Bone, **Sir David William** (1874-), novelist, b. Glasgow, son of a journalist and brother of Sir Muirhead B. (q.v.). He went to sea at 15 as an apprentice on the square-rigged *City of Florence*, and served 7 years in sail. Joining the Anchor Line in 1899, he rose to be commodore of their fleet. His books, which are all about the sea, include *The Brassboulder*, 1910, *Broken Stowage*, 1915, *The Lookoutman*, 1923, and *Capstan Bars*, 1931. *Merchantmen at Arms*, 1919, which was illustrated by his brother, told of the work of the merchant service in the First World War. *Landfall at Sunset*, 1955, is an autobiography.

Bone, **Henry** (1755-1834), Eng. enamel painter, b. in Cornwall; apprenticed at Plymouth, and afterwards worked at the Bristol china works. He was elected a member of the Royal Academy in 1811. His copies in enamel after Old Masters are much sought after by connoisseurs; best known is his 'Bacchus and Ariadne,' after Titian.

Bone, **Sir Muirhead** (1876-1953), etcher and painter, studied at the school of art in Glasgow, and came to London in 1901, where he estab. his reputation by his remarkable etchings of buildings, docks, etc. 'For technical skill Bone can be compared with the great Italians, Piranesi and Bibiena' (Sir Kenneth Clark). In 1906 his 'Great Gantry, Charing Cross Station' was purchased by the National Art Collections Fund and given to the Brit. Museum. From 1916 to 1918, he was official artist on the W. front, and with the fleet. He was a trustee of the National Gallery and the Imperial War Museum. He was knighted in 1937, and in 1940 was appointed official war artist to the Admiralty. His illustrations to the *London Perambulator*, by his brother James, are fine examples of his draughtsmanship. He also illustrated *Old Spain*, with description by Gertrude B., 1936, and *Came to Oxford*, 1952.

Bône, *see* BONA.

Bone, the hard tissue that constitutes the skeleton or framework of the body. This framework serves to support some structures as a central core, and to protect others as a surrounding casing. The different parts of the framework are articulated or jointed with one another and are converted into levers by which a great number of movements can take place through the instrumentality of muscles (*see* JOINTS). B.s are of various shapes, according to the functions they fulfil. Long B.s, of cylindrical form, are characteristic of the limbs; flat B.s, with a certain amount of curvature, are characteristic of protective B.s; short B.s are characteristic of the wrist and instep; while such B.s as the vertebrae and those of the face are somewhat more irregular in form. In the developing foetus the B.s first appear as cartilage, which gradually becomes ossified as growth proceeds, a process which is not completed until the age of about 21. At birth all the larger bones have areas of ossification in the middle, and the long bones have small is. of ossification at each end. The former is known as the diaphysis and the latter as the epiphysis. Between the two is an area of cartilage known as the epiphyseal line. Since growth takes place at the epiphysis, the epiphyseal line is present until growth is complete. The age at which growth finishes varies with the different B.s, and from an examination of the state of the epiphyses it is possible to estimate the age of a child or adolescent. There are 206 distinct B.s in the ordinary adult. The functions and dispositions of the B.s are dealt with in the articles on SKELETON; SKULL; ARM; etc. Human B. consists of about 31 per cent of organic matter and about 69 per cent of mineral salts, of which calcium phosphate forms the greater part, being 58 per cent of the whole B. matter. The animal matter may be removed by boiling or charring. When the mineral matter only is left, the B. appears hard and brittle. The mineral salts may be dissolved out by treating the B. with acid, when a jelly-like substance remains, preserving the shape of the B., but possessing none of its characteristic hardness. Thus the combination of animal and mineral substances serves to produce a substance which is at once hard, tough, and elastic. The qualities of B. as a useful substance in itself have been recognized in the arts. It is stronger than oak, can withstand a tremendous crushing strain, and yet is so elastic that savages have used the ribs of large animals for making bows. An examination of a fresh B. shows it to be covered with a strongly adhering membrane, which is called the *periosteum*. Underneath this the B. appears as a hard compact mass, gradually decreasing in hardness towards the axis, so that the inner part of the B. is of a spongy nature, while in certain situations there is a cavity, often filled with marrow, in the interior. In curved B.s there is a thickening of the hard compact portion on the concave side, where the greatest strain occurs. The B. is

thus most economically constructed, the greatest strength and elasticity being combined with lightness of material. All B.s are provided with channels by which the nourishing elements in the blood may penetrate to the interior, while the vessels of the periosteum enter the surface by many fine arteries. For diseases of the B. *see* OSTEITIS; OSTEOMYELITIS; TUBERCULOSIS (CARIES). For fractures *see* FRACTURES. *See* H. Gray, *Anatomy* (31st ed.), 1954.

Bone-ash, white residue remaining when bones are heated with access of air till all organic matter is oxidized. Bones are usually boiled to remove the fat and glue-forming substances and the remainder is burnt. The ash consists of tricalcium phosphate, and is used as a manure, in the manuf. of superphosphates, and in the manuf. of porcelain.

Bone Beds, strata or deposits of bones found on land or beneath the sea. They are thin layers of the remains of bones of reptiles, fishes, and mammals, occurring in certain places. At Ludlow, for example, there is a B. bed stretching for many miles. There are some also in the SW. of England, and similar ones in Germany. The Rhaetic B. B.—so called from deposits found at first near the Rhaetian Alps—form part of the Triassic System. There is a B. bed under the sea near the Faroe Is., and this contains shells mixed with the bones.

Bone-black, animal charcoal, obtained by the dry distillation of bones. When the fat and gelatines are removed from the bones the remainder is heated in closed retorts. The product is about one-tenth charcoal, the remainder being calcium and magnesium phosphates and other mineral salts. It is used for removing colouring matter and the refining of many commercial products, e.g. raw sugar, and the removal of fuel oil from whisky before the latter is rectified.

Bone Manure, general name for fertilizing agents in which powdered bones, or substances derived from bones, are present. The most important mineral element which has to be supplied to cultivated soil is phosphorus. The value of bone as a phosphorus-supplying manure was realised by Liebig (q.v.) in 1840, and at the experimental farm of Sir John Lawes at Rothamsted in 1843 the possibilities of artificial phosphates were investigated. The bones were dissolved in sulphuric acid to obtain the calcium superphosphate, which was soon found to be of the highest value as a manure.

Bone Oil, a fetid, blackish-brown, thick liquid obtained by dry distillation of bones, or by heating them with water and by use of solvents. Extracted also in preparation of bone-black, and used in soap-making. Contains ammonia, sulphuretted hydrogen, pyrol, etc. Dippel's oil, an animal oil produced by distillation of stags' horns, is used as medicine.

Boner, Ulrich (c. 1324–49), Swiss writer of fables, b. Bern, and descended from a famous Bernese family. He probably took clerical orders and became a friar. His name is of frequent occurrence

between the dates 1324 and 1349. His book of 100 fables, *Der Edelstein*, was one of the first Ger. books to be printed, in 1461.

Boneshaker, see CYCLES AND CYCLING.

Bo'ness, formerly **Borrowstounness**, burgh and seaport of W. Lothian, Scotland, situated on the Firth of Forth, 21 m. W. of Edinburgh. It has a harbour and dock with considerable continental trade, a shipbreaking yard, pottery manufs., coal-mines, and timber yards (pit-props). Kinnell Estate is now a public park, and Kinnell House has been taken over as an anct monument. The Antonine Wall, also known as Graham's Dyke, traverses the par. There is an 18-hole golf-course. Pop. 10,000.

Bonet, Juan Pablo (c. 1590-1630). Sp. philanthropist, who in 1620 pub. at Madrid a work on the instruction of deaf-mutes. His method, which was probably largely that of Pedro Ponce de León (c. 1520-84), corresponds to what is now known as the 'combined system,' i.e. he used phonetics as well as the manual alphabet. He taught the meaning of nouns by pointing, verbs by action, and the other parts of speech by continual use. Eng. trans. of his book, 1890.

Bonet, or Bonnet, Théophile (1620-89), Swiss physician, b. Geneva; took his degree in medicine in 1643, and practised in Geneva with great success till about 10 years before his death, when, having become deaf, he relinquished practical work for writing. He is best known as having been a pioneer in the science of pathological anatomy, but he also wrote numerous treatises on different branches of medicine and surgery. His chief works were *Labyrinthus Medicus Extricatus* and *Sepulchretum Anatomicum seu Anatomia Practica*, 1679. Of this last, a corrected ed. by Manget was issued in 1700. See Nicéron's *Mémoires*.

Bontadio, Jacopo (d. 1550), It. philosopher and historian, b. Gorzano, near Salò; educ. at Verona and Padua; in 1535 he became a private secretary to Cardinal Ghinucci at Rome. In 1545 B. became prof. of philosophy at Genoa, of which city he wrote a hist., *Annales Genovenses*, 1528-50. His other works include letters, poems, and a trans. of Cicero's *Oratio pro Milone*.

Bonfidius, Edmund (1536-74), Fr. jurist.

Bonfire (Early Eng. *bonefire*; Scottish *banefire*), in its original meaning a fire for burning bones, term now used to designate any fire which is lit in the open air, usually on an occasion of national rejoicing. The origin of the lighting of these fires seems undoubtedly to be pagan, since the early Church did its best to stop the custom of lighting fires, which were described as of heathen origin. Nevertheless, sev. Christian festivals came to be celebrated by the lighting of B.s. In many countries St John's Eve and St Peter's Day are celebrated in this way. The great 'B. day' in England is 5 Nov., Guy Fawkes' Day.

Bongar (*Bungarus*), genus of poisonous snakes in the family Colubridae. *B. candidus*, the krait, is common to India, and

though only about 4 ft in length it is a very deadly reptile.

Bongardia, genus of one species, *B. chrysogonum* (family Berberidaceae), a tuberous-rooted perennial of Syria and Persia, with golden yellow flowers and edible leaves.

Bonghi, Ruggiero (1828-95), It. scholar and statesman, b. Naples. He had to leave there after 1848 and go to Tuscany, and was later exiled to Turin for an article against the Bourbons. At Turin he resumed his philosophic studies and his trans. of Plato. In 1860 he returned to Naples, and threw in his lot with the Cavour party, and some years later became minister for public instruction. He reformed the It. educational system and founded the Vittorio Emanuele library in Rome. Among his works are a trans. of the Dialogues of Plato, 1880, and *Storia di Roma*, 1884.

Bonham, co. seat of Fannin co., Texas, U.S.A. It is situated on Bois d'Arc Creek, and has a pop. of 7000.

Bonheur, Rosalie Marie, usually called **Rosa** (1822-99), Fr. artist, b. at Bordeaux. She was descended from a family of Swedish origin and also a family of considerable artistic talent. She exhibited with success at the Salon her study of living animals, her faithful representation of them giving her international popularity. She received the decoration of the Legion of Honour and afterwards became an officer of the same order. Among her more famous pictures may be mentioned 'Ploughing in the Nivernais,' 1848, and 'The Horse Fair,' 1853, in the U.S.A. (a replica is in the National Gallery). 'The Horse Fair' toured England and made a great sensation.

Bonhill, par. of Dunbartonshire, Scotland, 3 m. N. of Dumbarton, comprising 3 vills: Alexandria, Balloch, and Jamestown. Strathleven industrial estate is in the par. Pop. (par.) 16,750.

Boniface, name of 8 Popes, and of 1 antipope (*Boniface VII*, 974). See POPES, LIST OF THE.

Boniface I, St (418-22), successor of St Zosimus. He was opposed by the antipope Eulalius, but was recognised by the imperial gov.

Boniface II (530-2), by birth a Goth, was nominated by his predecessor, St Felix IV, through the influence of the Ostrogothic king. He attempted to use this method of appointment as a precedent, but failed in the nomination of his own successor.

Boniface IV, St (608-15), succeeded **Boniface III**. He converted the Pantheon at Rome into a Christian church.

Boniface V (619-25), successor of St Deusdedit. According to Bede he did much for the conversion of England; he is said to have fixed upon Canterbury as the metropolitan see, although St Augustine had intended that honour for London after his own death.

Boniface VIII (Benedetto Gaetano) (1294-1303), succeeded to the papal chair on the abdication of Celestine V. B.'s insistence on his rights in the temporal sphere coincided with the triumph of

nationalism, and made him numerous enemies. The most bitter and most powerful of these was Philip IV of France. The bull *Clericis laicos* (1296), forbidding taxation of the clergy without papal consent, called forth Fr. reprisals, which obliged B. to modify his tone. But in the jubilee year of 1300 he once more paraded the temporal authority, and 2 years later re-opened the breach with Philip by the celebrated bull *Unam sanctam*. The Fr. vice-chancellor, Guillaume de Nogaret, accompanied by Sciarra Colonna, was sent to Anagni to arrest the Pope and bring him before a general council for deposition on a variety of charges, including heresy. B. was insulted by these envoys in a scene known to hist. as the Outrage of Anagni (7 Sept. 1303). He escaped to Rome, but *d.* of grief and humiliation the same year at the age of 83.

Boniface IX (1389-1404), succeeded Urban VI, by whom he had been elevated to the purple. He won back the greater part of the papal states, and his private life was irreproachable. His pontificate, however, was marred by nepotism and the sale of offices.

Boniface, Saint (680-755), known as the apostle of Germany, *b.* Crediton in Devonshire, his baptismal name being Winfrid. A Benedictine, and head of the abbey school at Nutschulling, he was ordained priest in 710. After an unsuccessful attempt to evangelise Germany in 716, B. went to Rome in 718 and obtained the Pope's blessing on his work. Thenceforward he preached with astonishing results in Bavaria, Hesse, Friesland, Thuringia, and Franconia. His promotion was as follows: bishop, 723; metropolitan beyond the Rhine, 731; papal legate, 738; Archbishop of Mainz, 744. B. founded a great number of schools and religious houses, including the Abbey of Fulda where his relics lie. Martyred at Dokkum, his feast is on 5 June.

Boniface of Savoy (*d.* 1270), Archbishop of Canterbury, son of Thomas of Savoy and uncle to Henry III's wife, Eleanor. B. was a Carthusian. His election to the see of Canterbury in 1241 proved so unpopular that he withdrew to Rome in disgust, 1250-2; in 1256 he took part with the bishops against the king, but in 1263 joined the papal legate in excommunicating the rebellious barons. He *d.* while accompanying Edward I on a crusade.

Bonifácio, José, 19th-cent. Brazilian patriarch of independence and liberator of the slaves.

Bonifacio: 1. Strait separating Corsica and Sardinia (qq.v.). It is only 7 m. wide, but navigation is made difficult by the numerous small is.

2. Tn of Corsica, on the strait of B., 43 m. SE. of Ajaccio (q.v.). It is built on a high promontory, but has a port in the fiord 200 ft below. There is a citadel and there is a beautiful 12th-13th-cent. church. Pop. 3600.

Bonin Islands, or Ogasawara Jima, group of is., N. Pacific Ocean, lat. 26° N., long. 143° E., 700 m. SSE. from Japan. They number about 20, but only 10 are

of any considerable size. They have been divided into 3 groups; the N. group are called the Parry Is., and those in the centre the Beechey Is., while the S. group are the Bailey or Coffin Is. The whole of them are of volcanic origin. They were discovered in 1639 by Quast and Tasman. In 1827 Capt. Beechey visited them, and took possession of them for Britain, and in 1878 the Japanese re-claimed them. Port Lloyd is the chief port. Pop. 1500.

Boning, see **BORNING**.

Bonington, Richard Parkes (1802-28), artist, *b.* at Arnold, near Nottingham. The family went to France c. 1817, B. studying art under Louis Francia at Calais and under Baron Gros in Paris. In 1822 he began to exhibit at the Salon, and in 1824 was awarded a medal there. His pictures are distinguished by the purity and brilliance of their colouring. His fame has grown with time. While much of the best in Fr. landscape painting may be said to date from Constable, a great deal has to be allowed to the influence of B. Delacroix was one of his friends and admirers. His 'Henry IV receiving the Spanish Ambassador' was bought by Lord Hertford for over 80,000 francs, and his 'Grand Canal, Venice' and 'Fish-market, Boulogne' also realised high prices. He exhibited sev. pictures at the Royal Academy. In the National Gallery are his 'Piazzetta, St Mark's, Venice' and 'Sunset.' His water-colours are well represented in the Wallace Collection, and he executed brilliant lithographs. He worked mainly in France, and, never strong, *d.* when on a visit to England to seek medical advice. See monograph by Dubuisson (trans. 1924).

BONITO

Bonito (*Katsuwonus pelamis*), fish of the family Scombridae. It belongs to the same family as the tunny (q.v.), and is allied to the mackerel.

Bonivard, François (c. 1493-1570), the hero of Byron's poem, 'The Prisoner of

Chillon.' He was b. Seyssel, being descended from an old noble family of Savoy. He succeeded his uncle as prior of the Cluniac priory of St Victor in 1510. Resisting the encroachments of the Duke of Savoy, he was arrested and imprisoned. His first imprisonment only lasted for about 2 years, at the end of which time he was released. But he still remained a great antagonist of the duke, and in 1530 he was again arrested and imprisoned. He spent some 4 years underground, in the castle of Chillon, and was only released in 1536 on the seizure of the castle by the Bernese, who had revolted and won back Vaud from the duke. The details of his imprisonment as we have them from Byron owe a considerable amount to the imagination of the poet. He became a Protestant shortly after his release, and received a pension from Geneva. He was appointed in 1542 to write an official hist. of Geneva, and his *Chroniques de Genève* were written between this time and his death, but they were not pub. until 1831.

Bonjem, small tn of Tripoli, N. Africa, situated 150 m. to the N. of Sokna. It is situated in an oasis, and has Rom. antiquities and ruins.

Bonn (anc. *Castra Bonnensia*), Ger. city in the Land of N.-Rhine-Westphalia (q.v.), on the Rhine (q.v.), 37 m. SSE. of Düsseldorf (q.v.). In 1949 it was made the cap. of the W. Ger. Federal Rep. By origin a Celtic settlement, B. became an important Rom. camp on the Rhine, and it regained its importance in the Middle Ages when it became the residence of the electors and archbishops of Cologne. The tn was sacked by the Elector Frederick III of Brandenburg in 1689, was under siege in the War of the Sp. Succession (see SPAIN, *History*), and was occupied by the French during the Napoleonic wars. In 1815 it passed into the possession of Prussia. After the First World War it was occupied (1918-26) first by Brit. and then by Fr. troops. The beautiful minster of B. (severely damaged during the Second World War) belongs to the 11th and 12th cents. The former palace of the electors is now occupied by the univ. (founded 1786; refounded 1818), which is one of the most important in Germany. On the S. side of the city a new administrative dist. has grown up since the end of the Second World War; it contains various gov. buildings, including the *Bundeshaus* (Parliament House), a structure in modern style. B was the bp. of Beethoven (q.v.), and his house is still preserved as a museum. There are engineering, tobacco, printing, and flag-making industries. Pop. 139,200.

Bonnard, Pierre (1867-1947), Fr. painter, b. Fontenay-aux-Roses, near Paris. He began life as a civil servant, but soon abandoned an official career for art. He learned under Bouguereau, but the chief influences on his own style were Renoir and Toulouse-Lautrec in colour and drawing respectively. For a brief period he was associated with the followers of Gauguin, styled the 'Nabis,' but he is better described as a late and notable disciple of Impressionism. His most

characteristic paintings were of interiors with figures draped or nude, but he also painted a number of landscapes and still-life subjects. In 1940 he was made an honorary member of the Royal Academy. In 1941 six works by B. were sold for one million francs. See monographs by F. Fosca, 1919, and J. Renald, 1948; also T. Natanson, *Le Bonnard que je propose*, 1953.

Bonnat, Léon Joseph Florentin (1833-1922), Fr. portrait-painter, b. Bayonne; studied in Madrid and Paris. His reputation was estab. by his 'St Vincent de Paul taking the place of a Galley Slave' (1866) and other religious works showing the influence of Sp. masters. His fame rests chiefly on his portraits of celebrities, including those of Victor Hugo, Dumas, Gounod, and Thiers. See Van Dyke's *Modern French Masters*, 1896.

Bonner, Edmund (c. 1500-69), bishop of humble origin; educ. at Pembroke College, Oxford. He was chaplain to Cardinal Wolsey, 1529, and in 1532 was sent to Rome by Henry VIII to press the claims of Henry's divorce from Catherine of Aragon. He was made Bishop of Hereford in 1538, and Bishop of London in 1539. B. was in favour of the principle of royal supremacy during Henry's reign, but refused to enforce the use of the new Prayer book under Edward VI, and as a result was confined in the Marshalsea prison from 1549 to 1553. He was restored to his see on the accession of Mary, and was conspicuous by his zeal in the persecution of the London Protestants during this reign. He refused to take the oath of supremacy on the accession of Elizabeth, and was sent to the Marshalsea prison again where he d. That B. was more harshly treated than the other deprived bishops is probably explained by Elizabeth's personal dislike of him, and by his notoriety as a persecutor of Protestants.

Bonne's Projection, in map projection, a method first employed in a rough form by Ptolemy for the second projection of his World Map, and by Bonne in 1752. It was also adopted by the Fr. war depot in 1803 for the map of France on the scale of 1/80,000, and much used in the last cent. for continental services. In Great Britain it was used for the old ordnance survey of Scotland and Ireland on the scale of 1 in. to the m., and is also frequently used in atlases. It is a modification of the simple conic, in which all the parallels are divided truly and the meridians are curves passed through these dividing points. The projection is equal area and the scale is along and perpendicular to the parallels. It is not well adapted for countries with great extent in long., because the intersections of the meridians and parallels become very oblique—as may be seen at a glance at the map of Asia in most school or other atlases. See MAPS.

Bonnet, Charles (1720-93), Swiss naturalist and philosopher, b. Geneva. His observations and experiments on aphids or tree lice gained for him in 1740 the rank of corresponding member of the Fr. Academy of Science, and 3 years later he became a fellow of the Royal Society.

In 1745 appeared his first pub. work, which was called *Traité d'insectologie*, and in 1754 his researches in botany and the results he had obtained from his long work in this subject were pub. in *Recherches sur l'usage des feuilles dans les plantes*. He next turned his attention to philosophy, his eyesight preventing him from further continuing his natural science experiments. His *Contemplation de la nature* was pub. in the years 1764-5. His last work of importance was *Palingénésie philosophique* (1769-70) in which he develops the idea he had already put forward that animal life is continued and perfected in a future existence.

Bonnet, Théophile, see BONET.

Bonnet (Lat. *bonelum*, stuff, thence cap made from stuff), soft cap or covering for the head. It was worn, and so called, in England until the latter years of the 17th cent., and in Scotland till later. The genuine B. of the Scotch peasants was made of a thick woollen fabric, with no lining; it was of a round, flat shape, generally dark blue in colour, with a red tuft on the summit. It was extremely durable. The glengarry B., which is still worn by Scottish soldiers, rises to a point in front, and has ribbons at the back. Stewarton and Kilmarnock, in Ayrshire, have been noted for the making of Scottish B.s since very early times. From the fact that small landed proprietors in Scotland continued to wear B.s for some time after their use had been discontinued elsewhere, they were known as B. lairds. The use of the word B. as applied to men's head-gear has now fallen into disuse, and the term is applied only to ladies' wear. A B. differs from a hat in fitting closely to the head, and often having no brim. It varies considerably, however, in both shape and decorations, according to the prevailing fashion. The B. of a ship's sail is an additional piece which is now laced on to the bottom of the sail, but was formerly at the top. The term is also used for various protective devices, and a slang name for a gambler's accomplice is a 'bonnet.'

Bonnet Piece, gold coin of the time of James V of Scotland. On it was a figure of the king, who was the first king of Scotland to have dates put on coins, wearing a bonnet on his head instead of a crown—this being the origin of the name of the coin.

Bonnétâble, tn in the dept of Sarthe France, on the R. Triptotin. 14 m. from Mamers. It has a beautiful 15th-cent. castle. There are boot and other leather manufs. Pop. 3500.

Bonneval, Claude Alexandre, Comte de (1675-1747), Fr. soldier of fortune. At the age of 13 he joined the army. While serving in the Netherlands under Luxembourg, he was condemned to death by court-martial, and fled to Germany. Entering the Austrian service, he distinguished himself by his conspicuous gallantry. With the Austrian army he fought against France, and also against Turkey. His ungovernable temper, however, led to a quarrel with Prince Eugène, his patron. He was again sentenced to

death by court-martial, but the sentence was commuted, and he was exiled. He offered his services to the Turkish sultan, by whom they were accepted, and he changed his faith, becoming a Muslim and taking the title of Ahmed Pasha. He helped to reorganize the sultan's army. He rendered great services to Turkey during the Russian and Persian wars, and was made governor of Chios. Later he fell under the suspicion of the sultan, and was banished to the shores of the Black Sea, where he d.

Bonneval, Fr. mrkt tn in the dept of Eure-et-Loir, at the confluence of the Loir and the Ozanne. It has the remains of an abbey founded in 841. Pop. 3800.

Bonneville, Nicolas de (1760-1828), Fr. man of letters, was president of a dist. of Paris from the first days of the revolution. With Fauchet he brought out the *Cercle Social*, the *Chronique du Jour*, etc. Under the Terror, 1793, he was imprisoned, and later persecuted under Napoleon. He was among the first Frenchmen to study Ger. literature. His *Nouveau Théâtre allemand* was pub. 1782-5, and *Histoire de l'Europe moderne*, 1789-92. He pub. a volume of *Poésies* in 1793.

Bonneville, Fr. tn, cap. of an arron., in the dept of Haute-Savoie. Wine is produced. Pop. 2500.

Bonneville, Lake, extinct lake of the U.S.A. which in a recent geological period extended over a quarter of the total area of the Great Basin, a vast region of inland drainage in the SW., extending over Nevada, Utah, Oregon, and California. For further details see GREAT BASIN.

Bonney, Thomas George (1833-1923), geologist, b. Rugeley; educ. at Uppingham and at St. John's College, Cambridge. In 1877 he was made prof. of geology at Univ. College, London. He was president of the Geological Society, 1884-6, and secretary of the Brit. Association, 1881-5. His works include *The Alpine Regions*, 1868, *The Story of Our Planet*, 1893, *Volcanoes*, 1898, *The Present Relations of Science and Religion*, 1913, and *Memories of a Long Life*, 1922.

Bonnier, Gaston (1853-1922), Fr. botanist, b. Paris, prof. of botany at Paris Univ. He proved experimentally the synthesis of lichens. His *La Flore de la France et de la Belgique* is the leading work of its kind in both those countries. (Eng. trans. and adaptation by Ethel Mellor, 1925.)

Bonny, tn in S. Nigeria, W. Africa. It is situated on a creek on the E. side of the R. B., near the mouth. It is swampy, and a most unhealthy tn. It has a large trade in palm oil. The R. B. is one of the delta mouths of the Quorra. Its anchorage is good and safe. Pop. 6500.

Bonnyrigg and Lasswade, joint burgh of Midlothian, Scotland, some 2 m. SW. of Dalkeith, on the N. Esk riv. The poet Wm Drummond of Hawthornden is buried in Lasswade church; his mansion of Hawthornden lies 2 m. SW. Sir Walter Scott lived in Lasswade from 1788 to 1804. Ironstone is quarried locally. Pop. 5860.

Bonomi, Ivance (1873-1951), It. politician, b. Mantua, member of the Reform party. He held sev. cabinet posts between 1916 and 1922, in 1920 signing with Sforza the treaty of Rapallo which, *inter alia*, gave Fiume its independence. When Mussolini came to power he retired from politics, but returned in 1944 to succeed Badoglio (q.v.) as Prime Minister of a coalition gov. He resigned in 1945.

Bononcini, Giovanni (1672-1747), b. Modena, son of Giovanni Maria B. He became famous as a composer of operas, rivalling Handel for a time. He was court composer at Vienna for 10 years. He wrote the second act of the famous pasticcio *Muzio Scevola* (an operatic medley performed in London 1721, and of which the other acts were written by Mattei and Handel). For some time he shared with Handel and Ariosti the directorship of the operatic enterprise known as the Royal Academy of Music, but was later induced to run a rival house by the nobles who opposed the king. He wrote 7 oratorios and many operas, including 8 for London and about a dozen for Vienna.

Bononcini, Giovanni Maria (1642-78), It. composer, b. near Modena; studied in Bologna, entered service of Francis II, Duke of Modena, and became *maestro di capella* of San Giovanni in Monte. Wrote many instrumental and vocal compositions, and the theoretical work, *Musico pratico* (1673).

Bonomia, Rom. name for (1) Bologna, Italy, (2) Boulogne-sur-Mer, France (qq.v.).

Bonpland, Aimé Jacques Alexandre (1773-1858), Fr. traveller and botanist, b. La Rochelle on 22 Aug. He studied medicine, and for some time served as an army surgeon. In 1799, together with Humboldt, he undertook a journey of exploration through Mexico, Columbia, and the dist. round the Amazon. The result of this journey was the collection of about 6000 plants, which on his return to Europe he proceeded to explain in his *Plantes équinoxiales*. Later he explored central America. Among his works may be mentioned *Monographie des Melastomacées*, 1806, and *Description des Plantes rares de Navarre*, 1813.

Bonsignori, or Buonsignori, Francesco (1455-1519), It. painter, b. Verona. Many of his works remain at Mantua and Verona, and some are to be found in the prin. European galleries. Vasari declares him to have been a pupil of Mantegna. His best-known works are paintings of the Madonna with saints at Verona, and portraits at Florence. See Vasari's *Lives*.

Bonstetten, Albert von (c. 1441-1509), Ger. monk and author, a member of the Einsiedeln monastery of the Benedictine order. His numerous works include *Descriptio Helvetiae*, 1478, *Poema de justitiae et ceterarum virtutum exilio*, 1479, *Historia austriaca*, 1491, and a detailed hist. of Einsiedeln.

Bonstetten, Charles Victor de (1745-1832), Swiss writer and publicist, b. Bern. He was educ. at first at home, but afterwards at Leyden, and later in England,

where he became a friend of the poet Gray. On his father's death he entered political life, and became a dist. governor. But his ideas were too liberal, and after the taking of the Bastille he had to retire. In 1795 he again became a governor of the It.-speaking part of the rep., but again in 1798 had to retire because of his political opinions. He then spent some years in Denmark, and finally settled in Geneva in 1803, where he d. One of his greatest books was the study of the effect of climate upon different nationalities, *L'homme du midi et l'homme du nord*, 1824. Other works are *Recherches sur la nature et les lois de l'imagination*, 1807, *Études de l'homme*, 1821, and *Pensées diverses*, 1815.

Bontempelli, Massimo (1878-), It. author, b. Como. He began his career as a prof. of letters and a convinced follower of the classical methods of Carducci. In this period he wrote his *Sicilian Odes*, inspired by antiquity. He then became a futurist and humorist. In 1926 he founded the review *900*, in which he vigorously preached reaction against academic art and sentimentalism. His book *Lady of my Dreams* is composed of short stories relating imaginary adventures in an ultra-modern world, but with infinite care for realism in their details. He himself describes his art as 'magic realism.' Other novels are *La Vita Intensa*, 1920, *Gente nel Tempo*, 1937, and *Giro de Sole*, 1940.

Bontuku, tn. of W. Africa, in the Fr. colony of the Ivory Coast, situated some 200 m. inland, near the W. border. It was placed under Fr. protection by Capt. Binger (q.v.). Pop. 4000.

Bonus, sum paid to shareholders in a joint-stock company as addition to ordinary dividends. It is generally given out of accumulated profits, or the profit from some exceptional transaction, when it is not considered advisable to raise the ordinary dividend. As used by insurance companies it is an amount added to the original amount of the policy by a distribution *pro rata* of the accumulated profits, or of the surplus. In a more general sense B. is used to mean any payment of more than what is due.

Bonvin, François (1817-87), Fr. artist, b. Vaugirard. Most of his pictures have for their subjects incidents in the life of the working people with whom he had come into contact. Among his best-known pictures are 'L'École d'orphelins,' 'La Charité,' 'La Basse Messe,' and 'La Cuisinière.'

Bony Fishes, scientifically known as Osteichthyes, the largest and most important class of fishes. The other classes comprise the lampreys and hagfishes (Cyclostomata) and the sharks, rays, and chimaeras (Elasmobranchii). There are 2 main groups of B. F., the first the tassell fns, Crossopterygii, consisting of the lung fishes (Dipnoi) (q.v.), the Osteolepidoti and the Coelacanthini. The osteolepidoti are only known as fossils but the coelacanthus have one living representative, *Latimeria* (q.v.). Typically the tassell fns have paddle-like paired fns with well-developed, scaly, muscular bases fringed

by the fin rays. The other group of B. F., the Actinopterygii, the 'ray fins,' do not have such bases to the paired fins and the fin rays originate at the level of the body. The ray-finned fishes are divided into the Palaeoniscoidei, Subholostei, Holostei, and Teleostei. The palaeoniscoids are mainly a fossil group, common during later Devonian, Carboniferous, and Permian periods and are only represented to-day by the birchirs (*Polypterus*), reed fishes (*Erpetoichthys*), sturgeons, and paddle fishes (*Chondrostei*). The Subholostei are entirely a fossil group, abundant during Triassic times and were succeeded by the Holostei. However, the only surviving holosteans are the bow fin (*Amia*) and the garpikes (*Lepisosteus*) of N. and central America. The main group of Actinopterygii is the Teleostei (q.v.), consisting of about 25,000 living species and ranging from the herring and salmon-like fishes (Isospondyli) to the angler fishes (Pediculati). The teleosts are thus by far the most diverse group of living B. F.

B. F. are characterised by having a skeleton of true bone and typically some kind of swimbladder is developed. The sharks and rays and the lampreys and hagfishes have no swimbladder.

Bony Pike, Billfish, or Garpike, name applied to the fishes of the family Lepisosteidae. They have elongated snouts, their bodies are covered with thick scales, and in habit they are predaceous. *Lepisosteus osseus* is a species commonly found in fresh waters of N. America. Like the mud fish (q.v.) the garpikes belong to the Holostei, a group of bony fishes.

Bonyhád, tn of Hungary, in Tolna co., 9 m. SSW. of Szekszárd (q.v.). It has a trade in corn, vegetable oil, wine, and tobacco. Pop. 8500.

Bonze (Jap. pronunciation of *fan sūng*, member of a monastery), member of a Buddhist monastery. The Jap. form is *bonzo* or *bonzi*. The word used to be applied by Europeans to any priest in Japan and China.

Booby, species of bird which is closely connected with the gannet, and receives its humiliating name from the ease with which it allows itself to be captured. With the gannet it forms the genus *Sula* of the family Sulidae, but it differs from the gannet in breeding on trees and bushes, and in having no feathers on its throat and lower jaw. It is persecuted by the frigate or man-of-war bird, which belongs to a different genus of the same family, and is compelled to give up to it the fish which it has captured. The birds are cosmopolitan except on cold shores; *S. cyanops* comes from the S. Pacific, and *S. australis* from the S. seas.

Booby Island is situated in Torres Strait, off Queensland, Australia. It is dangerous to navigation, and a lighthouse has been built here.

Book, name given to a literary production, usually 1 vol., and also to sev. if forming a single work. The word has been variously derived, but the derivation which presents least difficulties is that from A.-S. *boc*, meaning a beech-tree, supposedly from the original use of beech

bark for writing. Almost as far back as it is possible to trace any form of civilisation, it is possible to trace the existence of B.s of some form. The clay tablets, with cuneiform inscriptions recording decisions of the law courts of Babylonia, have a right to rank as B.s. More in the direct line of descent are the papyrus rolls of early Egypt, covered with hieroglyphics, and of great antiquity, the earliest extant papyrus (q.v.) dating back to some 4000 years BC. The fashion thus set of recording events on papyrus was one which remained in existence for a long time, and as late as the 13th cent. papyrus was still used as a medium for writing. The Greeks gave papyrus the name of *biblos*, from which is derived the word 'Bible.' The supply of papyrus was at one time found to be declining, and the prepared skin of sheep and goats was brought into use as a substitute, proving so successful that it was only replaced later by the invention of paper, which was introduced from the E., and to which the name papyrus was transferred. The method of preparing the skins was traditionally ascribed to Eumenes II, King of Pergamum (or Pergamus); hence the name parchment, from Lat. *pergamena* (*charla*), paper of Pergamum. During the period of the predominance of papyrus the usual form of B. was the long roll wound round a stick, but with the commoner use of parchment the B. form as we now know it began to be used. With the coming of printing the form of B.s did not at first undergo any great change. The type used was similar to the calligraphy which had been usual up to that time. B.s were first printed without title-pages, and the information about the printer and place of printing was given at the end of the B. It was not until the beginning of the 16th cent. that B.s began to be given a title-page, together with the name and address of the printer and the date. The early printed B.s were large, and owing to the method of binding heavy as well. During the 16th cent. the introduction of smaller type, and the reduction in the size and weight of B.s, did much to popularise them, and many B.s during this period were brought within the reach of ordinary people. The early 17th cent. saw a falling off in the printing of B.s, which increased in price. Towards the end of the cent., however, B.s began to improve in printing, although they did not cheapen. The 18th cent. saw a great improvement in the printing and binding of B.s, and prices of B.s again became reasonable. B.s were often pub. by subscription (i.e. sale before printing, or even before writing, by means of preliminary notices), and then the price was high. Illustrations began to appear in them, and it is during this period that we get the beginning of the popularity of the novel, which was usually printed in sev. vols. The price of B.s during the greater part of the cent. was fairly uniform, and B.s could be bought by all classes save the very poor, but towards the end of the cent. the prices again rose. The 19th cent. saw a vast improvement in every respect. B.s were well bound, well

printed, and in many cases well illustrated. The publishing of B.s at popular prices began, although cheap B.s were as a general rule not well printed or well bound. With the turn of the cent., however, the continuous advances in technical and mechanical efficiency in both printing and binding at last brought the well-produced and cheap B. within the reach of all. *See also* BOOKBINDING; BOOK-COLLECTING; BOOKSELLING; MANUSCRIPTS; NATIONAL BOOK LEAGUE; PRINTING; PUBLISHING.

Bookbinding, process whereby the leaves of books are bound together in such a manner as to keep them in order and protect them from injury. It may be said to have begun when the method of making books from strips of parchment wound round rollers at each end was superseded by the method of fastening leaves together at the back and placing the so formed book between covers for protective purposes. Before the days of printing, as early as the 6th cent., the monks had carried the binding of MSS. to a very high plane. They bound the MSS. between boards, which were afterwards decorated with metal and jewels. This was known as the Byzantine style of binding. The majority of the books so bound were destroyed by people seeking for gems that were supposed to be hidden in their covers, which were made of wood of great thickness. Then between the 10th and 14th cents. the monks of England, having copied and improved the designs of books brought from the E., became the foremost binders of Europe. The binding of books was now done by the aid of leather stretched over the boards and decorated with the impress of small stamps bearing the conventional designs.

But the introduction of the printing press gave a great impetus to the trade of B., and as the number of books increased so the office of bookbinder became separated from that of printer. This, together with the introduction into Venice from the E. of the use of gold leaf in the decorating of bindings, caused the end of the 15th and beginning of the 16th cents. to be one of the finest periods in the hist. of B. At this time morocco leather was first used, and with the aid of fine, delicate tools for impressing designs on covers, the result was the foundation of an exquisite art for the decoration of bindings. Venice was the seat of this rich ornamentation, and the distinct character of the designs originated there gives rise to the Venetian pattern of tool. Some of the most celebrated patrons of the art in Venice were Tommaso Malioi, Aldus Manutius (q.v.), founder of the Aldine Press, and Jean Grouler (q.v.) of Lyons, sometime treasurer to the duchy of Milan. When Grouler returned to France, he had his books bound under his own supervision in such a manner that they cannot be equalled even to-day in beauty of design or in excellence of workmanship. The Fr. school of binders, led by Nicolas and Clovis Eve in the 16th cent. Le Gascon and du Seuil in the 17th, and the Padeloup and Derôme

families in the 18th cent., ably followed up the impulse given in France by Grouler, and kept in unrivalled until the end of the 18th cent. In Germany the books were usually bound in pigskin, vellum, or calf; the latter being preferred for its softness and smooth surface and its great advantages for blind-tooling, i.e. the impression of designs without the use of gold.

In England the men who stand out pre-eminently are of comparatively recent time. While we may mention Thomas Berthelet, binder to Henry VIII, and John Gibson in the reign of James I, yet chief notice must be paid to Samuel Mearns, binder to Charles II, who originated the 'cottage' style of ornamentation. In the 18th cent. Robert Harley, Earl of Oxford, had books bound in red morocco with centre panels surrounded by a broad tooled border, so founding the Harleian style. Other names to be noted are Baumgarten and Benedict, Kalthoebler (credited with the introduction of painted edges, though according to Zaehnsdorf he rediscovered the secret if it had been lost, for it had certainly been done in the 16th cent.), and Staggemeir. At the end of the 18th cent. Roger Payne used original artistic tools of his own design, always finishing his bindings in accordance with the character of the book. These were followed by Lewis, Mackenzie, Hayday, and Zaehnsdorf. After a period of stagnation and imitation an artistic revival in printing at the end of last cent. owed its inspiration to Wm Morris, though the virtual founder of the modern school of binding was T. J. Cobden-Sanderson, of the Doves Press and Bindery. Later names that may be mentioned are Douglas Cockerell, a pupil of Cobden-Sanderson, Charles Ricketts, and Miss E. M. MacColl.

HANDICRAFT BOOKBINDING. Large eds. of books, bound in cloth, are produced by machinery. Since this process differs materially from that of leather binding, the ordinary cloth binding should be described as casing, and the term binding reserved for the process when the boards are attached to the book before covering. In casing the boards are covered and then glued to the book. Nearly all branches of B. to-day can be performed by machinery, but we first describe the various operations of handicraft B. before referring to modern machine methods, because these latter have been evolved from the handicraft processes.

Folding. Books are usually received from the printers in sheets which require folding. On each sheet is an alphabetical letter or 'signature' to denote the order of appearance in the book. From the number of folds in a sheet a book is known as a folio, quarto, octavo, duodecimo, etc. Folio implies 1 fold down the centre, or 2 leaves to the sheet. Quarto (4to) refers to sheets folded again across, making 4 leaves to the sheet. Similarly, octavo (8vo) means 8 leaves to the sheet. For folding by hand, the only instrument used is a folding stick, made of wood or bone, shaped like a paper-knife.

Gathering. When the sheets have been folded into sections, then they have to be

gathered into books. The usual way of gathering by hand is by laying piles of sections on a long table, a section being taken from each pile in turn. After gathering, the book must be collated, i.e. looked through to see that there are no sections misplaced or pages out of place.

Sewing and stitching. Hand-sewing is done on a press which has a crossbar from which are suspended vertical lay cords. These cords are then fastened to keys. Through small holes in the backs of the sections the threaded needle is passed round these cords, so fastening the section to the cord. The sewing thread is continually joined up, so that it is continuous through the whole book. When the back has been sewn in, then the sewing thread is merely passed up through the centre of the section and over the binding cord.

Trimming. Most books are now bound with cut edges. In these cases, after sewing, the book is placed either in a press and cut with a plough, or, as is the case with large outputs, in a guillotine. A guillotine consists of a bed upon which the book is placed and adjusted by gauges, and securely held down by a clamp. A knife then descends which cuts the edge accurately at the places which have been marked. When the front edge has been cut, the head and the tail may be treated in the same manner.

Gluing up. The books are now knocked up until they are square, and they are then placed between gluing boards, and a coating of glue, which is not too thick, is spread over the back; the object of this is to aid in the holding of the sections together, and to make the back firmer to withstand the rounding and backing processes.

Rounding. The trimmed books have now to be rounded. The purpose of this is to prevent the back sinking in. The book is taken when the glue is not quite dry, or the glue is moistened slightly. The book is then pulled into a round shape with the left hand and hammered with the right until it takes a rounded form. This is performed on both sides of the book and requires great care. Not all books are rounded, some having 'flat' backs.

Backing. The book has now to be backed, or grooved, so that the boards may turn on them as on a hinge, and may fit closely against the sides. Therefore, according to the thickness of the covers, the groove must be made deep or small. The book is placed between 2 backing boards with the back slightly projecting, and the book adjusted until the rounding is even and the head and tail seen to be rectangular. The whole is now fixed in a press in such a way that the back will fall outwards, forming a sharp groove. It is then hammered into position on both sides.

Decoration of edges. Ordinary cloth-cased books have either plain trimmed edges or are deckle-edged, i.e. rough and uncut. But as in the case of leather-bound books the edges may be decorated in a number of different ways, to prevent

the soiling which must happen with white edges. The edges may be sprinkled with spots or one or more colours. A simple sprinkling of one colour is obtained by letting drops of the paint fall from a brush rubbed on a fine sieve. When 2 or more colours are used then sand is spread over the edges to keep some portions protected from the colour. Again, edges may be coloured plainly, in which case the colour, mixed with water, is spread over the edges with a sponge or brush. One of the finest methods of decorating edges (much used for account books) is that known as marbling. This is a special branch of the trade and depends upon the fact that colours mixed with ox gall will float upon a sized surface, and a colour containing more gall will force the first off. The smooth edge of a book will take these colours up, so the marbling is prepared in a trough and the edge of the book dipped in it diagonally from corner to corner. This must be done before the book is rounded, or, if after, then the book must be knocked back for the process. There are many recognised varieties of design in marbling, the commonest of which is comb or feather marbling. The most elaborate system of decoration is gilding. This is performed by placing the book in a press and scraping the edges smooth with a steel scraper. A mixture of black-lead and glair—white of egg beaten to a froth in water—is then brushed over the edges, and when this is dry the gold leaf is laid on the edge from the gold cushion to which it has been transferred from the gold-leaf book with a gold knife. The gilder then polishes the book edge with a highly polished agate or bloodstone.

Casing. A lining of mull (gauze) having been laid on the back of the book to strengthen it, the covers are now prepared from strawboards, coloured cloth, and stiff paper for the back. After being cut to the size required, the cloth is glued carefully and the backing paper and boards laid on; the edges of the cloth being cut at the corners, to prevent thick folds when it is turned over the boards. After these covers have been titled (see *Embellishing* below) they are pasted to the books and pressed, after which the cloth-cased book is ready for use.

Leather binding. With leather the process is different in most cases. Although sometimes the leather covers are made separately and placed on the book complete, yet the proper method of true binding is that by which the covers are built up around the book. To the book in the state already described under the decoration of edges, head bands are added of vellum or catgut covered with silk or cotton, or of calico over cord. The purpose of these is to prevent too great a strain coming on the book when it is being taken from a shelf. Bands—5 as a rule—of leather are now pasted or glued on the backs of the books. The mill-or straw-boards are fastened to the book by lacing the sewing lay-cords through the boards, or inserting them in the thickness of the boards (i.e. split-boards). In the

**FOLDING**

In the folding machine flat printed sheets are fed automatically through a series of rollers and folding and slitting knives. The sheets emerge, in book size, as 4 sections of 16 pages each or 2 sections of 32 pages each. They are now ready for illustration plating or endpapering before gathering.

Camco (Machinery) Ltd

GATHERING

This gathering machine has 24 'stations,' hoppers into which separate stacks of each book section are loaded loose. Suction devices draw the sections down to a reciprocating table, thus assembling them in book order for delivery and checking or collation. The collated books are stacked for sewing.

J. M. Dent & Sons Ltd

**SEWING**

Book sections are placed by the operator on a saddle to permit the needles and thread accurately to pierce the fold in the back of sections. This machine sews them together in a continuous stream, and they are separated into books by another operator as they come out at the rear of the machine.

Smyth-Horne Ltd

TRIMMING

The book edges are cut to remove folds and make the edges even. This continuous trimmer cuts first the front edge, then the heads and tails.

Smyth-Horne Ltd

**BLOCKING**

This press, a modified printing machine, impresses from a brass stamp the title lettering or other decoration on the binding case formed of strawboards and cloth in another machine. Pressure suffices for ink blocking, but for gold and foils heat is necessary also. The machine has mechanical 'arms' for picking up the cases and placing them in position for stamping. Gold, ink, and metallic or pigment foils may be used for the title or design.

C. F. Moore & Sons Ltd

CASING-IN

In this machine a coating of paste is applied to the sides of the book and the back of the case is rounded. It is then positioned over the book and rollers press them together. The cased book is then delivered to a chute.

Smyth-Horne Ltd

case of books which have a flexible back, the leather is fastened directly on to the book, and it consequently adheres to the back of the book, although it is flexible enough to allow of the book opening.

Coverings. Bound books are covered with either split sheepskins, sheepskins, morocco, or any other leather, parchment, vellum, cloth, velvet, and imitation leather. Special processes are required for each of these. Those bound in leather may be either bound in whole leather, or half bound, having the corners and back made of leather and the sides of cloth or paper. The third type is the limp type, which has the cover flexible and pasted directly to the back of the book. After the covering has been put over the boards the end-papers are pasted down to the boards and the inside covered with paper.

Embellishing. When small ornaments are used and made up into design, it is known as hand-finishing, and when a large design is used then the process is known as blocking. In either case the tooling may be blind or gold. Gold tooling is performed by pressing gold leaf on to a specially prepared surface and brushing off the gold leaf not stamped on. Blind-tooling is merely an impression on the leather or other cover, without any colour whatsoever. Blind-tooling is sometimes termed antique or monastic tooling.

Bible bindings are largely in leather, and offer facilities for a display of taste on the part of binders, owing to the custom of having rounded corners, limp, soft corners without flaps, or yapp—soft with flap—covers, specially gilded edges, and tasteful linings for the covers.

Commercial and library books. The sewing of books which are intended to last for a considerable time and which are well bound is still done usually by hand; but a good deal of the sewing of most other books is now done by a book-sewing machine, chiefly with tape supports. The style of binding usually adopted for thread-sewn books, like common bill books, is 'quarter-binding,' which consists of boards with a coloured paper finish and cloth up the back; stout strawboards are glued on the end-papers, strips of cloth up the back, and the books are trimmed round. But superior quarter-bound books, after being sewn, are trimmed in a guillotine; the backs are then well glued, and before the glue is set the back and fore-edge are nicely rounded. This operation is now frequently performed by a rounding machine. Before the covers are put on, the backs are strengthened by adding cloth or leather strips—leather or imitation leather is generally used for covering the back, and cloth or marbled paper for the sides; and these are 'turned in' to give a more finished appearance than is possible with the cheaper bindings, the result being that no boards are visible. The make-up of a half-bound book is superior to that of a quarter-bound book in every way; quarter-bound books are always fitted with flexible backs, but the back of a half-bound book, whether an account and general commercial book or any

other, is firm and substantial, and when the book is open there is an air space between the leaves and the cover back, which space is called a 'hollow' or 'open' back and ensures durability. Half-bound books have leather corner pieces in addition to the leather back, and the covers are heavily built; the end-papers at beginning and end consist generally of highly decorated marbled paper. Sometimes, instead of being marbled, edges are simply sprinkled, a less costly but not so attractive or finished process. It may be noted here that many library books have their marbled or sprinkled edges burnished, the process being effected by a burnisher, generally in the form of a specially shaped agate in a wooden holder. Russia leather bands are 'laced' on to some types of full leather bindings, but only for books which are for exceedingly long currency. When once the covers are fixed, the books are sent to be 'finished' and 'polished up,' and to have the lettering and ornamentation added to the backs and sides. The lettering and marking tools are of brass; those for rolling are circular, with the design cut out on the circumference and mounted, and they revolve as the tool is played forwards and backwards. The leather of the cover is sponged over with glair, and, when dry, gold leaf is applied and finally the cover is given a coat of varnish.

MODERN MACHINERY. Handicraft B. is to-day a small and specialised trade. The great mass of books are produced mechanically, and automatic machines play a leading part in their manufacture. For journals, and some cheaper grades of bookwork, web and rotary printing presses include the work of folding; then a single machine undertakes the work of assembling the sections, gluing paper covers, and trimming and cutting edges. There are also, *inter alia*, case-making machines; blocking presses for imprinting titles and designs in ink, pigment, foil, or gold on the binding case; various forms of three-knife trimmers for edge trimming and cutting; machines for lining or reinforcing backs; and casing-in machines for fastening the book to the covers. Some of these machines are linked in modern production-line technique in the larger binderies. The accompanying illustrations show machines used in modern mass production B.

Case work now embraces almost all the novels, travel books, etc., which are produced in great quantities; but the result often means books of less strength. Such books are printed so that they may be easily folded into sections with a definite number of pages to each, and the folding is done by special machinery which may take a 64-page sheet, slit and fold it into 4 sections of 16 pages each or 2 of 32 pages each, delivering them from the different parts of the machine at seven thousand sheets an hour. Illustration plates are inserted, usually by hand, and cartridge end-papers are applied to the first and last sections by machine. Each section bears a 'signature' to facilitate rapid gathering and collation during

'making up,' and the gathering, too, is often done by special machinery. After the sections are sorted they are thread-sewn by machine, the books are nipped to make them solid, glue is applied to the books, and after trimming of the edges they are ready for rounding and backing; the latter process is to give a nicely rounded effect to the back and to the fore-edges of the book. 'Rounding' is related to the sewing and is intended to overcome the difficulty of the increased back-space caused by the threads, and is now done by a rounding machine.

The covers of these case-work books are made separately from the books themselves, and generally by a case-making machine. The term 'case' refers to a cover of strawboard and cloth made separately and into which the trimmed, rounded, backed, and mull-lined book of sewn sections is pasted by means of the end-papers. The making of the case and the titling and decoration are done apart from the unbound book, and 1000 cloth cases an hr can be turned out on some of the machines now in use. Whatever lettering is required is also done by machinery, in a blocking press by which gold, metallic or pigment foils, or ink, are impressed in the case. Cases are blocked in colours as well as gold-blocked, although keen competition has modified the use of gold leaf. A wide range of decorative or pictorial effects can be obtained by printing cloth before case-making. The cases are applied to the books in a casing-in machine which applies adhesive to the end-papers on the sides, and pushes the book into the case, the back of which may have been rounded on the same machine.

Unsewn or threadless binding. The modern demand for the reduction of costs in B. has led to the devising of machines which produce books without sewing. In this process the books are assembled, the backs or folding points are sawn off and the resulting loose pages glued together on the back. They can then be reinforced with a strip of calico and covered with a paper cover for the acceptable markets, or the books may then follow the traditional rounding and backing and casing-in processes. The development of extremely strong adhesives has added this form of simplified binding which, however, is not yet universally accepted as a completely satisfactory substitute for sewing.

Materials. Modern B. production makes use of a number of substitutes for cloth and for this purpose various different grades of strong paper have been produced. The qualities of leather have been simulated by the plasticising of linen or cotton bases, producing a material widely used for more expensive books, or reference books.

See J. W. Zaehnsdorf, *The Art of Bookbinding*, 1903; D. Cockerell, *Bookbinding*, 1905, *Some Notes on Bookbinding*, 1929, and *Bookbinding and the Care of Books* (5th ed.), 1953; G. D. Hobson, *English Binding before 1600*, 1929; D. Leighton, *Modern Bookbinding*, 1935; A. J. Philip,

The Business of Bookbinding, 1935; J. S. H. Bates, *Bookbinding for Schools*, 1941; C. Ede, *The Art of the Book*, 1939-1950, 1951.

Book Clubs. There are various kinds of B. C.: for the purchase and reading of various books, for the printing of books in connection with a certain subject or study, and for the sale of books to members. Formerly many clubs used to be formed for the purchase of the best works of the day as they issued from the press, and for the distribution of them in turn among the members. The books thus bought were sold annually, and the proceeds carried forward.

Another kind of book club for the printing of books still exists in this country and the U.S.A. As first founded they were largely convivial clubs, holding dinners at intervals. Each member was bound to defray the cost of reprinting as many copies of some scarce work as there were members in the club; the chairman's copy was generally printed on vellum. The oldest of the B. C. is the Dilettante Society, which dates from 1734; another long-estab. club is the Cymmrodorion, or Metropolitan Cambrian Institute. The first book club to be carried on after modern methods was the Roxburghe Institute, instituted in 1813. Other famous B. C. are the Bannatyne Club, founded by Scott in 1823, the Maitland Club, the Abbotsford Club, and the Camden Society.

The book club as it is known to-day is a scheme for supplying to enrolled members special eds. of new books at regular intervals. The idea was put into being in a large way in the U.S.A., the Book of the Month Club, formed there in 1926, achieving eventually huge circulations. It was quickly followed by other B. C. in the U.S.A., notably the Literary Guild, which also has a vast membership. On the Continent, notably in Germany, the movement flourished in the same period. In England the Book Society was formed in London in 1929, its committee of literary critics selecting each month for the society's members a choice of one new book and 'recommending' sev. more books. The chosen book and the recommended books are made available for sale to members at the same time and at the same price as the ordinary ed. is first pub., and a jour. is given to members. Specialised B. C. followed with certain variations, notably political and religious B. C., and a variation of the purely literary book club was instituted in 1937 by Readers Union, which provides its members each month with a special ed. of a book which has been pub. one year or more, the price to members being lower than that of the regular ed. Among other B. C. operating with a large membership on similar lines are World Books (the Reprint Society), Foyle's Book Clubs, and the Companion Book Club. There are also sev. of these 'reprint' B. C. in the U.S.A.

Book-collecting. The value of a library must depend almost entirely upon the skill of the particular collector. B. assumes many forms, but there is usually

some central idea dominating the bringing together of a mass of books, coupled with the adoption of some method of classification. Some collectors are attracted almost solely by the rarity of a book, others by the age; others by the lure of a first or early ed., by the splendour or tastefulness of the binding, while some desire to bring together as many books as possible on certain specific subjects either for their own edification or with a view to ultimate transference to the public. B. in the true sense must be distinguished from the formation of a public or working library. Finally, a book-collector is rarely nowadays a 'biblio-maniac,' or person who, regardless of its points, collects, yet never reads, any book that happens to strike his fancy. An excellent list of rare, curious, and valuable books, compiled by a bookseller who was evidently anything but a biblio-maniac, is to be found in *A Journey Round the Library of a Bibliomaniac*, by Wm Davis, 1821. It is often said that the element of rarity is over-estimated by book-collectors. In this connection it is not far from the truth to assert that rarity does not depend on the number of copies originally printed, but rather on the belief that any particular book is not, or will not in the future be, easily procurable. An illustration of this, given in Slater's *Library Manual*, is furnished by the celebrated 'Elzevirs,' or books printed by Louis Elzevir of Leyden, who flourished in the 16th cent. Although the market was for that period flooded with 'Elzevirs' they never became very common, though the vogue of 'Elzevirs' has fluctuated and decreased rapidly in this cent. B. in the modern sense is generally said to have originated in the public-spirited action during the Tudor period, after the dissolution of the monasteries and the plundering of the monastic libraries, of Archbishop Parker and Sir Robert Cotton, who made it their business to rescue as many of the books as possible. A number of modern collectors owe their treasures to the purchase of old libraries belonging to private owners. The tasteful bindings of Grollier (q.v. and see also BOOKBINDING) and other Fr. and also It. bookbinders which appeared after the Renaissance, probably added a stimulus to a form of B. Impetus was given to B. by the introduction from Holland towards the end of the 17th cent. of the custom of selling old books by auction, and the hobby of B. quickly became fashionable. Prices have fluctuated from time to time. The close of the 19th cent. saw a rapid increase in the prices of specimens of early printing, illuminated MSS., first eds. of Eng. classics, and the earlier Fr. and It. printers. Caxton's, however, have more than held their own, and prices have increased during the last hundred years from three to four figures. Some of the most celebrated sales held in this country include those of the libraries of the Duke of Roxburghe in 1812; Wm Beckford (author of *Vathek*) in 1823; Richard Heber in 1834-7; the Earl of Sunderland in 1881; the Earl of Ashburnham in

1897-8; and Lord Amherst of Hackney in 1908-11. The Huth library, formed by Henry Huth (1815-78), was dispersed in 9 portions, 1911-20; and the Britwell Court library, after passing to Mr Christie-Miller, was sold in batches, 1916-27 (not all by auction). The collection of Americana in the Harmsworth Trust library was sold between 1948 and 1953, and the André de Coppet collection of the letters of Napoleon in 1956. In 1933 the Rosebery copy of Shakespeare's First Folio fetched £14,000; a fine copy to-day would fetch nearer £20,000. The highest price ever paid at an auction for a printed book was \$151,000 in 1947 in New York for a copy of *The Bay Psalm Book*, Cambridge, Mass., 1640. In 1951 the Shuckburgh copy of the famous Gutenberg—or 42-line—Bible was sold for over £40,000. It is now in the private collection of Arthur A. Houghton of New York. Other famous book-collectors of the 20th cent. include T. J. Wise (q.v., Eng. poetry), Dyson Perrin (early printed books), Chester Beatty and Yates Thompson (MSS.), Joseph Lilly, and Carl Pforzheimer. Three great Amor. collectors who have now institutionalised their libraries are J. Pierpont Morgan in New York, Henry Huntington in San Marino, and Henry Clay Folger at Washington—the last two excelling in Shakespeariana.

For full information as to prices see the ann. vols. of *Book Prices Current* and *Book Auction Records*. See also R. B. McKerrow, *An Introduction to Bibliography for Literary Students*, 1928; P. H. Muir, *Book-collecting as a Hobby in a Series of Letters to Eccryman*, 1944; J. Carter, *Taste and Technique in Book-collecting*, 1948, and *ABC for Book-collectors*, 1952. See also BIBLIOGRAPHY and LITERARY FORGERIES.

Book Illustrations, see ILLUSTRATION.

Book-keeping, science of recording commercial and pecuniary transactions in a systematic and accurate manner, that will preserve a distinct record and thus enable one at any subsequent date to understand their nature and effect with clearness and expedition, and also enable one to ascertain the exact state of the financial position of a business. All transactions should be correctly entered, as the stability of a business depends on the accuracy of its books, for these may be regarded as a mercantile chart, by a reference to which a merchant should be able to obtain information as to his trading; whether a certain dept is paying or worked at a loss, and whether his business is improving or likely to lead him to the bankruptcy court. Inefficient B. may often be the cause of bankruptcy. Bankrupts are liable to be penalised for keeping unsatisfactory books (the Bankruptcy Acts, 1883 and 1890). Companies registered under the Companies (Consolidation) Act, 1929, are compelled to keep at least 5 statutory books, and have their books audited annually by a public accountant. Under Section 26 of the Companies (Consolidation) Act, 1908, it is obligatory for a public joint-stock company to submit an ann. statement in

the form of a balance-sheet, audited by the company's auditors, to the Registrar of Joint-Stock Companies. The latest provisions regarding Auditors and Accounts of Companies are embodied in the Companies Act, 1948. Earliest known treatise on B. was by Lucas de Burgo, 1494, but the subject can be traced to the introduction of barter. At that time, whenever the transactions involved credit, traders had recourse to the elementary form of the notched stick, or chalk marks on a handy rock. In the 15th cent. the great mercantile cities of N. Italy, at that time the chief commercial centres of Europe, adopted the principles of double entry (*doppia scrittura*), and this system, under the name of the *It. method*, gradually made its way over Europe, many of the original names still being used in the practice of the science. The double entry system first appeared in England about the beginning of the 17th cent., and sev. books were produced on the subject, but only contained a modified version of the *It. method*. There are one or two different systems of B., and the so-called single entry is but an unsystematic, unreliable, and often misleading method. It merely consists of personal accounts, which only enable a trader to ascertain with whom he trades, and a mass of incomplete memoranda from which it is almost impossible to discover whether a profit has been made or not. The double entry system is mathematically correct in its results, and gives a complete statement of all business dealings. The books kept by a merchant vary according to his business, and on taking up the study of B. one is not taught how to keep the books of a particular trade such as those of a cloth merchant, wine merchant, or publisher, but the principles that will admit of general application to modern business, and this knowledge an intelligent person will have no difficulty in applying to any specific business. The chief books used in a firm keeping their transactions and accounts by the modern method are:

Private Ledger. This contains the records of the capital and 'drawing,' and the profit and loss accounts; thus if there are 2 partners in a firm, each contributing as capital £5000, the respective amounts would be credited to separate 'capital accounts.' The heading would be *Merchants' Capital Account*, and the amount of cash paid in by 1 partner would be entered on the right hand (credit) side; first the year and date, then 'by cash £5000,' the same proceeding being employed for the other partner. **Drawing account:** In this would be entered on the left-hand (debit) side the sums drawn out by the partners, and on the credit side the interest allowed on the capital of each partner, and also the share of the profit realised or loss sustained; when the drawing account is balanced the difference should be transferred to the respective capital accounts of the partners. **Profit and loss account:** To this would be debited all the trade expenses, and on the credit side one would

have the gross profit, the difference of course, as previously stated, being transferred to the drawing account.

The *Cash Book* is practically a part of the ledger, which is separated for purposes of convenience. In modern B. it is always taken for granted that the cash book is separate from the ledger, and is used alone for entering cash receipts and payments; as this is an integral part of the ledger, all items in it are separate halves of twofold entries; thus cash coming in from John Jones, £6, would be entered in the cash book on the debit side, and posted (the act of separately transferring the entry to the account which such an entry affects in the ledger). This would make the double entry. Thus we see that every entry that is debited in the cash book is credited to a corresponding account in the appropriate ledger, and vice versa. It is the practice of a cashier to enter cash receipts from the accompanying statements or cheques, and the payments from the memoranda or counterfoils in the trader's possession; then the corresponding entries (debit or credit) are made as soon after this as possible. The cash book should be balanced monthly, checked by the balance in hand, at bank, and brought down. It is advisable to prepare a reconciliation statement, showing how the balance is made up, thus:

Cash receipts, as per cash book	£2000	17	6
Cash payments, as per cash book	1560	4	6
Balance	£440	13	0
<i>In hand—</i>			
Notes	£10	0	0
Silver	5	10	6
Copper	0	0	6
	£15	11	0
<i>At bank</i>	425	2	0
	£440	13	0

The *Sales or Day Book* is used daily to record particulars of goods sold on credit, and is usually in an analysed form to facilitate the dissecting and summarisation of a variety of goods; thus, by employing a system of grouping the different sales, the merchant can tell at a glance what particular dept or class of goods is selling the most. A simple form of analysed sales book would be required by a trader dealing in corn, flour, and maize; it would be constructed as specimen on p. 388. When the particulars of an order have been entered in the sales book, the invoice should be made out therefrom and dispatched to the customer, then the entry should be posted to the debit side of the customer's account in the ledger; this makes the double entry. The sales book should be carefully added up, the totals carried forward, and at the end of a given period, usually monthly, the final totals are posted to the credit of the sales account, thus showing at a glance the correct sales of each particular line.

SALES BOOK (ANALYSED FORM)

1958 Oct.	J. Jones	1 Sack Flour 1 " Corn 1 " Maize	66	£ s. d. — 10 0 0 — 10 0 0	£ s. d. — 6 0 0 — 6 0 0	£ s. d. — — 10 0 0 — 10 0 0	£ s. d. — 6 0 0 10 0 0 10 0 0 26 0 0

Purchase Journal (Bought Day Book). In many business houses, purchases form a considerable part of the transactions, and various methods are employed to record them as concisely as possible. If the trader employs a good system, the labour involved in recording them is considerably lessened. It will be found that the purchases on 'credit' are very numerous and invoices will be received of all shapes and sizes, and in order to avoid considerable postings to the 'purchases account,' the 'bought day book,' or, as it is usually called, the 'purchases journal,' is employed; this is on the same principle as the sales day book, and in this all credit purchases are entered, the various purchases extended to their respective columns, and as the persons named in the purchases journal are creditors they will therefore be posted to the credit side of their personal accounts, as with the sales book. The purchases journal is added up at the end of a period and the totals posted to the debit of the purchases account, thus saving a multitude of entries in this account.

Journal. In modern commercial practice the journal proper has almost been done away with, in fact some important business houses employ no journal proper at all. On the Continent, however, the journal is still extensively used, being ruled to contain the whole of a trader's transactions. In France, under the Code Napoleon, its use was made compulsory. It is now used for recording such transactions as opening and closing entries, especially for those that do not come within the scope of other books, such as adjustments, bad debts, interest, etc. The common form of journal is simple; it consists of columns for the date of the entry, particulars, folio, and 2 cash columns for debit and credit; a usual entry would be thus:

Bills of Exchange Act, 1882 (45 and 46 Vict. chap. 61), may be defined as an unconditional order in writing addressed by 1 person to another, signed by the person giving it, requiring the person to whom it is addressed to pay on demand, or at a fixed or determined future time, a certain sum in money to, or to the order of, a specified person, or to bearer. A bill of exchange has many advantages, although some business houses do not adopt bills of exchange, considering them as significant of a state of weak finance. Some of the chief advantages of a bill of exchange are: it is a negotiable instrument, a convenient method for the transfer of debts, and there is prompt legal recovery in the case of non-payment. A firm may be financially embarrassed but have a considerable amount owing in book debts, so they arrange for some of their debtors to accept a bill drawn upon them; they can then obtain financial relief in a number of ways; discount the bill with a banker or bill broker, who will advance the money on it, subject to the deduction of a small discount, or they may transfer it by endorsement to a creditor. As it would be inconvenient to post a bill of exchange direct to the ledger on account of the numerous features of it, e.g. the dates of acceptance and maturity, the names of the acceptor, the bank payable, etc., it is usual to keep a separate record called a bill book, which sets forth in analysed form the date drawn, the drawer, bank payable at, tenor of bill, and due dates, these particulars being required for the due recording of a bill. When a bill has been accepted and received by the 'drawer' it is entered in the bill book, and the 'acceptor' immediately credited, and at the end of a given period the bill book is added up and the total transferred to the debit of the 'bills receivable account,' thus we have the double

Bill Book. It is the custom of many trading concerns to make and receive payments by methods differing from coins, bank-notes, or cheque. 'Bills of exchange,' or 'drafts,' are stamped promises to pay, and according to the

entry. The entries necessary for a bill payable would be vice versa.

Returns Book. In many cases a trader returns goods for various reasons; some may have been damaged in transit, portions may be unsatisfactory and not up

to sample, the wrong goods may have been sent. In the case of 'returns inward' a credit note should be at once made out, stating particulars of the returns and allowance, and should be entered at the same time in the returns book, which follows on lines similar to the sales day book; the item should be posted from there into the customer's account in the ledger; the returns book should be added up at the end of the period, and the totals transferred to the debit of the sales account. *Returns outward* in the majority of cases are entered at the back of the purchases journal posted from there to the creditor's account, and the total of the returns outward posted to the credit of the purchases account.

Ledgers. An impersonal ledger would contain particulars of all property and nominal accounts. Property or real accounts would consist of buildings, plant, and machinery, stock, goodwill, copyright, patents, etc., and in the case of these accounts all property acquired is posted on the debit side of the account, and is always regarded in business as a debtor to the trade for the amount paid in that direction. Sometimes property is parted with; when this is so, the respective property account should be credited. *Nominal accounts* are the subdivisions of the profit and loss accounts, and would be divided under the heading of wages, discount, trade expenses, interest, rent, rates, and taxes, bad debts, depreciation, repairs, etc. When these represent losses they should be debited to their respective accounts; when a gain, such as interest, discount, or rents received, then they should be credited. The *Sales ledger* contains the record of all the sales to customers. In very large establs. having an extensive turnover it is necessary to have the sales ledger divided into parts or sections, such as *tn.*, country, and foreign, and in some cases these are subdivided, so that 1 ledger may be in 4; then each ledger will contain so many letters of the alphabet, the first ledger having the letters A to G, and the others running consecutively. In the case of a large business it is very desirable that the ledgers should be divided, as this facilitates the discovery of errors, each book being balanced separately, and it also does away with the inconvenience of a cumbrous book. *Bought Ledger* is the facsimile of the sales ledger, but the entries are reversed; all items being posted from the purchases journal and placed on the credit side of the bought ledger. This and the debtors ledger especially should be posted daily.

With the development of the accounting machine the traditional book form of ledger has been replaced by loose-leaf cards for easy insertion into the machines for posting. The entries are made on the ledger card in similar manner to posting by hand, but as the machines have adding and subtracting registers built into them, the new balance is automatically printed by the machines after each entry, thereby obviating the necessity for tedious mental

adding and subtracting. As it is easy to take carbon copies with an accounting machine, a record of every transaction can be made on a sheet of paper passed under the platen of the machine, and the day's postings can rapidly be checked. A further important advantage of the accounting machine is that statements of customers' accounts are prepared and maintained at the same time as postings are made. Among the latest developments of machine accounting are the punched card and electronic systems (*see* AUTOMATON and ELECTRONIC COMPUTATION).

Trial Balance. This may consist of the total postings to the ledger, or the balances appearing at a certain date before the closing entries have been made. The correct method to use when preparing a trial balance is to extract the debit and credit balances and not the total postings, and is generally adopted in business. It exhibits in a concise form the information from which, after the necessary adjustments have been made, a profit and loss account, and balance sheet can be constructed. The total of the debit balances should agree with the total of the credit balances, and if they should not do so it shows at once that an error has occurred either in postings or in the compilation of the trial balance. Even if both sides agree there is still the possibility of compensating errors, e.g. an item of trade expense, which should have been treated as a loss, may have been entered as an asset. A trial balance, therefore, only proves that there is a credit for every debit, but in practice, if the trial balance agrees, it is generally taken that the postings have been correct, and that the accuracy of the books has been proved.

Balance Sheet is a summary in a classified form of the balances remaining in a set of books, kept by double entry, extracted after all the nominal accounts have been closed and all adjusting entries made. It shows the position of a business in relation to its proprietor and other parties, and it is prepared with a view of ascertaining the correct financial status of a trading concern, whether solvent or insolvent. Liabilities are shown on the left-hand side and the assets on the right. As a balance sheet is not an account, but a transcript of ledger balances at a given date, it should never be headed with 'Dr' or 'Cr'; some accountants, however, still occasionally prefix 'To' and 'By', which is incorrect. A simple form of a balance sheet is shown on p. 390.

The Companies Act, 1948, contains statutory provisions regarding the contents of Balance Sheet and Profit and Loss Accounts of Limited Companies.

B. is one of the subjects taught in the majority of the educational institutions in London and the provs. It is possible to obtain tuition at any of the evening class centres held by the London County Council during the winter session on payment of a nominal fee. The pupils are entered for the examinations held by the public examination bodies, at whose

BALANCE SHEET OF WILLIAMS & McDONALD ON 31ST DEC. 1958

examinations anyone may sit on payment of a small fee. The prin. London bodies are the London Chamber of Commerce; the Society of Arts; the National Union of Teachers; the Association of B. Teachers, etc. In addition to the above are the special professional societies for whose examinations only those who are specially qualified or articulated are permitted to sit. Text-books recommended for use: H. J. Clack, *Advanced Book-keeping: for the Advanced Student*, 1932; A. J. Favell, *Practical Book-keeping and Accounts* (two parts), 1934-5; G. O. Sutherland and W. Padgett, *The Groundwork of Book-keeping*, 1936; E. E. Spicer and E. C. Pegler, *Book-keeping and Accounts* (tenth ed.), 1938; D. Cousins, *Book-keeping and Accounts*, 1945; H. Brown, *Municipal Book-keeping and Accounts*, 1946. See also AUTOMATON and CALCULATING MACHINES.

Book-land, see BOC-LAND.

Book League, National, see NATIONAL BOOK LEAGUE.

Book-lice, insects of the family Psocidae and order Psocoptera, which destroy the bindings of books; the peculiar tapping noise they make has earned for them the title of *death-vaiches*. *Atropos* and *Clathra* are genera which include mischievous B.

Book of the Dead, see DEAD, BOOK OF THE.

Book-publishing, see PUBLISHING.

Book - scorpion (*Chelifer cancellarius*), arachnid of the order Pseudoscorpiones and family Cheliferidae. They are brownish in colour, have 2 eyes, and probably live on book-lice (q.v.).

Book-worm, name given to any larvae which feed on the paper, binding, and paste of books which are not often used, or are stored in museums. They may merely attack the binding, or may bore tunnels through the pages. Sev. species of *Anobium*, *Anthrenus*, *Ptinus*, and *Dermestes* are coleopterous insects of destructive nature which damage books. In America the *Phyllodromia* (or *Blatta*) *germanica*, a cockroach known as the Croton bug, performs the function of a B., though it is naturally not considered as one. Frequent overhauling of books is the best preventive of such pests.

Bookmaking, see BETTING.

Bookplate, or Booklabel, engraved or printed form establishing ownership, to paste inside the front cover of a book, and showing the name, monogram or coat of

arms of the owner of the book. Sometimes called *Ex Libris*, or 'From among the books of...'. From the 15th cent. wood-cut or engraved Bs. were popular, and often beautifully executed by well-known artists, such as Dürer and Bewick. In recent times ornate and armorial designs have given way to typographical or lettered B.s, such as those designed by Reynolds Stone. A large collection of B.s (The Franks Collection) is to be seen at the Brit. Museum, and another at the Fitzwilliam Museum in Cambridge. See W. J. Hardy, *Bookplates*, 1897; G. Howe, *Catalogue of British and American Bookplates in the British Museum*, 1904; G. H. Viner, *The Origin and Evolution of the Bookplate*, 1940; M. F. Severin, *Making a Bookplate*, 1949.

Booksellers Association of Great Britain and Ireland, formed in 1895, having as its main object the development of a stable retail side to the book trade by means of a price-maintenance system. In pursuance of this it vigorously supported the Net Book Agreement put forward by the publisher Mr (afterwards Sir) Frederick Macmillan. As well as protecting the interests of its members the B. A. has set out to improve and maintain the status of the trade, and has done much towards this by its efforts in promoting staff training and education schemes. The B. A. is organised regionally into 16 branches, each of which sends a representative to the national council. Specialist groups dealing with particular classes of book-selling have also been set up. An ann. conference and special sessions are held in which publishers are invited to take part, thus providing the Brit. book trade with an unofficial 'parliament.'

Bookselling as a trade has its recorded origins in classical times, and ant. literature contains many references to the booksellers (*bibliopolae* or *librarii*) of Athens and Rome, whose stock was the scrolls (vols.) produced by educ. slaves. B. was carried on in Athens from the 5th cent. B.C.; later Alexandria became the centre of the book trade and then Rome, where the booksellers were numerous and prosperous. The pillars outside the shops and the sides of the doors and windows were covered with the titles of books on sale within. There among the wealthy a collection of books was regarded as an essential part of a man's possessions. Horace complained that his booksellers (the Sosti brothers) made more out of his

books than he did. Titus Pomponius Atticus, Cicero's friend and publisher, was the first great bookseller. He had branches of his business in Rome and in the provs. The 4th cent. A.D. sees the end of references to B. (as a trade it would hardly have existed in the Dark Ages), but in the 12th cent. according to Hallam's *Literature of Europe*, shops were set up in Bologna and Paris, chiefly to serve the univs. In the 14th cent. Paris was the world's book market, the booksellers functioning under univ. regulations; in fact, the development of univs. and the growth of B. went hand in hand. Cambridge booksellers were first referred to in 1276. John Hardy, bookseller of Cambridge, is recorded in 1350 and stationer Robert of Oxford in 1308. In medieval times booksellers were called stationers owing to their transacting business from stalls or shops (*Low Lat. statio*). This distinguished them from the pedlars who in pre-Reformation times, and later, were lively channels of book distribution. Booksellers also sold parchment and paper, and thus it is that in modern times the term stationer has shifted its meaning. The Booksellers' Guild, incorporated as the Stationers' Co. in 1557, has 600 years of hist. This company in the 16th cent. had wide powers enabling it to suppress works obnoxious to authority. The sale of gospels and devotional books was long the monopoly of guilds or of univ. stationers, and later in the 16th cent. of the king's printer. There was at that time no free press in England, though books could be bought freely on the continent of Europe; Laud in the 17th cent. was notorious for the restrictions he introduced, but these were abolished during the Commonwealth.

Just as in its time the rise of Christianity produced a widespread demand for copies of the gospels and of missals which were issued as codices (i.e. books, as distinct from scrolls), so did the invention of printing, the new learning, and the Reformation influence decisively the demand for books and help to shape the trade of B. as we know it to-day. Gutenberg and his successors laid the foundations of the trade. In his time, as in classical times, the producer was the distributor, the publisher was the bookseller, and for two or more cents. the bookseller was printer and bookseller combined (e.g. Christopher Plantin (1514-89) of Antwerp, whose printing office and bookshop is preserved as the Plantin Museum). An English counterpart was Edward Blount (admitted to the Stationers' Co., 1588; d. 1632) who, with Wm Jaggard, bookseller, and printer to the city of London, pub. the First Folio of Shakespeare. Jacob Tonson (1656-1736) was one of the great booksellers of his day. He pub. for Dryden, did very well out of *Paradise Lost*, and by publishing Rowe's ed. of Shakespeare rendered him for the first time generally accessible. Another was Thomas Guy (1644-1734), notable as much for his B. as for his benefactions. The 18th cent. has been called the golden age of B., and Robert Dodsley (1703-64)

is one of the great names of the cent. He pub. much for Samuel Johnson and suggested and helped to finance the *Dictionary*. James Lackington (1746-1815) was the first bookseller to conduct business on a strictly cash basis and the first to deal in remainders. In those days there was no royalty system, the author being paid a lump sum for his work—and often, as the records of 'Grub Street' show, a very small sum. Another evil of those days was the patronage system, by which a struggling writer had his work printed through the favour of some nobleman or other wealthy person, a system in which booksellers had a part; and a variant of that was the subscription system, by which wealthy or learned persons subscribed for copies of a work before pub., and which pertains to-day only in the case of books privately printed (though in the trade all orders for a book before the actual date of pub. are still called subscription orders).

The beginning of the 19th cent. saw the end of the publisher-bookseller, and thereafter the two functioned separately, so that to-day publishing is a clearly defined profession and B. as clearly recognisable as a trade. The cent. saw certain developments in the trade, notably the rise of the circulating libraries, the most famous being Mudie's, and the estab. of the railway bookstall, from which in the next cent. developed the multiple book shop. It was a hard but interesting cent. for the bookseller, with its development of the technique of printing cheaply and the gradual increase in literacy, which encouraged the opening of bookshops all over the country. But the trade was not organised. Towards the end of the cent., with increasing competition came the discount system, in which booksellers sold at varying but considerable discounts off pub. prices. It was cut-throat competition and it brought ruin to many booksellers. So disastrous had the position become in the last decade of the cent. that the publishers saw their businesses in danger unless some action was taken. Frederick Macmillan, with his friends Murray and Longman, devised the net book system, described as the sheet-anchor of the trade, which was introduced in 1899 and was generally adopted by 1906. This ensured that any book pub. at a net price should be sold at that price. For 60 years this agreement has been honoured by the trade, and what measure of prosperity the bookseller now enjoys is due substantially to this agreement, which was operated by the Publishers' Association, who had the power, only rarely used, to black-list persistent offenders. The passage into law of the Restrictive Practices Act in 1956 was seen as a grave danger, but the general acceptance by the publishers of the new Net Book Agreement, 1957, made it plain that they were determined to maintain the fixed price principle; in fact, the new agreement made the net book system a more closely knit instrument than heretofore; what previously could only be regulated by action within the trade had

now become a contract enforceable through the courts of law.

In 1895 the booksellers formed themselves into an association (now called the Booksellers' Association (B.A.) (q.v.)), set up, as was the Publishers' Association formed a year later, to provide a body to deal corporately with problems connected with the implementation of the Net Book Agreement. Membership of the B.A. is not obligatory on booksellers: of the 7000 persons or concerns now registered with the publishing body as eligible to receive trade discounts, some 2700 only are members of their own trade organisation. This number includes all booksellers of note. Advantages of membership include the sale and exchange of book tokens, introduced to a hesitant trade in 1926 and now an accepted and valuable part of B., participation in the Booksellers' Clearing House, by which some hundred or so accounts may be paid by one cheque, and various sales promotion schemes, formulated from time to time, the most striking being the national books sales of 1955 and 1956.

The year 1955 saw the final collapse of the great wholesalers, Simpkin Marshall, who had never properly established themselves after the total destruction of their stock and premises in 1940, a loss the magnitude of which both sides of the trade were quick to experience. For both it meant enormous additional labour in the servicing of orders for single copies of a title. Late in 1955 an 'Orders Clearing' service was instituted as a first step towards the eventual setting up of a jointly controlled 'Single Copy House,' a centre for the collection and dispatch of these items of trade which represent as much good service as profit. Notable in the hist. of the trade in the period between the wars was the introduction in 1926 of book clubs (q.v.); and their growth and successful exploitation during a quarter of a cent. has resulted in a current ann. distribution of some 9½ million vols., fewer than half of which pass through the booksellers' hands, however. Even more revolutionary in shaping reading habits have been Penguin Books, started in 1936, which by high standards of production and text broke down the old prejudice against paper-backed books, led the way for other first-rate series, and widened the market for books to an astonishing degree. The paper-back has become a national institution, and well-designed shops for the sale only of such literature are beginning to be opened up.

The increase of the reading habit among children has resulted in craft of a high order both in authorship and in production being devoted to juvenile literature, and the ann. Carnegie Medal, for a work of outstanding excellence in this field, has been awarded by the Library Association yearly since 1937. In 1940 the book trade, under the wise and vigorous leadership of Sir Geoffrey Faber, fought a new 'battle of the books,' and successfully resisted the imposition of a purchase tax on books. Recent hist. of the trade is remarkable for the degree of

co-operation achieved between publisher and bookseller, to an extent impossible to have foreseen earlier in the cent. The founding of the National Book Council (now the National Book League, q.v.) in 1925, and the establishing in 1929 of the Joint Advisory Committee of publishers and booksellers, marked practical steps on the path to fuller collaboration.

In 1948 the booksellers, aware that the trade was less prosperous than was safe for its healthy functioning, were instrumental in setting up a joint book trade committee, which after four years of close discussion produced a valuable report on sales expansion, methods of distribution and rationalisation of terms, and trade practice. In 1953 came the Chalmers Wade report, an examination of the trading figures over the previous four years of a number of representative booksellers, which dramatically spotlighted the narrowing margins of profit in B., due to irresistible increases in overheads (rent and wages).

It is a reflection on the trade that the economics of retailing are such that even given the stabilising effect of fixed prices, it is not possible to make a living by the sale of new books except in a very few special cases, e.g. in central London or in some univ. cities. The bookseller is forced to add other commodities or services to his stock-in-trade, which may include second-hand books and probably a lending library; stationery in all its ramifications is the most usual and obvious addition, but reproductions of works of art and gramophone records are increasingly being thought of as appropriate stock. The reasons for this condition of things are various and complex, but they may be summed up as being due primarily to lack of turnover, i.e. not enough books being bought by the public, and secondly to insufficient profit margins: it is more costly to sell books than most other commodities owing to slow turnover, degree of service required, and rapid depreciation of stock.

Anyone may set up as a bookseller in this country. No qualifications are needed; all that is required in an official sense is that he should be registered by the Publishers' Association as eligible for trade terms. He need know nothing of books or of the trade. In fact, to succeed he will require to possess varied and diverse qualities, for B. at its best calls for wide general knowledge, a retentive memory, a natural faculty for liking people, a love of literature, and, most important, sound business instincts. His stock he will build up with the utmost care: buying is the key job in any bookshop and calls for judgment of a fine sort. He will have to trim his purchases to the particular needs, found by trial and error over long years, of his locality and trade. He will be expected to maintain a basic stock of classic literature, and representative titles from all the popular and leading series, and though he may regard himself as a general bookseller, he will probably find it convenient and profitable to specialise in a congenial range of subjects. New books are bought largely in advance of

pub. from publishers' travellers; such orders usually carrying a better discount than orders sent in after pub. To the travellers are given orders for replacement of level stock, that is, titles reckoned normally to be kept on the shelves. The need to secure best discounts requires an exact knowledge of publishers' terms, which though possessing a superficial uniformity do vary remarkably from publisher to publisher or from category to category of title. Some are more generous, others less so: it will depend also on whether the order is for general literature, or for technical or educational works, or which discounts are restricted. His daily orders, usually for single copies of books, on the speedy supply of which his reputation for good service will largely depend, will require all his attention, for without a comprehensive wholesale service he has to decide on the quickest and the most profitable way to get these daily orders to his shop. The bookseller will pay attention to talks on books on the radio and television; he will keep abreast of book reviews in the leading literary journals, so that he is prepared for inquiries. If he is wise he will have secured some institutional business (i.e. book orders from schools, technical colleges, public libraries, etc.). This business is regular, and though it is usually conducted at a discount is good bread-and-butter trade. He has to do something more than wait for orders: he must exercise a creative salesmanship, if he is to make a mark in his community. He cannot hope to stock more than a fraction of the 18,000 new books pub. every year; but by having available the best reference catalogues, he can at least know something of them, and that is half the battle in securing an order. Particular attention will have to be paid to new developments in his locality, as, for example, factory building and its potential market for technical literature. There is in this country virtually no system of sale or return, except in the case of particular books requiring special display. All the books on the shelves of a bookshop, therefore, have been paid for: they are the booksellers' capital, and on his skill in selling them depends his solvency. As important as good stock is good staff, who should be lively, knowledgeable, and courteous. Their wages are now subject to the rulings of the official wages board, and their trade education can be helped by the courses arranged by the Education Board of the B.A. B. is a trade of many attractions: it appeals increasingly to women of education and character, and it can make a very satisfying means of livelihood.

Second-hand or antiquarian B. is widely practised in this country: a good second-hand department is a useful, if not a necessary adjunct to any well-run bookshop. But it is a different sort of business, calling for different techniques, involving attendance at sales and issue of catalogues. It is in the main a highly specialised trade, requiring technical knowledge in limited fields. Many anti-

quarian businesses are one-man concerns, but that one man is an expert, possibly a scholar in his own territory. Not only is he making a living but he is also serving the learned world by his specialisation. The second-hand trade has its own organisation, the Antiquarian Booksellers' Association.

The practice of B. in Great Britain as outlined here applies in general to most overseas countries, though the tendency, on the continent of Europe at all events, is for a greater cohesion between trade organisations, a more rigid control, exercised through the publishing side, resulting in greater efficiency, and a markedly superior distributive system. In the countries of the British Commonwealth there is greater flexibility of discounts between publisher and bookseller, to offset heightened stock risks due to transit difficulties, though many Brit. publishers now maintain stock either themselves, or in the hands of agents, in Australia, Canada, New Zealand, South Africa, India, and Pakistan. B. in the U.S.A. differs considerably from the system in this country. Except in the largest or univ. cities, where admirable book-stores are found, the traditional bookshop scarcely exists. There the overall picture is dominated by the paperback, which finds its market through the ubiquitous drugstore and the like, and by the book club, through which millions of vols. yearly reach their subscribers by post. On the other hand, the antiquarian trade is well conducted on traditional lines.

Boole, George (1815-64), mathematician and logician, b. Lincoln. He entered the scholastic profession when only 16, and later started a school of his own in Lincoln. In 1849 he was appointed prof. of mathematics at Queen's College, Cork, and had already shown his mathematical ability by his 'Theory of Analytical Transformations' pub. in the *Cambridge Mathematical Journal*; to it he contributed many other papers and also to its successor, the *Cambridge and Dublin Mathematical Journal*, and to the *Philosophical Magazine and Philosophical Transactions*. He is best known by his *Treatise on Differential Equations*, 1859, later revised by Todhunter to become a standard text-book, and by a *Treatise on the Calculus of Finite Differences*, 1860. B.'s writings on logic are even more

original than those on mathematics. See his *Mathematical Analysis of Logic*, 1847, and *An Investigation of the Laws of Thought*, on which are founded the *Mathematical Theories of Logic and Probabilities*, 1854.

Boom, industrial tn of Belgium, 12 m. S. of the city of Antwerp. There are brick and tile works, breweries, salt and starch manufs. Pop. 18,400.

Boom: 1. Nautical term (allied to 'beam,' from Dutch *boom*) for the spars which are attached to the mast at one end, and controlled by the sheet at the other end,

extending along the foot of the sails. According to which sail it is connected with, it is termed the jib-boom, the main-boom, etc. The term was also used for a barrier of timber, etc., which was fastened across the mouth of a harbour in war to prevent the entrance of the enemy's vessels, as the famous B. in the siege of Londonderry in 1689. In modern warships it is a spar placed at right-angles to the hull, to which small boats are made fast, used only when the vessel is at anchor or secured to a buoy. It is referred to as the lower B.

2. Commercial term, originating in the U.S.A., having come into use during the latter half of the 19th cent. To 'boom' (M.E. *bummen*) means 'to make a deep continued sound,' and as a sudden movement often produces an increasing sound B. has come to mean a sudden spurt of activity in the business world.

Boomer, Australian name of the male of the largest species of kangaroo.

Boomerang, missile made of wood, used by the aborigines of Australia and of some other places. There are 2 kinds of B., which must be carefully distinguished, the return B. and the non-return B. The origin of the term is not definitely known, but it seems to have been the word used by the aborigines of New S. Wales for the weapons which they themselves used. The B. is made of hard wood and in Australia is always curved at an angle of between 90° and 120°. It is 2-3 ft long and weighs roughly half a pound. The non-return B. is much longer, and from Central Australia come huge specimens, 6 ft long. One side of it is flat, the other convex, and along the convex side runs a sharp edge. The arms have a skew upon which the return or non-return of the B. depends. The B., when about to be thrown, is held vertically, and when thrown as much rotation as possible

should be imparted to it. After travelling 50 or more yds revolving in an upright direction, it turns over on the flat side, curves away to the left, and begins to rise in the air, before it finally returns to the thrower and drops. An Australian will often make it describe 3 or 4 circles, rising 150 ft, before it returns to him, and it has been known to return to the thrower even after striking the ground. The war B. is of the non-return type and is thrown under the shield in a stooping position. It is sometimes made to strike the ground some 20 yds ahead of the thrower, and then flies 80 yds or so farther at a height of 4 ft.

Boomplaats, tn of S. Africa in the Cape Prov. It is the site of a battle fought in 1848, when the British under Sir Harry Smith defeated the Boers under Andries Pretorius, who had relied upon help which did not materialise.

Boonder, see RHESUS MONKEY.

Boone, Daniel (1734-1820), Amer. backwoodsman and pioneer, b. Pennsylvania, of Eng. descent. His early life was spent on his father's farm. In 1767 he visited the dist. of Kentucky, which, however, he was not the first to discover. Later in sev. campaigns he explored more thoroughly the ter. of Kentucky, meeting with many adventures. In 1775 he led the party of settlers who founded the tn of Boonesboro, or Boonesborough in Kentucky. Later, during one of his expeditions, he was captured by Shawnee Indians, adopted into the tribe, and only managed to escape with considerable difficulty. For a short time he sat in the Virginia legislature as the representative of Kentucky. He lost all his land in Kentucky owing to his want of formal titles, and retired later to Missouri, where in 1803, when this ter. came into the possession of the U.S.A., he again lost his land for the same reason. In 1812 he was granted some land as a recognition of his services. Many biographies of him have been written, one of the best being that by John Bakeless, *Master of the Wilderness: Daniel Boone*, 1939.

Boorde, or **Borde**, Andrew (c. 1490-1549), physician and author, was educ. at Oxford. He joined the Carthusians while still a minor, and was made suffragan Bishop of Chichester, in 1521. He was freed from his monastic vows in 1529, and then studied medicine, afterwards travelling on the Continent. He was, after he had returned to London in 1534, sent on a mission by Thomas Cromwell to discover the state of feeling which prevailed abroad towards the Eng. king. In 1536-8 he travelled widely through nearly every European country, but his account of his travels, sent to Cromwell, was lost. Wrote *Fyrst Boke of the Introduction of Knowledge* (the earliest continental travel guide), 1548, *Dietary of Healthe*, 1562, and *Breviary of Helthe*, 1547.

Boos, Martin (1762-1825), Ger. priest, b. Bavaria. In 1790 he originated a religious movement parallel to that of the Protestant Pietists. He was created prof. of theology at Düsseldorf in 1810, and held the post till 1819.

British Museum

RETURN BOOM-
ERANG USED IN
HUNTING
NW. Australia.

Booster, dynamo worked as an auxiliary to a larger one for the purpose of charging, or adjusting the charge of, accumulators. It is usually arranged that when the load on the supply dynamo is greatest, the B.s help the accumulators to discharge, but when the load is less, the B.s recharge the accumulators.

Boot, see **BOOTS AND SHOES**.

Boot, Boots, or Bootikin, instrument of torture used in order to extract confession from suspects. It seems to have been first introduced in Scotland, where its use appears to have continued down to the union of the 2 kingdoms in 1707, when it was enacted that torture should not be used again in Scotland. Torture appears to have been last used in England about the year 1640. It comprised a long iron or wooden B. into which the foot of the victim was inserted, wooden wedges being afterwards inserted, usually between the B. and the calf, and driven in forcibly with a wooden mallet. Between the blows questions were put to the sufferer until he either confessed or was mercifully released by unconsciousness. At the same time that this instrument of torture flourished in Scotland, a similar instrument was used in Germany called the 'Spanish B.' Other varieties of the instrument seem to have been metal B.s which were placed on the victim and then excessively heated, and B.s made wet and then placed on the victim's foot and allowed to contract as they dried.

Boötēs, constellation next in the heavens to the Great Bear. If the latter constellation be regarded—as it is sometimes called—a Plough, or a Wagon, B. may be regarded as representing its driver. B. was, in fact, termed by the Greeks *Arctophylax*, the 'bear-keeper.' Alpha Boötis, or Arcturus (q.v.), is the brightest star in the N. hemisphere and Epsilon Boötis is a beautiful double of yellow and blue.

Booth, Barton (1681-1730), actor in the reigns of Anne and George I. joined a company of strolling players in his youth. He had considerable talent, and was received in Dublin with great applause. In 1701 he came to London and joined the Drury Lane company. His most famous part was that of Cato in Addison's play of that name. He was buried in Westminster Abbey. His life was written by Theophilus Cibber.

Booth, Charles (1840-1916), sociologist, b. Liverpool. He was a member of the shipping firm of Alfred Booth & Co., Liverpool, and a fellow of the Royal Society. He made inquiries into the statistics affecting various social questions, and in his book, *Life and Labour of the People in London*, 1891-1903, he deals with these statistics, and discusses the condition of the different classes. He did a great deal towards securing old age pensions, and on this subject he wrote the following books: *Pauperism, a Picture, and Endowment of Old Age, an Argument*, 1892, and *Old Age Pensions and the Aged Poor*, 1899. He was a privy councillor, and won a high place among sociologists of the day. President of the Royal

Statistical Society, 1892-4. See memoir by M. Booth, 1918.

Booth, Edwin Thomas (1833-93), Amer. actor, b. Belair, Maryland, the second son of Junius Brutus B. (q.v.). He made sev. appearances on the stage previous to his father's death, but was not held to have been a very great success. After the death of his father (1852), he toured California and Australia, and met with overwhelming success. On his return from his tour, he played at the Winter Gardens in New York (1862), producing Shakespearian plays on a magnificent scale. During the period which followed the assassination of President Lincoln by his brother, John Wilkes B., his career was overshadowed by that event (1865). In 1868 he built a theatre of his own in New York, but eventually lost all his fortune in it. He produced here a number of Shakespear's plays, and by great labour was able to retrieve his fortunes. He founded the Players' Club in New York, and converted his own private residence into a club house. He was a first-rate actor, particularly in tragic parts, and was asked by Irving to play in London the roles of Othello and Iago alternately with himself. His last appearance was as Hamlet in 1891 in Brooklyn. Life by E. B. Grossman, 1894.

Booth, Evangeline Cory (1865-1950), 'General' of the Salvation Army, (q.v.) b. Cambridge Heath, Hackney, seventh child of Wm B., founder of that body. She was leader of the Salvation Army successively in Great Britain, Canada, Newfoundland, and the U.S.A., and succeeded Edward J. Higgins as general in 1934. She d. at New York. She composed sev. songs, including 'Songs of the Evangel', 1927. Other pubs.: *Towards a Better World* (sermons), 1929, and *Woman*, 1930.

Booth, John Wilkes (1838-65), Amer. actor, son of Junius Brutus B. (q.v.) and younger brother of Edwin Thomas B. (q.v.). In 1865, disappointed by his ill success as an actor, he entered into a conspiracy which had as its object the assassination of Abraham Lincoln, as a revenge for the ill success of the Confederates. On 14 April, while Lincoln was watching a play from a box at Ford's Theatre, Washington, B. shot the president and managed to escape, although he had broken his leg. He was, however, ultimately tracked to Virginia, where, since he refused to surrender, he was shot.

Booth, Junius Brutus (1796-1852), actor, b. London. Father of Edwin Thomas B. (q.v.) and John Wilkes B. (q.v.). He received a fair education, and, after trying a number of professions, he appeared at the age of 17 in some unimportant parts. Two years later he appeared at Covent Garden, and from this time was considered one of the best actors of the age, and Kean's greatest rival. In 1821 he migrated to the U.S.A. and became famous there.

Booth, William (1829-1912), better known as Gen. B., was b. Nottingham. At an early age he came under strong religious influences and, after having been

a local preacher with the Wesleyan Methodists and a minister of the Methodist New Connexion, he severed his connection with those bodies and engaged in evangelistic work. His work was done amongst the poorest and the most degraded people, and he organised them into bands who openly testified to their conversion. He organised successively a number of missions, the most successful of which was the Salvation Army (q.v.) in 1878.

Booth, William Bramwell (1856-1929), eldest son of Wm. B., founder and first 'General' of the Salvation Army, b. Halifax. Educ. privately, he began public work in 1874. Chief of Salvation Army staff from 1880; chairman of Salvation Army Life Assurance Society and the Reliance Bank. He was ably assisted by his wife Florence whom he married in 1882, and by whom he had 2 sons and 5 daughters. All the family joined enthusiastically in carrying on the work started by his father for the relief of the 'submerged tenth.' On his father's death, B. succeeded him as general of the Army, and it was largely owing to his organising ability that the movement's missionary and social activities were estab. and extended. He was a virile opponent of social evils. In 1883 he joined with W. T. Stead in attacking the 'white slave' traffic which resulted in the passing in 1885 of the Criminal Law Amendment Act. Among his pubs. are *Social Reparation*, 1899, *Bible Battle-Axes*, 1901, *Papers on Life and Religion*, 1920, and *These Fifty Years*, 1929.

Booth (from a Scandinavian root, seen also in Icelandic *búa*, to dwell, and Dan. *bod*) is a covered stall at a fair or market, set up for the purpose of displaying goods for sale. At first a B. was a temporary structure, taken down each week after market-day, but there was always a tendency for the B. to become permanent. Records, dating as far back as the 12th cent., have preserved many complaints lodged against encroachments on the market-place. Thus in 1192 the abbey of Bury St Edmunds made a fruitless attempt to remove the sheds which citizens had dared to set up without the abbot's consent. That tendency towards permanence is well illustrated by the 'Lucken-B.s.' that grew up in Edinburgh High Street. A burghess became so attached to his own little niche beneath the tn hall, that the timber planks of his movable stall were gradually replaced by lath and plaster, and even by brick and stone. These unsightly 'kramies' or B.s., fastened to the basement of public buildings, have been aptly compared to limpets on a rock. The shopman stood within the unglazed window, the shutter of which divided horizontally in the middle, so that the upper part formed an eaves or awning, and the lower portion a shelf for his wares.

Bootham School, public school for boys, founded at York in 1823 for sons of members of the Society of Friends. Boys of any denomination are now accepted.

Boothby, Guy Newell (1867-1905),

Australian novelist, b. Adelaide. His grandfather was a Yorkshireman, who emigrated to Australia in 1853. B. finally left Australia for England in 1894, and, settling at Bournemouth, estab. a reputation as a novelist of the popular type. His novels include *A Bid for Fortune*, or *Dr Nikola's Vendetta*, 1895, *The Beautiful White Devil*, 1896, *The Fascination of the King*, 1897, and *Dr Nikola's Experiment*, 1899.

Boothia, Gulf of, sea passage forming the N. boundary of Boothia Felix. It is an extension of Prince Regent Inlet, and is about 310 m. long.

Boothia Felix, peninsula situated on the N. coast of Canada. It belongs to the Franklin dist., and its area is about 13,100 sq. m. It was discovered by Capt. Ross, 1829-33, and named after Sir Felix Booth, who financed the expedition to the extent of £17,000.

Bootle, co. bor. of Lanes, England, situated at the mouth of the R. Mersey, immediately N. of Liverpool. It is noted for its immense riverside docks. It has large engineering and tin smelting works, tanneries, corn mills, etc. There are 2 railway stations on the main Liverpool-Southport line, and 3 on the Liverpool Overhead Electric Railway. B. is a fine tn, containing many large public buildings. There are libraries, museum and art gallery, tn hall and municipal offices, and sev. parks and recreation grounds. The parl. bor. returns 1 member. The tn suffered severely during Ger. air-raids on Merseyside in 1940-1. Pop. 75,000.

Bootlegging, term applied to the smuggling of illicit liquor. It is an old name which goes back to days when the liquor was concealed in the large sea-boot of the smuggler, and was revived in the 20th cent. in connection with the smuggling of alcohol into the U.S.A. at the time of prohibition (q.v.). In the early days of prohibition B. was a large industrial organization with a network of traffic over the Canadian and Mexican borders of the U.S.A., but this trade was later stopped by the vigilance of Federal prohibition agents. Modern B. approximated more to old-time smuggling in the attempts that were made to land liquor on the Pacific and Atlantic coasts of America. On the Atlantic side the consignments of alcohol were shipped from the distilleries of Scotland to the 'rum row' as it was called, off New Jersey. Brit. Bahamas, and the is. of St Pierre, off Newfoundland, were used as half-way houses, and from them means were found to transport the liquor to the Amer. coast. Liquor importations into Nassau, Brit. Bahamas, increased so phenomenally that gov. revenue from a tax of \$7 a case went up by leaps and bounds. Another method of B. was for the 'rum-fleet' to wait out at sea beyond the reach of revenue cutters, Amer. waters being fixed at a 12-m. limit. The liquor was then conveyed to the coast at night by fast motor-boats. The B. industry, however, suffered from its degeneracy, for so many poisonous concoctions were peddled under faked labels that neither the bootlegger nor his customer could

be certain of the genuineness of a boot-legged brand. A serious aspect of B. was that it afforded equal opportunities for the importation of drugs and narcotics. The bootlegger depended upon a business organization, linking him up with the smuggler or the 'moonshiner,' the latter being the man who owned a secret still, but he had another enemy beside the prohibition agent, and that was the 'hijacker.' The hijacker preyed upon the bootlegger and, playing a lone hand, constituted the most dangerous element in the whole lawless trade of B.

Boots and Shoes. Many and various have been the different forms of covering for the human foot, and many stages of evolution have been passed through from the primitive sandal to the latest products of the shoe factories. Not only fashions but climatic conditions, have always been factors in the form of foot-gear. The most elementary form of covering is the sandal; the next is the slipper, in which the straps or lacing of the sandal are discarded; from the slipper the ordinary short shoe is evolved, and from the latter the boot. As it is the most primitive, so naturally is the sandal the most ancient form of foot-covering. In many museums specimens can be seen of sandals dating back to the time of the Egyptians; papyrus was a common material for sandals of that period. Long boots were worn by hunters, and the *cothurnus*, or boot with a very thick sole, was used by tragedians on the stage. In Rome there were more varieties: *soleae*, or sandals, were used by the plebs or common people; *calcei*, or black leather shoes, were worn by members of the patrician class; *mullei*, or red leather shoes, were reserved for the use of senators. From early times up to the present day, the oriental peoples excelled in the art of making beautifully ornamented slippers. In medieval times shoes were worn on the continent of Europe, and by the end of the 14th cent. the fashion of pointed toes had been carried to such a length that the toes of many shoes of that period project for over a foot, in a long curled-up strip of leather. By the time of Edward IV the boot proper was *de rigueur* as an article of knightly attire, and continued so until the more ornamented Fr. boot was introduced by Charles II. William III and his followers estab. the use of the jack-boot for horsemen, and it was used by the Brit. cavalry until quite recently. A somewhat less cumbersome form is used by the Household Cavalry. The jack-boot was superseded in general use by the Hessian boot, which was more slightly over the tight pantaloons in vogue than the former. For use under loose pantaloons the Duke of Wellington introduced the boot which bears his name. After the Wellington the Blücher boot was used, and now the form of boot generally worn is short, just covering the ankles.

Boot and shoe manufacture. Until the advent of machinery, all boots were made by hand; but shoe making as a handicraft is dying out, and machinery may be used for all the processes. The machine-made

products do not equal the best of those made by hand in flexibility or endurance; but a more even standard is attained and the output attained by machinery is of course much greater. The Blake machine for sewing the soles together marked the first step in the transition from hand to machine-made goods, and the machinery later invented for welting the shoe rendered the best of the latter practically on a par with the best of the former. The Blake process which was extensively used in ladies' shoes has now become almost

obsolete and has been replaced by a process in which the sole is attached to the shoe by means of an adhesive. The difference between the riveted shoe, made by the Blake process, and a welted shoe is briefly as follows. A Blake or riveted shoe is sewn, or riveted, from sole to insole, at one operation; the upper is at the same time fastened between the 2 soles. This vertical seam, even if sewn, has a tendency to stiffen the shoe unless the leather used is exceedingly light and flexible. If the shoe is riveted it is still stiffer, and therefore this style of shoe is used only for rougher wear. When a shoe is welted, whether by machine or hand, the upper, insole, and welt are first sewn together with a horizontal seam, extending half through the insole; the welt and sole are then joined by a second operation. The defect of the Blake and riveted shoes is by this means eliminated, as the shoe bends inwards

along the horizontal seam, and is much more pliable. In almost all modern factories human labour is dispensed with as much as possible; in shaping the uppers it is used more than in the rest of the processes. The uppers of footwear are made from the skins of the lighter animals—mainly calf, goat, and sheep, whilst the soles are made from the butt portion of heavier hides—such as oxhides. The shoulders of these animals are also used for very light, flexible soles for slippers and

light-weight shoes. The first process in making the uppers is cutting them out according to pattern. The skin is laid upon a bench, the pattern is placed on the top of it, and the leather is cut round the edges of the pattern with a sharp knife. The various pieces of the uppers are then sent to the machine room. A variety of machines are here used: stitching machines, fancy perforating machines, edge-folding machines, barring machines, machines for trimming the edges of the leather, sewing-machines of various kinds, etc. In lace-up boots a single machine punches the hole, puts in the eyelet, and fastens it. The leathers that have to be seamed or folded are 'skived' first, then they are pasted together and placed under

the sewing-machine, and after they have been stitched together the seams are levelled down by a 'seam rubbing' machine. The thicker leathers used in the bottom parts are cut from the hide, after being pressed under powerful presses, with dies shaped according to the various parts required. The layers of leather required for the heel are first of all nailed together loosely in one machine, and then crushed solid in another, which exerts on them a pressure of sev. tons. All the various parts of the boot are now sent to the assembling room, preparatory to being started through the making and finishing rooms. The shoes which are to be made 'stuck-on' or 'cemented' (the modern development from the original Blake sewn shoes) receive slightly different treatment from those that are to be welted. The last is iron on the bottom, and so the lasting machine permanently tacks the upper to the insole with short tacks, which are clenched when coming into contact with the last. An alternative method of lasting is to lay the upper edge over the insole and to stick it down with an adhesive. In the welted shoe the upper is not nailed down to the insole, but is held by a lip previously cut in the latter, standing out therefrom vertically. The lip, the upper, and the welt are all 3 sewn together by a machine whilst the shoe is still on the last. The welt is now beaten out straight, and the sole laid on and held in position by paste, etc., until it is stitched. From this point the treatment of 'stuck-on' and welted shoes is similar, save that the former generally have the nails driven from the inside through to the heel, while the latter have the nails driven through the heel to the sole. In the finishing room the heel is first trimmed into shape, and then smoothed with sandpaper. The sole is treated in the same way, and the edges of both are then coloured and burnished with machine-driven hot irons. In welted shoes a machine now makes the prick marks between the stitches, and the bottoms are then coloured, and given a gloss by revolving brushes and pads. The shoe is then finished and ready for wear. There are a number of other methods of making shoes by machine, most of them being based on one of those described. See B. E. Hazard, *The Boot and Shoe Industry*, 1921; H. Norris, *Costume and Fashion*, 1924-38; C. W. H. Mander, *Description and Historical Account of the Guild of Cordwainers*, 1931; E. Bordoli, *Footwear*, 1933; J. Korn, *Boot and Shoe Production*, 1954.

Booty (term allied to the O.E. *bot*, later 'boot,' meaning 'advantage'), plunder, usually obtained by violent means. In a special sense it denotes things taken by land forces in war. In England the High Court of Admiralty has jurisdiction to try any question concerning B. of war which may be referred to it by the Privy Council. Property captured by the naval forces is called 'prize' and forms the peculiar province of the prize court of the Admiralty. See also PRIZE.

Bopp, Franz (1791-1867), Ger. linguist.

With his first work—*Über das Conjugationssystem der Sanskritsprache in Vergleichung mit jenem der griechischen, lateinischen, persischen und germanischen Sprache*, 1816 (Eng. revision, 1820)—he became the founder of 'Comparative Grammar' of Indo-European languages, and initiated the era of modern linguistics. His main work is *Vergleichende Grammatik des Sanskrit, Zend, Griechischen, Lateinischen, Lithauischen, Gothischen und Deutschen* (6 parts), 1833-52 (3rd ed., 2 vols., 1868-71). He also ed. various texts, and his *Sanskrit Grammar* passed through sev. eds. (1827-63).

Boppard, Ger. tn in the *Land of Rhineland-Palatinate* (q.v.), on the Rhine (q.v.), 34 m. NW. of Mainz (q.v.). It was once a free city of the empire, and has a fine 12th-13th-cent. church. Pop. 8000.

Bora, Catherine von (1499-1552), wife of Luther, whose father had placed her in the convent of Nimbschen, near Grimma. Under the influence of Luther's doctrines she fled with 8 of her companions in 1523. Luther placed them in honourable families and assumed the task of getting them advantageously married; he himself married Catherine. This was in the period of his poverty, but Catherine proved a true helpmeet in trouble. She survived the death of her husband by sev. years, and moved from Wittenberg to Leipzig, where she took in boarders for her living. She later returned to Wittenberg, but moved from there because of the plague, and on the road to Torgau had an accident from which she d.

Bora, It. name for the violent, cold, dry, N.E. wind which is common in winter in the Adriatic, especially along the Istrian and Dalmatian coasts. The cause of the prevalence of this wind is the sudden increase in barometric pressure which takes place over the plateaux of Europe in winter, thus sending the cold air into the valleys and over the Adriatic Sea. It is usually strongest in the morning and least at night, and is precisely similar in character to the mistral which is found along the Fr. Mediterranean littoral. When it is associated with a depression over the Adriatic heavy rain or snow may occur.

Bora-Bora, or **Bola-bola**, is. in the group called Society Is. It rises to a height of 2165 ft. During World War II it was an Amer. air and naval base and has a 5200-ft airstrip.

Boric Acid, or **Boric Acid**, H_2BO_3 , a crystalline substance, found native in the volcanic lagoons of Tuscany. B. A. is also contained in the vapours which are exuded from fissures in the rocks of the same dist. The gases are brought into contact with water, which dissolves the B. A. when heated and is afterwards evaporated to recover the crystals. B. A. is soluble in hot water and alcohol, and is of use as an antiseptic, as it kills micro-organisms without affecting living tissue. It is usually employed in the form of an ointment, being an excellent remedy for a scurfy condition of the scalp in infants. It is also used for ulcerated nipples and as a dressing in surgery. The aqueous

solution is effective in cleansing cuts, abrasions, and scratches, and absorbed in socks checks excessive perspiration in the feet.

Borage (*Borago officinalis*), herb with rough stem and small blue flowers. It is cultivated as a garden flower in the U.K. and is occasionally found wild. It is used as a garnishing in claret-cup and other drinks.

Boraginaceae, family of dicotyledons native to tropical and temperate climates, consisting chiefly of herbs, but also of shrubs and trees. The flowers are hermaphrodite, regular and hypogynous, the calyx has 5 joined sepals, the corolla 5 joined petals; there are 5 stamens, and 2 superior carpels, generally deeply divided into 4 lobes with a single style rising between them. The fruit consists of a drupe or 4 achenes. The leaves are alternate and roughly hairy. Chief genera are *Anchusa*, *Arnebia*, *Borago*, *Brunnera*, *Caccinia*, *Cordia*, *Cynoglossum*, *Echium*, *Heliotropium*, *Lithospermum*, *Macromeria*, *Myosotidium*, *Onosma*, *Pulmonaria*, *Symphitum*, and *Tournefortia*.

Borah, William Edgar (1865-1940), Amer. senator, b. at Fairfield, Illinois, educ. at S. Illinois Academy, Enfield, and at the univ. of Kansas. B. was conspicuous among those who defeated Wilson's attempt to bring the U.S.A. into the League of Nations. Nevertheless it was through B.'s action that the negotiations resulting in the Disarmament Conference (Nov. 1921) were undertaken; and it was he who proposed 'outlawry of war' in the Senate in 1923. From 1925 to 1933 he was chairman of the Senate Committee on Foreign Affairs. He fought against the repeal of the Neutrality Act, 1939.

Borås, tn of Sweden in the prov. of Älvsborg; makes artificial silk and other textile fabrics, iron wares, and trades in cattle, horses, and iron. Pop. 62,623.

Borax, sodium tetraborate, $Na_2B_4O_7$, a substance found in nature in the form of monoclinic crystals, white or greyish in colour, transparent or translucent, with a hardness of 2 to 2½ and a sp. gr. of 1.7. B. was known in early times, being extracted, under the name of tincal, from the salt lakes of Tibet. It is also found in California and Nevada, and in the desert of Atacama in S. America. It is manuf. from boric acid, which is fused with half its weight of sodium carbonate, the B. being dissolved out with warm water. On being fused B. forms a globule. It combines on fusing with the oxides of many metals, forming globules of characteristic colours, therefore providing a test for the detection of certain metals. B. is also used in the glazing of pottery and in glassmaking.

Borch, Gerard Ter, see TER BORCH.
Borchgrevink, Carsten Egeberg (1864-1934), Norwegian explorer, b. Oslo; his father was Norwegian, a barrister by profession, his mother was English. He was educ. at Gjørtzen College; graduated Royal College, Tharandt, Saxony. When the *Antarctic* sailed from Melbourne in 1894 under Capt. Christensen, B. shipped

as an ordinary seaman, and was one of the first men to set foot on the Antarctic continent. In 1898 he was placed in command of Sir George Newnes's *Southern Cross* expedition, and in 1902 investigated the volcanic disturbances in the W. Indies. See the *Report of the Sixth International Geographical Congress*, London, 1895, pp. 169-75. He wrote *First on the Antarctic Continent*, 1901, and *The Game of Norway*, 1920-5. In 1930 he was awarded the Patron's Medal of the Royal Geographical Society of London. Obituary appears in *Norsk Geografisk Tidsskrift*, Bd. 5, Heft 2, 1934.

Borda, Jean Charles de (1733-99), Fr. mathematician and physicist, b. Dax, in the dept of Landes. He served in both the army and the navy and distinguished himself by the introduction of new methods and instruments connected with the sciences of navigation, astronomy, and geodesy. His most important invention was that of the reflecting circle. He was one of the men of science who framed the new system of weights and measures adopted in France under the Republican gov. He pub. *Description and Use of Circle of Reflection*, 1778, and *Table of Logarithms*, 1804.

Bordarii (from Low Lat. *borda*, a cottage), or **Cotarii**, were tenants under the feudal system, who, in return for menial services, chiefly field labour, possessed holdings of from 1 to 5 ac. They had neither oxen nor plough and were inferior in rank to the villeins, though they were certainly not slaves.

Borde, Andrew, see **BOORDE**.

Bordeaux, Duc de, see **CHAMBORD, COMTE DE**.

Bordeaux, Henry (1870-), Fr. novelist, b. Thonon, educ. at the Sorbonne and the Paris Faculty of Law. He practised law, 1890-1900, then turned to literature. During the First World War he served in the army, becoming an officer of the Légion d'Honneur, and receiving many foreign orders. In 1919 he became a member of the Fr. Academy, and in the same year he lectured in London on Verdun, in the defence of which he took part. He is an honorary Docteur de l'Université de Montréal. A prolific writer, his works include *Le Pays natal*, 1900, *La Peur de vivre*, 1902, *Le Lac noir*, 1904, *La Croisée des chemins*, 1909, *La Robe de laine*, 1910, *La Résurrection de la chair*, 1920, and *Yamile sous les cèdres*, 1923. Among more recent books may be mentioned his fiftieth novel, *Cendres chaudes*, 1938, and *La Sonate au clair de lune*, 1942.

Bordeaux (anc. **Burdigala**), Fr. city, cap. of the dept of Gironde, on the Garonne (q.v.), 351 m. SW. of Paris. It is the fifth city of the country, one of the chief ports of France, and lies near the head of the Gironde (q.v.) estuary, about 60 m. from the Atlantic. In ancient times it was the cap. of the Bituriges Vivisci (q.v.), and, later, under the Romans was an important tn of Aquitania (q.v.). It suffered under the incursions of the Vandals, Goths, and Franks (qq.v.), and was in Eng. hands 1154-1453, during which

time it developed great prosperity. There were risings in B. during the Fronde (q.v.), and the tn was a centre of the Girondists (q.v.) in the 18th cent. The National Assembly under Thiers (q.v.) met at B. 12 Feb.-1 Mar. 1871, and the tn was also the seat of the Fr. Gov., Sept.-Dec. 1914, and 15-30 June 1940. The old part of the tn is distinguished by narrow, crooked streets, but the newer parts are very well laid out, as a result of much rebuilding in the 18th cent., when B. fl. upon its trade with the Fr. colonies. There are splendid streets and squares, notable among them being the Place des Quinconces, with its great statues of Montaigne and Montesquieu (qq.v.), both natives of the B. dist. There is an archiepiscopal cathedral (12th-15th cents.), with fine towers, a 15th-cent. campanile, a univ. (founded 1441), an 18th-cent. theatre, sev. fine old churches, and museums and libraries. The prin. industries are iron and steel engineering, shipbuilding, oil and sugar refining, and the manuf. of chemicals, aircraft, and foodstuffs. Some of this industry is concentrated in the suburbs of Cenon and La Bastide on the r.b. of the riv. The port has an extensive trade: the prin. exports are wines, and among the imports are coal, chemicals, oil, and foodstuffs and wines from Fr. overseas possessions. Pop. 257,950.

Bordelais, old name of a dist. of SW. France, in Aquitaine (q.v.). It lay between the Rs. Dordogne, Drot, and Garonne, and the chief tn was Bordeaux (q.v.).

Borden, Mary (1887-), novelist, b. Chicago. Educ. at Vassar, she served in a Fr. hospital during the First World War and was awarded the Croix de Guerre and made a member of the Légion d'Honneur. In 1918 she married Maj.-Gen. Sir Edward Spears, settled in London, and became a Brit. subject. Her novels include *The Romantic Woman*, 1919, *Jane, Our Stranger*, 1922, *Three Pilgrims and a Tinker*, 1924, *Four O'clock*, 1926, *Flamingo*, 1927, *Forbidden Zone*, 1929, *Sarah Gay*, 1931, *The Black Virgin*, 1937, *No. 2 Shovel Street*, 1949, and *Martin Merriedew*, 1952.

Borden, Sir Robert Laird (1854-1937), Canadian statesman and lawyer. Succeeded Sir Wilfrid Laurier after his defeat on the Reciprocity Bill at the general election in 1911. He was b. Grand Pré, Nova Scotia. In 1878 he was called to the Bar and practised in Halifax, becoming eventually president of the Nova Scotia Barristers' Society. In 1896 he represented Halifax in Parliament, but lost his seat in 1904 and was elected for Carleton. In 1908, however, he was returned for both places, and from 1901 led the Conservative opposition. Responsible for Canada's offer, in 1912, of 3 battleships for the home country, a policy which was the subject of lively discussion. During the First World War he shouldered the chief share of the task of guiding Canadian affairs and was in office as Prime Minister and secretary of state for external affairs throughout. In 1915 he was invited to attend meetings of the

Brit. Cabinet in London, this being the first occasion on which a dominion statesman had been summoned to take part in a Cabinet discussion in Great Britain. He was returned again at the general election of 1917. He attended the Imperial Conference in 1917 and 1918 and went to Paris as one of the Canadian representatives at the Inter-Allied Peace Conference of 1919. Resigned premiership in 1920, being succeeded as Conservative leader by Mr Arthur Meighen. G.C.M.G., 1914.

Border. The name referring to a stretch of country on both sides of the frontier between England and Scotland. The term has 3 distinct uses, and can be applied historically, geographically, and in a literary sense. The actual boundary between the 2 countries is a line beginning about 3 m. W. of Berwick, along the line of the Tweed to the Cheviot Hills which become for some 35 m. the line of demarcation; hence the boundary continues along the line of the Liddel and the Esk for a short distance, and thence to the line of the Sark, which it follows to the Solway Firth. The actual length of the boundary line is 108 m., whilst by taking the distance as the crow flies it is no more than seventy miles. At the extreme E. of this line is the ter. known as the Liberties of Berwick, an area of about 8 sq. m. which encloses the present tn of Berwick. The only Eng. B. cos. are Northumberland and Cumberland, but on the Scottish side, in addition to the actual B. cos. of Berwick, Roxburgh, and Dumfries, there are included in the term also the cos. of Selkirk and Peebles, which historically have always been included. The country on the Eng. side of the B. is chiefly bleak and rugged moorland, only pasturing sheep and cattle, but on the N. side there are great stretches of fertile land, a country of dales and valleys, possessing a natural beauty and famous for its picturesqueness. The B. country is watered on the N. side by the Tweed, the Whiteadder, Leet, Kale, Jed, Kershope, Liddel, Esk, and Sark, whilst on the Eng. side are the Rs. Till, Boumont, Coquet, Rede, and the N. Tyne. The hist. of the B. was for some 1500 years extremely stormy. During the Rom. occupation the original inhab. and the Picts of still further N. were held in check by the Rom. walls. The earliest inhab. seem to have been the Brigantes, who held both sides of the B., and were a fierce and warlike tribe. They gave trouble to the Romans, but eventually the Romans brought them at least to nominal subjection, and built the wall of Antoninus from the Clyde to the Forth. But even at this early date the B. was a dist. with a distinct hist. of its own, since the land between the 2 walls (Hadrian's and Antoninus's) was never actually conquered, and never really held by the Romans. The evacuation of Britain by the Romans resulted in the B. country becoming the battleground for the invaders from the N. (the Picts), the invaders from over the sea (the Angles), and the hapless Britons, until finally the whole of the B. country

was divided into the kingdoms of Strathclyde, Bernicia, and Deira. Bernicia and Deira were later united to form the kingdom which stretched from the Humber to the Forth. But the country continued to be agitated by the constant warfare between Scot and Angle, and later the Viking joined in the struggle. The hist. of the B. between the 6th and the 11th cents. is the hist. of continued warfare, raids, and bloodshed. The struggle, which had its origin in the quarrels of more or less petty tribes, began, with the development of the tribes into nations, to assume a national aspect. The struggle was now one for the permanent possession of the valley of the Tweed. Finally, the Scottish kings snatched Lothian from the hands of the English, and also had designs upon Cumberland, which, though nominally ceded to the Norman kings in the reign of William Rufus, was nevertheless contested between the 2 nations for a considerable time. Amid the constant warfare the development of the country had gone on, especially on the Scottish side. The Celtic Church had been responsible for this to a very large extent. With the coming of the Celtic monks, churches had sprung up in the wilds of Northumberland, and in the fertile valleys and dales of the Scottish lands. Monastery and church dotted the countryside, and on the Scottish side grew up the large and flourishing tns of Berwick, Jedburgh, and Roxburgh. But the death of Alexander III in 1286 plunged Scotland and England into the war of the succession, and the determined efforts of Edward I to achieve his dream of a united Great Britain made the B. the battlefield of the 2 countries. The country was harried and ransacked by both sides. Northumberland was practically laid waste, the tns of Roxburgh and Jedburgh fell into the general ruin, and from that time until the beginning of the 17th cent. the B. was rarely at peace. Many battles took place here, amongst them Halidon Hill (1333), Otterburn (1388), Nisbet (1402), Homildon (1402), Hedgeley Moor (1464), Flodden (1513), Solway Moss (1542), and Ancrum Moor (1544)—these in addition to the many skirmishes which took place between the B. families. The important defeat of Montrose at Philiphaugh by Leslie also belongs to the hist. of the B. The B. was kept in peace more or less by the building of numerous castles, which were to overawe the moss-troopers and the freebooters of the neighbourhood. The B. was during the 15th and 16th cents. administered by wardens appointed respectively by the sovereigns of England and Scotland, the B. at this time being divided into 3 marches, over each of which ruled, practically as sovereigns, the Eng. and Scottish wardens. When in 1603 James VI of Scotland succeeded to the throne of England as James I, peace on the B. became more possible. James I even desired to do away with the name B., but the term has always been kept. The castles, however, were dismantled, the garrisons reduced, and gradually the B. became accustomed to peace. A number

of fortresses, important in B. warfare, remain as pleasant little tns at the present day, but a number are in ruins.

The B. produced a distinct literature of its own. The B. ballads sang the deeds of the B. heroes, the heroes who led their little bands of followers to attempt deeds which a larger army would not have dared to attempt. The ballad of *Chevy Chase* is typical of the B. minstrelsy. But the open life of the Borderer found expression also in the more sentimental side of literature, and the beauties of his native hill and dale did not escape him. Sir Walter Scott rescued the ballad poetry, and the traditions of the B. literature found expression in James Hogg (the Ettrick Shepherd), John Wilson (Christopher North), and John Mackay Wilson.

Border Regiment, The, formed in 1881 by the linking of the 34th and 55th Foot. The 34th Foot was raised in 1702, and almost immediately went on active service to Spain, then later under Marlborough. It was present at Dettingen and Fontenoy. For its conspicuous behaviour at Fontenoy it was awarded a laurel wreath, a unique distinction. It served in the Peninsular and Crimean wars and Indian mutiny. The B. R. is the only one with the Peninsular battle honour 'Arroyo dos Molinos.' The 55th Foot was raised in 1755, and went to America in 1757; fought in the war of Independence and campaigns in W. Indies, China, and Crimea. During the First World War it raised 16 battalions, which served in France, Flanders, Italy, Macedonia, Gallipoli, Egypt, and NW. Frontier, India. In the Second World War the B. R. fought in France and Belgium and in NW. Europe generally. They played a distinguished part in the battle of Arnhem in Sept. 1944. Other units, in the Fourteenth Army (q.v.), were part of Wingate's Chindits and also fought in the Irawadi R. battles. The B. R. is to be amalgamated with the King's Own by 1959.

Border Town, small post in of S. Australia, situated in the co. of Buckham, about 180 m. SE. by S. from Adelaide.

Border Warrant, old form of process in Scots law, used for detaining the person of an absconding Eng. debtor.

Bordes, Charles (1863-1909), Fr. musical composer, b. La Roche-Carbon. He studied in Paris with Marmontel and César Franck, but only took up music professionally in 1887, beginning as a church organist and choirmaster. Appointed choirmaster of Saint-Gervais, Paris, he organized the world-famous choir, the Chanteurs de Saint-Gervais. His work in restoring to Fr. church music the tradition of plainsong and the music of old masters heralded the reforms of Pius X. In 1900 the Schola Cantorum, of which he was co-founder with Gullmunt and d'Indy (1894), became a high school of music. The catalogue of his works includes, besides church music, some instrumental music, among which may be mentioned *Rapsodie basque*, 1899, and *Les Trois Vagues* (an unfinished lyric drama).

Bordet, Jules (1870-), Belgian bacteriologist, b. Soignies and educ. at Brussels Univ. where he qualified in medicine in 1892. From 1894 to 1901 he worked at the Pasteur Institute in Paris, and was then appointed director of the Pasteur Institute in Brussels. In 1907 he became prof. of pathology and bacteriology at the univ. of Brussels. He discovered the phenomenon of bacterial haemolysis (1898); with O. Genoux he devised the complement-fixation reaction (1901), of value in tests for the diagnosis of certain infectious diseases, especially the Wassermann reaction for syphilis, and in immunology. These 2 workers discovered *Haemophilus pertussis*, the micro-organism causing whooping cough. B. wrote *Traité de l'immunité*, 1920. He was awarded the Nobel Prize in 1919.

Bordighera, It. tn, in Liguria (q.v.), on the Riviera (q.v.). It is a much-frequented winter resort, known for its palms (used in Rome on Palm Sunday, q.v.), fruit, and flowers. It has Rom. remains. Pop. 9000.

Bordj-bou-Argeridj, tn of Algeria, situated in the dept of Constantine, on the high plateau of Madjana. Cattle are reared, and grain is grown in the dist. Pop. 12,000.

Bordj-Menafel, tn of Algeria, in the dept of Algiers and the dist. of Tizibuzon. Pop. 18,000.

Bordone, Paris (1500-71). It. painter of the Venetian school, b. Treviso, a pupil of Titian. He was the fashionable portrait-painter of Venice, and in 1538 was invited to France by Francis I, whose portrait he painted. Though portraiture was his forte, he also painted scenes from mythology, allegories, and religious subjects. His great painting is 'The Fisherman presenting the Ring of St Mark to the Doge,' c. 1535, in the academy at Venice. The National Gallery has his 'Daphnis and Chloe,' and a portrait of a lady, and his 'Lady at her Toilet' is in Edinburgh. Other notable paintings are the 'Adoration of the Shepherds' (in Treviso Cathedral), some mythological pictures at the Villa Borghese, and a 'Madonna' in the Louvre. Others of his works are to be seen in Cremona, Milan, Genoa, Florence, etc. He was typically Venetian in his colour and noted for his fine flesh tones.

Bordure, heraldic term denoting the border which surrounds the shield, and generally occupies one-fifth of the field. It is sometimes used as a mark of difference, particularly in Scotland. A B. componée is one divided into 16 small squares of alternate tinctures. A great variety is found in B.s; they are engrailed, invected, wavy, etc. With rare exceptions, the B. surmounts all ordinaries.

Bore, or **Eagre**, phenomenon which occurs in some rivs. in spring tides. At such times the inflowing water rises to a considerable height and moves along against the current like a wall. It is due to the fact that the volume of the tidal wave is greater than the riv. can receive without being greatly disturbed. The height of the B. varies from 3 ft to 12 ft.

The latter height is attained by the B. of the Brahmaputra. In England B.s may be observed in the Severn, the Trent, the Wye, and the Solway.

Bore (In fire-arms), see GUN.

Boreas, god of the N. wind, son of Astræus and Eos, brother of Hesperus, Notus, and Zephyrus, with whom he dwelt in a cave on Mt. Haemus in Thrace. When the Athenians invoked his aid against Xerxes' fleet, a storm destroyed part of it, whereupon they built him an altar on the banks of the Ilissus.

Borecole, see KALE.

Boree, an Australian tree, *Acacia pendula*, also the Weeping Myall. Yields a close-grained, violet-scented hardwood which is useful for cabinet-making.

Boreham Wood, see ELSTREE.

Borel d'Hauterive, Joseph Pétrus (1809-1859), Fr. novelist and poet, b. Lyons. He was educ. in Paris, and was intended to be an architect, but soon gave up any attempt at making a living by architecture, and became a writer. He was one of the most devoted and extravagant followers of the Romantic school. Most of his life was spent either in Paris or in Algeria. His chief works are *Rhapsodies* (poems), 1832; a vol. of short stories, *Champavert*, 1833, in which his talents were best displayed; and *Madame Putiphar*, 1839, to which he wrote a preface in verse. See A. Marie, *Pétrus Borel*, 1922.

Borelli, Giovanni Alfonso (1608-79), It. physicist and mathematician, b. near Naples. In 1649 he became prof. of mathematics at the univ. of Messina and then at Pisa. He returned to Messina later, but having taken part in some political affair, was forced to retire to Rome, where he lived under the protection of Christina, Queen of Sweden. He was the first to suggest the parabolic path of comets, and he was the founder of the iatro-mathematical school, since he attempted to explain the movements of the body on mechanical principles. He stated his theory of the circulation of the blood in *De Motu Animalium*, but very erroneous conclusions were reached. He wrote works on mathematical, medical, and astronomical subjects.

Borenus, Tancred (1885-1948), Finnish historian of art, b. Wiborg, Finland, son of Carl B., sometime member of the Finnish Diet. Educ. at Helsingfors Univ.; appointed prof. of hist. of art, Univ. College, London, 1922. Diplomatic representative of Finland in England, 1919. His numerous works include: *The Painters of Vicenza*, 1909, new ed. of Crowe and Cavalcaselle's *History of Painting in Italy*, 1912, *Catalogue of Visconti Lee of Farcham's Collection*, (2 vols.), 1923, *English Primitives*, 1924, *English Medieval Painting*, 1927 (with E. W. Tristram), *Florentine Frescoes*, 1930, *Catalogue of the Pictures and Drawings in the Collection of the Earl of Harewood*, 1936, *English Painting in the XVIIIth Century*, 1938, *Italian Painting and Later Italian Painting*, 1945, and *Dutch Indoor Subjects*, 1946.

Borers, beetles which pierce the wood on which they feed and thus do much

damage. There are many species contributed by such genera as *Anobium* and *Ptinus*. Also a family of fish (Myxinidae) called hag-fishes (q.v.), B., or slime-eels; have no suckers, but have 4 pairs of tentacles over the mouth and terminal nostril. Hags burrow right into fishes, devouring them until nothing is left but skin and bones. *Myxine*, with half a dozen gill-pouches but only 1 gill opening, is a widely distributed genus. *M. glutinosa* of the N. Atlantic is troublesome to fishermen, having a preference for attacking fish already caught on lines. See also BORING SPONGES; BORING-WORM; TEREDO.

Boreus, genus of mecopterous insects included in the family Panorpidæ, and related to the scorpion-flies. They have biting mandibles and the wings are absent. *B. hiemalis* is a native of Europe and America and is found in the winter months only. It is about a quarter of an inch long, and of a greenish colour with reddish legs.

Borga, see PORVOO.

Borger, tn in the prov. of Drenthe, Netherlands, 11 m. SE. by E. from Assen. Pop. 10,350.

Borgerhout, suburb of Antwerp, Belgium. Its manufs. are tobacco, candles, and tapestry. There are bleaching and dye works. Pop. 50,000.

Borghese, Giuseppe Antonio (1882-1952), It.-Amer. author, b. Polizzi Generosa, Sicily. He became prof. of Ger. literature at Rome Univ. in 1910, and in 1917 transferred to Milan Univ., where in 1926 he became prof. of the faculty of letters. He was active as journalist, critic, novelist, dramatist, and poet. At the early age of 20 he wrote a *History of Romantic Criticism*, and followed this by a study of the work of Gabriele D'Annunzio. In both of these the young student was inspired by the example of Benedetto Croce. In 1921 he pub. the novel *Rubè* (Eng. trans., 1923), in which It. critics see a portrayal of the duel between the warlike idealism and the basic pacifism of the Italians. B. was an opponent of Fascism, and in 1931 left Italy for the U.S.A., where he became a naturalised American in 1938. In 1936 he took the post of prof. of It. literature at Chicago Univ. Later books include *On Dante Criticism*, 1936, *Goliath: the March of Fascism*, 1937, *The City of Man*, 1940 (together with Thomas Mann), and *Common Cause*, 1943.

Borghese, name of a celebrated It. family of Siennese origin, which is first prominent in the hist. of the rep. of Siena at the beginning of the 13th cent. One of its number settled in Rome during the 16th cent., and a son of this member of the family became Pope, with the title of Paul V. in 1605. The family fortunes were much advanced by the Pope, who created a nephew Prince of Viverno, and a little later the title of Prince of Sulmona was conferred on the same nephew by the King of Spain. The son of this prince raised the family fortunes by his marriage with a daughter of the Aldobrandini family, one of the oldest and richest families of Rome. Camillo Filippo Ludovico, Prince B., married the sister of

Napoleon in 1803. He was made Duke of Gustalla, and later governor of the provs. of Piedmont and Genoa. He sold the art treasures of his house to Napoleon. After the fall from power of Napoleon he retired to Florence, where he lived until his death in 1832. The B. palace (q.v.) at Rome is one of the most magnificent of the buildings of that city.

Borghese, Giovanni Ventura (1640-1708), It. painter, pupil of Pietro da Cortona, whom he helped in some of his chief works at Rome. After his master's death B. completed some of his unfinished paintings. In the church of San Niccolò da Tolentino are his pictures 'The Annunciation' and 'The Virgin Mary crowned

inner court has 2 tiers of granite colonnades, with Doric columns below and Corinthian above. In it are huge anct statues of Sabina, Julia, and Ceres. Its wonderful collection of art treasures was sold by public auction, 1892, by Prince Paolo Borghese. Many of its fine pictures have been removed to the Villa Borghese (see BORGHESE VILLA), belonging to the It. state. Pope Leo XIII acquired the important family archives for the Vatican. The picture gallery still includes a Madonna of Botticelli, and 1 by Lorenzo di Credi, 2 Evangelists by Michelangelo, 4 paintings of Raphael (1 being 'The Burial of Jesus'), Titian's 'Sacred and Profane Love,' and his 'Three Graces,'

W. F. Mansell

THE VILLA BORGHESE, ROME

by Angels.' Four scenes from the life of St Catherine in the church of Città di Castello are considered his finest works.

Borghese, Villa, summer residence at Rome of the Borghesi till 1902, outside Porta del Popolo; built by Cardinal Scipione Caffarelli-Borghese on the Cenci estate, after plans by Giovanni Vansanzio (early 17th cent.). It has a magnificent park of over 200 ac. Its grand collection of works of art was sold to Napoleon by Prince Camillo Borghese, 1806. Some of these were restored in 1815, the remainder are in the Louvre. A new collection of sculptures and pictures was formed later. Among the treasures contained are Algarde's 'Sleep' and Canova's famous statue of the reclining figure of Pauline Borghese. See BORGHESE PALACE. Both villa and park became the property of the It. state, 1902. See M. L. Gothein, *History of Garden Art* (Eng. trans.), 1928.

Borghese Palace, one of the most magnificent buildings in Rome, in the Piazza Borghese, in residence of the Borghesi. Built between 1590 and 1607 by Martino Longhi and Flaminio Ponzio, and known, from its shape, as 'Il Cembalo.' The

Correggio's 'Danaë,' Van Dyck's 'Christ on the Cross' and portrait of Maria de' Medici. There are also canvases of Andrea del Sarto.

Borghesi, Bartolommeo (1781-1860), It. savant, b. Savignano, near Rimini. He was a student of the documents of medieval times, and so ruined his eyesight by close reading that he had to give up his study of documents, and turn to numismatics. He was responsible for the arranging and cataloguing of the coins of the Vatican. He retired from Rome in 1821 to San Marino, where he spent the rest of his life, taking some little part in the politics of that rep. He estab. a reputation by his great work, *Nuovi Frammenti dei Fasti Consolari Capitolini*, 1820. His works on numismatics also added to his reputation. His complete works were pub. by order of the Emperor Napoleon III, the first vol. appearing in 1862, and the tenth and last in 1897.

Borghesi, Ippolito, It. painter, native of Naples (fl. towards end of 16th or beginning of 17th cent.), pupil of Francesco Curia. Painted historical and religious subjects; imitated Raphael and

Andrea del Sarto. Chief works: Altarpiece in chapel of Monte di Pietà at Naples ('Assumption of the Virgin'), and another in San Lorenzo at Perugia.

Borghetto, It. vil., in Trentino-Alto Adige (q.v.), on the Adige (q.v.), 26 m. SSW. of Trento. It was the scene of a victory of Napoleon (q.v.) over the Austrian general, Beaulieu, in 1796. Pop. 500.

Borhorst, Ger. tn in the Land of N.-Rhine-Westphalia (q.v.), 68 m. NNE. of Düsseldorf (q.v.), with textile manufs. Pop. 9000.

Borgia, It. family who came originally from Valencia, Spain. One of its members, Alonso de Borja (1378-1458), was a bishop and private secretary to Alfonso of Aragon, and accompanied him to Naples. This Borja in 1455 became Pope as Calixtus III and settled a number of his family in Italy. His nephew, Rodrigo de Borja (1431-1503), also became Pope as Alexander VI (q.v.), and from that time the prin. seat of the family was in Italy, and the name was changed to B. Before Alexander became Pope he had a number of children by a Rom. girl, who was known as Vanozza, but whose real name was Giovanna del Cattani. Two of these children, Lucrezia and Cesare, subsequently achieved considerable notoriety, and are listed below:

Cesare Borgia (1476-1507). From birth he was vowed to the priesthood, and he became a cardinal when only 17 years old, but was dispensed from holy orders in 1499 and married Charlotte d'Albret, princess of Navarre. He succeeded his brother Giovanni, whose murder he had arranged, as captain-general of the Church. Whilst his father, Alexander VI, was crushing the feudal power of the barons in the Romagna, Cesare undertook the task of recovering all the fiefs along the Adriatic coast which had ceased to acknowledge the overlordship of the Holy See. Cesare was a brilliant soldier, though unscrupulous and extremely cruel. He made himself master of the Romagna, Perugia, Siena, Piombino, and the Duchy of Urbino. He was named Duke of Romagna by the Pope, but in 1503 Alexander VI d. Pius III, his successor, d. after a few weeks, and was succeeded by Julius II, an enemy of the B. family. Cesare was forced to surrender to him at Naples. He was removed to Valencia and later to Medina del Campo, but escaped and went to the court of Navarre, where he was placed in command of the royal forces, but was killed in battle, 12 Mar. 1507. He was a patron of art, and befriended Leonardo da Vinci (q.v.). Though personally cruel and entirely dominated by his lust for power, the people whom he governed regarded him as an upright and able administrator. It was to him that Machiavelli (q.v.) dedicated his treatise *The Prince*.

Lucrezia Borgia (1480-1519), Duchess of Ferrara, was married first to Giovanni Sforza, secondly to the Duke of Biscelgie, and thirdly to the Duke of Ferrara. Historical evidence fails to confirm the picturesque crimes imputed to her in

relation to her supposed natural son, Gennaro. She left behind a reputation for learning, beauty, and charity, and is said to have enjoyed the respect of her subjects. See F. B. Corvo, *Chronicles of the House of Borgia*, 1901; L. Collison-Morley, *The Story of the Borgias*, 1932; and N. Balchin, *The Borgia Testament*, 1948.

Borgia, Francesco St (1510-72), third general of the Jesuit order, the duties of which post he prosecuted with the utmost zeal and prudence. Beatified by Pope Urban VIII, and canonised by Clement X in 1671. His feast is on 10th Oct.

Borglum, John Gutzon de la Methe (1867-), Amer. sculptor, b. Idaho. He studied at the San Francisco Art Association. His works are chiefly remarkable for their enormous size—especially that on the rock of Stone Mt., Georgia, a memorial to the Confederate Army. His brother, Solon Hannibal B., was a sculptor of wild W. subjects.

Borgne, lake in the U.S.A., situated in the SE. of Louisiana. It is about 25 m. wide, and touches the Gulf of Mexico on the E.

Borgo San Donnino, see FIDENZA.

Borgo San Sepolcro, see SAN SEPOLCRO.

Borgo Val Di Taro, It. tn. in Emilia-Romagna (q.v.), on the Taro, 36 m. SW. of Parma (q.v.). It is a mt holiday resort. Pop. 2500.

Borgognone, Ambrogio (d. 1523), It. painter of the late 15th and early 16th cents. He was a contemporary of Leonardo da Vinci, his real name being Ambrogio di Stefano da Fossano. The name B. is probably due to the fact that he was closely associated with the Burgundian school of art. His chief claim to fame lies in the work of decoration which he did for the Certosa, the convent of the Carthusians, at Pavia. After his return from Pavia to Milan he painted a series of frescoes for the great church of San Simpliciano. Two examples of his work at the Certosa are in the National Gallery.

Borgognone, Jacopo Cortesi (1621-76), It. painter, b. St Hippolite, Burgundy, the son of a minor artist. Many of his most famous battle pictures record the achievements of his patron, Prince Mathias of Florence, and his best work is in the Palazzo Pitti at Florence. He spent the last part of his life in a Jesuit house.

Borgomanero, It. tn. in Piedmont (q.v.), 22 m. NW. of Novaro (q.v.). It has copper manufs. Pop. 11,000.

Borgström, Hjalmar (1864-1925), Norwegian composer and critic, b. Oslo. He became music critic of the *Aftenposten* there in 1913. His operas were not successful, but he made his mark with orchestral, chamber, and piano music. He is best known by his symphonic poem of Shakespeare's *Hamlet*, though that entitled *Tanken* ('Thought') is regarded as his most important work. Another is based on Ibsen's play *John Gabriel Borkman*.

Borgu, extensive dist. in Africa partly in Dahomey, Fr. Equatorial Africa, and partly in Nigeria.

Boric Acid, see BORACIC ACID.

Borinage, coal-mining dist. of Belgium, lying S. and W. of Mons (q.v.), prov. of Hainaut.

Boring, see WELL and TRIAL BORING.

Boring Sponges (*Cliona*), species of siliceous sponges (*Demospongiae*). They excavate tunnels in limestone rocks and do considerable damage to jetties, breakwaters, etc. Oyster-shells will often be found to have been perforated by them.

Boring-worm (*Polydora ciliata*), species of marine bristle-worm (*Polychaeta*). They inhabit U-shaped tunnels which they excavate in the rocks.

Boris III (Boris Clément Robert Marie Pie Louis Stanislaus Xavier) (1894-1943), king or tsar of Bulgaria, b. Sofia, eldest son of Ferdinand, prince (later tsar) of Bulgaria, and Princess Marie Louise of Bourbon-Parma. To win over Russia, Ferdinand, a Catholic member of the Coburg family, had his heir converted, at the age of 2, to the Gk Orthodox Church. B. succeeded to the throne on the abdication of Ferdinand, 1918. In 1930 he married Giovanna, daughter of the King of Italy. His first child, Princess Marie Louise, was b. in 1933 and a son and heir, Prince Simeon, in 1937 (who succeeded him in 1943). B.'s position was fundamentally insecure throughout his reign, and he survived more than one attempt at assassination. Though he wished for better relations with his Balkan neighbours he adhered to Bulgarian territorial claims, and after Alexander of Yugoslavia's assassination in 1934, his attitude towards Yugoslavia cooled and he thereby alienated the sympathy of the Macedonian elements in Bulgaria. Nor did his policy please the army, which was Macedonian and revolutionary in outlook. In the same year a military *coup* overthrew the gov. of Agrarians and Democrats and B. was once more in danger of dethronement; but his popularity with the peasantry and his diplomacy, coupled with the dissensions in the army, saved him, and the militarist combination collapsed. In 1938 he was successful in securing the release of Bulgaria from the punitive clauses of the treaty of Neuilly. When the Second World War began B. attempted to keep his country neutral. But Bulgaria had no other market for her produce than Germany; the army was entirely dependent on Ger. arms; the general staff was largely pro-German; and Nazi intrigue was rife. With the fall of France and Rumania under Ger. 'protection' B. signed the Tripartite Pact, 1941, and Ger. troops were thereby allowed to occupy Bulgaria. B. collaborated with the Axis against his Yugoslav and Gk neighbours, with whom his gov. had concluded agreements of non-aggression, but, owing to pro-Russian popular feeling, B. did not declare war on the U.S.S.R., though he did declare war on Britain and the U.S.A. When the tide of events began to turn against the Axis in 1943 there were signs that B., always cunning and resourceful, was contemplating a *coup* with the help of elements of the army; but he d. shortly after paying a visit to Hitler, whether from natural

causes or whether at the hands of Ger. or domestic enemies is uncertain. An unscrupulous opportunism marked B.'s policy throughout the 25 years of his troubled reign.

Boris Fëdorovich Godunov, see GOMUNOV.

Borislav (Ukrainian *Boryslav*; Polish *Boryslaw*), tn in Drohobych Oblast of Galicia (q.v.), W. Ukraine, 45 m. SW. of L'vov, with ozokerite mines (since 1846) and oil and gas wells. Pop. (1956) 30,000.

Borisoglebsk, Russian tn in the Voronezh Oblast, 120 m. E. of Voronezh. It has extensive food industries, and the well-known B. oak forest near by. It was founded in the 17th cent. as a Muscovite outpost, and prior to the 1930's was an important centre of the grain trade. Pop. (1956) 55,000.

Borja, Sp. tn in the prov. of Zaragoza. It has numerous anct buildings, and once belonged to the great family of B. (see BORGIA). It has manufs of textiles and brandy. Pop. 6000.

Börjesson, Johan (1790-1866), Swedish poet and dramatist. He was educ. at Gothenberg and Uppsala, took holy orders, and became court preacher in 1821. His dramas were mostly historical, based on Schiller's interpretations of Shakespeare. The best known are *Erik den XIV*, 1842, *Erik den XIV's son*, 1847, and *Solen sjunker*, 1856. His chief lyrical work is in *Blommor och Tårar på en Dotters Graf*, 1854. He became a member of the Swedish Academy in 1861.

Borkhausia, see BARCHHAUSIA.

Borkum, is. in the N. Sea, belonging to Germany, and in the *Land* of Lower Saxony (q.v.). It is one of the E. Frisian group, and is situated between the E. and W. arms of the Ems estuary (q.v.). The is. is about 5 m. long, and half as wide. There is good pasture land for cattle, and numerous sea-birds find a breeding place upon it. It became a popular health resort, but is more noteworthy as part of the Ger. coast defence system. The dismantling of the is.'s defences after the First World War was incomplete, and the gun emplacements were not destroyed. During the Second World War the is. was heavily defended, principally by the Coastal battery of 4 11-in. guns and some 7 other batteries, including anti-aircraft guns. There were 16 radar stations, and the anti-aircraft defences of the is. claimed to have shot down over 100 allied planes. After the collapse of Germany in 1945, the total demolition of the defences of B. was put in hand. Pop. 3000.

Borlänge, largest tn in the prov. of Dalarna, Sweden, on the R. Dal, an important ironworking centre. The Domnarvets ironworks in B. are the largest in N. Europe. Pop. 23,828.

Borlase, Cornwall (1695-1772), antiquary, b. Cornwall and educ. Exeter College, Oxford. He was presented in 1722 to a living near Penzance, to which the vicarage of St Just was added in 1732. He pub. in his *Philosophical Transactions* an essay on Cornish diamonds, and was

made an F.R.S. in 1750. He subsequently produced sev. works, including *Antiquities of Cornwall*, 1754. He was made an LL.D. in 1766. He presented collections to the Ashmolean Museum at Oxford.

Borley Rectory, the reputedly haunted rectory 2½ m. from Sudbury, Suffolk, England, destroyed by fire in 1929. See Harry Price, *The End of Borley Rectory*, 1946.

Bormann, Martin Ludwig (1900-1945), Ger. Nazi leader, b. Halberstadt, Saxony. He joined the Nazi party in 1925, and in 1933 became chief of staff to Rudolf Hess, later succeeding him as third deputy to Hitler. After the defeat of Germany, he was missing and presumed dead, although tried in absence as a war criminal at Nuremberg. See the *Bormann Letters* (ed. H. Trevor-Roper), 1954.

Bormio, It. tn, in Lombardy (q.v.), in the valley of the Adda (q.v.). It is in the Alps (see ORTLER GROUP) near the Swiss border, and has thermal springs. Pop. 2300.

Born, Bertran de, see BERTRAN DE BORN.

Born, Max (1882-), physicist, b. Breslau. He occupied in succession the chairs of theoretical physics at the univs. of Berlin (1916), Frankfurt (1919), Göttingen (1921). In 1933 he came to England and became a lecturer at Gonville and Caius College, Cambridge, and was appointed Tait prof. of natural philosophy at Edinburgh in 1936. In 1939 he acquired Brit. nationality and was elected F.R.S. In 1954 he was awarded the Nobel prize, jointly with Walther Bothe, for fundamental work in quantum mechanics. He has made important contributions in many fields, including the statistical interpretation of wave functions, the use of perturbation theory for scattering problems, the B.-Oppenheimer theory of molecules, the theory of liquids, and of crystals. Amongst his Eng. books are *Einstein's Theory of Relativity*, 1922, *Problems of Atomic Dynamics*, 1926, *Mechanics of the Atom*, 1927, *Atomic Physics*, 1935, *The Restless Universe*, 1936, and *Experiment and Theory in Physics*, 1945.

Borna, Ger. tn in the dist of Leipzig, 15 m. SSE. of Leipzig (q.v.). It is in a lignite-mining dist., and has engineering manufs. Pop. 19,000.

Börne, Karl Ludwig (1786-1837), Ger. political writer and satirist, b. Frankfurt-on-Main, of Jewish parentage. He studied medicine at Berlin. From 1807 he studied constitutional law and political economy at Heidelberg and Giessen. In 1818 he became a convert to Lutheran Protestantism, changing his name from Löb Baruch to Ludwig Börne. From 1818 to 1821 he ed. *Die Wage*, which was suppressed by the police authorities for its anti-gov. views. His views and satirical style are fully developed in his *Briefe aus Paris*, in which he reproaches the Ger. people with every kind of vice and folly. B. d. in Paris of consumption. He was a bitter enemy of Heine (q.v.).

Borneo, third largest is. in the world, in the Greater Sundas group between S.

China and the Sulu Sea (N.) and the Java Sea (S.). Area 287,000 sq. m. Not being volcanic B. is less fertile than the surrounding is. The mountainous interior rises to 13,455 ft in Mt Kinabalu in the N. There are many navigable rivers, most important of which are the Kapuas and Rajang flowing W., and the Barito flowing S. B. is mainly jungle with swampy lowlands in the S. and SW. The climate is hot and humid. with ann.

E.N.A.

A WOMAN AND HER BABY OF THE JUNGLE REGION OF BORNEO

rainfall over 100 in. from the NE. and SE. monsoons. Dense forests produce sandalwood and camphor. Agric. products include rubber, rice, copra, and resin. Mineral resources include oil, iron, copper, diamonds, and coal. Main exports are petroleum products. The pop. (about 3,100,000, including nearly is.) comprises Dyaks (q.v.) in the interior, and Malays, Javanese, and Chinese on the coast. Portuguese and Sp. traders visited B. in the 16th cent., Dutch in the 17th, and Brit. in 1665. Dutch influence was paramount until the estab. of Sarawak (q.v.) in 1841. B. was occupied by the Japanese in the Second World War. It is divided politically into 4 sections: (1) Brit. N. Borneo (29,380 sq. m.); (2) Sarawak (47,000 sq. m.), both Brit. Crown Colonies; (3) Brunei (2226 sq. m.), a Brit.

protectorate; and (4) Indonesian Borneo (formerly Dutch Borneo) (208,300 sq. m.).

Borneo, North, ter. at the N. end of the is. of B., area 29,380 sq. m., with a coastline of some 900 m. The pop. of 364,000 consists mainly of settlers on the coast and of aboriginal tribes inland. The Bornean natives number about 250,000 (Dusuns 120,000, Bajaus 45,000, and Muruts 18,000). In addition there are nearly 80,000 Chinese, over 17,000 natives of the Malay Archipelago, and some 1200 Europeans. The E. coast has many valuable rivs. and the chief riv. on the W. is the Padas. Kinabalu Mt. is 13,455 ft. high. The climate is pleasant. Sandakan (14,000) is the best of the 4 excellent harbours. Rubber cultivation, over 120,000 ac., is the chief

rights and assets was left to be settled by arbitration. The Crown was to pay £860,600 on 30 Dec. 1946, out of which sum the company was to redeem outstanding debentures, this sum being regarded as full or part satisfaction of the amount payable under the arbitration (save that whatever that amount, the company would not be called on to repay any part of the £860,600).

See Owen Rutter, *The Pagans of North Borneo*, 1930, and Agnes Keith, *Land below the Wind*, 1939.

Borneo Camphor is obtained from a huge tree, native of Sumatra and Borneo. It is deposited in fissures in the wood, and these fissures have to be opened to obtain it, but it can also be obtained by the action of reducing agents.

Danish Tourist Bureau

BORNHOLM

industry. Other exports include tobacco, manila hemp, copra, cutch, and timber. There is a railway (116 m.) from Jesselton, the cap. (pop. 11,700), on the W. coast to Melapap in the interior, with a branch from Beaufort to Weston on Brunel Bay. The ter. was bought from the sultan of Brunel in 1877 by the Brit. N. Borneo Co., incorporated by royal charter in 1881. A Brit. protectorate was estab. in 1888, and the ter. was administered by a governor responsible to the company's court of directors in London. During the Second World War the ter. was in the occupation of the Japanese from 1941 to 1945. See **PACIFIC FRONT IN THE SECOND WORLD WAR**. After the Second World War it was considered desirable that the Crown, in consideration of compensation to the company, should assume direct responsibility for the gov. of the state of N. B. The agreement for the transfer of sovereign rights to the Crown was concluded on 26 June 1946, on which date Brit. N. B. became a Brit. crown colony (like Sarawak, q.v.). Its name was then changed to N. B. Under the agreement the sum to be paid in respect of sovereign

Bornholm, is. belonging to Denmark, situated about 22 m. SE. of the Swedish coast, in the Baltic Sea. It is 24 m. long, and 16 m. wide; area 225 sq. m. Its coast is very rocky, and the interior is hilly, especially in the N., where the cliffs reach a height of nearly 150 ft. The soil is fertile, and flax, hemp, and oats are grown. There are good pasture lands for cattle. Sev. quarries are in the neighbourhood, from which are obtained building stone, marble, and limestone, also a fine porcelain clay is worked. The industries are weaving, the making of clocks and watches, and earthenware. There are distilleries and breweries. Rønne is the chief tn, and there are a few small tns: Nekse, Hasle, Svanke, Allinge, and Sandvig. B. was captured by the Hanseatic League in 1525, and later passed to Sweden, but returned to Denmark in 1660. In the Second World War the is. was occupied by the Germans and then by the Russians until April 1946. Pop. 48,500.

Borning, or **Boning**, method of making a line or surface level. It is accomplished by looking along 2 or more straight edges

or a range of poles set up at regular intervals.

Bornite, metallic reddish-brown, brittle, copper-iron sulphide (formula Cu_3FeS_3), crystallising in the isometric system. It is named after Ignaz Born (1742-91), an Austrian metallurgist, who is notable for having discovered a method of extracting metals by amalgamation. A freshly fractured surface is copper-red to brown in colour, but soon develops an iridescent tarnish; whence the names *Erubescite* and *variegated copper ore*. Cornish miners have called it *peacock ore*. B. occurs as a primary mineral, but the most important source of this and other copper sulphides are ore bodies, which have been enriched by secondary depositions from overlying minerals of the oxidation zone. Of this type are the important copper deposits of Butte, Montana, U.S.A. B. is also mined in S. Australia, Peru, the Caucasus, Mansfeld, in Germany, and S. and S.-W. Africa.

Bornu, central African dist. W. and S. of Lake Chad. Formerly a Negro kingdom extending to the borders of Egypt, it was first visited by Europeans in 1823. Towards the close of the 19th cent. it was divided between Great Britain, France, and Germany, being included in Nigeria, Fr. W. Africa, and the Cameroons. The Nigerian dist. of B. has an area of 33,650 sq. m., and a pop. of 700,000; its cap. is Maidugari, pop. 57,000. It is a flat country with few elevations. The soil on the whole is fertile, for though water is lacking it can usually be obtained by boring; and the region is said to be capable of great pastoral development. The regions adjoining rivers are formed by alluvial deposits and are very fertile. Climate is hot and unhealthy. Chief products are indigo, cotton, yams, beans, and ground nuts. Pop. consists of various tribes, of which the chief are Kanuri, Kanembu, Tebu, Musgu, Manga, and Hausa. They are mainly Mohammedan Negroes, and trained horsemen.

Borodin, Alexander Porphyrevich (1833-87), Russian composer, b. St Petersburg. He displayed from childhood an equal liking for music and for science. His professional career was that of an expert chemist, but he devoted all his spare time to music. He first came under the influence of Balakirev and, after a period of study, wrote his first symphony—which shows some influence of Schumann, yet is in many respects characteristic of the later B. himself. He then began his opera *Prince Igor*, working at it at irregular intervals. This score, completed by Rimsky-Korsakov and Glazunov, contains some of his finest music. His other works include a second symphony (1877) and a third unfinished symphony; 2 string quartets and a few minor pieces for the same combination of instruments; a dozen songs, some of great originality and beauty; and the orchestral tone-poem *In the Steppes of Central Asia*. B. shows very distinctive melody, not greatly influenced by folk-song, and his harmony has a very individual flavour; also, almost alone among

Russians, he has the gift for utilising simple but remarkably apt polyphonic combinations of these melodies, as exemplified in the tone-poem mentioned above and in the 'Polovtsian Dances' in *Prince Igor*.

Borodin (real name Gruzenberg), Mikhail Markovich (1884-1952), Russian Communist of Jewish origin. Before 1917 he spent many years as an emigrant in America, where he was a member of the Amer. Socialist party. From 1918 he worked as an agent of the Communist International. In Aug. 1922 he was arrested in Glasgow and after 6 months' imprisonment expelled from Britain. In 1923 he was invited by Sun Yat-sen to China, and until 1927 acted as high adviser to the Central Executive Committee of the Kuomintang. He was arrested during the great purge of 1936-7, and d. in a concentration camp.

Borodino, vil. in the Moscow Oblast, 70 m. W. of Moscow. It was the scene of the great but indecisive battle in 1812 between Napoleon and the Russians under Kutuzov. Both sides incurred terrible losses but held their positions. After the battle, however, Kutuzov retreated and surrendered Moscow.

Borojević, von Bojna, Svetozar (1856-1920), Austro-Hungarian soldier, b. Croatia. In the Galician campaign, 1914, he was a general of infantry and distinguished himself at the battle of Komarov. After the fall of Lemberg to the Russians, he was put in command of the Third Army in that sector, but in his ill-starred attempt to capture Przemyśl by frontal attack (Jan.-Feb. 1915) he was no more successful than the general he had superseded. This campaign having developed into the Carpathian battle with a serious Russian threat to the plains of Hungary, it was left to B. with the very effective help of von Mackensen to turn the tide, and Lemberg was recovered soon after the Russians had been repelled from the Carpathians. In 1917 B., now promoted to be Commander-in-Chief of the Austro-Hungarian armies on the Isonzo front, again attacked in concert with a Ger. army on his wing, his coadjutor this time being Otto von Below. The breakthrough was accomplished, but the Austrian armies under B. looked staying power. B.'s First and Second Isonzo armies did eventually reach the Piave, but in June 1918 he was involved in the failure of the final and disastrous Austro-Hungarian offensive. His memoirs were pub. in 1921. He d. at Klagenfurt.

Boroglyceride, mixture of boric acid with glycerol.

Boroimhe, see BRIAN.

Borolanite, geological name of igneous rock occurring near Loch Borolan in the Scottish highlands. A form of syenite.

Boron, non-metallic chemical element. It occurs in nature in the form of boric acid and its salts. The element when separated appears as a brown powder, which burns to form the trioxide B_2O_3 . When heated with sulphuric acid it oxidises to boric acid. It combines directly with fluorine on contact, and with chlorine

and bromine on heating. The chloride is a colourless fuming liquid which readily decomposes in the presence of water, and the bromide has much the same properties. The sulphide also can be formed by direct union of the 2 elements on heating, and is also rapidly decomposed by water.

Bororo, tribe of Amer. Indians of the Amazon, Brazil. Hunters and gatherers, they trace descent on the mother's side (matriline, q.v.). They have elaborate mortuary rites. See R. H. Lowie, 'The Bororo,' in J. H. Steward's *Handbook of South American Indians* (vol. i), 1946, and C. Levi-Strauss, *Tristes Tropiques*, 1956.

Borough (Burrows, Borrows), Stephen (1525-84), Eng. navigator; went on the expedition under Willoughby from the Thames to find a N. passage to Cathay and India, 1553, this being the first voyage of the English to Russia. B. was master of the *Edward Bonaventure*, with Chancellor as chief pilot. Separated by storms from the other 2 vessels, he sailed on into the White Sea, being first to find and name N. Cape. In a second expedition in the *Serchthrift*, 1556, he discovered Kara Straits between Novaya Zemlya and Vaygach Is. Probably about 1558 he went to Spain, and was the first to propose a trans. of Cortés's work, known in England as Eden's *Arte de Navigation*, 1561. B. went on another expedition to Russia in 1560, 'the seventh voyage of the Merchant adventurers to Moscow' (Hakluyt). In 1563 he was chief pilot and one of the 4 masters of the queen's ships in the Medway. Some of his records of his voyages appeared in Hakluyt.

Borough, William (1536-99), Eng. navigator and author, brother of Stephen B. (q.v.). He was an ordinary seaman on the *Edward Bonaventure* on the first voyage to Russia, 1553. Afterwards he made many voyages to St. Nicholas. Later he transferred his services from the merchant adventurers to the Crown, but the actual dates are uncertain. In 1570 B. fought against pirates in the Gulf of Finland. Commanding the *Lion*, he accompanied Drake in the Cadiz expedition, 1587; but got into trouble for questioning the wisdom of the attack on Lagos. He commanded the *Bonavolia* in the Armada fight, 1588. B. is author of *Instructions for Discovery of Cathay Eastwards for Pel and Jackman*, 1580, and of *A Discourse of the Variation of the Compass*, 1581. Some of his charts are preserved at the Brit. Museum and at Hatfield.

Borough, The, see SOUTHWARK.

Borough. The word B. is derived from O.E. *burg*, meaning a walled or fortified place. Such places comprised the fortress-girded metropolis of each component kingdom of the heptarchy in Britain, walled seaports, border fortresses, and fortified *tuns*, or townships, on the royal demesne. The genesis of the *burg* is not to be sought in any Rom. source, and all the evidence at hand goes to show that the development of Eng. B.s is exclusively related to the peculiar conditions

of our national life. It is true that the Rom. *coloniae* and *municipia* reveal in some sort the idea of self-gov., but the powerful central organisation of the imperial gov. of auct. Rome and its military spirit were inconsistent with any true conception of local gov. In Britain, when the great fiefs or feudal baronies became hereditary, any local power that might have existed became absorbed in the privileges of the great barons. Thereafter burghal life in England is a slow growth originating in charters of incorporation or grants of liberties, comprising privileges rooted in custom, bought of the overlord or king at a heavy price in money and developed through the powerful organisation of merchant and craft guilds. Finally, the term B. becomes almost synonymous with the statutory creation of the 'municipal B.', denoting a place to which certain wide powers of self-gov. are accorded and exercised through the characteristic hierarchy of mayor, aldermen, and burgesses. The *township*, the smallest unit in the political system, consisted merely of a group of allodial landowners and held together by a community of interests, undoubtedly contained the germ of many of our B.s. Others grew out of a collection of such townships, and most of the remainder had their beginnings in the neighbourhood of some castle or under the walls of the monasteries. The chief magistrate of the *burg* was the *town-reeve*, or, in ports, the *port-reeve*. The men of the *burg* met together both for the purposes of commerce and defence, and by a system of mutual pledges (called *frankpledge*) answered for the good behaviour of every man in the *burg*, the paramount ownership of the great feudal lords being preserved by their power to appoint the reeve and the exaction of an arbitrary tallage. The king's supreme ownership was secured through the jurisdiction of the hundred, from which the *burgs* soon obtained exemption, and the shire-gemot, to which they remained more or less subject until the evolution of that body into the co. council and co. court of to-day. Even before the Conquest a few big tns had acquired the privilege of compounding for the arbitrary taxes or tallages of the king's sheriff by paying a fixed rent.

After the Conquest B.s or tns became divided into those which were included in the royal demesne and those which were held by barons, and soon rose into greater importance through the grant by the king or overlord (as the case might be) of charters of incorporation and privileges. These privileges generally comprised a right of independent jurisdiction, self-assessment, the right to have a *hanse*, or merchant guild, the free election of reeves, *infangentheof*, or local jurisdiction, over thieves, exemption from tolls, and the commutation of the profits of fairs and markets and the arbitrary assessments by the sheriff of individual burgesses (q.v.) for a perpetual fixed rent from the whole B., called the *firma burgi*. Those contributing towards the *firma*

burgi were said to hold their tenements by burgrave tenure. By the time of Henry III most of the large tns had obtained a distinct recognition by the king of their privileges and immunities. Charters were granted to the 'fully qualified members of the township,' and from having no powers of self-gov., B.s soon became especially adapted through the organisation of the guild system, to the functions of municipal gov. Separate jurisdictions, and the obligations of feudal tenures which bound so many of the burgesses to some paramount tenant-in-capite, or great baron, disappear after incorporation, and the substitution of the *mayor* for the *reeve* heralds the advent of an independent local community. The municipal gov. of B.s from and after the grants of incorporation by the Plantagenets was developed partly by the possession of corporate property, but arose chiefly from the spirit of corporate unity and mutual responsibility that permeated the *guilds*. When B.s become recognised by the Crown, their by-laws (*burg-laws*) acquire a binding force. Later, in the reign of Edward III, the powers of the merchant guilds are absorbed by the *craft guilds*, or guilds of craftsmen engaged in a particular craft in a particular B. Ultimately the place of the craft guilds is taken by the merchant companies of the 17th cent., and the powers of self-gov. revert to the close corporation of the B. composed of the mayor, aldermen, and councillors. From the middle of the 13th cent. the general tendency in the development of B.s is to vest the governing powers in a mayor chosen by the whole body of burgesses, a group of aldermen, and a larger body of councillors. The aldermen and councillors, who soon acquired the power to elect the mayor themselves, united themselves into a close corporation, and managed to get charters of incorporation granted to themselves to the exclusion of their fellow burgesses. This restrictive tendency increased, and after the close of the 15th cent. freemen were excluded by the close corporation from elections, and the corporation assumed the ownership of the B. property and even controlled the election of members of Parliament, a power which was found especially useful to the Crown. This state of things came to an end with the passing of the Municipal Corporations Act of 1835. That Act, which introduced the term 'municipal B.,' reformed the larger corporations and gave new powers of self-gov. to such places, whether parl. B.s or not, as were deemed 'municipal B.s.' In connection with parl. representation, constitutional historians observe that the word B. becomes for a time associated with a place, whether incorporated or not, which usually returned a member to Parliament. Where the B. had no charter, that distinctive feature of B.s was preserved by the assumption that every parl. B. must have had a charter at some former time, or was entitled to the privileges of incorporation by prescription (usage). The Reform Act, by disfranchising the rotten

B.s (see ROTTEN BOROUGH), restored the meaning of B. to its previous signification. A B. now means a tn or place subject to the Municipal Corporation Act, 1882, and its amendments (see LOCAL GOVERNMENT ACT, 1933). The Crown still retains the prerogative of incorporating B.s by royal charter. A B. possesses a common seal and a council consisting of a mayor, aldermen, and councillors. The councillors are elected by the local government electors and the mayor and aldermen by the councillors. The mayor is an *ex officio* magistrate for the B., and sometimes receives a salary. The mayor serves 1 year, the councillors 3 years, and the aldermen 6 years, one-half of the aldermen retiring every 3 years. B.s of over 75,000 inhab. can be turned into administrative cos. by private Act of Parliament, and are not then under the power of the co. council. The Local Government Act, 1888, converted a number of these large B.s into administrative cos. Some B.s have a court of quarter session, presided over by a judicial officer called a recorder. A B. is controlled by the central gov., but the sanction of the Ministry of Housing and Local Gov. is required for loans secured on the B. rates, and the property of the B. may not be alienated without the consent of the Crown. A B. possesses wide powers of making bylaws for the good rule and gov. of the B. As to the qualification of a Burgess, see BURGESS. The word burgh as used now is appropriated to Scotch B.s or burrows, as to which see BURGH. See also LOCAL GOVERNMENT.

Borough English, custom, formerly existing in many cities and ancient boroughs of England, by which lands and tenements held in ancient burgrave descended to the youngest son instead of to the eldest.

Boroughbridge, par. and mkt tn of Yorks (W. Riding), England, on the R. Ure, 6 m. SSE. of Ripon. Aldborough (q.v.) is $\frac{1}{2}$ m. E. Pop. 1000.

Borrera, named after Wm Borrer (1781-1862), an eminent Brit. cryptogamic botanist. It is a genus of lichens, containing species which grow on trees or the ground, and are branched, bushy, or tufted little plants, one species farinaceous. Sev. are British.

Borreria, genus of Clinchonads, of which one species, *Borreria ferruginea* and *B. podya*, both from Brazil, yield a bastard ipecacuanha.

Borris, vil. of co. Carlow, Rep. of Ireland, at the foot of the Blackstairs Mts. Pop. 500.

Borromeo Islands, group of 4 is. in Lake Maggiore (q.v.), Italy. The largest, Isola Madre, has a palace and a park with exotic plants. Isola Bella is famous for its magnificent unfinished palace of the Borromeo family and its beautiful terraced gardens. Isola dei Pescatori (or Superiore) has a fishing vil. The 4th is. is Isola Giovannini. Total pop. about 300.

Borromeo, Carlo, St (1538-84), It. cardinal, son of Ghiberto B., Count of

Arona, and Margarita de' Medici, b. at the castle of Arona, on Lake Maggiore. He studied civil and canon law at Pavia, taking his doctor's degree in 1559. When his uncle became Pope as Pius IV, B. was made protonotary, created cardinal deacon, and raised to the Archbishopric of Milan. He founded an academy of learned persons, and pub. their memoirs as the *Noctes Vaticanæ*. On the death of Pius IV, Carlo began the reformation of his diocese. Sev. religious orders opposed him in these reforms, the most vigorous being that of the Brothers of Humility. A plot to assassinate him was formed by this society, and he only escaped death by a miracle. During the plague at Milan in 1576 he helped the sick, buried the dead, distributed money, and avoided no danger for the sake of the suffering. Canonised in 1610, his feast is on 4 Nov. Besides the *Noctes Vaticanæ* he pub. many homilies, discourses, and sermons.

Borromeo, Federico (1564-1631), It. archbishop, nephew of Carlo B. (q.v.). He was made cardinal in 1587, and Archbishop of Milan in 1595. His noble life is commemorated in Manzoni's *I Promessi Sposi*, 1826. He was the founder of the Ambrosian library, for which he collected 9000 MSS.

Borromini, Francesco (1599-1667), It. architect, b. Bissone; chief representative of the baroque style. Prin. works are the churches of S. Carlo alle Quattro Fontane, St Agnese (except the *campanile*), S. Ivo alla Sapienza, and S. Filippo Neri; and the Falconieri Palace—all in Rome.

Borron, Robert de, Fr. poet of the 12th cent. He wrote a Graal romance in octosyllabic couplets, *Joseph d'Arimathie* (c. 1180-99), one of the earliest works, if not the first, concerning the Holy Grail. He also wrote a poem on Merlin, based on Geoffrey of Monmouth or Wace, which survives for the most part only in a prose version. B.'s poems are not of exceptional value, but their influence on the Arthurian prose romances was immense. See J. D. Bruce, *The Evolution of Arthurian Romance* (2nd ed.), 1928.

Borrow, George Henry (1803-81), philologist and author, b. E. Dereham, Norfolk. In *Lavengro* he tells us that he was of Cornish descent on his father's side, while his mother was a Huguenot. He speaks of himself as being a very backward boy. In Norwich, where his parents came to live when he was 17, he was articled to a solicitor. Here his philological tastes were encouraged. He studied Welsh, and learnt to read and appreciate the works of Dafydd ap Gwilym (q.v.). On the death of his father, in 1824, he went to London and became a hack writer in the firm of Sir Richard Phillips, who was undoubtedly the original of the vegetarian publisher in *Lavengro*. In 1825 appeared his first work, *Faustus: a Translation from the German*, and in the next year a miscellany from the Danish. In 1826 also appeared his *Romantic Ballads*. The chaus of London galled him, however, and in that year he threw them off

to wander through the country as tinker, gipsy, ostler, or whatever offered, walking through the Eng. countryside, consorting with those who, like himself, felt the call of the wild. Later he extended his travels to the Continent, walking through parts of France, Austria, Italy, and Russia, where from 1833 to 1835 he superintended the trans. of the N.T. into Manchu, the court language of China. In 1835 he pub. his *Targum*, a collection of trans. from 30 languages and dialects.

National Portrait Gallery

GEORGE HENRY BORROW

Returning to England, he accepted the somewhat unlikely position of an agent to the Bible Society, and travelled through Spain, Portugal, and Morocco from 1835 to 1839, his adventures being admirably described in his work *The Bible in Spain*. In 1840 he married Mrs Clarke, a Norfolk lady, and settled down to a life of literary labour on her estate at Oulton Broad. To the estate he welcomed his old friends the gipsies, and it became for them a regular camping-ground. There he passed the remainder of his life.

In 1841 he had pub. *Zincali, or The Gypsies in Spain*, followed in 1843 by *The Bible in Spain*. The first, by its extraordinary knowledge of a mysterious race, and the second, by its wonderful pictures of the country, took the reading world by storm, and placed B. in the foremost rank of living writers. His popularity was too great to last. *Lavengro*, 1851, and *The Romany Rye*, 1857, its sequel, came far below the expectations aroused by the earlier work. It was not that the author was at fault, but that he did not write to suit his public. *Lavengro* is undoubtedly

greater than the earlier books, even if *The Romany Rye* is weaker. His later books were certainly weaker than his earlier; *The Sleeping Bard*, 1860, trans. from the Welsh, did not awaken much interest; *Wild Wales*, 1862, is lacking in the romantic flights which characterise the earlier work; and *Romano Lavo-Hil*, 1874, a glossary of gipsy words and phrases, is curious, but not inspired. His last 2 books were *The Turkish Jester*, 1884, and *The Death of Balder* (trans. from the Danish of Ewald), 1889. See H. Jenkins, *Life of George Borrow*, 1912; E. A. Thomas, *George Borrow: the Man and his Books*, 1912; C. K. Shorter, *George Borrow and his Circle*, 1913; S. Dearden, *The Gipsy Gentleman*, 1939; B. Vesey-FitzGerald, *Gipsy Borrow*, 1953.

Borrowdale, Cumberland, the upper valley of the Derwent (q.v.), ascending in a S. direction from Grange, via Rothwaite, Scatoller, and Senthwaite to Esk Hause, 2490 ft, in the heart of the Lake Dist. (q.v.) mts. The upper reach of B. is dominated on the right by Great Gable (q.v.), to which there is an easy path, the rock climbs being on the far side, and on the left by Glaramara, 2560 ft. The Derwent rises in Sprinkling Tarn below Esk Hause. B. formerly possessed rich plumbago mines, exhausted in 1868.

Borrowing Days, or Borrowed Days, the last 3 days of Mar., popularly supposed, according to Scottish legend, to have been borrowed from April. The deed is thus told in quaint verse:

March borrowit from Averill
Three days and they were ill.

The rhyme, however, is not peculiar to Scotland. See Kenneth Richmond's *Poetry and the People*, 1947, p. 199: 'that verse which, in one form or another, turns up in . . . every county:

March borrowed from Averill
Three days and they were ill.

The one was sleet and the other was snow
and the third was the worst that e'er did blow.'

Borrows, S., see BOROUGH, STEPHEN.

Borrowstounness, see BO'NESS.

Borsa, tn of Rumania, in the prov. of Baia Mare. It is noted for its mineral springs. Pop. (1930) 1500.

Borsec, vil. in Bacău prov., Rumania, 95 m. E. by N. of Chuj. It is situated in the Carpathian valley, at a height of 2400 ft above the sea, and is celebrated for its mineral waters.

Borsippa, anct Babylonian city **Barsipa**, mod. **Birs Nimrud**, 7 m. SW. of Babylon. B. fl. c. 1200-50 bc as a centre of religious learning and of the worship of Nabu, god of astronomy, writing, and science. The vitrified ruins of the 7 stage *ziggurat* rebuilt by Nebuchadnezzar II, named *Euriminanki* ('Tower of the 7 planets'), have been considered by some to be the biblical tower of Babel. Arab tradition says that here Nimrod tried to cast Abraham into a fiery furnace. Numerous expeditions to B., notably those by Layard, Rawlinson, Rassam, and Koldey, have unearthed buildings and inscriptions.

Borsod-Abauj-Zemplén County, see MISKOLC.

Borstal Training. From the point of view of his trial, the adolescent offender of 17 upwards is regarded as a full adult, but there are certain restrictions on imprisonment of those under 21 (see CRIMINAL LAW) and certain special forms of treatment, namely the detention centre (see CRIMINAL LAW), of which there are at present (1956) only 2, and the system of B. T. The inception of the Borstal system dates from 1902 when a modified form of prison treatment for this age group was introduced at Borstal prison, near Rochester. In 1908, under the Prevention of Crime Act, Borstal detention became a recognised part of the penal system, separated from the prison system, though the Borstal institutes remained under the control of the Prison Commission. From their inception the Borstal institutes concentrated on training. Under the Criminal Justice Act, 1948, the name has been changed from Borstal detention to B. T., a change which is significant of the point of view behind the system.

Anyone aged 16-21 convicted of an offence punishable in an adult by imprisonment can be sent to Borstal by the Assizes or Quarter Sessions or recommended to Quarter Sessions for Borstal by a summary court if the court is satisfied 'that it is expedient for his reformation and the prevention of crime.' Absconders from approved schools (q.v.) aged 16 and over can be committed to Borstal directly by summary courts.

Borstal sentences could originally be for 2 or 3 years. They are now always for 4 years of which not more than 3 years can be spent in a Borstal institution. The period of detention is followed by a period of release on licence which continues until the end of the 4-year sentence whatever the date of release. During this time the offender is placed under supervision, generally of a probation officer, and can be recalled at any time if his behaviour is unsatisfactory. The average period of detention is between 20 and 21 months.

There were in 1955 14 training estab. for boys of which 9 were open, 4 closed, and 1 of medium security. In addition there are 1 recall centre, 1 corrective estab. for those who persistently misbehave, and 2 reception centres dealing with allocation. For girls there is 1 open and 1 closed training institution, the latter acting also as the allocation centre. Recall cases are sent to a wing of Exeter prison. In 1954, 1522 boys were committed to Borstal, and 130 girls. The Borstal institutions for boys vary considerably, not only because some are open and some closed, but also in respect of the type of technical training given and the type of boy for whom they are intended, e.g. the immature and deprived boys are sent to different institutions from the tougher type. This demands careful allocation which is carried out at the reception centre where a most thorough system of observation and testing has been built up.

The Borstal institutions for boys are mostly large. Only 1 takes less than 100 and Portland, the largest, can accommodate over 370. The open Borstal for girls at East Sutton takes over 50, but the closed Borstal at Aylesbury has an average pop. of about 165. The training given at the Borstal institutions is based on an individual approach which is impossible with these large numbers. Hence the Borstal institutions are divided into 'houses,' though even so this basic unit is often too large for its purpose owing to shortage of staff. The house system is also valuable as helping to establish a corporate sense. Both smaller Borstal institutions and smaller houses would be welcomed by the Borstal authorities themselves. The prison commissioners are planning 2 new closed Borstal institutions both of which would take only 50.

Technical training, whether industrial or agric., plays a large part and includes trade courses recognised by the Ministry of Labour. The boys at Usk Borstal are occupied in afforestation and at the N. Sea Camp in land reclamation. On the side of character training the aim is to build up a sense of responsibility and to teach self-discipline, rather than mere conformity to rule. The particular needs and difficulties of each inmate are taken into account, and the aim is to avoid rigidity in the handling of the individual.

Though the purpose of the Borstal system is training rather than punishment, it is important to recognise that the long Borstal sentence seems, to the boys and girls who receive it, far more punitive than a short prison sentence. In so far as the fear of punishment has a deterrent effect, a Borstal sentence is likely to rouse more fear than a prison sentence.

Before the war Borstal claimed 75 per cent success for boys and 70 per cent for girls. These figures covered a 7-year period after release. During the war the Borstal system was seriously affected by the loss of staff—a large proportion being young—so that during the early post-war years the staff was largely inexperienced and was still short in numbers whilst the Borstal pop. rose rapidly. It is doubtless primarily as a result of this situation that the success rate for boys fell to 65 per cent. The girls' Borstal institutions now claim 90 per cent success.

A recent study of Borstal results shows that the results from the open Borstal institutions are better than from the closed, even when the chances of success estimated on the basis of the boy's character and previous records appear to be the same. (See reference to prediction table under PENOLOGY.)

Bibliography. W. Healy and B. S. Alper, *Criminal Youth and the Borstal System*, 1941; W. A. Elkin and Rev. D. B. Kittermaster, *Borstal: A Critical Survey*, 1950; G. Rose, *500 Borstal Boys*, 1954; Dr H. Mannheim and L. Wilkins, *Prediction Methods in Relation to Borstal Training*, 1955; W. A. Elkin, *English Penal System*, 1957.

Borthwick Castle, E. Midlothian, Scotland, 13½ m. SSE. of Edinburgh, founded in 1430. In June 1567 Mary Queen of Scots and Bothwell stayed here after their marriage. It was restored (1890–1913) as a private residence, and during the Second World War was used as a safe-deposit for Scotland's national art treasures. The historian Robertson was b. at the manse close by.

Bort-les-Organes, Fr. tn in the dept of Corrèze, on the Dordogne, at the foot of vast basalt colonnades—the so-called 'Organs of B.' There is a hydro-electric station, and textile and leather manufs. Pop. 5100.

Boru, see BRIAN.

Borujerd, dist. and tn of Persia, 100 m. E. of Kermanshah. It produces wheat, cotton, pulses, tobacco, sugar-beet, and fruit, and is a centre for carpet-weaving. Pop. of tn 46,000.

Boryslaw, see BORISLAW.

Borysthenes, anc. name for the Dniester R. (q.v.).

Borzhomi, tn in (Georgia, on R. Kura, 93 m. W. of Tiflis. It is a watering-place with a fine climate, and the centre of sev. health resorts; its mineral waters are sold throughout Russia. Pop. (1917) 3500.

T. Fall

Borzoi, or Russian Wolfhound, dog of the greyhound type, which is found to endure cold and travel rapidly over snow. It is light and slender of build, has warm, silky hair and large hairy feet; its swiftness is remarkable, and it is therefore much used in wolf-hunting. The tsars of Russia for a long time kept special kennels of these hounds, and the first pair seen in England was given to the Prince of Wales by the tsar in 1870. B.s hunt in couples, catching the wolf up very speedily, when one attacks it on each side, holding it until the huntsman rides up to dispatch it. When not engaged in hunting, the hound is good-tempered, obedient, and intelligent. In colour it is usually white, but black, tan, and yellow patches are frequently to be seen. In appearance it is graceful, with a long, narrow skull, long and powerful neck and body, slender legs, deep chest, flat sides, and a profuse and silky coat. The

average height of the male is 28 to 33 in., and of the female 26 to 30 in.

Bos, Lambert (1680-1717), Dutch scholar and critic, b. Workum in Friesland; educ. at the univ. of Franeker, where he became Gk prof. in 1704 and spent the rest of his life. His works include notes on Thomas Magister (q.v.), 1698, *Ecclesiastiones Philologicae*, 1700, *Ellipses Graecae*, 1702, trans. into English by John Seager in 1830, *Vetus Testamentum ex Versione LXX. Interpretum*, 1709, *Antiquitates Graecae*, 1714, and *Animadversiones ad Scriptores quosdam Graecos*, 1715.

Bos, see OX.

Bos (fossil), oxen family, occurs in a fossil stato in the superficial deposits of Europe and America. *B. primigenius* is found in the Pleistocene in Essex and Wilts; *B. longifrons* in Ireland is a smaller species.

Bosa, tn in Sardinia (q.v.), 30 m. S. by W. of Sassari (q.v.). It has an ancient castle, and 2 notable churches. There is a coral fishery. Pop. 7500.

Bosanquet, Bernard (1848-1923), philosopher. He was a scholar of Balliol College, Oxford, and lecturer (1871-81) at Univ. College, Oxford. As a philosopher he was a follower of Hegel, whose *Aesthetics* he trans., and a disciple of T. H. Green. Works include (1885-99) *History of Aesthetics, Knowledge and Reality, Essentials of Logic, Psychology of Moral Self*, and the *Philosophical Theory of the State*.

Bosanski Brod, see SLAVONSKI BROD.

Bosboom, Anna Louisa Geertruida Tonsaint (1812-86), Dutch novelist, b. Alkmaar. During her early life she spent several years in historical research, of which she made good use later for her novels. In 1851 she married Jan B., the painter. Her works, many of them stories of Dutch hist., are true representations of the manners and customs of the people. Among these works are *Almagro*, 1837; *Engelschen te Rome* (The English at Rome), 1839; *Het Huis Lauernesse* (an episode of the Reformation), 1841, which was trans. into sev. languages; and the 3 stories of the Leicester family: *De Graaf van Leicester in Nederland*, 1846, *Vrouwen van het Leicestersche Tijdvak*, 1845, and *Gideon Florensz*, 1854. She was also successful with the modern character novel, as *Majoor Frans*, 1874. Her stories are remarkable for their historical and psychological insight. Her collected works were pub. in 25 vols., 1880-8. *See* J. M. C. Bouvy, *Idee en Werkwijze van Mevr. Bosboom-Tonsaint*, 1935.

Bosán Almagover, Juan (c. 1490-1542), Sp. poet, b. Barcelona, of an ancient noble family. He came to Granada to the court of Charles V in 1516. He was afterwards entrusted with the education of the Duke of Alva. He passed some years in military service. His poems were pub. by his widow at Barcelona in 1543. They are divided into 4 books. The first contains light poems in the old Castilian metres. The second and third books consist of a number of poems in It. metre, sonnets, canzoni, and poems in blank verse. *Hero and Leander* is the longest

of these. The fourth book contains his best effort, *The Allegory*. He pub. in 1534 a trans. of Castiglione's *Cortegiano*. His friendship with Garcilaso de la Vega (q.v.) bore fruit in popularising It. verse forms. *See* M. de Riquer, *Juan Boscan y su cancionero barcelonés*, 1945.

Boscawen, vil. on the N. coast of Cornwall, England, 6 m. from Camelford. It is a popular holiday resort, has a sheltered harbour, and is surrounded by impressive scenery. Pop. 600.

Boscawen, Sir Edward (1711-61), Eng. admiral, third son of Hugh, 1st Viscount Falmouth. He became a lieutenant in 1732, served at Porto Bello, 1739-40; Cartagena, 1741; commanded a small squadron in Soundings, 1746; wounded off Finisterre, 1747; appointed Commander-in-Chief by land and sea in E. Indies in 1747, and later in the Mediterranean. Unsuccessfully attempted to reduce Pondicherry. He was nominally member of Parliament for Truro after 1741. He was Lord Commissioner of the Admiralty, 1751-61; vice-admiral, 1755. He commanded on N. Amer. station, in the Channel, off Brest, and in Bay of Biscay at intervals between 1755 and 1757; Commander-in-Chief of fleet at siege of Louisburg, 1758; privy councillor, 1759. His crowning feat was the destruction of the Fr. fleet in Lagos Bay on 18 Aug. 1759. When he died he was holding the post of general of marines. B. was nicknamed 'Old Dreadnought.'

Bosch, Jerome (c. 1462-1516), Dutch painter (so named from his bp. s'Hertogenbosch, Holland, his true name being van Aeken), but as an artist usually considered with the Flemish School. From his choice of subjects he resembles Brueghel, whose art is said to have been largely founded on that of B. B. is in fact one of the most original artists of his age, though he was long forgotten and has only been reappreciated in the light of modern Surrealism. His subjects are chiefly satirical, fantastic, or grotesque. He was patronised by Philip II of Spain, and sev. of his prin. pictures are in Madrid, notably 'The Hay Wain' of the Escorial and his 'extraordinary vision of an 'Earthly Paradise' (Prado). Among his other paintings are 'St Jerome in the Desert,' 'St Anthony,' 'The Last Judgment,' 'Adoration of the Magi,' 'The Fall of the Rebellious Angels.' *See* J. Combe, *Hieronymus Bosch*, 1948.

Bosch, Johannes van Den, Count (1780-1844), Dutch gen. and administrator, b. Gelderland. He went to Java in 1797, rising to be governor-general of the Netherlands E. Indies in 1828. He was responsible for much of the early development of these Dutch colonies. From 1833 to 1839 he was colonial secretary, and was created count in 1842.

Bosch, Karl (1874-1940), Ger. chemist. He adapted the Haber process for synthesis of ammonia to commercial production, and became chairman of important dye works. He is credited with the discovery of a number of chemical substitutes which relieved shortage in Germany during the First World War.

He was awarded the Nobel prize for chem., 1931.

Bosch Vaark, common bush-pig (*Polamochoerus porcus koiriplamus*) of the Boers. It closely resembles the type found in Madagascar, the sole indigenous representative of the Artiodactyla in that is. The B. V. is found in E. and S. Africa.

Boscobel, par. in Shropshire, England, 22 m. E. by S. of Shrewsbury. B. Manor was the retreat, after the battle of Worcester, 1651, of Charles II who hid in an oak-tree to escape his pursuers.

supra to sun-spots), 1736, in which is to be found the earliest geometrical solution of the problem of the equator of a planet determined by 3 observations. In 1758 his famous work on the molecular theory of matter, *Theoria philosophiae naturalis redacta ad unicam legem virium in natura existentium*, *De solis ac lunae defectibus*, 1760, is an excellent Lat. poem on eclipses.

Bose, Sir Jagadis Chandra (1858-1937), Indian naturalist; educ. in Calcutta and at Christ's College, Cambridge. He was appointed prof. of physical science at

BOSCASTLE

Youttons

Boscombe, sea-coast suburb of Bournemouth, Hants, England.

Bosovich, Roger Joseph (1701 or 1711-1747), It. mathematician and astronomer, b. Ragusa. He entered the Society of Jesus. He was appointed teacher of mathematics and philosophy in the Collegium Romanum at Rome. His reputation was previously made by the solution of the problem to find the sun's equator and fix the time of its rotation by observing the spots. He was sent to London in 1760 to defend the interests of Ragusa. In 1764 he was appointed to a professorship at Pavia, and subsequently at Milan. After the suppression of the Jesuits in 1773 he went to Paris, was given a pension by the king, and appointed director of optics to the navy. Afterwards returned to Milan where he gradually became insane. He did much research on optics, especially on the theory of achromatic spectacles. He left more than 70 works on astronomy, physics, optics, etc., the prin. being *De Maculis solaribus* (see reference

Presidency College, Calcutta, in 1885, became emeritus prof. in 1915, and then founded and directed the B. Research Institute in Calcutta. He became one of the greatest authorities on plant life. In the course of his investigations he invented many delicate recording instruments, one of the most notable of which is the crescograph. In nature the movement of plant tissues may be so minute as to defy the human eye. With the crescograph this movement can be magnified 10,000,000 times and the reactions of plants may thus be studied when manures, poisons, or other stimuli are applied. Among his numerous books are *Plant Response*, *Irritability of Plants*, *Life Movements in Plants*, and *The Nervous Mechanism of Plants*.

Bose, Subhas Chandra (1897-1945), Indian politician. He was an ardent nationalist, and a supporter of Gandhi. In 1920 he joined the Swaraj party, and from 1929 to 1931 was president of the All-India Trades Union Congress. In

1939 he became president of the Indian National Congress. During the Second World War he went into hiding and escaped from India, eventually making his way to Japan. From there he announced his intention of leading an Indian National Army to drive the British from India. He was killed in Japan in an air crash.

Bosio, François Joseph, Baron (1769-1845), It.-Fr. sculptor, b. Monaco. He was brought up and constantly lived in France, where he was a favourite with Napoleon I. He became famous on account of the bas-reliefs he executed for the column in the Place Vendôme. Louis XVIII and the succeeding kings of France employed him in many public works. He was created baron by Charles X.

Boskovice, Czechoslovakia in the region of Bruo (q.v.), with coal-mines and chemical works. Pop. 5000.

Bosna, see SAVA.

Bosna, riv. of Yugoslavia. It rises S. of Sarajevo, and flows N. to join the Sava. Length 160 m.

Bosna-Serai, see SARAJEVO.

Bosnia, N. part of the rep. of Bosnia-Hercegovina, Yugoslavia; roughly the dist. bounded by the Sava (q.v.) and its tribs. the Drina and Una. It is very mountainous, and its mountain ranges, belonging to the Dinaric Alps (q.v.), are thickly wooded. The climate is Alpine. Sarajevo (q.v.) is the prin. tn. Area 16,240 sq. m. *See also BOSNIA-HERCEGOVINA.*

Bosnia-Hercegovina, constituent rep. of Yugoslavia, bordered on the N., NW., and SW. by Croatia, and on the E. by Serbia. It is composed of the 2 anc't provs. of Bosnia and Hercegovina (qq.v.). The early hist. of these provs. is the hist. of Illyria (q.v.). After the break-up of the Rom. Empire the region was contended for by the Hungarians and the Byzantines, and it became to all intents and purposes Hungarian ter. in the 13th cent. In 1325 Bosnia annexed Hercegovina, and an independent kingdom was formed. This fell to the Turks in the 15th cent., and remained under the overlordship of the Muslims for 400 years. In 1875 there was an uprising of the Christians in B.-H., who were supported in the following year by the Serbs and the Montenegrins. In 1877 Russia, as protector of the Slavs, declared war on Turkey (*see TURKEY, History*), and in 1878 Bosnia and Hercegovina were handed over to the military occupation of Austria (*see BERLIN, CONGRESS and TREATY OF*). Under Austrian administration considerable improvements were made in the condition of the people of the region. In 1908, fearing that the 'Young Turk' reforms might lead to a strengthening of Turkey's position, and taking advantage of Russia's weakness, Austria formally annexed the provs., at the same time as Bulgaria declared itself free of Turkish suzerainty. The Austrian move was supported by the Croats on religious grounds, but was opposed by the Serbs, who considered that the region belonged to them for ethnic and

historic reasons. The murder of the Austrian Archduke Francis Ferdinand (q.v.) at Sarajevo in June 1914, by a Bosnian student, was the incident which led to the Austrian declaration of war against Serbia (*see WORLD WAR, FIRST*). After the subsequent collapse of the Austrian empire, and the end of the war, Bosnia and Hercegovina were incorporated in the new kingdom of the Serbs, Croats, and Slovenes—later Yugoslavia.

The rep. of B.-H. is largely agric. Livestock is raised, and cereals, fruit, vines, and tobacco are grown. Some coal and iron are mined, there are numerous spas, and there is a growing tourist industry. The prin. tns are Sarajevo (the cap.), Banja Luka, Mostar, Tuzla, and Zenica (qq.v.). Area 19,809 sq. m.; pop. 2,843,500. *See also YUGOSLAVIA.* *See Sir A. J. Evans, Through Bosnia and Hercegovina on Foot, 1876; W. H. Chadburn, My Balkan Tour, 1911; R. W. Seton Watson, The Role of Bosnia in International Politics, 1931; B. Schmitt, The Annexation of Bosnia, 1937.*

Bosphorus, or Bosporus: 1. Gk name for the strait leading from the Black Sea to the Sea of Azov. Called also Cimimerian B. (*Strait of Kerch*). Panticapaeum, on the European side, was the cap. of the Bosphoran Kingdom (q.v.).

2. Now **Karadenizi Bogazi.** The word is derived from the Greek denoting Oxford. The legend is that Io, daughter of Inachus, crossed the Thracian B. in the form of a cow. This strait unites the Black Sea with the Sea of Marmora, and forms part of the boundary between Europe and Asia. The channel is 18 m. long, and has a depth varying from 20 to 66 fathoms. Its minimum width is 2½ m. It is rarely frozen over. The inlet, on either side of which lies Istanbul, is called the Golden Horn. The shores, which are elevated, are composed of various volcanic rocks, such as dolerite and granite, but along the remaining course the formations are Devonian. The scenery on both sides is varied and beautiful, being dotted with cypresses, laurels, and plane-trees and covered with palaces, vills., and picturesque gardens. On the European side are many fine buildings of the wealthier citizens of Istanbul.

Bosphoran Kingdom, anct state on the N. Black Sea shores formed by a number of Gk colonies on the Kerch' and Taman' peninsulas c. 480 bc, with Panticapaeum (Kerch') as cap. It was under a Rom. protectorate from 110 bc, and conquered by the Huns c. AD 370. Excavations (since 1816) show that the B. K. attained a high level of culture, combining Greek and local elements. *See M. Rostovtzeff, 'The Bosphoran Kingdom,' in The Cambridge Ancient History, vol. viii.*

Bosquet, Pierre François Joseph (1810-1861), Fr. marshal, b. Mont-de-Marsan in Landes. He entered the army in 1833, and went to Algeria a year later. Became a captain in 1839, lieutenant-colonel in 1845, and colonel of a Fr. line regiment in 1847. He returned to France in 1853. In the Crimean War he contributed greatly to the victories of Alma and Inkerman.

He was wounded at the siege of Malakov, where he took a leading part in the assault. He became a marshal of France and a senator in 1856.

Bosruck, tunnel in the Austrian Alps on the Pyhrn railway, 57 m. S. of Linz (q.v.). It is 3 m. long, and the centre point (2178 ft) is on the border between Upper Austria and Styria (q.v.).

Boss, in architecture, either a carved stone keystone of approximately hemispherical form at the intersection of ribs in a Gothic vault, or a similar carved ornament in wood at the intersection of beams in a flat or curved ceiling. The B.s add a rich effect to the vault or ceiling, and are often of great interest and beauty.

Bossi, Enrico (1861-1925), It. organist and musical composer, b. Salò, Lake Garda. He studied at Bologna and later in Milan and, after going abroad, resolved to effect reforms in organ study in Italy. He held various directorial posts, including, from 1916 to 1922, that of the Royal Liceo of Santa Cecilia, Rome. Chief works: *Cantico dei cantici* (biblical cantata); *Il Paradiso perduto* (oratorio after Milton); symphonic poem with voices, *Il cicco*; church music; 2 trios for violin, cello, and piano; and a large amount of organ music.

Bossiney, see TINTAGEL.

Bossu, Le, see ADAM DE LA HALLE.

Bossu, René Le, see LE BOSSU.

Bossuet, Jacques Bénigne (1627-1704), Fr. orator and prelate, b. Dijon, France, on 27 Sept. Although of bourgeois rank, his family took an honourable part in the public and official life of Burgundy. He was destined from infancy for the Church. On his father's appointment to the presidency of the parlement at Metz, Jacques was left to the care of his uncle, whose delight it was to foster his nephew's gifts. At the Jesuits' college where he was educ. he outclassed all other scholars in Greek and Latin. After reading the prophecies of Isaiah he was so struck by the beauty of their poetry that he became virtually 'a man of one book.' The Jesuits endeavoured to enlist him in their society, but his family disliked the proposal and he went to Paris in 1642. He entered the Collège de Navarre, where he achieved distinction. At the age of 24 he was appointed Archdeacon of Metz, and became a priest in 1652. He spent 6 years in pastoral activity and in study of the Scriptures. He wrote at this time a book entitled *Réfutation du catéchisme de Paul Ferry*. He became renowned as a preacher, and was in perpetual request in the city. When he appeared crowds flocked to listen. The queen, Condé, Turenne, and Mme de Sévigné listened to him frequently, and Louis XIV on hearing him for the first time sent a message of congratulation to the young man's father. His discourses have been divided into 3 parts, according to the place where they were uttered: (1) Those of Metz, showing a considerable amount of crudeness; (2) those of Paris, distinguished by strength and splendour; and (3) those of Meaux, in which faultless grace of

composition is the chief characteristic. In 1669 B. was appointed to the diocese of Condom, and later became preceptor to the Dauphin. He resigned the former post and plunged with vigour into his new duties, recognising that on the culture of the Dauphin might depend the future welfare of the Fr. people. During this period he wrote *L'Histoire abrégée de la France, La Politique sacrée*, and the celebrated *Discours sur l'histoire universelle*. In 1671 he was elected a member of the Fr. Academy. About this time he pub. the much criticised and widely trans. *Exposition de la doctrine de l'église catholique*. This book created much discussion, and twice received the imprimatur of the Pope. In 1681 he was appointed to the bishopric of Meaux. Soon after he attended the general assembly of the Fr. clergy, convoked by royal edict, and he preached a great opening sermon on the unity of the Church. In 1688 appeared *L'Histoire des variations des églises protestantes*, a review in 15 books of confessions of faith emitted by Protestant churches during the Reformation period. B. d. in Paris in 1704. He was of unrivalled eloquence and great learning, a defender of the faith, and champion of auct. rights and liberties of the Gallican Church. His complete works were ed. by the Abbé Lebarq. 1862-4. See FÉNELON and GALLICANISM. For a full bibliography see *Bibliothèque des bibliographies critiques*, by C. Urban, pub. by the Société des Études historiques, 1900. See also G. Lanson, *Bossuet*, 1901, and E. K. Sanders, *Jacques Bénigne Bossuet: a Study* (Eccles. Biographies), 1921.

Bossut, Charles (1730-1814), Fr. mathematician, b. Tarturas, near Lyons, on 11 Aug. Studied under Clairaut and D'Alembert. From 1752 to 1789 prof. at Mézières. After the revolution he was prof. at the Polytechnic schools in Paris. Wrote *Essai sur l'histoire générale des mathématiques*.

Boston, Thomas (1677-1732), b. Dunst. Berwickshire; he was successively schoolmaster at Glencairn and minister in Berwickshire and at Ettrick, Stirlingshire. His best-known work, *The Fourfold State*, was one of the religious classics of Scotland. He also played a leading part in the courts of the Church in the Marrow controversy (q.v.), respecting the merits of an Eng. work, *The Marrow of Modern Divinity*, which he defended against the attacks of the Moderate party in the Church. B.'s autobiography is an interesting record of the Scottish life of his period, full of sincerity and conscious and unconscious humour.

Boston, municipal bor., mrkt tn, and seaport of Lincs (parts of Holland), England, situated on the R. Witham, 31 m. SE. of Lincoln and 107 m. N. of London by rail. It lies in a flat fertile agric. dist. Its name is said to be derived from 'St Botolph's Town,' St Botolph having founded a monastery here in 654 (destroyed by the Danes in 870). St Botolph's Church (14th cent.), the largest par. church in England, is famed for its tower ('Boston Stump'), 272½ ft high.

The Guildhall (1450) contains the cells in which those later known as the Pilgrim Fathers were imprisoned in 1607. Later they founded H., Massachusetts (q.v.). The dock, 7 ac. in extent (1882), and riverside quay, 2640 ft. in length (1938), belong to the corporation. The prin. traffic is in timber, fruit, vegetables, fertilisers, grain, flour, and coal. Prin. industries are agriculture, canning, timber-working, labels and tags, fertilisers, feather purifying, and shell-fishing. Foxe, the martyrologist (1517-87), and Jean Ingelow, the poetess (1820-97), were b. here. Pop. 24,453.

Boston, cap. of Massachusetts, U.S.A., in Suffolk co., situated on an inlet of Massachusetts Bay called B. Harbour, 180 m. N.E. of New York by rail. B. has the longest railway station in the U.S.A., opened in 1898. A series of lines of railway (Boston and Maine, New York, New Haven, and Hartford) converge at this city. At the outskirts of the city is the junction railroad connecting most of these lines with one another. An extensive system of railways, opened in 1901, and a subway relieve the traffic of the streets, and connect the suburbs with the city proper. B. is the third largest wholesale market (after New York and Chicago) in the U.S.A. Its industries produce wool and cotton textiles, shoes, leather, machinery, food products (packed meat and frozen and canned fish), bakery goods, refined sugar, rubber goods, petroleum products, soap, chemicals, medicines, electrical equipment, pianos, and furniture. It has shipyards, shipbuilding facilities, repair yards, and printing and publishing plants. Its port receives fish, wool, hides, rubber, fertiliser, sugar, coffee, fruit, ores, petroleum, coal, wood, pulp, leather, lumber, cotton, flax, hemp, and sisal; it ships textiles, leather, grain products, wood products, cordage, machinery, and other manuf. goods. Logan International Airport, in E. B., built on land dredged from B. Harbour at a cost of \$40,000,000, has the nation's longest runway, 10,212 ft., 3 of 8500 ft. and 2 of 7000 ft., used by 12 airlines. B. Bay is 13 m. long. The climate is generally healthy though exposed to E. winds. B. is one of the finest cities of the U.S.A., and contains some of the choicest examples of architecture. Trinity Church and the Rom. Catholic church are two of the chief glories of the city. The former was begun in 1872, and, built in the Romanesque style of S. France, is the masterpiece of H. H. Richardson. There are windows by Wm Morris, Burne-Jones, and others in it. The mother church of the Christian Scientists (whose H.Q. are at B.) was opened in 1906. The B. public library (1885-1905) is a dignified building of pinkish-grey stone, and is built in the style of the It. Renaissance. The old museum is a red-brick edifice in modern Gothic style. Historically famous buildings are the Paul Revere house, Faneuil Hall, 1742, known as the 'cradle of Liberty' since the revolutionaries met here; Old S. Church, 1730; Old N. Church, 1723; Old State House, 1748; New State

House, 1795; and King's Chapel, 1754. Among other public buildings are Tremont Temple, H.Q. of the New England Baptists, post office and sub-treasury buildings, the U.S. gov. buildings, the co. court house, the Athenaeum, the Massachusetts Historical Society, the Isabella Stewart Gardner Museum of Art, and 3 large hospitals.

The city has an excellent water supply and an elaborate sewage system. Among its many educational institutions may be mentioned the Massachusetts Institute of Technology, a Methodist Episcopal univ., a Rom. Catholic college, the Massachusetts College of Pharmacy, B. College, B. Univ., schools of Harvard Univ., the Massachusetts Normal Art School, and 2 conservatories of music, one, the New England Conservatory of Music, being the largest in the U.S.A. As a musical centre it rivals New York, and was the undisputed literary centre of America until the latter part of the 19th cent. When B. was first settled it was called Shawmut or Trimountaine. It bore a conspicuous part in the early trouble with England, and of all Americans was the most energetic in opposition to Grenville's Stamp Act. With the repeal of that Act came the Declaratory Act, in which Parliament asserted its right to tax the colonies; various duties were imposed, and this led to a boycott by the B. merchants, who were, in fact, urged on to revolutionary courses by one Samuel Adams. The result was that two regiments of regulars were sent to the tn, the attempt to quarter them there leading to what is known as the B. massacre (1770). After the destruction of the Brit.-taxed tea in the harbour (1773), the port was closed and the tn was occupied by a Brit. force, which was compelled to evacuate in Mar. 1776. During the years 1830-1860 it was the H.Q. of the movement for the suppression of slavery. The city has suffered much by conflagration, especially in 1872, when 80 ac. of buildings were destroyed by fire. Bp. of Franklin, Copley the painter, Poe, Emerson, and other eminent men. Pop. 801,440.

Bibliography. H. W. Foote, *Annals of King's Chapel* (2 vols.), Boston, 1900; *Records relating to the Early History of Boston*, Boston, 1905; A. French, *The Siege of Boston*, London, 1911; M. C. Crawford, *Romantic Days in Old Boston*, Boston, 1910; L. Whiting, *Boston Days*, Boston, 1911; S. Jenkins, *The Old Boston Post*, Boston, 1913; E. M. Bacon, *Rambles around Old Boston*, 1914; L. M. Beebe, *Boston and the Boston Legend*, 1935.

Boston, card game invented in the last quarter of the 18th cent., and said to have originated in Boston, Massachusetts, during the Brit. siege, among the officers of the Fr. fleet, which lay off Marblehead. The 2 small is. in the Marblehead Harbour, called Great and Little Misery from the period of the Amer. Revolution, correspond to terms used in the game. At the middle of the 19th cent. B. was still popular in Europe, and to a lesser degree in America, since when it has declined in favour.

Boston Tea Party, so called from a large meeting of Americans at B., 16 Dec. 1773, to demonstrate against the attempt of Lord North's Cabinet to force the importation of tea on the colony of Massachusetts by 3 ships which had just arrived in the harbour and were moored at Griffin's wharf preparatory to unloading their cargoes. There was also a large protest meeting at the old S. Church, and as this had no results, on the same night about 50 men who were disguised as Mohawks boarded the Brit. tea ships in the harbour, and cast overboard 342 chests of tea.

Bostonite, igneous rock of the hypabyssal or dyke class, the essential constituents being alkali-felspar, quartz, and biotite. Occurs in Arran and Skye.

Boswell, Alexander (1775-1822), printer and song-writer, son of James B. (q.v.), b. Auchinleck. He was educ. at Westminster and Oxford. He settled at Auchinleck, where he set up a private press and printed many rare books in early Eng. and Scottish literature. In 1817 he contributed 12 songs to Thomson's select collection of original Scottish airs. He was created a baronet in 1821 for a loyal composition entitled *Long live George the Fourth*. In 1822 he fought a duel with James Stuart of Duncarn, who challenged him as the author of certain truculent pasquinades reflecting on his honour and courage. B. was mortally wounded and d. the next day. He was a devoted admirer of Burns, and by his own exertions raised £2000 for the monument on the banks of the Doon.

Boswell, James (1740-95), biographer, b. Edinburgh, son of Lord Auchinleck, a prominent advocate. He was educ. at Edinburgh High School and the univ. of Edinburgh, Glasgow, and Utrecht, where he studied law, being admitted to the Scottish Bar in 1766. At the age of 21 he pub. anonymously an *Ode to Tragedy*. A great lion-hunter, he attained the height of his ambition when he was introduced to Dr Johnson in a London bookshop on 16 May 1763 and succeeded in winning his friendship. Later in this year he went on a continental tour in the course of which he met Rousseau and Voltaire (q.v.), and was introduced to Paoli in Corsica. *An Account of Corsica*, 1768, his first book, was a great success. In the following year he married his cousin, Margaret Montgomerie, by whom he had 7 children, and shortly afterwards began the period of greatest intimacy with Johnson, whose conversation he recorded with such effectiveness until his death in 1784. In 1773 he was elected a member of the famous Club, to which Johnson, Reynolds, Burke, and Goldsmith belonged, and in the same year he induced Johnson to accompany him on the Scottish tour of which he gave an account in *A Journal of a Tour to the Hebrides*, 1785. In 1782 B. succeeded, on his father's death, to a wealthy estate, and made some attempts at a political career, but obtained only the recordership of Carlisle, which he relinquished after a year. In 1789 his wife d., and he accelerated his

own end by the drink and dissipation which had always been his weakness. B.'s *Life of Samuel Johnson*, pub. in 1791, was so successful that a second ed. was called for 2 years later. Unquestionably the greatest biography written in English, it shows a marvellous power of observation and vivid narration. Although an admirer of the great doctor, B. was no mere sycophant, and his account is all the more valuable and entertaining because it reveals the weaknesses as well as the greatness of his subject. The standard ed. is that by G. B. Hill, revised by L. F. Powell, 1934-50. B.'s *Letters* were ed. in 1924, and his *Notebook*, 1776-1777

JAMES BOSWELL

in 1925. About the same time a vast mass of unpub. diaries and papers was discovered at Malahide Castle in Ireland, the seat of his great-grandson. Sections of this were pub. as *Boswell's London Journal*, 1950, and *Boswell in Holland*, 1763-1764, 1952. See P. H. Fitzgerald, *Life of James Boswell*, 1891; C. B. Tinker and F. A. Pottle, *A New Portrait of James Boswell*, 1927; F. A. Pottle, *The Literary Career of James Boswell*, 1929; C. E. Vulliamy, *James Boswell*, 1932; D. B. Wyndham Lewis, *The Hooded Hawk, or The Case of Mr Boswell*, 1947.

Boswell, James (1778-1822), son of Johnson's biographer, a barrister by profession and a member of the Roxburghe Club, was awarded the Vinorian fellowship at Brasenose College, Oxford. He completed his friend Malone's *Shakespeare* (2nd ed.), and also ed. the 3rd variorum *Shakespeare*, 1821.

Boswellia, genus of balsamic plants belonging to the family Burseraceae, comprising 10 Indian and African species. They are said to yield oilbalm or frankincense used in incense in Catholic

churches, and one species is supposed to be the *libanus* of Theophrastus, the *thurea virga* of the Romans. *B. thurifera*, a large Indian timber-tree, and *B. serrata*, also Indian, yield a resin.

Bosworth, Joseph (1789-1876), philologist, b. Derbyshire, educ. Repton Grammar School and Aberdeen Univ. His *Elements of Anglo-Saxon* appeared in 1823. His prin. work, a *Dictionary of Anglo-Saxon Language*, was pub. in 1838. In 1858 he obtained the professorship of A.-S. at Oxford Univ.

Bosworth, or Market Bosworth, mkt. tn of Leics, 12 m. W. from Leicester. Two m. to the S. is R. Field, the site of the last battle between the houses of York and Lancaster, 22 Aug. 1485, when Richard III was beaten by the Earl of Richmond, afterwards Henry VII and slain. Dr Johnson was an usher in the grammar school. Pop. of par. 1000.

Botafogo, residential dist. of Rio de Janeiro (q.v.). Brazil, on B. Bay, lying at the E. foot of Corcovado (2310 ft.). The hill is a notable local landmark; at the summit is a concrete statue of Christ.

Botafogo Bay, inlet of Guanabara or Rio de Janeiro Bay, Brazil.

Botallack, name of a mine on the W. coast of Cornwall, England, 7 m. W. of Penzance. From 1721 it was worked for tin, and in 1841 for copper. The works are at the cliff's edge, and extend over 2000 ft. below the sea.

Botanic Garden, garden designed for the promotion of botanical science. It owes its origin to pharmacy. The earliest European school of medicine was at Salerno, and records exist there of the medical garden of Matthaeus Sylvaticus (1309). In 1333 a similar garden was estab. by the rep. of Venice. Soon many public and private bodies followed the example. The B. G. in the modern use of the term, dates from a private one erected at Padua between the years 1525 and 1533, from the public one at Pisa, estab. by Cosmo de' Medici in 1544, or from that of Padua in 1555. B. G.s were then laid in most It. cities and at the univs. of Leyden, Leipzig, Breslau, and Heidelberg. A royal garden was estab. at Paris in 1597, its chief use being to supply the ladies of the court with bouquets, and it was not until 1616 that its scientific purposes were defined. This garden became famous as the Jardin des Plantes, and chairs of botany and pharmacology were founded in 1635. In the 17th cent. many gardens were laid, the chief including those at Oxford, Chelsea, and Edinburgh. In the 18th cent. further stimulus was given to this movement by Linnaeus. Most European and Amer. univs. now possess B. G.s. In America are also the famous gardens of Philadelphia and New York. Kew Gardens (q.v.) in London, estab. in 1759, are generally regarded as the largest and best-equipped gardens in the world.

The B. G.s at Cambridge are also important, and there are fine gardens at Vienna, Edinburgh, Dublin, Glasgow, Rio de Janeiro, Melbourne, Trinidad,

Georgetown (Brit. Guiana), Vancouver, Sydney, Singapore, Sibpur, near Calcutta, and Peradeniya in Ceylon. The B. G. at Buitenzorg (Java) is particularly well known for the pub. of its *Annales*. Connected with many B. G.s are museums, herbaria, laboratories for research and investigation, etc. The principle of arrangement of the plants is varied, some ranging them according to their geographical distribution, and others according to their medical and economic interests, or in their natural families. The varied origin of the plants necessitates placing them in conditions similar to those from which they were taken.

Botany (Gk *botanē*, herb), science and study of the life, structure, and classification of plants, living and fossil. Since they form the ultimate source of his food supply, plants have been of direct importance to man from very early times, and B. is an ancient science. Solomon 'spake of trees, from the cedar of Lebanon to the hyssop on the wall' (1 Kings iv. 33). The Greeks Herodotus, Plato, and Aristotle studied plants and attempted rude classification; Theophrastus studied plant morphology; Dioscorides wrote one of the earliest books on materia medica, and Pliny wrote of grafting and budding, and sexuality of flowers. About 1200 species of plants had been discovered by Gk. Rom., and Arab herbalists when in 1532 Otto Brunfels, a Bernese physician, pub. his *Herbarium Vivae Eiorones*, in which he described about one-fifth of them. This was followed in 1542 by a *Catalogue of Plants* in 4 languages by Conrad von Gesner of Zürich, and in 1545 by *De Historia Stirpium Commentarii Insignes*, a foundational work of botanical nomenclature, by the Ger. Leonard Fuchs (q.v.). Matthias de L'Obel (1538-1616), Fr. botanist to James I, is credited with the arrangement of plants according to their natural relations, further elaborated by Wm Turner, sometimes known as the father of Eng. B. John Gerard, herbalist and barber-surgeon of Holborn, pub. his *Herball*, based on Dodoens's *Stirpium historiae pemptades* of 1583, in 1597, and it was the standard work of Eng. B. in the 17th cent. Progress in B. was signally marked by the pub. of *Historia generalis Plantarum* in 3 vols., 1686-1704, in which John Ray estab. his true principles of classification, and by Joseph Pitton de Tournefort's *Institutiones Rei Herbariae* in 3 vols., in 1700, which prepared the way for the *Species Plantarum*, pub. in 1753, by the Swede, Carl Linnaeus, in which he introduced the binomial system of nomenclature still in use to-day, whereby each plant is given first the name of its genus, and second the name of its species. In France A. L. de Jussieu pub. his *Genera Plantarum* in 1789, an important contribution to modern methods of botanical classification based on the natural relations of plants. In England George Bentham and Sir Wm Jackson Hooker collaborated in *Genera Plantarum ad Exemplaria imprimis in Herbariis Kewensisibus Servata Definita* (1862-83), which further advanced classification;

and Bentham's series of Flora is still a valued handbook of Eng. botanists.

Branches of botany. While B. studies only one subject, it is divided into different branches, such as: Comparative Morphology, the study of plant form and structure; Histology, tissues; Cytology, cells; and Physiology, study of plants as living and growing organisms—these branches often being studied together under Anatomy; Ecology covers plant distribution and relation to environment; Pathology, diseases and functional disorders; Phylogeny, evolution; Genetics concerning heredity and variation; and Taxonomy, classification and nomenclature. In modern classification the vegetable or plant kingdom consists of: I. Non-vascular plants, divided into (1) Thallophyta, or thallophytes, rootless plants without stem or leaf, usually simple, sometimes unicellular, which include (a) Algae, thallophytes with chlorophyll, consisting of seaweeds and related marine and freshwater plants; (b) Fungi, thallophytes without chlorophyll, saprophytic or parasitic in habit; (c) Lichens, which are algae and fungi living in symbiosis; and (d) Bacteria, unicellular thallophytes without chlorophyll. (2) Bryophyta, plants without true roots and without woody tissue, with some differentiation into stem and leaf, and bearing spores in leafless capsules, which include (a) Hepaticae, or liverworts, and (b) Musci, or mosses. II. Vascular plants, divided into (1) (a) Filicinae, or ferns; (b) Lycopodiaceae, or club mosses; and (c) Equisetaceae, or horsetails. (2) Spermatophyta or Spermatophytes, also called Phanerogams or Phanerogams, or flowering plants, forming true seeds, which include (a) Gymnospermae, plants with seeds not enclosed in a fruit case, consisting of Coniferae (conifers), Taxaceae (yew), Cycadaceae (cycads), Ginkgoaceae and Gnetales; and (b) Angiospermae, plants with seeds enclosed in a fruit case, which are sub-divided into (aa) Dicotyledons, seedlings with 2 cotyledons or seed leaves, and leaves net-veined, and in turn have flowers with un-united petals, known as Archichlamydeae or Polypetalae, or flowers with united petals, known as Metachlamydeae or Sympetalae; and (bb) Monocotyledons, seedlings with 1 cotyledon, leaves mostly parallel-veined.

Botany Bay, inlet of about 16 sq. m. on the coast of New S. Wales, Australia, 6 m. S. of Port Jackson (Sydney Harbour). It is the outlet of the George's R., and is surrounded by the S. suburbs of Sydney. It was discovered in 1770 by Capt. Cook, who landed at a spot now marked by a monument and took possession for the Crown. It received its name from John Banks, the botanist of the party, on account of the great variety of its flora. The tn was fixed upon as a convict settlement, but the idea was abandoned and the settlement was made at Sydney instead. The first governor was Arthur Phillip, 1788. The transportation of criminals to New S. Wales ceased in 1840.

Botev, Khristo (1848-76), Bulgarian poet and patriot. In 1865 he went to Odessa Gymnasium where he was deeply influenced by the liberal ideas of the sixties. After an unsatisfactory year at home he was sent to Russia again (1868) to become a doctor, but went off instead to Rumania where, till 1874 with Karavelov, and then alone, he led the Bulgarian liberation movement. On the outbreak of a rising against the Turks he led a band into Bulgaria to join the insurgents, but he and his band were annihilated before reaching the insurgents. His poems breathe extreme courage and patriotism and his influence on Bulgarian literature is out of all proportion to the amount (22 poems) that he wrote. A selection in English was pub. in Sofia, 1948.

Botfly, any species of dipterous insect of the family Oestridae. These flies are large and hairy, with short antennae, and their larvae are usually to be found in mammals. *Gastrophilus equi* is the gadfly of the horse, which lays its eggs on the animal's hairs; the horse is irritated

and licks them off, the larvae remain in its stomach until ready to pupate, then pass out and become mature external to their host. *Oestrus ovis* occurs in the nostrils of sheep; *O. tarandi* in the skin of the reindeer; *Hypoderma bovis* on the legs of cattle, and the larvae often occasion warbles or tumours under the skin of the back.

Both, Jan (c. 1610-52), and **Andreas** (1609-50), Dutch painters, b. Utrecht. They early went to Italy, being two of the first Dutch painters to come under its influence. At Venice it is said that Andreas was drowned in a canal. The two worked together, Jan painting the landscapes into which Andreas painted the figures and animals. Both brothers also executed etchings.

Botha, Louis (1862-1919), S. African general and statesman, first Premier of the Union of S. Africa, son of one of the Voortrekkers, b. Greytown (Natal). He saw active service in savage warfare and served as field cornet in 1887. Soon after he settled in Vryheid dist., which he represented in the Volksraad of 1897. In the war of 1899 he served under Lucas Meyer, but he soon received higher commissions. He was in command of the Boers at Colenso and Spion Kop. During these conflicts he gained so high a reputation that he was made commander-in-chief of the Transvaal Boers on the decease of Gen. Joubert. After the fall of Pretoria he reorganised the Boer resistance with a view to continued guerrilla warfare. This movement was successful in its aim, for the Boers resisted for 3 years. He was chief representative of his countrymen in the peace negotiations of 1902. He went to Europe with Gens. De Wet (q.v.) and De la Rey in order to raise funds to enable the Boers to resume their former employments. During the period of reconstruction under Brit. rule, B. gave liberal advice with regard to measures which he thought would tend to the maintenance, order, and prosperity of his people in the Transvaal. After the granting of self-gov. to the Transvaal in 1907, B. was called upon by Lord Selborne to form a gov. In the next year he was present at the colonial conference in London. On this occasion he declared the wholehearted adhesion of the Transvaal to the Brit. Empire and his intention to work for the welfare of the country. Owing to a serious disagreement with Gen. J. B. M. Hertzog (q.v.), he re-formed his Cabinet in Dec. 1912, from which Hertzog was excluded. B., however, had a loyal colleague in Gen. J. C. Smuts (q.v.), to whom he entrusted the difficult question of Indian settlement in 1913, which was led by Gandhi (q.v.), who came from India to voice Indian views, and who soon returned there satisfied with the arrangements made. Although B. was a man of great moderation, he could, nevertheless, take a firm and even arbitrary line when the occasion demanded it. The outbreak of war in 1914 was a testing time for many in S. Africa, for the Ger. agents from Ger. SW. Africa had been busy among all

classes with anti-Brit. propaganda and had met with varying success. It was known further that sev. hundred S. African rebels had joined the Ger. forces. With B. there was no hesitancy; his loyalty to the imperial gov. was exhibited in his instant declaration of support for Great Britain. This was a contingency that the Germans had overlooked, although they were more successful with De Wet, Beyers, and Maritz. He organised the S. African forces under himself as commander-in-chief. His intention was to capture Lüderitz Bay, and thus close it to the enemy as a base for combined land and sea operations. His columns were moving towards this point when Maritz, the commander of one of them, deserted with his force to the Germans. Later, when Beyers, Kemp, and De Wet headed a rebellion against the gov., B. took the field against them, captured De Wet, and ended the rebellion. It was not until Jan. 1915 that B. could turn to his original intention of overthrowing the Germans. Though the fighting never reached serious proportions, the natural conditions of the country, the well-planned obstacles, and the necessarily long lines of communication made progress difficult. The first strategic objective was to seize Windhoek before the Germans could initiate a guerrilla campaign, and thus paralyse their efforts in the surrounding country. B. commenced his advance in Mar. and reached his objective in May. He then pursued the enemy along the railway to Tsumeb, where he destroyed them as a fighting force. Resuming his duties as Prime Minister of the Union, he organised forces to assist the Brit. invasion of Ger. E. Africa and for the W. front in Europe. He was invited to become a member of the imperial War Cabinet in England, but sent Smuts, whose absence threw a heavy burden upon him. He came to England after the armistice, and attended the peace conference at Versailles, where he was a most impressive figure, notwithstanding that he was undergoing medical treatment at the time. The terms of the peace treaty were not entirely to his liking, and his frank opinions on them won him the respect of all the delegates. He was also a supporter of the rights of the dominions and the status of their delegates. He returned to Pretoria and d. on 27 Aug. 1919, in his fifty-seventh year, from heart failure following influenza. He was a simple, God-fearing man with a wide knowledge of human nature and a fund of practical wisdom. His patience, tact, and moderation gained him a reputation as a 'manager of men.' His loss was mourned by English, Dutch, and natives alike, his kindness and largeness of heart making him beloved by all. At his graveside Gen. Smuts said: 'His was the largest, most beautiful, sweetest soul of all my land and days.' See S. J. P. Kruger, *Memoirs*, 1906; Earl Buxton, *General Botha*, 1924; E. A. Walker, *A History of South Africa*, 1940; Deneys Reitz, *Commando: a Boer journal of the Boer War*, 1943.

Bothnia, former name of a country of N. Europe which extended along the E. and W. coasts of what was then, as it is now, the Gulf of B. The E. portion is now included in Finland (q.v.) and the W. in the Swedish prov. of Norrland (see SWEDEN).

Bothnia, Gulf of, part of the Baltic Sea between 60° and 66° N. lat., and 17° and 25° 30' E. long. To the S. are the Åland Is.; the E. shore of the gulf is part of Finland, the W. and N., of Sweden and Lapland. The depth varies from 20 to 50 fathoms. Navigation is rendered difficult by the number of small is., sandbanks, and cliffs, or *skaers*, but there are many good harbours. Numerous rivs. flow into the gulf from Sweden and Finland; the alluvial deposit from these has caused the land to encroach on the sea in the upper part of the gulf. The contrary has been the case in the SW., where the sea is gradually overflowing the land. The salinity of the water is not great, and is less when the rivs. are flowing into it. In winter the whole surface is generally frozen so hard that sledges can be driven over it.

Bothwell, Adam (c. 1527-93), divine, Bishop of Orkney, 1562. He was one of the 4 Scottish bishops who embraced the Reformation. He performed, after Protestant form, the marriage ceremony of Mary and Bothwell at Holyrood House, but soon afterwards deserted her party, and crowned and anointed her infant son, Prince James, at Stirling, 1567. B. was for a time suspended from the ministry by the General Assembly, 1567, for solemnising the marriage of Mary and Bothwell. He exchanged a part of his bishopric of Orkney with Robert Stewart for the abbacy of Holyrood House, about 1570.

Bothwell, James Hepburn, Earl of (c. 1536-78), Scottish nobleman. He was the son of the third earl, and succeeded his father in 1556. In addition to the family estates and titles, he succeeded also to the hereditary offices, which included that of the Lord High Admiral of Scotland. He showed himself at the beginning of his career to be anti-English, and he joined himself to the party of Mary of Guise, although he himself was a Protestant. He had a violent quarrel with Arran, a quarrel which originated in his appropriation of a sum of money which was sent by Queen Elizabeth to the lords of the congregation. He was employed by the Scottish courts on many missions, and in 1561 was sent from Paris by Mary Queen of Scots to summon Parliament. He made peace with various of his rivals, but although he had but recently been made a privy councillor, he again was ordered to leave the city when riots broke out between himself and his enemies. He was imprisoned, but escaped, and although he again submitted to the queen, he was forced into exile owing to the predominance of the influence of Moray. In 1564, being captured on Holy Is., he suffered a short imprisonment again, this time in the Tower. He was recalled, however to

aid Mary in putting down the insurrection of Moray, and it is at this point that he comes forward as the champion of Mary. Mary was becoming tired of her feeble husband, Darnley. The murder of Rizzio in Mar. 1566 marks the beginning of B.'s ascendancy, and Mary began to show a preference for him. He was made the most powerful noble in Scotland, and estates were showered upon him. Mary's role in Darnley's murder remains a mystery, but it is certain that B. was the driving force behind the plot, and he himself superintended all the arrangements which led to the blowing up of Kirk o' Fields. B. stood his trial for the murder, but Lennox, who was the chief prosecutor, was virtually forbidden to attend, and B. was declared not guilty. He now made preparations for his marriage with Mary, and although his previous marriage was declared null and void, it is doubtful whether his marriage to Mary was legal according to the law of the Rom. Catholic Church. On 12 May he was created Duke of Orkney and Shetland, and on the 15th Mary and he were married according to the Protestant rites. The nobility, however, rallied to defeat him, and he was defeated at Carberry Hill. B. parted from Mary, reached the Orkneys, and from there sailed to Norway. He was captured by the authorities and sent to Copenhagen. He still corresponded with Mary, but her feelings for him seem to have changed from passion to revulsion, and she demanded a divorce, which she obtained in 1570. His later years were spent in solitary confinement in the castle of Dragsholm in Zealand, which brought on insanity. See also MARY QUEEN OF SCOTS. See P. Hume Brown, *History of Scotland*, 1908-9, and life by R. G. Browne, 1937.

Bothwell, tn of Lanarkshire, Scotland, situated on the r. b. of the Clyde, a residential quarter of Glasgow. The riv. is crossed by a suspension bridge; a second bridge gives its name to the battle fought between the Royalists under Monmouth and the Covenanters in which the latter were utterly defeated (1679). In the vicinity is the splendid Norman ruin of B. Castle. There is also a priory founded in the 13th cent. The mausoleum of B. was the bp. of Joanna Baillie (1782-1851), dramatist and poetess. Pop. 3600.

Bothy, or **Bothie**, originally a cottage or hut, but later the word came to mean a barely furnished and generally uncomfortable dwelling for farm servants. The system prevails in the E. and NE. dists. of Scotland, and consists of building the outhouses (barns, stables, etc.) of a farmstead in the form of barracks in which the male servants reside.

Botanistes, see NICEPHORUS III.

Botley, par. of Hants, England, on the Hamble, 6 m. from Southampton, a centre for growing early strawberries. It was the home of Wm Cobbett. Pop. 1500.

Botocudos, barbarous tribe of S. Amer. Indians of E. Brazil, inhabiting the E. Coast Range. Their name is derived

from the Portuguese *botoque*, a plug, with reference to the wooden plugs or disks worn in their lips. They are below medium height, broad-shouldered, and remarkable for the depth and muscular development of chest. Their features are broad and flat, with high cheek-bones, wide nostrils, and thick lips. They are of a light yellowish-brown colour and have the general yellow tint of Mongolic races.

Botoiph, St (d. c. 680), Eng. missionary of whom little is known beyond the fact that, after a period in a Fr. monastery, he founded an abbey at Iken in Suffolk. More than 70 Eng. churches were dedicated to him. His feast is on 17 June.

Botosani, commercial tn of Rumania, in the prov. of Suceava, 47 m. SE. of Chernovtsy. Pop. (1930) 32,400.

Bo-tree, or **Bodhi-tree** (*Ficus religiosa*), family Moraceae; is sometimes called the peul-tree. It has long, sharply pointed leaves from which rain drops off rapidly, and grows in damp forests. The milky latex yields caoutchouc. Vishnu (q.v.) is said to have been born beneath this tree.

Botrychium, genus of ferns of the family Ophioglossaceae which grow in temperate and tropical lands, and in Britain are represented by *B. lunaria*, the common moonwort. The stem is a subterranean rhizome, the roots are fleshy, branched, and produce no buds, and the leaves grow so slowly that they take 5 years to show above ground. The sporophylls are petiolate and bear a fertile and a sterile lamina, which are usually both branched. The prothallus is a small, ovoid body, with scattered root-hairs, and usually bear antheridia on the upper, archegonia on the lower, surface. The prothallus of *B. virginianum* remains fixed to the sporophyte for about 5 years.

Botryllus, typical genus of tunicates of the family Botryllidae. The species are submarino, very small, soft, and contractile, and are found adhering to other bodies in bunches of 10 or 12 arranged like rays of a star round a common centre. They are found in Europe, N. America, and the Mediterranean.

Botrytis, genus of fungi of the order Moniliales, of which sev. are plant parasites, including *B. cinerea*, a common saprophyte which is also parasitic and responsible for Grey Mould infections among plants; *B. allii* causes neck rot of onions; *B. tulipae* causes Fire in tulips.

Botta, Carlo Giuseppe Guglielmo (1766-1837), It. poet and historian, b. San Giorgio del Canavese, Piedmont. He studied medicine, and became a doctor in the Fr. Army. In 1799 he was appointed a member of the provisional gov. of Piedmont. After the incorporation of Piedmont with France he went to Paris, where as a member of the corps législatif, he expressed views hostile to Napoleon. After the Restoration he became rector of academies at Nancy and Rouen. In 1830 he was allowed to return to his native tn and received a pension. He continued Guicciardini's hist. of Italy down to the fall of Napoleon.

Botta, Paul Émile (c. 1802-70), Fr.

traveller and archaeologist, son of Carlo Giuseppe B. As physician to Mehemet Ali he accompanied his expedition to Sennaar in 1830. He was subsequently appointed consul-general at Tripoli. During 1843 he made his memorable explorations of the mounds of Konyanjik and Khorsabad. His chief work was *Monuments de Ninive découverts et décrits par P. E. Botta*.

Bottego, Vittorio (1861-97), It. explorer. In 1892 he started from Berbera and reached the Upper Juba, which he explored to its source. Between 1895 and 1897 he explored the neighbourhood of Lakes Margherita and Rudolf, and the Sobat riv. system, but in the latter year was murdered in the Abyssinian highlands by the Somalis. For an account of his first journey see his book *Viaggi di Scoperta nel Cuore dell' Africa*, 1895; for an account of the second see *Seconda Spedizione Bottego*, 1899, by Varmutelli and Citerini.

Bottesini, Giovanni (1821-89), It. double-bass player and composer, b. Crema in Lombardy. He went on a concert tour in 1840 which extended to America. During this tour he estab. his fame as the greatest master of the double bass. He directed It. opera from 1846 in Havana, Paris, Palermo, and Barcelona. He became director of the Conservatory at Parma. B. composed among other works at least 4 operas and an oratorio. He wrote *Méthode complète de Contre-basse*.

Böttger, Johann Friedrich (1682-1719), see PORCELAIN, *Hard-paste*.

Botticelli, Sandro, more properly **Alessandro di Mariano del Filipepi** (c. 1445-1510), Florentine painter and perhaps the most poetic of the great Renaissance Italians. He derived his name of B. apparently from his eldest brother, who was a broker in a fair way of business, and who seems to have taken charge of the boy; his brother was nicknamed Botticello. He seems to have been physically weak, and was probably at an early age apprenticed, since his father was too poor to permit him to remain at home and do nothing. He would seem to have spent his early apprenticeship with his brother Antonio, who was a goldsmith, but having shown a great aptitude for painting he was apprenticed to Fra Filippo Lippi (q.v.). For 8 years he remained under the guidance of this master, and was probably employed in helping to complete the frescoes which Lippi had been commissioned to do at Prato. In 1467 Lippi left Florence for Spoleto, and B. was left to do his work without the influence of the master. At this period he seems to have come under totally fresh influences, from which he learnt much that he would probably never have earned from Lippi. In 1470 appeared one of his great pictures, 'Fortitude,' which is at present in the Uffizi. The realistic influence of this period of his life is also obvious in the paintings of 'Judith and Holofernes' and 'St Sebastian.' During this period he had also come into contact with a number of the painting schools of

Faces, 1940, *London Pride*, 1941, *From the Life*, 1944, *Fortune's Finger*, 1950. *The Challenge*, 1953, and *Man and Beast* 1954; *Search for a Soul*, 1947, is autobiographical.

Bottomley, Gordon (1874-1948), poet and dramatist, *b.* Keighley, and educ. at the grammar school there. Owing to early and continuous ill health he was obliged to lead a secluded and inactive life. His first book of verse, *The Mickle Drede*, appeared in 1896, and this was followed at intervals by a dozen or more vols. of poems, mostly in dramatic form. His first major vol. of poetry was *The Gate of Smaragdus*, pub. in 1904. The plays *The Crier by Night*, 1902, and *The Itiding to Lithend*, 1909, first illustrated his devotion to the cause he had at heart—the resurrection of Eng. poetic drama, a cause he shared with W. B. Yeats and Lascelles Abercrombie (q.v.). But it was not until the production of his play, *King Lear's Wife*, 1915, a prelude to Shakespeare's play, that he became in any sense a popular poet. B. never had any notable success on the regular stage, and in his later period he confined himself to shorter dramatic poems, like *The Widow*, *The Singing Sands*, and *Ardorlich's Wife*. Although the more ambitious and beautiful play, *Gruach*, 1921, a prelude to Shakespeare's *Macbeth*—which was awarded the Femina-Vie Heureuse prize in 1923 and produced in London 1924—perhaps marks the peak of his achievement, the later, briefer, lyrical dramas are his most characteristic work. In form, influenced by Yeats's and Sturge Moore's experiments after the manner of the Jap. *No* plays, their choice of theme gave them a distinction all their own. He brought back into verse drama much of the romanticism and at times extravagance of the post-Elizabethan dramatists. In *Poems of Thirty Years*, 1925, he collected all of his lyrical verse which he deemed worthy of preservation. In 1925 he was awarded the Benson medal of the Royal Society of Literature, of which he became a fellow in 1926, and he received honorary doctorates from Aberdeen (1930), Durham (1940), and Leeds (1944).

Bottomley, Horatio William (1860-1933), journalist and financier. He worked for a time in a solicitor's office in London, and then, after various business experiences, he turned to journalism and founded the *Financial Times*. His next journalistic venture was the highly successful weekly, *John Bull*. But he is remembered chiefly for his various company promotions and for the remarkable skill with which he defended the various actions brought against him for fraud. He was Liberal M.P. for Hackney from 1906 to 1912 and from 1918 to 1922, though he took an independent line. In 1922 he was sentenced to 7 years' penal servitude for fraud in connection with Victory Bonds. In the First World War he gained a great reputation as a patriotic orator. See life by J. Symons, 1955.

Bottomry, maritime term. When it is a matter of vital importance to raise

money for the proper completion of a ship's voyage, and there is no time to communicate with the owners, and the master has exhausted every other means for raising money, then he may 'hypothecate' the vessel and, in some cases, the cargo, i.e. he may give a bond or written contract for the loan of the money advanced on the security of the ship and freight. This bond binds the owners to repay the loan within a limited time after the safe arrival of the ship, but if the ship does not arrive safely the money is not repaid. The holder of a B. bond has a right to be paid before a mortgagee, but will not be paid until claims for wages or salvage have been satisfied. Where sev. bonds have been given, the last comes takes priority over the others.

Botrop, Ger. tn in the *Land* of N.-Rhine-Westphalia (q.v.) at the N. edge of the Ithur dist. (q.v.), 26 m. N. by E. of Düsseldorf (q.v.). It is a well-laid-out tn of recent origin, and is an important coal-mining centre. Pop. 104,800.

Botulism (from Lat. *botulus*, a sausage), an acute and frequently fatal disease caused by poisoning from the toxins produced by the *Bacillus botulinus*. This bacillus, which is anaerobic and therefore able to grow in the absence of oxygen, is a contaminator of meat, and may be present in tinned foods. B. is characterised by paralysis of the cranial motor nerves and of the diaphragm, and by a disturbance of the secretion of the mouth and pharynx. See FOOD POISONING.

Botwinnik, Michael Moisevitch (1911-), Russian chess-master, *b.* St Petersburg. From 1930 onwards he dominated the scene in Soviet chess and he was many times Soviet chess champion. In 1948 he won the world championship in a tournament specially arranged by the World Chess Federation to fill the vacancy left by Alekhine's (q.v.) sudden death 2 years before. B. successfully defended his title by drawing matches with Bronstein in 1951 and Smyslov in 1954. He divides his time equally between chess and his profession of electrical engineering. An outstandingly successful tournament player he has scored many victories in important events, notably at Nottingham (1936), where he was equal first with Capablanca (q.v.), Groningen (1946), and the Alekhine Memorial Tournament at Moscow (1956). He has written comparatively few books on chess but these, like his actual play, are characterised by a deep understanding of strategy. See his *Championship Chess*, 1950.

Botwood, seaport of Newfoundland at the mouth of the Exploits R. A railway runs from B. into the interior. It is the port for the export of timber products of Grand Falls and of the lead, zinc, and copper concentrates from Buchans.

Botzen, see BOLZANO.

Bouch, Sir Thomas (1822-80), civil engineer, *b.* Thursley in Cumberland. His earliest tastes were for engineering, and in 1839 he began his career with a civil engineer. After this he was an engineer on the Stockton and Darlington railway, and in 1849 became manager

and engineer of the Edinburgh and N. railway, and it is to him that the Forth and Tay owe their 'floating railways.' He was the engineer of the Tay Bridge, finished in 1877, for which the freedom of the tn of Dundee was conferred upon him. He was also made a knight. The disaster of the Tay Bridge in 1879 was the cause of his health giving way, owing to mental shock, and of his death in the following year.

Bouchain, Fr. tn in the dept of Nord, on the Scheldt, 12 m. from Valenciennes. Pop. 2400.

Bouchardon, Edmé (1698-1762). Fr. sculptor, b. Chaumont. He studied in Paris under Guillaume Coustou, and later in Rome. A strict classicist, he was considered the greatest sculptor of his day. His best-known work is the 'Fountain of Grenelle,' in Paris, while an equestrian statue of Louis XV was destroyed in 1792. See life by Comte de Caylus, 1762.

Boucher, François (1703-70), Fr. painter, b. Paris. Studied at Rome, and became member of the Academy in 1734. In 1764 he was appointed court painter to Louis XV. The number of his figure or landscape pictures and drawings is said to have exceeded 10,000, and he also executed engravings. He became director of the Fr. Academy, which post he retained until his death, taught Madame de Pompadour painting, was chief designer to the Royal Beauvais Tapestry manufactory, and designer for the Opéra. In these capacities he was the leading exponent of the graceful, facile, and somewhat shallow art of the age of Louis XV, though painters especially have always admired his superb skill. He is well represented in the Louvre and the Wallace Collection, London. See A. Reichel, *Boucher*, 1925.

Bouches-du-Rhône, maritime dept of SE. France, in Provence (q.v.), containing the delta of the Rhône (q.v.). It consists of 3 arrons.: Marseille, Aix-en-Provence, and Arles (qq.v.). The W. portion, known as the *Camargue* (q.v.), is plainland, and in the N. and E. the Maritime Alps (q.v.) slope down to the Rhône basin. Between the mts and the sea is an arid plain called *la Crau* (q.v.). The sea coast is much indented and has many lagoons (see *BEÛRE*); there are also inland ponds. The amount of arable land is small, though some cereals are grown. Olives are grown extensively in the NE., and there is much stock-raising, particularly horses and cattle. Lignite and bauxite are found, and salt is worked. There are heavy industries in Marseille, the cap. Area 2025 sq. m.; pop. 1,048,800.

Boucicault, Dionysius (Dion) Lardner (1822-90). Irish dramatist and actor, b. Dublin; educ. at Univ. College, London. He made an immediate success with his *London Assurance*, at Covent Garden, in 1841. He soon wrote other pieces, among them *Old Heads and Young Hearts*, *Louis XI.* and *The Corsican Brothers*. He made his first appearance as actor in 1852, in a play of his own, *The Vampire*. From 1853 to 1860 he was in America.

On his return to England he produced the first of a series of his own Irish plays, *The Colleen Bawn*, 1859, at the Adelphi Theatre. This met with great success in the U.K. and in America. It was followed by *Arrah-na-Pogue*, 1864, and *The Shaughraun*, 1875. He wrote over 50 plays.

Boudicca, see *BOADICEA*.

Boudin, Eugène Louis (1825-98). Fr. marine painter, b. Honfleur. He studied in Paris, and led the Ecole St Sulpice school of artists, so named from the fact that its H.Q. were at a farm of that name. The group included, among others, Corot, whose follower B. was; Monet, his disciple; Isabey; Millet; and Courbet (qq.v.). He worked much at Le Havre and is especially noted for his riv. and Normandy coast scenes, now highly valued. His 'Corvette russe' was bought for the Luxembourg in 1888, as also was his 'Rade de Villefranche.' He was awarded the Légion d'Honneur in 1898. See M. G. Jean-Aubry, *Eugène Boudin*, 1922.

Boufarik, tn of Algeria, 23 m. S. of Algiers by rail. Pop. 13,000.

Boufflers, Louis François, Duc de (1644-1711), marshal of France who attained great distinction, and was descended from one of the oldest families in Picardy. Serving under Condé, Turenne, Créqui, and Catinat, he attained rapid promotion, and his marshal's baton in 1693. His masterly defence of Namur in 1695 against William III, and of Lille in 1708 against Prince Eugène, received recognition by the king, and he was made a duke and peer of France. His ability was clearly shown by the manner in which he conducted the retreat from Malplaquet in 1709.

Boufflers, Stanislaus Jean, Marquis de (1738-1815), Fr. administrator and writer, son of the Marquise de B., mistress of Stanislaus, King of Poland, b. Lunéville. He was famous for his elegant manners and conversation. His works consist of poems, travels, *clôtes*, and tales. In 1784 he was made a marshal in the army, and in 1785 became governor of Senegal (q.v.) in Africa, where his administration was most enlightened. He went to Prussia in 1792, returning to France in 1814, when he was made joint librarian of the Bibliothèque Mazurine.

Bougainville, Louis Antoine de (1729-c. 1811), Fr. navigator, b. Paris. Studied law, but entered the military profession in 1753. At the age of 21 he pub. a treatise on the integral calculus as a supplement to L'Hôpital's treatise, *L'Analyse des infiniment petits*. In 1755 he became secretary to the Fr. embassy in London. In the next year he went to Canada as captain of dragoons and aide-de-camp to Montcalm. He was rewarded with the rank of colonel and the cross of St Louis. He served in the Seven Years War. He undertook the task of colonising the Falkland Is., but the Fr. Gov. gave them up to the Spaniards. He then went on a voyage of discovery which lasted 2 years, 4 months. Saw active service in the navy, became vice-admiral in 1791. He was a senator under Napoleon

I, a count of the empire, and a member of the Légion d'Honneur.

Bougainville, largest member of the Solomon Is., which belonged to Germany from 1899 to 1914, and was assigned to Australia after the First World War. B. is of volcanic origin and is mountainous, with the Emperor Range in the N. and Crown Prince Range in the S. Exports are copra, ivory nuts, and tortoiseshell. The is. is named after Louis B. (q.v.), who landed here 1769 when on a voyage of discovery round the world. B. was occupied by the Japanese during the Second World War. Area about 3880 sq. m.; pop. about 40,000. *See also* PACIFIC CAMPAIGNS, OR FAR EASTERN FRONT, IN SECOND WORLD WAR and SOLOMON ISLANDS.

Bougainvillea, S. Amer. genus of the family Nyctaginaceae. The flowers are arranged in groups of threes, and are surrounded by an involucre of petaloid bracts, red or lilac in colour. *B. spectabilis* is a beautiful tropical creeper with lilac-coloured bracts.

Bough, Samuel (1822-78), landscape painter, son of a shoemaker, b. Carlisle. A scene painter in early life and self-taught in art, in 1849 he began an earnest study of nature, working at Hamilton and Port Glasgow. He also supplied landscape illustrations for books. He became a member of the Royal Scottish Academy in 1875. Chief pictures (mainly water-colour) are 'Shipbuilding at Dumbarton,' 'Canty Bay,' 'The Rocket Cart,' and 'Borrowdale.'

Boughton, George Henry (1836-1905), painter, b. near Norwich, was taken as an infant to Albany, New York, but settled in London in 1861. Elected R.A. in 1896, he exhibited many pictures at the Royal Academy. Sev. of his pictures represent the old Puritan life in New England. The Tate Gallery has his picture entitled 'Weeding the Pavement.'

Boughton, Rutland (1878-), Eng. composer, b. Aylesbury; he entered the Royal College of Music as a student in 1900. He supported himself by playing in an orchestra, and later by teaching at the Midland Institute of Music in Birmingham, where he continued until 1911. In 1914, in collaboration with Reginald Buckley, he founded the Glastonbury Festival School of Music Drama, and it was here that the music drama *The Immortal Hour* was produced. The Glastonbury Festival was revived after the First World War, when 2 other operas by B., *The Birth of Arthur* and *The Round Table*, were performed in Aug. 1920. In 1922 *The Immortal Hour* was produced in London, where it had a long run. Other works include the music dramas *Alkestis*, *The Queen of Cornwall*, and *Bethlehem*; *The Moon Maiden*, a choral ballet; *Agin-court*, a dramatic score for male voices; 2 symphonies, *Cromwell* and *Deirdre*; and 2 string quartets.

Bougie: 1. Seaport of Algeria, 120 m. E. of Algiers. It is beautifully situated on the slope of Mt Garaya. It is an anct tn, and was the Saldæ of the Romans. In the 5th cent. it was the chief seat of the

Vandals. Under the Arabs it was named the little Mecca. The tn fell into decay after the 16th cent., and when captured by the French in 1833 it consisted of little more than a few fortifications and ruins. It has now become a strong fortress and a port of great commercial value. The Fr. word for candle is probably derived from the name of the tn, candles being first made of wax imported from B. Pop. 44,376.

2. Tn. of W. Australia, amalgamated with Kalgoorlie (q.v.) in 1947.

Bougie, cylindrical instrument made of waxed silk, gum-elastic, rubber, or metal, which may be passed into the gullet, urethra, or other passage for the purpose of dilation or examination.

Bouguer, Pierre (1698-1758), Fr. mathematician, b. Croisic, Brittany, where his father was regius prof. of hydrography. At an early age young B. succeeded his father as prof. In 1727 he gained a prize given by the Academy of Science for his paper 'On the best manner of forming and distributing the masts of Ships.' In 1729 he pub. *Essai d'optique sur la gradation de la lumière*. He became prof. of hydrography at Le Havre, and in 1749 he wrote *La Figure de la terre déterminée*, which gave the results of the expedition to S. America, in which he took part, to measure the length of a degree of the meridian near the equator.

Bouguereau, Adolphe William (1825-1905), Fr. painter, b. La Rochelle. Studied art at the École des Beaux-Arts during the years 1843-50, when he won the Grand Prix de Rome. This enabled him to study in Italy until 1855. In 1847 he began regularly to exhibit at the Salon. In 1855 he exhibited 'The Martyr's Death' (the body of St Cecilia borne to the Catacombs), which was afterwards placed in the Luxembourg. Very popular and well known through engravings of his works, B. has been much criticised as the main representative of a sentimental and insipid type of academic painting, though his pupils included some famous painters. He was a member of the Légion d'Honneur in 1856, an officer of the order in 1876, and commander in 1885.

Bouhours, Dominique (1628-1702), Fr. critic, b. Paris. Entered the Society of Jesus, and was appointed to read lectures on literature in the Collège de Clermont in Paris, and on rhetoric at Tours. He became preceptor of the 2 sons of the Duke of Longueville, who d. in B.'s arms. He wrote an account of the death of his former patron. B. was sent to Dunkirk to the Rom. Catholic refugees from England, and he pub. sev. books during his missionary work there. Among these were *Les Entretiens d'Ariste et d'Eugène*, 1671, a critical work on the Fr. language. Other works are *La Manière de bien penser dans les ouvrages d'esprit*, 1687, *Doctes sur la langue française*, 1674, and *A Life of St Ignatius*, 1679. He d. at Paris.

Bouillabaisse is the name of a Fr. dish, popular especially in Provence. It is composed of a large fish, to which are added sev. smaller ones cut up; onions,

saffron, sliced tomatoes, olive oil, etc., are then put in, and the whole cooked in a casserole.

Bouillaud, Jean Baptiste (1796-1881), Fr. physician, b. Bragette, near Angoulême. After serving under Napoleon, B. studied medicine at Paris and qualified in 1823. He became prof. of clinical medicine in 1831. He was one of the best diagnosticians of his time, but relied too much on blood-letting as a form of treatment. His work on the heart was outstanding; he demonstrated the relationship of heart disease and acute rheumatism, gave a classical description of aphasia (loss of speech), and located the speech centre in the anterior lobe of the brain. His best work is his *Traité des Maladies du Cœur*, 1835.

Bouillé, François Claude Amour, Marquis de (1739-1800), Fr. general, celebrated for many exploits before the era of the revolution. He held liberal principles and sat in the first assembly of the Notables, and after attempting to assist Louis XVI in pursuing his journey from Varennes after his flight from Paris, he quitted France and served under the allies. He d. in London.

Bouillon, see GODFREY DE BOUILLON.

Bouillon, fortress tn in the prov. of Luxembourg, Belgium, situated on the R. Semois, 9 m. SE. of Sedan. B. was French from 1678 to 1815, when it passed to the Netherlands, becoming Belgian in 1837. Godfrey de B., the crusader, was one of the counts of B. Here Napoleon III. of France spent the first night of his exile after the battle of Sedan, 1870. Pop. 2800.

Bouilly, Jean Nicolas (1763-1842), Fr. author and dramatist, b. near Tours. During the revolution he held sev. high offices under the new gov., and was largely responsible for the organisation of primary education. He retired from public life in 1799, and devoted himself to literature. He wrote the musical comedy *Pierre le Grand* for Grétry's music (1790), the opera *Les Deux Journées* to Cherubini's music (1800), and *L'Abbé de l'épée* (1800). Among other books he wrote the following: *Causeries d'un vieillard*, 1807, *Contes à ma fille*, 1809, *Les Adieux du vieux conteur*, 1835. The libretto of Beethoven's *Fidelio* was founded on his *Léonore*, 1798.

Boulak, see BULAK.

Boulanger, George Ernest Jean Marie (1837-91), Fr. politician and soldier, b. Rennes. He entered the army in 1856, and estab. his reputation as a soldier by service in Italy, Cochinchina, and in the Franco-Prussian war. As director of infantry at the War Office, a post to which he was appointed in 1882, he made a name as a reformer. On all sides he became regarded as the man who would avenge the defeats of 1870. In 1884 he had been commander of the army at Tunis, and in 1886 he was appointed war minister. In 1887 he came out of office with the ministry, and was not reappointed. He was, however, given the command of an army corps. B. was now the most popular man in France, and was urged to

run for the presidency. In 1888 he was taken off the list of active officers for various acts of insubordination. He immediately entered politics and started an agitation for the revision of the constitution. It was obvious that he was aiming to establish a dictatorship. Some of his moderate supporters began to be alarmed. He resigned his seat as a protest, and was immediately returned by an overwhelming majority for one of the divs. of Paris. At this point had he struck the threatened blow he might have been successful, but he failed to seize his opportunity, and in April 1889 he fled the country on the issue of a warrant for his arrest on a charge of treason. The Boulangist movement did not survive his exile for very long. In Oct., in his absence, he was condemned for treason. Finally, after settling in Jersey, he committed suicide in 1891 on the grave of his mistress in Brussels.

Boulanger, Pierre Emanuel Hippolyte, see BOULENGER.

Boulangerite (named after one of its discoverers, Boulanger, a Frenchman), a non-crystalline mineral of the colour of lead. It exists in bacillary, amorphous masses, slightly granulated. The formula for B. is $\text{Pb}_2\text{Sb}_2\text{S}_6$, and the sp. gr. 8 to 6.

Boulay de la Meurthe, Antoine Jacques Claude Joseph, Comte (1761-1840), Fr. politician, son of an agric. labourer, b. Chamousey in the Vosges. He became a lawyer and at first supported the revolution. He represented La Meurthe in the Council of Five Hundred. He was known as an opponent of Jacobinism and of the Directory despotism. Under the empire he helped to compile the Civil Code, and was created a count. He was a member of Napoleon's privy council.

Boulay (-Moselle), Fr. tn, cap. of an arron., in the dept. of Moselle. Pop. 2100.

Boulder: 1. Tn of B. co., Colorado, U.S.A. It is situated at the foot of the Front Range on B. Creek. It is the centre of a large mining, stock-raising, and agric. region. The U.S. Atomic Energy Commission plant was begun in 1951 at Rocky Flats. B. is the site of the univ. of Colorado. It is served by the Union Pacific and the Colorado and NW. railways. Pop. 20,000.

2. Australian tn, see KALGOORLIE.

Boulder Clay, or Till, clay containing boulders and stones of various sizes deposited from a glacier or ice-sheet. The fine matrix of the deposit is made of 'rock flour' produced by the abrasion of rocks over which the ice passes, and its composition varies according to the nature of these rocks. Some B. C.s are sandy or chalky. The boulders also vary in composition according to the nature of the parent rocks. A mantle of B. C. covers much of the N. part of the Brit. Is. as well as parts of Scandinavia, Holland, and Germany, and great areas in Canada. The widespread B. C. of N. Europe and N. America was deposited by the great ice sheets of the Glacial or Pleistocene Period. B. C. may be formed in an even layer, in irregular heaps, or in small ovoid hills or drumlins which are aligned parallel to

the direction of ice flow. See GLACIERS and GLACIAL PERIOD.

Boulder Dam (renamed Hoover Dam, 1947), big dam, completed in 1935-6, on the Colorado R., in Black Canyon on the borders of Nevada and Arizona, where the riv. enters on its last pronounced southward reach. The dam is 727 ft above the bed rock and raises the water level in Lake Mead by 584 ft; it is 1282 ft in length along its crest. The total land in all states to be irrigated is some 2 million ac., and the dam holds 10,000,000,000 gallons of water, supplying a generating plant with a capacity of 2,000,000 h.p.

Paul Popper

BOULDER DAM

Boulders, Erratic, see ERRATICS.

Bouls, the Athenian council, believed to have been instituted by Solon. It consisted of 500 members divided into 10 sections of 50 each, the members of which were known as prytanies and were all of the same tribe. The prin. duty of the B. was to discuss and prepare measures for submission to the assembly, but it also enjoyed considerable executive powers.

Boule Work, see BUHL WORK.

Boulenger, or Boulanger, Pierre Emmanuel Hippolyte (1838-74), Belgian landscape painter, *b.* Tournai, studied in Brussels Academy and at Tervueren. He worked in much the same spirit as the members of the Barbizon School (q.v.). The institution of the Société Libre des Beaux-Arts (1868) was largely due to his influence, also its jour., *L'Art Libre* (1871).

Boulevard (Fr., cf. Ger. *Bollwerk*; Eng. *bulwark*), term applied to the rampart or outer fortification of a tn. In France,

Germany, etc., these ancient fortifications have frequently been demolished, levelled, and the broad space thus obtained planted with trees and used as a promenade. Hence the term now denotes a broad avenue, designed for walking or driving. The most celebrated B.s are those of Paris.

Boulismia, see BULIMIA.

Boulogne-Billancourt, Fr. tn in the dept of Seine, a SW. suburb of Paris, on the Seine, adjoining the Bois de Boulogne. It has many fine residences, automobile and aircraft works, and chemical and other manufs. Pop. 79,000.

Boulogne-sur-Mer, Fr. seaport and holiday resort on the Eng. Channel, cap. of an arron., in the dept of Pas-de-Calais. It is at the mouth of the R. Liane. To the Romans it was Bononia Gessoriacum. The Normans sacked it in 882. It was united to the Fr. crown by Louis XI in 1477. Henry VIII took it in 1544, but it was restored to the French in 1550. In 1803 Napoleon began to muster an army at B. with the intention of invading England; a 164-ft-high column outside the tn commemorates the event, but the statue of Napoleon with which it was crowned was destroyed in 1944. Until the Fr. Revolution B. was a bishopric; the present basilica of Notre Dame stands on the site of the cathedral then burnt. During the First World War B. was an important Brit. base, and was awarded the Croix de Guerre. In the Second World War it was very badly damaged, over 5000 buildings being demolished, but there has since been a great deal of rebuilding. The tn is in 2 parts: Upper B., the older part, still has its medieval wall; Lower B. is the seaport proper. Across the riv. is the suburb of Capécure, containing the main railway stations. There is a fine beach and good bathing. B. is the first fishing port of France, has a busy coasting trade, and cross-channel and transatlantic services. The chief industries are fishing, fish-curing, boat-building, and the manuf. of textiles, steel, ships' stores, soap, pens, and cement. Sainte-Beuve, Mariette, and the brothers Coquelin (q.v.v.) were *b.* at B., and Le Sage, Thomas Campbell, and Charles Churchill (q.v.v.) *d.* here. Pop. 42,000.

Boulonnais, name of a former div. of France, now situated in the Pas-de-Calais. Its cap. was Boulogne-sur-Mer.

Boult, Sir Adrian (1889-), conductor, *b.* Chester. He was educated at Westminster School and Oxford, where he studied music under Sir Hugh Allen; he later studied at Leipzig under Hans Sitt and Eugen Lidner, and devoted attention to the methods of Nikisch. He was on the music staff, Royal Opera Covent Garden, 1914, and from 1918 conducted for the Royal Philharmonic Society and Liverpool Philharmonic Society, also the London Symphony Orchestra, and Queen's Hall Orchestra. He was on the teaching staff at the Royal College of Music, London, 1919. Conductor of the Birmingham City Orchestra and the Birmingham Festival Choral Society, 1924-30; and 1930-42 was director of music at the B.B.C., remaining with the corporation as chief conductor

of the B.B.C. Symphony Orchestra. He has done fine work, especially for the younger Eng. school of composers. Knighted, 1937. Pub. *A Handbook on the Technique of Conducting*, 1937.

Boulton, Matthew (1728-1809), engineer, b. Birmingham. He succeeded (1759) to his father's business of silver stamper and piercer. So great were his improvements and extensions that in 1762 he removed his works to Soho, just N. of Birmingham. A new method of inlaying steel was one of his first achievements. He formed a partnership with the great James Watt (1775). They joined in improving coining machinery, and produced a new copper coinage for Great Britain in 1797. That same year a patent was granted B. for his method of raising water by impulse. Consult S. Smiles, *Lives of Boulton and Watt*, 1865, and H. W. Dickinson, *Matthew Boulton*, 1936.

Bounding Bett, see SOAPWORT.

Boundary (O.F. *badine*, *bonde*; medieval Lat. *badena*, from *butina*, frontier line), that which marks the limit of land. The B. may be indicated by a post, ditch, hedge, march of stones, road, or riv., or it may be indicated by reference to a plan, or to possession of tenants, or by actual measurement. When 2 properties are divided by a road or riv., the middle line of the road or riv. is regarded as the B. between the owners (*usque ad medium filii*); whereas a hedge or fence is taken to belong equally to the adjoining owners. The B.s of tns and pars. depend upon anct charter or custom. The Local Government Acts of 1888 and 1894 provided for the readjustment of local areas, subject in certain cases to the confirmation of Parliament. The Reform Acts of 1832, 1867, and 1884 defined political B.s, which frequently differ from municipal ones. In law, the exact B., whether public or private, is a matter of evidence, and where there is no evidence the court acts on presumption. The presiding authority of a local board in England, or of a police bor. in Scotland, finally defines the B., which is then publicly recorded. In Scotland, a bounding charter describes the limits of land.

Bounds, Beating the, or Perambulation, custom common to sev. European nations under different forms. In England, on Holy Thursday or Ascension Day, the vicar, with some officers and boys, walked in procession to each of the different par. boundaries, where the boys beat the boundaries with peeled willow-wands in order to remember their location. Sometimes the boys themselves were beaten and received a little money for their pains. This ceremony may be compared with the Rom. Terminalia, celebrated on 23 Feb. In Scotland, alternative names are 'riding the marches' and 'common riding.' At Shrewsbury it was called 'bannering,' and the custom was kept up till the middle of the 19th cent. Since then there has been a revival of the custom in some pars., including some in the city of London. See Brand's *Popular Antiquities*.

Bounty, in political economy, a sum granted directly or indirectly by a gov.

to producers, manufacturers, etc., for the purpose of encouraging the particular industry, usually taking the form of a subsidy on quantities of goods exported from the country. B.s, or subsidies as they are also termed, were used much in Great Britain under the former mercantile system, examples being those on the herring fisheries, which, it is said, cost the state more than the price of the herrings as sold in the open market; the linen export B.s were abolished in 1834; and the corn export B.s abolished in 1814. Foreign countries which frankly adopt a protectionist standpoint still grant B.s to stimulate industries of importance to the country apart from their commercial value, e.g. the Fr. shipping B.s, as a support for the navy; but, with one exception, the sugar B.s (see BRUSSELS SUGAR CONVENTION), state trade subventions usually take more indirect methods, in the form of rebates, drawbacks, etc. From 1918 the Brit. Gov. gave a temporary B. to the growers of sugar-beet. From the point of view of economics, B.s are objected to as penalising the consumer, the taxpayer, to benefit an individual trade; as withdrawing capital to an industry which without the B. would decline, and should therefore be regarded as doomed to extinction; and, as proved by past hist., B.s have been in themselves unnecessary or even harmful, as in the case of the linen B.s and herring fishery B.s. Apart from economic B.s, the word is applied to the money premiums formerly paid on enlistment for the army and navy in Great Britain and Ireland, which varied in amount during the great Napoleonic wars from £18 to over £20 a head. In the old militia forces B.s of £2 were paid on enlistment. B.s, or 'B. money,' are paid to a mercantile ship's crew for salvage service, and payments were made to the crew per head for slaves taken by a Brit. ship from a slaver. The queen's B. is a donation of £3 granted by the sovereign to the mother of triplets.

'Bounty,' Mutiny of the. H.M.S. *Bounty* was an Eng. vessel sent out in 1787 to Tahiti, under Wm Bligh (q.v.), to collect plants of the bread-fruit tree for the W. Indies. On the return voyage Bligh's crew mutinied under his harsh treatment, turning him and the few who were loyal to him adrift. They finally reached land in safety. Of the mutineers some returned to Tahiti and were captured and punished; the rest settled on Pitcairn Is. (between S. America and Australia) in 1790. There were quarrels with the native Tahitians, and massacres took place, in which most of the Englishmen were murdered as time went on. Gradually, however, a little colony was formed under the surviving Englishman, John Adams, who d. in 1829. Lord Byron used this incident in *The Island*. See Wm Bligh, *Voyage to the South Sea in the 'Bounty,' the Mutiny, and Voyage to Timor*, 1792; Sir John Barrow, *The Eventful History of the Mutiny of H.M.S. 'Bounty,' 1831*; H. V. Evatt, *Rum Rebellion: Overthrow of Governor Bligh*, 1938.

Bounty, Queen Anne's, an Eng. eccles.

fund, founded in 1703, the tithes, etc., originally paid to the Pope, and later to the Crown, being reserved for it. Its purposes are to augment small livings, to build parsonage houses, and generally to make grants for eccles. purposes. It is now administered by the Eccles. Commissioners.

Bounty Islands, small uninhabited is. included in the boundaries of New Zealand. They lie to the SE. of S. Is. at about 48° S. and 180° W.

Bourassa, Henri (1868-1952), Canadian journalist and parliamentarian, b. Montreal, son of the Canadian author, artist, and architect Napoléon B. (1827-1916); grandson of Louis J. Papineau. Elected 1896 to Dominion House of Commons as a Liberal, he resigned in 1899 as a protest against Canadian participation in the Boer War and was triumphantly re-elected as a 'Nationalist.' In 1907 he left the Dominion Parliament to enter the Quebec Legislature, of which he was member 1908-12. In 1910 he estab. *Le Devoir*. His Quebec Nationalist following joined forces with Ontario Conservatives to defeat Laurier in 1911, but he bitterly opposed the Conservative policy of conscription in the First World War. He sat again in the House of Commons 1925-35. B. left a strong mark on political thought in Quebec.

Bourbaki, Charles Denis Sauter (1816-1897), Fr. general, b. Pau, educ. at Saint-Cyr; entered the army in 1836, and served in Algeria, the Crimea, and Italy, distinguishing himself particularly at Alma and Inkerman (1854), and at Solferino (1859). In the Franco-Ger. War, he commanded the Imperial Guard and took a prominent part in the fighting round Metz, after which he was sent on a secret mission to the Empress Eugénie in England. For a short time he was at the head of the army of the N. He met with a severe repulse at Belfort (1871), and on his retreat attempted suicide. He became corps-commander at Lyons in the same year, and retired in 1881. See Grandin, *Le Général Bourbaki*, Paris, 1897.

Bourbon, Fr. family which occupied the thrones of France, Naples, and Spain. The family can trace their descent back to the early part of the 10th cent. The name B. is taken from the territorial possessions of a certain Adhémar, lord of the barony of Bourbonnais, a ter. lying away in the centre of France and represented by the modern dept of Allier. The family of B. early in his hist. became allied by marriage to the house of Dampierre, and in 1272 it became allied by marriage to the royal Capetian house, by the marriage of Agnès, heiress of the house of B., with the sixth son of Louis IX. The son of this marriage received the title of the Duke of B., but before the end of the 15th cent. this line had become extinct, and the duchy had passed into the possession of another branch of the family. With the great constable, Charles de B., the direct line from the first B. duke came to an end. A younger branch of the line took up the title in the person of Louis, Duke of Vendôme, and in direct descent from him

was Antoine (q.v.), King of Navarre by marriage, and heir to the B. title and name. His son was the famous Henry of Navarre who in 1589 became King of France as Henry IV (q.v.). Henry IV was assassinated in 1610, and was succeeded by his son, Louis XIII, who d. in 1643, and was succeeded by his son, the 'grand monarque,' Louis XIV. He was succeeded by his great-grandson Louis XV, but before his death had succeeded in establishing the B. dynasty upon the throne of Spain. Louis XV d. in 1774, and was succeeded by his grandson, Louis XVI, who met death on the scaffold during the revolution in the year 1793. His son was nominally Louis XVII, and after the Napoleonic wars his brother was restored to the throne of France as Louis XVIII. He was succeeded by his brother, Charles X. Charles X's grandson was styled the Count of Chambord, and on his death in 1883 the supporters of the B. family in France accepted as the head of the house of B. the Orléanist, Louis Philippe, Count of Paris. He d. in 1894, and his position was taken up by his son (d. 1926). He left no son, and the claim to the Fr. throne then passed to John, Duke of Guise, and then to his son, Henry, Count of Paris (b. 1908). Before this date, however, the Orléanist branch of the B. family had placed one of their number on the throne of France. The Orléanists were descended from the brother of Louis XIV. Amongst the more prominent members of that section of the family may be mentioned, Louis Philippe, 'Egalité,' whose son became King of the French for a short time in the 19th cent. The 2 other important branches of the family are the Sp. and the Neapolitan. The Sp. dynasty was founded practically by Louis XIV, whose scheme for a union between the 2 countries failed, but who succeeded in placing his grandson, Philip of Anjou, on the throne in the place of the dead Charles II. Philip of Anjou became King Philip V of Spain, he was succeeded by his son, Ferdinand VI, and he in turn was succeeded by his brother, Charles III. He was succeeded in 1788 by his son, Charles IV, whilst his second son became King of the Two Sicilies. Charles IV was deposed by Napoleon, this deposition being one of the chief causes of the Peninsular war, but after the wars the throne was restored to the son of Charles IV in the person of Ferdinand VII. In 1833 he was succeeded by his daughter Isabella, and his brother Carlos, Duke of Madrid, claimed the throne by right of Salic law, the resulting quarrel starting a long period of sporadic civil war between the rival factions. Isabella abdicated in 1870, and was succeeded by her son, Alfonso XII, who d. in 1885, and was succeeded by his posthumous son, Alfonso XIII (abdicated 1931). The first of the B. family to have the sovereign rights of the kingdom of Naples was Charles III, who on his succession to the Sp. throne passed these rights on to his second son, Ferdinand I. Ferdinand, at one time deposed by Napoleon, afterwards regained his kingdom and took the title of King of the Two

Stellies. He was succeeded in 1825 by his son, Francis I, who held the same title as his father, and he in turn was succeeded by his son, Ferdinand II. Francis II, who succeeded him, was deprived of his possessions, which were incorporated in United Italy. Another branch of the family is the Parmese branch, which held the titles of Dukes of Lucca and Parma. The duchy of Parma came into the B. family in 1748, when by the treaty of Aachen it was conferred on the youngest son of Philip V of Spain. It was held by this branch of the family until 1860, when the duchies were annexed by Victor Emmanuel to the kingdom of Italy. Other branches of the B. family are the Vendôme branch, descended from a natural son of Henry IV, and the families of Condé, Conti, and Montpensier.

Bourbon, Charles, Duc de (1490-1527), Fr. noble, usually styled the Constable de B., the second son of Gilbert, Count of Montpensier. By marriage with the heiress of the B. estates, and by the death of his elder brother, he became the wealthiest and most powerful noble in France. His conduct at Marignano (1515) gained for him the title of constable of France, and he was also made the Governor of Milan. But his wealth and his influence made him many enemies at court, who, after the death of his wife, seem to have been led by the queen mother. His estates were confiscated, and B. turned against France and entered the service of Charles V. In 1524 he commanded Charles's armies in Italy, helping to drive the French from the country, but failing in the action before Marseilles. He also took part in the battle of Pavia (1525). In 1526 he was given the duchy of Milan. In 1527 his troops, composed of Spaniards and Ger. Protestant mercenaries, clamouring for their arrears of pay, were led against Rome. Rome was attacked and stormed, and in the storming of the walls B. was killed. After his death Rome was sacked by his starving and mutinous troops. See life by C. Hare, 1911.

Bourbon, Duke of Vendôme, see AN-TOINE.

Bourbon, Henry I and II of, see CONDÉ, PRINCE DE.

Bourbon, Louis Antoine de, see ANGOU-LEME, DUKE OF.

Bourbon, Louis I and II de, and Louis Joseph de, see CONDÉ, PRINCE DE.

Bourbon, Ille, see RÉUNION.

Bourbon-Lancy, Fr. tn in the dept Saône-et-Loire, noted for mineral springs dating from Rom. times. Pop. 4600.

Bourbon-L'Archambault, Fr. tn in the dept of Allier, on the Burges. It is a spa, and has the ruins of the medieval castle of the lords of B., from whom sprang the royal family (see **BOURBON**). Pop. 2800.

Bourbon-Vendée, see ROCHE-SUR-YON, LA.

Bourbonnais, anct. prov. of central France, corresponding to the present dept of Allier, with parts of Cher, Puy-de-Dôme, and Creuse. Its cap. was Moulins (q.v.). It formed the duchy of Bourbon from 1327 to 1527, when it was united

with the crown. In 1661 it was given to the house of Bourbon-Condé, who held it till the revolution. (See **BOURBON**.)

Bourbonne-les-Bains, Fr. spa in the dept of Haute-Marne. The Romans called its thermal springs Aquae Borvoni. There is a 12th-cent. church and the ruined château of the seigneurs de Bourbonne. Pop. 2700.

Bourchier, Arthur (1864-1927), actor-manager, b. Berks, educ. at Eton and Oxford, where he founded the O.U.A.D.C. His first professional appearance was with Mrs Langtry in 1889, as Jacques in *As You Like It*. Other of his Shakespeare characters were Shylock, Henry VIII, Macbeth, Macduff, Sir Toby Belch, and Falstaff. He toured with Daly's company in America, returning to England in 1893, and married the actress, Miss Violet Vanbrugh, in 1894. He acted with Sir Charles Wyndham as Joseph Surface in *The School for Scandal*. For a time he was Sir C. Wyndham's partner at the Criterion, appearing with him in *David Garrick*. In later years he was manager of the Garrick Theatre and of the Strand Theatre.

Bourchier, John, see BERNERS, JOHN.

Bourchier, Thomas (c. 1404-86), Eng. archbishop, educ. at Oxford. He became Bishop of Worcester in 1434; Bishop of Ely, 1443; and in 1454 was made Archbishop of Canterbury. He was lord chancellor 1455-6. B. supported the Lancastrians at the beginning of the Wars of the Roses, but from 1461 supported Edward IV, whom he crowned. He also crowned Richard III and Henry VII. He was made a cardinal in 1467.

Bourdalois, Louis (1632-1704), Fr. priest, b. Bourges, 20 Aug. He entered the Society of Jesus when 16, and was later appointed prof. of rhetoric, philosophy, and moral theology in various Jesuit colleges. He began preaching in 1666, and had an immediate success. In 1669 he was recalled from the provs. to preach in Paris, where his eloquence soon caused him to be ranked with the great men of the period. His sermons at Versailles were so much appreciated that he was asked to deliver Advent and Lenten sermons on at least 7 other occasions, whereas usually the same preacher never came more than 3 times to court. When the Edict of Nantes was revoked he went to Languedoc to confirm the new Catholic converts, and performed this mission tactfully. Towards the close of his life he devoted himself to charitable institutions, where his discourses were welcomed. Voltaire thought his sermons surpassed Bossuet's; they were remarkable for their severe but simple morality, devoid of over-elaboration. B. was a far greater orator than writer, and preached morality rather than dogma. Père Bretonneau's ed. of his sermons is reliable. For his life see Anatole Feugère, *Bourdalois, sa prédication et son temps* (Paris), 1874, or Sainte-Beuve, *Causeries du Lundi*.

Bourdeaux, see BORDEAUX.

Bourdelle, Émile Antoine (1861-1929), Fr. sculptor, trained at Toulouse and Paris, and strongly influenced by Falguière and Rodin. His first notable work

was 'Adam après la faute,' exhibited in 1883. In 1912 he was given the work of decorating the Théâtre des Champs-Élysées, and also designed for the State factory of Gobelins tapestries. His most important monuments include 'The Virgin of Alsace,' 'The Epic of Poland,' 'Rodin travaillant à la porte de l'enfer,' besides busts of Sir James Frazer in the Royal Academy and of Beethoven in the Luxembourg collection.

Bourdon, Sébastien (1616-71), Fr. painter, *b.* Montpellier. He studied at Paris and Rome, and returning to Paris became one of the founders and later rector of the Royal Academy of Painting. In 1652 he was appointed court painter in Sweden. While known for his historical paintings, he produced a great variety of works and excelled in landscape. His masterpiece is the 'Martyrdom of Saint Peter,' in the Louvre, where sev. of his works are hung.

Bourdon de l'Oise, François Louis (1750-1797), Fr. revolutionary, *b.* Saint-Rémy, near Compiègne. He took part in the storming of the Tuilleries (1792), and played a leading part in the events leading to the execution of Louis XVI and the destruction of the Girondists. He later sided with the Moderates, and helped in the overthrow of the Terrorists (1794). He became a member of the Council of Five Hundred. His Royalist leanings brought him under suspicion, and in 1797 the Directory transported him to Cayenne, where he *d.*

Bourdonnaux, Bertrand-François, Comte Mahé de la (1699-1753), Fr. sailor and administrator, *b.* St. Malo. As a naval officer in the service of the Fr. E. India Co. he took a prominent part in campaigns against the fortified seaports of India, including the capture of Mahé (1725), and later served in the Fr. Navy, commanding a squadron and rescuing Pondichéry and Mahé (1741-2). In 1746 he won a naval victory at Negapatam and captured Madras. But he is best remembered as a colonial administrator. From 1735 to 1740, and again from 1742 to 1746, he was governor-general of the Îles de France et de Bourbon (Mauritius and Réunion). There he supervised the building of the tn of Port Louis and the design and completion of its harbour works, the building of roads, and the development of agriculture, especially of the sugar-cane industry. In 1747, after disagreeing with Dupleix, who commanded the Fr. troops in India, he was recalled to France and imprisoned in the Bastille. His trial (1751), after 2 years of imprisonment, cleared him of all charges.

Bourg (-en-Bresse), Fr. tn, cap. of the dept of Ain, on the Reyssouze. It was the anct cap. of Bresse (q.v.). In the suburb of Brou is a celebrated flamboyant church, containing magnificent monuments. Lalande (q.v.) was *b.* here. There is considerable trade in horses, cattle, poultry, and grain, and manufs. of copperware. Pop. 26,500.

Bourg-Dieu, see DÉOLS.

Bourg-St-Andéol, Fr. tn in the dept of Ardèche, on the Rhône. It is a

picturesque tn, with a remarkable Romanesque church. It has a trade in pottery and wine. Pop. 3400.

Bourg-sur-Gironde, Fr. tn in the dept of Gironde, on the Dordogne. It is a picturesque tn, at the foot of a cliff, and with many anct buildings. It has vineyards and quarries. Pop. 2100.

Bourgageuf, Fr. tn in the dept of Creuse. It has sev. anct buildings, including a castle built for a brother of the Sultan Bajazet II (q.v.). It has a market. Pop. 3500.

Bourgelat, Claude (1712-79), Fr. veterinary surgeon, at first a barrister and then a musketeer, founded in 1761 a veterinary school at Lyons, the first of its kind in Europe. He was director also of the second, estab. in 1765 at Alfort. He made a study of the anatomy of domestic animals, and raised an art that had been empirical to the rank of a science.

Bourgeois, Léon Victor Auguste (1851-1925), Fr. statesman, *b.* Paris; educ. for the law. He was made prefect of police in 1887, and began his political career the following year when he defeated Boulanger by a great majority and entered the Chamber as a Radical deputy for Marne. He was under-secretary for home affairs in 1888, minister of the interior in 1889, and minister of public instruction in 1890. From 1895 to 1896 he was Premier. He was minister of public instruction in 1898, and in 1903 represented France at The Hague Peace Congress. He became a senator in 1905, and minister for foreign affairs in 1906. His services were frequently invoked in arbitration or agreements between France and other states, and in interparty compromises. In 1918 the Fr. Gov. appointed him chairman of a foreign office committee on the League of Nations. He was chairman of the drafting committee in 1919, and in that capacity had a great deal to do with the form in which the League scheme was finally presented to the allied nations. He was one of the Fr. delegates on the Inter-Allied Peace Conference to Paris, 1919. He was awarded the Nobel peace prize in 1920. *See* Maurice Hainburger, *Léon Bourgeois* (biography from Radical-Socialist point of view), 1932.

Bourgeois, Sir Peter Francis (1756-1811), Eng. painter, son of a Swiss clock-maker. He became R.A. in 1793, and is famous for his bequest of a valuable collection of pictures to Dulwich College, and a large sum of money for the upkeep and extension of the galleries. Two noted works are 'Kemble as Coriolanus' and 'Hunting a Tiger.'

Bourgeoisie, Fr. word, applied to the middle-class citizens of a tn as distinct from the nobility and the working classes. The term is often used contemptuously, implying smug respectability (as in 'petit bourgeois'), and more generally to identify the capitalist 'class' as a whole. The B. figures prominently in Marxist economic and sociological analysis. *See* references in BOLSHEVISM; COMMUNISM; ENGELS, FRIEDRICH; MARX, HEINRICH KARL.

Bourges (anct *Avaricum*), Fr. city, cap. of the dept of Cher, and former cap. of Berri (q.v.), 144 m. S. of Paris. It stands on the canal du Berry, and on the Yèvre, a trib. of the Cher (q.v.): the surrounding dist., once marshy, now has rich market gardens. B. was once the cap. of the Bituriges Cubi (q.v.), and later an important tn of Aquitania (q.v.). After the battle of Agincourt (q.v.) in 1415 it was the centre of Fr. power: Charles VII (q.v.) was ironically called 'the king of B.' The Pragmatic Sanction (q.v.) of 1437 was promulgated here. The fine Gothic

1935), Fr. novelist and critic, b. Amiens, and studied at the college of Sainte-Barbe, Paris, where he graduated brilliantly in 1872. Three vols. of verse—*La Vie inquiète*, 1875, *Edel*, 1878, and *Les Aveux*, 1881—were among his earliest contributions to literature. Greatly indebted to Taine, B. is essentially a psychologist. His critical studies, *Essais*, 1883, and *Essais de psychologie contemporaine*, 1886, are singularly subtle in analysis. His first novel, *L'Irréparable*, 1884, was quickly followed by others (*Cruelle Enigme*, 1885, *André Cornélis*, 1887, and *Le Disciple*,

THE CATHEDRAL OF ST ÉTIENNE, BOURGES

R.N.A.

archiepiscopal cathedral (1200-60) is one of the most notable churches in Europe, and contains beautiful medieval glass. Other interesting buildings are the house of Jacques Cœur (q.v.), which is considered to be one of the best examples of Fr. secular Gothic architecture, and the Renaissance house of Jacques Cujas (q.v.), which is now a museum. The univ. of B., founded in 1463, was suppressed at the revolution. The tn has ordnance, engineering, and textile industries, and a trade in wool and wine. Pop. 53,900.

Bourges-Maunoury, Maurice (1914-), Fr. politician. After a distinguished record with the Fr. Resistance during the Second World War, he entered the Constituent Assembly as a Radical-Socialist in 1946. He held office in various post-war Fr. govts. and succeeded Mollet (q.v.) as Premier in June 1957, resigning on 30 Sept.

Bourget, Paul Charles Joseph (1852-

1889), which placed him in the front rank of modern novelists. They show an extraordinary insight into 'states of soul' and the morbid, cynical interest of a dilettante in psychological situations. He travelled widely and was a cosmopolitan by instinct (his father was a Russian, his mother an Englishwoman)—facts which account for his intimate knowledge of mixed society of all nationalities. He pub. impressions of his travels in *Outre-Mer*, 1895, and *Études et portraits*, 1888. Other publs. include *Nouveaux Pastels*, 1890; *Sensations d'Italie*, 1891; *Psychologie de l'amour moderne*, 1891; *L'Étape*, 1902; *L'Émigré*, 1907; *Le Démon de midi*, 1914; *Le Sens de la mort*, 1915; *Un Draine dans le monde*, 1921; *Nos actes nous suivent*, 1927. He became a member of the Fr. Academy in 1894. See E. Seillière, *P. Bourget, psychologue et sociologue*, 1937, and W. T. Secor, *P. Bourget and the Novel*, 1948.

Bourget, Lac du, Fr. lake in the dept of Savoie, near Aix-les-Bains. It is 11 m.

long and about 2 m. wide. It is Le Lac of the poem by Lamartine.

Bourget, Le, Fr. tn in the dept of Seine, on the N. outskirts of Paris, 7 m. from the centre of the city. The French were defeated here in 2 battles in 1870 (see FRANCO-GERMAN WAR). The large airport of Le B. is one of the prin. commercial airports in France. Pop. 7300.

Bourgogne, see BURGUNDY.

Bourgoin, Fr. tn in the dept of Isère, on the Bourbre, a trib. of the Rhône (q.v.). It has textile and engineering industries. Pop. 7700.

Bourguignon, Le, see COURTOIS, JACQUES.

Bourignon, Antoinette (1616-80), Flem. mystic, b. Lille; a religious enthusiast from her earliest years, she was subject to strange hallucinations and visions. Ardent for reform and the original purity of the Gospel, she won numerous disciples and as many foes. She was banished from her country, and travelled in Belgium, Holland, and N. Germany. She also visited France, England, and Scotland, preaching reform. Her followers soon dwindled away after her death, but her influence was felt again in Scotland in the 18th cent., and was denounced by the Presbyterian general assemblies of 1701, 1709, and 1710. Her writings were pub. by Pierre Poiret, her disciple, at Amsterdam, 1679-84. Three have been trans. into English: *An Abridgement of the Light of the World*, 1696, *A Treatise of Solid Virtue*, 1699, and *The Restoration of the Gospel Spirit*, 1707.

Bourinot, Sir John George (1837-1902), Canadian historian, became clerk to the Canadian House of Commons in 1880. His works cover the whole field of Canadian hist. The best known of his works is *Parliamentary Procedure and Practice in Canada*, 1884, which is a standard work on the subject. His other works include *Canada*, 1885, in the Story of the Nations series; *Builders of Nova Scotia*; *Canada under British Rule*; and *Constitutional History of Canada*, etc.

Bourke, Richard Southwell, 6th Earl of Mayo (1822-72), statesman, b. Dublin and educ. at Trinity College there. He was appointed Viceroy of India in 1869, and reorganised the finances of the country and promoted many useful public works. He helped to preserve the autonomy of Afghanistan. He was assassinated at Port Blair, Andaman Is.

Bourke, tn in New S. Wales, Australia, situated on the Darling R., 500 m. by rail from Sydney. The dist. is the centre of a large grazing area. Pop. 3000.

Bourlon Wood, small wood W. of Cambrai in N. France; the scene of fighting in Nov. 1917 during the First World War. Owing to allied activity in Flanders, the Germans had been gradually weakening various parts of the W. front to reinforce their line towards its N. extremity, and in Italy. Cambrai was one of the points so weakened, and the Allies therefore decided to make an advance in this sector. It was decided to dispense entirely with a preliminary artillery bombardment, and to rely on numerous tanks. The task was

not an easy one, notwithstanding the element of surprise, for the Germans persistently counter-attacked, causing some positions to change hands sev. times. The Germans fully appreciated the importance of B. W. as a key position and eventually brought up overwhelming odds against the British, who were compelled to evacuate it on 4 Dec. 1917, and withdraw to a more defensible line.

Bourmont, Louis Auguste Victor de Ghaïnes, Comte de (1773-1846), Fr. marshal, b. Château de Bourmont, in the dept of Maine-et-Loire. He fought on the side of the Royalists under Condé; he went into exile from 1793 to 1799, and took an active part in the struggle in La Vendée. He was imprisoned on a charge of intrigue at Besançon, but escaped to Portugal. Later he won the favour of Napoleon, and for his services in Naples, Russia, and Germany (1808-14) was promoted to the rank of general. He vacillated between Louis XVIII and Napoleon, deserting the latter before the battle of Ligny. In 1829 he was appointed minister of war, and in the following year took command of the expedition to Algeria, in which he was successful. He refused to take the oath of allegiance to Louis Philippe, and was deprived of his peerage and his command in the army. He served Dom Miguel, King of Portugal, for a time, and d. at his castle at Bourmont.

Bourne, Edward Gaylord (1860-1908), Amer. historian, b. Strykersville, New York. Author of *The Surplus Revenue of 1837*, 1885, *Essays in Historical Criticism*, 1901, and *Spain in America*, 1904. He also ed. the narrative sources for *De Soto*, 1904, *Champlain*, 1905, and *The Northmen, Columbus, and Cabot*, 1906.

Bourne, Francis, Cardinal (1861-1935), b. Clapham, 23 Mar.; educ. at St Cutlbert's College, Ushaw, St Edmund's, Ware, Saint-Sulpice, Paris, and the univ. of Louvain. Ordained priest, 1884; served as curate at Blackheath, Mortlake, and W. Grinstead in succession. He was the founder in 1889, and the first head, of a theological seminary in the diocese of Southwark, of which he was made bishop in 1897. He had previously, in 1895, received the appointment of domestic chaplain to the Pope. When Cardinal Vaughan d. in 1903 B. succeeded him as Rom. Catholic Archbishop of Westminster. From a national point of view, the most striking event of his career as archbishop was in connection with the Eucharistic Congress of 1908. The Host was to have been carried through streets in Westminster on Sunday, 13 Sept., but representations made by the gov. that this would be illegal prevented it at the last moment. B.'s correspondence on this matter with the Prime Minister, Asquith, is a masterly example of his diplomatic gifts. He was created cardinal in 1911.

Bourne, Hugh (1772-1852), joint founder, with Wm Clowes, of the sect of Primitive Methodists. He was b. Fordhays, Staffs; began life as a carpenter. He became a Wesleyan Methodist local preacher, but his zeal for open-air meetings

did not meet with the approval of that body, and his repeated defiance of the resolutions of the Wesleyan Methodist Conference resulted in his expulsion from the society in 1808. His evangelical style of preaching was popular, and he gathered round him many followers, through whom he estab. a new denomination, which adopted the name of Primitive Methodists in 1812. B.'s first chapel was founded at Tunstall in 1811, and the first ann. conference at Hull in 1820. He visited Scotland, Ireland, Canada, and the U.S.A., and before his death the members' roll numbered 110,000. He pub. the *History of the Primitive Methodists*, 1823. See J. Walford, *Memoirs*, 1855.

Bourne, Vincent (1695-1747), Eng. classical scholar and poet. Went from Westminster to Trinity College, Cambridge, finally becoming a master in his old school. Pub. Lat. poems of poetic as well as linguistic merit. His pupil, Cowper, ranked him as high as Ovid. Lamb also has praised his Lat. verse. The best ed. of his *Poemata* (1840) has a memoir by John Mitford.

Bourne, mkt tn in the Stamford parl. div. of Lincs, England, 95 m. N. by W. of London. It has an Early Eng. church which belonged to a foundation of Augustinian canons of 1138. It has an agric. trade; it is also famous as having been the stronghold of 'Hereward the Wake,' Pop. 5200.

Bournemouth, watering-place and winter resort on Poole Bay, off the coast of Hants, England, 25 m. S.W. of Southampton. It received its charter of incorporation in 1890, became a co. bor. in 1900, a parl. bor. in 1918, and a registration area (with Christchurch), 2 bor. constituencies, in 1948. Its sheltered position in a pine valley, and its even temp., have made it a favourite winter resort for invalids. The sanatorium for consumptives was built in 1855, and there are numerous hospitals and convalescent and nursing homes. In the churchyard of St Peter's are buried Godwin, Mary Wollstonecraft, and Mary Shelley. B. has a fine stretch of sands, parks, winter gardens, 2 piers, one 1000 ft long, and golf-courses. The Undercliff Drive is now 1½ m. long, making a total promenade length of 4½ m. The Russell-Cotes Museum and Art Gallery is situated in B., which also has free libraries and 2 large boarding-schools for girls. During the season steamers ply between B. and other centres on the mainland and the Isle of Wight. Yachting in Poole Harbour is popular among the visitors. Outside the tn an aerodrome has been erected, which is available for civil aviation. The Pavilion, comprising theatre, dance halls, etc., was opened in 1929. The area of B. until 1930 was 6643 ac.; but this was nearly doubled in that year by amalgamating with the bor. the pars. of Kinson and Holdenhurst and the open space known as Hengistbury Head (357 ac.). With these additions the bor. area is 11,627 ac., and its coastline is now 7 m. The par. of Kinson is notable for an anct church, about which clings the tradition of

smuggling days. This is the sixth extension of B. in the past half-cent. or more, in which period B. has grown from an insignificant tn to be one of the largest seaside resorts in the country. Tn-planning schemes were successfully carried out in order to safeguard development under the extension, to make B. one of the most attractive watering-places in Europe. Pop. 144,730.

Bournonite, copper lead antimony sulphide, (CuPbSbS₃). It is an opaque mineral, of a dull grey colour, with bright metallic lustre. It occurs in tabular, orthorhombic crystals, which sometimes form wheel-shaped, twinned growths; hence the miners' name 'cog-wheel ore.' It is first mentioned by Philip Rashleigh in 1797; later, in 1804, by the Comte de Bournon, from whom it derived its name, though Bournon himself named it Endellion, after the place in Cornwall where it was first found. It is also to be found at Neudorf in the Harz, Germany, and in a few other localities.

Bournville, dist. within the boundary of the city of Birmingham, England, an early and distinguished example of tn planning, where a model vil. and factory were founded by George Cadbury (1839-1922). The estate is now administered by the B. Vil. Trust.

Bourrée, dance of Fr. origin, in vogue in France under Louis XIV. It was similar to the gavotte, but is somewhat faster and differs from it by beginning at the last quarter of the bar, not at the half-way. The dance called B., which is still popular in Auvergne and Anjou to the music of the musette or to that of the hurdy-gurdy, seems quite different. It is generally in 3-4 time, but occasionally in 2-4. As a musical form B.s are often found in the suites of the older composers, such as Bach.

Bourrienne, Louis Antoine Fauvelet de (1769-1834), Fr. diplomat, b. Sens. He became friendly with the future Napoleon 1 at the military school at Brienne. He became secretary of the embassy at Stuttgart, 1792; secretary to Napoleon, 1797, whom he accompanied to Italy and Egypt. He was appointed a councillor of state in 1801, but was dismissed from office in the following year on a charge of peculation. In 1805, however, he was sent as *chargé d'affaires* to Hamburg, but was recalled on account of his dishonest transactions, and was obliged to refund a million francs to the public treasury (1810). He then deserted Napoleon and supported the Bourbons, and sat in the Chamber of Representatives (1815). He d. in a lunatic asylum at Caen. His *Mémoires sur Napoléon* (10 vols., Paris, 1829) are unreliable and spiteful.

Bourrit, Marc Théodore (1735-1819), Swiss artist and naturalist, b. Geneva. He made numerous excursions in the Alps, and devoted all his energies to their study. He was the first to make an attempt to climb Mont Blanc, which he did in 1784, but he did not succeed until 3 years later, after Balmat and Saussure had done so. His chief works are *Description des glaciers du duché de Savoie*, 1774, *Description des aspects du Mont*

Blanc, 1776. *Description des Alpes pennines et rhétiennes*, 1781, and *Description des cols et passages des Alpes*, 1803.

Bourse, name applied on the Continent to a stock exchange, money market, or any place where merchants resort. The Royal Exchange of London was originally called Gresham's Bourse; it was built at his own expense by Sir Thomas Gresham (1566-7) on the model of one at Antwerp. The Paris B. was designed by Brongniart (1808) and was completed by Labarre (1827).

Bouscat, Le, Fr. tn in the dept of Gironde, a NW. suburb of Bordeaux (q.v.). It has a coast wireless station, and a trade in market garden produce and wines. Pop. 18,000.

Boussac, Fr. tn in the dept of Creuse, on the Petite-Creuse. It is a picturesque tn. and has a 15th-cent. castle. Pop. 1400.

Boussingault, Jean Baptiste Joseph Dieudonné (1802-87), Fr. chemist. He studied at the School of Mines of Saint-Étienne; served under Gen. Bolívar in the S. Amer. war of independence; on his return to France became prof. of chem. at Lyons. In 1839 he became a member of the Institute and prof. of agriculture in the Conservatoire des Arts et Métiers, Paris. In 1876 he was made grand officer of the Légion d'Honneur. He won fame for his experimental investigations in agric. science. Pub. *Économie rurale* (2 vols.), 1844; new ed. in 3 vols., 1860-4, and 1887-91; trans. into English and German.

Boussu, tn in the prov. of Hainaut, Belgium, 7 m. W. of Mons. In the tn and neighbourhood are coal-mines, smelting works, and copper and iron foundries. Two engagements between the French and the Austrians took place here on 28 April and 4 Nov. 1792. Pop. 12,200.

Boutsens, Pieter Cornelis (1870-1943), Dutch poet and dramatist, b. Middelburg. His first pub. were the sombre verse collections *Verzen*, 1898, and *Praeludien*, 1902, but his later poetry is more classical in structure and inspiration. His rhythm and imagery are of great beauty. He also pub. some very successful trans. from the Greek, and from modern poets, such as Goethe and Novalis. His *Verzamelde Werken* were ed. in 6 vols., 1943-51. See H. J. C. Grierson, *Two Dutch Poets* (includes some trans.), 1936.

Bouterwek, Friedrich (1765-1828), Ger. poet and philosopher. He began by writing novels and verses, then turned to literary hist. and philosophy, adopting ideas first of Kant and later of Jacobi. His chief works are *Geschichte der neuern Poesie und Beredsamkeit*, 1801-19, *Aphorismen nach Kants Lehre vorgelegt*, 1793, and *Ideen zu einer allgemeinen Apodiktik*, 1799.

Bouts, Dirk (c. 1410-75), Dutch landscape and historical painter. Some uncertainty exists about his name, which occurs as Theodoricus (Latin) or Thierry B.; often as Thierry de Haarlem, or Stuerbout, though probably he has no connection with that family of painters. B. settled in Louvain (c. 1448), being appointed painter to the tn council (c. 1468). Perhaps a pupil of van Eyck; his

work shows some resemblance to that of Campin and Van der Weyden. In 1468 B. finished 2 large pictures for Louvain tn hall. These (now in Brussels Gallery) illustrate a legend in Godfrey of Viterbo's chronicle praising the virtue of justice, as exemplified in a judgment of Otho III. They are striking and powerful works with life-size figures. In 1468-72 he painted the 'Last Judgment.' Other works are 'The Adoration of the Kings' (Munich), 'St Erasmus's Martyrdom' in St Peter's Church, Louvain, also the 'Last Supper' (c. 1463). The shutters of this triptych are now at Munich, the central leaf at Berlin. Many works formerly attributed to Memling are proved to be B.'s ('History of St Ursula' at Bruges).

Bouts-rimés, pastime in vogue among literary circles during the 17th and 18th cents., particularly in France. One member of the party gives out certain rhyming words, and the rest of the players compose verses, using the given words as their rhyme endings. The amusement was ridiculed by Addison: see *Spectator*, No. 60.

Bouvet, Francois Joseph (1753-1832), Fr. admiral. He distinguished himself in service in the E. Indies in the time of Hyder Ali, and later, in the Napoleonic wars, he commanded a div. of ships at the battle of the First of June, 1794. In 1802 he was sent out to occupy Guadeloupe.

Bouvetoya, is. in the S. Ocean discovered by Bouvet (q.v.) in 1739; explored 1927 and 1928 by Norwegian expeditions, and previously by a Ger. expedition in 1898; visited and accurately charted by S. African naval expedition in 1955. It is most inaccessible. See B. Aagaard, *Fangst og Forskning i Sydshavet*, Oslo, 1930; *Polar Record*, vol. viii, No. 54, 1956.

Bouvier, John (1787-1851), Amer. jurist, b. Codogno, Italy; his family emigrated to Philadelphia, 1802; became an Amer. citizen, 1812; admitted to the Bar, 1818; recorder of Philadelphia, 1836; and 1838 till his death associate justice of the court of criminal sessions. He pub. a standard law dictionary and ed. *Bacon's Abridgment of the Law*.

Bouvines, or Bovines, vil. in the dept of Nord, France, 6 m. SE. of Lille. It is noted as the scene of the victory of Philip Augustus of France over the Emperor Otto IV; John, King of England; and the Count of Flanders, in July 1214. Pop. 600.

Bouxwiller, or Buxwiller, Fr. tn in the dept of Bas-Rhin. It has tile and chemical manufs. Pop. 2600.

Bovet, Daniel (1907-), pharmacologist, b. Neuchâtel, Switzerland, subsequently became a naturalised Italian. He graduated at Genova Univ., 1929, and until 1947 worked at the Pasteur Institute, Paris. Now director of pharmacology dept, Istituto Superiore di Sanità, Rome. In 1935 B. was associated with the introduction of sulphanilamide into clinical use. He was the first to synthesise an antihistamine compound. He has also studied the muscle-relaxing drugs and his work here has led to the introduction of

succinylecholine in modern anaesthesia. His latest work concerns the group of drugs known as tranquillisers. Awarded Nobel prize for physiology and medicine, 1957.

Bovey Tracey, vil. in Devon, England, 8½ m. WNW. of Teignmouth, on the edge of the moors. The Bovey Beds are a deposit of sands, clays, and lignite, due to the degradation of the neighbouring Dartmoor granite. The layer is 200-300 ft thick, and extends from B. T. to Newton Abbot. The geological formation closely resembles that of the Bournemouth Beds or Lower Bagshot. The clay extracted is valuable, and used for pipe and potter's clay. Pop. 3356.

Bovidae, family of mammals included in the order Ungulata and of ruminant habit. The family consists of antelopes, sheep, goats, and oxen, with their different species and varieties, but the different sub-families are not sharply defined or easily separated from one another. They occur in all parts of the Old World and in N. America, but are not native to Australia and S. America. They are artiodactylate (i.e. even-toed), and all the males have horns, these consisting of solid bony extensions of the skull encased in a sheath of true horn. Horns are frequently present, but sometimes absent, in the females. Their chief distinguishing features are their horns, limbs, stomach, and teeth. About 45 genera and 200 species exist, of which most are antelopes.

Bovill, Sir William (1814-73), Judge, noted for his decisions in commercial cases. Called to the Bar in 1841 he joined the home circuit. Q.C., 1855; M.P. for Guildford, 1857. The Partnership Law Amendment Act, which he helped to pass, 1865, is called B.'s Act. B. was solicitor-general, 1866, and vacated office the same year to become chief justice of the common pleas.

Bovines, see **BOUVINES**.

Bovino, It. tn. in Apulia (q.v.), in the Apennines, 18 m. SW. of Poggia (q.v.). It has an ant. cathedral, and there is a trade in agric. produce, wine, and oil. Pop. 9000.

Bovista, genus of gasteromycetous fungi or small puff-balls (q.v.), differing from *Lycoperdon* mainly in having free capillitium threads, about 10 species of temperate regions. *B. plumbea* and *B. nigrescens* are found on heaths, pastures, etc., in Britain.

Bow, Clara (1905-), Amer. actress, known as the 'It' girl, b. Brooklyn, New York. She began in the cinema in 1922, and was a well-known player in the silent days and also at the beginning of the sound period.

Bow, dist. of London, 3 m. E. of St Paul's, in the metropolitan bor. of Poplar. Chancer's Priores's convent of Stratford-atte-Bow was situated here. It has 3 railway stations.

Bow (at Stratford-le-Bow, E. London). 1744-75/6, factory producing soft-paste porcelain (q.v.), with a bone-ash content.

Bow, see **ARCHERY**.

Bow (Fr. *archet*; Ger. *Bogen*; It. *arco*), by means of which stringed instruments

such as the violin are made to sound. It is made of a thin staff of elastic wood tapering slightly to the lower end, from 29.134 to 29.528 in. in length. It is divided, as a whole, into 5 parts: the stick, the ferrule, the nut, the hair, and the head. The hairs, numbering from 110 to 200 of the best white horsehair, are fastened to the lower end, and their tension is regulated by the nut.

Bow, of a ship, the forepart or stem, which cleaves the water as the vessel moves. A naval architect speaks of the 'U' or 'V' form B.s, referring to the shape of the section, whilst sailors describe various types as being broad or full, and lean or fine, B.s. As 'starboard' and 'port' are used respectively of the right and left sides of the vessel, looking forward it is possible to speak of the starboard and port B.s, which mean, of course, at the stem.

Bow Church, Cheapside, London, originally built in the 11th cent. The surviving crypt is the oldest parochial building in London. Because of this arched crypt the church came to be known as S. Maria de Arcubus, or St Mary of the Arches (or Bow), hence St Mary-le-Bow; and the prin. court of the Archbishop of Canterbury (see **ARCHES**, **COURT OF**) derived its name through using this crypt. The church was destroyed in the Great Fire and rebuilt by Wren in 1670-3, the steeple, one of his finest, being completed in 1680. It was the most famous par. church of the city, and those b. within sound of its bell were called Cockneys (q.v.). It was severely damaged in the Second World War, and is being restored.

Bow Fell (2950 ft), mt in the Lake Dist. (q.v.) of Cumberland, England, 8 m. W. of Ambleside.

Bow-legs (*Genu varum*), a deformity marked by separation of the knees when the ankles are touching. There is usually outward curvature of both femur and tibia. It may occur in one leg only, but is generally found in both. At birth all infants are bandy-legged, but during their first year a gradual change comes, the cartilage hardening to bone. The chief cause is rickets, which retards bone formation. Rickets is now a rare condition, and so therefore is B. Other causes are occupations of certain kinds (such as that of jockey), followed before the bones have grown and hardened properly. The condition sometimes results from fracture of the lower end of the femur and malunion of the bone. In young children treatment of the constitutional disease will usually effect a cure; in older patients an operation may be needed. The deformity is the opposite to that known as knock-knee (*Genu valgum*) (q.v.).

Bow Street, between Long Acre and Russell Street, London, W.C., famous for its police court, which is the chief police court of the metropolis. The first of the B. S. magistrates was Sir Thomas de Veil, who, when an acting justice, lived in B. S. (1735), and the court really owes its subsequent estab. in B. S. to him. Fielding, the great novelist, was the next holder of the post. Until 1829 the work of the

B. S. magistrates embraced executive functions which are now performed by the commissioner of the Metropolitan Police. Extradition warrants under the Foreign Jurisdiction Acts are issued at B. S. police court. The street also gave its name to the B. S. runners, who served writs and acted as detectives up to the year 1829.

Bow Window, see BAY WINDOW.

Bowden, suburb of Adelaide (q.v.), S. Australia. Pop. 5000.

Bowdich, Thomas Edward (1791-1824), traveller in Africa and scientific writer, b. Bristol. He conducted a mission to Ashanti in 1815, and on his return pub. *A Mission from Cape Coast Castle to Ashanti*, 1819, and the *African Committee* in the same year. He then studied mathematics and natural science in Paris for a time, and in 1822 set out on a second expedition, but d. of fever at Bathurst, Gambia. He wrote sev. works, including *Discoveries of the Portuguese in Angola and Mozambique*, 1824; he also made a trans. of Moillon's *Découverte des sources du Sénégal et de la Gambie*, 1820.

Bowditch, Nathaniel (1773-1838), Amer. mathematician and astronomer, b. Salem, Massachusetts. From early youth he showed a bent for mathematics, but was bred to his father's business as a cooper, and later apprenticed to a ship-chandler. Between 1795 and 1803 he went on 5 long voyages to perfect himself in practical navigation. The trans. of Laplace's *Mécanique céleste*, 1829-38, with annotations, is one of his chief works. To this (fourth ed.) his son's life is prefixed, 1839, elaborated into a separate biography by another son, 1865. B. also wrote *The Practical Navigator*, 1802.

Bowler, Thomas (1754-1825), editor, b. Ashley, Bath. He studied medicine at St Andrews and Edinburgh. In 1818 he pub. the *Family Shakespeare*, in 10 vols., in which 'those words and expressions are omitted which cannot with propriety be read aloud in a family.' He also ed. Gibbon's *History of the Decline and Fall of the Roman Empire*, 'with the careful omissions of all passages of an irreligious or immoral tendency.' His prudery was much ridiculed, and gave rise to the word 'bowdlerism.'

Bowdoin, James (1726-90), Amer. statesman, graduated at Harvard in 1745. During his governorship of Massachusetts (1785-6) he suppressed the insurrection known as Shays's Rebellion. In a letter to Benjamin Franklin he suggested that the phosphorescence of the sea was due to animalcules. It was in recognition of his scientific research that Bowdoin College, Brunswick, Maine, was named after him.

Bowdoin College, for the higher education of men, founded at Brunswick, Maine, in 1794, in honour of James Bowdoin (q.v.). Bowdoin's son gave large grants of land, money, etc., to B. C., which had a faculty of 76 members in 1955 for a student body of 783. It had 21 buildings, including a library of 234,000 vols., and a Union building.

Bowel, one of the divs. of the alimentary

canal below the stomach. It consists of the small intestine, which is divided into the duodenum, jejunum, and ileum, and the large, which is divided into the caecum, ascending colon, transverse colon, descending colon, sigmoid colon, and rectum. See also *INTESTINES*.

Bowell, Sir Mackenzie (1823-1917), Canadian politician, son of a carpenter, b. Rickingham, Suffolk, 27 Dec. His parents emigrated in 1833 to Belleville, Canada; here he became a journalist and newspaper proprietor. In 1867 he entered the Canadian Parliament as member for N. Hastings; after holding this seat for 25 years he passed to the Senate. As a Conservative and leader of the Orangemen he took a prominent part in politics, being successively minister of customs, militia, and commerce, and from Dec. 1894 to April 1896 Premier. His party being defeated on the education question, he led the opposition from 1896 to 1906. In 1895 he was made K.C.M.G.

Bowen, Charles Syngue Christopher, Lord (1835-94), lawyer and judge, b. in Glos. A great classical scholar, he became fellow of Balliol, 1858, and was called to the Bar at Lincoln's Inn, 1861. He appeared in the famous Tichborne case, 1872. He was raised to the Court of Appeal, 1882; became lord of appeal in ordinary, 1893. His last public service was presiding over the commission for inquiring into the Featherstone riots.

Bowen, Edward Ernest (1836-1901), schoolmaster, b. Woolaston, near Chesham. Son of a curate, he was educ. at London and Cambridge, where he became a Fellow of Trinity. In 1859 he became a master at Harrow, and remained there for the rest of his life, becoming head of the modern side in 1869. In 1872 he wrote the Harrow school song, 'Forty Years On.' His *Harrow Songs and Other Verses* appeared in 1886.

Bowen, Elizabeth Dorothea Cole (1899-), novelist, b. Dublin. Taken to England as a child, she was educ. at Downe House in Kent. In 1923 she married Alan C. Cameron, and later they lived at Oxford. Her first book was *Encounters*, 1923, a vol. of short stories; other collections are *Ann Lee's*, 1928, *Joining Charles*, 1929, *The Cal Jumps*, 1934, and *Demon Lover*, 1946. Her first novel, *The Hotel*, 1927, was written at Bordighera; others are *Friends and Relations*, 1931, *To the North*, 1932, *The House in Paris*, 1935, *The Death of the Heart*, 1938, *The Heat of the Day*, 1949, *The Shelbourne Hotel*, 1951, and *A World of Love*, 1955. She also wrote a study of Anthony Trollope, 1946, and a book of essays, *Collected Impressions*, 1950. In 1948 she was made a C.B.E. and in 1949 received an honorary doctorate of Trinity College, Dublin.

Bowen, Sir George Ferguson (1821-99), administrator and colonial governor, b. Ireland, and educ. at Charterhouse and Oxford. Between 1859 and 1887 he was successively governor of Queensland, New Zealand (where he put an end to the Maori war), Victoria, Mauritius, and Hong Kong. He was knighted in 1856.

Bowen, Richard (1761-97), naval officer,

b. Ilfracombe. In 1794 he received his appointment as commander, and in the same year became captain of the *Terpsichore*, 32-gun frigate, which he commanded till his death. After naval operations in the W. Indies he returned to Europe, and in Oct. 1796, off Cartagena, captured the Sp. frigate *Mahonesa*. The *Terpsichore* was greatly damaged, but by Dec. she was off Cadiz, where she encountered the Fr. 36-gun frigate *Vestale*. His eventful career ended during Nelson's unlucky attack on Santa Cruz, July 1797, when B. was shot dead.

Bower, Archibald (1686-1766), Scottish eccles. historian, educ. at Douai and Rome. He joined the Society of Jesus, 1706, and was a member of the court of the Inquisition in Macerata, 1723-6. He ed. *Universal History*, 1735-41, and wrote *History of the Popes*, 1748-66.

Bower, or Bowmaker, Walter (1385-1449), Scottish chronicler, 'continuator of Fordun,' abbot of the monastery of St. Columba, in the is. of Inchcolm, Firth of Forth. When John of Fordun d., he had written his *Scotichronicon* to the death of David I. 1153, in 5 books. B. added 11 books, continuing the hist. to the death of James I. 1437. Walter Goodall pub. an ed. in Edinburgh in 1759.

Bower Bird, or Satin Bird, name given to certain birds of the Australian family Ptilorhynchidae, the best-known species of which are *Ptilorhynchus violaceus*, the satin, and *Chlamydera maculata*, the spotted B. B. The B. B. is also found in New Guinea, e.g. the species *Amblyornis inornata*. The name derives from the fact that it habitually builds bowers or 'runs' as well as nests.

Bowerbank, James Scott (1797-1877), geologist, b. London. Succeeded with a brother to his father's distillery. A distinguished microscopist, he formed a large collection of fossils. He founded with others 'The London Clay Club,' 1836; pub. *History of the Fossil Fruits of London Clay*, 1840. Became F.R.S., 1842; part founder of Palaeontographical Society, 1847. Wrote *A Monograph of the British Spongiadae* (Ray Society, 1864-82). The Brit. Museum bought his fine collection, 1864.

Bowfin, see MUDFISH.

Bowie-knife, Amer. hunting-knife, called after Col. James Bowie (c. 1790-1836), who in a skirmish near Natchez, 1827, killed an opponent with a blacksmith's file; this file he afterwards fashioned into a double-edged blade, about a foot long and more than an inch wide.

Bowles, Samuel (1826-78), Amer. journalist, b. Springfield, Massachusetts, son of Samuel B., who estab. the weekly *Springfield Republican*. B. junior devoted most of his life to the daily *Republican*, and by his ability gave it a national reputation. B. also wrote books of travel. *The Life and Times of Samuel Bowles* (2 vols., 1885) by Merriam is practically a hist. of Amer. politics after the compromise of 1850.

Bowles, William Lisle (1762-1850), poet, b. King's Sutton, Northants. Educ.

Winchester School and Trinity College, Oxford, he became rector of Bremhill, Wilts, and prebendary of Salisbury Cathedral. In 1789 he pub. *Fourteen Sonnets on Picturesque Spots*, which had a considerable influence on the then youthful Lake Poets. His longer poems, *The Spirit of Discovery*, 1804, *The Missionary of the Andes*, 1815, *The Grave of the Last Saxon*, 1822, have not the merit of his sonnets. In 1807 he pub. his ed. of Pope's works, with a memoir and critical notes, which gave rise to the famous 'Pope and Bowles' controversy. See Gilfillan's ed. of his works, with memoir, 1855, and G. Greever, *A Wiltshire Parson and his Friends*, 1926.

Bowling, indoor game played in an alley with wooden balls and 10 wooden pins. Though played in Germany and the Low Countries since the 14th cent., it attained its greatest popularity in the U.S.A., being introduced thither by the Dutch emigrants. Up to 1840 the Dutch pop. of New York played the game on the green, and the bowlers' square N. of the Battery is still called B. Green. The first covered alleys were of hardened clay or slate, but they are now of alternate pine and maple strips of a width of about 1½ ft., set on edge and fastened together and to the bed of the alley. The alley itself is 41½ in. wide and 80 ft. long, while on each side is a 9-in. gutter to catch 'wides,' and at the back a heavily padded wall. It is played with 10 pins or 'skittles' (the tenth having been added to evade the law against the game of 9 pins), which are set up in the form of a triangle. The balls may be any size not exceeding 27 in. in circumference and 16 lb. in weight. There is no limit to the number of players, though 5 is the usual number for championship teams. The object of the game is to knock the pins down, each player rolling 3 balls (a frame). 10 frames making a game, though in first-class matches only 2 balls are bowled. If all 3 balls are used, the number of pins overturned is recorded. Where 2 only are used a seemingly complicated mode of scoring by strikes and spares is adopted. There are thousands of B. clubs in the U.S.A. and Canada, nearly all under the jurisdiction of the Amer. B. Congress. Variations of the game are cocked hat, quintet, four buck, duck pin, head pin, etc., the variation being in the size or disposition of the pins, the size of the balls, the number of pins, or the mode of scoring. For the Eng. form of the game see SKITTLES.

Bowling Green: 1. Co. seat of Warren co., Kentucky, U.S.A., on the Barren R., and on the Louisville and Nashville railroad. It contains many educational institutions, including W. Kentucky State Teachers' College and B. G. College of Commerce. It was incorporated in 1812, and received a charter in 1893. There is considerable trade in agric. produce, and also in horses and cattle. It manufs. evaporated milk, packed meat, beverages, foundry, building material, and concrete products, electric tubes, and clothing; there are also flour and feed mills, saw mills, and oil and rock-asphalt processing

plants. During the Civil war it was an important strategic point. Pop. 18,347.

2. City of Ohio, U.S.A., 19 m. from Toledo in an agric. dist. Products include machine tools, machinery, vehicles, and cut glass. It is the seat of B. G. State Univ. Pop. 12,000.

Bowls, oldest of Brit. outdoor pastimes next to archery, dating back, at least in its rudimentary forms, to the 13th cent. (Contemporary MSS. contain drawings that sometimes represent players bowling at a jack (e.g. a MS. in the Windsor Royal Library, No. 20 E. iv) and sometimes as bowling at no apparent mark at all (e.g. a 14th-cent MS. book of prayers in the House collection at the Bodleian Library, Oxford). The game grew so popular that it threatened to jeopardise the practice of archery, with the result that statutes forbidding it, together with other sports, were passed in the reigns of Edward III, Richard II, and other monarchs. When the bow had fallen into desuetude as a weapon of war, bowling continued to be the subject of repressive legislation on account of its all-too-frequent connection with taverns, which caused them to be much patronised by gamblers and the dissolute generally. The word B. occurs first in the Act of 1511, which confirmed previous enactments against unlawful games. Landowners under a later Act could obtain licences to play on their own private greens, but throughout the Tudor period the game continued to be the subject of legislative interference, and in Elizabeth's reign the scandals of the bowling alleys grew notorious. But the game still waxed in popular favour, and, if Shakespeare is to be credited, women played it in his time (*Richard II*, Act III, Sc. iv). By this time biased B. had been introduced, and doubtless pictures that represent Sir Francis Drake on Plymouth Hoe are accurate in portraying that historic match as being played with such B. In 1618 the game had grown high in royal favour, and James I and his sons Prince Henry and Charles I of England were all enthusiastic bowlers. Evelyn and Pepys both record the fact that notable persons played the game for stakes; and indeed it was only after the revolution of 1688 that it degenerated once more into a pot-house recreation. Its revival is due to its popularity in Scotland, in which country it became popular in the 19th cent. although known at a much earlier date. The celebrated Southampton Bowling Club was founded as long ago as 1299. Many others, like the greens in Candleriggs and Gallowgate, date back to the early part of the 18th cent. It was not, however, until meetings were held in Glasgow to promote a national association that the game really became organised and a national code of rules adopted, and the first regular bowling club of which there exists any trace is the Willowbank Club, founded in Glasgow at the commencement of last cent. Another notable step in Scotland was the use of seaside turf for seed-grown or meadow turf. Further, Scottish emigrants introduced the game wherever they

went, notably in the colonies. B. is played on the continent of Europe, though hardly on scientific principles. There is also some warrant for supposing that the Dutch played it in the 17th cent. In the last quarter of the 19th cent., when the Scottish influence seemed to be waning, Australia led the way in organisation by the estab. in 1880 of the Bowling Association of Victoria and New S. Wales. In 1892 the Scottish Bowling Association was founded, and then between 1895 and 1904 the Midland Cos., the London and S. Cos., the Imperial, the Eng., and the Irish and Welsh bodies were formed, and though this multiplicity of associations tended at first to prejudice homogeneity in organisation, yet their very formation indicates the fact of the tremendous popularity of the game. It has now become quite a local feature of tns. In Scotland the public greens are self-supporting from a charge including the use of B. for a few pence an hour per player. In London the upkeep of the greens falls on the rates, and players have to provide their own B. There are 2 kinds of bowling-greens, the level and the crown. The former is the usual kind, the latter being confined almost entirely to the N. and Midland cos. The crown has a fall which may be as much as 18 in. all round from the middle to the sides and affords but limited scope for skill and scientific play. The level must be of a minimum size of 33 yds by 21 yds, but an ideal green is 42 yds square. The orthodox direction is up and down. The whole ground is excavated to a depth of from 1 to 2 ft, drained, and the turf laid over layers of gravel, clinders, mould, and silver sand. Round the entire green is a ditch 4 to 6 in. deep and having a holding surface not injurious to B.; beyond the ditch is a bank of turf. The green is divided into spaces not less than 19 to 21 ft in width styled 'rinks,' which word also designates each set of 4 players, and these rinks are numbered on a plate fixed in the bank at each end. Every player usually uses 4 lignum vitae B. in single-handed and pairs games, 3 in triples games, 2 in rink games. The bias is obtained by making one side more convex than the other, the bulge showing the side of the bias. No bowl must have less than No. 3 bias, i.e. it should draw about 6 ft to a 30-yd jack. The diameter of the bowl should not be less than $4\frac{1}{2}$ in. or more than $5\frac{1}{2}$ in., while its weight should not exceed $3\frac{1}{2}$ lb. The jack is a white earthenware ball $2\frac{1}{2}$ in. in diameter. Theoretically the game is simple, the aim of the player being to deliver his bowl so as to cause it to rest nearer to the jack than his opponent's, or to protect a well-placed bowl or to dislodge a bowl in a better position than his own. In practice, however, there is great opportunity for skill. The teams comprise 5 rinks of players in International matches; 6 rinks of 4 players in Inter-County matches; and 3, 4, 5, or 6 rinks of players in club matches. The leader of each rink is chosen for his skill in playing to the jack. The ideal position for the leader is a bowl

at rest in front of or behind the jack, but not obstructing the path of subsequent B. As a rule a 'singles' match consists of 21 points; pairs and rink matches of 21 ends; and triples matches of 18 ends. See H. P. Webber and J. W. Fisher, *Bowls*, 1948; R. T. Harrison, *How to become a Champion at Bowls*, 1952; J. P. Munro, *Bowls Encyclopaedia*, 1952; J. Jones, *Bowls from every Angle*, 1954; A. T. Evans, *Competitive Bowls*, 1956.

Bowmaker, Walter, see BOWER, WALTER.

Bowman, Isaiah (1878-1950), Amer. geographer, educ. at the State normal college, Ypsilanti, Michigan, and at Harvard and Yale. Was assistant in physiography at Harvard, 1904-5, and, later, instructor in geography at Yale and prof. of geography at Yale, 1909-15. Director of the Amer. Geographical Society. Went with the geographical and geological Yale Peruvian expedition in 1911, and was leader of the expedition to the central Andes under the auspices of the Amer. Geographical Society in 1913. He was a member of various territorial commissions of the Peace Conference at Paris in 1919. Among his numerous pub. works are *Forest Physiography*, 1911, *South America*, 1915, *The Andes of Southern Peru*, 1916, *The New World—Problems in Political Geography*, 1921, *Desert Trails of Atacama*, 1923, and *Design for Scholarship*, 1936.

Bowman, Sir William (1816-92), ophthalmologist, b. Nantwich. He was prof. of physiology at King's College, London, 1845-55; Fellow of the Royal Society, 1841; and of the Royal College of Surgeons, 1844; the first president of the Ophthalmological Society, 1880-3. He won a great reputation by his *Lectures on Operations on the Eye*, 1849. He was also surgeon to the Royal London Ophthalmic Hospital and to King's College Hospital. He was created baronet in 1884. He pub., in conjunction with Todd, *The Anatomy and Physiology of Man*, 1843-56, and his *Collected Papers* were ed. by Sanderson and Hille, with a life by H. Power, 1892.

Bowness, tn on the E. shore of Lake Windermere, Westmorland, England, 8 m. NW. of Kendal, part of Windermere (q.v.) urban dist.

Bowood, seat of the Marquess of Lansdowne. It is 2 m. from Calne, Wilts, and is noted for its gardens.

Bowra, Sir Cecil Maurice (1898-), scholar. He was educ. at Cheltenham and New College, Oxford. During the First World War he served in France with the artillery. After it he became a Fellow of Wadham College, and in 1938 was elected Warden. In 1946 he was appointed Prof. of Poetry and in 1951 became Vice-Chancellor of Oxford and was knighted. An accomplished classical scholar, he has also a wide knowledge of many literatures. Among his works are *Tradition and Design in the Iliad*, 1935, *Greek Lyric Poetry*, 1936, *Early Greek Elegists*, 1938, *The Heritage of Symbolism*, 1943, *A Book of Russian Verse*, 1943, *Sophoclean Tragedy*, 1943, *From Vergil to Milton*, 1945, *The Romantic Imagination*,

1950, *Heroic Poetry*, 1952, *Problems in Greek Poetry*, 1953, and *Inspiration and Poetry*, 1955.

Bowring, Sir John (1792-1872), statesman, traveller, and linguist, b. Exeter. He began his working life in a merchant's office, but devoted much of his time to languages, for which he had a remarkable talent. He became the first editor of the *Westminster Review*, 1824, and trans. much foreign poetry, both ant. and modern, into English. He was a member of Parliament 1835-7 and 1841-9, and an active free-trader, and became governor of Hong Kong in 1854. In 1856, the *Arrow*, bearing the Brit. flag, was fired upon, and B., to avenge the insult, bombarded Canton without consulting the home gov. His action was severely criticised, and a vote of censure was moved against him in Parliament.

Bowsprit, boom or spar projecting from the bows of a sailing ship and also of a steamer, when its stem is of the cut-water type. It supports the jib-boom. An elongation of the spar is used to fix the foremost stay-ropes, which carry the sails.

Bowyer, William (1699-1777), Eng. printer; educ. at St John's College, Cambridge. In 1722 he became his father's partner in business, and his firm was chosen printers of Votes of House of Commons in 1729, and Journal of House of Lords in 1767. His most important work was *Conjectural Emendations of the Greek Testament*, 1763, and he also wrote 2 essays upon the *Origin of Printing*, which were pub. in 1774. He trans. Rousseau's first *Discourse* in 1751.

Box (*Buxus*), genus of 30 evergreen shrubs of the family Buxaceae. The common B. (*B. sempervirens*) is widely distributed, and found in hilly, chalky dists. The wood is of commercial value, used in wood-engraving, and in the manuf. of musical and mathematical instruments. See TIMBER.

Box, genus of the family Sparidae (sea-breams), is characterized by the species possessing trenchant teeth. They are

carnivorous, often brightly coloured fishes, inhabiting tropical and temperate seas, and are usually edible. *B. salpa* has a bluish body with yellow stripes.

Box Day, in Scots law, was formerly one of the days during vacation appointed by the Court of Session for lodgment of papers required to be deposited in court. It was so named from the boxes in which the documents were placed. The procedure was abolished in 1933.

Box Elder, see ACER.

Box-hauling (navigation), a manoeuvre practised when a sailing-ship close hauled refuses to tack and there is not room to wear. The head-sails are thrown aback to give her stern-way, the helm then put alee, and she falls off, after which she is rounded to, and her proper course resumed.

Box Hill, beauty spot in Surrey, England, being a spur of the N. Downs, 590 ft high, about a mile from Dorking, and so named from the box-trees on it. It was given to the nation by Leopold Salomons and is now held by the National Trust.

Box-thorn (*Lycium*), genus of Solanaceae found in Europe and America, consisting of thorny shrubs and trees. *L. europaeum* grows in Europe. *L. chinense*, Chinese tea-tree, and *L. halimifolium* are hardy sea-side shrubs. *L. pallidum*, SW. U.S.A., is the best in bloom.

Boxall, Sir William (1800-79), painter, b. Oxford. He studied at the Royal Academy and in Italy. He exhibited his 'Jupiter and Latona' at the Academy in 1823. He specialised in portraits and also illustrated the Waverley Novels, was Director of the National Gallery, 1865-74, and knighted 1867.

Boxer, or **German Bulldog**, popular breed in Britain and the U.S.A. since being crossed with the Brit. bull-dog; an attractive companion and good guard. Colours are brindle, red, or fawn. It is muscular and compact, with broad head and short nose.

Boxers, **The**, name given by Europeans to the members of a Chinese secret society (I-ho T'uan), partly religious, partly political, which was organised in 1896 by the prefect of Shantung. Its members were opposed to foreign influence, and their hostility was aggravated by demands of the W. powers for land and privileges in China. This, together with drought and famine and troubles at court, urged them on to terrible excesses. Murder of a missionary met with but slight punishment; hence they organised an anti-missionary rising, 1900, and determined to destroy all foreigners in their country. They marched through China pillaging, destroying railways, and murdering missionaries and Chinese Christians. The dowager empress gave support to the movement, the imperial troops making no attempt to crush the rising. At Peking the B. murdered the 1st secretary of the Jap. legation and the Ger. minister, Baron von Ketteler, and then besieged the legations. This intolerable behaviour gave rise to an intervention of all the European powers. Americans and Japanese also joined the allies for the purpose of

suppressing the B. Hard fighting took place at Tientsin and elsewhere, but finally the relief party succeeded in freeing the besieged, Aug. 1900. The court fled, and the allies were left in possession of Peking until a peace was signed in Sept. 1901.

Boxing is the method of fighting with the fists either with or without gloves, though the latter method is not in vogue to-day, but at one time it was very common, and perhaps should really come under the heading of pugilism. In ancient times B. was practised at the Gk and Rom. gladiatorial spectacles. Among both the Greeks and Romans, however, the naked fist was not used, but a kind of glove known as the cestus (q.v.), made of leather and sometimes loaded with iron or lead. It was a terrible weapon, and these fights frequently proved fatal. Later a mixture of B. and wrestling, called Pankration, became popular. The rules were revised after sev. contestants had been killed. It is in England, however, that the 'noble art,' as it is sometimes called, attained a high state of proficiency. It first came into public notice in this country in the early part of the 18th cent. James Figg opened the first B. booth in London in 1719, and it continued to increase in popularity all through the reigns of the 4 Georges. Jack Broughton was the first man to think of using gloves for B. They were known as muffers, and the same boxer also drew up the first set of rules. After Broughton's death the public interest in the ring flagged a little, but a boxer named Tom Johnston stepped into the breach. From 1750 up to about 1820 the interest in the ring was enormous. All classes of society, high and low, took a part. Byron has related in his diary how he had lessons in B. from the famous 'Gentleman' Jackson, who made a fortune out of pugilism. Mendoza the Jew, Jem Belcher, Humphreys, Tom Cribb, Spring, and Dutch Sam were all famous fighters of their day. Gully was a pugilist who afterwards entered Parliament, and more extraordinary still was the case of Bendigo, who became a revivalist preacher, and of whom the story is told that he once used threats of a pugilistic nature to induce his congregation to give liberally to the collection. Since about 1820 the ring has been shorn of much of its glory, and the days of the 'Corinthians,' the rich patrons of the ring, are now over. From 1850 to 1860 public interest was re-aroused by the B. of such men as Sayers and Heenan, Broome and Mullins, but other sports have since grown in the public favour. Public interest has always tended to centre on the heavyweights, and among the more notable boxers who have held the world championship of this div. since the latter part of the 19th cent. are John L. Sullivan, James J. Corbett (q.v.), Bob Fitzsimmons (q.v.), James J. Jeffries, Tommy Burns, Jack Johnson, Jess Willard, Jack Dempsey, 'Gene' Tunney, Joe Louis, and 'Rocky' Marciano.

Professional boxing in Britain is under the sole control and jurisdiction of the Brit. Boxing Board of Control (B.B.B. of C.), formed in 1929, and all contests are

conducted under the rules laid down by this body. The board consists of 21 stewards, who are unpaid and have no financial interest in the sport. Their theoretical function resembles in a general way that of the stewards of the Jockey Club (see HORSE-RACING). They are divided into 2 groups which deal respectively with administration (e.g. policy making) and disciplinary action (stewards of appeal). Although the B.B.B. of C. has no legal standing, it is regarded by the gov. as the responsible body. Before a foreign boxer can take part in a contest in Britain application must be made to and permission obtained from the Minister of Labour by the board, which is held responsible for the assessment and collection of his income tax. In the U.S.A. control is in the hands of state-appointed B. commissions and associations whose rules are the law of the state. Everyone having a financial interest in professional B.—boxers, managers, trainers, seconds, promoters, referees, etc.—is required to hold a B.B.B. of C. licence, for which an ann. fee is payable to the board, which also receives a percentage of the takings from all promotions. In the case of referees the applicant must be interviewed and approved and must then pass oral and practical examinations before a licence is granted. For administrative purposes the B.B.B. of C. divides Britain into 8 areas—Scotland, Wales, N. Ireland, and 5 areas in England. Each area has its own council consisting of 19 members, elected to represent the interests of all parties. Each area also has its own medical officer.

The recognised weight categories of professional B. throughout the world are:

Flyweight	8 st. and under
Bantamweight	8 st. 6 lb. and under
Featherweight	9 st. and under
Lightweight	9 st. 9 lb. and under
Welterweight	10 st. 7 lb. and under
Middleweight	11 st. 6 lb. and under
Light-heavyweight	12 st. 7 lb. and under
Heavyweight	Any weight

Each contest must be for a specified number of rounds. No contest shall exceed 15 rounds nor be of less than 12 min. duration, except in the case of novice competitions where contests may be of 8 min. duration. There is now no question of contests being fought to a finish as in the days of the prize ring. Rounds must be of 3 min. duration with 1 min. intervals. In novice contests 2-min. rounds are permitted. The terms 'fight' and 'knock out' are never used officially and have been replaced by 'contests' and 'count out.' All contests are to be decided in a 3-roped ring (with the ropes joined in the centre of each side) not less than 14 ft or more than 20 ft square, and not less than 18 in. margin of ring floor outside the ropes. The floor is to be covered with canvas over a layer of felt. Corner posts are to be padded. Boxers must shake hands before the commencement of the contest and before the beginning of the last round. Contestants must be stripped to the waist, use

dark coloured shorts, and box in regulation boots without heels or spikes. The gloves are to weigh 6 oz. each and contestants to weigh in on the day of the contest. Breaking by twisting, and removal of the padding by fingering or thumbing from the potential part of the glove is prohibited. If bandages are used, the length of bandage in each hand must not exceed the following: flyweight to middleweight, 9 ft; light-heavyweight and heavyweight, 12 ft; width must not exceed 1 in., and material must be the best adhesive tape; 9 ft. of 2-in. soft bandage (W.C.W., B.P.C.), as supplied by the board for championships, may also be used, except in the light-heavyweight and heavyweight divs. when 12 ft of tape and 12 ft of bandage are allowed. In all contests a referee, who must officiate inside the ring, and a timekeeper shall be appointed by the board. In contests of 6 rounds or under, 2 seconds for each boxer shall be allowed in the ring; in other contests 4 seconds are allowed for each boxer. The seconds shall leave the ring when ordered to do so by the timekeeper: the referee shall see that this is carried out. The seconds shall give no advice or assistance to the contestants during the progress of any round. Contestants must be medically examined immediately after the weigh-in on the date of the contests. The referee shall award a maximum number of 5 marks at the end of each round to the better man and a proportionate number to the other contestant or, when equal, the maximum number to each. Marks are awarded for 'attack'—direct clean hits with the knuckle part of either glove on any part of the front or sides of the head or body above the belt (the belt is an imaginary line drawn across the body from the top of the hip bones), and for 'defence'—guarding, slipping, ducking, or getting away. Where contestants are otherwise equal, the majority of the marks shall be given to the one who does most of the leading off or who displays the better style. If a contestant is down, he must get up unassisted within 10 sec: his opponent meanwhile must retire to the farthest neutral corner and shall not resume B. until ordered to do so by the referee. A man is considered down even when he is on one or both feet, if at the same time any other part of his body is touching the ground, or when he is in the act of rising. A contestant failing to continue the contest at the expiration of 10 sec. shall not be awarded any marks for that round, and the contest shall then terminate. If at the conclusion of any round during the contest, one of the contestants should attain such a lead on points as to render it an impossibility for his opponent to win, he must then be declared the winner. The referee shall decide each contest in favour of the contestant who obtains the greater number of marks. The referee shall have the power to disqualify a contestant for any of the following acts: hitting below the belt, using the pivot blow, hitting on the back of the head or neck or on the kidneys, hitting with the open glove, or the inside

or butt of the hand, the wrist, or elbow, for holding, butting, shouldering, wrestling or roughing, for ducking below the waistline, intentionally falling without receiving a blow or for any other act or conduct which he may deem foul. A contestant disqualified for any cause whatever shall not be entitled to any prize or remuneration, except in accordance with regulation 20, paragraph 16, of the B.B.B. of C. The referee, who has the power to stop the contest if in his opinion a contestant is outclassed or accidentally disabled, shall decide any question not provided for in the rules and the interpretation of any of these rules on matters arising during the time the contestants are in the ring. The referee's decision is final. See G. E. Odd, *Ring Battles of the Century*, 1949; T. Leigh-Lyde, *The Squared Circle: from Corbett to Ezzard Charles*, 1951; F. Mills, *Learn to box with me*, 1955.

Amateur boxing. In Great Britain amateur B. comes under the control of sev. associations. The Amateur Boxing Association (A.B.A.) is the governing body in England, the Scottish A.B.A. in Scotland, and the Welsh A.B.A. in Wales. Amateur B. in Eire and N. Ireland comes under the jurisdiction of the Irish A.B.A. Wales was affiliated to the A.B.A. until Dec. 1955, and Scotland also came within the A.B.A. until about 1946. To-day each of these bodies is separately affiliated to the International Association. However, a joint consultative committee still enables the 3 associations to meet for the discussion of matters of mutual interest.

The A.B.A., formed in 1880, is the oldest such organisation in the world, and the original rules of most other associations and federations, including those of the world controlling body, Association Internationale de Boxe Amateur (A.I.B.A.), have been based on those of the A.B.A. Evolution necessitates changes, and these original rules, whilst retaining their basic qualities, have been amended from time to time, to allow of such innovations as the referee-in-the-ring, the audible count, etc. Tradition dies hard, however, and the A.B.A., parent of amateur B., has often been amongst the last to adopt such changes. With H.Q. in London, the A.B.A. governs amateur B. in all affiliated clubs in England, including all units of the services, pre-services organisations, and all clubs within the National Association of Boys' Clubs (see **BOYS' CLUBS**). There are a number of B. clubs throughout the country which have chosen to affiliate to the A.B.A., but their numbers are relatively few. It should be noted that a club does not become affiliated automatically on application. Certain minimum standards as to training facilities, equipment, and instructors are necessary, and, of course, the rules of a club must be approved by the parent body. Fundamentally the regulations governing amateur B. and professional B. in Great Britain do not vary greatly. Important differences, however, are the following. Amateur B. contests are controlled by a referee (who does not score) and 3 judges seated at different sides of the ring (who

give the decision at the end of a bout, if the referee has not stopped it, because of injury, for example, and given his sole decision); the wearing of a singlet, as in all other amateur sports; a 'drawn' decision may not be given. The raising of the winner's hand, whilst possible under A.I.B.A. rules, is not generally followed in England, except occasionally in international matches. Apart from certain junior classes, the weight of gloves is 8 oz.; the ring may vary from 12 ft to 20 ft square. Whilst amateur and professional B. in Great Britain are administered by 2 completely separate bodies, representatives from each meet from time to time to discuss mutual interests, and a close and friendly liaison is maintained.

Until 1950 the weights of the amateur and professional organisations were the same, but to lessen the disparity in weight in the more popular categories, the A.I.B.A. increased the weight classes from 8 to 10. These metric weights, now adopted throughout the amateur world, and their airdupois equivalents used in Great Britain, are:

Flyweight	51 kg.
(8 st.: 112 lb.)	
Bantamweight	54 kg.
(8 st. 7 lb.: 119 lb.)	
Featherweight	57 kg.
(9 st.: 126 lb.)	
Lightweight	60 kg.
(9 st. 7 lb.: 133 lb.)	
Light Welterweight	63 5 kg.
(10 st.: 140 lb.)	
Welterweight	67 kg.
(10 st. 8 lb.: 148 lb.)	
Light Middleweight	71 kg.
(11 st. 2 lb.: 156 lb.)	
Middleweight	75 kg.
(11 st. 11 lb.: 165 lb.)	
Light Heavyweight	81 kg.
(12 st. 10 lb.: 178 lb.)	
Heavyweight	over 81 kg.
(Any weight)	

Affiliated clubs wishing to hold a tournament must obtain permission from the A.B.A. The A.B.A. appoints the main officials such as referees, judges, clerks of scales, and often timekeepers. The duration of rounds varies with the type of competition or contest, as does the duration of the bout on occasion. Schoolboy B., up to the age of 15, is left in the hands of the Schools A.B.A., which is affiliated to the A.B.A. Boxers over 15 are divided into 2 broad categories: Juniors, 15 to 17 years of age, and Seniors, over 17. Juniors for competition purposes have 2 classes: A (15-16 years), and B (16-17 years), and in addition are sub-divided as 'Junior Novices' and 'Juniors.' Senior boxers are in 3 classes: 'Novice,' 'Intermediate,' and 'Open.'

Whilst the A.B.A. controls amateur B. in England there are throughout the country, for administrative purposes, various subsidiary associations, e.g. the London A.B.A. prov., co., and service associations, all of which have representation on the A.B.A. council and many of its committees. Although all come under the 'umbrella' of the basic A.B.A.

regulations, they have autonomy in local affairs and can alter their rules to meet local conditions, subject to the A.B.A.'s permission. In recent years many of these subsidiary associations have instituted medical schemes, the forerunner being that of the London A.B.A. These schemes vary in minor respects throughout the country, but all have as their object the protection of the competitor from himself.

Though normally participating in a number of international matches each season, the A.B.A.'s main event of the year is the final stage of the A.B.A. championships, usually held on the last Friday in April at the Empire Pool and Sports Arena, Wembley. Prior to this eliminating championships are held, not only in England, but in Scotland and Wales, both of whom take part in the A.B.A. championships. All championship bouts are decided over three 3-min. rounds.

It is essential that all participants in amateur B., whether they be competitors or officials, comply with the A.B.A. definition of an amateur which is as follows: 'An amateur is one who has never competed for a money prize, staked bet, or declared wager, who has not competed with or against a professional (except with the express sanction of the A.B.A.), and who has never taught, pursued, or assisted in the practice of athletic exercise as a means of obtaining a livelihood or pecuniary gain, or accepted money directly or indirectly for acting in an official capacity therein or contracted to participate professionally therein.'

The A.B.A. have as patron H.R.H. the Duke of Edinburgh; his grace, the Duke of Hamilton (a former Scottish amateur champion), is vice-patron. In 1956 the 11th Hon. the Earl of Derby became the association's president, the first time in the hist. of the A.B.A. that the president has not come from within its own ranks.

Amongst the main functions of the International Association are the technical arrangements for the Olympic Games (q.v.) and the holding of the European championships. Unlike the former, which are held every 4 years, the latter are held every odd year (1957, 1959, *et seq.*), and are without doubt, the toughest proposition for competitors, outside the Olympic Games. Styles, of course, vary enormously, but style, important as it is, is a secondary factor in B. The first essential is to attack, and naturally to defend. Therein lies the strength of most of the continental experts of amateur B., allied to the supreme fitness, without which success in this arduous sport must prove an elusive will-o'-the-wisp. Apart from the Olympic Games, European championships, and certain other regional games, most nations find experience and competition through the medium of international matches. In this respect the A.B.A. has provided its boxers, not to mention the public (physically present and televiewing) with a universal cross-section of amateur B. teams ranging from the U.S.A. to the U.S.S.R.

See A. Newton, *Guide for Beginners: Learn how to Box*, 1945; R. E. Clarke, *Amateur Boxing*, 1949; J. T. Hankinson and R. G. B. Faulkner, *Boxing for Schools*, 1952.

Boxing Day, one of the Eng. bank holidays (26 Dec.). On B. D. the ann. presents or Christmas boxes were once given to employees, but it is now usually done on the last working day before the holiday. See BANK HOLIDAYS.

Boxmoor, see HEMEL HEMPSTEAD.

Boxtel, small tn in the prov. of N. Brabant, Netherlands, 8 m. S. of 's Hertogenbosch. At B. the French defeated the English and Dutch allies, 1794. Here Wellington, then Col. Wellesley, witnessed his first battle and distinguished himself in covering the retreat. B. is the centre of a textile industry.

Boy-bishop. In medieval times, on the feast of St Nicholas (held up as a model for imitation by boys), 6 Dec., a choir-boy in each cathedral was elected by his fellows to act as bishop till Innocents' Day, 28 Dec., and during this period a number of burlesque ceremonies took place, with the full approval of eccles. and royal authorities. These buffooneries ended in England at the Reformation, but the Eton 'Montem' (which used to be held in winter but was stopped in 1844) is said to have descended from them.

Boy Scouts, organisation for boys, founded in 1908 by Lt.-Gen. Lord Baden-Powell (q.v.), worldwide movement which, through its handbook *Scouting for Boys*, aims at training boys to be manly, self-reliant, and self-respecting. They learn to be quick and ready in action, and to co-operate one with another. The pledge taken is: 'I promise on my honour to do my duty to God and the Queen; to help other people at all times, and to obey the Scout law.' It is officially disclaimed that there is any military aim or meaning in scouting for boys. The purpose rather is to nurture good citizens and inculcate principles of international good-fellowship. The boys practise signalling, tracking, first aid, cooking, stalking, camping, and various other useful activities. The unit for work is the 'patrol,' a party of some 6 or 8 boys under a boy leader. Any number of patrols may form a troop, under a scout-master and his assistants. Boys whose interest is in nautical affairs are enabled to join the Sea Scouts, and a corresponding body of Air Scouts was formed in 1941. Boys are divided by age into 4 training sections: Wolf Cubs, for those of 8-11

THE BADGE OF THE
BOY SCOUTS IN
GREAT BRITAIN

The fleur-de-lis is incorporated in varying devices in the badges of Boy Scouts in other countries.

years; Scouts, from 11 to 15; Senior Scouts from 15 to 18; and Rovers from 17 to 24. The organisation of B. S. is based on decentralisation of authority and responsibility. Funds are raised locally. The standard uniform of the B. S. is chiefly of khaki colour, with various colours for the different troops and patrols (neckerchief and shoulder knots). Considerable variations in uniform are permitted, however, in the following of traditional national dress.

In 1911 there was a royal rally of B. S. in Windsor Park, and the following year a royal charter of incorporation was granted. During the First World War B. S., and especially Sea Scouts, found opportunities for service, and in 1920 peace was celebrated by an international jamboree, held at Olympia, London. The boys of 27 countries were represented, testifying to the growth of the movement. In Aug. 1929 the movement celebrated the 21st anniversary of the pub. of *Scouting for Boys*, and 50,000 B. S. met together at Arrow Park, Birkenhead, representing 42 nationalities differing in language, creed, and colour. There have been 9 world Scout jamborees; the eighth was held at Niagara-on-the-Lake, Canada, in 1955, the first time that a jamboree had been held outside Europe. A thousand B. S. went by air from Great Britain. The ninth world jamboree, the Jubilee Jamboree, was held at Sutton Coldfield, Warwick, England, 1-12 Aug. 1957. This was the greatest representative international gathering ever held, and some 35,000 scouts from 85 countries attended. The jamboree celebrated the golden jubilee of the Boy Scout movement and the centenary of the birth of its founder, Lord Baden-Powell of Gilwell.

During the Second World War the B. S., including the Sea Scouts and Air Scouts, distinguished themselves by useful service in home defence and in a number of other ways. Lord Rowallan (q.v.) became Chief Scout in Feb. 1945. The total active membership in the U.K. is over 532,380 (1956), and in the rest of the Brit. Commonwealth about 1,041,000. The movement was introduced into the U.S.A. in 1910, and has grown rapidly, membership now numbering nearly 4,000,000. The aggregate world membership is about 7,000,000 in over 100 countries.

See Lord Baden-Powell, *Scouting for Boys*, 1908, *Wolf Cubs' Handbook*, 1916, *Aids to Scoutmastership*, 1920, and *Rovering to Success*, 1922; E. E. Reynolds, *Baden-Powell*, 1942, and *The Scout Movement*, 1950.

Boyacá: 1. Dept in central and E. Colombia; cap. Tunja. Rich mineral resources are to be found, and dense forests on the mt slopes yield fine timber. It was the centre of liberating forces in the struggle for independence. Area 24,934 sq. m.; pop. 791,300.

2. Vil. of above dept, where Bolívar and Santander defeated the Spaniards in a decisive victory in 1819. Pop. 370.

Boyers, higher nobility in Russia till Peter the Great's time; they took part in the Prince's (later Tsar's) Council

('Boyers' Duma') and headed the military and civil administration.

Boyce, Hector, see BOECE, HECTOR.

Boyce, William (c. 1710-79), Eng. organist and composer, educ. at St Paul's School in London, being a chorister in the cathedral, and later an apprentice to Dr Maurice Greene. In 1734 he became organist at Oxford Chapel (St Peter's), Vere Street, and in 1736 at St Michael's, Cornhill, becoming in the same year composer to the Chapel Royal. In 1737 he was appointed conductor of the Three Choirs Festival, and in 1749 became organist at All Hallows, Thames Street; succeeded Greene as master of the king's band in 1755, and in 1758 became organist to the Chapel Royal. His works include much music for stage entertainments, a large number of services and anthems, secular choral works, 8 symphonies, and other instrumental music; but he is best known for his ed. of *Cathedral Music*, 1760-78.

Boycott, Charles Cunningham (1832-1897), Eng. land agent, educ. at Blackheath and Woolwich. In 1850 he entered the army; retired some years later as captain; 1873, agent for Lord Erne's estates in co. Mayo, coming into conflict, 1879, with the Land League agitators. They, under Parnell (q.v.), began to persecute B., 1880; men refused to work for him, and he had to be placed under police protection. Hence the modern phrase 'to boycott a person' is derived. B. left Ireland for London and the U.S.A., but, returning in the autumn of 1881, was again mobbed and ill-treated. After this conditions gradually improved; 1886, he became agent of Adair's estates in Suffolk; 1888, he gave evidence before the commission appointed to examine charges made by *The Times* against the Irish leaders. See Barry O'Brien's *Parnell*, i.; *The Times*, 22-4 June 1897; *Correspondence of Lord Erne and Loughmask Tenantry*, 1880. See **BOYCOTTING**.

Boycotting, form of coercion consisting in a conspiracy to prevent all dealings, social, commercial, or otherwise, with the person aimed at. First used against Capt. C. C. Boycott (q.v.) in 1880. This form of persecution was stringently dealt with under the Crimes Act of 1887, but is not yet extinct in Ireland. B. became more and more a form of international warfare. In 1912 the Turks declared a national boycott against everything Italian. In 1910 all Gk goods were rigorously boycotted. The *Shwadeshi* (or *Swadeshi*) movement in Bengal, India, was the boycott of Brit.-made wares as a protest against the partition of that prov. Amer. trade unions adopted this method of treating employers with whom they quarrelled. Boycotts in the form of denial of supplies of goods have also been used in Britain, America, and elsewhere as a means of enforcing conditions of trading, e.g. resale price maintenance (q.v.).

Boyd, Andrew Kennedy Hutchinson (1825-99), minister and author, widely known as A.K.H.B., b. Auchinleck, Ayrshire; educ. at King's College, London,

and the Middle Temple; returning to Scotland, he entered Glasgow Univ. and became a minister of the kirk, taking charge successively at Newton-on-Ayr, 1851-4; Kirkpatrick Irongray, Dumfries, 1854-9; St Bernard's, Edinburgh, 1859-1865; and St Andrew's, 1865-99. In 1890 he was elected moderator of the General Assembly. As an author he won fame by his *Recreations of a Country Parson*, first contributed to *Fraser's Magazine*, an attractive series of articles followed by his *Graver Thoughts and Critical Essays of a Country Parson* (1862-1875).

Boyd, Mark Alexander (1553-1601), Brit. scholar. After a wild and unruly youth he left Glasgow College for the Continent, 1581, and he studied law at Paris, Orleans, and Bourges. In 1587 he served with Catholics in the League war for Henry III, but resumed his studies at Toulouse, 1588. In 1592 he pub. at Antwerp Lat. poems dedicated to James VI, and in 1595 he returned to Scotland, and was for a time travelling tutor to the Earl of Cassilis. His *Epistolae Heroïdes et Hymni* are to be found in Johnston's *Deliciae Poetarum Scotorum*, 1637. Among his prose and verse MSS. in the Scottish National Library are *In Institutiones Imperatoris Commenta* and *L'Estat du royaume d'Ecosse à présent*. See D. Dalrymple, *Sketch of the Life of Boyd*, 1787.

Boyd, Martin, see AUSTRALIAN LITERATURE.

Boyd, Robert (d. 1590), 4th Earl Boyd, Scottish statesman. According to some accounts he was privy to the murder of Darnley; in 1567 he was a member of the packed jury acquitting Bothwell of the deed. He fought for Mary Queen of Scots many times, and was employed by her on various occasions, one being to obtain her divorce from Bothwell. He was suspected of complicity in the murder of Moray, 1570; he then joined the regent's party, becoming a privy councillor and Morton's firm adherent after 1573 (appointed extraordinary lord of session). B. was a party to the 'raid of Ruthven,' and was banished for this, 1583; in 1586 he acted in negotiations for alliance between England and Scotland, and was restored to the bench.

Boyd, Zachary (1585-1653), Scottish minister, educ. at the univs. of Glasgow and St Andrews, afterwards student and then teacher, under his cousin Robert B., at the Protestant College of Saumur, France. When that in was treacherously occupied by Louis XIII in 1621, and the Huguenots were persecuted, B. returned to Scotland, and became minister of the Barony par., Glasgow, which then held its services in the crypt beneath the cathedral. In 1634-5 and 1645 he was rector of the univ. He was a noted preacher and a staunch Covenanter. On 13 Oct. 1650, a month after the battle of Dunbar, he had the courage to 'deal faithfully,' as the phrase went, with Cromwell, who was present, in a sermon at Glasgow Cathedral, but though political opponents, the 2 men respected each other in private life. B.

wrote many books, the best known being *The Last Battell of the Soul in Death*, 1629, and some books of verse, *Psalms of David in Meeter* and *Zion's Flowers*, the latter being metrical versions of Scripture, often known as 'Boyd's Bible.' His writings were marked by the quaint 'concoits' common in those times, but have force. His *Four Letters of Comfort* were reprinted in 1878.

Boyd Orr, John, 1st Baron (Orr, John Boyd) (1880-), physiologist and nutritional expert, b. Kilmaurs, Ayrshire; he was educ. at Glasgow Univ., where he took his M.A., M.D., and D.Sc. degrees. He entered the medical profession but gave up his practice to study animal nutrition at the Rowlett Institute of Animal Nutrition, Aberdeen, of which he was director until his retirement in 1945. During the First World War he served with the Royal Army Medical Corps. His work on *Minerals in Pasture and their Relation to Animal Nutrition* appeared in 1928, and four years later he became a member of the Reorganisation Committee for the Fat Stock Industry. He also served on other gov. organisations concerned with animal nutrition and milk supply. His researches, embodied in *The National Food Supply*, 1934, and *Food, Health, and Income*, 1936, were the basis of the rationing system in the Second World War. He was prof. of agriculture at Aberdeen Univ. from 1942 to 1945. In the latter year he was elected M.P. for the Scottish Univs., but resigned in 1946 on account of his work with the United Nations Food and Agric. Organisation, of which he was director-general. It was a period of acute world food shortage, and his proposals were successful in averting a famine situation. On his retirement from the Food and Agric. Organisation he became chancellor of Glasgow Univ. (1947). He was knighted in 1935 and created a baron in 1949. He was awarded the Nobel Peace prize for 1949.

Boydell, John (1718-1804), engraver and print publisher, b. Dorrington, Shropshire, and educ. for the Church; but early left his profession for art, about 1741 apprenticing himself to a London engraver. About 1751 he began the pub. of the works of other engravers, and in this direction was most successful, producing the work of Woollett, MacArdell, Hall, Earlom, Sharpe, Heath, J. Smith, Val. Green, etc. In 1790 he became Lord Mayor of London. His most famous production was the series of Shakespearean engravings which appeared in 1802, after pictures commissioned from well-known painters. These were exhibited in his Shakespeare Gallery, though this venture failed and he d. shortly after.

Boyd-Ed, Karl (1872-1930), Ger. naval officer, b. near Hamburg. He was sent to Washington as naval attaché to the Ger. embassy there in 1911. On the outbreak of war he became known in the U.S.A. as director of Ger. espionage, and Wilson forced his recall from the country some time before America actually entered the war.

Boyer, Alexis (1757-1833), Fr. surgeon, b. Uzarches in the Corrèze. He was the son of a tailor, and acquired his first knowledge of medicine in the shop of a barber-surgeon. Proceeding to Paris he studied under Louis and Desault, and in 1794 became second operator at the Hôtel Dieu. A few years later he attracted the notice of Napoleon, who in 1804 appointed him his first surgeon and in 1807 made him a baron. When the New Academy of Medicine was created he was one of its first members, and after Napoleon's downfall he was surgeon successively to Louis XVIII, Charles X, and Louis Philippe. His prin. works were *Traité complet de l'anatomie*, 1797-9, and *Traité des maladies chirurgicales*, 1814-26. See J. F. Roux, *Boyer et Bichat*, 1851.

Boyer, Jean Pierre (1776-1850), a mulatto, b. Port-au-Prince, Haiti. He was educ. in France and, returning to his native country, joined the army. Toussaint l'Ouverture's Negro insurrection drove him back to France, where he served under Napoleon. Returning again to Haiti, he aided in the rebellion which overthrew Dessalines, the Negro President (1806). Haiti now broke up into 2 reps. under Pétion and Christophe. Siding with Pétion, B. became President in the N., and conquered almost all the is. In 1825 he obtained Fr. recognition of Haitian independence by paying 150,000 francs, but in 1840 a popular insurrection drove him from the is., and he fled first to Jamaica, then to Paris, where he d.

Boyle, Charles, 4th Earl of Orrery (1676-1731), author, b. Chelsea. He succeeded to the title in 1703. Educ. at Christ Church, Oxford, he pub. in 1695 an ed. of the Epistles of Phalaris which formed the start of his famous controversy with Bentley (q.v.) who proved that they were spurious. B. was an M.P. for a time, then entered the army, fought at Malplaquet, and became a major-general. In 1721 he was imprisoned in the Tower as a Jacobite. The orrery (q.v.) or moving model of the solar system, was so named in his honour by its inventor, George Graham.

Boyle, John, 5th Earl of Cork, 5th Earl of Orrery, and 2nd Baron Marston (1706-1762), son of Charles B. (q.v.), was educ. at Christ Church. Famous as a friend of Swift, Pope, and Johnson, in 1751 he pub. *Remarks on Swift*, a rancorous criticism of Swift's life and works.

Boyle, Richard, 1st Earl of Cork (1566-1643), Irish statesman, b. Canterbury; educ. privately and at Corpus Christi, Cambridge, and entered the Middle Temple, but in 1588 left England for Ireland. He was accused by Sir Wm Fitzwilliam, Sir Henry Wallop, and others, of theft and embezzlement, but put their accusations down to conspiracy, and was about to lay his case personally before Elizabeth in England, when the Munster rebellion broke out, and so reduced his fortunes that he was obliged to return to law in the Middle Temple. He was employed by Essex in Irish state business, and was again brought to trial at the instigation of Wallop, whose accusations he was able to refute. B. was then made

clerk of the council of Munster, and went over to England on missions to the queen in 1601 and 1602, on the last occasion making arrangements with Sir Walter Raleigh to purchase all his lands in Ireland, obtaining 12,000 ac. for £1000. This enormous estate he administered with firmness and energy, making improvements, and introducing new industries from England. In 1603 he was knighted, in 1606 became a privy councillor for Munster, in 1612 a privy councillor of state for Ireland, in 1616 was created Lord B., and in 1620 Earl of Cork, in 1629 became a lord justice, and in 1631 high treasurer for Ireland. The appointment of Wentworth (Strafford, q.v.) as lord deputy in 1633 involved him in difficulties, and Strafford's impeachment was no doubt partly due to B.'s skilful and inconspicuous opposition to him. B. was able to checkmate the rebels in Munster in the 1641 rebellion.

Boyle, Richard, 1st Earl of Burlington and 2nd Earl of Cork (1612-97), son of Richard B. (q.v.). He took an active part in the Irish rebellion, 1642; was created Baron Clifford of Lanesborough, Yorks, 1643; lord-lieut. of the W. Riding of Yorks, 1663; and Earl of Burlington, 1663. He was a supporter of William and Mary.

Boyle, Richard, 3rd Earl of Burlington and 4th Earl of Cork (1694-1753), was appointed privy councillor, 1714; lord-lieut. of the W. Riding of Yorks, lord high treasurer of Ireland, 1715. He had travelled in Italy, and while there acquired a love for architecture. In collaboration with the architects Flitcroft, Colin Campbell, and especially his protégé W. Kent (q.v.), he added a colonnade (since demolished) and other features to Burlington House in Piccadilly; and also had some share in the design of Chiswick House, c. 1725; the Dormitory of Westminster School, 1722-30; and the Assembly Rooms at York, 1731-2, as well as some other buildings no longer existing.

Boyle, Robert (1627-91), chemist and philosopher, b. Lismore, Ireland; educ. at Eton and by private tutors at home and on the Continent. In 1644 he returned to England, having inherited his father's manor of Stalbridge, Dorset. He began at once to show a fondness for scientific studies, and was influenced in this direction by the meetings of the Royal Society, then the Philosophical College, in 1645. While in England he made a speciality of chem., but on visiting Ireland in 1652-3 took up anatomy. In 1654 he settled at Oxford, and erecting a laboratory, was the leader of a small scientific society. About 1659, assisted by Robert Hooke, he invented the 'machina Boyleana,' the forerunner of the modern air-pump, and by means of experiments with the elasticity, weight, and compressibility of air, estab. B.'s law (q.v.) about 1660-2. In 1661 he pub. his *magnum opus*, *The Skeptical Chymist*, in which he overthrew the Aristotelian conception of the 4 elements and substituted the modern idea of an element, viz. a substance which cannot be decomposed

into simpler ones. This book was the foundation stone of modern chem. In 1668 he settled in London, where he became a prominent member of the Royal Society, and issued numerous scientific and philosophical works, corresponding with all the greatest men in these branches of learning throughout Europe. Throughout his life he was also an earnest student of theology, and subscribed largely to societies for the propagation of the Gospels. He appears to have been a man of singularly beautiful character, and was very popular, his reputation being international. His services to science were rather general than particular, but they were none the less valuable on this account, and he stands out as the originator of the 'experimental method.' Among his achievements may be mentioned the introduction of vegetable colour-tests of acidity, alkalinity, the preparation of phosphorus, and hydrogen, the construction of hermetically sealed thermometers, and the use of freezing mixtures, besides his researches into problems of elasticity and pressure. His complete works were pub. in 5 vols. in 1744.

Boyle, Roger, Baron Broghill and 1st Earl of Orrery (1621-79), Eng. statesman, soldier, and dramatist, *b.* Lismore; educ. at Trinity College, Dublin, Oxford, and on the Continent. On returning to England he held commands in the Scottish expedition, and the Irish rebellion of 1641-9, and later served under Cromwell in the subjugation of Ireland. Although a Royalist at heart, he supported Cromwell, and sat in his parliament, returning, however, to his old allegiance at the Restoration. He wrote dramatic and poetical works, which had some contemporary success.

Boyle, mrkt tn in co. Roscommon, Rep. of Ireland, 28 m. S.E. of Sligo, on both banks of the R. B. Has considerable agric. trade, and the ruins of a fine Cistercian abbey. There is a 9-hole golf-links. Pop. 2500.

Boyle Lectures (now discontinued), series of lectures founded in 1691 by the will of Robert Boyle, which provided £50 per year for a minister to preach 8 sermons in a year 'for proving the Christian religion against Atheists, Theists, Pagans, Jews, and Mohammedans, not descending to any controversies among Christians themselves.' (See LECTURES.)

Boyle's Law, law of the compressibility of gases. The temp. remaining the same, the vol. of a given quantity of gas is inversely as the pressure which it bears. This was discovered independently by Robert Boyle (q.v.), and by Mariotte. In England it is called Boyle's law, and in other countries, Mariotte's law.

Boileau, René (nom de plume of René Tardiveau), (1867-1926), Fr. novelist, *b.* La Haye-Descartes, Indre-et-Loire. His novels, marked by a close regard for style and respect for Fr. literary tradition, often describe priv. life. Among his best are *Le Parfum des Iles Borromées*, 1898, *Mademoiselle Cloque*, 1899, *Le Bel Avenir*, 1905, *Mon Amour*, 1908, *La*

Jeune Fille bien élevée, 1909, *Tu n'es plus rien*, 1917, *Elise*, 1921, and *Le Carrosse aux deux lézards verts*, 1922. He was elected to the Fr. Academy, 1919.

Boyne, Leonard (1853-1920), Irish actor. He made his début at the Theatre Royal, Liverpool, 1870, as Leybourne in *The Flowers of the Forest*. He then toured various tns in England and Wales, first appearing in London as John Ferne in Robertson's *Progress*, at St James's Theatre, 1874. B. also played in *Such is the Law* (1878); *A Gay Deceiver*, *Delilah* (as Col. Tempest); *Sister Mary*, *A Man's Love* (1889); *The Lights o' London*, *The Streets of London*, *The Trumpet Call*, *The Benefit of the Doubt* (1895); *For Auld Lang Syne* (1901); *Becky Sharp* (as Rawdon Crawley), and *The Marriage of Kitty* (1902). He also played *l'Alroy in Caste* (1889), and in *Our Boys*. He also acted in New York.

Boyne River, riv. of Rep. of Ireland, rises near Edenderry on the Offaly-Kildare border, and flows N.W. by Trim, Navan, and Drogheda, into the Irish Sea; total length about 70 m. It is famous in hist. for the battle of the Boyne, fought in July 1690 between William III and James II. The former had an army of Brit. and Dutch soldiers, with a regiment of Huguenot refugees; King James's army was numerically inferior composed mainly of Irish, with some Eug. and Fr. officers. After a bitter fight the Irish were defeated and James fled to France, his hopes of restoration to the throne at an end. An obelisk near Drogheda marks the scene of the battle. The Orangemen still celebrate 12 July as the anniversary of the battle.

Boyneburg (Bemelsberg), Konrad von (c. 1494-1567), Ger. knight, trained in warfare under Sickingen and Frundsberg. On the expedition to Italy, B. was chosen as Frundsberg's deputy, and on the latter's sudden illness became commander-in-chief. He distinguished himself at the storming of Rome (1527), the defence of Naples (1528), and the capture of Florence (1530). He fought also against the Turks and French. The last battle at which he was present was St Quentin, 1557.

Boys, Sir Charles Vernon (1855-1944), physicist, *b.* Wing, Rutlandshire, educ. at Cambridge and elected F.R.S. in 1888, distinguished as an original experimenter. In 1895 he devised a torsion balance in which fibres drawn from fused quartz were used. With this he repeated the work of Henry Cavendish (q.v.) and determined the universal constant of gravitation with greater accuracy than had been previously obtained. This was found to be 6.658×10^{-8} c.g.s. units, from which the mean density and the mass of the earth were obtained. He invented the radio-micrometer (q.v.), designed a calorimeter for measuring the thermal power of coal-gas, and made a moving lens camera for the study of rapid phenomena such as lightning.

Boys' Brigade, organisation for boys, founded in 1883 by Mr (afterwards Sir) Wm A. Smith, of Glasgow, with the object

of the advancement of Christ's Kingdom among boys, and the promotion of habits of obedience, reverence, discipline, self-respect, and all that tends towards a true Christian manliness. The B. B. consists of 2933 companies of boys between the ages of 12 and 18. Each company is connected with a church or other Christian body. Military drill is used as a means of banding the boys together, and of training them in discipline and self-respect. Bible classes, gymnastic training, ambulance work, bands, club-rooms, way-faring, athletics, swimming, and summer camps are extensively carried on. The B. B. is to be found in 29 overseas countries and in the Brit. Isles; Brit. membership is 105,680 (1956-7), officers and boys. An organisation for 9- to 12-year-old boys called the Life Boys (Brit. membership 72,758, 1956-7) provides the junior reserve for the B. B. The H.Q. of the B. B. are at Abbey House, London, S.W.1.

Boys' Clubs, National Association of (1925), gives free advice and help to its affiliated clubs through trained officers and specialist advisers. It pursues a vigorous policy of forming new Boys' Clubs wherever they are needed, particularly in recently developed areas such as new towns and housing estates. It maintains 2 national training centres where residential courses are held regularly for leaders and older boys on all aspects of club management and activities. Regional training is carried out partly by area organisations of Boys' Clubs and by the association's mobile training wing which tours the country and visits clubs whose leaders are unable to attend residential courses. At the end of 1955 there were 2118 clubs affiliated to the association with 164,800 members. Over 20,000 men and women were helping the movement in some capacity, mostly without payment.

'Adjustment to Industry' courses are held regularly for young employees and apprentices to give them a better understanding of their work and thus to create the right attitude towards it. The association holds ann. arts festivals and national football and boxing competitions. It also arranges an ann. conference for leaders and officers. The association receives generous assistance from the King George's Jubilee Trust and the King George VI Foundation. It also has an ann. grant from the Ministry of Education with whom it co-operates fully, but most of its income is raised from voluntary sources. The H.Q. are at 17 Bedford Square, London, W.C.1. See also YOUTH ORGANISATIONS OF GREAT BRITAIN.

'Boy's Own Paper,' monthly magazine of fiction and articles on adventure, hobbies, sport, science, and every possible subject of interest to intelligent boys between the ages of 12 and 18, with the main emphasis on the older boy. Production and contents are of high quality and the magazine, founded in 1879, now circulates in 53 countries.

Boz, pseudonym under which Dickens

(q.v.), having put together a loose pile of papers—satires on institutions, pictures of private persons, and fairy tales of the vulgarity of his world—decided to publish them with the title *Sketches by Boz*, 1836. *The Pickwick Papers* were at first pub. under the same name, 1837. 'Boz' was really a nickname of his brother.

Bozen, see BOLZANO.

Bozrah, possibly el-Busseirah, S.E. of the Dead Sea, anct. cap. of the Edomites; or perhaps Bosra in the Hauran, S. of Damascus, with anct. Rom. ruins, a populous medieval city, now only a vil.

Bozzaris, Marcos (1788-1823), Gk patriot, b. Sul in Epirus. In 1821 he joined in the revolt against Turkish rule, but was defeated in 1822 at Petta and driven back to Missolonghi, which he defended very ably. He fell at Karpenisi whilst leading a daring night assault upon the Turkish-Albanian army, which was completely routed, although of far superior strength.

Bra, It. tn in Piedmont (q.v.), 25 m. N.E. of Cuneo (q.v.). It is the centre of a silk-worm breeding industry and is known for its market gardens. Pop. 22,000.

Brabançonne, La, Belgian national anthem, written and composed during the revolution of 1830, when Belgium broke away from Dutch rule. The words were by a Frenchman, Jenneval, the music by a Belgian, Camphout. Jenneval was killed near Antwerp, Oct. 1830.

Brabant, Sir Edward Yewd (1839-1914), S. African soldier, joined the Derby militia in 1855, and the year following went to S. Africa, where he joined the Cape Mounted Rifles. On the outbreak of the S. African war in 1899 he raised the corps known as 'Brabant's Horse' which did splendid service throughout the campaign. In 1900 he was made K.C.B., and in 1902 commandant-general of the Cape forces.

Brabant, name of a duchy, formerly part of Lorraine. Early in the 15th cent. the Duchy of B., through intermarriage, became incorporated with Burgundy, and on the marriage of Mary of Burgundy to the Emperor Maximilian was transferred first to the Austrian Empire, then under Charles V to the Sp. crown. During the Netherlands rebellion, N. B. became a Dutch prov., while S. B. remained Sp. till 1714; it then fell in turn to the Austrians, French, and Netherlands. In 1830 the Belgians achieved their independence and S. B. is now their central prov. The eldest son of the King of the Belgians is called the Duke of B. S. B. is very densely peopled (area 1267 sq. m., pop. (1955) 1,887,782), and rich both in agriculture and manufs.; chief tns are Brussels, Louvain, and Nivelles. N. B. is larger, but poorer, being very marshy. Area 1920 sq. m.; pop. 1,354,363. Chief tn, s' Hertogenbosch. See W. A. Arendt, *The Brabant Revolution, 1789-1796*, 1843, and L. Van der Essen, *A Short History of Belgium*, 1920.

Brabazon, Hercules Brabazon (1821-1906), painter, b. Paris; the son of Hercules Sharpe, he took the name of B. on

succeeding to the B. estates in Ireland. He lived the life of a country squire, remaining an amateur in the arts, but nevertheless estab. a considerable reputation as a water-colourist in the Eng. tradition. He travelled widely in Europe and the Mediterranean, and his paintings are witness to this fact. See life by C. L. Hind, 1912.

Brabazon, Sir John Palmer (1843-1922), general, b. co. Mayo, Ireland. He joined the Grenadier Guards, exchanging later into the cavalry. His first campaign was in Ashanti, 1874. In 1878 he served in Afghanistan, and in 1880 shared in Roberts's famous march to Kandahar, and the victory over Ayub Khan's army on 1 Sept. In the Suakin campaign of 1884 he fought at E. Teb and Tamai, and served with the Light Camel Corps in the attempt to relieve Gordon, being present at the battle of Abu Klea (Feb. 1885). In the Boer War he led the second cavalry brigade, under French, during the operations round Colesberg (Jan. 1900), and afterwards commanded a div. of Imperial Yeomanry.

Brabazon of Tara, John Theodore Cuthbert Moore-Brabazon, 1st Baron (1884-), Brit. pioneer of motoring and aviation. He was educ. at Harrow and Cambridge. M.P. for Chatham Div. of Rochester, 1918-29, and Wallasey, 1931-1942, he held various gov. positions between 1923-7 and 1940-2. He holds the first pilot certificate granted by the Royal Aero Club and was a pioneer in the development of aerial photography.

Brač (It. *Brazza*), Yugoslavian is. in the Adriatic, the largest is. of the Dalmatian archipelago. It is mountainous, and has sev. small vils. of which the prin. is Supetar (San Pietro). Pop. 26,000.

Bracara Augusta, see BRAGA.

Bracciano, Lake of (It. *Lago di Bracciano*; anct. *Lacus Sabatinus*), It. lake, in Lazio (q.v.), 15 m. NW. of Rome (q.v.). The basin is almost circular and of volcanic origin. The lake is 538 ft above the sea, but so deep that its floor is below sea level. It has always been famous for excellent fish. Around its shores are many ruins of Rom. and perhaps even earlier origin. Area 28 sq. m.

Bracciolini, Francesco (1566-1645), It. poet, b. Pistoia. His talents gained him early admittance to the academy of Florence. Through the influence of Cardinal Barberini, later Pope Urban VIII, he became secretary to Cardinal Antonio Barberini, and went with him to France. His works include a heroic poem, *La Croce Racquistata* (The Cross Regained), ranked by some critics next to Tasso's *Gerusalemme Liberata*; *Lo Scherno degli Dei*, an imitation of Tassoni's *La Secchia Rapita*; and *L'Assedio della Rocella*, a heroic poem in 20 cantos. His poems, however, do not bear the stamp of a powerful creative imagination.

Bracciolini-Poggio, Giovanni (Gian) **Francesco** (1380-1459), It. scholar and humanist of the Renaissance, b. Terranuova d'Arezzo. He became secretary to the Rom. curia (c. 1403), but never showed interest in eccles. or political

affairs, devoting all his energies to unearthing old classical MSS. Among his discoveries were sev. orations of Cicero, some plays of Plautus, Lucretius' *De Rerum Natura*, Quintilian, and fragments of Valerius Flaccus, Silius Italicus, and others. He himself wrote moral essays, *Historia Florentina, 1350-1455* (1476), in imitation of Livy, and *Liber Facetiarum* (see Lisleux's ed., 1878; Hazlitt, Old English Jest Books, iii, 1864), a collection of humorous but often indecent stories aimed chiefly against the monks. Of his polemical invectives those against Filelfo and Valla are best known. He retired to Florence c. 1452, becoming chancellor and historiographer in 1453. His *Opere* were printed at Strasbourg (1510). See lives by W. Shepherd, 1802, and E. Walker, 1914; also V. Rossi, *Il Quattrocento*, 1933.

Bracebridge, small tn in Canada, situated on the Muskoka R., in Muskoka co., Ontario. It is about 120 m. N. of Toronto. Pop. 2762.

Bracegirdle, Anne (c. 1663-1748), actress. The date of her birth is usually assigned to 1663, but by some it is put 10 years later. She had a brilliant career on the stage till, in 1707, she and her rising rival, Mrs Oldfield, played Mrs Brittle in Betterton's *Amorous Widow* on successive nights. The audience awarded the palm to Mrs Oldfield, whereupon B. then quitted the stage, never to return, except for Betterton's benefit performance in 1709. She achieved her greatest successes as an actress in the plays of Congreve (q.v.), to whom she was suspected of being secretly married.

Bracelet (O.F. dimin. of *bracel*, from Lat. *brachiale* (*brachium*, arm)), ornament worn from time immemorial by both sexes. B.s are repeatedly mentioned in the Bible; Abraham's servant presented Rebekah with 2 gold B.s (Gen. xxiv. 22), and one was taken, probably a royal armband, from Saul as he lay dead on Mt Gilboa (2 Sam. i. 10). Throughout the E. in ant. times, an armband of plain or enamelled metal was a regal ornament; Egyptian kings are represented as wearing such, and B.s are still worn by E. princes. Among the Lat. tribes *armillae* were very massive; Petronius Arbiter says they sometimes weighed over 6 lb. The Romans often awarded them as decorations for valour, to their own people only; on foreigners torques or other ornaments might be bestowed. B.s were often given in Rome as birthday or wedding presents; as a rule virgins did not wear them. Among the Greeks, who got their first designs from Asia, the snake pattern was common, also penannular hoops with finial decorations. Among early Teutons and Scandinavians bronze armlets were often very large, protecting the whole fore-arm, and B.s were given to brave warriors; in the Saxon Chronicle King Edgar is called 'bestower of Bracelets,' as is also Athelstan (*Song of Brunanburh*); this term is applied to great chiefs. Very anct. B.s were simple in pattern, of easily worked metals, gold, silver, copper, and bronze. As skill and luxury increased, choice of

materials was more varied, brass, polished steel, etc., being used, and jewels being employed in the decorations, especially in India and Persia, where these ornaments were often of fabulous cost. One pair of B.s., taken at the sack of Delhi by Nadir Shah (1739), was valued at a million sterling. Designs multiplied greatly; highly wrought panels joined by clasps were among the triumphs of Etruscan art. Among barbaric tribes beads and plaited wire are much used to this day; the Kaffirs of S. Africa are skilful in making B.s. of the latter material.

Braces (cf. Fr. *bras*), ropes attached to the yard-arms of vessels, by means of which the yards can be swung round and so the sails 'trimmed.'

Brach, term derived from the O.F. *braque*, *brachet*, dimin. of *brac*, from Old High Ger. *bracco* or *brueco*, to indicate a scenting or hunting dog of the hound type. It is applied to the female.

Brachial Artery, artery of the upper arm. It is a continuation of the axillary artery, and proceeds from the armpit downwards and outwards along the inner side of the arm, reaching the middle of the bend of the elbow. Its branches are the *superior profunda*, springing from the inner and back part of the brachial soon after its commencement; the *inferior profunda*, a smaller artery springing from the middle of the brachial; the *anastomotica*, providing the anastomoses at the elbow; and muscular branches to the muscles of the upper arm. The brachial subdivides in the lower arm into the radial and ulnar arteries.

Brachial Plexus, aggregation of nerves in the lower part of the neck and armpit. The nerves engaged are the fifth, sixth, seventh, and eighth cervical and the first dorsal spinal nerves. See SPINE AND SPINAL CORD.

Brachinus, genus of coleopterous insects of the family Carabidae, of which sev. species are Brit. See BOMBARDIER BEETLE.

Brachionus, genus of microscopic and aquatic beings of the phylum Rotifera and order Plolima. They have a long, flexible foot ending in 2 toes, and they swim by means of minute cilia. *B. uveolarius* is the commonest species.

Brachiopoda, phylum of marine bottom-dwelling bivalved invertebrate animals, with 2 dissimilar but bilaterally symmetrical valves which lie dorsally and ventrally and enclose the soft parts. They bear some affinity to the Polyzoa, but the resemblance to the Lamelli-branchia, or true bivalves, is superficial. In the latter the shells lie right and left, are equal and unsymmetrical about the median line. B. possess brachia, or arms, bearing cilia which produce currents of sea-water to bring food to the mouth and carry away waste materials, besides enabling the mantle lobes to perform their respiratory function. In the primitive Inarticulata the valves are kept together by muscles, but in the more advanced Articulata the valves are united by a strong hinge. Most B. were attached by means of a stalk or pedicle.

They are amongst the oldest known fossils, were abundant in Palaeozoic times, but have since declined steadily. There are about 1400 fossil genera, but only about 60 living genera. B. are widely used as index fossils in correlating strata. See T. Davidson, *Monograph of the British Fossil Brachiopoda*, 1851-84; T. H. Huxley, *Contributions to the Anatomy of the Brachiopoda*, 1854; H. M. Muir-Wood, *A History of the Classification of the phylum Brachiopoda*, Brit. Museum (Nat. Hist.), 1955.

Brachycephalic (Gk *brachus*, short; *kephalē*, head), term applied to skulls of which the transverse diameter is more than eight-tenths of the long diameter.

Brachycerus, genus of coleopterous insects of the family Curculionidae, which are apterous and generally very rough. These weevils live on the ground in S. Europe and Africa. See COLEOPTERA and WEEVIL.

Brachypodium, or false brome-grass, genus of tropical and temperate Gramineae, of which there are 2 Brit. species, *B. sylvaticum* and *B. pinnatum*. The former grows in woods, the latter on open heath; the inflorescence is a simple raceme with unequal glumes.

Brachypteryx Montana, or mountaineer warbler, bird of the family Timeliidae, or babbling thrushes. By the Javanese it is known as *ketek*. In colour it is indigo, black, and white, in song it is garrulous and plaintive, in habit it is insectivorous, and builds its nest on the ground. It inhabits the wooded peaks of Java.

Brachyteles, woolly spider monkey, genus of Cebidae, consisting of 3 species of prehensile-tailed monkeys found in America. They have woolly hair, but the long tail is naked towards the tip, and the pollex is reduced.

Brachyura (Gk *brachus*, short; *oura*, tail), term applied to a large group of decapod crustaceans which are characterised by having the short tails tucked up beneath them, e.g. the crabs, thus differing from the long-tailed crustaceans like the lobsters. The term is also applied sometimes to very short-tailed bats, and *Brachyurus* to a genus of short-tailed monkeys of S. America.

Bracken, Brake (*Pteridium aquilinum*), species of Polypodiaceae common in Great Britain. It has a creeping rhizome which grows at some depth below the surface of the soil, and sends up every year 1 large much-divided leaf, known as a frond, at the base of which there is a nectary. On the back of the leaf-stalk it produces adventitious buds. In the B. there is a true lateral indusium, which is a delicate membrane of a yellow colour, and the margin of the pinnae bends over to protect the sporangia, thus forming a false indusium.

Brackenbury, Sir Henry (1837-1914), soldier and military writer, b. Bolingbroke, Lincs; he joined the Royal Artillery in 1856, and served in central India during the mutiny. In 1870-1 he assisted in the work of relieving the sick and wounded in the Franco-Ger. war. He went through the fighting in Ashanti

in 1874, and in 1879-80 served as chief of staff in the Zulu war. In 1884-5 he led the riv. column in the Sudan campaign and was promoted to be major-general. Director-general of ordnance, 1899-1904. His writings include *The Last Campaign of Hanover*, 1870, *Narrative of the Ashanti Column*, 1885, and *Some Memorials of my Spare Time*, 1909.

Brackenbury, or Brakenbury, Sir Robert (d. 1485), member of a Durham family, constable of the Tower of London. He fought against the rebels under Buckingham and was rewarded with various grants by Richard III. He was made constable of the Tower for life in 1483. B. is said to have refused to murder the 2 little princes, but to have handed over his keys to Tyrrell at Richard's command. He was killed fighting for Richard at Bosworth, 1485.

Bracket, metal or wooden support which projects from a wall. B.s have 2 uses. In architecture they support heavy weights, such as balconies, and as articles of furniture they are used to support much lighter things, such as lamps and ornaments of all kinds.

Bracklesham Beds, Upper Eocene estuarine and marine sands and clays exposed in Britain in the London and Hants basins.

Brackley, Viscount, see ELLESMERE.

Brackley, mkt tn and bor. in Northants, 6 m. from Silverstone car race track; chief industries are brewing and boot-making. Once had considerable wool trade, and sent 2 members to Parliament; has fine church, and school founded by William of Waynflete, 1447. Pop. 3000.

Brackwede, Ger. tn in the *Land of N.-Rhine-Westphalia* (q.v.), 90 m. NE. of Düsseldorf (q.v.), with metal industries. Pop. 22,000.

Bracon, typical genus of the Braconidae in the Hymenoptera. It is a large genus, widely distributed in Britain, with parasitic larvae, and differs from the Ichneumon-flies in having the cubital cell of the fore-wing separated from the second cubital by a single cell.

Braet, or **Hypophyll**, in botany, a modified tissue-like scale-leaf, growing near the calyx or peduncle or pedicel of a flower. Some plants are without B.s and are termed *ebracteate*; those with B.s are called *bracteate*. Some plants have smaller scale-leaves between the B.s and the flowers, known as *bracteoles* (c.g. *Scilla*). B.s may be scaly, leafy, membranaceous, woody, or coloured. They may be petaloid as in Cornus; form a calyx-like structure known as an *involucre* as in Anthyllis; or a cup known as a *cupule* as in the oak acorn, or flower protection or *spathe* as in the arum.

Bracton, Henry de (d. ? 1268), judge and writer on law. He was clerk in the king's service in the early part of his career, under the patronage of Wm Rayleigh. In 1245 he appeared as justice, and from 1248 until his death was a justice of assize in Somerset, Cornwall, and Devon. For a time he was also employed as judge in the king's central court, but 1257 saw

him dismissed, probably owing to his connection with political events of that period. In 1259 he was made rector of Combe-in-Teignhead, and 2 years later he became rector of Barnstaple; in 1264 he became archdeacon, and a year or so before his death he attained to the chancellorship of Exeter Cathedral. His fame is chiefly due to his treatise on the laws and customs of England, the greater part of which was compiled 1250-8; this, although unfinished, is considered the best work of any Eng. lawyer of the Middle Ages.

Bradbury of Winsford, John Swanwick Bradbury, 1st Baron (1872-1949), civil servant, b. Winsford, Cheshire, and educ. at Manchester Grammar School, and at Brasenose College, Oxford. He entered the civil service in 1896, and became joint permanent secretary of the Treasury and K.C.B. in 1913. His name suddenly became widespread on the outbreak of war in 1914; when, on the disappearance of gold currency, there came the issue of the treasury note for 1 pound, which was for some years popularly known as a Bradbury because of the signature of the secretary of the Treasury that appeared prominently upon it. B. ceased to be secretary of the Treasury in 1919, and was prin. Brit. representative on the reparations commission at Paris, 1919-25. B. was raised to the peerage, 1925.

Braddock, Edward (c. 1695-1755), Brit. general, b. Perthshire. He entered the army in 1710. During the later years of the war of the Austrian Succession he fought in Holland, being then a lieutenant-colonel. In 1754 he was made a major-general, and in the following year he went to Virginia to command the Brit. forces against the French. He was much hindered by the supply arrangements, but finally took the field with about 2000 men, amongst whom was George Washington, and he attempted an attack upon Fort Duquesne (now Pittsburgh). The column fell into an ambush of French and Indians, and were completely routed; B. himself, after conspicuous gallantry, was shot and fell mortally wounded.

Braddock, bor. in Allegheny co., Pennsylvania, U.S.A. It is situated on the R. Monongahela in SW. Pennsylvania, about 10 m. SE. from Pittsburgh, at an altitude of 830 ft. There are extensive iron and steel works in the neighbourhood. Pop. 16,488.

Braddon, Mary Elizabeth (1837-1915), novelist, b. London. Her first success was *Lady Audley's Secret*, 1862, which she followed up with *Aurora Floyd* and *Eleanor's Victory*, 1863, and *Henry Dunbar*, 1864. These are all 'sensational' novels, constructed on melodramatic lines, with skilful and exciting plots and plenty of variety. Though never rising to the highest levels of fiction, Miss B., who wrote 70 novels, showed sustained powers, *Beyond these Voices*, pub. as late as 1910, being pronounced equal to its predecessors. Among her later novels may be mentioned *The Green Curtain*, 1911, and *Miranda*, 1913. Sev. of her stories

appeared as serials in *Belgravia*, which she ed. for many years. In 1874 she married John Maxwell, publisher, and their son, W. B. Maxwell, won considerable repute as a novelist and journalist.

Bradfield, John Job Crew (1867-1943), engineer; educ. at Ipswich Grammar School and at Sydney Univ., New S. Wales. He graduated at Sydney in engineering up to his doctorate, winning first-class hon. and the univ. medal at each stage. In 1891 he entered the Public Works Dept of New S. Wales, but later set up in private practice. He was consulting engineer for the design and construction of the Brisbane R. bridge and approaches; but will be chiefly remembered as the designer and chief engineer of the great bridge across Sydney Harbour. He also designed and supervised the construction of the Sydney city underground railway. B. was a member of the Sydney Univ. Senate and a fellow of the Australian and New Zealand Research Council.

Bradfield, vil of Berks, England, about 9 m. from Reading. Here is B. College (q.v.). Pop. 2000.

Bradfield College, public school for boys, founded 1850 by Thomas Stevens, rector and lord of the manor. Since 1890 Gk plays have been performed every 3 years in the school's open-air Gk theatre. In 1939 there were 9 serving Brit. admirals who had been boys at the school.

Bradford, Andrew (1686-1742), Amer. printer and publisher, son of Wm B. (q.v.), the printer. In 1719 he began the issue of the *American Weekly Mercury*, the first newspaper in Pennsylvania. In 1741 his *American Magazine* ran for only 3 issues.

Bradford, Sir Edward Ridley Colborne (1836-1911), Brit. soldier; joined the Madras cavalry in 1853. During the mutiny he distinguished himself in the operations against Tantia Topce, and afterwards acted first as political agent, then as head of the criminal dept concerned with Thuggism, and later as political secretary to the Indian Gov. Returning home, he was in 1890 appointed commissioner of police in London. He was made G.C.B. in 1897, and baronet on his retirement in 1903.

Bradford, John (c. 1510-55), Eng. Protestant preacher. Rather reckless in youth, he was educ. at Cambridge (becoming fellow of Pembroke Hall), and converted by Latimer. B. became Ridley's chaplain, 1550; prebendary of St Paul's, 1551; royal chaplain to Edward VI, 1553. His preaching won praise from John Knox. Tried before Gardiner and Bonner, he was burned at Smithfield under the Marian persecutions. B.'s writings were ed. by Townsend for the Parker Society, 1848-53. See Stevens's life, 1832.

Bradford, Samuel (1652-1731), Eng. bishop, educ. at St Paul's School and, after the plague and fire, at Charterhouse; went to Cambridge, 1669, leaving without a degree because of religious scruples. Studied medicine for a time; in 1680 was admitted to degree of M.A. by royal

mandate; 1697, was incorporated at Oxford. B. took orders after the revolution, becoming deacon and priest, 1690. In 1691 the governors of St Thomas's Hospital elected him minister of their church in Southwark. Became tutor to grandsons of Archbishop Tillotson, being made rector of St Mary-le-Bow, 1693; B. often preached before the corporation of London, and lectured at various places. He was a staunch Whig and Protestant; 1698, William III made him royal chaplain in ordinary. He continued in office under Anne, becoming prebendary of Westminster, 1708. His sermons on 'The Credibility of the Christian Revelation, from its Intrinsic Evidence,' were pub. with others in *A Defence of Natural and Revealed Religion*, 1739. Bishop of Carlisle, 1718; Bishop of Rochester and dean of Westminster, 1723.

Bradford, William (1590-1657), Amer. colonial governor and historian, b. Yorks, England. As a 'Pilgrim Father' he sailed in the *Mayflower*, 1620, to Plymouth, New England. B. succeeded Carver as governor of this settlement, 1621, ruling firmly and wisely, and showed tact in dealing with the Indians. He was author of *History of Plimouth Plantation*, pub. in the *Proceedings of the Massachusetts Historical Society*, 1856; also of *Dialogues* on church gov.

Bradford, William (1663-1752), Amer. colonial printer, b. Leics, England; emigrated with Penn to Pennsylvania, where in 1685 he introduced printing into the middle colonies, his first imprint being an almanac, *America's Messenger* (1685). His press, having been seized on his issuing a tract for the minority sect of Friends, was restored to him by Governor Fletcher on appeal. Removing to New York in 1693, he became royal printer for the colony, holding the post for 50 years or more, and issuing in 1725 the first number of the *New York Gazette*; he continued it for 19 years.

Bradford, William (1719-91), Amer. printer and publisher, grandson of above; estab. in 1742 the *Weekly Advertiser or Pennsylvania Journal*. He served in the War of Independence, rising to the rank of colonel.

Bradford, William (1755-95), Amer. jurist, son of above, also served in the War of Independence, afterwards becoming first attorney-general of Pennsylvania, then judge of the supreme court of that state, and finally attorney-general of the U.S.A. (1794-5).

Bradford, city, municipal and co. bor. of the W. Riding of Yorks, England, has been connected with wool in one form or another for over 6 cents. From the Middle Ages for 3 cents. or more woollen manufacturing was its staple industry; but in the 17th cent. the worsted trade began to drift from E. Anglia to the N. and B. became one of the chief seats. It is now the world's central market for wool, and wool and mixture products. B. is a comparatively modern city, and a place of rapid growth since the beginning of the industrial revolution. The worsted trade prospered exceedingly in B., even under

the conditions of hand labour, but of course the steady growth of those early days bore no comparison with the boom which came afterwards with the introduction of steam power and the factory system. B. also profited greatly by the paralysis of Amer. manufacturing caused by the Civil war, and much more during the Franco-Ger. war of 1870-1. It is estimated that the total value of the production of the wool textile industry before the Second World War was about £200,000,000. In 1950 the value of exports of wool yarns and manufs., excluding carpets, was £141,000,000; the total output, excluding carpets, was about £514,000,000. B. is chiefly concerned with the treatment of textile materials and their conversion into finished goods. It is the great centre of the sorting of fleeces as they come from dominion and foreign sources, or from the home farmer. The city is also the world's chief manipulator of the production, by the process of combing, of wool 'tops' (long fibres) and 'nolls' (short fibres) and wastes of various kinds. It produces great quantities of worsted coatings for men, of linings for garments and, in great abundance, the materials for women's wear. Mercerised cotton goods are also a great feature, and altogether there are now sev. hundred large factories for the weaving of worsted, velvet, plush, alpaca, mohair, silk, and rayon, and mercerised cotton fabrics. A few of the largest firms have their own dyeing and finishing plant, but in regard to the bulk of the products of the mills, they must pass, at one stage or other of the processes of manuf., into the care of the separate dyer. Engineering is another great industry of B. The making of boilers, condensing plant, pumps, marine machinery, lift machinery, machine tools, and motors is carried on upon a large scale. Electrical engineering has also come into prominence; products include all kinds of electric generators and motors for industrial and domestic purposes; the complete electrical equipments, including the traction motors for electric and diesel-electric locomotives and railway coaches, and for tramcars and trolley-buses. Other industries are stone quarrying, brewing, buildings, structural engineering and public works contractors, manuf. of disinfectants, photo engraving, printing and publishing, etc. B. is connected with the Mersey and the Humber by canals, and is an important railway centre. There are many fine public buildings, including the cathedral the site of which probably dates back to the 14th cent., when the church was rebuilt by the de Lacys. B. was created a bishopric in 1920. A scheme for the restoration of the cathedral has been begun, and the year 1958 has been set as the time for completion. The tn hall has a tower which contains a very fine clock, with carillon chimes. The building was completed as to its first design in 1873, and enlarged later, but has now become inadequate. Other notable buildings are the Forster Square railway station of the N.E. Region of Brit. Railways which, with its

hotel, cost over £1,000,000; the chamber of commerce (called Commerce House), a 7-storey building; the Cartwright Memorial Hall in Lister Park, B.'s art gallery and museum, and the most ornamental piece of architecture in the city; St George's Hall (1853), once the general public assembly place of B., acquired by the corporation in 1952, and opened in the autumn of 1953 for orchestral and other concerts, public meetings, and exhibitions; the post office, built at a cost of £250,000; the exchange, with a fine statue of Cobden; and Bolling Hall, the only building of any antiquity apart from the cathedral. City statutes include those of Peel, W. E. Forster, Sir Titus Salt, and Richard Onstler. The existing charter of the B. Grammar School was granted by Charles II (1662), but the foundation dates back to an unknown time before the reign of Edward VI. B. Girls' Grammar School was estab. in 1875. There is a college of art and the technical college is one of the largest of its kind in the country (founded 1880). The Mechanics' Institute originated in 1832, though the present building was only erected in 1871. The parks include Lister Park, better known as Manningham Park, containing, besides the Cartwright Memorial Hall, a recording station of the meteorological section of the Air Ministry, and open-air swimming pools which, after great alterations, were reopened in 1939; Baildon Moor (870 ac.), kept as a recreation ground; and Horstall playing fields.

Records of B. indicate that in the reign of Edward the Confessor the manor was in the hands of one Gamel, and was valued at 'four pounds troy weight of silver.' During the Norman conquest of the N. of England it appears to have been destroyed, for the Domesday entry says enigmatically 'Ilbert hath it; it is waste.' The Ilbert referred to was a de Lacy, in which family the manor continued until the 14th cent. In 1311 the pop. was 650, and there was already a fulling mill yielding £1 per annum. The mention of the fulling mill in 1311 indicates that the woollen industry had already become estab. in the tn, and by the 16th cent. it had become an important part of the life of the tn. A weekly market was granted in 1251, and confirmed in 1294. Edward IV, in 1481, also confirmed the market, and granted 2 ann. fairs. In 1540 Leland visited the tn and in his *Itinerary* said that 'it standeth much by clothing' and was 'a praty quik town.' The first B. mill was estab. in 1798, and by 1841 there were 70. In 1847, the year in which B.'s progress to modern prosperity began, the united townships of B., Manningham, Horton, and Bowling were granted a charter of incorporation. The tn was not represented in Parliament before 1832, when it was created a parli. bor., returning 2 members; it was evidently a bor. of prescription until 1847. In 1885 there were 3 members and in 1918 4. In 1907 B. received the honour of a lord mayor. Pop. 286,000.

Bradford, tn in McKean co., Pennsylvania, U.S.A., in a rich oil-producing dist.

It has large petroleum refineries, also manufs. iron ware, glass, chemicals, etc. Pop. 17,350.

Bradford-on-Avon, mrkt tn in Wilts, near Bath, England. St Aldhelm was abbot of B. monastery in AD 705, and the little church of St Lawrence, still perfect, dates from Saxon times. B. is mentioned as a bor. in Domesday Book. On the tn bridge (rebuilt in the 15th cent.) there is a chapel, used as a lock-up for the last 250 years. Kingston Hall (c. 1600) is a fine example of a prosperous cloth merchant's house. Under the Stuarts it was the chief cloth-manufacturing tn in the W. of England, but is now principally concerned with light industries and the making of rubber goods. Pop. 5500.

Brading, vil. 4 m. S. of Ryde, in the Isle of Wight, with a bull ring and the remains of a Rom. villa. Pop. 2000.

Bradlaugh, Charles (1833-91), free-thinker and politician, b. Hoxton, London, the son of a solicitor's clerk. At 17 he enlisted as a soldier, but bought himself out after a few years. He then became a 'free-thought' writer and lecturer, calling himself 'Iconoclast,' and gradually rose to be a prominent leader among 'advanced' political societies, Reform Leaguers, Secularists, and Land Law Reformers. His advocacy of atheistical opinions aroused intense opposition, and for some years he was attacked both in the law courts and the press. This antagonism was in 1876 intensified by his republishing, in alliance with Annie Besant (q.v.), an Amer. pamphlet on birth control which had already been condemned by an Eng. court of law. Both were sentenced to a heavy fine and imprisonment, but the conviction was quashed on technical grounds. B. had for some years been seeking to enter Parliament, and in 1880 was elected for Northampton; refusing, however, to take the oath he claimed liberty to affirm under the Parl. Oaths Act, but he was rejected by the House. After being re-elected 4 times, he was at last permitted to enter, on affirming, in 1886. See life by J. Gilmour, 1933.

Bradley, Andrew Cecil (1851-1935), scholar, b. Glasbury, Brecknock, brother to Francis Herbert B. (q.v.) and half-brother to George Granville B. (q.v.). Educ. at Cheltenham and Balliol College, he was elected fellow of Balliol in 1874, and lectured there from 1876 to 1881. He was prof. of modern literature at Univ. College, Liverpool, from 1881 to 1889, and at Glasgow Univ. from 1889 to 1900, then prof. of poetry at Oxford from 1901 to 1906. He pub. *A Commentary on 'In Memoriam'*, 1901, *Shakespearean Tragedy*, 1904, *Oxford Lectures on Poetry*, 1909, and *A Miscellany*, 1929.

Bradley, Edward (1827-89), Brit. clergyman and writer. He graduated at Durham Univ. in 1848, and was ordained in 1850. As a contributor to *Punch*, under the name Cuthbert Bede, he was well known to his contemporaries, but his claim to posthumous fame rests on his *Adventures of Mr Verdant Green*, an *Oxford Freshman*, 1853. It is full of fun,

and, considering the author was not an Oxford man, remarkably true to life.

Bradley, Francis Herbert (1846-1924), philosopher, b. Glasbury, Brecknock, brother to Andrew B. (q.v.) and half-brother to George B. (q.v.), dean of Westminster. Educ. at Univ. College, Oxford, he became a fellow of Merton. Prin. works: *The Presuppositions of Critical History*, 1874; *Ethical Studies*, 1876 (reissued with additions, 1927), in which he attacked Utilitarianism; *The Principles of Logic*, 1883 (revised, 1922); *Appearance and Reality*, 1893; *Essays on Truth*, 1914. To the world at large he will be memorable for his irreverent definition (in the preface to *Appearance and Reality*) of Metaphysics: 'The finding of bad reasons for what we believe upon instinct.' Awarded the O.M., 1914.

Bradley, George Granville (1821-1903), scholar and divine, b. High Wycombe. He was educ. at Rugby under Arnold, and at Univ. College, Oxford, where in 1844 he was elected a fellow. In 1858 he was appointed headmaster of Marlborough, where he was very successful. His personal influence was remarkable; Tennyson said he sent his son 'not to Marlborough but to Bradley.' Returning to Univ. College in 1870 as master, and finding the standards both of discipline and learning only moderate, he set to work as a reformer with such success that admission to his college became an honour to be competed for. On Dean Stanley's death in 1881, B. was chosen to succeed him as dean of Westminster. After the coronation of Edward VII (Aug. 1902), Dean B. retired from office. He was buried in the abbey. His *Life of Dean Stanley* was pub. in 1892.

Bradley, Henry (1845-1923), philologist, b. Manchester, son of John Bradley of Kirkby-in-Ashfield and his second wife—who in 1846 removed with their family to Brimington near Chesterfield. They were Congregationalists, and Henry adhered to the same denomination. He was educ. at Chesterfield Grammar School. He married in 1867, and soon had a considerable family. He wrote notes for the *Sheffield Independent*—chiefly on place-names, a subject upon which he soon became the recognised authority. He went to London in 1883, and became a contributor to the *Academy* and the *Athenaeum*. The editor of the former handed him for review the first instalment of James Murray's *New English Dictionary* (the great 'Oxford Dictionary'), and the critique he wrote induced Murray to invite him to join in the editorship. This he did not immediately do, but he was an early contributor. He was temporary editor of the *Academy*, Oct. 1884 to May 1885. He began editorial work on the great dictionary in Jan. 1888. Early in 1892 he broke down through overwork, and was sent to Norway, where he regained health; meanwhile he was granted a Civil List pension of £150, and £200 from the Literary Fund. In 1896 he removed to Oxford, where he devoted himself entirely to the dictionary, becoming editor-in-chief

on Sir James Murray's death in 1915. His chief original works are *The Story of the Goths*, 1887, and *The Making of English*, 1904; as editor he brought out sev. important works, including *Caxton's Dialogues* (Early Eng. Text Society), 1900, and a revision of Morris's *Elementary Lessons in English Grammar*. See his *Collected Papers*, with a memoir by Robert Bridges, 1928.

Bradley, James (1693-1762), astronomer, b. Sherborne. He entered Oxford in 1711, and became F.R.S. in 1718. He took orders in 1719, but resigned his benefice in 1721 in order to take up the professorship of astronomy at Oxford. His observations of the star γ Draconis from 1725 to 1728 showed that it described a small ellipse in the sky and he put forward his reasons for the phenomenon soon afterwards (see ABERRATION). Later on he explained also the phenomenon of nutation (q.v.). In 1742 he became astronomer royal. During the last 12 years of his life he did very valuable work in the observations of star positions.

Bradley, Katharine Harris, see FIELD, MICHAEL.

Bradley, Margaret Louisa, see WOODS.

Bradley, Omar Nelson (1893-), Amer. general, b. Clark, Missouri, educ. at the U.S. Military Academy, W. Point, and commissioned in 1915. He held a number of appointments, including that of secretary to the general staff, and in 1943, during the Second World War, he took command of the U.S. 2nd Corps in the N. African campaign, being present in the final drive against the Germans in Tunis. In this campaign he held the rank of lieutenant-general (temporary), and was given the permanent rank of major-general in Sept. 1944. In Jan. of that year it was announced by Gen. Eisenhower that B. was to lead the ground forces in the invasion of Europe, and throughout the fighting in Normandy, and subsequently, he commanded the U.S. Twelfth Army Group, which in Aug. was made independent of the Brit. Twenty-first Army Group, commanded by Gen. (later F.M.) Montgomery, thus giving the 2 commanders equal status. The U.S. Twelfth Army Group comprised the Amer. First, Third, Ninth, and Fifteenth Armies (see WESTERN FRONT IN SECOND WORLD WAR). B. was promoted full general (temp.) in 1945. K.C.B. (hon.), 1944; and succeeded Gen. Eisenhower as chief of staff of the U.S. Army in 1947, and served until 1949, when he became chairman, joint chiefs of staff. Retired 1953. He wrote *A Soldier's Story*, 1951.

Bradman, Sir Donald George (1908-), Australian cricketer, b. Cootamundra, New S. Wales. Educ. at Bowral Intermediate High School. He first played for Australia in 1928 against the M.C.C. team. At Sydney, in 1929-30, he beat previous records by scoring 452 not out in 415 minutes against Queensland. In the second innings of his first test in England at Trent Bridge (1930) he made 131, following with 254 at Lord's, 334 at Leeds, and 232 at the Oval. The Leeds innings

beat the record individual score in test matches between England and Australia which had been held by R. E. Foster since 1903-4 with 287 at Sydney. He led the Australian eleven against England in England in 1934, in Australia in 1936-1937, in England in 1938, in Australia in 1946-7, and in England in 1948. His test match average in 1946-7 was 97.14. In the 1938 season he made 13 cents. In 1938-9 he scored 6 consecutive cents. (a feat also accomplished by C. B. Fry in 1901). He is among the few cricketers to

Australian Government

DON BRADMAN

make 1000 runs before June, achieving the distinction in 1930 and again in 1938. His batting average of 115.66 in 1938 is the highest ever recorded in England. In his final season before retirement from test cricket (1948) at the age of 40, his aggregate was 2428, his highest score 187, his average 89.92, and in that season he scored 11 cents. In this last season he had the satisfaction of leading a team which sustained no defeats. Knighted 1949.

Bradshaw, George (1801-53), publisher, b. Pendleton, Lancs. He was in business at Manchester as a map-engraver and printer when the railway era began, and in 1839 he pub., at sixpence, the first of his *Railway Time Tables*. In 1847 he began his *Continental Railway Guide*. He was a member of the Society of Friends.

Bradshaw, Henry (c. 1450-1513), Benedictine monk and poet, b. Chester. He studied theology at Oxford, and then

returned to his monastery at Chester. His *De Antiquitate et Magnificentia Urbis Cestriae* is lost, but the *Life of St Werburgh*, largely a compilation, was pub. in 1521. It is written in Eng. 7-line stanzas.

Bradshaw, Henry (1831-6), scholar and librarian, b. London. He was educ. at Eton and King's College, Cambridge, of which he became a fellow, 1853. After a short scholastic career in Dublin he returned to Cambridge as assistant in the univ. library, where he compiled a catalogue of the MSS. His discovery in 1857 of the *Book of Deer* threw light on ancient Celtic language and literature. Another discovery was that of MSS. containing the earliest remains of the Waldensian language and literature. In 1868 he discovered 2 previously unknown poems—*Legends of the Saints*, and some lines on the *Siege of Troy*, which he found in a MS. of *Lydgate's Troye Books*. He was univ. librarian, 1867-86. His *Collected Papers* were pub. by F. Jenkinson, 1889. See memoir by Sir G. W. Prothero, 1888, and C. F. Newcombe, *Some Aspects of the Work of Henry Bradshaw*, 1905.

Bradshaw, John (1602-59), judge and regicide, b. Cheshire, and called to the Bar in 1627. He became of sufficient prominence in his native co. to be mayor of Congleton, and later recorder of the bor. He became prominent as a lawyer, and took part in a number of trials of importance during the period 1640 to 1647. In 1647 he was made chief justice of Chester and a Welsh judge. When Charles I was brought to trial, B. accepted the post of president of the court, putting aside all legal objections to the court, and refusing to allow Charles to speak in his own defence, and pronounced the death sentence on the king. After the execution of the king, B. became one of the prominent leaders of the Commonwealth. He was a staunch republican, and branded as illegal Cromwell's dissolution of the Rump Parliament. He was an opponent of Cromwell during the Commonwealth period, and was forced into retirement. B. was buried in Westminster Abbey, but his body was disinterred on the Restoration and publicly hanged.

Bradshaw, William (1571-1628), Puritan divine, educ. at Worcester, Ashby-de-la-Zouch Grammar School, and Cambridge. As tutor in the family of the Governor of Guernsey (c. 1595), he was influenced by Thomas Cartwright. Returning to England he preached in vills. near Cambridge. In 1601 B. became a lecturer at Chatham, but was suspended for heresy. A patron in Derbyshire helped him for a time; he was chosen lecturer at Christ Church, Newgate, 1605, but the bishop would not authorise him. In 1605 B. pub. *English Puritanisme*, supporting complete autonomy of individual congregations while advocating the duty of submission to civil authority. A Lat. version by Wm Ames (q.v.) spread these views abroad. B. got into trouble for them, and retired to Derbyshire. See Browne's *History of Congregationalism in Norfolk and Suffolk*, 1877; Gataker's life

in Clark's *Martyrology*, 1677; Neal's *History of the Puritans*, i. and ii., 1759; Barclay's *Inner Life of the Religious Societies of the Commonwealth*, 1876.

Bradstreet, Anne (c. 1612-72), Amer. poetess, b. probably at Northampton. Her father, Thomas Dudley, was steward to the Earl of Lincoln, and she was well educ., having 8 tutors as a child. She married Simon Bradstreet, an M.A. of Cambridge, in 1628, and in 1630 sailed with him to New England. In Massachusetts they lived first at Ipswich, then at N. Andover. In 1650 her vol. of poetry, *The Tenth Muse*, was pub. in London, rendering her America's first poetess. Her work is on the whole uninspired and unoriginal, though some of her later verses were more successful. See Helen Campbell, *Anne Bradstreet and Her Time*, 1890.

Bradwardine, Thomas (c. 1290-1349), Archbishop of Canterbury, known for his learning as 'Doctor Profundus.' A native of Sussex, he was educ. at Merton College, Oxford, where he rose to be doctor and prof. of divinity, and chancellor of the univ. He became famous as a lecturer and writer, especially against Pelagianism; he was also a mathematician. Having attracted royal notice, he was made chancellor of the London diocese and chaplain to Edward III, whom he accompanied during the Crécy campaign and the siege of Calais. Returning to England he was made prebendary and then archdeacon of Lincoln, and in 1349 Archbishop of Canterbury, but d. of the Black Death a few weeks later.

Brady, F. J., see AUSTRALIAN LITERATURE.

Brady, Nicholas (1659-1726), clergyman and poet, b. Bandon, Cork. Educ. at Westminster School and Oxford and Dublin Univs., he took orders, supported the Orange side in the revolution, and became chaplain successively to William III, Mary II, and Anne. From 1696 till his death he held a living at Richmond, and in 1699 he was made a D.D. of Dublin. He is best known for the metrical version of the Psalms which he made in collaboration with Nahum Tate (q.v.), and which gradually superseded the older version of Sternhold and Hopkins. B. also wrote a tragedy, *The Rape*, 1652, and some poems.

Bradycardia, abnormal slowness of the heart-beat. *Tachycardia* is the opposite.

Bradyodonts, Palaeozoic cartilaginous fishes with crushing teeth adapted for eating invertebrate shells. They were abundant in Carboniferous times, and their teeth are fairly common as fossils (e.g. *Petalodus*, *Deltodus*, *Psammodus*).

Bradypus, or **AI**, is the 3-toed sloth, an edentate mammal of the family Bradypodidae. It inhabits the forests of S. America. See SLOTH.

Braemar, dist. lying along the R. Dee, Aberdeenshire, Scotland, situated in the Grampians. It contains deer forests, and sev. castles and mansions, the chief being Balmoral and Abergeldie castles, and other royal residences. There are no tns: the largest vills. are Castleton

and Braemar, and Crathic. In this dist. the rebellion of 1715 broke out under the Earl of Mar.

Brag, game of cards, the interest of which depends on the ability of the player to 'brag' or bluff as to the contents of his hand. It is usually played for stakes, and is a predecessor of poker.

Braga, **Theophilo** (1843-1924), Portuguese statesman, philosopher, historian, and man of letters, and the first president of the Portuguese Rep. He was b. at Ponta Delgada (Azores) and educ. at the univ. of Coimbra, where he became head of a literary school. Later, in 1872, he was appointed prof. of literature in Lisbon. Early in life Senhor B. (whose philosophy was that of Auguste Comte, i.e., Positivist) entered politics, and by virtue of his integrity and ability became leader of the Republican party. He directed the armed rising of this party in Lisbon on 3 and 4 Oct. 1910. Being joined by the fleet in the Tagus and a portion of the garrison (led by non-commissioned officers), the rising was successful; the rep. was formally proclaimed on 5 Oct., young King Manuel fled, and the new regime was accepted by the rest of the country. B. was declared president of the provisional gov., a gov. which exercised a dictatorship for 6 months. President B.'s administration was characterised by strong anti-clerical action; the Jesuits were expelled, and clerical property was confiscated. On the adoption of a constitution and the election of a new chamber, B. retired from public life. However, after the troubles of the spring of 1915, when Arriaga resigned on May 27, B. was again called upon, and held the presidency until the election of Machado on Aug. 6. He then finally retired, and d. 28 Feb. 1924. B.'s literary output was voluminous, and includes poems, biography, and hist.—particularly literary hist. Among his better-known works are *Vision of the Ages*, 1864, *Literary Theocracies*, 1865, *The Portuguese People, Their Customs, Beliefs, and Traditions*, 1885, and *History of Portuguese Literature*, 1909-14.

Braga: 1. Dist. of NW. Portugal, in Minho prov. (q.v.). It is on the Atlantic coast, is bordered NE. by Spain, and is mainly agric. Area 1054 sq. m. Pop. 511,400.

2. (Anc. *Bracara Augusta*), city of Portugal, cap. of B. dist. It was one of the prin. tns of Lusitania (q.v.), and in the 5th cent. was the cap. of the Suevi (q.v.). It was subsequently in the hands of the Visigoths (see *GOTHES*) and the Moors (730-1041). There are Rom. remains, and parts of the medieval walls still exist. There is a splendid Gothic cathedral (12th-17th cents.). The Archbishop of B. is primate of Portugal. Leather goods, hats, and cutlery are manuf. Pop. 32,650.

Bragança, or **Braganza**, **House of**. This house was founded by Alfonso, a natural son of the Portuguese King John I (q.v.), in the earlier half of the 15th cent., the title being derived from the tn of the same name (q.v.). When Portugal in 1640

threw off the Sp. yoke through a bloodless revolution, the Duke of B. became King of Portugal as John IV. In 1807 Napoleon declared the throne empty, and John VI retired to Brazil until 1821, being succeeded in 1826 by his son Peter, the Emperor of Brazil. Peter, however, resigned the crown in favour of his daughter Maria, with whose death in 1853 the main Portuguese branch of the house terminated.

Bragança: 1. Dist. of NE. Portugal, in Trás-os-Montes e Alto Douro prov. (q.v.). It is generally mountainous, and is enclosed on the N. and E. by Spain, and on the S. by the Douro (q.v.). Area 2526 sq. m. Pop. 227,150.

2. (Anc. *Brigantia*; Rom. *Julio-briga*), tn of Portugal, cap. of B. dist. It is the seat of a bishopric, and gave its name to the House of B. (q.v.). There is a silk industry. Pop. 8000.

3. (*Paulista*), tn in the prov. of São Paulo, Brazil, 40 m. N. of São Paulo. Textile mills and agric. products. Pop. 12,760.

Braganza, **Catherine of**, see CATHERINE OF BRAGANZA.

Braganza, see BRAGANÇA.

Bragg, **Braxton** (1817-76), Amer. general, b. N. Carolina, trained in the military academy at W. Point, and served in the Seminole and Mexican wars, rising to the rank of lieutenant-colonel. From 1856 to 1861 he led a civilian life in Louisiana, where he was commissioner of public works. When the Civil war broke out in 1861 he was appointed brigadier-general, and soon after major-general, and served in the Confederate Army of the Mississippi, taking part in the battle of Shiloh, 1862. Soon after that he was placed in command of the W. Army, in succession to Gen. Beauregard, and invaded Kentucky, but was repelled by Buell. Later, he faced Rosecrans in a long and hard-fought campaign, 1862-3, in which at one time the Northerners were in great straits, but were relieved by Grant, who defeated B. at Chattanooga, Nov. 1863. The latter was now superseded, but acted as military adviser to President Davis until late in 1864, when he took part in the campaign against Sherman, which ended in the surrender of the S. Army. After the war he was appointed chief engineer to the state of Alabama. His death occurred suddenly at Galveston, Texas. See life by D. C. Seitz, 1924.

Bragg, **Sir William Henry** (1862-1942), physicist, b. Stonerise Place, Wlton, Cumberland, 2 July, son of R. J. B. He was educ. at King William College, Isle of Man; and at Trinity College, Cambridge—major scholar, 1882; third wrangler, 1884; first class in Part III of mathematical tripos, 1885. He was in Australia 1886-1908, prof. of mathematics and physics at Adelaide Univ. He was a member of the council of the S. Australian School of Mines and Industries from 1895, and of the council of the univ. from 1898. He was at Leeds Univ. as Cavendish prof., 1909-15; and then Quain prof. of physics, univ. of London, 1915-23. Elected F.R.S., 1906. With his son,

Wm Lawrence B., was awarded a Nobel prize for physics and Barnard gold medal of Columbia Univ. for work on X-rays and crystals. In 1928 he was appointed president of the Brit. Association, and from 1935 to 1940 he was president of the Royal Society; also director of the Royal Institution. K.B.E., 1920; O.M., 1931. His publs. include vols. of lectures, also papers contributed to the *Philosophical Magazine* and the *Transactions of the Royal Society*. Also, *The World of Sound*, 1920, *Concerning the Nature of Things*, 1925, and *The Universe of Light*, 1933.

Bragi, son of Odin and Freyja; Norse god of wisdom, poetry, and eloquence, named after him *bragur*. He wed Idhun, goddess of eternal youth. B. received slain heroes on their entry into Valhalla. At festivals, horns were drunk in his honour.

Braham, John (1777-1856), Eng. tenor, b. London, of Jewish family, his real name being Abraham. He first sang in public when only 10 years old. When his voice broke, he supported himself by pianoforte teaching, but after 2 years' voice training under Rauzzini at Bath, he reappeared at Drury Lane in 1796, in an opera by Storace, and many engagements were offered him. But the desire for further experience and study took him to France and Italy, where he had a long series of triumphs. Returning home in 1801, he was received with enthusiasm, and thenceforth reigned supreme in concert, oratorio, and opera. He wrote many songs, which had no great merit, but to which his singing gave wide popularity. One of them, 'The Death of Nelson,' is still known. His singing was remarkable for intense expression; Lamb (q.v.) speaks of this in one of his essays (*Imperfect Sympathies*).

Brahe, Tycho (1546-1601), Dan. astronomer, b. Knudstrup on 14 Dec., of aristocratic parentage, and educ. at the univ. of Copenhagen. He began to study the law, but his interest in astronomy was roused by the total eclipse of the sun which occurred on 21 Aug. 1560, and from that time forward he devoted himself to this science, becoming the greatest astronomer of his day. His first achievement was the radical correction of the Alphonsine and Prutenic tables (q.v.). This was while he was at Leipzig, and at Augsburg, on the evening of 11 Nov. 1572, he saw the new star in the constellation of Cassiopeia, which had been previously noticed by others but Tycho was the only one to observe it systematically and to speculate on its implications. According to Aristotelian philosophy no change could take place in the realm of the fixed stars, but now it seemed that the foundations of this philosophy were crumbling. Unable to find a parallax for the star, Tycho concluded that it could not be located in any of the lower spheres, and he announced his views about it in *De Nova Stella*, pub. in 1573. Although it was as bright as Venus when first seen, it continued to fade and by Mar. 1574 it was invisible.

This star thus brought fame to Tycho, and after further wanderings in Germany and Switzerland, King Frederick II of Denmark undertook the building, equipment, and maintenance of an observatory to enable Tycho to prosecute his astronomical labours. On the is. of Hven, or Hveen, was erected an 'astronomical castle,' called Uraniborg (city of the heavens), and an observatory was sunk in the ground named Stællborg (city of the stars). This was in 1576, and from that time till 1596 Tycho, under the protection of Frederick and his son, Christian IV, conducted a long series of painstaking observations, and enunciated the Tychoonic system of planetary motions, a system which sought to reconcile the old Ptolemaic and new Copernican systems. While here, Tycho was visited by many notable persons, including James VI of Scotland (afterwards James I of England), who wrote a poem in his honour. In 1596 B., who had ever been an object of the dislike of the majority of the members of his aristocratic caste, was deprived of his appointments and of King Christian's protection, and had to abandon his loved Uraniborg. In the summer of the next year he left Denmark with his wife and family, and at the end of 1598, in response to the pressing invitation of the Emperor Rudolph II, he estab. himself and his instruments at Benatky, near Prague in Bohemia. Here he was joined by the celebrated Kepler in Feb. 1600, and they laboured together till Tycho d., 24 Oct. 1601. Not the least among his many claims to immortality is the fact that with his observations, and acting on his advice, Kepler discovered his great laws of planetary motion. How thorough and accurate Tycho's observations were may be better appreciated when it is remembered that he d. just prior to the invention of the telescope. See also ASTRONOMY. See J. L. E. Dreyer, *Tycho Brahe: Scientific Life in the Sixteenth Century*, 1890; H. Macpherson, *Makers of Astronomy*, 1933.

Brahilov, see BRAILA.

Brahma and Brahminism. Brahma is the supreme being of the Hindu pantheon. He has 3 manifestations: Brahmā, Vishnu, and Siva, but, strictly speaking, all the other gods are merely manifestations of him, and were supposed to originate in him. Thus we read in the *Atharva-Veda*, 'All the gods are in Brahma as cows in a cow-house.' The other gods only achieved immortality when they were pervaded by him. He is, in fact, the generative power of the whole universe. His name is derived from the root *brih*, 'to expand,' and he denotes the universally diffused substance of life and created energy. Brahman (in the neuter) is simple, infinite being; when it passes into actual manifested existence it is called Brahmā; when it achieves world-growth it is termed Vishnu; and when it once more returns into simple being, Siva. All the other deities are merely manifestations of the neuter, Brahman. The fundamental doctrines of the Hindu religion gather round the Brahmin caste, and Brahminism is

practically interchangeable as a phrase with Hinduism. But the Brahmins are recognised as the highest caste in the Hindu religion—the caste of priests of the highest rank. In its ranks ceremonial purity and social exclusiveness are regarded as first essentials. Brahminism is not a body of theological dogmas, but an hereditary system of customary observances. See HINDUISM and INDIA.

Brahmanabad, ruined city N.E. of Hyderabad, Pakistan. It stood on an ancient course of the Indus, and its fortifications were 4½ m. in perimeter. Excavations suggest that everything is still *in situ*, as at Pompeii, so that probably the city was destroyed by some catastrophe which also changed the course of the river. Tradition declares that the gods destroyed it to punish the wickedness of a King Dholara, whose name occurs in the annals of 9 cents. ago.

Brahmanas, second of the 3 grand divs. of Vedic literature, being prose commentaries describing the ritual to be observed in sacrifices and worship by Brahmins. The oldest probably belong to about the 7th cent. B.C. The most important are *Altareya Brahmana*, attached to the Rigveda; *Chandogya Brahmana*, belonging to the Samaveda; and *Satapatha Brahmana*, belonging to the White Yajurveda.

Brahmaputra, riv. rising on the N. side of the Himalaya, in Tibet, about 100 m. from the source of the Indus. After flowing E. and S.E. along the N. of the range for over 800 m., during which it receives many tribs. both from N. and S., it turns southward, and after a long course through almost unknown mt. ranges, during which it has a fall of 7000 ft., it emerges into Assam, India. In Tibet it is generally known as the Tsangpo, in Assam it is called the Dihang. In Assam it is joined by large tribs., and thence flows down to the Bay of Bengal. Its outlet is in delta fashion, the delta becoming mingled with the delta of the R. Ganges. It has a total length of 1800 m., and is navigable up to Dibrugarh, 800 m. from the sea.

Brahmin, or **Brahmin Ox**, see ZEBU.

Brahmins, name given to the priests who form the first of the 4 great castes among the Hindus; they are the teachers of the doctrines of the Vedas (q.v.).

Brahmo Samaj, Theistic Church in India, owes its origin to Raja Ram Mohan Roy, one of the greatest men India has produced. He was b. in 1772 in the dist. of Baidwan, and mastered at an early age the Sanskrit, Arabic, and Persian languages. Having discovered the fallacies of the religious ceremonies practised by his countrymen, he impartially investigated the Hindu Shastras, the Koran, and the Bible, repudiated the polytheistic worship of the Shastras, and inculcated the reformed principles of monotheism as found in ancient Upanishads of the Vedas. He founded a society in 1816 consisting of Hindus. Texts were read and theistic hymns were chanted, but this society died owing to the antagonism of the orthodox Hindus. In 1830 he

organised a Hindu society of prayer meetings, which may be considered as the foundation of the present B. S. The ground-work of their faith was 'the worship of the eternal and immutable Being, who is the author and preserver of the universe, but not under and by any other name, designation, or title, peculiarly used for any particular being or beings by any man or set of men whatsoever.' The basis of the new faith was the Vedas. Soon after Raja Ram Mohan Roy set sail for England, and took up residence at Bristol, where he d. in 1833. The B. S. maintained a bare existence until 1841, when Babu Debendra Nath Tagore, head of a well-known Calcutta family, devoted himself to it. He gave a printing press to the Samaj, and *estab.* a monthly jour. known as the *Tattvabodhini Patrika*. About 1850 a schism took place on account of the discovery that the greater part of the Vedas was polytheistic. The advanced party had nature and intuition as the groundwork of their faith. Branch societies were founded in different parts of India, especially in Bengal, and the new Church made rapid progress. Some of the articles of the B. S. creed may be tabulated as follows: (1) The book of nature and intuition supply the basis of religious faith. (2) Although the Brahmos do not consider any book written by man as the basis of their faith, yet they do accept with respect and pleasure any religious truth contained in any book. (3) The Brahmos believe that the fundamental doctrines of their religion are also the basis of every true religion. (4) They believe in the existence of one supreme Being or God—a God endowed with a distinct personality, moral attributes worthy of his nature, and an intelligence befitting the governor of the universe, and they worship him alone. They do not believe in any one of his incarnations. (5) They believe that the religious condition of man is progressive like the other departments of his condition in this world. (6) They believe in the immortality and progressive state of the soul, and declare that there is a state of conscious existence succeeding life in this world, and supplementary to it as regards the action of the universal moral gov. The B. S. has thousands of members, and considerable progress is being made. There is a fine chapel in Calcutta.

Brahms, Johannes (1833–97), Ger. composer, b. Hamburg on 7 May. He received his first music lessons from his father, a poor double-bass player, studying afterwards under Marxsen of Altona. He appeared in public as a pianist at the age of 15, but continued his studies and composition without ceasing until 1853, when he went on a concert tour with Reményi, the Hungarian violinist. During this tour he made the acquaintance of Joachim, who recognising his genius, became his friend, and gave him letters of introduction to Liszt and Schumann, who both appreciated his work, the latter proclaiming him to be 'the coming composer.' In 1857 he was made director of the court concerts and choral

society at Detmold; this appointment he held for 4 years, with plenty of leisure for study and composition. In Jan. 1859, at the Leipzig Gewandhaus, he produced his piano concerto in D minor, a work so new and opposed to convention that at first it was a failure, but, played by Clara Schumann and others, it gradually won favour throughout Germany. In 1862 B. went to Vienna, which became his permanent residence. He d. there on 3 April 1897. Though his music was thoroughly classical in spirit, yet its form and treatment were so individual and presented so many new and difficult

E.N.A.

JOHANNES BRAHMS

problems that he was not generally understood or appreciated for many years. He refused to write opera, and only 2 of his leading compositions were inspired from without—the *Deutsches Requiem* by the death of his mother in 1863, and the *Triumphlied* by the Ger. victories of 1870-1. Many of his works were produced in pairs having some resemblance in form and expression; this is shown especially in his 1st and 2nd, and 3rd and 4th symphonies. His numbered works amount to 122, and the collections and studies without opus number fill sev. more vols. The greatest of Ger. composers of the later 19th cent. and a firm believer in 'absolute music,' B. regarded himself as the champion of classicism. Yet in his songs, chamber music, and symphonies he is a romanticist and the true successor of Schumann. In the earlier part of his career he wrote chiefly chamber music, and his first and second quartets for strings and piano are among

the most exhilarating chamber compositions in the repertory. B.'s sacred music (such as his *Requiem*) is full of restrained power, shown alike in the treatment of chorus and orchestra. Seldom passionate, B. abounds in sincere sentiment; he is often sombre, but never gloomy; he is rich in intellectual vigour, and almost always inspired. In any one of his symphonic movements all these moods are blended into a coherent artistic unity.

See M. Kalbeck, *Brahms* (Vienna), 1904; *Brahms: the Herzogenberg Correspondence* (Eng. trans.), 1909; J. A. Fuller-Maitland, *Brahms*, 1911; E. Evans, *Historical, Descriptive, and Analytical Account of the Entire Works of Johannes Brahms* (4 vols.), 1912-36; also studies by W. Murdoch, 1933, C. Geiringer, 1936, and P. Latham, 1948.

Brahui, one of the races of Baluchistan, near Pakistan. The B. are generally regarded as aboriginals, and they certainly occupied the country before the Baluchis, who have driven them into the mts, where they now live a nomadic life.

Braid, James (1795-1860), Scottish surgeon, b. Fife. His education in medicine was undertaken at Edinburgh. On the completion of his studies he practised as a surgeon in Manchester till his death. He inaugurated modern hypnotism, the word itself being introduced by him. See life by J. M. Bramwell, 1896.

Braidwood, Thomas (1715-1806), Scottish educationist; educ. Edinburgh univ. In 1760 he opened in Edinburgh a school for the deaf and dumb. It was successful, but was regarded very much as a curiosity. It was visited in 1773 by Dr Johnson. B. later came to London, where he d.

Brăila, or **Brahilov**, port of Rumania on the lower Danube; active industry and a chief outlet for Rumanian wheat. The grain wharves have a capacity of 300,000 tons, and prior to 1939 the harbour handled some 1,000,000 tons annually; there is steam communication with Constantinople. B. was captured by the Germans in 1916. In the Second World War it was captured by the Russians on 2 Sept. 1944. Pop. (1948) 96,000.

Braille, Louis (1809-52), Fr. teacher of the blind, b. Coupvray, near Paris, son of a saddler. At the age of 3 he damaged an eye with his father's awl and soon afterwards became blind. After some education at the Institut National des Jeunes Aveugles he became a prof. there. He invented the Braille system of reading by touch, using embossed dots. His system did not meet with general acceptance during his lifetime; he d. of tuberculosis at the age of 43. Dr T. R. Armitage, a blind London doctor, examined the Braille system in 1868 and worked long and successfully to estab. it for the Eng.-speaking blind. His enthusiasm led to the foundation of the National Institute for the Blind (1869) and the pub. of books and periodicals in Braille. B. pub. *Procédé pour Ecrire au Moyen des Points*, 1837. See **BLIND, Education and training**.

Braille Type, see **BLINDNESS AND THE BLIND**.

Brain, that part of the nervous system which is enclosed within the cranium and consists of the cerebrum, the cerebellum, the pons, the medulla, and the pituitary body. The average weight of the B. in man is some 50 oz. in the male and some 45 oz. in the female. It increases rapidly in weight up to the seventh year, then more slowly, and reaches a maximum between the ages of 20 and 30. The nervous system of the human body may be divided into 2 parts: (1) The sympathetic nervous system, consisting of nervous matter bound together by nervous cords and placed on either side of the vertebral column; (2) the cerebro-spinal nervous system, consisting of the B. and the spinal cord, which are continuous with each other. The systems are connected intimately with each other and together serve to co-ordinate the various parts of the body into a harmonious whole, all the functions of every part, whether exercised consciously or not, being dependent upon the proper action of the nervous system. The B. is composed of 2 substances, which are called white matter and grey matter, the former being chiefly made up of *nerve fibres* and the latter of *nerve cells*, which give rise to nerve fibre. Both kinds of matter lie in a matrix called the *neuroglia*, which therefore constitutes the supporting tissue of the B. matter. Nerve fibres are the conducting elements of the nervous system; the fibre consists of an axis-cylinder which is in many cases coated more or less thickly by a fatty substance called *myelin*. The nerve cells of the grey matter consist of protoplasmic nuclei from which certain processes proceed. The axis-cylinder process is in reality a nerve fibre, and the dendrites, or protoplasmic processes, branch out into a complexity of filaments, growing more and more attenuated as they proceed away from the nerve cell. The B. is surrounded by 3 membranes or *meninges* termed the *dura mater*, the *arachnoid mater*, and the *pia mater*. The *dura mater* is a dense fibrous membrane which adheres to the inner surface of the skull, and serves both as a feeding membrane for the bone and as an envelope for the B. The *arachnoid mater* is a thin and transparent membrane, separated from the *dura mater* by a minute quantity of fluid and from the *pia mater* by a space containing the cerebro-spinal fluid. The *pia mater* is a delicate membrane which follows the inequalities of the B. surface, dipping into all the fissures, and carrying the finer blood-vessels which proceed into the substance of the B. The B. itself, when viewed from above, presents an ovoid, or egg-like appearance. The parts then visible are the 2 cerebral hemispheres, separated by a groove from front to back called the *great longitudinal fissure*. Viewed from below, a short cylindrical portion at the rear communicates with the spinal cord. This is called the bulb or *medulla oblongata*, while above it but close to it is a white prominence called the *pons Varolii*. The closely packed mass at the rear is called the *cerebellum*. *Medulla oblongata* is the continuation

upwards of the spinal cord. It is about $1\frac{1}{2}$ in. long and 1 in. broad. At first its girth is the same as the cord; it becomes bilateral by shallow grooves anteriorly and posteriorly. As it thickens the anterior groove is crossed by bundles of nerves from each side, the formation being called the *decussation of the pyramids*. The groove is carried upwards to the pyramid, which expands up to the lower border of the pons Varolii, then becoming constricted as it disappears into the pons. Viewed from the side, the most prominent feature is the *olivary eminence*, about $\frac{1}{2}$ in. long, which marks the position of an underlying nucleus of grey matter. From behind, 2 swellings run parallel to the medial groove on each side. The inner one is called the *funiculus gracilis*, and the outer the *funiculus cuneatus*. The form ends in a prominence called the *clara*. The upper portion of the posterior area is occupied by the *restiform body*, a rope-like strand which links the medulla to the cerebellum. The medulla is composed of white matter on the surface and grey matter in the interior. The grey matter is, however, much broken up by fibres traversing it in all directions, thus constituting the *formatio reticularis*. The *pons Varolii* is a white prominence lying in front of the cerebellum. It consists of 2 parts: (1) The ventral or anterior portion, which corresponds to the pyramid of the medulla oblongata, which disappears into it, and the feet of the *crura cerebri* which appear to rise out of it; (2) The dorsal portion, which represents a continuation upwards of the *formatio reticularis*. The ventral part is made up of longitudinal and transverse fibres and the dorsal portion principally of grey matter. The *cerebellum*, or little B., lies behind the pons Varolii and the medulla oblongata and below the hinder part of the cerebrum. In front and behind there are medial notches which divide the lateral hemispheres. At the bottom of the notches appear a medial lobe which is called the *vermis*. A deep horizontal fissure divides the cerebellum into an upper and a lower portion. The upper surface is divided from before backwards into the *lingula*, the central lobule, the *culmen monticuli*, the *olivus monticuli*, and the *folium caecum*. These divs. cross both hemispheres and the *vermis*. On the under surface the *vermis* is divided from behind forwards into the *tuber valvulae*, the pyramid, the *uvula*, and the *nodule*. The hemispheres are divided from behind forwards into the *postero-inferior lobule*, the *biventral lobule*, and the *tonsil* or *amygdala*. The cerebellum consists of a central mass of white matter covered by a continuous layer of grey matter. The *cerebrum*, or great B., occupies the upper portion of the skull from front to back. It is connected with the parts that lie below by the *mesencephalon*, or mid B., about $\frac{1}{2}$ in. long. It consists of a dorsal part made up of the *corpora quadrigemina*, and a ventral part composed of the *crura cerebri*, 2 rope-like strands, apparently emerging from the pons Varolii. In the interior is a canal called the *aqueduct of*

Sylvius, leading from the fourth ventricle below to the third ventricle above. The cerebrum itself is divided from the cerebellum by a membrane called the *tentorium*. A deep longitudinal fissure divides it into 2 hemispheres, which are united below by a band of white matter, the *corpus callosum*. The surface of each hemisphere consists of grey matter and exhibits convolutions or *gyri*, separated from each other by depressions or *sulci*. In each hemisphere there are 5 lobes: the frontal, parietal, occipital, temporoparietoid, and central, or is. of Reil. The grey matter on the outside, or *cortex*, extends to a thickness varying from 2.5 mm. to 6 mm. The interior is composed of white matter, but there are certain deposits of grey matter imbedded in the basal part of each hemisphere. These are called the *corpus striatum*.

Functions of the brain. The B. in man constitutes the main portion of the central nervous system, which acts, as it were, as an exchange, co-ordinating the different nervous impulses, translating the effects of a stimulus into action, and, as far as we know, into thought. Physiology has nothing to do with what the psychologists call consciousness, except indirectly. The ways in which ideas are formed, memories linked and stored, are the concern of psychology, and no satisfactory parallelism has yet been estab. between psychological phenomena and physiological facts. Sensation, however, may be trans. physically as well as psychically, and a certain amount of localisation of function in the B. has been demonstrated as regards sensation and movement. The peripheral nervous system consists of threads of nervous matter which penetrate into the remote parts of the body. Some of those nerves serve to transmit impulses from their source to some central ganglion, or nervous mass, whence impulses are again sent forth to glands and muscles, resulting in secretions and movements. The nerves which carry the impulses to the central nerve-mass are called afferent nerves, and those which carry the departing impulses, efferent nerves. The impulses carried to and from the B., particularly those in connection with the vital organs, are not related to consciousness. With respect to many nervous impulses, however, a change in consciousness does take place. The impulses which come from the stimulation of the highly differentiated systems of nerve endings in the organs of sight, hearing, touch, taste, etc., cause particular phenomena which are usually referred to under the psychological terms of sensation. The efferent nerves then carry away impulses which may have no obvious relation to the impulse from the periphery. That is to say, a highly complex process seems to have been gone through which, in the language of psychology, we call thought. Whatever may be the particular nature of the nervous movements interposed between a mass of incoming nervous impulses and the subsequent departing impulses, it is fairly certain that the seat of those movements is the complex mass of fibres and nerve cells which

we call the cortex of the fore-brain. When this portion of the B. has been removed from animals, it has been found that they have no power of co-ordinating movements. Certain stimuli may still bring about appropriate reactions, but they do so invariably and without any adjustment to other circumstances. Now there are certain actions which are performed as reflexes, such as coughing, sneezing, breathing, and the actions of the internal muscles. Many of these, however, can be brought under control if necessity arises, e.g. a cough or a sneeze may be checked. With the fore-brain removed such reflexes are not checked, but occur more regularly and certainly than under normal conditions.

VERTICAL CROSS-SECTION THROUGH THE BRAIN

A, cortex, grey matter of the cerebral hemisphere; B, white matter of the cerebral hemisphere; C, fornix; D, third ventricle; E, lateral ventricle; F, pons Varoli, cut obliquely and showing fibres running from it and forming the crura cerebri; G, median fissure; H, convolutions (*gyri*); I, fissures (*sulci*); K, optic thalamus.

Many attempts have been made to connect various portions of the cortex with appropriate differences of function. One of the most interesting was the doctrine of phrenology, which sought to connect the various areas with so-called 'faculties,' such as music, love of humanity, etc. The complex nature of such 'faculties' is sufficient to condemn the hypothesis. On the other hand, experiment and observation have enabled us to connect certain areas with stimuli arriving from the eyes, the olfactory nerves, and the ear. There are also regions which seem to be intimately connected with movements of the leg, arm, tongue, mouth, neck, and body. Electrical stimuli applied to the appropriate point in the B. have been found to produce motions in the particular parts of the body associated with them. In general, it may be remarked that knowledge of the special functions of different parts of the B. is very scanty, and that though such knowledge has been of great use in localising injuries, etc., it has

thrown no particular light on the general problem of the connection between mind and matter.

Brain diseases. These may be the result of injury or organic disease; or, on the other hand, functional disturbances, whose causes may or may not be traced to a physical source. Because of the vital nature of the B. function and its intimate connection with the function of all other organs, lesions in it are apt to be far reaching in their effects. Furthermore, since the B. is enclosed in a rigid box, any lesion, such as a growth, which tends to occupy space must do so at the expense of the space available for the B. The resulting increase in intracranial pressure may cause symptoms far more severe than those due to the lesion alone. Concussion of the B. results from a blow on the head or a fall from a height. The symptoms may range from a feeling of giddiness to complete insensibility. Vomiting accompanies a return to consciousness, and there may be subsequent disturbance of the normal functions of the B., e.g. lapses of memory. A severe blow may cause a fracture of the skull, and injury to B. tissue as well as concussion. Tumours of the B. may be benign or cancerous in their nature. The B. is of course likely to suffer if the blood stream is in any way abnormal. If the supply of blood is too small, syncope or fainting results. If one portion of the B. is cut off wholly or partially from its blood supply, as in arterio sclerosis (q.v.) or hemiplegia (q.v.), it gradually undergoes softening as a result of malnutrition. The general effect of a deficiency of oxygen is lassitude and feebleness, while too great a quantity of carbon dioxide produces drowsiness and eventually causes convulsions. Poisons find their way to the B. in the blood stream. Some of these are produced by disturbed secretions in some other part of the body, and result in auto-intoxication, a condition which reacts strongly upon the state of consciousness. Alcohol and other drugs produce characteristic mental phenomena, and the result of lead-poisoning on the B. is to lead to loss of memory and general mental feebleness. Micro-organisms may be carried to the B., causing meningitis, or inflammation of the B. substance. The B. carries on its work by the aid of nutrient matter carried by the blood, and any over-stimulation or excessive exercise of its functions without proper rest and food causes fatigue and may be the precursor of a neurosis or other state of psychological instability. For diseases of the B., see ENCEPHALITIS; EPILEPSY; GENERAL PARALYSIS OF THE INSANE; HEMIPLEGIA; HYDROCEPHALUS; MENINGITIS; POLIOMYELITIS; PSYCHIATRY; PSYCHOPATHOLOGY; SCHIZOPHRENIA. See S. W. Hanson, *Anatomy of the Nervous System* (9th ed.), 1953, and H. Gray, *Anatomy* (31st ed.), 1954.

Brain Coral (*Meandrina*), coral with meandering, sinuous grooves on the surface, which look like the convolutions of the human brain. It is circumtropical in distribution.

Braine-l'Alleud, tn in the prov. of Brabant, Belgium; manufs. glass and cotton. Wellington's extreme right was posted here at the battle of Waterloo (q.v.). Pop. 12,900.

Braine-le-Comte, tn in the prov. of Hainaut, Belgium, 20 m. SW. of Brussels. It has cotton mills, dye-works, and breweries, and specialises in the production of flax. Pop. 10,600.

Brainerd, David (1718-47), b. in Connecticut. Educ. at Yale College, he was expelled for a statement concerning the religion of one of the masters. He began his missionary duties to the Massachusetts Indians in the same year (1742). He met with the greatest success in New Jersey. He d. after the pub. of his *Mirabilia Dei inter Indicos*, and *Divine Grace Displayed*.

Brains Trust, popular name given to any group of experts who meet together for the purpose of giving information on any subject put to them or finding authoritative answers to current problems. The term 'Brain Trust' was first used to designate a group of expert advisers, chosen from academic life, who assisted President Franklin Roosevelt in his campaign for the presidential elections in 1932, and later in the formulation of the 'New Deal.' The term gained further currency as the title of a broadcast programme inaugurated by the Brit. Broadcasting Corporation on 1 Jan. 1941 with Donald McCullough as question-master. The questions were not previously made known to the B. T. and the answers were impromptu. The idea has subsequently been developed to stimulate public discussion of topics of both general and technical interest.

Braintree: 1. Mkrt tn of Essex, England, 11½ m. from Chelmsford. The church dates from the 13th cent. There are engineering works, and textile factories with manufs. of silk and *crêpe*. Pop. 17,520.

2. Tn in Norfolk co., Massachusetts, U.S.A., 10 m. SSE. of Boston. Granite is found in the neighbourhood, and there are manufs. of shoes, abrasives, petroleum and rubber products, paper boxes, and a bleaching industry. B. was the bp. of John Adams, second president of the U.S.A. Pop. 23,200.

Braising, see COOKERY.

Braithwaite, John (1797-1870), engineer. He ventilated the House of Lords by air-pumps, 1820; devised the donkey engine, 1822. He cast the statue of the Duke of Kent, which was set up in Portland Place. B. constructed the first practical steam fire-engine, and with Ericsson built for the Stephenson's the locomotive engine 'Novelty,' the first to run a mile a minute, 1829. With Vignoles he projected and laid out E. Cos. railway, 1836-43. He and Ericsson fitted a canal boat with a screw propeller. This went from London to Manchester by means of canals, and back by the Thames. With Robertson he was joint founder of the *Railway Times*, 1837. He became F.S.A. in 1819; M.I.C.E. in 1838. Wrote *Supplement to Capt. Sir John Ross's*

Narrative of a Second Voyage in Search of a North-West Passage. See *Mechanic's Magazine*, xli, 1830, and *Minutes of Proceedings of Institution of Civil Engineers*, xxvi, 1871.

Braithwaite, Dame Lillian (Mrs Gerald Lawrence) (1873-1948), actress, b. Ramsgate, daughter of J. M. B., vicar of Croydon, educ. at the high schools of Croydon and Hampstead, and in Dresden. Minor parts in Benson's season at the Comedy Theatre in 1901 were followed by a tour with George Alexander, who engaged her for the St James's Theatre. There she acted in Esmond's *The Wilderness* and Stephen Phillips's *Paolo and Francesca*, establishing her reputation in W.-end comedy. In 1908 she acted with Cyril Maude in *The Flag Lieutenant* and, in 1913, with Matheson Lang in *Mr Wu*. Among her outstanding parts were those of Mrs Errol, the innocent young widowed mother, in *Little Lord Fauntleroy*, 1914, the vacillating wife in Clemence Dane's *A Bill of Divorcement* in 1921, the parasitic mother in Mr Sidney Howard's *The Silver Cord*, and one of the old sisters in the very successful play *Arsenic and Old Lace*, 1942-6. Though she occasionally returned to Shakespeare, e.g. as Portia in *The Merchant of Venice*, 1916, and as Virgilia, the appalling wife of Coriolanus, most of her long succession of roles were in modern comedy, in which her dominant quality of womanly sweetness found full expression. She also acted for the cinema. D.B.E., 1943.

Brake, see BRACKEN.

Brake, Ger. port on the Weser (q.v.), in the Land of Lower Saxony (q.v.), 82 m. NW. of Hanover (q.v.). It was the chief port on the Weser until the founding of Bremerhaven (q.v.), and was the first base, in 1848, of the Ger. fleet. It has a shipbuilding industry. Pop. 17,000.

Brake, also spelled 'break,' appliance to stop or retard the motion of a body by the use of a resistance which absorbs part of the energy of the body. The need for contrivances for controlling the speed of machinery of all kinds has led to the invention of many kinds of B.s. Simpler types in common use are the block B., the slipper B., and the band B. The block B. consists of a block of wood which, on being pressed against the rim of a wheel, retards its motion. In the case of the ordinary wagon the force is applied by the foot of the driver pressing on a treadle which is connected by a system of levers to the brake-block. In the case of heavier wagons, the force is applied by means of a wheel and screw. The slipper B. is commonly used on heavy vehicles when descending hills, and consists of a metal skid or slipper into which one of the wheels fits, and is thus prevented from revolving. The increased friction retards the motion of the vehicle. The band B. is used in the case of machines such as winches and cranes, and consists of a band passing round a circular drum fixed to the shafting of the machine. On tightening the band the friction retards the motion of the machine. In the *hydraulic* B. the retarding force is the

pressure exerted by the water in a cylinder from which its escape can be regulated. This type of B. is used in elevators and other machines worked by hydraulic power. Electric B.s are now much used on electric tramway systems. When a tramway car is travelling at high speed, and the current is cut off, the momentum of the car drives the motors as dynamos and thus produces a current which is made to excite electro-magnets to which are connected metal shoes. The metal shoes becoming magnetised are attracted to the metal rails above which they are fixed, and the friction between shoe-pieces and rails retards the motion of the car. *Motor-car brakes*, see MOTOR CARS.

Railway brakes. The high speeds attained on modern railways have necessitated the construction of extremely powerful B.s.

Westinghouse brakes. It is essential that a B. for use on a modern railway train should be continuous, automatic, and quick in action; the use of such a B. is in fact enforced by law. Unless a B. can be continuously applied throughout the length of the train collisions between the rear and front carriages will occur when the latter are suddenly brought to a stop. Moreover, it is evident that a B. which can be caused to act on the wheels of each vehicle is much more powerful than one which only operates on those of the end cars. It is necessary for the B. to be automatic in order that it may at once come into action should an accident such as the uncoupling and breaking away of a coach occur. The modern Westinghouse B.s possess all these essential qualities. The 2 kinds at present in use are the air-pressure B. and the vacuum B. In both types the B.s are applied by air pressure, regulated by means of a train-pipe which runs the whole length of the train. In the case of a coach becoming accidentally uncoupled the resulting rupture of the train-pipe causes an alteration of the air pressure, which automatically causes the B.s to be applied. The original form of air-B. invented in 1869 by George Westinghouse was not automatic and has been superseded by an automatic type.

Westinghouse automatic air-brake. Invented in 1879. Compressed air is stored by means of a pump on the engine at a pressure of about 80 lb. per sq. in. This reservoir is in connection with a train-pipe. Under each vehicle is placed a small air reservoir and a triple valve which controls the admission of air to the B. cylinder. In the triple valve is a small cylinder and piston which will be caused to move by any alteration in the pressure of the air in the train-pipe. Since the movement of this piston determines the admission of air from the storage cylinder to the B. cylinder, the action of the B. is affected by variations in the pressure of the air in the train-pipe. The latter is in turn regulated by the valve in the engine cab connecting with the large reservoir of compressed air. Under normal conditions the triple valve closes the communication between the

B. cylinder and air reservoir, and hence keeps the B. out of action. To apply the B. the air pressure in the train-pipe is reduced by the driver at one end of the train or the guard at the other operating a valve. The reduction of pressure in the triple valve causes a motion of the small piston in the valve, which results in the opening of the top port. This causes some of the compressed air to enter the B. cylinder, resulting in motion of the piston which operates the B.s. When the air pressure in the auxiliary air chamber has become less than that in the train-pipe the air in the B. cylinder is automatically shut in, and the pressure of the B. shoes on the wheels is sustained. Thus the power with which the B. is applied depends upon the extent to which the pressure in the train-pipe is reduced. To release the B.s the engineer operates a valve whereby the train-pipe is again put into communication with the main reservoir of compressed air underneath the engine cab. The increased pressure in the triple valve causes a motion of the valve-piston which results in the compressed air in the B. cylinder being allowed to escape into the atmosphere. The resulting motion of the pistons releases the B., while at the same time the air from the train-pipe is enabled to pass into the auxiliary storage chamber and to recharge it ready for another application of the B.s. Now if through the accidental breaking of a coupling or some other cause one of the junctions of the train-pipe is ruptured, the air pressure within the pipe will be reduced to atmospheric pressure, the triple valve will operate as above, and the B.s will be automatically applied, bringing the coaches to a standstill. Moreover, if part of the apparatus becomes defective, resulting in a leakage of the compressed air, attention is at once called to this by the automatic application of the B. In an improved arrangement, when a large reduction is made in the air pressure in the train-pipe, the escaping air is vented straight into the B. chamber. The venting of the train-pipe under each coach is greatly accelerated, with the result that the B.-blocks are applied nearly simultaneously throughout the length of the train.

Westinghouse automatic brake improved triple valve is a valve which gives a closer approach to simultaneous action to all the triple valves in a train than most previous designs. A further improvement, also making for smooth and even action, consists of a removable plug, perforated with a series of holes always kept open, and an additional hole carrying an automatic check-valve supported by a spring. It is so arranged that when the B.s are first set, the automatic valve is opened against the spring resistance by the excess of air pressure above it, so that the larger of the open holes control the rate of flow of the air to the B. cylinder; as the air pressure on the under side of the valve increases, the spring closes the valve, when the smaller of the open holes control the rate of flow to the B. cylinder.

Vacuum brake. When this B. is in use a train-pipe exists as in the case of the air-pressure B. By means of an ejector or air-pump operated by the engine-driver, a vacuum of about 20 in. of mercury is obtained in the train-pipe and in the vacuum chambers which are fixed under each vehicle. The space in the B.-cylinder above the piston-rod is also kept a vacuum, as it is in direct communication with the vacuum chamber and train-pipe. The B. is applied by allowing air to enter the train-pipe, whereby an alteration of the pressure in the B.-cylinder results in a motion of the piston controlling the application of the B.-blocks. If through an accident a breakage of the train-pipe is caused, air at atmospheric pressure is introduced which automatically causes the application of the B.s. The maintenance of the required vacuum is essential to the working of the B. For this purpose vacuum gauges registering the difference between the pressure of the air within the vacuum chambers and that of the atmosphere are fixed inside the engine cab and the guard's van. By means of the ejector the reading is never allowed to indicate less than a certain minimum number of inches of vacuum. Passenger trains are usually operated at 20-in. vacuum, but a few railways use 24-in. vacuum, and freight trains 20-in., or 16-in. on long trains, where the high vacuum is difficult to maintain. B. cylinders are either of the combined type, with the vacuum chamber forming the outer casing of the cylinder, or separate type with an independent vacuum chamber. In the former case, the cylinder is connected to the B. pipe by a single branch valve, and in the latter case a double branch is used, the second branch connecting the vacuum space above the piston with an independent vacuum chamber.

Brakelonde, see JOCELIN DE.

Brackenbury, Sir R., see BRACKENBURY.

Brama, genus of percormorph fishes. They are large fishes, of bright colour. *B. rafi*, Raf's bream, is 1 to 2 ft long, of deep blue colour, with a large and forked tail. It is widely distributed over the warmer parts of the ocean.

Bramah, Joseph (1748-1814), inventor and engineer. He was the son of a Yorkshire farmer, but owing to an accident was unable to work on a farm. He was apprenticed to a cabinet-maker, and later started in business on his own account. His most famous invention was that of the lock which bears his name, the patent for which was taken out in 1778. Seven years later he patented the hydraulic press (q.v.). He designed a machine for the Bank of England which printed and numbered banknotes. He invented a number of other things, including machinery for the manuf. of aerated waters, and a paper-making machine. He suggested the locomotion of ships by means of screws in 1785.

Bramah Press, see HYDROSTATICS and HYDRAULIC PRESS.

Bramante, Donato (c. 1444-1514), It. architect, b. Urbino. He was apprenticed

to Fra Bartolommeo as a painter and worked in Milan from c. 1480 to 1499, when he moved to Rome. About 1482, he turned from painting to architecture. In that year he began the church of S. Satiro and in 1492-7 built the apse of S. Maria delle Grazie—both in Milan. In Rome he designed the beautiful circular 'Tempietto' adjoining the church of S. Pietro in Montorio, 1503; and the cloister of S. Maria della Pace, 1504. He also had some share in designing the Cancelleria Palace, finished in 1511. Pope Julius II employed him c. 1504 to remodel the rambling complex of buildings that formed the Vatican palace and the Belvedere, which he achieved by two long galleries enclosing a court. Owing, however, to the impatience of the Pope and B.'s zeal in trying to meet his wishes the design was not finished before the death of both the Pope and B. himself. The foundations were defective, and much of the work had to be done again. B. was also commissioned by Julius to begin the great task of rebuilding St Peter's. His designs were completed, and he worked with such celerity that before he died he had built the 4 great piers and vaulting the arches, besides the cornice and vaulting of this portion. After his death, however, his design was considerably altered by his successors.

Bramantino (c. 1450-1536), It. painter, real name **Bartolommeo Suardi**, probably b. Milan, where he studied under Foppa of Brescia, Leonardo da Vinci, and especially under Bramante (q.v.) (hence his nickname). When the latter left Milan in 1499, B. succeeded to his position. In 1525 he was made architect and painter to Francesco Sforza II. His chief oil paintings are all sacred, the 'Holy Family' and 'Crucifixion' in the Brera Gallery and 'The Dead Christ' in the church of San Saporito being examples.

Brambanan, or **Prambanan**, region in Surakarta prov., Java, with many specimens of Hindu temples which are characterised by an absence of mortar in their construction. Of these edifices the most imposing is a cruciform temple whose various extensions form a square of upwards of 500 ft to the side.

Bramber, par. of Sussex, England, on the R. Adur, formerly a port. Here are the ruins of B. Castle, with the remains of a Norman gatehouse; the church of St Nicholas was built originally as a chapel to the castle and dates from about 1075. Pop. 440.

Bramble, see **BLACKBERRY**.

Brambling (*Fringilla montifringilla*), bird related to sparrows, finches, and buntings. It greatly resembles the chaffinch, but is larger, and it inhabits many parts of Europe and Asia. It is known also as the bramble finch, or mt finch.

Bramhall, John (1594-1663), Irish clergyman, educ. at Sidney-Sussex College, Cambridge. He was rapidly advanced in the Church, and in 1633 went to Ireland with Wentworth. He was imbued with the strength of mind of his master, and his Church policy in Ireland destroyed the chances of the Royalists in Protestant

Ulster. He crossed over to England on the outbreak of the Civil war, and after the death of the king took refuge on the Continent. After the Restoration he became Archbishop of Armagh.

Bramham, vil. of the W. Riding of Yorks, England, not far from Tadcaster. Near by the Percys were defeated at the battle of Bramham Moor in 1408. Pop. 1400.

Brampton, Baron, see **HAWKINS**, SIR H. **Brampton**: 1. Anc't mkt tn in Cumberland, England, 9 m. ENE. of Carlisle. The remains of an Early Eng. church contain an interesting crypt. It is a rural centre, and has a sheet-metal industry. Pop. 3000.

2. Co. tn of Peel co., Ontario, Canada, an important railway junction 20 m. NW. of Toronto. It is particularly noted for its horticult. nurseries and greenhouses. Pop. 11,165.

Bramwell, Sir **Byrom** (1847-1931), physician, b. N. Shields, son of a physician, educ. at Cheltenham College, Edinburgh, and Paris. He qualified in 1869, M.D. 1877. He assisted his father in practice at N. Shields and in 1872 was appointed lecturer in medical jurisprudence at Durham College of Medicine, Newcastle. He began to practise as a consultant in Newcastle in 1874 but moved to Edinburgh in 1879. He was appointed pathologist to Edinburgh Royal Infirmary in 1882, assistant physician in 1885, and physician in 1897. B. made his scientific reputation in the fields of neurology, diseases of the cardiovascular system and the blood, and in endocrinology. He was president of the Royal College of Physicians of Edinburgh in 1910. He was a versatile sportsman, a man of tireless energy and strong physique. He was knighted in 1924. He wrote *Diseases of the Spinal Cord*, 1882, *Diseases of the Heart and Thoracic Aorta*, 1884, *Intra-cranial Tumours*, 1888, *Anaemia and Diseases of the Blood-Forming Organs*, 1899, *Atlas of Clinical Medicine* (3 vols.), 1892-6, and *Clinical Studies* (8 vols.), 1902-10.

Bramwell, Sir **Frederick** (1818-1903), engineer. He set up for himself in 1853 as a consulting engineer. As an advocate and expert witness in the law courts and parl. committee rooms he was unsurpassed, and his services as adviser and arbitrator were in constant request. He took a leading part in many scientific societies, and was chairman of the City and Guilds Institute, and of the Inventions Exhibition, 1885. He was on the council of the Royal Society, and in 1888 president of the Brit. Association.

Bramwell, George William Wilshire, Baron (1808-92), judge, b. London. He became a barrister in 1838, and went on the home circuit. Q.C., 1851; knighted in 1856; judge, 1876. At his suggestion the word 'limited' was added to the titles of companies that want to limit their liability. He was partly responsible for the Companies Act, 1862. Granted title Baron B., 1882. Sound law, common sense, and clear expression marked his judgments. See *Fairfield's life*, 1898.

Bramwell, John Milne (1852-1925), physician, b. Perth, educ. at Perth and Edinburgh Univ. (M.B., 1873). After a year's travel he practised for some time at Goole, Yorks. Became noted after 1889 for his pubes. on hypnotism, and his treatment by suggestion. Among his works are *James Braid, Surgeon and Hypnotist*; *Hypnotism in the Treatment of Insanity and Allied Disorders*; *Hypnotic Anaesthesia*; *Dipsomania and its Treatment—by Suggestion*; *Hypnotism and Treatment by Suggestion*.

Bran, Celtic mythological figure, often alluded to as the Blessed, son of Llyr. His sphere was that of the poetical and musical arts, and he was represented as being of gigantic height. In later times he was regarded as a saint who had brought the cross from Rome to Britain, and is an instance of how the early Church was successful in metamorphosing heathen deities into 'saints.' Hence his title of the Blessed. An ant. Welsh poem states that his head was buried under the White Tower of London, the eyes looking towards France, as a spell against foreign invasion, but Arthur disdained to take advantage of magic in guarding his kingdom, and had the head exhumed.

Bran, husk of wheat and other grain. In bread manuf. the B. is separated from the fine flour, while in the preparation of brown bread it is included as an ingredient. Its composition of water 13 per cent, protein equivalent 9.9, and starch equivalent 42.6, gives it some nutritive value in addition to which it has a valuable laxative effect. It is also used in making cattle foods, and in cleaning goods in dyeing works.

Brancaaster, fishing vil. and par. of Norfolk, England; near by is Scott Head, a range of sand dunes forming a bird sanctuary belonging to the National Trust. Pop. 1000.

Branchiae, see GILLS.

Branchidae, priestly family of Asia Minor, claiming descent from Branchus, son of Apollo, guardians of Apollo's temple and oracle at Didyma, near Miletus. The Brit. Museum contains seated statues that once bordered a sacred way to the temple. See Herodotus, i. 157, vi. 19.

Branchiopoda (Gk *brachia*, gills; *pous*, foot), a group of crustacea with sev. pairs of limbs which are leaf-like or lobed in form, so that the order is also known as Phyllopoda (Gk *phyllon*, a leaf). They are usually to be found in fresh water, and never in the sea, though occasionally they inhabit salt lakes (e.g. *Artemia*, the brine shrimp). The best-known member is *Daphnia*, the fresh-water flea, belonging to the sub-group Cladocera.

Branchiostoma, name given by Costa in 1834 to a curious creature he found on the Neapolitan shore. Two years later it was rediscovered by Yarrell, described in his *History of British Fishes*, and is now known by the name he gave it of *Amphioxus* (q.v.).

Brancker, Sir William Sefton (1877-1930), Eng. soldier and military aeronautical officer. Son of Col. W. G.

Brancker, Royal Artillery. Educ. at Bedford and the Royal Military Academy, Woolwich. Began army career as a lieutenant in the Royal Artillery in 1896 and served in the S. African war (1902). Trained in aviation 4 years before the First World War, on the outbreak of which he was appointed deputy director of military aeronautics. Carried out a flight to India during the First World War. In 1918 he was appointed controller-general of equipment and director of personnel on the Air Council; later director of civil aviation in the Air Ministry and undertook many flights on official missions. Killed in disaster to *Le101*, Oct. 1930. See life by N. Macmillan, 1935.

Brancovan, Constantin (1654-1714), Rumanian noble of the family of B., or Brancoveanu, which originally came from Serbia. He became Prince of Wallachia in 1688 after assisting Turkey in the Austrian war of 1690. Thereafter he managed by astute diplomacy to remain neutral and to maintain his own position, until, clearly compromised in his dealings with Russia, he was deposed and beheaded by the Turks, 1714. His death has been made the subject of numerous Rumanian popular ballads. With his encouragement Wallachia became during his reign a printing centre for the Orthodox E.

Brancovich, George, see BRANKOVICH.

Brancusi, Constantin (1876-1957), Rumanian sculptor, who studied at Cracow and Bucharest, and had guidance from Rodin (q.v.) in Paris. He is noted for his simplification of bird and fish forms, and as the pioneer, since 1907, of abstract sculpture.

Brand, Henry Bouverie William (1814-1892), 1st Viscount Hampden and 23rd Baron Dacre, politician, educ. Eton. He became private secretary to Sir George Grey in 1846, and entered Parliament in 1852 as Liberal member for Lewes. In 1872 he was elected Speaker without opposition, and re-elected in 1874 and 1880. The most remarkable event in his speakership was when, on 2 Feb. 1881, he closed the debate on the Coercion Bill, on his own authority, after a 41-hr sitting. He was raised to the peerage in 1884.

Brand, Sir Jan Hendrik (1823-38), S. African politician, b. Cape Town, son of Sir H. C. B., speaker of the Cape House of Assembly. He entered the law. In 1863 he became president of the Orange Free State, and was 4 times re-elected: in 1869, 1874, 1879, and 1886. In 1876 he visited England to attend the conference to discuss the estab. of a S. African Confederation. B. opposed the scheme, which failed. At the beginning of the war between the Transvaal and Great Britain in 1880, B. preserved a neutral position, and acted as one of the mediators at the peace conference in 1881.

Brand, John (1744-1806), antiquary, b. Durham. He received his education at the local grammar school, after which he was sent to Oxford by the aid of friends. He took holy orders there and became rector of 2 pars. in the city of

ought to owe all their colour and half their taste to the wood. In Armagnac they are stored in casks of the native black oak in which they mature far more quickly than Cognac. In Cognac the blending of *eaux-de-vie* of various years from various dists. within the region is a fine art, and it is becoming more and more difficult to find that perfection of Cognac, distilled from the wines of a single outstanding year grown in the very heart of the region, which has a right to the name Champagne. In Armagnac, on the other hand, the proprietor of each vineyard makes his own B., for there is little big business and there is a wonderful variety of really fine B. to be found. Armagnac gains colour from its black oak so quickly and its flavour is so rich that it needs neither sweetening nor colouring matter. Most blended Cognacs are coloured and sweetened by minute doses of caramel which obscure their bouquet and flavour. Napoleon B.s are patent frauds, since they profess to have been bottled in the time of the emperor and the spirit merely goes down-hill without improving in a bottle. See A. Baudouin, *Les Eaux-de-vie et la fabrication du Cognac*, 1893; H. Warner Allen, *White Wines and Cognac* (with a notice of Armagnac), 1952, and *Through the Wineglass*, 1954.

Brandywine Creek, stream rising in Chester co., Pennsylvania. It flows into the Delaware R., and finally empties itself into Christina R. at Wilmington. A battle was fought on its banks during the Amer. War of Independence in 1777.

Brangwyn, Sir Frank (1867-1956), painter, b. Bruges. He worked under Wm Morris at 15, then went to sea. His frequent travels in the E. greatly influenced his artistic development. Rich colouring and well-balanced design mark his decorative panels and frescoes for the Royal Exchange, Lloyd's Registry, Skinners' Hall, and the chapel of Christ's Hospital School. Italy, Germany, America, and Australia also possess specimens of his work. B. also made designs for book decoration, pottery, tapestry, and furniture, and many etchings and water-colours. He became A.R.A. in 1904. In 1925 the nation received an offer from Lord Iveagh of £20,000 for the decoration of the royal gallery in the House of Lords by a series of paintings by B. B. began painting a number of great panels, 5 of which were placed in the gallery; but in 1930 the House of Lords decided by 55 votes to 11 to reject the panels, apparently on the ground that the paintings, though highly meritorious, were not in keeping with the restrained dignity of the gallery. They are now in the Guildhall, Swansea. Awarded the gold medal of the Berlin Academy in 1912. President of the Royal Society of Brit. Artists from 1913 to 1918. Elected R.A. in 1919. Member of the Legion of Honour. Awarded the Albert Medal of the Royal Society of Arts, 1932. Knighted, 1941. The works of this world-famous artist are widely distributed and there is a B. Museum at Bruges. A comprehensive exhibition of his work was held at the Royal Academy

in 1952. Pubs.: *Belgium*, 1916, and *The Way of the Cross*, 1935. See W. De Bellerocche, *Brangwyn's Pilgrimage: Life Story of an Artist*, 1948.

Branlewo (Ger. Braunsberg), tn of Poland, in Olsztyn prov., 51 m. NNW. of Olsztyn (q.v.). It is on the R. Pasieka, 4½ m. from its mouth on the Vistula lagoon (q.v.). B., which was the chief tn of Ermeland (q.v.), was a stronghold of the Teutonic Knights (q.v.) in the 13th cent. In 1466 it was taken by the Poles, and in 1772 it went to Prussia. During the Second World War it was very severely damaged, and before being again made part of Poland in 1945 was evacuated by its Ger. pop. Pop. 2800 (1939, 21,142).

Brankovich, George (c. 1367-1457), Prince of Serbia from 1427, when he succeeded his uncle, Stephen the Tall. He was driven into Hungary by Sultan Murad II in 1437. After a period of exile, he organised an expedition against the Turks, under himself, the Hungarian, Janos Hunyadi, and Wladislas of Poland. Murad asked for a 10-year truce, offering excellent terms, which were accepted. But on receiving news that a Venetian fleet was about to attack Murad, the allies broke their agreement and marched S. B., fearing Muslim vengeance, sent secret intelligence to Murad, and also dissuaded Albania from joining the league. Murad consequently won the battle of Varna (Nov. 1444), Wladislas being killed and Hunyadi narrowly escaping. B. was allowed to keep his principality.

Branks, scolding-bridle. It was an instrument consisting of an iron hoop with hinges at the sides and fashioned to enclose the head. An arrangement in front rendered speech impossible; in some cases a knife was used, so that the slightest movement caused great pain. Any woman guilty of a petty breach of the peace was formerly marched through the streets by the bridle with the B. upon her head, making herself a subject for the insults and jeers of the populace.

Branksea, see BROWNSEA.

Branksome, part of the bor. of Poole (q.v.), Dorset.

Brankursine, see ACANTHUS.

Brantly, Edouard (1844-1940), Fr. physicist, inventor of the coherer (q.v.), used as detector in early experiments on electromagnetic waves.

Brant, Joseph (1742-1807), chief of the Mohawk Indians. He assisted the Brit. during the Indian and revolutionary wars. His energies were quite as indefatigably exerted on behalf of peace in later years. He became a zealous Christian in his later life, and trans. the Book of Common Prayer and part of the Bible into Mohawk. He visited England for the purpose of raising money on behalf of the erection of the first episcopal church in Canada in 1786. A monument is erected to his memory at Brantford, Ontario.

Brant, or Brandt, Sebastian (1458-1521), Ger. poet and satirist, b. Strasburg. He studied at the univ. of Basel, where he distinguished himself, afterwards becoming a prof. there. He returned to

Strasbourg to practise law in that tn. and was honoured by the Emperor Maximilian, being made count palatine. Among his writings are Lat. poems and treatises on law. But his best-known book is *Das Narrenschiff* (The Ship of Fools), pub. in 1494, written in rhymed couplets, with 110 fools representing the follies of the age. Although devoid of artistic beauty of structure, and though the satire is often coarse, the work appealed to popular taste. It is supposed to have given Erasmus the idea for his *Praise of Folly*. The *Narrenschiff* has been trans. into most European languages. Alexander Barclay's *Shippe of Fools*, 1509, is a free trans. in verse; and an abridged prose trans. was pub. by Henry Watson in 1517. See Rajewski, *Sebastian Brant*, 1944.

Brantford, cap. of Brant co., Ontario, Canada, 24 m. W. of Hamilton and 30 m. N. of Port Dover harbour on Lake Erie. It is the site of His Majesty's Chapel of the Mohawks, the first church built in Ontario. The city has a collegiate institute and vocational school and many primary or public schools, a well-equipped general hospital, 51 churches, a fine public library, 4 parks. Here is the Prov. School for the Blind. The chief industries are agric. machinery and implements, textiles, binder twine, mining and wood-pulp machinery. B. is the centre of a very rich agric. dist. It is on both the Canadian National and Canadian Pacific railways and has a modern airport. Its residential dists. along the Grand R. are the largest in S. Ontario. B. has developed from land given by the Six Nations Indians in 1830 from the 'reserve' given to their leader, Joseph Brant (q.v.), in 1784 by the Brit. Gov. to recompense them for their homes abandoned in the Mohawk Valley, New York State, during the Amer. Revolution. Sometimes called 'the telephone city,' from the fact that it was here that Dr A. G. Bell invented the telephone in 1874. Pop. 49,856.

Branting, Karl Hjalmar (1860-1925), Swedish statesman, b. Stockholm, and educ. at Uppsala (Uppsala) Univ. He helped to found the Social Democratic party, 1889, and was its leader from 1907. He was the first Social Democrat to be elected to the second chamber, 1896. B. was finance minister in the Liberal-Labour coalition, 1917; first became Premier, 1920; again from 1921 till 1923; and from 1924 till 25 Jan. 1926. He was a strong supporter of the League of Nations, being elected to its council in 1922, and being Swedish delegate to the Paris conference for settlement of Åland and Spitzbergen questions. He received a Nobel peace prize, 1921.

Brantôme, Pierre de Bourdelle, Seigneur de (c. 1540-1614), Fr. soldier and memoir writer, b. Périgord, educ. at Paris and Poitiers. He was given sev. benefices. He, had, however, no inclination to enter the Church, and chose arms as his profession. He gained a great reputation as a soldier during the religious wars in France. He travelled extensively, visiting Scotland, England, Spain, Portugal,

and Morocco. Later he served at court under Charles IX and Henry III. About 1595 he went into retirement, and devoted himself to writing. As a historian he is not entirely trustworthy, but his *Mémoires of Hommes illustres and Dames galantes* have a fascinating style of their own, and he draws a vivid picture of the profligacy and gallantries of the court life of the period. His *Mémoires* were first pub. in 9 vols., 1665-6.

Brantôme, Fr. tn in the dept. of Dordogne, on an is. formed by 2 branches of the Dronne. There are a splendid Romanesque bell-tower, and the remains of an abbey founded by Charlemagne. Pop. 2200.

Braque, Georges (1881-), Fr. painter, b. Argenteuil. His father was a contractor for house-painting, and B. in his boyhood observed his father's workmen mixing colours, and especially noted the processes of 'graining' and 'marbling.' He went to Paris to study art in 1904 and painted in the 'Fauve' manner, with bright, free colour, until about 1908 when the Cubist movement came into being. B. was a friend of Picasso, who is commonly credited with having invented Cubism, but it seems that B. was the first to exhibit a Cubist picture—at the Salon des Indépendants in 1908. The idea behind Cubism led logically to abstraction, a path that B. has pursued without losing a sense of pictorial beauty. B. aimed at producing 'a new sort of unity, a lyricism which issues wholly from the means employed,' and his respect for his material and, in his own words, for the 'Rule which corrects the Emotion' is obvious. In his many still-lives he shows how from some quite simple object, such as a dish of fruit, a whole set of novel relationships and harmonies can be derived. The Brit. Council paid him tribute with a large exhibition at the Tate Gallery, 1946, and this was impressively supplemented by the Arts Council exhibition of 1956. See Maoght, *Cahiers de Georges Braque, 1917-47*, 1948; also studies by J. Paulhan, 1946, B. Dorival, 1948, and A. Verdet, 1956.

Bras d'Or, Lake, gulf belonging to the Atlantic Ocean, which very nearly divides Cape Breton Is. into 2 parts. It is irregular in shape, and the isthmus in the S., which joins the 2 pieces, is just a little more than 1 m. in breadth.

Brasenose College, Oxford, founded by Wm Smyth, Bishop of Lincoln, and Sir Richard Sutton of Prestbury, Cheshire, in 1509. The main front, facing Radcliffe Square and the first quadrangle, except the upper storey, date from the foundation. In the chapel, 1663-8, the Gothic and Grecian styles are combined. The hall dates from the early 16th cent. As early as the 13th cent. a B. Hall existed, and in 1333 some students migrated to a house in Stamford, known as B. Hall, finding the factions in Oxford a hindrance to learning. An ancient knocker in the shape of a nose, which was brought in 1890 from this house to the hall in Oxford, may well be the origin of the name.

Brasidas (d. 422 B.C.), Spartan general during the first decade of the Peloponnesian war. He first distinguished himself by the relief of Methone (431). In 428 he led a force of helots and mercenaries into Thessaly with a view to destroying the Athenian empire in the N., and won over sev. Athenian colonies in that region. In April 422, on the conclusion of a truce between Athens and Sparta, B. defeated the Athenian army at Amphipolis but was himself mortally wounded. His death, and that of the Athenian general, Cleon (q.v.), prepared the way for the Peace of Nicias in the following year. See Thucydides, II-v.

Brasília, cap.-designate of Brazil, in Goyaz state, situated on a plateau 3500 ft above sea level, more than 1000 m. from the sea, and set amidst magnificent scenery. The new city has been carefully planned on the most modern lines for a pop. of 500,000; in 1957 the pop. was about 4000.

Brasov, see STALIN (tn).

Brass, tn on the mouth of the B. estuary, in the Niger delta, S. Nigeria, said to be named from the brass rods exchanged by early traders for oil and slaves.

Brass, metal composed of copper and zinc. It has been known from very early times; it is mentioned in an old Scripture hist. as being manuf. into instruments of music, ornaments, and various other things. In all probability these were not made from B., but from bronze, since we have no clue to the composition of the metal. The Romans used an alloy which they called *aurichalcum*, and this seems to have been B. Monumental B.s are the earliest traces of the use of the metal in Great Britain. In the reign of Henry VIII, the export of B. was forbidden, a fact which indicates that the manuf. of B. was extensively carried on in England. The former method of manuf. was that of mixing with powdered zinc ore small quantities of copper. The mixture then was heated in large pots over a furnace. The modern process is that of mixing metallic zinc with copper, in crucibles, or in a reverberatory furnace, the copper being first reduced to a molten state, and then the zinc added, also in a melting state. When crucibles are used, there is less waste. The molten metal is then poured from the crucibles into moulds to form ingots for remelting. The B. trade in England is carried on chiefly at Birmingham. The various processes are casting, rolling, and drawing, stamping, tube-drawing, and casing, and B. finishing. B. wire is used in immense quantities for the manuf. of pins, paper-maker's wire web, shoe rivets, etc. B. finishing includes dipping, burnishing, lacquering, etc. When an article in B. is made, it goes through a cleansing process in acid, and then it is dipped into a solution of nitric acid. For the process of burnishing, polished steel tools are used, and the article is washed in a weak solution of acid, after which it is dried in sawdust. When lacquering is done the work is heated, and while in this state

a coating of varnish, made of shellac dissolved in spirit, is spread over the surface of the article.

Brasses, Monumental, see MONUMENTAL BRASSES.

Brassey, Thomas (1805-70), railway contractor. B. near Chester, he was educ. at the local school. He began life as a surveyor, and thus acquired the outlook and experience necessary to the calling he subsequently adopted. He was in business in Birkenhead. There he undertook a contract for railway work, and in a few years was at the head of a great undertaking which carried out contracts in all parts of the world. Among his chief contracts were the Great N. railway, 1847-51, and railways in France, Italy, Canada, Australia, and India.

Brassey, Thomas, 1st Earl (1836-1919), eldest son of Thomas B. (q.v.), politician, b. Stafford, and educ. at Rugby and Univ. College, Oxford. He became a Liberal M.P. in 1865. He devoted himself particularly to naval questions, and is known as the founder of *The Naval Annual*. He filled the position of civil lord of the Admiralty from 1880 to 1884, and in 1884-5 was secretary. He was Governor of Victoria, 1895-1900. Knighted, 1880; baron, 1886; earl, 1911. His publs. include *British Scamen*, 1877, and *The British Navy* (5 vols), 1882-3.

Brassica, family Cruciferae, genus of 30 species or more, chiefly ann. or biennial herbs, native to Mediterranean or Europe; and many cultivated as food plants. *B. oleracea* is the cabbage, and derived from it are its vars.—*acephala*, Kale; *bullata*, Savoys; *gemmifera*, Brussel Sprouts; *capitata*, Red and White Cabbages; *gongylodes*, Kohlrabi; *botrytis*, Sprouting Broccoli; and *cauliflora*, Cauliflower. *B. campestris* var. *rapa* is the Turnip; *B. cernua*, Petsai Cabbage; *B. napus*, Rape; and *B. nigra*, Black Mustard.

Brassó, see STALIN (tn).

Brassy, see BIR.

Brathwaite, Richard (c. 1588-1673), Brit. poet. He entered Oxford Univ. at the age of 16, passing thence to Cambridge. He settled later in London. He produced *The Golden Fleece* in 1611, a collection of poems. This was followed in 1614 by *The Poet's Willow* (pastorals), *The Prodigal's Tears* (moral treatise), and *The Schollers Medley* (historical survey). In the following year he brought out *A Strappado for the Devil*, which followed the style of the *Abuses Stript and Whipt* of George Wither. *Barnabee's Journal*, 1638, is the only noteworthy work among his many publs. See M. W. Black, *Richard Brathwaite*, 1928.

Brătianu, Ion Constantin (1821-91), Rumanian statesman. From 1841 to 1848 he studied in Paris, where he associated with advanced Liberals and brought back their ideals with him to Wallachia. In 1848 he took part in the Rumanian rebellion, and was prefect of police at Bucharest under the provisional republican gov. When the rising was crushed he escaped to Paris. In 1857 he returned home and took his place thenceforward as

one of the Liberal leaders. He had much to do with the election of Prince Charles of Hohenzollern-Sigmaringen to the throne of Rumania in 1866, and was one of the ministry up to 1870. After the dissolution he was implicated in a conspiracy against the prince but was acquitted. In 1876 he became Premier, and was thus head of affairs during the war of 1877, in which Rumania, with the help of Russia, achieved her independence. His premiership lasted until 1888, and was marked by reforms, especially in education and commercial affairs. Besides being a statesman, B. also attained distinction as a political writer.

Brătianu, Ionel (Ion) (1864-1927), Rumanian politician, son of Ion Constantin B. (q.v.). Leader of the Rumanian Liberals, he was a zealous supporter of the Entente cause in the First World War. He concluded with the Entente powers a treaty on the basis of which Rumania declared war on Germany and Austria. During the war and almost to the year of his death, B. was Premier and, virtually, dictator of Rumania. Was one of the Rumanian delegates to the inter-allied peace conference in Paris in 1919. He was in opposition 1919-21.

Bratislava: 1. Region (*kraj*) in central Czechoslovakia, bordering on Austria and Hungary, part of the former prov. of Slovakia (q.v.). It contains a long ridge of the Carpathians (q.v.), but is generally low-lying and fertile and is watered by the Danube (q.v.). Area 2900 sq. m.; pop. 838,500.

2. (Ger. *Pressburg*; Magyar *Pozsony*), Czechoslovak city, cap. of the region of B. and former cap. of the prov. of Slovakia, on the Danube. It is near the point at which Czechoslovakia, Austria, and Hungary meet. It was once cap. of Hungary (1541-1784), having belonged to that country since the 10th cent., and sev. Hungarian kings were crowned in its cathedral (partly 13th cent.). Other noteworthy buildings are the Franciscan church (1290), the town hall (1288), and the Landhaus where the Hungarian representatives met until 1848. A Hungarian univ. was founded here in 1465; this has been removed to Pécs (q.v.) and in its place is a Slovak univ. (1919). There is also a technical univ. (1938). B. is an important riv. port and railway centre. It has textile, engineering, chemical, and petroleum-refining industries, and has a trade in agric. produce and wine. Pop. 184,500.

Bratsberg, mountainous dist. in the S. part of Norway; former name of Telemark (q.v.) co.

Bratsk, tn in Irkutsk Oblast of S. Siberia, on R. Angara and Tayshet-Iena railway, founded 1831 as a fort. Since 1955 it has been the building site of B. hydro-electric station, the largest in the world (3,200,000 kw.), and the prospective centre of a new major industrial area.

Bratstvo (Russian *brotherhood*), name of Russian Orthodox organisations which existed in the tns of the Ukraine and Belorussia in the 16th-18th cents. when

these tns. belonged to the Polish-Lithuanian state. A B., organised on the lines of a guild and attached to a church, had religious and charitable functions. Later the main function was resistance to the Catholic and Polishising influences. B.s set up printing presses and founded schools, some of which attained a high degree of scholarship. The most famous B.s were those of Lvov and Kiev.

Bratties, framework of boards, iron plates, or brickwork, built transversely in the galleries of mines, to regulate the flow of ventilation. In cases of emergency, sheets of heavy canvas, called B. cloths, impregnated with a creosote preparation, are sometimes used.

Brattleboro, vill. of Windham co., Vermont, U.S.A. Its industries comprise the manuf. of organs, textiles, optical goods, wood products, paint, flour, and feed, while a large portion of the inhab. are engaged in sugar refining, farming, and dairying. Pop. 11,522.

Brauchitsch, Walther Heinrich Alfred Hermann von (1881-1948), Ger. soldier, b. Berlin. He served in the artillery and rose to rank of captain during the First World War. He became a major-general in 1931, and a chief of artillery in 1932. Under the Nazis his rise was rapid, and in 1938 he was made Commander-in-Chief of the Ger. Army, and a field marshal. He carried out the occupation of Austria and Czechoslovakia, and was instrumental in building the Siegfried wall. On the outbreak of the Second World War, B.'s long-formulated plans for the conquest of Poland were carried out by *blitzkrieg* methods, and he was responsible for the general conduct of the war until relieved of his command by Hitler in Dec. 1941.

Braun, Eva (d. 1945), mistress and wife of Adolf Hitler (q.v.). After an association lasting sev. years Hitler is believed to have married B. on or about 29 April 1945, in the Berlin bunker where they subsequently committed suicide, 30 April 1945.

Braun, Karl Ferdinand (1850-1918), Austrian physicist, b. Fulda; educ. at Fulda Gymnasium, and Marburg and Berlin univs. In 1872 he graduated with a work on the vibration of chords. He was successively prof. at Marburg, Strassburg, Karlsruhe, and Tübingen, directing the building of the Physical Institute there. In 1895 he became prof. of physics at Strassburg Univ., and director of the Physical Institute. His best-known researches are the so-called 'B.'s cathode-ray tube' and the wave circuit. The wave circuit is the basis of all arrangements for wireless telegraphy, which he improved by inventing a method allowing the sender's energy to be increased at will, and by another by which dispatches can be sent in a particular direction. His calculation of the constant of gravitation, by the torsion balance method, agrees closely with that of Prof. Boys. He and Hartmann constructed an apparatus for measuring the intensity of the magnetic field by a fine bismuth wire. B. showed the identity of electric waves and light. His latest

works were on demonstrating metallic gratings so fine as not to be within the microscope's range. In 1901 his *Drahtlose Telegraphie durch Wasser und Luft* appeared at Leipzig. In 1909 he and Marconi jointly won the Nobel prize for physics.

Braunau, see BROUMOV.

Braunau-am-Inn, Austrian tn in the prov. of Upper Austria, on the Bavarian border. It has 3 Gothic churches and some fine old houses. Hitler (q.v.) was b. here. Near by is an important aluminium mine. Pop. 12,000.

Brauner, Bohuslav (1855-1935), Czech chemist, b. Prague. He studied chem. under Bunsen and, in England, under Roscoe. He was a leading authority on inorganic chem. and conducted valuable research work on atomic weights (e.g. tellurium, 1889) and on the rare earths. Among his publs. are *Fluorescence*, 1877, *Atomic Weight of Beryllium*, 1878, *Chemistry of the Rare Earths*, 1882, *Experimental Studies in the Periodic Law*, 1889, and *Observations on Argon*, 1895.

Braunite, tetragonal mineral, occurring as small brown or black octahedra and compact masses in manganese deposits as Mn_3O_4 . It is found in large quantities and mined as an ore of manganese in the Central Provinces of India.

Braunsberg, see BRANIEWO.

Braunschweig, see BRUNSWICK.

Brauer, or **Brouwer**, Adriaen (1605-1638), Dutch painter, b., according to some biographers, at Haarlem, and according to others at Oudenarde. He worked both at Haarlem (with Frans Hals) and at Antwerp where he d. It is believed he led a dissolute life but his brilliant tavern scenes were highly appreciated by Rubens and Rembrandt (qq.v.). Rubens (who had 17 of his works) gave him a decent burial. Among his pictures are 'A Quarrel between Two Peasants' (at Dresden) and 'Spanish Soldiers playing at Dice' (at Munich)—most of them, indeed, being a reflection of the life he knew. See H. Talbot, *Laughter from the Lowlands*, 1936.

Brava, small is. in Cape Verde archipelago, Africa. Healthy, mountainous, and fertile inland. Harbour, Furnas. Pop. 7000.

Bravoes, It. bandits, outlaws, and assassins, who offered their services for money. They were originally retainers of noble It. families, and fought for their cause, but degenerated into ruffians who would do anything for money.

Bravura, It. term applied in music to a composition, and sometimes to a style of performance. Music of the B. type is characterised by a vigorous motif with many difficult and florid passages. A B. air demands skill and spirit in its execution, each syllable being divided into sev. 'notes.' It connotes 'skill': e.g. *Aria di bravura*, a brilliant aria making great demands on the singer. Mozart excelled in this style, largely through his mastery of instrumentation.

Brawling by clergy or laity in a church or churchyard was an offence created by the B. Act, 1551, to punish the B. scenes

common in the early days of the Reformation. Under the Eccles. Courts Jurisdiction Act, 1860, the offence committed by either clergy or laity is punishable at petty sessions (q.v.) by fine or imprisonment.

Brawn, food made with pig's head. The head is thoroughly cleaned and boiled. After that all the bones are removed, and the whole is chopped into small pieces. It is set by means of the liquor in which it has been boiled and can be placed in moulds.

Braxfield, Robert Macquese, Lord (1722-99), Scottish judge, admitted advocate in 1744, and acted as counsel for the Crown in many difficult feudal cases after 'the '45.' Made a Lord of session in 1776 with the title of Lord B., he became lord justice-clerk in 1788, and in the sedition trials of 1793-4 earned the name of 'the Joffreys of Scotland.' He is delineated in Stevenson's *Weir of Hermiston*.

Braxy, see SHEEP.

Bray, Anna Eliza, née Kempe (1790-1883), authoress, b. London. Among her many works, comprising romance and travel, are *The Borders of the Tamar and Tavy*, 1836, *Life of Thomas Stothard*, R.A., 1851, and *A Peep at the Pirates*, 1856.

Bray, Thomas (1856-1730), divine and philanthropist, b. in Shropshire. After being educ. at Oswestry school, he went to All Souls' College, Oxford. His graduation took place there in 1678. He obtained the rectory of Sheldon in 1690, where he wrote a portion of his *Catechetical Lectures*. These lectures earned for him a wide reputation. His energies were now directed towards the institution of public libraries in England and America. Phenomenal success attended his efforts, no fewer than 80 in England and 36 in America being constructed before his death. The Society for Promoting Christian Knowledge developed from this scheme. He went to Maryland in 1699 as the Bishop of London's commissary, but returned in 1706 to a living at Aldgate to work for the improvement of education in the colonies.

Bray: 1. Par. in Berks, near Maidenhead. It has a pop. of 4144 and is situated on the l. b. of the Thames. Its name is famous by reason of the ballad of 'The Vicar of Bray,' but the identity of the vicar is uncertain (see BRAY, VICAR or).

2. Popular coastal resort of co. Wicklow, Rep. of Ireland. B. is the gateway to Wicklow and its beautiful surroundings have increased its importance. The view from B. Head (791 ft) is famous. Pop. 12,000.

3. A small dist. of France, in the old prov. of Normandy, now included mainly in the E. div. of Seine-Inférieure, but also in the dept of Oise. It is on a cretaceous plateau, and is a cattle- and horse-breeding dist.

Bray, Vicar of, notorious vicar of B. in Berks. He is variously described as Simon Aleyn, Simon Dillin, or Simon Allen, and was appointed vicar during the reign of Henry VIII. He maintained his

position during the reigns of Edward VI, Mary, and Elizabeth by adopting the expedient of accommodating his religious principles to those in power. It was his aim to live and die vicar of Bray, an ambition which he achieved. The fickle vicar is made to live through the reigns of Charles II, James II, William III, Anne, and George I in the ballad *In Good King Charles's Golden Days*.

Brayley, Edward Wedlake (1773-1854), antiquary and topographer, b. Surrey. An enameller by trade, he was librarian and secretary of the Russell Institution, 1825-54, and compiled a catalogue of it. B. was part compiler with John Britton, of *The Beauties of Wiltshire*, 1801. Its success led to the *Beauties of England and Wales*, 1801-15.

Brazil, United States of, rep. of S. America. It is the fourth largest country in the world, comprising one-fifteenth of the terrestrial surface of the globe, 2600 m. long by 2500 m. broad. It extends between lat. 4° 21' N. and 33° 45' S., and between long. 35° and 70° W. Almost the whole of B. is in the S. hemisphere. Area 3,287,842 sq. m. (with internal waters).

Geography and resources. B. possesses one of the most magnificent riv. systems in the world. The Amazon, navigable throughout its course, traverses practically the entire country, and by means of its many affluent waters the whole state. Of the rivs. the more important are the Paraná, Madeira, Paranaíba, São Francisco, and Iguaçu, the falls of which are the third largest in the world. The Rio Grande and the Uruguay also drain large tracts of country. It is now possible to travel 6446 m. on the riv. systems of B. in Brazilian steamboats. B. is a country of many mt. ranges. Half of its surface consists of an elevated plateau, the mean altitude of which is from 2000 to 3000 ft. with here and there an isolated range of mts from 5000 to 7000 ft. high (Itataia, 9800 ft.). The highest summits are towards the E. coast, ranging from São Francisco on the N. to the S. part of the state of Rio Grande. The other prin. ranges are those of the Brazilian Andes, where nearly all the affluents of the Amazon have their source, and those ranges which separate the valleys of the Amazon and Orinoco. The coastal range is divided into the Serra do Mar, Serra do Orgão, Serra da Estrela, Mantiqueira, Tingua, Espinhaço, Pyrenees, and Paraná plateau. The resources of the rep. are practically inexhaustible. Rubber, rare timbers, medicinal plants, nuts, oils, wax, coffee, sugar, cotton, cocoa, tobacco, and practically all the precious and semi-precious metals are found or grow in comparative abundance, and it may safely be said that no country on earth is so rich in natural resources as B. The 'fine hard Pará' rubber is the best rubber in the world. Fibre-producing plants too, are, one of the greatest sources of wealth in the rep., and increasingly exploited. These are chiefly employed in making sacks for the export of coffee. Cánhano, or Brazilian hemp, is a valuable

plant, cultivated in the state of Rio on 1,000,000 sq. metres of land. Sisal and pita are also extensively grown. Unfortunately it does not pay to export any but the finest timbers, by reason of heavy carriage rates. The hardness of most varieties renders them less acceptable to furniture-makers than they were half a cent. ago. On the other hand, peroba, vinhatico, ipê, canella, piuna, and other woods are marketable, and fetch high prices locally. The exportation of nuts is large, including babaco for industrial use, and that of medicinal plants, quinas (furnishing cinchona), angelica, quassia, gentian, and ipecacuanha is even more considerable. Agriculture is principally concerned with coffee, sugar, cotton, cocoa, and tobacco. The average ann. crop of coffee is about 900,000 tons. Probably nearly four-fifths of the world's coffee production is from São Paulo alone. About 2,000,000 tons of sugar are produced annually. Cereals are secondary to these, but by no means unimportant. Cocoa and tobacco are also produced and exported. In 1952 cattle were estimated at 56,000,000; swine, 30,000,000; sheep, 16,000,000; horses, 7,000,000; and goats, 9,000,000. A great number of head of stock are exported, and much is utilised for canning or meat essence.

Minerals. The metals, precious and semi-precious, are found in comparative abundance, the prin. gold-mines being situated in Morro Velho and Passagem in the state of Minas Gerais. The average yield is 12 gm. per ton. The ann. yield is some 4 tons. The total ann. value of diamonds exported averages £120,000. The prin. diamond fields are near Diamantina in Minas Gerais, Bagagem, Canavieiras, Grão Mogol, Goiás, and central Baía. They produce up to 400,000 carats a year. Other minerals of importance found in B. are coal, agate, amethysts, asbestos, beryls, copper, graphite, jasper, iron, lead, manganese, talc, petroleum, and monazite. The production of minerals was greatly increased as a result of B.'s participation in the Second World War, and has become a growing and permanent part of the country's industrial economy. Iron ore is mined principally in the state of Minas Gerais; manganese in Minas Gerais, Matto Grosso, and Baía; chrome ore in Baía; tungsten and nickel in Goiás, bauxite in Minas Gerais, Espírito Santo, and Maranhão.

Exports and imports. Coffee at one time held a dominating place in B.'s export trade, and together with raw cotton occupied some three-quarters of the total exports. This proportion was reduced to below 40 per cent as a result of industrial development and increased mineral production. In addition to minerals, coffee, and cotton, commodities exported include mainly rubber, tobacco, hides, frozen meat, and cocoa. Imports consist chiefly of machinery, industrial and transport equipment, coal and coke, and chemicals. In 1954, total imports were valued at some £1052 million and exports at some £817 million.

Ethnography. The native races may be

roughly divided into the Carib, Arawak, Tupi-Guarani, and Tapuyan or Ges stocks, and among these we find the characteristics of the Mongolian and Proto-European elements which go to make up the Amer. red race. Constant wandering, intercrossing, regrouping, and other causes have contributed to racial confusion. The Arawaks are widely distributed over an area extending from the R. Paraguay to the extreme N. of the S. Amer. continent; the Tupi-Guarani occupy a ter. as vast as that between the R. Maroni in Fr. Guiana and the Plate to the S.; the Tapuyan tribes are found E. of the Cordilleras from the peninsula of Goajira on

up the Araguaya R., but was reported lost in the same year. The religion of most of the Arawaks and Tupi centres on the figure of Jurupari, a species of forest demon, whose cult bears a strange resemblance to freemasonry. Should any woman of the tribe see his symbols or the attributes of his ritual, she is immediately poisoned, tribal freemasonry being placed on a masculine basis. The non-aboriginal inhab. of the country are principally of Portuguese origin, but Basque, Slavonic, Teutonic, and Syrian elements are also present. Large numbers of Asiatic settlers—Japanese, Syrian, Chinese—help to swell the pop. Large Ger. colonies exist in

Canadian Pacific

SÃO PAULO, BRAZIL: VIADUTO DO CHA

the N. to the borders of Chile; whilst the Caribs extended from the Upper Xingú in the heart of B. to Cuba and Haiti in historical times. All these peoples, except where they have come into contact with civilisation, live the life of hunters, trappers, and fishers, and the majority of them dwell far from civilised communities. There is, however, still a *terra incognita* for the European explorer in the heart of B. The unknown region of B. is the country to the NE. of Cuyabá lying beyond the Rio das Mortes or R. of the Dead, and watered by the Araguaya and Tocantins rivs. No successful exploration of these riv. valleys has yet been accomplished by any white man, nor indeed is there any record of any seriously organised attempt, since the time of the old Portuguese pioneers, to do so. An Amer. expedition, which braved the hostility of the Chavantes and other Indian tribes of the region, was massacred to a man in 1897. In 1925 Col. Fawcett, the Eng. explorer, with 2 other men, set out to find a supposed white people in the heart of the continent

various parts of the country, and indeed Ger. expansion became a feature of modern Brazilian life, the Teuton having turned some of the best parts of the country into veritable national preserves. In 1740 the pop. was estimated at 175,000, three-quarters of which was made up of Indians, Negroes, half-breeds, Mulattos, and Mamelucos (mixture of white and Indians). By 1818 it had grown to about 3,000,000. This figure, however, is exclusive of uncivilised Indians, and it is estimated that of the total pop. at this time not more than one-third were free white inhab. The number of slaves was probably greater than the number of free white men, and the remainder of the pop. was made up of freed men and civilised Indians. From 1872 census figures are available and these show the pop. as 10,112,061 in 1872; 14,333,915 in 1890; 17,318,556 in 1900; 23,414,177 in 1910; 30,635,605 in 1920. In 1955 it was estimated at 58,500,000. Portuguese is the official language. German and Italian are also spoken in the S.

Administration. The United States of

B. are divided into 20 states, each with its own constitution and separate administrative and legislative and judicial systems, and united in a federal gov. The names of the states are as follows: Alagoas, Amazonas, Bala, Ceará, Espiritu Santo, Goiás, Maranhão, Matto Grosso, Minas Gerais, Pará, Paraíba, Paraná, Pernambuco, Piauí, Rio de Janeiro, Rio Grande do Norte, Rio Grande do Sul, Santa Catarina, São Paulo, and Sergipe. In addition to the states, there is the federal dist. of the city of Rio de Janeiro, Acre ter., and Região da Serra dos Aimorés, a ter. in dispute between the

E.N.A.

MEKUBENGOKRA-KAYAPO INDIAN
OF THE MATTO GROSSO

states of Minas Gerais and Espiritu Santo. Of these the oldest is the ter. of Acre on the frontiers with Peru and Bolivia. Five other frontier ters. under federal administration were created by decree in 1943 and were made up of areas taken from existing states. The names given to them are Amapá, Rio Branco, Guaporé, Ponta Pora, and Iguaçu; they border on the frontiers with Fr. and Dutch Guiana, Venezuela, Bolivia, Paraguay, and Argentina. The is. of Fernando Noronha in the S. Atlantic was also declared a federal ter. in 1942 as a result of its strategical importance.

A new constitution, restoring democratic gov., was created by decree on 1 Mar. 1945 and revised 18 Sept. 1946. This constitution envisaged a Chamber of Deputies elected for 4 years, each state returning a number of deputies (not more than 35 or less than 5) in proportion to its pop. The Senate consists of 2 representatives from each state and from the federal dist., their term of office being 8 years. The vote is compulsory for all

Brazilians of both sexes over 18 years of age. This constitution was modified as a result of the election of Gen. Dutra to the presidency in 1946. Rule by decree finished on 18 Sept. (1946), when the new constitution was promulgated. Under it the presidential term is reduced to 5 years; but the powers vested in the president, including the right to choose his own Cabinet, are still the pivot of a system in which the features of presidential gov. as practised in S. America—including a strong presidency—are substantially preserved. But the new constitution expressly recognises freedom to engage in party politics, from which only parties opposed to democratic gov. are excluded. There is considerable modification of the clauses of the previous constitution, which stipulated the progressive nationalisation of banks, insurance companies, and public services operated under concession. In prescribing that ordinary legislation shall devise the rules governing these entities, the 1946 constitution has lost some of the hotly disputed nationalism which characterised both the 1934 model and its own original draft.

Religion. In 1889 connection between Church and State was abolished; it was restored by the 1934 constitution, but again abolished in 1946. The religion is preponderantly Rom. Catholic, and B. is represented at the Vatican. There are 3 Rom. Catholic archbishoprics. Protestants in B. number something under 2,000,000, divided among a number of evangelical sects. There are also a number of Buddhists and Muslims.

Education. Education is free throughout B., and in some states is compulsory. The univ. of B. is located in Rio de Janeiro, and was founded on 7 Sept. 1920. There are also 3 univs., privately conducted, at Belo Horizonte, Curitiba, and Porto Alegre. There are (1952) some 84,000 primary schools and 2500 secondary schools, with over 1000 commercial and industrial schools.

Armed forces. Under the military law of 1923 military service is obligatory on all Brazilians from 21 years of age to 44 years: 1 year being spent in the ranks, and the remaining years in the first and second line reserve. By decree (9 Jan. 1945) the age of compulsory service was extended to cover the years 18 to 44. Peace-time strength of the army is about 200,000 all ranks. The navy is in a high state of efficiency, the revolts of recent years notwithstanding, and the whole navy was reorganised under a U.S. mission, with U.S. armaments and materials. Its prin. object is defence of B.'s enormous coastline. It consists of 2 battleships (19,000 tons displacement), 3 small protected cruisers, 9 destroyers, a coast defence vessel (3000 tons), 3 riv. monitors, 3 submarines, and a number of smaller craft and riv. boats. Six more destroyers are being built in B. The personnel of the navy amounts to about 1300 officers and 25,000 men. There is an air force of 5 regiments with a strength of 5000 personnel; this was made independent of the army or navy in 1940.

Communications. There are 22,800 m. of railway, falling into 4 categories: federally owned and managed; federally owned but managed by a State or private undertaking; State owned and worked; privately owned and operating under Federal or State concession. The shortage of roads greatly hampers the development of the hinterland. Air services within the country are maintained by 21 national air lines. In normal years Brazilian ports clear some 51,000,000 tons.

Towns. In the prin. cities of B. modern civilisation may be seen at its best in S. America, the police, sanitary, hospital, and other services being of the most advanced description, and equal to those of the first European cities. The cost of living is high. The Brazilians of the cities are cultivated, and passionately attached to literature, music, and the arts, and national expansion on these lines has been rapid. Rio de Janeiro is the cap. city (pop., 1950, 2,303,000). Other large cities are São Paulo (2,017,000), São Salvador da Baía (500,000), Recife (512,800), Belem (223,000), Porto Alegre (375,500), Belo Horizonte (339,000), Fortaleza (205,000), Niterói (171,000), Maceló (199,000), Curitiba (138,600), and Santos (207,000).

History. B. was discovered by Pedro Cabral, a Portuguese navigator, on 25 April 1500. Adventurers soon swarmed into the country, over which a governor-general was appointed in consequence of their irregularities. The French, Spanish, and Dutch made many attempts to wrest the land from its original colonists, but all of these were unsuccessful, and, the invaders finally rebuffed, a period of peaceful development set in. In 1699 the goldfields of Minas Gerais were discovered, and the interiors of the states of Baía, Goiás, and Matto Grosso were opened up and settled by groups of adventurers called *Bandeirantes*, who were attracted to those regions by stories of the fabulous wealth they were said to contain. In 1808 Brazilian ports were opened to European commerce, and in 1821 a constitution was granted by the Portuguese Crown, but the Portuguese Cortes afterwards repudiated it, a step which was followed by the declaration of the independence of B. by the patriotic young prince regent, who proclaimed himself as Pedro I. In 1831 he was compelled to abdicate, and the second and last emperor came to the throne in 1843. In 1865 the Paraguayan war commenced, and was carried on until 1870, by which time the pop. of the rival state had become practically decimated. It cost upwards of £63,000,000, and many valuable lives. In 1888 slavery was abolished, and in 1889 the emperor was forced to leave B., and a rep. was proclaimed. Under a new and enlightened constitution, and a succession of patriotic presidents, B. enjoyed a season of peace and prosperity such as was not experienced since its colonial times. In 1904 the third Pan-Am. congress was held in B., and did much to bind closer the bonds existing between her and her

neighbours. In the First World War B. remained neutral for more than 3 years. She had a much closer intellectual and cultural affinity with France than with Germany. A pro-Ally league was formed soon after the outbreak of hostilities and material aid was furnished to the Red Cross organisations of the allied forces. But the fact that an important part of the immigrant pop. of B. was German added to the difficulties of the Brazilian Gov. B. protested against the Ger. announcement of unrestricted submarine warfare in Jan. 1917, and the persistence of Germany in that policy led to the sinking of Brazilian ships in 1917. This caused the severing of diplomatic relations. Some 50 Ger. vessels which had been confined to the Brazilian harbours were seized by the Brazilian Gov. B. still remained neutral even after the entry of the U.S.A. into the war, and on 6 April 1917 she issued a declaration of neutrality. But after it became evident that Germany did not intend either to give up her submarine policy or to make reparations for the Brazilian ships which had already been sunk, on 26 Oct. 1917 Congress adopted a resolution recognising the existence of a state of war with Germany. Brazilian aviators joined the allied armies and a naval squadron was dispatched to European waters to co-operate with the allied fleets. Besides this, a number of hospital units and doctors were sent to Europe. The years following the war were characterised first by a period of reckless prosperity under boom conditions during the presidency of Dr Epitácio da Silva Pessoa (1919-22), and secondly by a period of financial depression during the presidency of Dr Arturo Bernardes (1922-1926). The Gov. was, however, strong enough to survive a serious military uprising in 1924, and in the elections of 1926 Dr Washington Luiz Pereira da Souza was elected president unopposed, and great advances were expected. Delayed reforms, however, precipitated a revolution against the regime of Dr Washington Luiz in Oct. 1930. In that month civil war broke out. The revolution, which began in the Rio Grande do Sul, had been 3 months in preparation, but despite rumour the secrecy of the revolutionaries' plans deceived the Gov., and though federal troops were concentrated in Porto Alegre in the previous Aug., these were withdrawn in Sept. On 3 Oct. Senhores Flores da Cunha, Osvaldo Aranha, and a number of officers made their final arrangements for arming the civil guard, attacking the general barracks, and seizing the arsenal. The federal leader, Gen. Gíl de Almeida, and his forces were taken by surprise; the barracks and arsenal soon fell, and a number of federal troops, including a battalion of sharpshooters, went over to the revolutionary movement, though only after a stout resistance. Meanwhile the branch offices of the Bank of Brazil, the postal dept, and other prin. offices were occupied by the revolutionaries, and popular enthusiasm for the movement increased, thousands volunteering for

service in response to a revolutionary call for recruits. Beyond the limits of Rio Grande some 50,000 men were soon in the field and half that number in training. By 24 Oct. the movement had secured the desertion of the garrison of Copacabana Fort, Rio de Janeiro, and alarm, aggravated by revolutionary literature, scattered by planes, spread through the cap. When soon afterwards the cap. rose in revolt, the hostilities ceased, and Dr Luiz was transferred a prisoner to Copacabana Fort, power passing to Dr Getúlio Vargas.

Throughout 1931 Vargas's provisional gov. ruled by decree, the national and state legislatures being dissolved pending the framing of a new constitution and electoral law. Elections for a constituent assembly were held in 1933, and the assembly promulgated the constitution of 16 July 1934. Dr Vargas was elected president and assumed office on 20 July. The following year (Nov. 1935) a 'communist revolution,' as it was called, was the occasion for placing the country under semi-martial law, which continued for 2 years, and amounted to a 'state of war' in 1937 during the time of the campaigns for the elections fixed for Jan. 1938. On 10 Nov. 1937, however, President Vargas by a *coup d'état* closed Congress and abolished the former political parties, issuing a new constitution for a corporative state, pending popular approval, of which he became virtual dictator. The former Congress, consisting of a Senate and a Chamber of Deputies, was replaced by a single 'parliament' combining a Chamber of Deputies and a Federal Council, the latter consisting of representatives elected by the state assemblies, plus 10 members nominated by the president. The new constitution was held to have leanings towards Fascism, but this was denied. The following year relations between Germany and B. became strained as a result of suspected Ger. complicity in the so-called 'Green Shirt' revolt led by Salgado and the Integralist party. This was rigorously suppressed. Vargas pursued a policy of economic nationalism, together with the centralisation of industry, and he set in hand the gradual reduction of the export taxes between the states of the union. In April 1938 the petroleum industry was nationalised. State autonomy was further curtailed the following year. During the early years of the Second World War B. strengthened its defences, and President Vargas took measures to counter pro-Axis propaganda and to renew economic and military ties with the U.S.A. B. entered the war against Germany and Italy on 22 Aug. 1942, and on 6 Feb. 1943 declared adherence to the Atlantic Charter, extending the declaration of war to include Japan. A Brazilian expeditionary force served on the It. front, and in the supply of minerals, rubber, and other raw materials B. made a notable contribution to the war effort of the U.N. On 29 Dec. 1943 a covenant was also signed between B. and Portugal, strengthening the cultural ties between the 2

countries. On 1 Mar. 1945 President Vargas signed a new constitution and undertook to make considerable concessions towards popular gov. In April an amnesty of all political prisoners was declared, and the president signed a decree to enable presidential elections and elections for Congress to be held in Dec. On 30 Oct., however, Vargas was compelled by a military *coup d'état* organised against him to relinquish power in favour of Dr José Linhares, president of the Supreme Court. The election held on 2 Dec. resulted in the elevation to the presidency of Gen. Enriquo Gaspar Dutra, who had been minister of war from 1936 to 1945. He was the head of the newly formed Social Democratic party which stood, *inter alia*, for the formation of a federal democratic rep. to be brought about as the result of constitutional reform. He was the first president to be elected by popular vote since 1926. The Constituent Assembly met in Feb. 1946, with the task of drawing up a new constitution, which superseded the suspended 1934 constitution in Sept. 1946. In 1947 B. outlawed its Communist party, and ordered the suspension of the Communist-controlled B. Workers' Confederation and all unions affiliated with it. In Oct. (1947) diplomatic relations with Russia were severed. After a brief return to power, Vargas committed suicide, and after a new election President Kubitschek was proclaimed in 1956.

Literature. Writing with a national flavour helped to form the new land of B. long before she became a modern state, independent of Portugal. Nations are born of the spirit and it is right that an epic poem in praise of Pernambuco (the *Prosopopoeia*) should be the earliest work of a Brazilian to gain lasting fame. It dates from the end of the 16th cent. Its counterpart in prose followed in the next cent., the laudatory and analytic *Dialogue of the Grandeur of Brazil* by the economist and publicist Ambrósio Fernandes Brandão. Despite, or because of, the 60 years' bondage of the home country under the Sp. crown (1580-1640), a truly national voice was heard, that of the lyricist, moralist, and, above all, satirist Gregório de Mattos, well named 'Hell'-Mouth.'

Poetry. Increased activity in the 18th cent. reached its peak in the School of Minas Gerais poets. Arcadian in expression, *Martília de Dirceu* by Tomás Antônio Gonzaga is still one of the most inspired love-poems in the language. Then, partly influenced by France though with genuine local colour, came the 'Indianist' writings such as the ten-canto epic *Caramuru* (idealising a Brazilian chieftain) by Santa Rita Durão, and Basílio de Gama's *Uruguai*, a story of racial conflict. Such works paved the way for the transition to the Romantic period proper. The *Poetical Signs* of Gonçalves de Magalhães, the first poet of his kind in B., was soon followed by the ever-popular *Song of Exile* of Gonçalves Dias. After the Romantic, a Parnassian period followed, well represented by

Machado de Assis and Raymundo Corrêa (*Everything is Pain*). The master of this Parnassian technique was Alberto de Oliveira, whose *Grecian Cup* is amongst the most finely wrought verse in the language. Olavo Bilac (1865-1918) wrote very skillfully in the erotic vein, and is celebrated for his Banderante epic *Emerald Hunter*. Brazilian poetry shows a preoccupation with personal as much as national destiny—perhaps the very size of the country contributes to this—and the sonnet, always a particularly personal form, remained exceedingly popular up to 1920. Symbolism has had few notable exponents in B. The two most justly famous modern poems are Menotti del Picchia's *Juca Mulato* (a romantic love-story) and Guilherme de Almeida's *Messidor*. After the First World War Modernism was fomented by Graça Aranha, Manoel Bandeira with his mixture of tenderness and irony, and the group of 'Cannibals.' Its greatest single expression was the 'week of modern art' for which São Paulo provided the forum in 1922. Free verse came into its own, Mário de Andrade and Carlos Drummond de Andrade being its finest protagonists. The outstanding modern figure, however, was undoubtedly Jorge de Lima (d. 1953), whose folklore poem of sociological content, *That Black Girl, Fulô*, enshrines a true and eternal 'brasiliidade.'

Prose. B.'s best prose has tended steadily more in the direction of inquiry into social justice. The Indianist novel found its finest representatives in the 19th cent. with José de Alencar (*Iracema* and *The Silver Mines*), Bernardo Guimarães (*Iscara, the Slave-girl*), and Esmeralda Tannay (*Inocência*). The theme of *Inocência*, a simple-minded country girl's love for a stranger, gives the author scope for naturalistic description and some degree of social comparison; these point to two important future trends in Brazilian writing, which reached the heights of realism and psychological perception with the work of the mulatto J. M. Machado de Assis (*Mr Grumpy, Quincas Borba, Posthumous Memoirs of Brás Cubas*), who is of world stature. The sociological novel has as its outstanding representatives *The Backlands*, 1902, by Euclides da Cunha, and the works of various regional novelists, such as *The Year Fifteen* by Raquel de Queiroz, which tells of the drought-stricken north-east, and the *Urupês* which made Monteiro Lobato famous and enabled him and his *Revista do Brasil* to have such great significance for modern writers. This trend culminated in the studies of Brazilian working life by Jorge Amado, notably his *Lands of the Unending*. Among his precursors were the historian Capistrano de Abreu, Sylvio Romero (*History of Brazilian Literature*), and Mário de Andrade, author of a curious slang allegory *Macunaima*, about the Indian chief and the big city.

Drama. The theatre has not traditionally produced great literature in B. One modern dramatist has, however, had great stage successes, namely Joracy Camargo

with his *God Bless You!*, trans. into many languages. Iain Boneca, Ernani Fornari's play about family life in the 1880's, was also an outstanding success. See Isaac Goldberg, *Brazilian Tales*, 1921; Ericeo Verissimo, *Brazilian Literature: an Outline*, 1945; Samuel Putnam, *Marvellous Journey*, 1948; J. B. Trend, *Modern Poetry from Brazil*, 1955.

Brazil Cabbage, or Chou Carabi, term applied to sev. species of *Araceae* of the genera *Xanthosoma*, *Colocasia*, and

Caladium. They have edible rhizomes and the leaves are also eaten.

Brazil Nut, see BERTHOLLETTIA.

Brasilwood, commercially supplied by various species of *Caesalpinia*, is now identified as a separate genus, *Gulandia echinata*. It is dark red in colour, and its biggest use is for the manuf. of violin bows. See TIMBER.

Brazing, see SOLDER and SOLDERING.

Brazos, riv. of Texas, U.S.A. It rises in the Staked Plain and runs 950 m. in a SE. direction, emptying itself finally in the Gulf of Mexico. It is navigable for 40 m. at all times, but at high tide for 250 m.

Brazza, Pierre Paul François Camille Savornan, Comte de (1852-1905), Fr. explorer and administrator, the founder of the Fr. Congo, of It. birth, b. on board ship in Rio de Janeiro harbour (became a Fr. citizen while engaged in the exploration of the Ogoué (or Ogowé). He made the exploration of the Ogoué in 1878, and later received from the Fr. Gov. 100,000 francs for exploration in the Fr. interest in the Congo. Here he secured large tracts of land for France and estab. many stations. He returned again later, and within 2 years estab. 22 outposts, of which Franceville was the chief, distributed over a space of 500,000 sq. km. In 1885 B., following a new trail, estab. on Lake Chad the junction of Fr. possessions in the Congo, the Sudan, and N. Africa. He was made governor of the Fr. dependency of the Congo in 1886. That post he held till 1898, when an inquiry was instituted regarding criticism of his administration, but he was acquitted. In 1905 he organised an expedition to ascertain the truth of certain rumours of cruelty to the natives and *d.* at Dakar. See Jacques Stern, *The French Colonies: Past and Future*, 1944.

Brazza, see BRAZ.

Brazzaville, cap. of Fr. Equatorial Africa, situated on the r. b. of the R. Congo, about 300 m. from its mouth, on the frontier between Fr. Middle Congo and Belgian Congo. B. was founded in 1886. It is connected with Pointe Noire (320 m.). Following Brazza's negotiations with the celebrated King Makoko of the Congo, the Fr. flag was hoisted at N'Tamou, the key to conquest of the Congo, and this place later became B. Pop. (estimated), 1946, 25,000, of whom 900 were Europeans.

Brčko, tn in Bosnia-Hercegovina, Yugoslavia, on the Sava. It grew up around a Turkish fort, and is the centre of a rich agric. region. Pop. 11,350.

Breach, legal word connoting the violation of a duty imposed by the terms of a written agreement or by the policy of the law. A B. of contract is where 1 of 2 parties to a contract or an actionable agreement breaks an obligation which the contract or agreement imposes upon him. The consequences of a B. of contract are that a right of action is at once conferred upon the party injured by the B., while in some cases, e.g. in contracts to supply a consignment of goods by instalments, the injured party is exonerated or 'discharged' from performing the rest of the

obligations imposed upon him. Not every B. of contract amounts to a B. of a vital condition so as to entitle the injured party to rescind. Some B.s are said to be merely of 'warranties,' as distinct from conditions, and entitle the injured party to sue for damages only. A B. of Covenant is where a party breaks a clause in an agreement (usually under seal) whereby the covenantor either vouches for the truth of certain facts or binds himself to perform or give something to covenantee. B. of Promise means the B. of any promise the fulfilment of which is legally enforceable, but the phrase has become especially associated with the B. of a promise to marry. A B. of Trust means the non-fulfilment by a trustee of duties accepted by him, and imposed upon him by the terms of the trust instrument. In cases of fraudulent conversion of trust property the trustee is liable to criminal as well as civil proceedings. B. of the Peace in criminal law connotes any act producing or tending to produce a B. of the queen's peace, e.g. murder, affray, assault, challenge to fight either by word or letter. The queen's peace is a comprehensive notion by the aid of which the Crown establishes a right to be a party to all criminal proceedings or pleas of the Crown. It has its origin in ancient feudal times when the king was actual overlord of the realm, and an affray therein was therefore justifiably deemed to be analogous to an insult offered to a guest in a private house. Prison B. denotes an actual breaking out of prison as distinct from a mere escape. The consequences vary according to the crime for which the prisoner is in custody. Pound B. is the common law offence of rescuing goods from the custody of the law after the officer of the court has impounded them upon a distress. Prosecutions seldom take place, as the landlord can recover treble damages by a civil action. B. of Arrestment in Scots law means the paying away of money in one's hands on which a legal 'arrest' has been laid, thereby manifesting a contempt for the law. See CONTRACT.

Breaching Tower, see BEFFROI.

Bread, food prepared by baking flour obtained by grinding cereals, e.g. wheat, rye, millet, barley, oats, and maize, or other vegetable products, e.g. beans, peas, tapioca, etc. Bread-making appears to have been practised from the very earliest times, as cakes of barley have been discovered in Stone Age dwellings. Baking was understood by the ancient Egyptians and Chaldeans, and it is recorded of Abraham that he commanded Sarah to make ready 3 measures of fine meal, knead it, and make cakes upon the hearth. The grinding of grain appears to have been one of the duties of the womenfolk of ancient households. The primitive mill consisted of 2 cylindrical stones, the upper one revolving about an axis fixed in the centre of the lower one. A hole bored eccentrically through the upper stone admitted the grain, which was thus ground between the flat surfaces of the 2 stones. A handle fixed in the

rotating stone enabled the woman to turn it round, and in the case of a large mill the work was performed by 2 women sitting opposite each other. Such an arrangement is referred to in the prophecy 'Two women shall be grinding at the mill; one shall be taken, and the other left.' The Romans estab. public bakehouses, from which free distributions of B. took place. Throughout Europe the place of B. as the most important food-stuff has been unquestioned from the time of the Rom. empire. In temperate lats, by far the most important source of bread flour is the grain of wheat. In more northerly lats, rye, oats, and barley are used; maize flour is made into cakes in parts of the U.S.A., and millet B. is used in the S. parts of Europe. Wheat flour consists approximately of starch, 72 per cent; nitrogenous matter, 14 per cent; water, 10 per cent; fats, 2.25 per cent; and mineral salts, 1.75 per cent. When a larger proportion of the outer covering of the grain is milled, the relative amounts of starch, mineral matter, etc., are altered. The essential stages in the making of ordinary B. are the making of dough, in which the flour is moistened, salt added, and yeast introduced; the 'rising' of the dough, when the yeast multiplies in the material, giving rise to little vesicles or bubbles of carbonic acid gas; and the actual baking. The effect of yeast (q.v.) is to make the B. light, and B. thus prepared is the chief food of civilised peoples, being in general more palatable, and digestible than the closer-textured, unleavened variety. In making what is called aerated B., the carbon dioxide is first dissolved in water under pressure, and the flour mixed with the water while still subjected to pressure. The dough is ejected from the machine and is cut into loaves as it emerges; it then 'rises' owing to the liberation of bubbles of carbon dioxide in the interior. Baking-powders are also used for the purposes of causing bubbles of gas in the dough. They consist of 2 substances such as sodium carbonate and tartaric acid, with perhaps an admixture of flour to effect a more uniform distribution. The powder is mixed with the flour, and when kneaded with water the carbonate is acted upon by the acid, with the result that carbon dioxide is liberated. As tartaric acid is frequently impure, other baking-powders containing phosphoric acid or alum and potassium bisulphate are frequently used. In mixing the dough on a large scale a 'sponge' is first prepared. This consists of part of the flour to be used mixed with a large proportion of water and the amount of yeast required for the whole batch, together with a small quantity of salt. The sponge is allowed to ferment for from 6 to 10 hrs. and then mixed with the rest of the flour, water, and salt. The kneading which is required for the mixing of the dough is often done in a machine consisting of a trough or cylinder in which blades revolve, thus thoroughly incorporating the different materials. The baking is done in an oven consisting of a vaulted chamber about 10 ft long, 8 ft

wide, and 2½ ft high. The heating is effected by a furnace or by means of superheated steam carried in pipes on the top and bottom of the chamber. B. in Great Britain must be sold by weight, and must not be adulterated by substances specified in the Weights and Measures Act, 1889. See T. B. Wood, *The Story of a Loaf of Bread*, 1913; D. W. Kent-Jones, *The Practice and Science of Breadmaking*, 1934; H. E. Jacob, *6000 Years of Bread*, 1944.

Bread-fruit is obtained from *Artocarpus incisa*, a tropical species of Moraceae which flourishes chiefly in the S. Sea Is. The fruit is spurious and forms a scrosis; it is roasted by the natives and eaten as

Hulton Picture Library

BREAD-FRUIT

bread. The Nicobar B. tree is *Pandanus odoratissimus*, a species of Pandanaceae, and the Australian B. tree is *Gardenia edulis*, a species of Rubiaceae.

Bread-nut, fruit of *Brosimum alicastrum*, a tree of the family Moraceae, which grows in tropical America and the W. Indies. This fruit is an achene, and is edible when cooked. The Barbados B. is a var. of *Artocarpus incisa*, the bread-fruit (q.v.).

Bread-root, or prairie turnip, name given to the edible tuberous roots of *Psoralea esculenta*. The plant is leguminous, and occurs in N. America. The yam (q.v.) has similar roots, and both are eaten boiled or raw.

Bread-tree, sov. species of *Encephalartos*, an African genus of Cycadaceae. The pith is rich in starch, and is made into meal by the Kaffirs. *E. caffer* is known as Caffre, or Kaffir, Bread. The Bread-fruit tree is *Artocarpus incisa* of Malaya; The Bread-nut tree, *Brosimum alicastrum*, of Jamaica; the fruits being edible.

Breadalbane, Scottish title assumed by John Campbell, son of Sir John Campbell, about the year 1677. He had played an important part in the political hist. of Scotland, and practically by purchase

became Earl of Caithness. He was, however, compelled to relinquish this title, and was in 1681 created Earl of B. and Holland, and received also a viscountcy and 4 baronies in the peerage of Scotland. Although a Presbyterian, he helped Lauderdale, and on the accession of William III, was one of the few men of authority in Scotland. He was entrusted with the task of pacifying the highlands, and he succeeded in his object, gaining wealth in the process. He was partially responsible for the Glencoe massacre, although his share in the atrocity did not become known until later. He sat later as a representative peer in the Brit. House of Lords after the Union, although he had not voted for the Union. Later, during the '15 he gave assurances of loyalty to both sides. He d. in 1717. He was succeeded by his second son, who became Earl of B., and who d. in 1752. The third earl, the eldest son of the second, was noted as a diplomatist who occupied high positions in the diplomatic service, being ambas. to France and Russia. He was a strong supporter of Sir Robert Walpole, and d. in 1782. He was succeeded by a cousin, who became Marquess of B. in the Eng. peerage. With the decease of the second marquess the marquessate became extinct, but the earldom passed again to a cousin, whose family still retain the title, and to whom the marquessate was restored in 1885.

Breadalbane, mountainous dist. of Perthshire, Scotland, lying for the most part around Loch Tay. It covers over 1000 sq. m. In it are sev. peaks of the Grampians, Ben Lawers (3984 ft) being the highest. There are deer forests and fishing in Lochs Tay and Rannoch.

Breadth (in art), term applied to a picture indicating a certain effect of grandeur. If a picture possesses breadth no one detail strikes the spectator more than another, but he views the picture from a general standpoint. This effect is sometimes obtained by putting as few details as possible into a picture, a great deal being dependent upon the proportions of light and shade. Turner's pictures are among those specially characterized by their breadth of treatment.

Breakbone Fever, see DENGUE.

Breakdown, in electrical engineering, failure of insulation in a circuit due to over-voltage (q.v.), or the bridging of a protective gap by a spark.

Breakspear, Nicholas, see ADRIAN IV.

Breakwater, barrier erected for breaking the force of water on the coast or outside a harbour and producing a calm within. Natural B.s also exist, such as the Isle of Wight, which occupies a position protecting Portsmouth and Southampton. Piers may also be constructed to serve as B.s, but the term B. strictly applies only to a structure built solely for protection. B.s are of 3 classes: (1) Vertical structures of built masonry. The B. at Aberdeen and the Dover Admiralty pier are examples. (2) Sloping structures of rubble stones dropped into the sea from floating barges or timber stages. These have a sloping face each side. The

Plymouth B. is an example. (3) Composite B.s involving both the above principles. Cherbourg B. is an example.

Plymouth harbour is one of the finest B.s in existence. The designs are by Rennie, and it was begun in 1812 at an estimated cost of £900,000. The stone was obtained from a neighbouring quarry, transported by rail and shipped in vessels fitted with trapdoors and deposited through these in the shape of a huge mound. The mound was to be 10 ft above low water, with a width of 30 ft on top. The movement of the waves and constant storms, however, severely changed its shape. In 1824 about 800 yds of the finished work was overthrown by a severe storm. After this it was raised 10 ft higher, and the width extended to 45 ft, having a seaward slope of 1 in 5. It was finished in 1841 at a cost of £1,500,000. The B. is 1 m. long, having a central portion 1000 yds long. Two wings of 350 yds long extend at the ends of this at a slight angle. The water space protected is about 1120 ac. The B. requires constant repair.

Holyhead breakwater, designed by Randall, was erected for the purpose of converting Holyhead into a harbour of refuge. The stone was obtained from Holyhead Mts, and was run out upon a timber staging and dropped into the sea. The rubble reached up to the level of high water, and has assumed a seaward slope of 1 in 12. The inner slope is 1½ to 1. The B. shelters an outer roadstead of 400 ac., and an inner roadstead of 270 ac. The stone was obtained by blasting, 1 explosion of 21,000 lb. of gunpowder displacing 130,000 tons of stone. The estimated cost was £1,500,000. On the death of Randall the work was continued by Sir John Hawkshaw, and was finished in 1873. On it stands a lighthouse rising to the height of 70 ft above high water.

The Portland breakwater acts as a B. to the stretch of water between the coast of Dorset and the peninsula of Portland. It was begun in 1849. There is an abundance of stone in the neighbourhood, easily quarried, and the steep slopes afford facility of transport. The B. stretches due N. for more than 2 m., with 1 or 2 openings for the entrance and exit of ships. The work was finished in 1872, and consists of a rubble-stone bank surmounted by vertical walls from the low-water level.

Cherbourg breakwater is perhaps the largest and most costly ever erected. According to the original proposal made by M. de Cessart numbers of hollow cones formed of timber framing were to be sunk as close to one another as possible, and then filled with stones. These cones, numbering about 64 and measuring 70 ft high with a base diameter of 150 ft, were to form a nucleus to the stone B., and to prevent displacement of the stones by the action of the waves. This plan was abandoned in 1785 owing to the damage done to them during stormy weather, and the stone B. was continued without the aid of the cones. It was finished in 1853 at a cost of £2,500,000. Fortifications

have been added since then upon the upper works. It is nearly 2½ m. long, 300 ft wide at the base, and 31 ft wide at the top. The water space included within and protected by the B. is about 2000 ac.

Dorer breakwater was built up by means of solid ashlar brought from the bottom by means of the diving bell, with the interior formed of blocks of concrete. The area enclosed is about 685 ac. It cost about \$3,500,000, and has been extended twice.

Alderney breakwater was designed for the gov. by James Walker in 1847. It is 4500 ft long, but the outer portion has been abandoned owing to the difficulty of maintaining it. It was completed in 1864, and the total cost of the structure was over \$1,500,000.

Colombo breakwaters, proposed in 1866 to afford protection for shipping, were begun in 1875, when King Edward VII, then Prince of Wales, laid the foundation stone. In 10 years' time the SW. B., 4212 ft long, was completed. In 1891 2 additional B.s. were provided, the NW., which was an is. B., and the NE., which jutted out from the land. The length of the former was 2670 ft, and of the latter 1200 ft. These were completed in 1906 at a cost of about \$170 per ft.

Marseilles breakwater, begun in 1845, has a length of about 3½ m. In its construction it consists of a layer of about 10 ft of small rubble at a depth of 55 ft below sea level, covered by layers of natural stone weighing from 2 to 80 cwt. each, and above this are artificial blocks weighing about 33 tons each. The slope is graduated in such a way that the waves are sharply cut at a point where their strength would be most effective, and their crests therefore fall harmlessly upon the masonry above.

Valparaiso breakwater presented especial difficulties in its construction, owing to the soft mud of the sea-bottom in the harbour and to the frequency of earthquakes in the vicinity. The work designed by Adam Scott, after sev. other schemes had been mooted, was carried out between 1912 and 1920. Where there was a good sandy foundation at the beginning of the work, a rubble mound was constructed with a strong blockwork structure above; but where the treacherous muddy base presented itself, huge monolithic blocks weighing over 12,000 tons took the place of the ordinary blockwork.

The introduction of concrete made of Portland cement has in recent years modified the construction of B.s. Cement is mixed with sand, gravel, and broken stone in various proportions. Sometimes the concrete is made up into large blocks and deposited under in low water. At other times it is lowered in large bags, which are opened under water and thus form a mound or basis upon which to work. See B. Cunningham, *Harbour Engineering*, 1908, 1928; E. Latham, *Marine Works*, 1926; R. N. Stroyer, *Concrete Structures in Marine Work*, 1934.

Bream, name applied to many species of fishes, the fresh-water B.s. and sea B.s. being absolutely distinct. The former

belong to the family Cyprinidae, carp-like fishes, and are distinguished by their compressed abdomen and elongated anal fin. Among these are *Abramis blicca*, white B., *A. brama*, common B., *A. crysoleucas*, Amer. shiner. The sea B.s. constitute the family Sparidae, which are perch-like carnivorous fishes, and, unlike *Abramis*, are mostly edible. Representative species are *Cantharus lineatus*, black sea-B. or old wife, *Sargus sargus*, sheep's head, and *Pagellus centrodontus*, common sea B. or chad. Ray's B. (*Brama rayi*) is a widely distributed oceanic spiny-finned fish of the family Bramidae.

Breast, external part of the thorax lying between the neck and the abdomen, also applied particularly to the *mammæ* of women. See MAMMARY GLANDS.

Breast-feeding, see CHILD.

Breast-wheel, see WATER-WHEEL.

Breasted, James Henry (1865-1935), Amer. orientalist, b. Rockford, Illinois. Educ. Yale and Berlin, studying under Erman. Became prof. of Egyptology and oriental hist., Chicago Univ., in 1905, and director of the Oriental Institute in Chicago in 1919. Collaborated in the Berlin dictionary of hieroglyphs (*Wörterbuch*). Many publs., including *A History of Egypt*, 1905; *Ancient Records of Egypt*, 1906; *The Development of Religion and Thought*, 1912; *The Edwin Smith Surgical Papyrus*, 1935. See C. Breasted, *Pioneer to the Past*, 1947.

Breastplate, metal plate of one or more parts, designed to protect the front of the body. It formed an important part of the war equipment of ant. times. See ARMOUR and CUIRASS.

Breath and Breathing, see RESPIRATION.

Breathing Pores, orifices at the end of breathing tubes in insects. Respiration is carried on by means of the air-tubes which penetrate into all parts of the body from spiracles or pores on the surface of each segment. The spiracles are closed by valves actuated by special muscles. When the valves are closed the air is driven by the contraction of the body into the finer branches of the air-tubes.

Breccia (It. *breccia*, pebble, fragment of rock), in geology, term applied to rock composed of angular fragments of a pre-existing rock or of sev. pre-existing rocks, united by a cement of mixed matter. It differs from conglomerate in the angularity of the fragments.

Brecey, Fr. tn in the dept of Manche, situated 27 m. to the SW. of Saint-Lô. Pop. 2200.

Brechin, royal burgh and mkt tn in Angus co., Scotland, on the S. Esk, 8½ m. W. of Montrose. The cathedral, now a par. church, was founded in 1150 by David I and has a notable 10th-cent. round tower. B. was the scene of the surrender of the Scottish crown to Edward I by Balliol in 1296; Dr Thomas Guthrie and Sir Robert Watson Watt were b. here. Prin. industries are linen, jute, and rayon fabrics, machine tools, light engineering, and distilling. Pop. 7264.

Brecht, Bertolt (1898-1956), Ger. playwright and ballad writer, b. Augsburg. His first dramas gained him the Kleist

prize in 1922 (*Trommeln in der Nacht; Baal; Im Dickicht der Stdte*). B. has developed a type of 'epic theatre,' meant to arouse in the spectator a direct political judgment. One of his greatest successes was the *Dreigroschenoper*, with music by Kurt Weill, 1928. More obvious examples of his political convictions are his *Versuche*, 1930-2, and *Die Rundkpfe und die Spitzkpfe*, 1938. B. left Germany in 1933 for Russia and in 1941 emigrated to the U.S.A. because he was strongly opposed to Hitlerism. Subsequently, he wrote a number of vigorous short plays and poems against Nazi Germany, collected in *Furcht und Elend des Dritten Reiches*, 1945. Most of his work combines a note of scepticism with ironical sentimentality, and the most elaborate technical devices. He also wrote ballads in the style of Villon, collected in *Haustopfe*, 1927, *Lieder, Gedichte und Chre*, 1934, *Svenborgers Gedichte*, 1939, and *Neue Erzhlungen und Gedichte*, 1949.

Breckinridge, John Cabell (1821-75), Amer. soldier, b. near Lexington, Kentucky. In 1849 he became a Democratic member of the Kentucky legislature, and from 1851 to 1855 he sat in Congress. In 1856 he was elected vice-president under Buchanan. He strongly favoured the pro-slavery party, and joined the Confederate forces, being created major-general in 1862. He fought with distinction at Stone R., Newmarket, and in co-operation with Lee at Cold Harbour. Towards the end of the struggle he was appointed secretary of war to the Confederates. At the close of the war he took refuge in Europe, but in 1868 he resumed his practice of law in Kentucky.

Breckland, dist. in Norfolk and Suffolk, England, not far from Thetford. It is sparsely inhabited and has lent itself to considerable afforestation development by the Forestry Commissioners in recent years.

Brecknock, see BRECON.

Brecknockshire, see BRECONSHIRE.

Brecon (**Brecknock**), municipal bor. and co. tn of Breconshire, Wales, situated almost in the centre of the co., at the junction of the Honddu with the Usk, 40 m. from Swansea. The priory church of St John (founded in the 11th cent.) became the cathedral of the new diocese of Swansea and Brecon in 1923. The choir (Early Eng.) has beautiful lancet windows; the nave is decorated. There are ruins of a 10th-cent. castle. Christ College, a public school for boys, was founded by Henry VIII in 1541. Mrs Siddons was b. in the neighbourhood. B. is the depot tn of the S. Wales Borderers (24th Regiment). Pop. 6546.

Brecon Beacons Impressive group of mts in the S. of Breconshire, Wales, the highest summit of Old Red Sandstone in the Brit Is., of which Pen y Fan (2906 ft) and Corn Du (2863 ft) are the peaks. The B. B. National Park takes its name from these hills.

Breconshire (**Brecknockshire**), co. of Wales, situated between the cos. of Radnor on the N. and NE., Hereford and Monmouth on the E., Monmouth and

Glamorgan on the S., and Carmarthen and Cardigan on the W. The co. is extremely mountainous with magnificent scenery, the highest ranges being the Brecon Beacons (q.v.) and the Black Mts (q.v.), of which Pen y Fan (2906 ft) and Wauw Fach (2660 ft) are the respective summits. The chief riva are the Usk, Wye, Taft, and Tawe (qq.v.) with their many feeders. It is proposed to include more than half the co. in a National Park (see BRECON BEACONS). The prin. geological formation is that of the Old Red Sandstone (Devonian). On the S. boundary of the co. this is overlain by carboniferous limestone and the lower coal measures of the S. Wales basin. In the N. older Silurian rocks are exposed. There is evidence that the area was heavily glaciated. The co. is an important water-producing area, supplying amongst other places Birmingham, Swansea, Cardiff, and Newport. Agriculture is the co.'s chief occupation, the emphasis being on cattle and sheep rearing. Arable and dairy farming is undertaken on the lower valley lands, especially on the fertile alluvial soils of the Usk and Wye regions. Afforestation is also being undertaken extensively. Anthracite coal is mined in the extreme SW. of the co., while limestone and silica rock are worked along the S. border. Brecon (q.v.) is the co. tn. Three m. W. of Brecon is Y Gaer, the Rom. *Bannium*, some 6 ac. in extent, an excavated walled fort (see R. E. M. Wheeler, *The Roman Fort Near Brecon*, 1928). The 14th-cent. fortified manor-house of Tretowr Court, 3 m. from Criekhowell, is now an anct monument; in the Vale of Ewyas are the ruins of Llanthony Abbey (founded early in the 12th cent.). Area 469,281 ac.; pop. 56,503. See Rosalind M. White, *The Land of Britain* (The Report of the Land Utilisation Survey of Britain), Part 37, Brecon, 1943; Theophilus Jones, *History of Brecknockshire*, 1909-30; Breconshire Co. Council's *County Development Plan, Report of Survey*, 1954; W. Rees, *An Historical Atlas of Wales*, 1951.

Breda, tn in the prov. of N. Brabant, Netherlands, situated at the confluence of the R.s Mark and Aa (2 canalised and navigable riva.), 25 m. WSW. of s'Herstogenbosch. It lies at the junction of sev. railway-lines, and is the seat of a Rom. Catholic bishopric. The old castle is now occupied by the Military Academy. The Protestant Great Church (Grote Kerk) contains fine mausoleums of the Counts of Nassau. The tn was once strongly fortified. The main manufs. are carpets, woollen and linen goods, leather, machines, hats, and soap. There are dye-works and breweries. B. has had an interesting hist., and has undergone many sieges. It was taken by Prince Maurice of Orange in 1590, by the Spaniards in 1625, and by the French in 1794-5. It was the subject of the Compromise of B. in 1566 (treaty of alliance against the Inquisition), the Declaration of B. in 1660 by Charles II of England, and the Treaty of B. in 1667 between England, the Netherlands, France, and Denmark. Pop. (1957) 100,360.

Bredasdorp, dist. of Cape Colony, S. Africa. The climate is fairly dry, the average rainfall being less than 20 in., but the B. dist. is the second richest in the Cape, largely owing to wool and wheat. The cap. of the dist. is B., which is situated 35 m. SW. from Swellendam, and is the most S. of all the small towns of the Cape, being 26 m. from Cape Agulhas (q.v.). It has a national park for preserving herds of bontebok. Pop. (dist.) whites, 1807; coloureds, 2035; others, 153.

Bredero, Gerbrand Adriaenssen (1585-1618), Dutch poet and dramatist, b. at Amsterdam, a shoemaker's son. In 1611 he dramatized a romance, entitled *Roderick and Alphonsus*. His original genius, however, first showed itself in his *Farce of the Cow*, 1612, and from that time there flowed from his pen a stream of comedies remarkable for their picture of Amsterdam life. In his *Jerolimo, the Spanish Brabantier*, 1617, he mocked at grandiloquence of the exiles from the S. His plays are full of wit and humour, although at times they lapse into coarseness. See J. ten Brink, *G. A. Bredero* (3 vols.), 1888, and J. A. N. Knuttel, *Bredero*, 1949.

Brederode, Henry, Count of (1531-68), Flem. patriot, b. Brussels. He became a Protestant (c. 1560) and supported the revolt against Philip II's administration. He drew up the document called 'The Compromise,' and his supporters were nicknamed 'Les Gueux' (q.v.) (the Beggars).

Bredon Hill (980 ft), in Wores, England, capped by Brit. and Rom. earthworks. It is the setting of A. E. Housman's poem *In Summertime on Bredon*.

Bree, Mathias Ignatius van (1773-1839), Flem. artist, b. at Antwerp. He studied at Paris, and in 1804 became director of the Academy of Fine Arts at Antwerp. More notable as a teacher than a painter, he sought to revive the Flem. tradition. Among the younger painters he encouraged were Wappers and De Keyser.

Breesch, Breeschloeder, see GUN.

Breesches Bible, another name for the Geneva Bible (see BIBLE), pub. in 1557 by Eng. fugitives from the Marian persecution 3 years after their arrival in Geneva. It is so called from its trans. of Genesis iii. 7—that Adam and Eve took fig-leaves and made themselves breeches. A sect of Puritan women (following this literally, as was their custom), claimed the right to wear male attire.

Breede, riv. of S. Africa in the SW. of Cape prov. Its source is in the Warm-Bokkeveld, and its direction is SW., then SE. by E., where it enters the sea at Port Beaufort. The bar at the mouth prevents all but small ships from crossing. The B. is navigable for 20 m.

Breeding, in the widest sense of the word, is the production of offspring by any method whatever, and includes the multiplication, by fission and budding, of the simplest organisms, as well as the sexual reproduction of higher animals and plants. It is usual, however, to restrict the use of the term to sexual reproduction, and particularly to that controlled by man for his own purposes. A consideration

of domestic animals, garden flowers, and farm crops will reveal man's interest in, and partial control of, B., and the earliest historical records show his attempts to rear cattle and to improve plants.

Most probably primitive man was nomadic, wandering in search of food, and the duration of the periods he spent in various places would have been largely dependent on the food supply. In the course of time it occurred to him to remove vines that were strangling his food plants and to cut down the undergrowth that prevented ready access to them. As a result of improved conditions the growth of desired plants would be improved. Very early in hist., too, man cleared ground, and cultivated crops, and the seeds of these, through variation and heredity, would develop into plants of differing quality. He cultivated the best of these, and by neglecting the others interfered, by artificial selection, with the process of natural selection.

Such early attempts at cultivation were thus the beginning of selective B. A great advance was made when man first realised that he could improve his crops and his herds by making a selection, not only of the kinds of plants or animals he wished to preserve, but also of the individuals with the most desirable qualities. Most probably such deliberate attempts were first made with animals, and man's criterion of the most suitable individuals was based on visible characters. For instance, Jacob chose the speckled cattle, which were vigorous and prolific, while the brown ones he left to Laban (Gen. xxx. 40). By experience, however, breeders have found that although visible characters may be of considerable use, they are frequently misleading, for they may have arisen as modifications due solely to particular environmental conditions operating on the animal, and may be totally unrepresented in its hereditary constitution. Moreover, it is possible for all the offspring of 2 white birds to be coloured, whereas those of other white birds are always white, so that animals with similar visible characteristics may have very different genetic constitutions. Thus for centuries B. has been carried on by a method of trial and error, but long experience has produced results of a very high standard: horse and cattle B. show the success of these empirical methods.

Unfortunately, however, accompanying this real attainment in B., a body of erroneous beliefs and superstitions has grown up, and even now is not entirely eliminated. Such errors frequently accompany experimental work carried on without knowledge of the underlying principles. One very widespread belief was that of 'maternal impression.' It was thought that the developing embryo could be somatically affected through impressions received through the sense organs of the mother. One of the earliest records of this is that of Jacob placing striped and speckled rods in front of cattle, in the belief that the sight of these markings would, through the mothers,

make an impression on the developing embryos and cause the young animals to have similar markings. 'Maternal impression' was long regarded as the explanation of disfiguring birth-marks and of hare-lip, but the theory is quite unsupported by scientific evidence. On the other hand, the importance of prenatal nutrition is fully recognised and in addition to causing physical harm, shock to the mother may so disturb her metabolism that serious interference with the feeding of the embryo may occur.

Another common belief is that in teleogony, the theory that the characters of the male are, after mating, retained by the female and may appear in the offspring of subsequent matings with other males. For instance, if a white mare were mated with a brown stallion and subsequently with a white stallion, any brown colour appearing in the offspring would be attributed to the first mating. Many experiments have been carried out to confirm this belief and, as a result, it may be stated that there is no justifiable foundation for the theory of teleogony nor of 'male infection' which is the corresponding retention by the male of characters of the female of a previous mating.

The mating of close relatives (inbreeding) has long been regarded as detrimental and the Church has placed certain restrictions on marriages between close relatives. Provided that the original stock is free from hidden defects superior animals can be bred by this method, but investigation is continually revealing so many of these hidden defects that inbreeding is probably best avoided except where inferior or deformed offspring can be discarded. Inbreeding is often practised quite successfully by dog-breeders and other fanciers.

The plant breeder on the whole appears to be free from popular superstition relating to plants, and plant-breeding has now reached a very high standard of perfection. For B. purposes plants have many advantages over animals. In the first place plants are so prolific that a certain amount of waste is relatively unimportant and so plants of doubtful value can be discarded. Many seeds are produced and so very intensive selection of the best can be carried out. However this can be a disadvantage if the methods of choosing the supposedly superior seeds are unreliable. Once a superior variety has been produced the prolific seed production allows rapid multiplication of that variety. As a result of these factors plant-breeding has become a very specialised branch of agriculture and, unlike animal breeding, is rarely carried out by the practising farmer.

In Egypt and China rice has been cultivated for centuries and comparatively early in hist. the importance of the stamen and pistil was recognised. Over 2000 years ago Theophrastus described the pollination of the female flowers of the date palm by natives hanging or shaking over it a branch bearing male flowers. The Chinese are said also to have experimented with hybridisation of flowers, and

much later in hist. the Romans hybridised roses, but the earliest records of systematic attempts were those of the Dutch, who cultivated and produced many new varieties of tulips, primulas, and hyacinths in the 17th cent. Van Mons (1785) at Louvain, by systematic cultivation, produced nearly 500 new varieties of pears in about 40 years. Contemporaneously, Cooper in the U.S.A., Knight in England, and Thaeer in Germany made attempts to improve crops. Thaeer, by his insistence on the value of selection, did much to make agriculture a scientific study. Cooper drew attention to the importance of choosing crops suitable to the soil instead of experimenting with different strains of seed in the hope of getting an improved crop of the same nature as one which had already done badly.

Numerous experiments on wheat B. were made in the 19th cent. with the aim of producing good pure varieties. Hallett made a great advance in his recognition of the fact that the best-looking grain was not necessarily the grain with the best genetic constitution. He therefore tested every grain from an inflorescence, and worked on the theory that the best grain from the best inflorescence would develop into the best plant. From the resultant plants he selected the best, and, by continuing this method for sev. years, was able to show that the method of continuous selection gave little or no increase in yield when applied to pure strains, though with mixed strains the increase was considerable. De Vilmorin worked on similar lines and stressed the importance of testing the progeny before assuming that a strain was pure.

The Irish potato famine of 1847 led to investigations on root crops, and Sutton produced the mangel, marrowfat pea, and a new variety of potato. He also experimented with grass and was able to improve pasturage.

The industrial movements of the 19th cent. gave a great impetus to agriculture. Transport was facilitated, farm machinery invented, and many experiments on cereal cultivation were made in England, America, and Sweden.

One of the best-known breeders of new varieties of plants by hybridisation was Luther Burbank, a Californian nurseryman. Although familiar with Mendel's work (described below) he nevertheless worked largely by rule of thumb, and was able to obtain such novelties as stoneless prunes, white blackberries, thornless cacti, and 'plumcoats' (the latter a hybrid between the plum and apricot). These new varieties, like many other cultivated plants, did not 'breed true' and therefore had to be propagated by vegetative means.

So far, as in animal B., all the results had been obtained by empirical methods, but in 1867, Mendel, abbot of Brunn, working with the edible pea, made the first *quantitative* systematic experiments on B., and as a result was able to formulate definite laws of heredity (see MENDELISM and HEREDITY). His work remained practically unknown until after Correns, Tschermak, and de Vries, all working

independently, rediscovered these laws in the early 20th cent. Since that time extensive research has been done, both on plants and animals, in an attempt to discover whether Mendel's laws are universally applicable. Results show that, while in certain cases the laws enable the breeder to forecast his results with a high degree of accuracy, in other cases discrepancies occur, so that the best results can be obtained only by a combination of theory and practice.

Some of the very qualities that formerly retarded progress in plant B. have been those of greatest use in enabling the geneticist to determine the ultimate units of genetic constitution of his plants. The large number of seeds produced by a single plant will, given the same suitable environment, grow into plants with a number of differences due to the different associations of groups of unit characters. This may be seen by referring again to Mendel's hybrid peas obtained by crossing tall plants having green cotyledons with short plants having yellow cotyledons. The seeds of the self-fertilised hybrids developed into 4 different types of plant—all plants with either green or yellow seed leaves and short plants with seed leaves of either colour. The sweet pea has 7 different groups of characters, and these may be associated in 128 ways, without including any possible cross-overs. The higher animals usually have more than 7 groups, and since most animals used in B. have comparatively small numbers of offspring, it is obvious that the whole of the breeder's lifetime would be too short to discover the complete genetic constitution of an animal. Moreover, he probably will not be interested in trying to do so, but will confine his attentions to the characters which he is trying to secure.

For these reasons the theory of B. has advanced beyond its practice, but increasing application of it is being made in agriculture and in horticulture. Plant B. is now estab. on a scientific basis, and theory combined with knowledge gained by experimental work enables the plant-breeder to obtain many of his results with mathematical precision. Although theory cannot be applied to the B. of animals with the same certainty with which it may be applied in many cases to that of plants, it can help the dealer in his selection of material and in the elimination of certain error, particularly that involved in trying to breed animals for characters which are not ultimate units of genetic constitution. Thus when a breeder wishes to raise a 'hardy' stock or a eugenicist to secure an 'intelligent' race, the first consideration should be to determine, if possible, the characters which constitute 'hardiness' and 'intelligence.' The best results in B. will always be obtained by the intelligent application of theory to practice. *See also* BIOLOGY; HEREDITY; MENDELISM. *See* W. Bateson, *Mendel's Principles of Heredity*, 1902; P. H. Morgan, *The Theory of the Gene*, 1928; C. D. Darling, *Chromosomes and Plant Breeding*, 1932; C. H. Waddington, *An*

Introduction to Modern Genetics, 1939; E. B. Ford, *Mendelism and Evolution*, 1940; J. E. Nichols, *Livestock Improvement in Relation to Heredity and Environment*, 1945; W. J. C. Lawrence, *Practical Plant Breeding*, 1946; J. Y. Beatty, *Plant Breeding*, 1954; L. W. Winters, *Animal Breeding*, 1954.

Breezes, Land and Sea, local winds, unconnected with the main movement of air, caused by differences in the heating of land and sea. In hot climates they blow regularly, and extend a considerable distance, except when they are overpowered by more violent winds, as, for example, the monsoons. In England they are irregular. It is a matter of common observation that about noon a breeze usually begins to blow landwards from the sea, and continues in that direction till sunset, whereas near midnight this breeze is superseded by one blowing in exactly the contrary direction, that is, from the shore seawards. The following is the usually accepted explanation: The heat of the sun causes the air over the earth to expand, and therefore to rise. This upper stratum passes away towards the sea, and thus increases the barometric pressure. This causes a current of air to flow continually towards the coast, where the pressure is lower. When the land breeze sets in at night, it is to be explained by similar reasoning. This time the atmosphere over the land is cooled, and the heated strata above contract and therefore fall. The cooling takes place much more rapidly over the land than over the sea. Therefore the colder heavier air rushes out to sea to relieve the higher pressure. *See* METEOR-
OLOGY.

Bregenz (Rom. Brigantium), Austrian tn, cap. of the prov. of Vorarlberg, at the E. end of the Lake of Constance (q.v.). Part of the 13th-cent. walls remain, and the par. church is partly 11th cent. It is a tourist resort, has a trade in agric. produce, and has iron and wood industries. Pop. 20,300.

Bremsstrahlung, *see* X-RAYS.

Brehon Laws, Eng. name for the laws that prevailed in Ireland till the middle of the 17th cent. The correct name for the laws is the *Feinechus*, meaning the laws of the *Feine* or farmers. The appellation B. is derived from the Gaelic word *breithechamh*, meaning a trained judge, who administered justice to the tribe. Fragments of transcripts of these laws are preserved in Trinity College, the Royal Irish Academy, the Brit. Museum, and the Bodleian. These fragments are a store-house of archaeological and philological treasures. The transcripts belong mainly to the 14th cent., but the laws themselves go back as far as to the 3rd cent. (the reign of Cormac Mac Art). The language of the B. L. is the *Bearla Feini*—the most archaic form of the Gaelic language. The vocabulary is often hard to interpret owing to the lack of contemporary documents. The Brehon expounded the law at the public assemblies of the tribes. If there were sev. Brehons in the dist. the suitor chose his own

Brehon. An appeal to the assembly was permitted against the decision of the Brehon, and if he were found to have given a false decision he was liable to a severe penalty. The Brehon had to study the laws for a course lasting about 20 years before he expounded them. The society among which the B. L. prevailed was based on the clan. These clans were under prov. kings, but these prov. kings swore allegiance and paid tribute to the Ard-Rí or supreme King of Ireland. The land occupied by a clan was the collective property of the clan, but part of the land was reserved for the king, nobles, and other public servants. The remainder of the land was allotted on the tithe system to the people. The laws recognised 2 classes of crimes—crimes against the state and crimes against the individual. Crimes of the first class, e.g. treason, were punished with the severest penalties, i.e. banishment and loss of property. The offenders of the second class had to give compensation in proportion to the crime. The B. L. were the guardians of the entire social life of ancient Ireland.

Breidfjörð, Sigurdur (1798–1848), Icelandic poet, the greatest of all the *rímur* (q.v.) poets and among the best loved. His *Núma rímur*, composed in Greenland in 1831–4, based on Florian's novel, *Numa Pompilius*, is one of the masterpieces of Iceland's 19th-cent. literature. See Sir Wm Craigie, *Specimens of Icelandic Rímur*, vol. III, 1952.

Breilsach, Ger. tn in the *Land* of Baden-Württemberg (q.v.), on a hill overlooking the Rhine (q.v.), 80 m. SW. of Stuttgart (q.v.). It has been a fortified position since Rom. times, and in the Middle Ages was an important Ger. stronghold. Opposite it, in France, on the other side of the riv. is the counter-fortress of Neuf-Brisach, built by Louis XIV. Pop. 3000. See BREISGAU.

Breisgau, dist. in Germany in Baden-Württemberg (q.v.), on the Rhine (q.v.). It contains the S. part of the Black Forest (q.v.), and its chief tns are Freiburg and Breisach (qq.v.).

Breitenfeld, dist. of Germany, NW. of Leipzig (q.v.). Two battles were won here by the Swedes during the Thirty Years War (q.v.). It was also the scene of part of the battle of Leipzig in 1913.

Breitinger, Johann Jakob (1701–76), Swiss scholar and writer, b. Zürich, where he became prof. of Greek and Hebrew. His critical works had a great reforming influence upon Ger. literature. In this effort he was associated with Bodmer, and took part in the controversy with Gottsched. His writings include *Kritische Dichtkunst*, a critique on the art of poetry, 1740. See J. W. Eaton, *Bodmer and Breitinger, and European Literary Theory*, 1941.

Breitkopf, Bernhardt Christoph (1695–1777), Ger. printer and publisher. In 1719 he founded the music-publishing firm B. and Härtel at Leipzig, which became famous for its eds. of the classics. B. and Härtel also encouraged new composers. The house was destroyed by

bombs in 1943 and in 1945 the firm moved to Wiesbaden. The remains of the old firm at Leipzig were expropriated by the Communist Gov. in 1951, but the Leipzig tradition lives on at Wiesbaden.

Breitkopf, Johann Gottlob Immanuel (1719–94), Ger. typographer, b. Leipzig, and educ. at the univ. there. He entered his father's printing and publishing business (to which he succeeded in 1745), and introduced many valuable typographical improvements, obtaining clearer and more elegant letters than had hitherto been known. B. invented a new method of printing music and one for printing maps with movable types. He wrote sev. books on the art, and began a *History of the Art of Printing* (pub. 1779). His second son, Christoph Gottlob B., after carrying on the business for a year, gave it up (1795) to his friend Härtel.

Breitscheid, Rudolf (1874–c. 1945), Ger. politician and writer, b. Cologne; educ. at the univs. of Munich and Marburg. He became a Socialist, and from Nov. 1918 till Jan. 1919 he was Prussian minister of the interior. He was elected to the Reichstag in 1920 and until 1933 was the Socialist party's expert on foreign affairs. On Hitler's rise to power he went into exile, and was in the Fr. unoccupied zone at the time of the Bordeaux armistice (1940), but was handed over by the Vichy Gov. to the Gestapo and d. in Buchenwald concentration camp sometime later.

Brema, Marie (1856–1925), operatic singer, b. Liverpool of Ger.-Amer. parents, her real name being Minny Fehrman and her married name Braun. She studied under George Henschel and sang at concerts. Her first appearance was at a popular concert in London in 1891, and the same year she appeared as Orpheus in Gluck's work, her great operatic part. In 1894 she made a successful appearance at Bayreuth. Afterwards sang in most of the prin. opera houses of the European caps. and at Covent Garden, her chief parts being Wagnerian, especially Brünnhilde and Kundry. On retiring from opera she taught in the Manchester College of Music.

Bremen: 1. *Land* of NW. Germany, in the Federal Rep., consisting of 2 enclaves in the *Land* of Lower Saxony (q.v.): one centres on the city of B. and the other on the tns of Bremerhaven and Wesermünde (qq.v.). Area 158 sq. m.; pop. 628,800.

2. Ger. city and port, cap. of the *Land* of B., on the Lower Weser (q.v.). It first rose to be a tn of importance when Charlemagne (q.v.) made it the seat of a bishopric. It attained prosperity through commerce, and it became in time one of the chief tns of the Hanseatic League (q.v.). In 1646 it became a free city of the empire. During the wars of Napoleon (q.v.) it passed into the hands of the French, but it regained its independence in 1813. It joined the N. Ger. Confederation (q.v.) in 1867, and eventually became part of the new Ger. empire. During the First World War its trade suffered severely, but after the war it recovered much of its former prosperity as an

industrial and maritime centre in touch with the prin. markets of the world, conducting in particular an important trade with the U.S.A. in tobacco, cotton, and petroleum. Its harbour cleared some 10,000,000 tons of shipping annually, two-thirds of which was sea-going. During the Second World War the city was severely bombed by the Allies, notably in Oct.-Dec. 1944. Although trade was at a standstill, the dockyards were active throughout the war, and were the centre of construction of U-boats (see SUBMARINE) of the largest type, of which over 1200 were launched. Himmeler (q.v.) made B. his H.Q. in April 1945 to organise the final resistance of the S.S. The city fell to the Brit. Second Army, 23-8 April. At the end of the war large parts of the city were in ruins, but there has since been a great deal of reconstruction. B. is divided by the riv. into 2 parts: the Altstadt (old tn) on the r. b., with narrow, winding streets and irregular houses; and the Neustadt (new tn) on the l. b. The 11th-cent cathedral of St Peter stands on the site of an 8th-cent. wooden structure. The beautiful Rathaus, Gothic with a Renaissance façade, survived the war, as did the fine Schütting guild-house. The harbours, which have no locks, have a depth of 32 ft. and are again busy; sev. of the great shipping lines, including N. Ger. Lloyd, have their head offices in the city, which is the second port of the country. In addition to shipbuilding, there are automobile, tobacco, brewing, coffee, and chocolate industries. Pop. 499,900.

'Bremen', The, name of a N. Ger. Lloyd liner, built in 1929. Quadruple screw, turbine-driven, and of a 51,731 gross tonnage. She is 898 ft in length and 101 ft in breadth, with a speed of 26 knots. In July 1929 the B. made the Atlantic crossing in 4 days 18 hrs 17 min. from Europe to New York, thereby beating the record of the *Mauretania*. Shortly after the outbreak of the Second World War the ship endeavoured vainly to get back from America to Germany. She eventually found refuge in a Russian port. See also ATLANTIC PASSAGE RECORDS.

Bremer, Fredrika (1801-65), Swedish novelist, b. Tuorla near Åbo, Finland. Her studies seriously affected her constitution, and at the age of 20 she travelled with her family, for the sake of her health. In 1828 the first vol. of *Sketches of Everyday Life* were pub., but the second vol., containing *The H. Family*, was the work that brought her international fame. Her father, a wealthy iron merchant, d. in 1830, and from that time she travelled and wrote as she pleased. She studied family life in the old and new worlds, and her books, entitled *The Neighbours*, 1837, *Homes of the New World*, 1853, and *Life in the Old World*, 1862, are the fruit of her researches. Her prin. works were trans. into English by Mary Howitt (11 vols., 1844-5). On her return to Sweden she became absorbed in questions of social reform, especially the emancipation of women, and her later works are concerned with her views on those topics. They include *Hertha*, 1856,

and *Father and Daughter*, 1858. See E. Klemm, *F. Bremer*, 1925.

Bremerhaven, Ger. port in the *Land of Bremen* (q.v.), 32 m. N. by W. of Bremen city, for which it is the out-port. It is on the N. Sea, on the E. bank of the Weser (q.v.) estuary, and has 11 harbour basins, ship-building and repair yards, and important fisheries. Pop. 129,000.

Brendan, or Brandon, St (c. 485-c. 533), b. Tralee in Kerry. The historical personage of this name seems to have been abbot of Clonfert; but according to medieval legend he sailed across the Atlantic in search of a 'promised land,' and was the hero of countless adventures. Geographers long accepted St B.'s Is. as a geographical reality, and in the maps previous to Columbus's voyage it is located near the mythical Is. of Antilla (or Antiglia). Columbus in his jour. says he had heard reports about the situation of the Is. It was variously located by geographers until in 1759 the legend was exploded and the reported discoveries were explained as mirage. There are many versions of this voyage, perhaps the most popular legend of medieval times; the oldest version is the *Navigatio Brendani* of the 11th cent. His feast is on 16 May.

Brendon Hills, range of limestone hills in W. Somerset, England, lying some 6 m. S. of Watchet. They average nearly 1400 ft in height.

Brennan, C. J., see AUSTRALIAN LITERATURE.

Brennan, Louis (1852-1932), Irish inventor, b. Castlebar, co. Mayo. He resided in Melbourne, Australia, from 1861 till 1880. In 1882 his torpedo, controlled by wires unwound from the shore, was adopted by the Brit. Gov. for harbour defence; and B. was superintendent of the Gov. B. Torpedo Factory, 1887-96; consulting engineer of the same, 1896-1907. Made C.B., 1892. From 1896 to 1912 he made mono-rail experiments; in 1907 he gave a successful exhibition before the Royal Society.

Brenner Pass, pass on the Austro-It. border in Tirol (q.v.), on the road between Innsbruck and Bolzano (q.v.). The gate of Italy on the N., it is the lowest pass in the main Alps (4500 ft), and is always open. L. Septimius Severus (q.v.) built a road here. There is now a motor road and a railway. During the operations on the W. front in the Second World War the U.S. 7th Army estab. contact with the allied forces in Italy at the B. P. in May 1945 (see WESTERN FRONT in SECOND WORLD WAR).

Brennibor, see BRANDENBURG.

Brennus, used as the name, although probably actually the title, of 2 chieftains of the Celts of Gaul. The first B. led the Gaulish tribes in an attack upon Rome. In 390 bc he defeated and practically annihilated a large Rom. army, and marched on Rome. The city, defended only by the aged senators, was easily captured, but the Capitol sustained a 2-month siege, being once saved only by the geese of the Capitol. The Gauls at last consented to a ransom of 1000 pounds of gold. Whilst the gold was being

weighed, the Romans complained of some unfairness, and B. immediately threw his sword into the opposite scale, exclaiming, 'Vae Victis' (woe to the vanquished). The second B. is said to have led 2 expeditions of the Gauls into Macedonia and Thrace. In the second (280 BC) the Gauls advanced on Delphi, but they were beaten back by the determined resistance of the citizens. Rather than return defeated B. committed suicide.

Brent Goose (*Branta bernicla*), bird of the family Anatidae, closely related to the barnacle goose. In colour it is black, white, and grey, and it commonly frequents Brit. coasts. It is both carnivorous and herbivorous, and is an edible species of goose.

Brenta, lt. riv. which rises in a lake at Levico (q.v.) and flows generally E. and then SE. to the Adriatic near Chioggia (q.v.). Part of the old bed of the riv. has been canalized. Length 106 m.

Brentano, Clemens (1778-1842), Ger. poet and romance writer, b. Ehrenbreitstein, the brother of Bettina von Arnim, Goethe's friend. He was of a restless, unsettled temperament, and subject to melancholia. He studied for some time at Jena, but subsequently went to Heidelberg and afterwards to Berlin. In the year 1818 he became a zealous Catholic and renounced his former unsettled habits. For 6 years (1818-24) he lived in seclusion in the monastery of Dülmen, where the 'nun of Dülmen' revealed herself to him. Towards the end of his life his melancholia developed to a critical pitch. He d. at Aschaffenburg. B.'s poems are of a somewhat extravagant romantic type. Symbolism and occult expression are carried to excess. He pub. his *Satiren und poetische Spiele* in 1800, and *Godwi* (a romance) in 1802. His dramatic works show considerable power; the best are *Victoria*, 1817 and *Die Gründung Prags*, 1815. His short novels were popular; *Geschichte vom braven Kasperl und dem schönen Annerl*, 1817, is one of the finest things he ever wrote. His *Romanzen vom Rosenkranz* was pub. after his death and contains some of his best work. B. also collaborated with Achim von Arnim in the collection of the tales and poems forming *Des Knaben Wunderhorn*, 1806-1808. B. was perhaps the greatest genius of the Ger. *Romantik*, but all his major works remained incomplete. See his *Letters*, ed. F. Seebass (2 vols.), 1951, and lives by R. Guignard, 1933, I. Seidel, 1944, and W. Pfeiffer-Belli, 1947. See also K. Glockner, *Brentano als Märchenerzähler*, 1937.

Brentano, Heinrich von (1904-), Ger. politician and lawyer, educ. at Giessen Univ. He became prominent in Ger. politics after the Second World War, being a Christian Democrat member of the Federal Parliament at Bonn from 1949. He became foreign minister in Adenauer's gov. in 1955. B. has done much to further the cause of European unity, and of Federal Ger. alliance with the W. He has been especially prominent in the affairs of the Council of Europe.

Brentano, Ludwig Joseph (corrupted

into Lujó) (1844-1931), Ger. political economist, b. Aschaffenburg, in Bavaria. He belonged to the same family as the poet Clemens of the same name. He studied at Dublin Univ. and also at sev. Ger. univs. In 1868 he travelled in England to study the conditions of labour and examine Eng. trade unionism. The fruit of these researches was his prin. work, *Die Arbeitergilden der Gegenwart*, 1872. The work traces the evolution of the trade union from the guilds of the Middle Ages. He became a prof. of political economy at Breslau in 1872, at Strasburg in 1882, at Vienna in 1888, at Leipzig in 1889, and at Munich in 1891. His other works include treatises on wages, on insurance for working classes, and on socialism. His later books are *1st das 'System Brentano' zusammengebrochen?*, 1915, *Die Urheber des Weltkriegs*, 1922, *Der wirtschaftende Mensch in der Geschichte*, 1923, and *Eine Geschichte der wirtschaftlichen Entwicklung Englands*, 1927-30. He d. in Munich.

Brentford, William Joynton-Hicks, 1st Viscount, of Newick, Sussex (1865-1932), politician and lawyer. In 1908 he became Conservative M.P. for NW. Manchester, defeating Winston Churchill. He was defeated there early in 1910, but elected next year for Brentford. In 1918 he changed to Twickenham, which he represented until the dissolution of 1929. He was made a baronet, Sept. 1919, and was one of those Conservatives who disapproved of continuing the Coalition. Under Bonar Law in 1922 he became parl. secretary to the overseas trade dept; in 1923 postmaster-general and paymaster-general; and then financial secretary to the Treasury, with a seat in the Cabinet—being sworn of the Privy Council 27 Mar. 1923. Under Baldwin he was minister of health until Jan. 1924; and in the second Baldwin ministry, 1924-9, home secretary. He became Viscount B. at the dissolution 1929. He was a leading Evangelical, president of the National Church League, and was prominent in securing the defeat of the Alternative Prayer Book measure in 1928. He wrote books on motor law, censorship of morals, and the prayer book. See life by H. A. Taylor, 1932.

Brentford, Middlesex, England, on the N. bank of the Thames, near the W. boundary of London, forms part of the municipal bor. of B. and Chiswick, and is generally considered the co. tn. Caesar's crossing of the Thames in 54 BC is considered by most authorities to have been at B. In 1642 Charles I's forces captured B. after the battle of Edgohill, but found the way to London barred by superior parl. forces. The industries of B. include the manuf. of soap, cosmetics, and pharmaceutical products, and light engineering. The Grand Union Canal joins the R. Thames at B., which has extensive docks for inland water transport and good road and rail communications. There is a daily fruit and vegetable wholesale market. B. and Chiswick return one member to Parliament. Pop. (with Chiswick) 59,200.

Brentidae, family of coleopterous

insects which includes many tropical beetles; the chief genus is *Brentus*. The most common colouring of the species is black, or brown, with red spots and markings. They live on plants, and the females bore into wood with their sharp mandibles.

Brenton, Sir Jahleel (1770-1844), Brit. admiral, *b.* in Rhode Is. Belonged to a loyalist family which lost most of its property in the insurrection of the Amer. colonies. He was lieutenant in the Brit. Navy at beginning of the war, and emigrated to England with his family. He went to sea (1781) with his father, and to the (Chelsea 'maritime school' on the return of peace. For a time B. served in the Swedish Navy against the Russians. He was at Cape St Vincent, in the *Barfleur*, 1797. In 1801 he served as flag-captain to Saumarez in actions at Algeciras and Gibraltar. B. was wrecked off Cherbourg, 1803, and joined by his wife in prison. Exchanged (1806) for Masséna's nephew captured at Trafalgar. His most brilliant achievement was his defeat of the Franco-Neapolitan flotilla, 1810. He was made baronet, 1812: K.C.B., 1815. B. reached flag rank, 1830, and took part in philanthropic work. He was resident commissioner at the Cape, and Lieutenant-governor of Greenwich Hospital, 1840. See Raikes's life, 1846.

Brentwood, mkt tn in Essex, England, situated in pleasant, well-wooded country, about 9 m. from Chelmsford. There is a large and important grammar school, which was founded in 1557 by Sir Anthony Browne, and dedicated to St Thomas à Becket. Pop. 31,000.

Brenz, Johann (1499-1570), Lutheran reformer, *b.* Weil, Württemberg; as a student at Heidelberg he heard Luther speak, and became a staunch adherent of the Reformation party. His *Syngramma Suevicum* expounds Luther's doctrine of the eucharist. Although a zealous reformer, he opposed persecution and openly disapproved of such methods in his *De Haereticis, an sint persequendi*, 1554. He co-operated in the Württemberg Confession of Faith, and his catechism was second only to Luther's.

Brescia: 1. Prov. of Italy, in central Lombardy (q.v.). Its N. half is in the Alps (q.v.), and the S. half is a plain watered by the Mella and Chiese, tribs. of the Oglio (see Po). The prov. contains the E. shore of Lake Iseo and the W. shore of Lake Garda (qq.v.). The prin. tns include B. and Chiari. Area 1870 sq. m.; pop. 870,000.

2. (anc. Brixia), It. city, cap. of the prov. of B., on the Mella, 51 m. E. of Milan (q.v.). It is dominated by an anc. castle, and has 2 cathedrals, of which the old is medieval, and the new, which has a baroque façade, dates from 1604. There are many other fine old churches and palaces, some of which sustained severe damage during the Second World War. The churches, and the picture gallery, contain notable collections of paintings, including works by Raphael, Tintoretto, and Moroni (q.v.). The marble temple of Vespasian, the chief of the numerous

Rom. remains in the tn, is now used as a museum of antiquities. B. is well known for its cutlery and fire-arms, and it has also silk, woollen, leather, paper, iron, and wine manufs. Arnold da B. (q.v.) was *b.* here. Pop. 147,000.

Breshko - Breshkovskaya, Yekaterina Konstantinovna (1844-1934), Russian revolutionary of aristocratic Polish origin, nicknamed the Grandmother of the Russian Revolution. She spent many years in prison, banishment, and underground work. Belonged to the party of Socialist Revolutionaries (q.v.). After the Bolshevik seizure of power she emigrated and lived in Prague.

Breslau, see WROCLAW.
'Breslau', see 'GOEBEN' AND 'BRESLAU.'
Bressanone (Ger. Brixen), It. tn, in Trentino-Alto Adige (q.v.), at the confluence of the Isarco and the Rienza. It is on a road to the Brenner Pass (q.v.) at the N. foot of the Dolomites (q.v.). From 1179 to 1803 it was the cap. of an eccles. principality of the Holy Rom. Empire. The cathedral and bishop's palace date from the 13th cent. Pop. (tn) 5900; (com.) 12,900.

Bressay, is., 6 m. long and about 2½ m. wide, belonging to the Shetland group, off the N. Scottish coast, situated E. of Mainland (q.v.). Its coast is bold and rocky; peat moss largely covers the interior. Shetland ponies are bred on the is. Pop. 450.

Bresse, anc. dist. of France, once part of Burgundy (q.v.), situated E. of the Saône. Bourg (q.v.) was the cap.

Bressuire, Fr. tn, cap. of an arron., in the dept of Deux-Sèvres. It has the ruins of an anc. castle. There are markets and a textile industry. Pop. 6100.

Brest, seaport in the dept of Finistère, France, situated on an immense roadstead, the only entrance to which is by a narrow channel. The place is thus a natural fortress, and has been strongly fortified since the time of Richelieu. Some of the old defences are the work of the great military engineer Vauban (q.v.). B. is built on the slopes of 2 hills, intersecting which is the R. Penfeld. It has 2 harbours, one for naval and one for mercantile shipping. There are shipbuilding yards, an arsenal, barracks, stores, and all the other features of an important naval station. B. has a naval academy, and sev. schools of nautical science. There are some manufs. such as chemicals and paper. Historically B. was a frequent cause of dispute between France and England. It was held by the English on 2 occasions before the incorporation of Brittany with France in 1532. During the Second World War the Germans used B. as a U-boat base, and for a time as a harbour for the battleships *Scharnhorst*, *Gneisenau*, and *Prinz Eugen*. B. was consequently subjected to heavy allied air attack. After the allied landing in France in 1944, the city was under siege for a period of 6 weeks (Aug.-Sept.), and when the Ger. garrison finally capitulated no building in the city had escaped damage and most had been destroyed. Pop. 91,400.

Brest: 1. Oblast in SW. Belorussia, situated largely in the Poles'ye (q.v.) and covered with mixed forests and marshes. It has large salt deposits. Pop. 1,194,000, mostly Belorussians (until the 1939-45 war also Jews and Poles). Industries include lumbering, grain growing, and hog raising. The prin. tns are B., Pinsk, and Baranovich.

2. (formerly **Brest-Litovsk**, Polish **Brześć nad Bugiem**) Cap. and economic and cultural centre of the above, on the R. Bug. It is an important transportation centre (5 railway lines, Dnioper-Bug canal). Pop. (1931) 48,000 (1910, 57,000). It has been known since 1017 as a fort. tn; in 1319 it became Lithuanian, in 1569 Polish, in 1795 Russian, and from 1919 to 1939 again Polish. It was the meeting-place in 1319 of the council which estab. the United Catholic Church. Since the 1830's it has been an important fortress, and it saw much fighting in both world wars. The peace treaty between Soviet Russia and Germany was signed here in 1918.

Brest-Litovsk, Treaty of, treaty which ended the war between Germany and Russia in 1918. In Nov. 1917 the Bolshevik revolution broke out, resulting in the formation of the Soviet Gov. with Lenin in control. An armistice was concluded with Germany early in Dec., and peace negotiations were begun at the H.Q. of Prince Leopold of Bavaria at B.-L. The treaty was signed on 3 Mar. 1918. The chief terms of this treaty were: (1) All mutual agitation and propaganda to cease; (2) Soviet Russia agreed to renounce control of certain tns. which formerly belonged to Tsarist Russia; (3) Germany to evacuate certain parts of Russia then occupied; (4) Russia to evacuate the E. Anatolian provs. of Turkey; the dists. of Kars, Ardahan, and Batum, and Estonia, Livonia, Finland, and the Aaland Is.; (5) Russia to demobilise her army completely and keep all warships within her harbours; (6) Russia to recognise the treaty of peace concluded by the Central Powers and Ukrainian People's Rep.; (7) Persia and Afghanistan to be respected as free and independent states; (8) Mutual renunciation of payment of war costs. Article XII of the treaty provided for the conclusion of other treaties, e.g. a supplementary treaty signed at B.-L. on 3 Mar. 1918, which dealt with the estab. of public and private legal relationships between Germany and Russia, the exchange of prisoners of war and interned civilians, and the treatment of merchant shipping. A commercial treaty between Germany and Russia was also concluded. Under the 'Ger.-Russian Financial Agreement,' Russia agreed to pay to Germany, under Article II, 6 milliards of marks as compensation to Germans 'who shall have suffered damage by reason of Russian measures.' This was signed by the peace delegates of both parties on 27 Aug. 1918.

The military situation created by the conclusion of the treaty of B.-L. did not prove so favourable to Germany as she had calculated. The Russian frontier

could not be left unguarded, as it was fully expected that independent hordes of Russians would make serious raids across the border in spite of the terms of the treaty. A Ger. force had also to be kept in Finland as a threat to Petrograd (now Leningrad) should Russia fall under the influence of the Entente and be induced to resume operations against Germany. The Rumanian army had been demobilised, but it had not been disarmed, and the Germans found that at least 4 divs. were required in that part of Europe. It was, however, too late for Germany to alter her plans for a supreme effort on the W. front, before the Entente forces were reinforced by the Americans. The protracted peace negotiations at B.-L. caused Germany to lose valuable time, and thus nullified the effect on the operations of the troops she was able to transfer to the W. front as a result of the conclusion of the treaty. This treaty was recalled, ironically enough, in Sept. 1939, after the Ger. invasion of Poland, when the Soviet armies marched into that country and Stalin's representatives met those of Hitler, at B.-L., to partition Poland between them.

Bretagne, see BRITANNY.

Brethren, Church of, the majority group of Ger. Baptist B., called from their practice of immersion 'Dunkers,' 'Dunkards,' 'Tunkers,' or 'Dippers,' with 1035 churches and 194,000 members in 1955. The sect was founded at Schwarzenau, Germany, in 1708 by Alexander Mack. Under persecution its members emigrated between 1719 and 1739 to the vicinity of Germantown, Pennsylvania. Their creed is strictly evangelical, and they enforce baptism by immersion, and only for adults. They practise extreme plainness of dress, 'washing of feet,' 'salutation with a holy kiss,' faith-healing, avoid war and litigation, and refuse to take oaths. The Church is represented throughout the U.S.A. except New England, maintains missions in Asia and Africa, has 8 colleges, a publishing house at Elgin, Illinois, and a Church paper, the *Gospel Messenger*.

Brethren, Plymouth, see PLYMOUTH BRETHREN.

Brethren of Common Life, community estab. by Gerard Groot about the year 1380, which included at one time the famous Thomas à Kempis (q.v.). Many of them were laymen. The Brethren were free to remain as long as they liked, or to depart when they liked; but as long as they remained Brethren, they were bound by their vows of chastity, poverty, and obedience. Their money went to a common fund, and they spent their lives among the people, converting and teaching them. They were bitterly attacked from inside the Church, but triumphed over their enemies at the council of Constance. In the 16th cent. they began to decline, and died out in the 17th. They are sometimes called the Brethren of Modern Devotion. Similar to them in some ways are the Bèguines in Belgium and the modern Lay Associations created in the Rom. Catholic Church under Pius XII.

Brethren of Mercy, see MISERICORDIA.

Brethren of the Free Spirit, sect of mystical pantheists who appeared during the 13th cent. They were really the outcome of the revival of the Aristotelian movement influenced by Neo-Platonism. They were bitterly attacked by the orthodox; council after council condemned their works, but they continued to exist until the 16th cent.

Bretigny, Fr. vil. in the dept. of Eure-et-Loir, 20 m. S. of Paris. By the treaty signed here in 1360, Edward III (q.v.) renounced his claim to the Fr. crown, receiving the SW. quarter of France as a sovereign prince. John II of France (q.v.) was liberated pending the payment of a ransom of 3,000,000 crowns.

Breton, Jules Adolphe (1827-1906), Fr. painter, b. at Courrières, Pas-de-Calais. He studied art under de Vigne at Ghent, under Wappers at Antwerp, and under Drölling at Paris. His first pictures were historical in character, and include 'Saint Plat Preaching in Gaul' and 'Misery and Despair'—a scene of the revolution of 1848. B., however, saw that his talent lay in interpreting rural life. In 1853 he exhibited his 'Return of the Harvesters' in the Salon at Paris, and the 'Little Gleaner' at Brussels.

Breton, Nicholas (c. 1545-c. 1626), poet and satirist, son of a London merchant. Apparently at Oxford in 1577, he was for some time in the Low Countries. From 1592 he enjoyed the patronage of the Countess of Pembroke. A very versatile writer, he produced many poetical works, including *A Floorish upon Fancie*, 1577, *The Soul's Heavenly Exercise*, 1601, *The Passionate Shepherd*, 1604, and *Pasquill's Mad-cappe*, 1626. His lyrics, 8 of which appear in *England's Helicon*, show both skill and delicacy. In prose he wrote *Wit's Trenchamour*, 1597, *The Wit of Wit*, 1599, *A Mad World, My Masters*, 1603, *Adventures of Two Excellent Princes*, 1604, *Grimello's Fortunes*, 1604, and *Strange News out of Divers Countries*, 1622. His mother married George Gascoigne (q.v.). His works were ed. by A. B. Grosart, 1879.

Bretón de los Herreros, Manuel (1796-1873), Sp. dramatist, b. Quel, Logroño. He occupied sev. gov. offices, became director of the National Library and secretary of the Royal Academy. He wrote about 160 original plays, and many trans. His genius lay chiefly in comic power and witty social satire. *Muñeca y verdades*, 1837, and *Escuela de Matrimonio*, 1852, are classics.

Breton Island, Cape, see CAPE BRETON ISLAND.

Breton Language and Literature. The B. language (also known as Armorican), spoken in Lower Brittany by about 1 million inhab (who are mainly bilingual), belongs with Welsh and Cornish (now extinct) to the Brythonic or P-Celtic group of the Celtic languages (q.v.). Contrary to the common belief there was no direct connection between the B. language and the ancient Celtic language of pre-Rom. Gaul, which was already extinguished before the B. settlers

arrived from Britain, refugees from the A.-S. invasion in the 5th and 6th cents. There are 4 main B. dialects: *léonard* (in the dist. of Léon, Finistère) which gives the official orthography; *cornouaillais* (in the dist. of Cornouaille, also Finistère); *trégorois* (in the dist. of Tréguier, Côtes-du-Nord); and *vannetais* (in the dist. of Vannes, Morbihan). B. literature may be subdivided into 4 periods: (1) Early B., 8th-11th cent.: glosses and names in auct documents (see J. Loth, *Vocabulaire Vieux-Breton*, 1884, and *Chrestomathie Bretonne*, 1890). (2) Middle B., 11th-19th cent.: very scarce literary material before the late 15th cent.; then, religious dramas or mystery plays (*Le Mystère de Sainte-Nonne*, late 15th cent.; *Le Grand Mystère de Jésus*, 1530; *Le Mystère de Sainte Barbe*, 1557), poems (*Passing of Mary, Life of Man*, etc.), but also secular books (such as *Catholicon* of Lagadouc, a B.-Lat.-Fr. dictionary printed in 1499: the first printed B. book). (3) Modern B.: begins in 1659 with Julien Mannoir's grammar, *Le Sacré Collège de Jésus*, in which a phonetic system replaces the traditional orthography; mystery and miracle plays, drawing on the O.T. (*Creation ar bed; Vie de David*) and the N.T. (*Dieu santes Anna; La Passion*), lives of saints (*St David; St Guennolé*), and chivalry literature (*Vie des quatre fils*). (4) 19th-cent. Renaissance: editors of ancient poems, legends, folk-tales, and ballads (Hersart Visconte de la Villamarqué, 1815-95; August Brizeux, 1803-58), lexicographers and translators (such as Le Gonidec and Troude), poets and writers (F. M. Luzel, Prosper Proux, P. D. Guesbriand, Abbé Guillome, Anatole le Braz, A. le Moal, Erwan Berthou, C. M. de Prat, V. Guillaud, N. Quellien, and others) have endeavoured to create a national literature. One of the most representative works of the modern movement is *An Delen Dir* ('The Harp of Steel'), by Fanch Jaffrennou, 1900. B. genius is best expressed in the oral literature of the auct bards and storytellers. Characteristic are the *gwezennoù* or *complaints* (dealing with local history, petty crimes, religious legends, superstitions, dramatic in composition, but concise in style) and *sonioù* (love songs, influenced by Fr. literature. Gwesnon, Taliez or Taleisin, Mezzin, or Merlin, and Sulio can still be recognised in the popular traditions, which are saturated with the marvellous, the supernatural, the ideal, with stories of adventure and of the sea.

Bretschneider, Heinrich Gottfried von (1739-1810), Ger. satirist, b. Gera. He attended the Moravian Institute at Elbersdorf and the gymnasium at Gera. In 1778 he obtained the office of librarian at the univ. of Buda, and in 1782 a gov. appointment. His best satires are *Almanach der Heiligen auf das Jahr*, 1788, and *Georg Wallers Leben und Sitten*, 1793.

Bretschneider, Karl Gottlieb (1776-848), Ger. theologian, b. Gersdorf, Saxony; studied theology at Leipzig, and the keenness of his intellect attracted the attention of F. V. Reinhard, preacher

to the court at Dresden, through whom he became pastor at Schneeberg in 1807. He was appointed general superintendent at Gotha in 1816. B. showed decided rationalistic tendencies.

Brett, Reginald Baliol, and **William Baliol**, see **ESHER, VISCOUNTS**.

Bretten, Ger. tn in the *Land of Baden-Württemberg* (q.v.), 27 m. NW. of Stuttgart (q.v.). It has anct walls and houses, and was the bp. of Melancthon (q.v.). Pop. 9000.

Bretton Woods Agreements, formulation of international monetary policy as agreed by the representatives of 44 nations at the international conference at B. W., New Hampshire, U.S.A., 1944, and subsequently ratified by most of the nations concerned. The object of the conference was to consider means of international monetary co-operation in order to aid international trade and to ensure stability of rates of exchange. The conference was agreed that international co-operation was essential to the maintenance of an international monetary system in order to promote trade, and that no nation should change its monetary policy without international consultation; and, further, that the nations should co-operate to increase foreign investment to enable the work of reconstruction to be carried out after the war. These aims were embodied in the B. W. Final Act by which the conference recommended that a permanent International Monetary Fund (q.v.) should be set up with a capital of 8800 million dols., and also an International Bank for Reconstruction and Development (q.v.) with a capital of 9100 million dols.

Bretts and Scots, Laws of the (Lat. *Leges inter Brettos et Scotos*), name applied to the laws relating to the Celtic tribes of Scotland in the 13th cent. The Scots were Celtic tribes in the highland dists., and the Bretts were the remnant of the Britons occupying the dist. of Strathclyde, or Cumbria. The dist. of Cumbria was held by the heir to the Scots throne, who was known as the Prince of Cumbria. The B. and S. were conservative in their Celtic traditions and institutions, but in 1305 Edward I of England ordained 'that the usages of the Scots and Bretts be abolished, and no more be used.' The fragments of the laws which remain are similar to the Brehon laws of the Irish. The system was an elaborate 'valuation' scheme, fixing the prices or 'cows' at which every man and woman was valued, from the king to the villen or churl. The basis of valuation was a cow—the king was valued at 1000 cows and a churl at 16. Hence was arranged a system of compensation for various injuries and crimes.

Bretwalda (probable trans. 'ruler of Britain'), title given by the 9th-cent. writer of the A.-S. Chronicle to Egbert, and, retrospectively, to 7 earlier kings. It was sometimes assumed by later ones, e.g. the term occurs in one of Athelstan's charters. Much historical argument has centred on the exact definition of B.; but it seems likely that it originated in the

early days of the A.-S. settlements among the followers of some king who considered him worthy of the title of overlord of Britain by virtue of his military successes over the Britons, gained in loose confederation with other invading groups. His authority over the other members of the confederacy was probably more apparent than real, and in any case temporary in character. See F. M. Stenton, *Anglo-Saxon England*, 1943.

Breuil, l'Abbé Henri (1877–), distinguished Fr. archaeologist, an authority on the Palaeolithic and particularly on cave-art of that period of which he has made many skilled copies. He has made detailed studies of his subject in the caves of France, Spain, China, Ethiopia, and S. Africa, and is regarded as the world's outstanding figure in this dept. of archaeology. He has been a prof. at the Institute of Human Palaeontology in Paris, and at the Collège de France; in 1937 he was awarded the gold medal of the Society of Antiquaries of London, the highest honour that learned society has in its power to bestow. His publs. include *Beyond the Bounds of History*, trans. by M. E. Boyle, 1949, and *Quatre cents siècles d'art pariétal*, 1952, trans. by M. E. Boyle in the same year.

Breul, Karl Hermann (1860–1932), Ger. philologist and educationist, b. Hanover, and educ. at Goethe Gymnasium, where he first studied theology. He then took up modern languages at Tübingen, where he studied under Ten Brink and Boehmer. Settled in England in 1884, and was appointed first univ. lecturer in German by Cambridge Univ., which had just estab. the medieval and modern languages tripos. In 1910 he was elected to the recently founded Schröder professorship of German at Cambridge Univ. Had a strong influence on education in his adopted country. President of Modern Language Association, 1910, and of the Eng. Goethe Society (founded 1886), and one of the founders and first editor of the *Modern Language Quarterly*, 1897. Made numerous contributions to the literature on the teaching of modern languages: *The Teaching of Modern Languages in our Secondary Schools*, 1898, repub. as *The Teaching of Modern Foreign Languages and Training of Teachers*; *Handy Bibliographical Guide to the Study of the German Language and Literature*; also produced well-annotated eds. of Ger. classics and an ed. of *Wiel's German Dictionary*. Ed. Eng. and Fr. texts, including a fine ed. of the *Cambridge Songs*—a notable contribution to the study of medieval literature.

Brunnerite, mineral consisting of magnesium carbonate, $MgCO_3$, together with oxide of iron. It is a variety of magnesite (q.v.) and is rarely found in the crystalline form.

Breve, note in music. It has now the greatest time-value, being equal to 2 semibreves. It is written thus \square or $\parallel O \parallel$, but is rarely found outside church music.

Breve, term in anct Scots law denoting a writ issued by Chancery ordering a

judge to try by jury questions stated in the B. Until the institution of the Court of Session (1532) almost all civil actions in Scotland were commenced by B.

Brévent, mt of the Pennine Alps, in the dept of Haute-Savoie, France, rising above the valley of Chamonix. Its summit (altitude 8282 ft) commands a fine prospect of Mont Blanc.

Brevet, word used to denote commission given to officers of the Brit. Army, of or above the rank of captain, to a higher rank without regard to the number of vacancies there may be in the higher order. A general B. formerly occurred at intervals of 5 years, but it gradually became confined to occasions of public thanksgiving, e.g. coronations and satisfactory conclusions of military service. The system was found to be vicious, because the rate of promotion was not adjusted according to demand. In 1854 general B.s were abolished, and a system of individual B.s was organised for distinguished military service. B.s are not given in the navy. In the U.S.A. the system applies to first lieutenants and officers above that rank, but the commission does not entitle the holder to a higher rate of pay.

Breviarium Alaricianum, collection of Rom. law, compiled by the command of Alaric II, King of the Visigoths, in the year AD 506. In it are contained 16 books of the Theodosian code, the *Novels* of Theodosius II, Valentinian III, Marcian, Majorianus, and Severus; the *Institutes* of Gaius, 5 books of the *Sententiae Receptae* by Julius Paulus; 13 titles of Gregorian code, 2 titles of Hermogenian code, and a part of the first book of the *Responsa Papiniani*. By many people it is thought that Anianus was the composer of this code, and hence it is often called the 'Breviary of Anianus,' but by the Visigoths it was known as *Lex Romana*. It was only in the 16th cent. that it received the name of B. A., to distinguish it from a later ed. that was introduced in the 9th cent. for the benefit of the Romans in N. Italy. This B. A. is the only collection of Rom. law containing the first 5 books of the Theodosian code and the 5 books of the *Sententiae Receptae* which has been preserved, and at one time was the only work known, until the discovery of some MSS. in a library in Verona.

Breviary (Lat. *breviarium*), book which contains the offices for the canonical hrs in the Rom. Catholic Church. Though B. means a summary it was probably used because it was a compilation of the various books (psalms, prayers, etc.) used in any one service. There are 8 canonical hrs: Matins, Lauds, Prime, Terce, Sext, None, Vespers, Compline. The Rom. B. has undergone sev. revisions. In 1536 a Spaniard, Francis, cardinal of Quiñones, made sweeping reforms in the B., by which he ensured that all the Psalms were read each week, and the major portion of the Bible each year. Although Rome refused to accept his revision, it is of exceptional interest to Englishmen, as the prefaces of the Eng.

prayer book are largely modelled on those of the cardinal, and the daily services of the Eng. Church are little more than condensations of the offices he enjoined. Till the Council of Trent every bishop had power to regulate the B. of his own diocese. Pope Pius V, however, while sanctioning those which could prove at least 200 years of existence, made the Rom. obligatory in all other places. Except for the Mozarabic B. in use at Toledo, and the Ambrosian that is followed in Milan, the Rom. has effectually superseded all others among the secular clergy, but monastic B.s still exist (e.g. for Benedictines and Dominicans). Since Pius V the Rom. B. has been revised sev. times for the purpose of simplifying the rubrics, improving the scriptural text, correcting the prosody of the hymns, and bringing the biographies of the saints into consonance with the results of historical research.

Brewer, David Josiah (1837-1910), Amer. jurist, b. Smyrna, son of a missionary of that place. Became a judge of the supreme court of the U.S.A. in 1869. He was president of the Venezuela Boundary Commission in 1896, and was a member of the Brit.-Venezuelan court of Arbitration at Paris in 1899. One of his most important decisions was at the time of the Chicago strike of 1894, when he estab. the right of the federal court to restrain obstructions to trains engaged in inter-state commerce or the transmission of mails.

Brewer, Ebenezer Cobham (1810-97), compiler, b. London. He studied law at Cambridge, and in 1836 took orders, but turned to literature, and in 1870 pub. his famous reference book, the *Dictionary of Phrase and Fable*, which has served 3 generations. Others of his 30 compilations are *The Reader's Handbook of Allusions, References, Plots, and Stories*, 1880, and a *Dictionary of Miracles*, 1884.

Brewer, John Sherren (1809-79), historian, b. Norwich. He was the son of a Baptist schoolmaster, and was educ. at Queen's College, Oxford. He was appointed lecturer in classics at King's College, London, 1839, and in 1855 prof. of Eng. language and literature, and lecturer in modern hist. He did much valuable research work. He pub. and ed. the *Monumenta Franciscana*, 1858, Bacon's *Opus Tertium* and *Opus Minus*, 1859, and a portion of the works of Giraldus Cambrensis, 1861. In 1877 he resigned from his academic posts to acquire the crown living of Toppenfield, Essex. There he continued his scholarly commentary on the records of the reign of Henry VIII.

Brewing, broadly the preparation of an alcoholic beverage from materials containing starch or sugar by fermentation, but usually the making of beer in all its varieties from malted barley (with which this article is concerned). In some countries other starchy materials, such as rice, maize, millet, and wheat, are used in place of or as adjuncts to barley, but the basic material is generally barley. The art of B. is of great antiquity. Inscriptions

of Egyptian life show clearly that beer was a popular national beverage on the banks of the Nile 3000 years before the Christian era. A short summary of the main processes involved in B. is given before describing the operations performed in greater detail. (1) The grain of the barley is first converted by a process of germination into malt, which is then steeped in hot water, whereby, by means of a chemical reaction to be described later, the starch contained in the malt is converted into soluble carbohydrates.

stances—barley, water, and hops—which form the basis of the manufacture will now be given.

BARLEY. The barley grain consists of a husk within which is the embryo of the plant and the endosperm, the latter consisting largely of reserve food material for the young plant. This reserve food, consisting of starch, protein, and mineral matter, forms the bulk of the grain and is the foundation material of the B. process. The varieties of barley grown commercially to-day are 2-rowed and 6-rowed

BREWERY COPPER ROOM
Hops are being added to the wort.

Bass, Ratcliff & Grelton Ltd

(2) The liquid, now called the wort, is drawn off and boiled with hops (see *Hops*), which impart a bitter flavour, together with preservative properties. (3) The wort is transferred to large vessels and yeast is added, which causes the process of fermentation to set in, in which the sugar contained in the liquor is converted into alcohol. (4) Finally the liquor is drained from suspended matter and stored for periods varying with the variety of beer. About three-fourths of the world's beer is made by the continental system of B. beers of the lager type. The chief difference between this and the Brit. process will appear in the course of this article. In no industry are the condition and chemical composition of the raw materials of greater importance than in the manufacture of beer, and a description of the 3 sub-

varieties and of these the most favoured for B. were until recently the 2-rowed Plumage-Archer and Spratt-Archer; these are greatly improved varieties produced by hybridisation in the U.K. at the beginning of the cent. They have latterly been largely replaced by Scandinavian hybrids which give better yields for the farmer and are more suitable for modern methods of harvesting, though they do not so readily make good malt. The valuation of barley is largely carried out by visual inspection of the grain; this in the hands of the expert is very reliable, though increasing use is being made of chemical analysis. The grains should be fully developed and ripe, even in size and colour, and carefully threshed. The appearance of a section cut across the grain gives a good idea of the maturity of the corn and of its

ready 'maltability.' Miniature germination tests are carried out to ascertain its regular viability, so essential to malting.

WATER. Considerable importance is attached to the constitution of water used for B. and locality plays some part in determining the character of beer. The best British ales are brewed with waters approximating in composition to those occurring naturally in the Burton-on-Trent dist.; these contain a high proportion of gypsum or calcium sulphate. Mild ales or stouts on the other hand are brewed with soft water, e.g. in Ireland, or with water containing carbonates and chlorides. The finest continental lagers are brewed with very soft waters.

Hops. The hops used by the brewer are the dried green cones which carry the seeds of the female plant of *Humulus Lupulus*. Hops are used primarily for flavouring but they have important preservative qualities. There are 3 important groups of substances carried by the ripe hop: (1) essential oils giving volatile aromatic flavours, (2) resins, giving bitterness and having preservative properties, (3) tannin-like bodies which play an important part in clarification and brilliance of the final beer. The chem. of the hop substances is very complex and still in parts obscure; it is being increasingly unravelled by studies at the Brewing Industry Research Foundation at Nutfield and in other B. research laboratories throughout the world. Hops are still largely valued by eye and nose, though analysis of the resins is becoming of increasing use. The characteristic flavour of Brit. beers as compared with those brewed by the continental method is largely due to the higher proportion of hops used; this in a high-class pale ale may be double the amount used in a good lager.

MANUFACTURE OF MALT FROM BARLEY. The barley is first screened, which frees it from dust and extraneous matter. The grain is then ready for the malting process, whereby it undergoes important changes in constitution, chief of which is the secretion of a group of enzymes called amylases. The enzymes are a class of natural substances which possess the property of being able to decompose certain organic compounds such as starch and protein into simpler substances. There are 2 major methods followed in the malting of barley: the 'floor' method and the 'pneumatic drum' method. In the floor method the barley is first steeped in water for a period of 2 or 3 days. During steeping the grain absorbs the necessary moisture for germination, swells in size, and becomes full and soft. The operation is carried on in oisterns having draining racks at the bottom to facilitate the changing of the water. After steeping the grain is placed in heaps on the malting floor. This is situated in a dark, well-ventilated building in a dry position, having thick walls so that the temp. can be maintained constant. It is essential that the germinating process should be kept well under control, and should proceed uniformly throughout the material. Temp. rises as the grain

germinates; the heaps are turned and spread and occasionally sprinkled with water to keep the germination even. Air conditioning is installed in most modern maltings to enable temp. and ventilation to be controlled. The process of 'drum' malting, which is of modern invention, is similar in principle to that just described, but instead of being spread on a floor and turned by hand, the grain is placed in revolving cylinders in which ventilation and temp. can also be controlled. In both systems, under the influence of warmth and moisture germination commences within the corn. Carbon dioxide (carbonic acid gas) is given out by the young seed, and the embryo at the base of the corn begins to grow.

BREWERY MALT HOUSE

Barley, in process of germination, being turned on the floor.

When the acrospire or growing point, still under the husk, has reached about three-quarters of the way along the corn, growth is stopped by drying the malt on a kiln. Moisture is first driven off by the application of a moderate heat, and then the temp. is raised to the neighbourhood of 180° F., in order that the 'withering' process may be effected. By varying the conditions on the kiln, malts varying in colour and flavour to meet special requirements can be produced. The primary object of malting is to produce a high development of enzymes with a minimum loss of B. material.

BREWING. The malt is now ready to be used in the B. process proper. This is carried out in three stages: (1) Mashing, (2) Boiling, (3) Fermentation. As these consist of successive treatments of the soluble extract from the raw material it is customary to make the brewery a high building in which the extract flows by gravity throughout the first 2 stages and is then pumped to the top of the building for cooling prior to the third stage, after which it ends up in the cellar

as beer. The malt is first elevated to the top of the building where there are mills in which the malt is crushed before passing to the grist cases commanding the mash tuns.

Mashing. In the 'infusion' system of mashing practised in the U.K. the grist is mixed with hot water in a mashing machine and passed into the mash tuns—cylindrical vessels with false bottoms—at a temp. of about 145° F.; this is later raised by admitting hot water to the bottom of the mash tun. The mash is allowed to stand for 2 hours or more during which time the enzymes produced in malting convert the starch into soluble sugars and dextrins. These then, together with the soluble nitrogenous substances and some mineral matter from the malt, constitute the liquid extract called wort. This is now run off through the false bottom at the same time as the grains are 'sparged' or sprinkled with hot water from a revolving arm. In continental B. a 'decoction' method is used in which the temp. in the mash tun covers a wide range; mashing is started at a low temp. and is raised in stages by removing portions of the wort to a separate vessel where it is heated to boiling and then returned to the mash tun.

Boiling. The wort is now run into coppers and boiled for 1½–2 hrs with hops. The object of boiling is to sterilise and to concentrate the wort and to extract the flavouring and preservative matters from the hops. Since some of these are volatile it is customary to add a proportion of the hops towards the end of the boil. Boiling also serves to coagulate some of the nitrogenous material in the wort and this assists in clarification of the beer. The hopped wort is then turned out into a hop back where the hops settle and form a filter bed on the false bottom. The filtered wort is then pumped to the top of the building where it passes through coolers prior to fermentation.

Fermentation. There are 2 types of B. yeast (*Saccharomyces cerevisiae*): (1) top fermentation yeasts which operate at normal temp. (60–70° F.) and produce a large crop of yeast at the top of the wort; these are used throughout the U.K. and in a few places elsewhere; and (2) bottom fermentation yeasts which function at temps. near the freezing point, are much slower in operation, and largely go to the bottom of the wort; these are used almost exclusively on the Continent and generally in the rest of the world.

(1) **Top fermentation.** Yeast from a previous fermentation or from a pure culture plant is added to the wort or 'pitched' at a temp. of about 60° F. After an initial 'lag' period, multiplication of the yeast proceeds very rapidly, a yeast crop of 3–5 times the weight of the original pitching being obtained. As a result the temp. of the fermentation rises and is controlled to a maximum of about 70° F. by circulating chilled water through coils of pipes (attenuators). Fermentation takes 3–4 days and may be completed in one vessel from which the

surplus yeast is skimmed off, or the wort may be 'dropped' into 'cleansing vessels,' from which the yeast is similarly skimmed, or into large casks from which the yeast is allowed to work over into troughs for collection (Burton Union System). At the end of fermentation the beer is further cooled before 'racking' into casks or storage for 'conditioning.' Details of treatment both during fermentation and storage vary with the type of beer and with the brewery. Mild ales are usually sold a few days after racking, while the pale ales and bottled beers are stored for a week or more, sometimes sev. weeks; strong beers are sometimes stored many months. Draught beers are usually clarified before sale by the addition of 'finings,' a preparation of isinglass; mild ales are sometimes sweetened by the addition of 'priming.' The light bottled ales are usually 'carbonated' by the addition of carbon dioxide gas after chilling and are then filtered.

(2) **Bottom fermentation.** The pitching takes place at about 40° F., and the major part of the fermentation in open vessels takes 10–14 days to complete; the beer is then chilled to between 34° and 36° F., and dropped into closed tanks in cold cellars for 'lagering,' a process which takes up to 6 months. After this the beer, highly charged with carbonic acid gas, is filtered under pressure into casks or bottles. It is stored and served cold.

CHEMISTRY OF BREWING. All industry is concerned with bringing about changes in the shape, arrangement, or nature of natural materials, usually by the application of external forces. In B. the chemical changes which take place are brought about by the action of natural forces inherent in the materials, and the brewer's art is so to control these forces as to obtain the desired results. The agents activating these forces are known as enzymes and are complex protein substances produced by living cells; they have the power of initiating profound and far-reaching changes in biological materials. They bring about the change of insoluble food materials into simpler substances which the organism can make use of for its growth and as a source of energy (as in normal digestion), and they can also act in the reverse direction and build up from such simple substances the complex material which makes up living tissue. Though they are produced and normally operate within the living cell they are not themselves living, but they can be isolated from the cells, sometimes in crystalline form, kept indefinitely without change or decomposition, and used to perform outside the living cell the functions they normally perform within it.

It was the isolation of the enzyme *zymase* by Buchner (1897) which finally resolved the long-standing controversy between Pasteur, the Fr. chemist, and Liebig, the famous Ger. scientist. Pasteur (1860) had shown beyond a shadow of doubt that yeast was always associated with alcoholic fermentation, which, he maintained, resulted from the

normal functioning of the living yeast cell ('life without air,' he called it); Liebig claimed that the fermentation was caused by forces liberated from decomposing albuminoid matter and that the presence of yeast cells was only incidental. Buchner succeeded in isolating from yeast an albuminoid substance which he called zymase; this he was able to show brought about the fermentation in the absence of any living yeast, thus showing that both protagonists were to an extent right and that their theories were not entirely mutually exclusive. Normally the action takes place inside the yeast cell and not outside as Leibig thought; nor is the enzyme decomposed in the process, for it was found that a very small quantity of enzyme could bring about the breakdown of very large quantities of sugar without suffering any loss of power; enzymes acting in fact as biological catalysts.

Much study has been devoted to the chemical changes occurring in fermentation, the overall results of which can be indicated by the simple equation:

It is believed to-day that to reach the end point shown in the equation the action passes through at least 12 different stages in which 12 different enzyme systems are involved. This indicates the great complexity of such natural changes, and it is typical of the many which occur in the course of B. from the first growth of the embryo barley on the malting floor to the final production of matured beer in bottle.

The major enzymic change takes place in the mash tun when starch, the plant's chief reserve food material, is broken down to simpler carbohydrates. Starch, a complex body of empirical formula $\text{C}_6\text{H}_{10}\text{O}_5$, has a molecular weight of over 50,000; and most of this under the action of the amylase group of enzymes is converted into a fermentable disaccharide maltose (molecular weight 360), but at the same time both simpler and more complex sugars are produced, including monosaccharides, trisaccharides, and a range of oligosaccharides formerly called dextrans. Enzyme actions are very sensitive to temp., and by varying the conditions in the mash tun the brewer is able to vary the constitution of the wort and so the nature of the resulting beer. Similarly protein breakdown, which occurs chiefly in the course of malting, results in the production of a wide range of nitrogenous bodies, including polypeptides, which are important for flavour and foam formation in the beer, and amino acids, which are essential for the growth and activity of the yeast.

VARIETIES OF BEER. The 2 main varieties of beer consumed in the U.K. are ales and stout. Ales are of 2 kinds, mild and bitter, and their difference in taste is due partly to the fact that a larger amount of hops has been used in the case of the bitter ale than in the case of mild. They are manufactured from pale malt, which has not been heated to a high temp. on

the kiln. The process of slow fermentation which goes on in the casks or tank while the ale is being stored and the consequent formation of carbon dioxide is the source of the refreshing and 'sparkling' qualities which characterise this beverage. In order that this slow fermentation may take place, the presence of a certain amount of fermentable sugar in the casks when they are stored is necessary. This is ensured by the temp. in the mash tun and by the type of yeast used in the fermentation.

Stout is brewed from a special mixture of malts, including roasted malts or roasted barley.

Lager. The chief differences between Brit. and continental beers have been shown to be in the method of mashing, the lower hop content, and the slow fermentation at low temp. Most lager beers are pale in colour, but dark beers of the 'Munich' type correspond to our mild ales. The light colour and mild flavour of the pale lagers must not be taken to indicate weakness: most lagers contain more alcohol than our draught beers or our bottled light ales. Stouts are seldom brewed outside the U.K., when they are usually brewed by Brit. methods. In recent years there has been a notable increase in the consumption of bottled beer as compared with draught beer. This has been brought about largely by the introduction of the system of chilling, carbonating, and filtering bottled beer, introduced at the beginning of the cent.: this improved the keeping qualities of the beer and to-day is sometimes accompanied by pasteurisation. It has also been fostered by modern methods of road transport.

BEER DUTY. For every 36 gallons where the worts were, before fermentation of a sp. gr. of 1030° or less, the duty is, (Aug. 1956) £7 15s. 4½d., for every additional degree in excess of 1030°, 6s. 7½d.

Consumption of beer in the United Kingdom. The production and consumption of beer in the U.K. showed a gradual decline from the end of the 19th cent. until 1933, when it began to recover. It continued to do so until 1946, when it again declined during 5 years to a level at which it has, broadly speaking, since remained. In 1899, 37,404,000 barrels of beer were brewed; in 1933, 17,950,303; 1946, 32,650,200; 1951, 24,891,746; 1955, 24,353,996.

REVENUE FROM BEER. The U.K. derives a substantial proportion of its revenue from the duty on beer. In 1925 the Chancellor of the exchequer was enriched from this source to the extent of £75,825,828; for 1956-7 the revenue is estimated at £258,506,000. The world's largest breweries are those of Guinness & Son in Dublin and Bass & Co. in Burton-on-Trent, though the Schultheiss Patzenhofer brewery in Berlin was as large. It is of interest to note from the consumer's point of view that whereas the main brewing industry costs (raw materials, fuel, transport, and building and repair of licensed houses) has risen threefold and more since before the last war, the

basic price of beer—that is, of draught beer in the public bar—apart from tax, has not so much as doubled. The duty, on the other hand, has risen on the pint of average strength from 2d. in 1939 to roughly 8½d.

Preece, *The Biochemistry of Brewing*, 1954; E. J. Jeffery, *Brewing Theory and Practice*, 1956.

Brewood, tn in Staffs, England, 11 m. from Stafford, chiefly concerned with agriculture. Pop. 3500.

Brewster, Sir David (1781–1868), philosopher, b. Jedburgh. His father was rector of the grammar school in that tn. Sent to Edinburgh Univ. at the age of 12 to study for the Church of Scotland, finished his course in divinity, but never entered into active ministry in the Church. Successively a pharmaceutical chemist, lawyer, and physicist. Specialised in optics. He was elected F.R.S. in 1815. In 1816 he invented the optic toy known as the kaleidoscope. Improved Wheatstone's stereoscope by substituting lenses for the mirrors used to combine the pictures. Invented the dioptric apparatus used in lighthouses, consisting of a central lamp, the rays from which are transmitted by an arrangement of lenses surrounding it. Made significant contributions to the development of other optical instruments, and discovered the relation between refractive index and polarising angle, B's Law. Editor of sev. scientific periodicals. He wrote *Letters on Natural Magic*, 1832, *More Worlds Than One*, and a book named *Martyrs of Science*, 1841. But his literary fame will rest chiefly on his *Memoirs of the Life, Writings, and Discoveries of Sir Isaac Newton*, 1855. To suggestions of his in an article in the *Quarterly Review*, the Brit. Association for the Advancement of Science owes its origin. B., Babbage, and Herschel were the active shapers of its constitution. In 1832 B. was knighted, and in 1838 he was appointed principal of the colleges of St Salvador and St Leonard, St Andrews. He had many European honours, and was one of the 8 foreign associates of the Fr. Institute. In 1859 he was made principal of Edinburgh Univ., where he remained till shortly before his death, which took place at Allierly, Melrose. See L. Playfair, *Sir David Brewster*, 1868, and Mrs Gordon, *Home Life of Brewster*, 1869.

Brewster, William (c. 1566–1644), Amer. colonist, one of the prin. men of the Pilgrim Fathers, b. Scrooby, Notts. After holding sev. secretarial appointments, he became post (the postmaster

responsible for relays of horses) in his native tn of Scrooby. In 1606 he helped to form a Separatist Church. He suffered persecution, but at last obtained a land patent from the Virginia Co. In 1620 he sailed in the *Mayflower*, and helped to found Plymouth colony.

Brewster Sessions, ann. meetings of magistrates or justices to hear applications for licences or renewals of licences by retailers of intoxicating liquors. They are held during the first fortnight of Feb. B. S. are regulated by Section 10 of the Licensing (Consolidation) Act, 1910.

Brezina, Otakar, see JEHAVY.

Brialmont, Henry Alexis (1821–1903), Belgian general and author, the son of Gen. Laurent B. In 1843 he passed from the military school at Brussels into the army as sub-lieutenant of engineers. From 1843 to 1874 he rose to the rank of major-general. As major-general he became director of fortifications in the Antwerp dist., and within the year inspector-general of fortifications and of the corps of engineers (1875). It was probably the unpopularity of his elaborate schemes for reformed fortifications at home that induced him to accept an offer from the Rumanian Gov. to take over the direction of the works necessary for the country's defence. He actively identified himself with the scheme which raised Bucharest to a first-class fortress. In 1884 he was reinstated in his former command of the Antwerp dist., and was responsible for the fortifications at Namur and Liège. Among his pubs. may be mentioned his last, entitled *Progrès de la défense des États et de la fortification permanente depuis Vauban*, 1893. In the First World War B.'s forts at Liège and Namur proved to be unable to withstand effectively the fire of the Skoda guns brought against them by the Germans.

Brian, surnamed **Borolmhe** (Boru) (c. 926–1014), belonged to a tribe of N. Munster. When his brother, the King of Munster, d. in 976, he ascended the throne and began his career of conquest. On subduing Leinster, he next overcame the Danes estab. near Dublin, and after killing Malachy, the King of Ireland, was himself recognised as Ard-Ri, or ruler of his country. Successful in many battles against the Danes, he was killed in one at Clontarf, 23 April 1014.

Brialmon, Charles Julien (1785–1864), Fr. mathematician, b. Sévros. He became prof. of applied science at the Ecole d'Artillerie. Among his works are *Mémoire sur la poudre à tirer*, 1823, and *Essai chimique sur les réactions foudroyantes*, 1825. B.'s theorem, called after him, is as follows: If a hexagon be described about a conic, the 3 diagonals will meet in a point.

Briançon (anct. *Brigantium*), Fr. tn, cap. of an arron., on the Durance (q.v.), in the dept of Hautes-Alpes. The older part of the tn, strongly fortified by Vauban (q.v.), is over 4000 ft above sea-level. It is a health and winter-sports resort, and has a trade in *crête de B.* (Fr. chalk), sweets, and cheese. Pop. 6700.

Briand, Aristide (1862-1932), Fr. statesman, b. Nantes, son of a small Breton farmer. B. was 11 times premier of France, and one of the 3 leading Frenchmen who immediately prior to, during, and after the First World War directed Fr. policy, the other two being Poincaré (q.v.) and Clemenceau (q.v.).

While still studying law, B. was drawn into socialist politics and journalism. His writings and speeches at this time were considered fairly extreme, and his anti-clericalism was very obvious. In 1902 B. became a deputy. He at once made his name, for the question of the relations of Church and State was the question of the day. He was appointed *rapporteur* of the committee of the chamber appointed to consider the law governing the religious congregations, and it was partly due to his influence that the law was passed with but slight modification. His first term of office came in 1906, when Sarrien offered him the post of minister of public instruction and worship, a position which he accepted so as to be able to carry through the secularisation law he had been instrumental in framing. In Oct. 1906 Clemenceau, who had formed his first gov., in succession to Sarrien, invited B. to remain in his post, which he did, but in 1908 he was transferred to the ministry of justice.

On the fall of Clemenceau's gov. in July 1909 he was called upon for the first time to form a gov. This he did, adding to the presidency of the council the portfolios of interior and of public worship. It was during the life of this gov. that the railway strike of 1910 occurred. Finally breaking with his old Socialist doctrines, he arrested the strike committee, mobilised the railway reservists, and dismissed those who refused this call to the colours. This action broke the strike, but it broke also his ministry (1911). In 1913, on Poincaré's election to the presidency of France, B. again became premier, and it was during this brief administration that he extended the period of military service. On 18 Mar. 1913 this gov. fell on a defeat by the senate of its proposals for electoral reform. Thereafter until the outbreak of the First World War he remained more or less out of the public eye.

In Aug. 1914, on the outbreak of the First World War, B. became minister of justice under Viviani. In 1915 he became premier again, being also foreign minister. He resigned in 1917, as a result of the Salonika expedition; his influence had, however, done much to bring Italy and Rumania on to the allied side. B. became premier and foreign minister again in 1921. The fulfilment of the treaty of Versailles was now the paramount question in Fr. politics. B. attended the Washington naval disarmament conference, 1921, and the Cannes conference, 1922. His tentative approaches with a view to a Franco-Ger. understanding made Poincaré one of his chief enemies, and in 1922 he was forced to resign. He was again in office as minister of foreign affairs in Painlevé's gov. in 1925, and continued to hold office

on the reconstruction of the ministry. It was while he held this position that the Locarno treaties (q.v.) were negotiated, pacts with which B's name is associated equally with that of Austen Chamberlain. By the prin. pact the chief Allies and Germany jointly undertook to guarantee peace in W. Europe. This pact was concluded in Oct. 1925, and greatly heightened B.'s prestige, so that when Painlevé resigned in Nov. B. once more headed the gov. But France's financial difficulties were at this time so serious that the life of her govts. was short. A period of instability ended when Poincaré, the ex-president, formed a ministry to deal with the financial question. This ministry came into office on 21 July, and B. returned to his old post of minister of foreign affairs. From then he held that post practically continuously, working for the reconstruction of Europe and its pacification. For this work he received, among other honours, the Nobel peace prize (1926). His name is closely associated with the Kellogg Pact (q.v.), his influence doing much to secure its general acceptance.

B. next proposed an ambitious scheme for the federal union of Europe. This, the memorandum on a 'Régime d'Union Fédérale Européenne,' dated 1 May 1930, was prepared by B. in response to the request of 27 European nations that he would specify further and more exactly certain tentative proposals that he had put before their delegates at Geneva. He envisaged a union of free independent states, not a merging of national sovereignty into a unified authority—a distinct retrocession from his former attitude. But his scheme came to nothing as the economic depression and the disarmament controversy soon overshadowed it. Soon after this B. retired to his estate in Normandy, where he d.

B. was the born orator and parliamentarian, to whose faculties the approach of a political crisis gave a keen edge. For most Frenchmen B. was a great figure in that he embodied for them the pacific solution of international difficulties and was veritably the symbol of the peace which he had tried to promote by the scheme of European federation. He had begun his political life as an extreme socialist and atheist; he d. a devout Catholic and the idol of the middle classes. See life by V. Thompson, 1930.

Briansk, see BRYANSK.
Brianza, hilly region of Italy, S. of Lake Como (q.v.). It is much frequented by tourists because of its beautiful scenery and fine climate. It is densely populated, and is a favourite resort for the Milanese. The chief tn is Cantù (q.v.).

Briar, or **Brier** (*Rosa rubiginosa*), flowering plant of the rose family; also known as the true sweet B., or egplantine (q.v.). Other species are *R. inodora*, a slightly scented B., and *R. micrantha*, the small-flowered sweet B. Various species of Brit. roses of larger growth are known as B. roses, specifically the dog-rose (*R. canina*). See also ROSE.

Briar-root, hard wood obtained from the root stock of *Erica arborea*, the common heath-plant of S. France, which is largely used in the manuf. of pipes. *Bruyère* is the French for heath, and the word has no connection with Eng. 'briar.'

Briare, Fr. tn in the dept. of Loiret, on the Loire, and the B. canal. It manufs. pottery, toys, and buttons. Pop. 3800.

Briareus, see *Aegaeon*.

Bribery, *term* in Eng. law, with four-fold signification: 1. The offence of a judge, magistrate, or any person concerned in the administration of justice receiving a reward from parties interested for the purpose of procuring a partial and favourable decision. Since the revolution in 1688 judicial B. has been unknown in England, and since that date no case is reported in which this offence has been imputed to a judge in courts of superior or inferior jurisdiction. 'Embracery' is the offence of attempting to influence a jury corruptly to give their verdict in favour of one side by the promise of money or entertainment or by entreaties. The offence is a misdemeanour punishable by fine and imprisonment. A juror may be guilty of this offence if he corruptly influence his fellow jurors. 2. The receipt or payment of money to a public ministerial officer as an inducement to him to act contrary to his duty. B. of a public ministerial officer is a common law misdemeanour in the person who takes and also in him who offers the bribe. B. with reference to particular classes of public officers has become punishable by sev. Acts of parliament. B. of customs officials, officials of the inland revenue, and, under the Merchant Shipping Act, of officials of the board of trade is punished with heavy penalties. B. of officials invested with powers of local gov. or administering the rates is punishable with imprisonment up to 2 years, together with a heavy fine and incapacity to hold any public office either for a number of years or for life. 3. The giving or receiving of money to procure votes at parl. elections, or elections to public offices of trust. The Corrupt Practices Act, 1854, deals with the offence of corruptly influencing a voter to give his vote in any particular way. The Representation of the People Act, 1867, enacts that a corrupt payment of rates to enable a person to be registered as a voter so as to influence his vote at any future election is B. All kinds of conduct have been held to be B. The conduct need not be dishonest provided there be no intention to influence the mind of the voter. Charitable gifts on an increased scale at Christmas may be B. when a certain vote or votes is or are aimed at. A promise of a bribe is B., and so is accepting a bribe even though one does not vote. Where the gift of money or entertainment takes place after an election, the giver is not guilty of B. unless something has happened before the election to raise the hopes of the voter. A mere offer of sale of a vote is not B. 4. Miscellaneous: corrupt presentation to a benefice is B., and buying and selling of public offices is also B. at common law.

B. may, under a recent Act, be constituted by the taking of a secret commission. The gist of this offence is the making of a profit by an agent without the knowledge of his principal.

Brice, St. (d. 444), Fr. prelate, b. Tours. On the death of St Martin, he was chosen Bishop of Tours, where he d. after a stormy career. His feast is on 13 Nov.

Brick, mass of clay, usually mixed with sand, fine coal ashes, small coal sifted, or other ingredients, tempered with water, shaped in a mould, and subsequently dried in the sun and, in most cases, burned or baked in a kiln or a heap or stack called a clump. The anets used B.s both baked and simply dried in the sun. Those found in the ruins of Babylon are among the oldest specimens existing. The Egyptians used sun-dried B.s, and the process of making them is represented in their paintings. The Romans, according to Pliny, began to use B.s at about the decline of the rep.: but there are yet remains of a B. building called the temple of the god Iudiculus, which is said to have been built on occasion of the retreat of Hannibal. It has been supposed that the Greeks did not use B.s until after their subjugation to Rome; but passages from Vitruvius and other writers show that B.s were in use before that period. The Gk names for B.s were *didoron*, *tetradoron*, and *pentadoron*, terms formed from *doron*, a hand-breadth, and describing their size as equal to so many hand-breadths. They appear to have been used simply dried, as Vitruvius speaks of their requiring 2 years to dry, and of the laws of Attica requiring that 5 years be allowed for that purpose, and because further he warns against using them too new for fear of their shrinking. Rom. B.s were very thin in proportion to their length and breadth, and were well burnt. They resemble tiles more than modern B.s, and are formed of various dimensions, from $7\frac{1}{2}$ in. square and $1\frac{1}{2}$ in. thick, or even smaller, to about 1 ft 10 in. square and $2\frac{1}{2}$ in. thick. In Persia B.s are used both sun-dried and baked. The latter resemble Eng. clump-burned B.s; but the former are, like the Egyptian B.s, mixed with straw cut fine, to give them greater tenacity. In making ordinary Eng. B.s the top soil, or *encallow*, is first removed from the clay, which is dug and turned over in the winter. Exposure to wet and frost prepares it for use by the spring, when fine ashes are added to it in the proportion of one-fifth ashes to four-fifths clay, or 60 chaldrons to 240 cub. yds, which will make 100,000 B.s. When much sand is mixed with the clay, forming what is called a mild earth, a smaller proportion of ashes may be used. This quantity requires also the addition of about 15 chaldrons, or, if mild, of about 12 chaldrons, of *brezze*, which is a kind of coarse coal ash, separated by sifting, to aid the burning. The clay and ashes being well mixed by digging, watering, and raking backwards and forwards with a pronged hoe, the mass is removed in barrows to the *puq-mill*, which consists of an upright barrel in which a series of

strong iron knives and teeth is caused to revolve by the power of a horse walking in a circular path, so as to cut and masticate the clay thoroughly as it passes from the top of the barrel to an aperture provided for its exit at the bottom. As the clay oozes out of the mill it is removed with a *cuckold*, or concave shovel, and covered with sacks to prevent its drying too fast. A person called the feeder takes from the stock of clay thus prepared a piece about the size of a B., covers it with sand, and passes it to the moulder, who throws it with some force into a wooden mould of the size and shape of the B., which mould is previously sanded. Having filled the mould, the moulder cuts off any superfluous clay with a stick kept in a bowl of water by his side, and then removes the back and sides of the mould, after which the soft B. is transferred from the bottom board of the mould to a pallet-board, and, when a sufficient number have been moulded, is conveyed with others to the *hacks*, which are long, level lines raised about 4 in. from the surface of the field, and formed about 2 ft. 6 in. wide. The upper surfaces of the B.s are previously sanded, and care is taken to avoid twisting or otherwise injuring their shape in transferring them to the hacks, on which they are laid in 2 rows, with a little space between each to allow the free circulation of air. One double row being completed, another is put upon them, and this is continued until the B.s are piled from 7 to 10 high. When partially dried the B.s are removed, placed diagonally, with wider apertures, and with the bottom B.s brought to the top; and after this process, which is called *skintling*, they are removed to the kiln or clamp, which is a vast pile of B.s, laid together as closely as possibly on a slightly concave foundation of B. rubbish, the raised ends of which face the N. and S. On this foundation the new B.s are built up in lots or *necks*, of which the centre one, which is first erected, is vertical, while the others, owing to the concavity of the foundation, have a slight inclination towards it. Small spaces, filled with breeze, are left among the lowest courses of B.s, and flues or *live-holes*, about the width of a B., and from 6 to 9 ft. apart, are also formed to aid the lighting of the clamp, and filled with dry bawns or wood. When full the clamp is surrounded by old B.s, or by the driest of those newly made, and a thick layer of breeze is spread on the top. The external B.s are coated with a thin plastering of clay; and, if the weather prove wet, the kiln is protected by *loos*, or hurdles interwoven with rushes. The fire is lighted at the mouths of the flues or live-holes, which are closed when it burns well; and in favourable weather the B.s will be completely burnt in about 25 or 30 days, in the course of which time the cindery matter dispersed through their substance becomes gradually ignited and consumed. Such B.s as are found to be imperfectly burnt are put into the next clamp to be burned again. Those which are sufficiently burnt are separated, according to quality, into hard sound

stocks; *places*, or inferior soft red B.s; and *burrs* or *clinkers*, which are black-looking masses of vitrified B., of very inferior value. Ordinary B.s are moulded in this country 10 in. long, 5 in. wide, and 3 in. thick, and are reduced by drying and burning to about 9 in. long, 4½ in. wide, and a proportionate thickness. Kiln-burnt B.s are, as their name implies, burnt in a kiln or an oven instead of a clamp, and have no ashes mixed with the clay. Marl or malm stocks, which are either baked or burnt, take their name from the marl originally used in them, which has now given place to chalk. Dutch clinkers are a kind of small, hard, yellow B. Fire-bricks, also called Windsor B.s, are 1½ in. thick, and of a quality to resist the action of fire. Paying B.s, draining B.s, capping or coping B.s, corging B.s, compass B.s, for wells and circular works, feather-edged or thin B.s for the external parts of wooden buildings, and many other varieties of form, size, and quality are made. In some cases a smooth or glazed surface is produced in the burning. There are 2 kinds of B. machine: one which works with clay in a semi-dry condition, and thus saves time in drying, and the other which works with moist clay. In the latter the clay is fed into an upright pug-mill which mixes it to the desired consistency and forces it out at the bottom over carrying rollers, so that it passes between 2 pressing rollers which force it through a die giving it the required size. The block is then cut into B.s by wires on a frame which is so arranged that the wires can cut rectangularly or at an angle. In the first machine the clay, already very solid, is forced by blades into shape on a revolving table which ejects the B.s under a press. They are then ready for drying. The largest brickworks in the world are at Stewartby, Beds, England. See also *Buckwork* and *Pottery*. See A. B. Searle, *Modern Brickmaking*, 1920, and E. Dobson and A. B. Searle, *Bricks and Tiles*, 1936.

Brick-making, see **BRICK**.

Brickfielders, term used in Australia to describe a hot wind which blows from the barren, sandy deserts of the interior. Like the strong 'southerly buster,' by which it is followed, it is occasioned by a cyclonic system over the Australian Bight. It is a healthy wind in that its extreme heat and dryness destroy disease bacteria, but it parches vegetation and creates dust storms. Usually it blows sev. days together.

Bricklaying, see **BRICKWORK**.

Brickwork, fitting together of bricks so that they mutually support each other, the strength of each individual brick, as well as that of the mortar by which they are united, being applied in the most effectual manner to aid the strength of the whole structure. B. is *bonded* by breaking or distributing the joints so that 2 never come immediately over each other, and by laying some of the bricks as *stretchers*, or stretching courses, with their length in the direction of that of the wall, and others, which are called *headers*, with their

length running across, or in the direction of the breadth or thickness of the wall. The bonds in most common use are *English bond*, consisting of alternate layers or courses of headers and stretchers; *Flemish bond*, in which headers and stretchers are laid alternately in the same course, the headers of one course being laid across the middle of the stretchers of the course below it; *garden-wall bond*, consisting of 3 stretchers and 1 header in the same course; and *herring-bone bond*, which is sometimes used in the case of very thick walls, and is produced by laying the bricks at an angle of 45° with the direction of the wall, and reversing the inclination of each successive course. Where necessary, to prevent the *perpends*, or vertical joints, coming immediately over each other, a half, quarter, or three-quarter brick, or *bat*, is used to commence or finish a course. Walls the thickness of which is 9 in. or equal to the length of 1 brick are called single-brick; those half that thickness, half-brick; and others brick and a half, 2 bricks, 2 bricks and a half, etc. Arched and groined work requires great skill and much cutting of the bricks to fit each to its particular bed. The *mortar* (q.v.), used for bedding and jointing, once composed of lime and sand, is now usually made from cement (q.v.), lime, and sand, proportioned to give the strength required. *Putty* is a very fine kind of mortar, made of lime and water only, used for delicate purposes, and such as the setting of rubbed or gauged arches, where the joints are visible. The foundations of a wall are always laid broader than the superstructure, and the broader courses are termed *footings*, the projections themselves being called *set-offs*. Garden walls are usually strengthened with piers or buttresses projecting 4 in. at intervals of 10 or 12 ft. B. is measured by the *rod* of 272 superficial feet. See N. Lloyd, *A History of English Brickwork*, 1928; W. Frost, *The Bonding of Brickwork*, 1933; F. Walker, *Brickwork*, 1937.

Bride, St., see BRIGIT, ST.

Bride (Teutonic word; O.E. *bryd*), term used of a woman about to be married, also during the first year of her married life. With it are associated many other words, such as 'bridegroom,' 'bride-bell,' now known as 'wedding-bell,' etc. In former times the friends assembled in the church porch to throw grains of wheat over the bride; but paper confetti is now generally used. Small cakes prepared for the wedding breakfast replaced the wheat, which developed into the large cake which is the custom of the present day.

Bridel, Philippe Cyriaque (1757-1845). Swiss writer, better known as the 'doyen Bridel,' was successively pastor at Basel, Château d'Ex, and Montreux. As his *Poésies helvétiques* were pub. in 1782, he may justly be considered the first Vaudois poet, as well as the initiator of '*helvétisme*.' He is celebrated for his delightful, if not always accurate, descriptions of his travels. His style is simple and unaffected, and all his work glows with the warmth of patriotic sentiment. His *Course de Bâle à Bienne par les Vallées du*

Jura appeared in 1789, while much of his descriptive writing is in *Étrennes helvétiques* and *Conservateur suisse*, 1783-1831.

Bridewealth, or **Brideprice**, property transferred at marriage in many societies from the husband's to the wife's family. By it are acquired rights over the children, who belong to the husband's clan. It is neither dowry nor wife purchase, although often so called. See A. Phillips, *Survey of African Marriage and Family Life*, 1953.

Bridewell, hospital in Blackfriars, London. The name is derived from a well within the palace of King John, dedicated to St Brigid or Bride, and from which the par. is called. In 1552 Edward VI granted the manor house and palace of Bridewell to the city of London as a house of correction for vagrants. It became one of the 5 royal hospitals (1557) but separated and was united to Bethlem for administration purposes. Rebuilt at end of 18th cent., it was demolished in 1864.

Bridge, Sir Cyprian Arthur George (1839-1924), Brit. admiral, b. St John's, Newfoundland. He entered the navy in 1853, and became rear-admiral in 1892. On his retirement, in 1904, he was Commander-in-Chief of the China station. He served on various committees, on explosives, ordnance, etc.; also on the commission on the N. Sea incident of 1904, and on the commission to inquire into the campaign in Mesopotamia, 1916.

Bridge, Frank (1879-1941), composer, b. Brighton, studied at the Royal College of Music, became an excellent quartet player (viola) and a gifted conductor, but led on the whole a retired life and taught only privately. As a composer too he cultivated chamber music for preference, though he also wrote a large amount for the orchestra, the piano, and the voice.

Bridge, construction which provides a continuous path or road over water, valleys, ravines, or above other roads. The term is applied also to cases in which some part of the B. is temporarily removable, or in which a suspended platform conveys passengers or goods across a space; those carrying water are

AN EGYPTIAN TRUSSED FRAME

termed aqueducts (q.v.). Timber, being readily worked by primitive tools, was, no doubt, the material first used for the construction of B.s by art—simple beams on natural piers or supports. Herodotus speaks of a B. of this type

across the Euphrates at Babylon, consisting of beams resting on stone piers ascribed to the time of Semiramis, 2230 B.C. B.s formed of boats, or pontoons, connected by timbers, were used in early times. Xerxes crossed the Hellespont by this means in 450 B.C. Suspension B.s, in which a long, narrow floor is hung from, or carried upon, ropes or chains, are said to have been used in China at a

Trinità B. of 3 spans at Florence, by Ammanati, 1566, and the Rialto B. by Antonio da Ponte, Venice. In Great Britain the numerous old stone B.s over rivs. and moats are structures of great beauty (e.g. Stopham B., Sussex, Elvet B., in the city of Durham), though not very remarkable engineering feats.

There was, indeed, little advance in B.-building between 1200 and 1739 and

RIALTO BRIDGE, VENICE

remote date, and were certainly in use by the Incas of Peru up to 200 ft span in the 16th cent. Upon Trajan's column (A.D. 100) the B. built by him across the Danube is represented. Great doubt exists as to the width of openings, which were spanned by timber arches, but the piers are said to have been 150 ft high. The Romans were indeed from this time forward great B. builders; many of their works (if we include aqueducts) are still in use, or at least standing. The semi-circular arch was with them the rule.

With the decline of Rome construction

1760, in which two latter years old Westminster and Blackfriars B.s across the Thames, by Labelye and Mylne respectively, were commenced. The first of these is of note because of the method of founding the piers by caissons (q.v.); the second is of interest because it appears to be the first instance in this country of the use of the elliptical arch, which gave rise to a widespread discussion between mathematicians and others, in which Dr Johnson took part, as to the practicability of constructing such an arch, notwithstanding that Ammanati's B. had been

BRITANNIA, MENAI STRAITS

SALTASH

of B.s lapsed, till the great revival in Italy 1000 years later. The originality and boldness of the early builders are well illustrated by the arched B. of 184-ft span, rising 60 ft, built in 1454 over the R. Allier in France, and by the great arched B. of 251-ft span over the R. Adda, of the latter part of the 14th cent., later destroyed by Carmagnola. Regard for beauty is shown by such examples as the

standing nearly 200 years. Both Blackfriars and Westminster B.s failed eventually by sinking of the piers. The best-known examples of more recent times which were considered completely successful were the London and Waterloo B.s by Rennie, both fine structures having elliptical arches of granite, that at the centre of London B. being of 152-ft span. When the centre piers of Waterloo B.

settled conspicuously, the L.C.C. decided on reconstructing it (see WATERLOO BRIDGE).

In modern B.-building 4 types are used: the girder, arch, cantilever, and suspension B.s. Though generally girders

A

B

C

D

E

TRUSSES

A. Howe; B. Bollman; C. Fink; D. Whipple; E. Pratt.

are only suitable for short spans and the suspension B. is the only solution for very long spans (greater than 1800 ft), the choice of type in any given case depends on local conditions such as total width to be bridged and possibility of dividing the width into spans, and of erecting piers for intermediate supports, height required under the bridge, materials available, and aesthetic considerations. A B. is a permanent structure and should look like

ST. LOUIS MUNICIPAL

a natural element of its surroundings. A row of masonry arches over a riv. looks well in city surroundings; plate girders on cylindrical piers do not.

Girders (q.v.) are either plate girders with solid plates between the upper and lower flanges, which are then usually parallel, or lattice girders (trusses) of constant or varying height. The box girder forming a closed tube, used in the Britannia tubular B. (1850) over the

Menai Straits and the B. over the St. Lawrence in Montreal, is now obsolete.

The Britannia tubular B. has 2 spans of 460 ft each and 2 of 230 ft, the traffic passing through 2 tubes side by side. It was built by Robert Stephenson, Hodgkinson, and Fairbairn, assisted by Clark, and estab. the superiority of wrought iron over cast iron. In 1859 was constructed Brunel's great B. at Saltash, having 2 spans of 455 ft. The top boom

PLAUNEN

is of hollow elliptical section, of cast iron, and arched from end to end. The bottom member of reverse arched form is of wrought iron, the two being braced with vertical and diagonal members. The B. is still in use.

In the accompanying diagrams indicating the forms of the various trusses, thin lines show members in tension, thick lines those in compression. The St. Louis municipal B. crossing the Mississippi has 3 spans each of 668 ft, carrying a double deck, with 2 railway

STEIN TEUFEN BRIDGE, SWITZERLAND

lines and a road for vehicular traffic and passengers. The girders are 110 ft deep at the centre, reduced towards the ends. The piers are founded on caissons, reaching rock at about 137 ft below high-water level.

Arches built of stone or brick are commonly used for short spans where labour and materials are at hand. The largest in England is the Grosvenor B., Chester, of 200-ft span (1833). The

Plauen B. (1903) spans 295 ft. Recently reinforced concrete (q.v.) has been much used; it is economical in first cost and maintenance. It is not, however, in railway work, adaptable to alterations or reconstruction, such as are frequently necessary with growth of traffic, or for other reasons, as no reinforced concrete structure is fit to carry its full load till many weeks after being built. The Stein Teufen B. in Switzerland is a fine

example, with a 259-ft span. The Sergolomento B. in Rome has a 328-ft span. The earliest attempt to use iron for an arched B. was made at Lyons (1755); the first carried to completion was the B. at Coalbrookdale, a semicircular cast-iron arch of 100 ft. still standing. Thomas Paine, author of *The Rights of Man*, having endeavoured in 1787 to secure the construction of a cast-iron arched B. over the R. Schuylkill, some of

B. between Norway and Sweden, which was completed in 1946, is the highest B. in Europe, being 200 ft above Svine Sund. It has a single span of 465 ft and a total length of 1260 ft. The Sydney Harbour B., which was designed by Ralph Freeman and opened in 1932, is the largest single-span arch B. in the world, its span being 1680 ft in length. The top of the arch is 445 ft above high-water level, while the roadway, which is suspended

COALBROOKDALE

SOUTHWARK

the ribs were cast at Rotherham and, the project being abandoned, the material was used for the arched B. of 236-ft span across the R. Wear at Sunderland, finished in 1796. Southwark B. over the Thames, by Rennie, completed in 1819, has 3 spans, the largest being of 240 ft. It was not till 1864 that a wrought-iron arch B. of importance was constructed, when a B. of 3 spans was built crossing the Rhine at Koblenz, having openings of 315 ft. The ribs are of openwork design

below the arch, is 170 ft above the water level, and being 150 ft wide can accommodate 6 lines of traffic, besides carrying 2 10-ft pathways. The total length of this B. is 3816 ft, including approaches. In England the 531-ft span of the now Tyne steel arch B. is the largest in the country. The clearance of 84 ft allows full headroom for the type of ships using the riv., and the height to the top of the arch is 200 ft.

Cantilever bridges, in which the struc-

VIAR

NIAGARA

rising a part of their height above the road level.

In 1874 was completed Captain Eads' great B. over the Mississippi at St Louis. This is of 3 spans, 502, 520, and 502 ft, the centre arch rising 47½ ft. The arches are formed of open triangulated ribs, supporting the roadway by vertical columns at the apices of the arch bracing. The general appearance is very fine. This is one of the earliest instances of the use of steel on large B. work,

ture of the B. is carried out from either side towards the middle of the opening, where the projecting ends are connected by an intermediate girder span, were in a crude form known in very early times by the Chinese, being constructed in timber. Of modern examples may be mentioned the Forth B. (1890) by Baker. This B. has 2 main spans of 1710 ft each. There are 3 cantilevers, connected over the prin. openings by independent girder spans of 350 ft. The length from end to

FORTH

though for small B.s it had been used in this country in 1861. Other B.s of importance are the Douro viaduct by Seyrig of 252-ft span, having crescent-shaped arches, hinged at the springing; the Viar B., France, of 722-ft span, having hinges at the crown and at the springing; and the Niagara Falls B., replacing in 1897 an earlier suspension B. The span of this arch, which is hinged at the springings only, is 840 ft. The

end of the cantilevered part of the B. is 5330 ft. The arrangement is stable and convincing in appearance. The great B. over the St Lawrence at Quebec, which is of cantilever form, has a centre span of 1800 ft, the cantilevers resting upon points, and deriving their whole stability from the land anchorages upon the shore. 1927 saw the opening of 2 important B.s—in May the cantilever B. over the Carquinez Straits, California, and in Aug.

 NEWCASTLE UPON TYNE: THE BRIDGES
 The Tyne bridge, the swing bridge, and the high level.

the International Peace B. between Buffalo, U.S.A., and Fort Erie, Canada. In 1927 also 3 B.s were put under construction to connect Staten Is. to the mainland. The Outer B. crossing, named after the first chairman of the port authority, from Perth Amboy, New Jersey, to Tottenville, Staten Is., is a high-level cantilever structure over Arthur Kill, being 135 ft above water as the Kills are navigable. Central span is 750 ft, and total length, including approaches, 10,200 ft. The other cantilever B. stretches from Elizabeth, New Jersey, to Howland Hook, Staten Is., with a centre channel span of 672 ft.

Suspension bridges. In modern times, one of the earliest B.s of note of this kind was the Menai suspension B., 1819, of 570-ft span, by Telford, and later suspension B.s are those crossing the East R. at New York, the Brooklyn, Manhattan, and Williamsburg, having centre spans of 1596, 1470, and 1600 ft respectively. The last has steel wire cables 18½ in. in diameter, dipping 176 ft, supporting a deck 118 ft wide. The great highway B. from Philadelphia to Camden over

QUEBEC

Delaware R., designed by Modjeski, was completed in 1926. Length between anchorages is 2253 ft and main span 1750 ft. Two suspension cables were used, each 30 in. in diameter, consisting of 18,666 wire strands. Main towers rise 385 ft above water. The great Hudson R. B. from New York City to New Jersey crosses the Hudson with a central span of 3500 ft, the weight of the suspended structure being 120,000 tons. This is the most striking modern Amer. B., with its steel towers 635 ft above high water and a clearance of 213 ft above high water at the centre so that the largest ocean-going ships can at all times pass beneath with their masts standing up. The essential object in the design of this B. was to allow of enlargement after the initial opening, so as to meet ever-changing conditions. Thus, though the floor has 2 decks the lower will probably not be in use for some years. The upper has a centre roadway 40 ft wide, to carry 4 lines of heavy traffic, and outside roadways 24 ft wide, and 2 footpaths 11½ ft wide. The towers, massive so as to express their function of supporting the tremendous weight of the suspended span, are each 210 ft wide and 65 ft long at the base. The engineer responsible for the Hudson R. B. is O. H. Ammann, formerly chief assistant to Gustav Lindenthal, who built the Hell Gate arch.

The Huey Long B. across the Mississippi, the latest of that riv.'s 29 major B.s, is 4½ m. in length, including its approaches, and is numbered among the world's

greatest B.s. It was opened on 16 Dec. 1935. Its central cantilever span has a total length of 799 ft from pier to pier, of which 500 ft comprise a suspended span supported by cantilever arms. A new B., over 8 m. long, begun in 1935, connects San Francisco with its suburb Oakland. Ships of any tonnage can pass under it. A still more striking B. is the new suspension B. across the Golden Gate, San Francisco. Its central span is 4200 ft long, with 2 side spans of 1100 ft each, giving a clearance of 225 ft, with towers 760 ft high.

Opening bridges, in which a part of the structure is temporarily removed to leave a clear opening over water, or to make a break in the road for purposes of defence, are many hundred years old, and in the early form consisted of means provided to raise by chains a short length of B. floor. **Swing B.s,** in which some part of the B. turns upon a pivot, the weight perhaps supported by rollers, are hardly more than a cent. old. This type is largely used, and has been applied to give a free opening of as much as 500 ft, as in the great swing span over the R. St Lawrence, carrying 2 railroads, a trolley track, a carriage road, and footways. A swing B. carrying 234 ft of the Bridge-water Canal crosses the Manchester Ship Canal (q.v.) at Barton; this has openings on either side of the central pier of 90 ft each. The weight of water carried is 760 tons, and the total turning weight 1350 tons. The ends are closed during turning by gates, and watertight connection to the canal ends proper is made by a rubber-faced wedge device operated by hydraulic rams. The heaviest swing B. in the world is believed to be the Sacramento double-deck B., which has a swing span of 390 ft and is operated by 2 80-h.p. electric motors, and, despite its great weight, can be opened or closed in 2½ min. In **Bascule B.s** the moving portion turns vertically about a pivot, rising till the opening is left clear. The arrangement may be single-leaf or double, as in the case of the Tower B. over the Thames, which has a centre opening of 200 ft, with 2 leaves each of 100 ft overhang meeting at the centre when down. In **Rolling B.s,** of which the Schertzer variety is best known, the opening part of the structure is formed with a rounded end suitably ballasted, upon which the opening part is caused to roll backwards till the span assumes an upright position, no longer obstructing the waterway. The heaviest opening B. of this kind, at Keadby in Yorks, is of 3000 tons weight.

Traverser bridges. That part of the structure crossing the space to be occasionally freed is made to roll bodily backwards, telescoping within itself, with suitable mechanical arrangements to meet the difficulty presented by coincidence of road surface on the moving and the fixed portions of the B. A structure of this kind crosses the R. Dee. **Transporter B.s,** of which many now exist, have an overhead arrangement of horizontal girders, or some form of stiffened suspension B., at a sufficient height to give

the desired headway, with a platform suspended therefrom, which, accommodating vehicular and passenger loads, is drawn across from side to side. Of this kind the Runcorn transporter B. over the Mersey, constructed by Webster, has a clear opening of 1000 ft. Formerly B.s used in military operations were constructed chiefly of timber, and were formed of plain or trussed beams, which might be supported by trestles. (Cantiliver and suspension types are used for larger spans, and for crossing wide rivs. B.s are commonly of the floating description. The paramount condition is ability to erect quickly.

Bridge, card game developed from whist and introduced about 1894. The cards are dealt as in whist. The dealer has the privilege of declaring what suit constitutes trumps, and he is influenced by the different scoring values of the various suits. Spades count 2 points for every trick above 6, clubs 4 points, diamonds 6 points, hearts 8 points, and no trumps 12 points. After considering his own hand, the dealer may leave the duty of declaring trumps to his partner, but no further communication than the bare words 'I leave it' is allowed. When trumps have been called, the 'leader,' or opponent on the left of the dealer, may 'double' the value of each trick, or, following him, the third player may exercise that right. In case of a double, the dealer or his partner may 'redouble,' which means that the value of a trick is quadrupled. This again may be doubled, and so on until a maximum of 100 points a trick is reached. After the leader has played his first card, the second player, or 'dummy,' lays his hand face upwards on the table and takes no further part in actual play, the dealer playing both hands. Otherwise play proceeds as in whist. The scoring is recorded on paper ruled with 2 vertical columns crossed by a horizontal line above half way. The values of tricks above 6 are scored below the line to either side, while above the line are scored honours, chicane, and points for grand and little slam. The honours consist of ace, king, queen, knave, and 10 of the trump suit, and for 3 or 'simple' honours a side scores the value of 2 tricks; for 4 honours, 4 tricks; for 5 honours, 5 tricks; for 4 honours in 1

hand, 8 tricks; for 5 honours, 4 in 1 hand, 9 tricks; for 5 honours in 1 hand, 10 tricks. In no trumps, aces are counted as honours, 3 counting 30 points, 4 counting 40 points, and 4 in 1 hand 100 points. 'Chicane' means the absence in 1 hand of any trump cards; the side possessing the hand scores points equivalent to simple honours. If all the tricks are taken, 'grand slam' is recorded, counting 40 points; if all but 1 are taken, 20 points are scored for 'little slam.' A game is concluded when 1 side completes 30 points below the line, and a fresh game starts. The first side to win 2 games is awarded the rubber, for which 100 points are scored in the honour column. The total score is arrived at by adding all points above and below the line.

Three-handed bridge. When 3 persons play, 4 hands are dealt, the dealer playing his own and dummy's. If the dealer 'leaves' the declaration, the trump is determined by the constitution of dummy's hand. If there are 3 aces, 'no trumps' must be called, otherwise the longest suit constitutes trumps. If 2 suits are of equal length, the pips are counted, ace counting 11 and other honours 10 each. If 2 suits are still equal, the suit of higher scoring value becomes the trump suit. Only declarations which are won are scored below the line; the opponents score above the line if the declaration is lost, together with honours, etc., as in ordinary B. 50 points are scored in honours for each game, and 50 more for the rubber. See also AUCTION BRIDGE and CONTRACT BRIDGE.

Bridge of Allan, burgh and holiday resort of Stirlingshire, Scotland, 3½ m. N. of Stirling, on R. Allan, situated on the lower S. slopes of the Ochil Hills. In the 1820's a spa developed around the Air-threy mineral springs, and B. of A. grew from a vil. to a small tn. It remains an attractive tourist centre. Bottle closures and stoppers are manuf. Pop. 3173.

Bridge of Sighs (It. Ponte dei Sospiri), name given to the covered bridge in Venice (q.v.) connecting the Doge's Palace with the State prison. The name refers to the fact that it was by way of this bridge that offenders under sentence of death were conducted to their fate.

Bridge of Weir, mkt tn in W. Renfrewshire, Scotland, 6 m. W. of Paisley, with a tanning industry. Pop. 3500.

Bridgeman of Leigh, William Clive Bridgeman, 1st Viscount (1864-1935), politician, educ. at Eton and Cambridge. He entered Parliament in 1906. In the Coalition Gov. during the First World War he was junior lord of treasury and parl. secretary in various depts. Privy Councillor 1920, home secretary in Conservative govs., 1922-4. On the Conservatives' return to power, Nov. 1924, he became first lord of the Admiralty, and was active in developing the project for the Singapore naval base. B. was created a viscount in 1929.

Bridgend, tn in Glamorganshire, S. Wales, on the R. Ogmere, in the centre of the vale of Glamorgan, 19 m. W. of

Cardiff. There are various small industries, but B. is prin. a mkt for the surrounding dists. Pop. 13,500.

Bridgenorth, see BRIDGNORTH.

Bridgeport, seaport and city of Fairfield co., Connecticut, U.S.A. It is situated on Long Is. Sound, and is about 65 m. N.E. from New York. It has a considerable coasting trade, and a safe harbour for small vessels. The state's chief manufacturing centre, B. produces electrical equipment, firearms, ammunition, brassware, sewing machines, typewriters, hardware, clothing, textiles, and aluminium. It is the site of B. Univ. and B. Engineering Institute. Pop. 158,700.

Bridges, Sir George Tom Molesworth (1871-1939), soldier, nephew of Robert B. (q.v.), the poet laureate. Artillery subaltern in 1892, reached the rank of major-general in 1917 and of lieutenant-general in 1922. In the First World War he commanded the 19th Div., head of military missions with Belgian Army, and to U.S.A. Governor of S. Australia, 1922-7. K.C.B., 1925. He pub. *Alarms and Excursions*, 1938.

Bridges, Robert Seymour, O.M. (1844-1930), poet laureate, b. Walmers. He was educ. at Eton, Corpus Christi College, Oxford, and later was a medical student at St Bartholomew's, London. For some time assistant physician at the Children's Hospital, Great Ormond Street, he afterwards was on the staff at the Great N. Hospital. Having ample private means, he retired from practice in 1882 to devote himself to literature. His knowledge of medicine and contact with suffering humanity undoubtedly account for the deep and subtle insight into the well-springs of human nature which characterises so much of his work, particularly in poems on the mystery of the body and the miraculous spirit of man. In 1894 he married Monica, daughter of Alfred Waterhouse, R.A., a love match which is often reflected in many of his earliest as well as latest love poems. In 1913, when he was appointed poet laureate in succession to Alfred Austin, many described him as an academic poet; but though he shunned publicity, his muse is not remote from human concerns, and if his poetry will never be 'popular', it often approaches the authentic in ecstasy and tenderness. His finished artistry, which mitigates the somewhat unmusical note of his more experimental quantitative hexameters and elegiacs, and deft workmanship, combined with real fervour, give him an unassailable place among our national poets as the link between the older and younger schools of Eng. lyrical poets. His finest work and that which most evidences his craftsmanship, is, perhaps, to be found in such poems as *Eros and Psyche*, his version of the love story of Apuleius, and in many of his sonnets. Other notable works are *Demeter: a Masque*, *The Spirit of Man* (an anthology in wartime), and *Prometheus, the Firegiver*. In prose, his essays on Milton's prosody and on Keats put him not far below Matthew Arnold, while he eschews the pessimism of the earlier critic. In the same period of his

highest activity, between 1885 and 1916, he also produced some 8 plays, all of the order of closet drama; and some loyal poems of the type of *Britannia Victrix*. The plays include a tragedy, *Nero*, written in 1885, and *The Return of Ulysses*, 1890, and a comedy, *The Humours of the Court*, in which he modelled himself on Calderon. In 1914 he produced a privately printed ed. of poems, entitled *October and other Poems*, which with some 18 war poems were pub. in 1920. In 1916 he pub. *The Spirit of Man*, a collection of prose and verse extracts from many writers, designed to bring fortitude and peace of mind to his countrymen in the dark days of the war. Another anthology, *The Chitwell Book of Poetry*, for use in schools, was pub. in 1924. Many of the best pieces in it—in a style which B. describes as 'New Miltonic'—are full of beauty and humour, often rich in philosophic suggestion. Included in the output of his later prose were a *Memoir of Henry Bradley* of the Oxford Dictionary, essays on Shakespeare's dramas, *Free Verse*, *Keats and Poetic Diction*. He also placed posterity in his debt by rescuing from oblivion the poems of Gerard Manley Hopkins (q.v.). His care for Eng. pronunciation led to his becoming an adviser to the B.R.C. on the subject. He was also the founder and general editor of a series of studies in the Eng. language known as the S.P.E. Tracts. It was at the age of 85 that he pub. his great poem, *The Testament of Beauty*, which has been well described as a personal synthesis to the making of which had gone all the scientific, artistic, philosophical, and religious energies of a great nature. It was in the year of the pub. of this poem, 1929, that he received the Order of Merit. See A. Symons, *Studies in Prose and Verse*, 1904, and E. Thompson, *Robert Bridges*, 1944.

Bridges, Sir William Throsby (1861-1915), Brit. general, b. Greenock. Educ. at Hyde. Isle of Wight; Royal Naval School, Greenwich; then—his parents having removed to Canada—at Trinity College School, Port Hope, Ontario, and at the Canadian Military College, Kingston. His parents having again removed, he followed them to New S. Wales and obtained a position in the Gov. Roads and Bridges dept. Became lieutenant in New S. Wales permanent artillery, 1885. Served in S. Africa, 1899-1900; Acting Q.M.G. H.Q. Commonwealth military forces, 1902; chief of intelligence, 1905; chief of general staff, 1909; and from 1910 till 1914 commandant Royal Military College, Duntroon, which he had founded. During the First World War he was with the first Australian contingent as major-general; and, while commanding the first Australian div. at Gallipoli, he was mortally wounded and d. at sea soon after.

Bridget, St. of Sweden (c. 1304-73), daughter of Birger Persson, Governor of Uppland, and of the blood-royal of Sweden. She was married to Ulf Gudmarson at the age of 14, and 8 children were b. of the marriage. After her husband's death she founded at Wadstena

(1344) the Order of the Most Holy Saviour, known as 'the Brighttines,' which quickly spread its influence throughout Europe. At S. Brent (Devon) is the famous Brighttine nunnery of Syon House. St B. was canonised in 1391; her feast is on 8 Oct.

Bridget, St. of Kildare, see BRIGIT, ST.

Bridgeton, city and co. seat of Cumberland co., New Jersey, U.S.A. It is a port built on Cohamsey Creek, about 40 m. from Philadelphia. B. is the shipping and trade centre for an agric. region; it manufs. glassware, metal products, and underwear. There is an 18th-cent. Presbyterian church. Pop. 18,300.

Bridgetown, cap. of Barbados (q.v.), Brit. W. Indies, deriving its name from a bridge found by the first settlers. Situated on Carlisle Bay, B. is a flourishing city and port. In 1665 the Dutch Adm. de Ruyter attacked B. in vain for 5 hrs. Père Labat, the celebrated Dominican father, visited the tn in 1700 and described it as handsome, with straight, broad, clean, and well-planned streets. The public buildings are an imposing group, built of locally hewn coral rock. St Michael's Cathedral, also built of coral, lies to the E. of them, on the site of a church erected in the 17th cent. which was destroyed in a hurricane in 1780. The cost of the new cathedral was defrayed by a lottery sanctioned by the legislature. George Washington's House, the lodging which the Amer. statesman and his invalid brother occupied on their visit in 1751, is of historical interest. Trafalgar Square (formerly called the Green) has a statue of Nelson. St Anne's Fort, a quaint fort facing the bay, was erected in 1703 by Sir Nevill Granville in honour of Queen Anne. Codrington College (founded 1710) lies 10 m. from the tn; it is affiliated to the univ. of Durham in England. Sugar, molasses, rum, and cotton are the chief exports. Pop. (B. and environs) 68,920.

Bridgewater, Francis Egerton, 3rd Duke of (1736-1803), introduced inland navigation in England. During his young days he became engaged to the Duchess of Hamilton, but the match was broken off. This caused his retirement from society, and he estab. a house in the country, where he studied the possibilities of canal traffic. He designed the canal from Worsley to Manchester so that it might be utilised for the transport of coal from his Worsley estate. A remarkable aqueduct across the Irwell is a feature of the great achievement. With the aid of his engineer, James Brindley, he projected the canal connecting Liverpool and Manchester. This was begun in 1762, and manifold and formidable obstacles had to be surmounted. The canals were sold to the B. Navigation Co. in 1872, and in 1887 were sold to the Manchester Ship Canal Co.

Bridgewater, Francis Henry Egerton, 8th Earl of (1756-1828), son of John Egerton, Bishop of Durham. He was educ. at Eton and Oxford. He studied for the Church, and was rector of Middle and Whitechurch, in Shropshire. He succeeded his brother to the title in 1823, but remained unmarried, and at his death the title became extinct. The Egerton

MSS. (on the literature of France and Italy) were bequeathed by him to the Brit. Museum along with a sum of £12,000. He also left £8000 to be paid to the author of the best treatise 'On the Power, Wisdom, and Goodness of God, as manifested in the Creation.' The president of the Royal Society (Davies Gilbert), in whose hands lay the decision of the merits of the works, divided the money among 8 persons for 8 separate treatises. These are the celebrated B. Treatises. The list of the works is as follows: (1) *The Adaptation of External Nature to the Moral and Intellectual Constitution of Man*, by Thomas Chalmers, D.D., 1833; (2) *Chemistry, Meteorology, and Digestion*, by Wm Prout, M.D., 1834; (3) *History, Habits, and Instincts of Animals*, by Wm Kirby, 1835; (4) *Geology and Mineralogy*, by Dean Buckland, 1837; (5) *The Hand, as emincing Design*, by Sir Charles Bell, 1837; (6) *The Adaptation of External Nature to the Physical Condition of Man*, by John Kidd, M.D., 1837; (7) *Astronomy and General Physics*, by Wm Whewell, D.D., 1839; (8) *Animal and Vegetable Physiology*, by Peter Mark Roget, M.D., 1840.

Bridgewater Canal, one of the first Eng. canals to be constructed (1755), was built by the order and at the expense of the Duke of B. for conveying coals from Worsley to Manchester. The work was successfully accomplished by Brindley. There are immense embankments on the old canal, and viaducts and bridges; 2 branches went from the Mersey at Runcorn Gap, one going to Manchester, the other to Pennington. The length was 40 m., and the fall 2 ft in a mile; the waterway was 5 ft deep and 52 ft wide. It was later extended to the Mersey. See BRIDGEWATER, DUKE OF and MANCHESTER SHIP CANAL.

Bridging, Military. Before the introduction of heavy armament light bridges of wood, rope, basket-work, etc., sufficed, while various types of rafts and flat-bottomed boats were used for the transport of horses and wagons. During a campaign material may have to be carried considerable distances, a consideration which affects choice of materials. Before the First World War military bridges were constructed almost entirely of wood, but owing to the development of heavy field artillery during the present cent., combined with the invention and use of tanks and of mechanical transport generally, the use of iron and steel became necessary. The demolition of bridges is one of the most effective means of delaying the enemy or denying to him the use of certain lines of approach or of restricting his activities to a certain area. At the beginning of the First World War the lack of heavy B. material was felt acutely by the Brit. Army when crossing the R. Aisne. Steel spans were, however, soon sent to France from England. As the war progressed lifting bridges for use on canals, and barge bridges, were also constructed; the latter were useful in spanning 60-ft gaps, the barge being turned in the required direction. The successful Ger. advance in the spring of

1918 caused many bridges to be built on the new front, in which a number of rolled-steel joist spans were erected over sev. small streams about St Omer. Much B. work was carried out during this period by the Amer. engineers in the Amiens area. In Aug. 1918 the Australian pioneers also distinguished themselves by erecting 2 high-level bridges at Chipilly. The Americans generally adopted the Brit. type of bridge, and produced a pattern with a 60-ft span in which the cross girders and flooring were raised to allow the sponsons of tanks to ride over the girders.

Sir D. Bailey, a Brit. engineer, gave his name to a bridge which was of the utmost value to the Brit. and Amer. armies in the Second World War, and became a standard method of bridge construction. The bridge, which is of steel, provides an equipment which can be assembled rapidly by hand in various ways in order to meet varying requirements of span and load. The roadway of timber planking is carried between 2 main girders. These girders are formed of steel lattice 'panels,' each 10 ft long by 5 ft 1 in. high, pinned together with alloy steel pins. The panels are designed to be handled by 6 men, and the bridge is normally built on rollers and pushed out across the gap as each set of panels with cross members and stiffening pieces is assembled. The strength of the main girders is varied by adding extra panels alongside the first and/or by adding extra storeys above. The bridge can be constructed to carry all military loads, including trains. A single span can extend over a gap of up to 250 ft. The equipment is also designed for use with pontoons as a floating bridge. See also ENGINEERING, MILITARY. See Institution of Civil Engineers, *The Civil Engineer in War*, vol. 1, 1948.

Bridgman, Laura (1829-89), Amer. blind deaf-mute, b. Hanover, New Hampshire. Up to the age of 2 the child was organically normal, but she caught a severe fever, which utterly destroyed her senses of hearing and seeing, and seriously impaired her nervous system. At the age of 8, through the influence of Dr Howe, she was admitted into the Perkins Institution for the Blind, Boston. At first her intellect could only be reached through arbitrary signs, but gradually she mastered the art of reading in embossed type, and thenceforth made extraordinary progress. She subsequently learned advanced algebra, geography, and elementary astronomy. She was of a very religious temperament, and wrote sev. little hymns. She was the first blind deaf-mute for whom a systematic education was successful. Charles Dickens met her, and gives an account of her education in his *American Notes*, Chap. III.

Bridgman, Percy Williams (1882-), Amer. physicist, b. Cambridge, Massachusetts. Studied at Harvard, where he became prof. in 1912. He has made studies of many phenomena at very high pressures, up to 100,000 atmospheres. He was awarded the Nobel prize in 1946.

Bridgnorth, tn and municipal bor. of

Shropshire, England, 14 m. SSE. of Wellington, picturesquely situated in the valley of the Severn, which divides it into the High and Low Towns. High Town, with its famous Castle Walk, is situated on a cliff overlooking the riv. It is an important market centre in a rich agric. area and possesses an anct tn hall, a library, and buildings of historical importance. Its industries are carpet-making, light engineering, radio, and electronics. Pop. 6250.

Bridgwater, seaport tn in Somerset, England, some 30 m. from Bristol, an anct bor., rich in historical associations. The R. Parrett flows through the middle of the tn and is spanned by a fine iron bridge. A variety of industries is carried on, including the manuf. of bricks, tiles, 'Bath' scouring brick (made from silt from the riv. bed), shirts and collars, wicker work, furniture, preserves, transparent cellulose film wrappings, general and electrical engineering. Pop. 23,340.

Bridie, James, pseudonym of **Osborne Henry Mavor** (1888-1951), dramatist, b. Glasgow. He was educ. at Glasgow Academy, High School, and Univ., where he ed. the *University Magazine*. Qualifying as a doctor, he practised in Glasgow till 1938, and was for a time prof. of medicine in the Anderson College. He first became famous with his play *Tobias and the Angel*, which ran in London with great success. Others of his plays are *The Anatomist*, 1930, *Jonah and the Whale*, 1932, *A Sleeping Clergyman*, 1933, *Susannah and the Elders*, 1937, *Mr Bolfray*, 1943, *The Forriegan Reel*, 1944, *John Knox*, 1947, *Dr Angelus*, 1947, and *The Queen's Comedy*, 1950. A founder of the Glasgow Citizen's Theatre, he was made a C.B.E. in 1946. Reminiscences of his life are contained in his book *One Way of Living*, 1939.

Bridle, that portion of the harness of a horse by means of which its direction is governed and its speed regulated. It is attached to the head and mouth. The ordinary single riding B. consists of a system of straps, one passing over the head, behind the ears, called the head-strap; another, the front strap, in front of the ears, and horizontally placed and joining the head-strap at each end; other portions include a cheek-piece, throat-band, nose-band, and the reins, all of which are explained by the names they bear. The driving B. has usually a pair of blinkers fixed to the cheek-pieces in order to restrict the vision of the horse, for its tendency to see objects approaching from the rear often leads to fright. Another variety of the B. is the double or Weymouth B., and is generally used in hunting, though its use in ordinary driving is increasing. It has 2 separate bits, and is to be recognised by its chain curb, which gives additional powers of control. A modification of this double B. is the Pelham. It consists of a single bit with an additional pair of rings fixed to the sides. Improvements regarding the appearance of the horse and also its physical comfort have seldom happily been made to achieve both ends. The bearing-rein,

fastening to the saddle-pad and thence to the bit, has the effect of arching the animal's neck and thereby considerably improving its appearance, but the physical discomfort entailed by the device is claimed by the opponents of the bearing-rein to render its application wilful torture. The modern bit, called a snaffle bit, consists of a smooth rounded iron, joined in the centre, and terminating in bars as a preventive against the bit being pulled out of the mouth, and it is noteworthy that it corresponds in structure almost exactly with the Assyrian device.

Bridlington, municipal bor. and seaside resort in the E. Riding of Yorks, England, sheltered by Flamborough Head 6 m. away. The priory church, once part of an Augustinian foundation, has interesting stained glass. Queen Henrietta Maria's lodgings were cannonaded here in 1643 by Adm. Batten, and shots from an Amer. squadron reached the shore in 1779. B. is the H.Q. of the Royal Yorks Yacht Club, and there is plentiful harbour accommodation for small vessels. It possesses one of the largest municipally owned entertainment undertakings in Britain, the premises being extensively used for conferences. Pop. 24,500.

Bridport, Sir Alexander Hood, 1st Viscount (1727-1814), Eng. admiral, son of a clergyman and brother of Viscount Hood of Whitley (q.v.). He entered the navy in 1741, and served as lieutenant for 10 years in a number of ships. Whilst on the *Minerva* frigate he was at Quiberon Bay when Hawke gained his famous victory, 1759. In 1778, in the *Robust*, he took part in the battle of Ushant. The court-martial of Adm. Keppel resulted from this engagement. B., by his defence of Keppel, roused considerable animosity. As commander of a flag-ship under Howe, he was present at the relief of Gibraltar in 1782. When war was declared with France in 1793, he distinguished himself, especially in the action known as the 'Glorious First of June,' as second in command to Howe, and was consequently raised to the Irish peerage. In 1796-7 he controlled the war from

London, whilst from 1798 to 1800, after the suppression of the mutiny at Spithead, he directed the siege of Brest, until St Vincent relieved him.

Bridport, bor. of Dorset, England, situated between the 2 rivs. Brit and Asker, 1 m. from the sea. B. forms a mkt tn and centre for a wide area. In 1253 Henry III granted a charter making B. a royal bor., and it is mentioned in Domesday Book. Ropes, twines, nets, and cordage of all kinds are made. At W. Bay there is a harbour which receives small shipping and is a holiday, boating, yachting, and fishing centre. Pop. 7000.

Brie, Simon de, see MARTIN (Popes), *Martin IV.*

Brie, agric. dist. of N. France, part of the anct prov. of Champagne (q.v.), lying between the Seine and Marne rivs. It is in 2 parts, W. and E., which are respectively known as the B. pouilleuse and the B. champenoise, the cap. of the latter being Meaux (q.v.). Area 2400 sq. m.

Brie-Comte-Robert, Fr. tn in the dept of Seine-et-Marne, once cap. of Brie (q.v.). It has a fine church, partly 13th cent. Glass is manuf. Pop. 3000.

Brief, in Eng. law, the written document on which as basis barristers advocate causes in courts of justice. The B. is a concise statement of the information procured by the solicitor with regard to witnesses, evidence, etc., and such comments on the case as the solicitor thinks necessary. The B. is endorsed with the title of the court and the action, and bears the name of the solicitor and of the counsel. On receiving the B. the barrister has authority to act for the client throughout the case. In Scotland the legal term corresponding to B. is memorial.

Brief (Church Brief or King's Letter), an obsolete instrument issued under the privy seal in the form of an open letter in the king's name which licensed the petitioners for the B. to collect money for charitable purposes therein specified. It was addressed to the archbishops, bishops, clergymen, magistrates, churchwardens, and overseers of the poor throughout England, who were enjoined to assist in such collection. A statute was passed in Queen Anne's reign to check abuses of B.s, which were abolished in the time of George IV because the cost of collection nullified the benefit to charity.

Brief (or Breve), Papal, term used to denote papal documents which are drawn up without the full ceremony which the bull (q.v.) necessitates. The B. is furnished with a red wax stamp showing St Peter drawing in a net and surmounted by the name of the pope ('the ring of the fisherman'). The B. was instituted to lessen the work of the papal chancery, hence the name.

Brieg, see BRZEG.

Brielle (Briel), small seaport in the prov. of S. Holland, in the Maas estuary, Netherlands, about 14 m. W. of Rotterdam. It has a good harbour, an arsenal, powder magazines, and barracks. The high tower of St Catherine's Church is used as a lighthouse. B. was captured by the 'Sea Beggars' in 1572, during the

struggle with the Spaniards. (See also NETHERLANDS, *History*.) The inhab. are chiefly fishermen and pilots. Pop. 3700.

Brienne-le-Château, Fr. tn in the dept of Aube, on the Aube. In 1779-84 Napoleon was a student in the military school formerly here, and on 29 Jan. 1814 he defeated Blücher near by. The church is partly 12th cent., and there is an 18th-cent. château. The tn has breweries. Pop. 2000.

Brienz, vil. in the canton of Bern, Switzerland, and the centre of the Oberland wood-carving industry. It is picturesquely situated on the N.E. of the lake of B., at the foot of the Brienzgrat Mts. The lake is 9 m. long and 3 m. wide and is formed from the R. Aar. Its waters are deep, and surrounded by beautiful scenery.

Brierfield, urb. dist. of Lancs, England, 2 m. from Burnley. Pop. 7050.

Brierley, Benjamin (1825-95), Brit. silk-weaver and writer in Lancs dialect. He educ. himself in his spare time, and began contributing articles to local papers in 1855. His sketches of Lancs character attracted attention. In 1863 he gave up silk-weaving and took the post of sub-editor of the *Oldham Times*, publishing *The Chronicles of Waterlow* in the same year. He completed his first long story, *The Laycock of Langley-side* (afterwards dramatised), in 1864. In 1869 he started *Ben Brierley's Journal*, a weekly, continued till 1891. Under the pseudonym Ab-o'-th'-Yate, he wrote *Tales and Sketches of Lancashire Life, Irkdale, and Ab-o'-th'-Yate in Yankeland*. He visited America 1880 and 1884. A statue was erected to him in Queen's Park, Manchester, after his death.

Brierley Hill, tn and urb. dist. of S. Staffs, England, now including the former dists of Kingswinford and Quarry Bank, 10 m. W. of Birmingham, and on the edge of the Black Country. B. H. has one of the largest bacon factories in the country and a large steelworks. Amongst a wide variety of other products are its famous table-glass-ware, seeds, fire-bricks, hollow-ware, decorative tiles, and chains and anchors. Pop. 48,943.

Brierly, Sir Oswald Walters (1817-94), marine painter. He entered Sass's art school in London, then studied naval architecture at Plymouth, and exhibited some ship drawings at the Royal Academy, 1839. He travelled with Benjamin Boyd in the *Wanderer*, and settled in Auckland for 10 years. Brierly Point is called after him. B. voyaged in the *Rattlesnake*, 1848, and in the *Meander*, 1850, with Sir Henry Keppel, whose book about this cruise he illustrated, 1853. He was with Keppel during the Crimean War. In 1855 B. pub. lithographs, 'The English and French Fleets in the Baltic'; 1856, he took sketches of the naval review at Spithead for Queen Victoria and was attached to the suites of the Duke of Edinburgh and the Prince of Wales on their tours by sea, 1867-8; appointed marine painter to the queen, 1874; knighted, 1885. His best pictures are at Melbourne and Sydney. In 1881 he

was curator of the Painted Hall, Greenwich. Two famous works are 'The Retreat of the Spanish Armada,' 1871, and 'The Loss of the *Revenge*,' 1877.

Briesen, see WABRZEŹNO.

Brieux, Eugène (1858-1932), Fr. dramatist, b. Paris. He held influential positions on the staffs of *La Patrie*, *Le Figaro*, and *Le Gaulois*, but did not establish himself as a playwright until his *Ménage d'artistes*, 1890. He freely introduced philosophical discussions into his plays, which are, for the most part, satires on various social evils. To-day his works have lost much of their interest. Thus in *Blanchette*, 1892, he exposes the dangers of educating girls of the working classes; in *Les Trois Filles de M. Dupont*, 1897, he throws into bold relief the grave difficulties arising from the antiquated system of dowry; *La Robe rouge*, 1900, discloses the injustices of the law; *Les Avariés*, 1901, is about syphilis; *Maternité*, 1903, concerns social hypocrisy in the matter of motherhood. *Maternity, Damaged Goods* (Fr. title *Les Avariés*), and *The Three Daughters of M. Dupont* were pub. in England; the vol. having a preface by George Bernard Shaw, who saw in B. the most considerable Fr. playwright since Molière. Among B.'s later works are *Les Hémorrhoides*, showing up the absence of freedom in 'free love,' 1906; *La Femme seule*, a feminist play, 1913; *Le Bourgeois aux champs*, on the incompatibility of bourgeois and peasantry, 1914; *Les Américains chez nous*, post-war comedy of old-fashioned France and new America, 1920. See P. V. Thomas, *The Plays of Eugène Brieux*, 1915.

Brieve, see BREVE.

Briey, Fr. tn, cap. of an arron., in the dept of Meurthe-et-Moselle. It is in a rich iron-producing dist. Pop. 2900.

Brig, 2-masted, square-rigged vessel. It was at one time a flat open boat with sails, and from 10 to 15 oars on each side, carrying about 120 men. A brigantine, or hermaphrodite B., is a small 2-masted vessel, square rigged on the foremast only, the other sails being fore-and-aft sails.

Brigade, military formation consisting of a group of arms and services under the command of a brigadier. The Brit. infantry B. consists of 3 battalions. In addition to infantry B.s the Brit. Army has armoured and parachute B.s. Besides its use to describe a formal group of military units the term has also been employed in connection with bodies of troops of a special character, e.g. the Irish B.s in French and Boer service, the Household B. (the Life Guards, the Horse Guards, and the Foot Guards), and individual regiments (the Rifle B.). The Brit. Artillery B. has now been replaced by the artillery regiment.

Brigade Major, officer, according to Eng. military usages, acting for the brigadier as does the adjutant for the C.O. of an ordinary regiment. He thus undertakes the corresponding duties of the brigade, having under him a staff of clerks, inspects guards, and directs movements. In the Brit. Army such offices are

held at camps of exercise (e.g. Aldershot), or during active service and manoeuvres. The officer resumes his ordinary duties when his services as B. M. are no longer required.

Brigadier, rank in the Brit. Army held by the commander of a brigade, formerly B.-General. In 1920 the title of B.-General was abolished in the Brit. Army, and 'Colonel-Commandant' substituted; but in 1928 the title of Colonel-Commandant was abolished and 'Brigadier' substituted. The title B.-General is still in use in the Amer. Army. A B. in the Fr. Army is a corporal.

Brigandine, so called from the brigands, was the term used for a coat or body garment, lined with small plates or scales of iron, as a form of armour (q.v.), more flexible than the solid breastplate used in the Middle Ages. It was usually covered with cloth, and the rivets fastening the plates were visible on the outside, often gilt for decorative effect upon velvet.

Brigands, name originally applied to mercenary or irregular troops. The word has become degraded in meaning and is now used to designate bands of outlaws who live by rapine and plunder. B. have usually been found to be malcontents or the remnant of a people whose country has been overrun by invaders. Notable B. were Spartacus and his gladiatorial bands in anct Italy, the later B. of Italy and Spain, the Scottish raiders, Australian bushrangers, and the dacoits of Asia. Mountainous countries have ever been favourable to the practice of brigandage. Competent rural police have crushed the vice out of most civilised countries; but in Corsica, as well as in the remoter parts of Sicily, the Balkans, and Turkey, the practice is by no means yet extinguished. Brigandage has been a favourite topic of romance, but the great majority of B. when judged impartially are unromantic types of character.

Brigantes (from Celtic, meaning mountaineers), tribe of people inhabiting N. Britain between the Forth and the Humber before the Rom. conquest. Eboracum (York) was their chief tn, and Ostorius Scapula was the first Roman to come into contact with them, defeating them during the reign of Claudius. They were not thoroughly subdued till the reign of Antoninus Pius. They had an eponymous goddess whose name was Brigantia, and mention of her is found in various inscriptions. A branch of the B. settled in SE. Ireland.

Brigantia, see BRAGANZA.

Brigantine, see BRIG.

Brigantium (Austrian tn), see BREGENZ.

Brigantium (Fr. tn), see BRIANÇON.

Brigantium Flavius, see BETANZOS.

Briggs, Charles Augustus (1841-1913), Amer. divine, was minister of the Presbyterian church of Roselle, New Jersey, 1870-4, and from 1874 was prof. at the Union Theological Seminary. He was a famous Heb. scholar. For 10 years he was editor of the *Presbyterian Review*, 1880-90. In 1892 he was tried by the New York Presbytery on a charge of heresy, and acquitted; but the general

assembly of the denomination, on appeal, condemned him and suspended him from the ministry. He had questioned the truth of certain statements in the O.T., and exposed the falsehood of some scriptural tradition. In 1899 he became a priest in the Protestant Episcopal Church.

Briggs, Henry (1561-1631), mathematician. He was a native of Yorks, and b. Warley Wood, near Halifax. In 1581 he obtained his degree at St John's College, Cambridge, and 7 years later a fellowship. He was appointed reader of the physical lecture founded by Dr Thomas Linacre. His work on logarithms brought him into close personal contact with John Napier, whose hyperbolic form had till then sufficed. B. proposed the alteration of the scale from the hyperbolic form to that in which ten is the base. At the end of the second visit to Napier the new system was pub. in 1617. He received the appointment of Savilian prof. of geometry at Oxford in 1619. In 1624 he produced his stupendous *Arithmetica Logarithmica*, a work containing the logarithms of 30,000 numbers worked to 14 places of decimals. He d. on 3 Jan. 1631. His life was noted for its abstemiousness, studious application, and contentment.

Briggs, Henry Perronet (1793-1844), Eng. painter, studied at the Royal Academy and specialised in historical subjects, though, after he became an R.A. in 1832, he painted many portraits, that of Lord Eldon being considered his best. His 'Juliet and the Nurse' is in the Tate Gallery.

Brigham Young University, educational institution for students of both sexes founded at Provo, Utah, in 1875 under the auspices of the Church of Jesus Christ of Latter-Day Saints. Students in 1955, 7700.

Brighouse, municipal bor. in Yorks (W. Riding), England, 4 m. ESE. of Halifax. Prin. industries are the manuf. of woollen and silk textiles, engineering, and carpet weaving. Pop. 31,000.

Bright, Sir Charles Tilston (1832-88), civil engineer. In 1853 as engineer to the Magnetic Telegraph Co. he superintended the laying of the first deep-water cable between Great Britain and Ireland, from Portpatrick (Scotland) to Donaghadee (Ireland). B. organised with Field and Brett the Atlantic Telegraph Co., 1856, himself becoming chief engineer. After 2 disappointments, he succeeded in laying a submarine cable connecting Ireland and Newfoundland, thus being first to establish communication by telegraph between Europe and America. The first cable failed after working 68 days. Later B. laid cables in the Mediterranean, Persian Gulf, and W. Indies. With Clark he discovered improved methods of insulating submarine cables. Their paper on electrical standards caused the formation of the Brit. Association Committee on the subject. B. was knighted, 1858; in 1865-8 was Liberal M.P. for Greenwich. See the life by his son (revised ed., 1908).

Bright, John (1811-89), statesman and orator, b. Rochdale. His father, Jacob B., was a mill-owner there and a member

of the Society of Friends. He entered his father's business, and, as a nonconformist, took an active part in local politics, and also in the temperance movement, in connection with which his first public speeches were delivered. In 1837 he met Cobden, who was then beginning to speak against the Corn Laws, and very soon joined him, serving on the Manchester committee which founded the Anti-Corn Law League in 1839. In 1843 B. was elected M.P. for Durham on a free trade platform. At that time Sir Robert Peel's 'sliding scale' was in force, by which the price of wheat was not allowed to fall below a certain point, roughly speaking 60s. per quarter. The Anti-Corn Law League were determined on getting rid of the duty entirely, but were making slow progress until they were seconded in 1845 by a terrible ally, the famine in Ireland caused by the potato disease, which forced Peel first to resign, then to return as the leader of what was practically a Free Trade ministry. In 1846 the Corn Laws were repealed, and the Anti-Corn Law League was dissolved. In 1847 B. was elected for Manchester without opposition. In 1852 he was again returned for Manchester, and took part in the memorable vindication of Peel's policy, when Disraeli's attack was decisively defeated. He fought hard against the advocates of the Crimean War, also against Palmerston's action in China and Persia, and was consequently defeated at Manchester in April 1857, but in Aug. was returned at Birmingham without contest. In 1858 he took a leading part in the admission of Jews to Parliament, and in the transfer of the gov. of India from the E. India Co. to the Crown. During the Reform agitation from 1859 to 1867 he was one of the leading speakers, and was a chief factor in the return of the Liberals to power under Gladstone in 1868, when he was made Privy Councillor and president of the Board of Trade. For 4 years he was kept out of Parliament by a serious illness, but in 1873 came once more to the front as chancellor of the duchy of Lancaster. In 1875 he was chairman of the party meeting which elected Lord Hartington as leader on the retirement of Gladstone, and in 1878 took an impressive share in the debates on the Russo-Turkish war. His severance from Gladstone began on the Egyptian question in 1882, but was not complete until 1885-6, when he defeated Lord Randolph Churchill at Birmingham by a large majority, and helped to crush the Home Rule Bill. In 1883 he spoke strongly of 'the Irish rebel party,' and accused them of having exhibited 'a boundless sympathy for criminals and murderers.' At the election of 1886 his influence was predominant in securing the defeat of Gladstone. B.'s sincerity in political life, as in everything else, was passionate and convincing, and he was one of the greatest orators of his age. His conscientious examination of even the most minor issues, his absolute refusal to give way on principles, sets him in the forefront of eminent Victorian nonconformist politicians.

See *Speeches on Questions of Public Policy*, ed. by J. E. T. Rogers (2 vols.), 1858; *Public Addresses*, ed. by J. E. T. Rogers, 1879; *Public Letters*, ed. by H. J. Leech, 1885; G. M. Trevelyan, *Life of John Bright*, 1925; M. E. Hurst, *John Bright*, 1946.

Bright, Mary Chavelita, see EGERTON, GEORGE.

Bright, Richard (1789-1858), b. at Bristol. He studied medicine at Edinburgh, Berlin, Vienna, and Guy's Hospital; M.D., Edinburgh, 1813. Two years later he travelled extensively in Hungary, and in 1818 pub. *Travels from Vienna through Lower Hungary*, an excellent account of the social and economic life of that country. In 1820 he was appointed assistant physician to Guy's Hospital and full physician in 1824, remaining with that hospital for the rest of his life. In 1827 he pub. his *Reports of Medical Cases*, giving the first account of his classical researches on the association between kidney disease, dropsy, and albuminuria, and clearly defined the disease now known by his name. He was F.R.C.P. in 1832 and was appointed physician-extraordinary to Queen Victoria in 1837.

Bright, Timothy (c. 1551-1615), physician, clergyman, and inventor of modern shorthand. He took the degree of M.D. at Cambridge, his medical works showing remarkable knowledge of the doctrines of early Gk writers. Queen Elizabeth gave him livings of Methley, 1591, and Barwick-in-Elmet, 1594, in Yorks. His *Treatise of Melancholie*, 1586, possibly suggested Burton's more famed *Anatomy*. B.'s *Characterie*, a method of 'short, swift, and secret writing,' 1588, is only partly alphabetical. Willis's *Stenography*, 1602, is the real precursor of our modern systems. See also SHORTHAND. See *Shorthand*, 1884, and Lewis's *History of Shorthand*, 1815.

Brightingsea, seaport and par. in Essex, England, situated 8 m. to the SE. of Colchester. It is on the R. Colne, at its estuary. It has important oyster fisheries. Pop. 4501.

Brightman, Frank Edward (1856-1932), liturgist and historian, b. Bristol, educ. at Bristol Grammar School and Oxford Univ. Ordained deacon, 1884, and became one of the librarians of Pusey House. He was an examiner in theology in 1890, and, in 1902, made a prebendary of Lincoln. He was the foremost liturgical scholar of his day in England, and his *Liturgies, Eastern and Western*, and his *English Rite*, 1915, proved him to be without a rival in this branch of learning. He was a first-rate historian, and both archbishops Temple and MacLagan used his learning in the *Responsio* to the bull *Apostolicae Curae* of Leo XIII in 1897. But B.'s main interest was not in controversial theology, for he contributed many valuable articles to the *Dictionary of Church History*, 1912, notably on the hist. of the prayer book. He disliked the deposited book of 1927, and was strictly loyal to the old prayer book. (Consult on this his criticisms in *Church Quarterly Review*, July 1927.) Other writings

include a study of Bishop King of Lincoln, 1912, eds. of Andrewes's *Preces Privatae*, 1903, and *Manual for the Sick*, 1909.

Brighton, popular watering-place of Sussex, England, 51 m. S. of London. The old name of the tn was Brighthelmston, which was corrupted about the beginning of the 19th cent. into B. The popularity of the tn as a watering-place was not assured till 1782, when the Prince of Wales spent a holiday there in the company of the Duke of Cumberland. The prince found the climate agreeable, and built the pavilion there in 1784 and took up a yearly residence in the tn. Brighton was made a parl. bor. in 1832, and a municipal bor. in 1854. The buildings of the tn are imposing. In 1849 the pavilion, which is said to have cost £1,000,000, was purchased by the tn for £50,000, and is now utilised as a museum, picture galleries, assembly room, and concert hall. The concert hall is known as the Dome; it can accommodate 3000 people. The streets are of substantial modern architecture. The promenade is magnificent and extends along the coast for about 4 m. A terrace of the finest houses in B. fronts the sea. There are 127 places of worship in the tn, of which the Holy Trinity Church is famous owing to the preaching of F. W. Robertson. Outside that of St Nicholas is the tomb of Nicholas Tattersell, the skipper of the collier in which Charles II escaped to France in 1651. The museum of Brit. birds containing the collection bequeathed by E. T. Booth was opened in 1893. It is the finest collection of Brit. birds in the world. The schools of B. are numerous and good, notably B. College. Roedean is a famous school for girls. The tn has many charity institutions, and the co. hospital is 'open to the sick and lame poor of every country and nation.' B. has no maritime trade; there are, however, considerable mackerel and herring fisheries. The water supply is derived from the chalk, the sources of which are within a short distance from the tn. In the summer the watering-place is the resort of many holiday-makers, chiefly from London. Hence the tn has been called London by the Sea, but the long vista of sea-front backed by palatial buildings, when lit up by myriads of lights, presents a spectacle which London cannot equal. King's Road is one of the finest thoroughfares in Great Britain, and the Aquarium, a great attraction, was reconstructed in 1927. The W. Pier is 1100 ft long and has a landing-stage of 720 ft; the Palace Pier is 1710 ft in length. The bor. was extended in 1927. During the 10 years before the outbreak of war in 1939, a number of major development plans were successfully carried out, notably the protective works for the undercliff walk and foreshore from Black Rock to Saltdean, the construction of the Black Rock bathing pool and the Madeira Drive, a promenade from the Palace Pier to the Black Rock. Further promenade works were held up by the war, but plans have since been revived. Within the tn

itself a covered market has been built, and recent building construction has included community centres, clinics, and branch libraries. During the war enemy air attack resulted in the demolition of 200 houses, while 900 were seriously damaged. In all there were over 50 air-raids, and the casualty list numbered nearly 1000. The bor. sends 2 members to Parliament. The municipal bor. has a mayor, 19 aldermen, and 56 councillors. Pop. 156,900. See A. Dale, *Fashionable Brighton, 1820-1860*, 1948.

Brighton, tn in Bourke co., Victoria, Australia, situated 8 m. S. of Melbourne by rail. Its fine situation on Port Phillip Bay has made it a fashionable watering-place. Pop. 21,000.

Bright's Disease, see NEPHRITIS.

Bright, St., of Kildare (other forms, **Brigid** and **Bridget**) (c. 450-c. 525), known as Bride of Kildare, was, according to legends, the daughter of a prince of Ulster. She lived a life of seclusion in the woods, and hence the name Kildare—Kil-dara, church of the oak, where she founded a nunnery, the first to be estab. in Ireland. She is said to have performed many miracles, and is one of the 3 patrons of Ireland with Sts Patrick and Columba. Known in England as St Bride, her feast is on 1 Feb.

Brignoles, Fr. tn in the dept of Var, once the summer residence of the Counts of Provence (q.v.). It has an anct church, containing a 2nd-cent. Christian sarcophagus. Brandy is manuf. Pop. 5900.

Brihuega, see ALCARRIA, LA.

Bril, Matthew (1550-84), Flem. landscape-painter, b. Antwerp. He studied art in Italy during the pontificate of Gregory XIII, by whom he was appointed to paint sev. frescoes in the Vatican. He showed talent, but *d.* when comparatively young.

Bril, Paul (1554-1626), Flem. painter. He was a native of Antwerp, and was led to live in Rome by the success attained by his brother Matthew (q.v.) whom he excelled. On his brother's death, Paul completed his commissions. 'The Martyrdom of St Clement,' in the Sala Clementina of the Vatican, is one of his masterpieces; and he was noted for his landscapes.

Brill, vil. in Bucks, England, 10 m. W. of Aylesbury, with an old post windmill. Pop. 900.

Brill (*Scophthalmus laevis*), flat-fish of the same genus as the turbot, *S. maximus*, but it is smaller, smoother, and more shining in appearance. It belongs to the acanthopterygious family Pleuronectidae.

Brillat-Savarin, Anthelme (1755-1826), Fr. gastronomist, b. at Belley. In 1793 he became mayor of Belley. To escape proscription he fled from France to Switzerland, and subsequently to America, where he played in the orchestra of a New York theatre. He returned to France on the fall of Robespierre and wrote his posthumously pub. famous *Physiologie du Gout*, a witty compendium of the art of dining. Many eds. and trans. of the work have been pub.

Brilliant, Grigori Yakovlevich, see SOKOL'NIKOV.

Brilliant, diamond (q.v.) cut to resemble 2 truncated cones placed base to base; the sides are covered with facets.

Brilon, Ger. tn in the *Land* of N.-Rhine-Westphalia (q.v.), near the Möhne (q.v.), 76 m. E. by N. of Düsseldorf (q.v.). In the Middle Ages it was an important tn of the Hanseatic League (q.v.), and it has a 13th-14th-cent. church. Pop. 11,000.

Brimstone, see SULPHUR.

Brin, Benedetto (1833-98), It. naval administrator, worked at first as a naval engineer. In 1873 he became under-secretary of state. B. was the right man to carry out the designs of Adm. Saint-Bon, the minister of marine. When in 1876 Depretis appointed him minister of marine, he supervised the construction of the great warships *Italia* and *Handolo*. He was for 11 years in the gov., 1876-98—1876-8 with Depretis; 1884-91 with Depretis and Crispi; 1896-8 with Rudini—and during that time he was responsible for the estab. of shipyards and factories for the production of guns, steel plates, etc. As minister for foreign affairs, 1892, he accompanied the king to Potsdam. He may be regarded as the founder of the It. Navy.

Brindaban, tn in Uttar Pradesh, India, famous as the place where the god Krishna stole the clothes of the milkmaids. A large red temple dating from 1590, one of the most interesting and elegant in India, is sacred to him.

Brindisi: 1. Prov. of Italy, in E. Apulia (q.v.). It is the N. part of the 'heel' of Italy, has a long coast-line on the Adriatic, and is mainly plainland. There is a plateau in the NW. The prin. tns include B. (see below), Ostuni, and Francavilla-Fontana (qq.v.). Area 725 sq. m.; pop. 326,000.

2. (anc. **Brundisium**), It. seaport, cap. of the prov. of B., on the Adriatic, 65 m. SE. of Bari (q.v.). It is situated on a small cape, and has an inner and outer harbour, the outer harbour being enclosed by a mole and sev. small is. It was taken by the Romans from the Sallentini in 267 BC, and developed into the prin. naval station on the Adriatic. It became the chief point of embarkation for Greece and Asia, and had a pop. of 100,000. A journey to B. is the subject of one of Horace's satires (Sat. I. v.), and here Virgil (q.v.) d. on his return from Greece in 19 BC. In the Middle Ages the port was used by the Crusaders (see CRUSADES) but thereafter it decayed. Its prosperity was restored by the opening of the Suez Canal (q.v.) in 1869, and it is now an important port for the E. In Sept. 1943, after the fall of Mussolini and the allied landings in Italy, Marshal Badoglio (q.v.) set up a pro-allied gov. here. B. has a 12th-18th-cent. archiepiscopal cathedral, sev. interesting medieval churches, an old castle, and 2 marble columns said to mark the end of the Appian Way (q.v.). There is a large trade in wine, spirits, oil, and fruit. Pop. (com.) 58,900.

Brindley, James (1716-72), engineer. He was b. at Thornsett, Derbyshire, and he received a very scanty education. His apprenticeship to a wheelwright seems to

have nourished his mechanical genius, for he speedily set up in business for himself and became famous for the ingenuity he displayed. He assisted the Duke of Bridgewater in carrying out his famous canals, and the success of the Manchester Ship Canal must be attributed first to the indomitable genius of B. He d. at Turnhurst, Staffs.

BRINE-SHRIMP

Brine-shrimp, or *Artemia*, is the generic name of some crustacea belonging to the group Anostraca of the Branchiopoda. They inhabit salt lakes, and some interesting experiments have shown that there is a correlation between the salinity of the lakes and the form of the B. These different forms had been described as separate species. See W. J. Bateson, *Materials for the Study of Variation*, 1894.

Brink, Bernhard Egidius Konrad ten (1841-92), Dutch philologist, b. Amsterdam. He studied at Münster and at Bonn. In the year 1870 he was appointed prof. of modern languages and literature at Marburg, and in 1873 he held the same position at Strasburg. He contributed much valuable information on Eng. philology. Chief works: *Chaucer-Studien*, 1870, and *Geschichte der englischen Literatur*, 1874.

Brink, Jan ten (1834-1901), Dutch author and literary historian, b. Appingedam. He commenced a course of theology, but found that his talents were literary rather than theological. In 1884 he became prof. of literature at Leyden, and there wrote sev. works of criticism and of romance. His style is very lucid and elegant, and his criticisms are acute and penetrating. Among his best works are a novel entitled *Het verloren Kind*, 1879, *Causerien over Moderne Romans*, 1885, *De roman in brieven*, 1889, and *Geschiedenis der Nederl. Letterkunde*, 1899.

Brinvilliers, Marie Madeleine, Marquise de (c. 1630-76), Fr. criminal. She married the Marquis de B. in 1651. She learned the secrets of poisoning from her lover, Jean Baptiste de Gaudin, Seigneur de

Sainte-Croix. B. poisoned her father, 2 brothers, and a sister, but failed in her attempt to poison her husband. *Sainte-Croix d.* by (probably) accidental poisoning in 1672, and the investigations as to the cause of his death revealed B.'s crimes. She fled, but was arrested near Liège, and executed in Paris, July 1676.

Brioude, Fr. tn, cap. of an arron., in the dept of Haute-Loire, on the Allier. It has a 12th-cent. church, and has a livestock market. Pop. 5600.

Briovera, see ST LO.

Briquette (Fr. 'small brick'), name given to a kind of fuel, made up chiefly of waste coal-dust. It smoulders for many hrs without going out, and gives a fair amount of heat. It is also used in various industries. The dust is cleansed and dried and then mixed with pitch in a disintegrator, until the 2 ingredients have thoroughly blended. The mixture is then placed in a vertical 'pug-mill': steam is introduced till the pitch is viscid, and then the mixture is left to cool in moulds. Manufacturing processes vary with the fuel from which the B. is to be made. Lignites and brown coal will briquette without any admixture, as will some bituminous coals; but most bituminous coals, all anthracites, and coke breeze must be mixed with a binding medium to give coherence and hardness to the B. Various other substances, such as tar, asphalt, starch, peat, etc., may be used in the manuf. of B.s. The weight of the B. may be anything from about 28 lb. to a few oz. each, depending on requirements. The value of the briquetting process lies in its ability to convert fuel which otherwise would have little if any value into a marketable product.

Brisbane, Sir Charles (c. 1769-1829), distinguished Brit. admiral who entered the navy in 1779, being a midshipman at battle of the Saints off Dominica, 1782. B. served under Rodney, Hood, and Nelson. In 1796 he was posted after being present at Iridport's action off Genoa and was made captain for his capture of Dutch ships in Saldanha Bay. He helped to cut out the *Chevette* from Camarat Bay, 1801. He commanded the *Arethusa*, and with the *Anson* destroyed the Sp. *Pompona* and 10 gunboats off Havana, 1806. His finest exploit was the capture of Curaçao and sev. Dutch vessels, 1807. Knighted for this by George III; K.C.B., 1815; vice-admiral, 1820; governor of St Vincent, 1808-29. See Ralle's *Naval Biography*, iv, and *Gentleman's Magazine*, 1830.

Brisbane, Sir James (1774-1826), Brit. naval officer, brother of Sir Charles B. Midshipman in *Queen Charlotte* at Howe's 'Glorious First of June' victory, 1794. As lieutenant served at the reduction of the Cape of Good Hope. In 1801 B. was present at the bombardment of Copenhagen, and was posted. In 1808 he commanded the squadron blockading Corfu, capturing the Fr. *Var*, 1809. Helped to reduce Ionian Is. and establish the sept-insular rep. In 1816 he served at bombardment of Algiers. As commander-in-chief in the E. Indies he concluded the

first Burmese war, 1825. See Marshall's *Royal Naval Biography*, iii.; James's *Naval History*, vi, 1860; *Nelson Dispatches*, iv.

Brisbane, General Sir Thomas Mكدougall (1773-1860), soldier and astronomer, b. Largs, Ayrshire. He served in Flanders, the W. Indies, Spain, and N. America, and in 1821 became governor of New S. Wales. The reforms he advocated in penal treatment and the encouragement he gave to immigration were severely criticised; but he promoted the cultivation of land. While in Australia he catalogued 7385 stars, and founded an observatory at Brisbane, which is now called after him. For his work, *The Brisbane Catalogue of Stars*, the Royal Society awarded him the Copley Medal. He also estab. observatories at Larx and at Makerstoun in Scotland. He succeeded Scott as president of the Royal Society of Edinburgh in 1833, and was president of the Brit. Association.

Brisbane, chief seaport, cap., and commercial centre of Queensland, Australia, situated on the Brisbane R., about 25 m. above Moreton Bay. It was first settled as a penal station in 1824 by Sir Thomas Brisbane (q.v.), governor of New S. Wales. The convict station was broken up in 1839; in 1842 B. was opened for colonists; and in 1859 it was incorporated. The tn has 4 divs.: North B., South B., Kangaroo Point, Fortitude Valley. It is the seat of an Anglican bishop and a Rom. Catholic archbishop. There are many fine public buildings, including the Houses of Legislature, the tn hall, the 2 cathedrals, the Queensland Club, a museum, a technical college, and a school of arts. It is the seat of Queensland Univ., which was estab. in 1911. In 1893 the channel of the riv. was dredged and deepened, so that ocean-going steamers can come up the riv. and berth at the wharves. The riv. is navigable by large vessels to the city, over 10 m. from Moreton Bay. There is regular communication by steamship with other Australian ports, B. being one of the chief centres of trade. The prin. exports are wool, tallow, hides, sugar, coal, and frozen meat. The climate is healthy and dry; the mean temp. is 70° F. in the shade. The tn has suffered from the flooding of the riv., notably in 1893, when much of South B. was destroyed. The Bridge which spanned the R. B. was then destroyed, and the Victoria Bridge was built to replace it in 1897. Three bridges, 2 of steel and another a rainbow-arched concrete structure, provide links for traffic between the N. and S. sides of the city which are separated by the B. R. A standard gauge railway line connects with the S. states, and from B. starts the Great N. railway which carries passengers to Cairns 1000 m. away. There are 2 large airports. B. has 4 national and 4 commercial broadcasting stations, an observatory, and botanic gardens. There is a notable race-course at Eagle Farm.

The city of Greater B. was created in 1925, absorbing within its boundaries 19 councils, with an area of 375 sq. m.,

which had been administered by 200 members. Its boundaries radiate approximately 10 m. from the centre of the city. It was the first greater city council area created in Australia. A modern feature, unique in Australia, was the adoption recently of the zoning plan of the city under which provision is made for shopping, residential, manufacturing, and industrial areas, and the creation of a green belt surrounding the city to ensure adequate park lands and recreational facilities for all time. The council

initiated the feud which is the central theme of the *Iliad*.

Brisighella, It. tn, in Emilia-Romagna (q.v.), 25 m. SW. of Ravenna (q.v.). It is built on the slope of a castle-crowned hill, overlooking the Lamone. Pop. 4500.

Brisson, Barnabé (1531-91), Fr. lawyer. In 1575 he became advocate under Henri III, and later was sent as an ambas. to England. After the death of Henri III in 1589 he became the leader of the people, being nominated first president by the Catholic Leaguers. Later he vacillated

Queensland Government

BRISBANE

The Customs-house and Circular Quay.

consists of 25 members, including a lord mayor, all elected on the adult franchise basis, to hold office for 3 years. Civic affairs are unified under one administration. The system is unique in Australia, for in addition to carrying out the ordinary functions of local gov., since 1925 it has had under its charge tramways, electricity, water supply and sewerage, cemeteries, and ferries. An outstanding constructional work completed during the Second World War was the building of a big dock in the lower reaches of the B. R., where all ships and war vessels, excepting those of the very largest type, may receive attention. The Greater B. area (385 sq. m.) is controlled by a city council under a lord mayor. Pop (1955) 515,000.

Briseis, daughter of Briseus, a native of Lyrnessus, on the fall of which place she became the captive of Achilles. Agamemnon took her from him and thus

between the royalists and the people, and was arrested, in spite of a warning to flee, by order of 'The Sixteen,' and put to death at once. Among his chief writings are *De formulis et sollempnibus Populi Romani verbis*, 1583, and *Le Code du roy Henri III*. See P. Le Bas, *Dictionnaire Encyclopédique*, 1843.

Brisson, Eugène Henri (1835-1912), Fr. politician, was called to the Bar in 1859. He was vice-president of the Assembly in 1879, and president in 1881. He was Prime Minister 4 years later; but it was during his presidency of the Chamber, 1895-8, and his ministry, 1898, that he distinguished himself by his judicious administration at the time of the Dreyfus trial. He was again president of the Chamber of Deputies from 1905 until his death.

Brisson, Mathurin Jacques (1723-1806), zoologist and natural philosopher, b. Fontenay-le-Comte. He studied for the

Church but did not take orders, preferring to pursue natural science. Became assistant to Réaumur and in 1756 pub. the first vol. of his work on the animal kingdom; but after Réaumur's death in 1757 he abandoned natural hist. for physical science. He was appointed a prof. at the Collège de Navarre and at the Ecoles Centrales in Paris. Some of his best-known works are those on ornithology—among them his *Ornithologie* (6 vols.), 1760; *Pesanteur spécifique des corps*, 1787; *Dictionnaire Raisonné de Physique* (2nd ed.), 1800.

Brissot (de Warville), Jean Pierre (1754–93), Fr. Girondist. He was a native of Chartres, and was trained to be a lawyer. The influence of Rousseau is obvious in his *Théorie des lois criminelles*, 1781, and *Bibliothèque philosophique du législateur*, 1782. After an unsuccessful attempt to found a newspaper, he was sent to the Bastille on a charge of sedition. On his release he renewed his revolutionary activities, and was forced to seek asylum in London. He returned to France in 1789. The keys of the Bastille were given to him on the destruction of the prison, and he was elected a member of the legislative assembly and later of the National Convention. Subsequently his moderate views led to his being accused of royalism. With other leading Girondists he was arrested and guillotined on 31 Oct. 1793. See *Mémoires de Brissot*, Paris, 1830.

Bristle Tails, see THYNANURA.

Bristles, strong, stiff hairs growing on the back of the hog and the wild boar. They are used in the manuf. of brushes, and by shoemakers and saddlers. The quality of the B. depends on length, stiffness, colour, and straightness. The longest and strongest are yielded in relatively small proportion, and are of high value; these are not made into brushes, but are bought by shoemakers. As to colour, the white B. are more valuable than the black and grey ones. Great Britain normally imports vast quantities of hogs' B. from Russia, Germany, France, Belgium, and China, with smaller supplies from Denmark, Holland, the U.S.A., and the F. Indies. The hog of cold countries yields the best B.; those coming from Russia (with Siberia) are the most valued, but France produces excellent white ones. The long thin animal of the N. becomes fat in the S., and its B. deteriorate, becoming softer, shorter, and less straight. The hog sheds its B. by rubbing itself against trees.

Bristol: 1. Cathedral city, municipal, co., and parl. bor., an anct seaport, and a modern industrial and distributive centre of W. England. The co. of B. lies on the borders of Glos and Somerset (B. was created a co. of itself by royal charter of Edward III in 1373). It stands on the Avon, 7 m. from the B. Channel and 118 m. from London. The tn originally occupied a position wholly on the N. of the Avon. The alteration of the course of the Frome by digging, in 1248, a fresh channel, and the erection of a bridge spanning the riv., added to the area of the tn, linking it also

with Redcliffe, owned by the Berkeley family. Later, in 1373, all the dists. were joined, though not without violent opposition from the lords of Berkeley. Founded upon a few ac. of land forming a mound at the confluence of 2 rivs., the tn was favourably sited, both for defence and trade communications, and at one time it was one of the first seaports in Christendom and its old streets were filled with foreign seamen. The atmosphere of the tn in the old seafaring days was brilliantly reflected by R. L. Stevenson in *Treasure Island*, and the 'Llandoger Trow' is the inn which Long John Silver was supposed to have frequented. Clifton (q.v.) is a suburb of B.

It was a discovery of coins minted at Brigstowe, i.e. place of the Bridge, B.'s early name, which proved that there was a community of some importance as early as the reign of Ethelred Unræd (978–1016). At that time the wealth of the tn was derived chiefly from the export of slaves to Ireland. B. was besieged during the wars of Stephen. Henry II gave the tn its first charter in 1171, and also conceded the tn of Dublin to B. residents. A siege occurred during the reign of Edward II, who was unable to reduce the tn to obedience for 4 years. It was recognised as a 'staple' tn in 1353, and enjoyed a considerable trade in wool, leather, wine, and salt. In discovery, colonisation, and maritime enterprise B. played a large part. In 1497 John Cabot sailed from B. in the small ship *Mathew* on the voyage which led to the discovery of the N. shores of the Amer. continent. His son, Sebastian, proclaimed the city his native tn. A considerable trade with the Amer. colonies was estab., and it was men of B. who colonised Newfoundland; for, though Humphrey Gilbert proclaimed Newfoundland to be part of Queen Elizabeth's dominions, no settlement took place until 1610, when John Guy, a B. merchant, obtained a royal charter and planted the first settlement on the Avalon Peninsula. B. also developed strong interest in the colonisation of America, and many communities named after the mother city are evidence of these links. In St Mary Redcliffe Church are to be seen the memorial and armour of Adm. Penn, father of Wm Penn, founder of Pennsylvania. Sev. streets bear names marking the associations of the Penn family with the tn. In Queen Square is the first Amer. consulate to be estab. in England. The first Catholic bishop of America was consecrated by a bishop of Clifton. In the heyday of the W. Indian sugar trade B. vied with Liverpool in the importation of sugar and the traffic in African slaves. In 1643 the city was captured by Prince Rupert, and later, in 1645, by Fairfax. A name honoured by a day being set apart for his celebration is that of Colston, a philanthropist. Sev. famous names are associated with B.: Grocyn, Wraxall, Sir T. Lawrence, and Beddoes, while Southey and Coleridge spent many of their youthful days in the city. In 1774 Burke was returned for the representation of B. in Parliament, though

he declined the honour in 1780. In the 17th and 18th cents. shipware and porcelain were produced at B. (see BRISTOL WARES). The famous *Great Western*, the first steamer intended for transatlantic trade, was built at B. in 1838.

The city contains a splendid array of architectural beauties of considerable antiquity. The cathedral, originally a Norman abbey church, still shows its Norman chapter-house and fine gateway. Other notable churches are St Mary Redcliffe, a 13th-cent. foundation of striking beauty, which was described by Queen Elizabeth (Tudor) as the fairest church in all the kingdom. St Philip's, and St Stephen's. The Rom. Catholic Church has a pro-cathedral and 13 other churches. The estab. Church of England has, besides the cathedral, 88 par. churches. The centres of education are the univ., Clifton College, Queen Elizabeth's Hospital, Red Maid's School, the grammar school (endowed 1532), and Colston's Schools. The univ. (see BRISTOL, UNIVERSITY OF) was chartered in 1099. King George V opened its new buildings on 9 June 1925. Architecturally the univ. is handsome and dignified, and is especially noted for its magnificent neo-Gothic tower, which is a prominent landmark. There are faculties of medicine, arts, science, engineering, and law. A chair of aeronautics is a later addition. There is also an agric. research station. Clifton College (q.v.) is a public school. The art gallery (1905) has a collection of interesting modern paintings. The adjoining museum was destroyed in an incendiary raid, but many of its salvaged contents are housed temporarily in the art gallery. The central library was opened in 1906 and there are many branch libraries, some of most modern design. B. Zoo is famous throughout the W. country.

Cents. of trade with Europe, and later with America, gave rise to a thriving balanced industry in the B. area, and the ease with which raw materials could be obtained led to the estab. of more than 300 separate types of industry. Chief among the many industries is engineering. Shipbuilding, motor-car, and aircraft building also absorb large numbers of employees. Nearly 10,000 persons are employed in the tobacco-making industry, and as many are engaged in printing. Other notable industries are clothing, cocoa and chocolate, chemicals, footwear, pottery, tanning, and wood working. B. is the home of the B. Aeroplane Co., builders of the Brabazon, Wayfarer, Blenheim, and other aircraft; of Wills, a branch of the Imperial Tobacco Co., and of Fry & Sons, cocoa and chocolate manufacturers. The distributive trades engage over 18,000 workers. Two aerodromes, the world's largest covered goods depot, good road and canal systems still further facilitate relations with all parts of the U.K. The municipal airport was opened in 1930.

B. is the largest municipally owned port in the country. The dock undertaking is administered by a committee of the corporation under the title of Port of

B. Authority. The corporation is also the conservancy authority and the pilotage authority. The docks, consisting of a total land and water area of 1241 ac. and a total length of quayage of 39,390 ft, comprise the Royal Edward and Avonmouth docks, situated on the Glos side of the Avon estuary, the Portishead dock on the Somerset side of the estuary, and the city docks about 7 m. up the R. Avon in the heart of B. B.'s leading position as a port is due to its excellent geographical position at the head of the B. Channel, which provides an outlet of about 100 m. from the open sea. The pop. within the area which can be

Will F. Taylor

UNIVERSITY TOWER, BRISTOL

economically served by the port is over 12,000,000, including the industrial midlands. The port has trading connections with all parts of the world and also a very extensive coastwise trade. The prin. trades of the port are as follows: *Imports*: grain, bananas and other fruit, refrigerated produce, petroleum, tobacco, cocoa, zinc, acid and fertilisers, timber, flour and grist milling, oil seeds, molasses, wine, canned goods, heavy chemicals, paper and woodpulp. *Exports*: chemicals, metals (tinplates, iron and steel), ores, clay, salt-cake, and all kinds of manuf. goods. A quarter of all the U.K.'s tobacco imports passes through B., a million tons of petroleum by-products are received annually, and, during the war years, B. was the world's largest petroleum importing centre; and as one of the prin. banana-importing centres of England B. normally receives 6,000,000 bunches annually.

In the Second World War B. suffered severely in air-raids. Some 1299 persons

were killed and over 3300 injured. Over 3000 houses were totally destroyed. Among the best-known buildings lost were St Peter's Hospital (a medieval treasure), the 17th-cent. Dutch house, the Merchant Venturers' Hall, the Masonic Hall, St Peter's Church (a Norman structure), Temple Church, famous for its leaning tower, and St Augustine's, dating from 1430. In addition almshouses, schools, cinemas, hospitals, factories, many churches, and almost the entire shopping centre, were either destroyed or seriously damaged. The city council has in hand a rebuilding scheme which will give B. a new shopping centre, civic and educational centres, ring roads, trunk roads, and other improvements in communications. Six members of Parliament represent the city at Westminster. The responsibilities for local gov. rest upon the lord mayor, whose office originated in 1216, and a corporation of 28 aldermen and 84 councillors, representing 28 wards. Pop. (estimated) 442,300.

2. Co. in the E. of Rhode Is., U.S.A.: area 25 sq. m. Its cap. and port of entry has the same name, and is situated on Narragansett Bay and New York, New Haven, and Hartford railroad. Its pop. is 29,080. There is a fine harbour where shipbuilding is carried on. There are manufs. of rubber, cotton, and woollen goods. It is believed that this part was visited by Norsemen in the year 1000, and to be referred to in certain Icelandic sagas (see ERICSSON, LEIF).

3. Bor. in Bucks co., Pennsylvania, U.S.A., on the Delaware R., 20 m. NNE. of Philadelphia. It has carpet, hosiery, worsted, metal products, chemical, and wallpaper factories. The first settlement was in 1681; incorporated 1720. Pop. 12,700.

4. Tn of Hartford co., Connecticut, U.S.A., situated 14 m. SW. of Hartford, on the New York, New Haven, and Hartford railroad. It has manufs. of clocks, brass goods, engines, electrical and sports equipment, ball-bearings, textiles, cutlery, bicycle brakes, paints, and concrete products. Pop. 35,961.

5. Tn, partly in Sullivan co., Tennessee, and partly in Washington co., Virginia, U.S.A., the boundary between the 2 states intersecting the tn. It lies 130 m. ENE. of Knoxville. Among its institutions are the King College for men (1868), and Sullins College and Virginia Intermont College for women. The prin. products are furniture, paper, structural steel, mining equipment, knitted goods, butter, and cheese. Pop. in Tennessee, 16,771; in Virginia, 15,954.

Bristol, University of, founded 1909, formerly Univ. College, B. (estab. 1876). The univ. has benefited by the generosity of the Wills family; it comprises the faculties of arts, science, medicine (including dentistry and veterinary science), engineering, and law, with a number of associated theological and training colleges and an agric. and horticult. research station. There are nearly 3000 students.

Bristol Bay, arm of the Bering Sea, lying to the N. of the peninsula of Alaska.

Communication with the interior is opened up for a considerable distance as 2 large lakes empty themselves into this bay. It is in lat. 57° 30' N., and long. 160° W.

Bristol Channel, inlet of the Atlantic Ocean, situated in the SW. of England. It has S. Wales to the N., and Devon and Somerset on the S. It forms an extension of the estuary of the Severn. Its length is about 80 m., while its breadth varies from 5 to 43 m. and its depth between 5 and 40 fathoms. It is Britain's largest inlet. Its coast-line is 220 m. The R.s. Towy, Taff, Usk, Wye, Severn, Avon, Axe, Ely, Parret, Taw, and Torridge flow into it. A feature of the channel is its extraordinary tides, which sometimes rise to a height of 35 ft at King Road at the mouth of the Avon, and even to 50 ft or more at Chepstow. This violent rise causes the Severn here, a rush of the tide in the form of a wall of water.

Bristol Wares. B. produced earthenware from medieval times, slipware (q.v.) in the 17th cent., delftware (q.v.) in the 17th and 18th cents., and soft-paste porcelain (q.v.) at Benjamin Lund's factory from 1750 to 1751 when it was transferred to Worcester (q.v.). The manuf. of hard-paste porcelain (q.v.) was brought from Plymouth by Wm Cookworthy in 1770. This factory, bought by Richard Champion in 1775, lasted until 1781, when Champion sold out to a Staffs firm at New Hall, whither the factory stock was transferred.

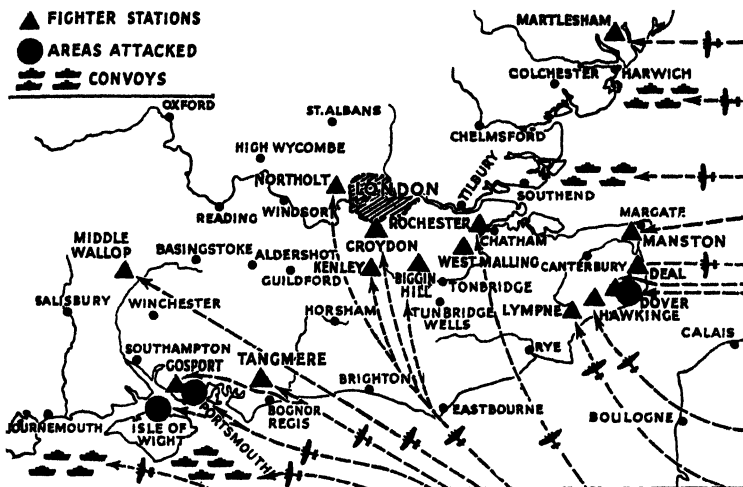

Britain, Ancient. For more than two hundred years antiquaries have recorded discoveries relating to the inhab. of early Britain. Within the last twenty-five years there have been spectacular advances in the method of systematic archaeology, particularly in the technique of scientific excavation and in the development of highly specialised synthetical studies, and a very great deal is now known of the early civilisations of these is. It is not possible to cover the subject adequately in one article. Some indication of the scope and volume of material now available for study and reference is given by the titles of the authoritative works listed below, and by the cross-references to other articles in the *Encyclopaedia*. Very many stone implements (see FLINT IMPLEMENTS) of Palaeolithic (Old Stone Age) hunters have been found in Britain (see STONE AGE); and sev. well-attested sets of their bones; but apart from the caves in which men lived from time to time, there are no visible monuments of this far-off period when the configuration of Britain was very different from that known at present. It was not until somewhere about the 6th millennium BC that Britain became isolated from the continental land-mass of Europe. The New Stone Age, the Neolithic (see STONE AGE), saw the estab. of a farming economy (see WINDMILL HILL) of an ultimate Mediterranean origin; immigrants from the Low Countries and Scandinavia invigorated this society, whose earthwork (q.v.), cattle compounds, and megalithic tombs (see MEGALITH CULTURE) are among the leading field monuments of

prehistoric Britain (see BARROWS). Somewhere about 1800 BC, pastoralist immigrants from France and the Low Countries, powerful and with an estab. aristocracy, introduced and advanced the benefits of metal-working (see BEAKER FOLK). To them are due the erection of religious sanctuaries (see HENGES MONUMENTS and STONE CIRCLES) such as Stonehenge (q.v.) in part, and Avebury (q.v.), but there is also in the vast number of weapons and in the earthwork forts (see HILL FORTS) much indirect evidence of tribal warfare (see BRONZE AGE). By 500 BC waves of Celtic invaders, warriors and farmers who were already in touch with the high civilisations of the Mediterranean, began to reach various parts of Britain (see IRON AGE). The subsequent developments of the Early Iron Age civilisations and their relative cultures with notable artistic achievements, a stable agriculture, and important civic centres, provides one of the most rewarding studies in Brit. prehist. With the conquest by the Emperor Claudius in AD 43, the written hist. of Britain may be said to have begun. See BRITAIN, ROMAN HISTORY OF.

Museum pubs. *Flint Implements*, 1950, and *Later Prehistoric Antiquities*, 1953.

Britain, Battle of. Ger. air-attack on Britain in Aug.-Oct. 1940. During this battle, unique in the hist. of mankind, 1733 Ger. aircraft were destroyed, as against the loss of 375 pilots killed and 358 wounded of the Brit. fighter command; 915 Brit. aircraft were lost, though the Germans claimed to have destroyed 3058. During daylight 1700 persons, nearly all civilians, were killed, and 3360 seriously injured, while, at night, 12,581 were killed and 16,965 injured. The encounters between opposing aircraft often

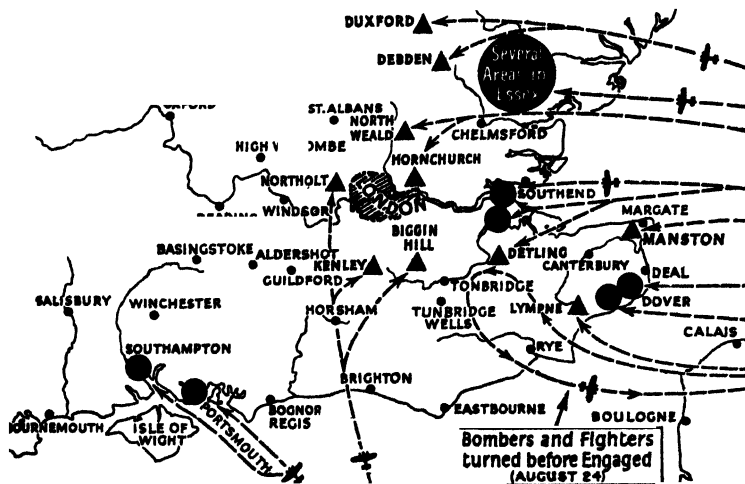

took place more than 3, 4, 5, and sometimes more than 6 m. above the surface of the earth by hundreds of machines flying often over 300 m.p.h. The battle not only brought into clear relief the brilliance and courage of the Brit. airmen, but showed how sound tactics and planning balked the enemy at every turn and prepared the defence for each new move. In this, the greatest air battle of hist., 'the Ger. Air Force was reduced from a confident smooth-running organisation to a shattered armada' (H. St G. Saunders, *The Battle of Britain*, 1941). The enemy's avowed object was to end the war before the close of 1940 and, to achieve this, an invasion of Britain was deemed essential. Before the Ger. Army could land, however, it was necessary to destroy the Brit. coastal convoys, to sink or immobilise intervening units of the R.N. and, above all, to chase the R.A.F. from the skies. Hence a series of air attacks were launched first on Brit. shipping and ports and then on aerodromes. There were 4 phases of the battle, and during the final phase daylight attacks gave way gradually to night raids of increasing intensity. During the first phase (8-18 Aug.) the Germans sent over massed formations of bombers, escorted by similar unwieldy formations of fighters flying up to 10,000 ft above the bombers. Employing these tactics the enemy made 26 attacks, first on shipping and S. ports. Realising that the Brit. fighter force was stronger than he had imagined, the enemy next attacked fighter aerodromes in S. and SE. England, while maintaining the attack on coastal tns. In this first stage the enemy made feint attacks on coastal objectives in the hope of drawing off the Brit. fighters, following these feints soon afterwards with the real attack against ports or aerodromes between Portland and Brighton. Generally these attacks were countered by using half the available squadrons to deal with the Ger. fighters and the rest to attack the bombers. The Brit. fighters' attacks from the stern on the Messerschmitt 109s and 110s were the more effective because these Ger. aircraft were not then armoured. The ratio of loss was about 1 Brit. to 5 Ger. airmen and would have been even more striking had not so much of the fighting taken place over the sea. Then followed a 5-day lull, Goering (q.v.) evidently deciding to change his tactics. In the second stage (19 Aug-5 Sept.) the main Ger. attack was delivered on a wider front, and tactics were changed by increasing the number of escorting fighters and reducing the size of the bomber formations, while the covering fighter screen flew at very great heights. The bomber formations, too, were protected by a 'box' of fighters, which sometimes broke through the forward screen of Brit. fighter forces by sheer weight of numbers, though only at the cost of numerous casualties. Having thus altered his tactical formations, the enemy proceeded to deliver some 35 major attacks between 24 Aug. and 5 Sept., his prime object being to destroy the inland fighter aerodromes and aircraft factories. During

PHASE 1: 8-18 AUG. GOERING'S BID FOR TOTAL VICTORY

these 12 days the Brit. tactical divs. were altered, the effect being to cause the enemy to be met in greater strength and further away from the inland objectives, while such of the Ger. aircraft as eluded this forward defence were dealt with by rear squadrons. The fighting efficiency of the Brit. fighter squadrons was put to considerable strain, but the enemy failed entirely to put them out of action. The third stage of the battle began on 7 Sept. with a mass attack on London, lasting an hour. The waves of attack consisted of formations of 20 to 40 bombers, with an equal number of fighters in close escort, with additional protection by large fighter formations flying at a much greater height. By way of diversion dive-bombers reappeared in attacks on coastal objectives and shipping. By night single aircraft dropped bombs at random over London. Between the coast and London, usually in the Edenbridge-Tunbridge Wells area, the raiders were met by Brit. Spitfires, which attacked the high-flying fighters, while Brit. Hurricanes, which had taken off first, engaged the fighter escorts, and were followed by other squadrons which fought the bombers. The attack on London was the crux of the battle. It continued from 7 Sept until 5 Oct. and was the last desperate attempt to win victory. Goering put forth all his strength, and during this phase 38 major attacks were made by day. On 7 Sept. a force of 350 bombers flew in 2 waves up the Thames estuary, some penetrating as far as Cambridge. On 15 Sept. came the climax: 300 Ger. aircraft, 150 in the morning and a like number in the afternoon, fought a running fight with Hurri-

canes and -pitfires from Hammersmith to Duncuness and from Bow to the Fr. coast. Over 50 wrecked Ger. machines littered SE. England as the result of this single day's fighting, and so redoubtable were the Brit. fighters that the Ger. pilots could be heard calling out to each other over their wireless telephones: 'Achtung! Schpitfeuer!' In all these major daylight attacks the Ger. fighter escorts steadily increased in numbers, till the ratio was 4 fighters to 1 bomber. Often the enemy jettisoned his bombs before reaching his apparent objective as soon as he saw the Brit. fighters. As the autumn wore on and the sky grew more cloudy, the enemy began to make more use of fighters flying very high above the clouds. But the high fighter screens were engaged by pairs of Spitfire squadrons half way between London and the coast, while wings of Hurricane squadrons attacked the bombers and their escorts before they reached the fighter aerodromes E. and S. of London. Other Brit. squadrons formed a third and inner ring, patrolling above these aerodromes, thus forming a defensive screen to guard the S. approaches to London. The final stage of the battle began on 6 Oct. The enemy's strategy and method now changed completely. He withdrew nearly all his long-range bombers and tried to achieve his end with fighters and fighter bombers—eloquent proof of the hammering his depleted bomber force had received by daylight. He now chose the night and, in increasing numbers, massed fighter formations came at great height in almost continuous waves to attack London, still the prin. target. By 31 Oct. the B. of B. was over. It did not cease

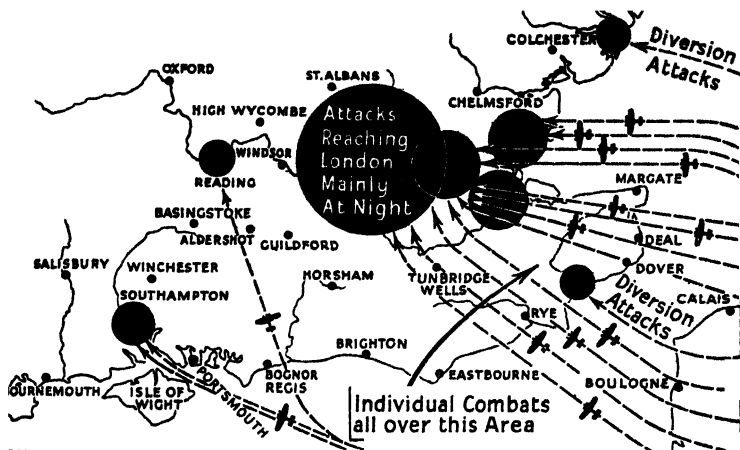

PHASE 2: 19 AUG.-5 SEPT. THE ATTACKS MOVE INLAND

dramatically or suddenly; it simply 'petered out.' Bitter experience had at last taught the enemy the cost of daylight attacks. He took to the cover of night. The enemy had paid dearly for his attempt to conquer Britain. It was a great deliverance. The Brit. airmen had turned the tide of world war by their prowess and by their devotion. 'Never in the field of human conflict was so much owed by so many to so few' (Winston Churchill). But though the Luftwaffe failed to destroy the fighter squadrons of the R.A.F., the situation during the battle was critical in the extreme. Pilots had to be withdrawn from the bomber and coastal commands and from the Fleet Air Arm and flung into the battle after hasty preparation. The majority of the squadrons had been reduced to the status of training units, and were fit only for operations against unescorted bombers. But the indomitable courage of the fighter pilots and the skill of their leaders brought the nation through the crisis, and the morale of the Germans cracked because of the tremendous losses which they sustained.

The course of the war during the autumn of 1940 was largely determined by the all-important fact that Germany failed to overwhelm Britain by the use of air power. Such plans for the invasion of Britain as Hitler may have made had now to be postponed and, unless he could redress the situation in the air, the projected invasion might have to be abandoned for good and all. The attacks on air bases, which had been so decisive a preliminary in the Ger. campaigns in Poland and in the Low Countries, had failed utterly against Britain; not a single

aerodrome had been put out of commission for more than a very short time. The failure of the Luftwaffe to overcome the R.A.F. made it impossible to batter the S. ports into chaos and so secure the complete mastery of the Channel. But, though the daylight raids had virtually disappeared, the B. of B. was in effect continued by night; and, thenceforth, every night hundreds of bombers flew in to pour tons of high explosives, first on London and then on the chief prov. tns. Considerable damage was done at times, but accuracy of aim was impossible, even with the aid of flares. A considerable part of the London dock system, with its surrounding warehouses and factories, was destroyed, and in nearly every quarter of the cap. shops and houses were demolished and old landmarks obliterated, together with the dislocation for a time of vital services such as gas and electricity and water. But the nerve centre continued to function and public morale remained unimpaired, especially as rapid progress was everywhere made in the construction of air-raid shelters and in the organisation of fire-fighting services. But still there remained the threat of grave damage unless some answer to the night bomber could be found. A partial antidote was sought in the rapid multiplication of anti-aircraft guns, whose tremendous box barrage kept the raiders at a great height and threw them off their course. New methods, too, of prediction contributed to the accuracy of the gun fire and new combinations of searchlights and anti-aircraft fire were worked out. Gradually the use of fighter planes against the night bombers was increased by selecting

PHASE 3: 6 SEPT.—5 OCT. THE LUFTWAFFE LAUNCHED AGAINST LONDON

Diagrams based on illustrations in 'The Battle of Britain,' with permission of the Controller, H.M.S.O.

pecially trained pilots and adapting such planes as the *Defiant* and *Nighthawk* to this complex purpose. On the other hand, the Germans were also gaining experience, and their night raids struck ever harder blows with decreasing numbers of bombers, carrying land-mines and torpedoes; and, guided by cross-beam radio, they could at least reach any given town in Britain. After sev. weeks of this groping, indiscriminate bombing, the enemy at length appreciated the ineffectiveness of their new methods. They treated London as one only of a number of objectives and concentrated their assaults on other towns in turn. Coventry was chosen for the night of 14 Nov. Some 500 planes swept in continuous waves throughout the long hours of moonlight and rained over 400 tons of bombs on the heart of the city, dropping loads of high explosives on fires previously started by incendiary bombs. Coventry provided the classic example of indiscriminate bombing, resulting in the destruction of the main shopping centre, disorganizing utility services, and demolishing the famous cathedral, but leaving the essential industrial plants but little the worse. This raid inaugurated a series of similar, but rather less damaging, attacks on Britain's chief prov. cities—Birmingham, Liverpool, Southampton, and Bristol suffered frequent hammering, while London periodically experienced mass revisitations. Later Plymouth, Manchester, and Glasgow (the last-named particularly in Mar. 1941) sustained considerable loss of life and damage to house property. The direct damage to Britain's war production

was less a matter of spectacular destruction than of methodical attrition. None of the essential services broke down. In a total war the disorganisation of civil life was inevitably a part of the Ger. military technique and it is no exaggeration to say that the civilian was in the first line of battle. But far from the morale of the Brit. people being broken, there were revealed resources of fortitude and cheerfulness and generosity of voluntary effort that were the very essence of the living spirit of democracy, and it was in this spirit, almost as much as on her physical resources, that the survival of Britain continued to rest. Macmillan, *The Royal Air Force in the World War* (4 vols.), 1942-50; P. Fleming, *Invasion*, 1940, 1957.

Britain, Great, see GREAT BRITAIN.

Britain, Roman, History of (see also *ROMAN REMAINS IN BRITAIN*). The fact that Caesar attempted no more than 2 short punitive expeditions against B. did not hinder the infiltration of Rom. ideas and material culture. A cent. of slow and quiet progress, of which both Brit. and Rom. merchants took advantage, ensued until in AD 43 peace was broken by the invasion under the Emperor Claudius.

The invasion was carefully planned and well carried out. The reasons which prompted its execution at this time were sev. There was political unrest among the Celtic tribes of B., some of whom had become nationalistic and anti-Roman

in their outlook and were thus a danger to the prov. of Gaul. The trade of B. in general, and that in minerals and corn in particular, much of it already in the hands of Rom. traders, could be further secured by making the is. part of the Empire. The conquest had for many years been considered advisable in the interest of Rom. overseas policy and Claudius, whose rise to power had been brought about by the army, was being pressed for a military triumph. His opportunity came with the death of the great Cunobelin (q.v.). King of the Catuvellauni. An army consisting of 4 legions and auxiliary troops landed on the coast of Kent, and in a few weeks and with relatively little fighting, the Rom. forces had secured a satisfactory base along the estuary of the Thames which permitted a ready advance into the Midlands and, what was equally important, an adequate supply line to the Continent. Each of the 4 legions engaged, with its auxiliary troops of light armed infantry and cavalry, worked as an independent unit. So rapid was the domination of most of lowland B. that within 4 years the army was well estab. on the frontier of S. Wales and, by about AD 75, the Ninth Legion was occupying its fortress at York (*Eboracum*).

There was little or no resistance in the S. and E., where the native folk, already well used to Rom. ideas, expected and perhaps even welcomed their inclusion within the Empire. An outstanding event was the revolt of the Iceni, a tribe in E. Anglia who, provoked by the demands made on them by the army of occupation, mobilised their forces under Boudicca (familiar to us as the golden-haired Boadicea) widow of their last ruler, and sacked the flourishing Romano-Brit. tns of *Camulodunum* (Colchester, q.v.) and *Verulamium* (q.v.) (St Albans), and even reached the busy undefended trading port of London. The massacre of the Romans and Romanised Britons living in these tns was fierce and terrible; equally so was the devastating revenge taken by the Rom. army on the countryside of the Iceni.

In contrast to the rapid conquest of lowland B., the course of the campaign in the N. and W. was long drawn out. Here, in a countryside rendered difficult of attack by its physical features, and often by its unfriendly climate, lived folk of an ancient stock who differed in almost every way from the inhabs. of the S. and E. The Silures of SE. Wales were subjugated by the governor Sextus Julius Frontinus, a capable soldier who was responsible for the setting up at Caerleon (q.v.) (*Iaca*) of the second legionary fortress. Wales was not finally secured until the campaign in 78 by Agricola, a governor upon whose sound strategy and wise administration the future of the prov. was to depend, and who is well known from the biography written by his son-in-law, Tacitus. In the next year, Agricola reduced and then fortified the N. and NW. of England, with a third legionary fortress at Chester (*Deva*) as his base.

An advance into Scotland followed, with the building of a line of forts across the Forth-Clyde isthmus, and the mythical battle of 'Mons Graupius' fought, perhaps, close to the camp at Inchtuthill, Perthshire, where he subdued the massed forces of the Caledonians.

A clear and undeviating frontier, intended to mark for all time the N. limit, not only of Rom. B., but also of the Empire, was the great and impressive wall built by the Emperor Hadrian between Tyne and Solway. Its 70-m. course with fortlets at intervals of a Rom. m. and intermediate signal towers, its accompanying road system and its great S. ditch, contemporary in structure with the wall, form together the best known and the most dramatic monument of the Romans in B. (see HADRIAN'S WALL).

About 143 the frontier was moved N. to the Forth-Clyde line of Agricola, and in the 36 m. were built the 19 forts of the Antonine Wall. As a tactical unit it was simple and well-designed, and it served its purpose as the N. barrier until about 155 when it was badly damaged in the first of a series of inroads and revolts. N. of Hadrian's Wall, the country continued to have a troubled hist., and peace and prosperity arrived only with the expedition of the Emperor Severus who, from a landing at Cranford on the S. of the Firth of Forth, advanced in 208 even N. of Aberdeen. Much new knowledge of the hist. of Rom. Scotland has recently been obtained from an aerial survey undertaken by the Univ. of Cambridge, and from this research it seems likely that our present understanding will need to be greatly modified.

The Caledonians were in arms again by 275, and to add to the Imperial difficulties, at the other end of the prov. Saxon pirates were beginning to raid the long-estab. and peaceful settlements close to the Kent and Sussex coasts; and in turn 2 officers of the Channel Fleet, to which was allotted the task of putting down the Saxon raids, usurped the title of Emperor of B. The emperor himself visited the prov. to restore order, and under Constantine—although the Saxon raiders continued to menace the S.E. and the coastline, and the 'Saxon Shore' was expressly fortified against them—there was again a period of general peace and prosperity. But the shadows were fast falling. By 367 the Picts of Scotland were harrying far and wide into the civilised areas of England; Scots from N. Ireland were invading the south-west of Scotland and the W. coast of England; and the incursions of the Germanic pirates became more frequent. It was a great shock to the defence system, and in spite of a capable regrouping of forces by Theodosius, the country never recovered from the severe damage inflicted by the violent barbaric onslaught. When, in 383, a Sp.-born Commander in B., Magnus Maximus, called himself Emperor and transferred part of the Brit. garrison to Gaul with the idea of conquering for himself the whole of the Rom. Empire, the end was near. A partial recovery was made possible by

the general Stilicho's brilliant but hopeless reorganisation of the forces still remaining in B. The defended area of the prov. was greatly reduced, and the forces seem to have been centred on York and on the Saxon Shore. But the recovery was short-lived. Yet another usurper, a common soldier called Constantine, in 407 withdrew the garrison to Gaul to seek his chance of fame and fortune, and with his going, B. was in fact no longer a prov. of the Rom. Empire. It was the end, in the words of one of our leading scholars, not of all that Rome had meant for B., but rather of what B. had meant to Rome. See R. G. Collingwood and J. N. L. Myres, *Roman Britain and the English Settlements*, 1937. The best book, with a useful bibliography, is I. A. Richmond's *Roman Britain* (Pelican Hist. of England), 1955. See also Brit. Museum, *Guide to the Antiquities of Roman Britain*, 1951, and *Ordnance Survey Map of Roman Britain* (3rd ed.), 1956. For the army see Graham Webster, *The Roman Army*, 1956.

Britannia Metal, white alloy of tin and antimony, a usual formula being tin, 90 per cent; antimony, 7.5 per cent; copper, 1.5 per cent; bismuth, 1 per cent; the last addition increasing the fusibility. Initially used as a substitute for pewter, it is now being rapidly displaced by nickel-silver.

British Academy, incorporated by royal charter in 1902, founded in order to promote 'the study of the moral and political sciences, including hist., philosophy, law, politics and economics, archaeology and philology.' It is governed by a president and a council of 15, who are elected annually from the 200 fellows of the Academy. Its *Proceedings* are pub. regularly and it issues monographs and numerous reprints of lectures delivered before its members. The Academy also offers various prizes, such as the Cromer prize for a Gk essay, and the Rose Mary Crawshay prize of £100 for research in Eng. literature, and administers gov. and other funds for research in the humanities.

British and Foreign Anti-Slavery Society first met in 1837. Its original president was Thomas Clarkson. It was founded to end slavery and slave traffic all over the world, and to protect all emancipated in any Brit. dominion. The society joined forces in 1909 with the Aborigines Protection Society, founded in 1839, the name of the new joint society being the Anti-Slavery and Aborigines Protection Society. See CLARKSON, THOMAS.

British Armies in the World Wars. In the First World War over 8,000,000 men passed through the ranks of the Brit. Armies. The total number of troops was 8,654,467, made up as follows: Brit. Is., 5,704,416; Canada, 640,886; Australia, 416,809; New Zealand, 220,099; S. Africa, 136,070; India, 1,401,350; crown colonies (including coloured troops from the W. Indies, etc.), 134,837.

Second World War: U.K. (mid 1945)—army numbered 1,931,000 (besides A.T.S.,

191,000); civil defence, N.F.S., etc., 127,000. Canada—total enlistments, 788,042. Australia—over 1,000,000 persons enlisted (civil defence workers numbered 300,000, and home guard 98,000). New Zealand sent 2 divs. overseas. The total enlistments in the S. African forces were 345,049, most of whom served in N. Africa. The Indian Army at its peak was 2,250,000 strong, a volunteer force and an empire record surpassed only by the U.K. Crown colonies also supplied contingents which served in Libya, Burma, etc. For casualties in the Second World War see CASUALTIES.

British Army. *General historical sketch.* The A.-S. army was essentially a territorial militia based on the same principle as the great Teutonic armies, i.e. that it was the right of every freeman to bear arms in the defence of his country. Alfred reorganised his army (the *fyrð*) by dividing the levies he raised into 2 sections, to serve alternately; the members of one were on active service while the members of the other pursued their normal domestic occupations at home. The whole system was changed by the Norman Conquest in 1066. By the end of William I's reign the feudal system had practically been accepted by everybody in England. On its military side it divided England roughly into 60,000 knights' fees, the holder of each of which was liable to knight's service for 40 days in the year. The feudal levy was, theoretically at least, bound to serve the king anywhere, but in fact there were many drawbacks to the system. The feudal force was barely sufficient for the crushing of a small revolt, and was ridiculous when applied to a foreign war. Gradually, as a result of the desire of the king to have a dependable B. A. and to crush the barons, the system of scutage (q.v.), instituted by Henry I, grew up. With the money thus obtained the king might raise mercenary troops, and so in future the purpose of the king was not so much to raise soldiers from the feudal fiefs as money to obtain soldiers.

The estab. of a mercenary B. A. was obviously the beginning of the estab. of a standing B. A., but in the meantime there grew up another totally different force. The militia, or, as it was originally called, the *posse comitatus*, was the levy of all able-bodied men in the country who were liable to be called out at any time to keep the king's peace. The militia raised in this way was liable to be called out for military service at home, but not abroad, although it seems to have served from the beginning in very much the same way as the later militia, as a means of recruiting the B. A.

The system by means of which the Edwards raised their armies, and especially that used during the Hundred Years War, was a combination of the feudal and mercenary systems. Edward III and Henry V both depended entirely upon the resources of England for the men whom they placed in the field, and obtained these men by means of contracts with the great nobles and the captains of free companies, incidentally in this way

solving social and economic problems. The captains of each regiment were given contracts, usually for 1 year, by which they were to maintain and arm their soldiers, and in return were to receive a certain fixed sum. The money for the soldiers was supplied from various sources, some coming from the royal revenues, some from parl. grants, some from the feudal fines paid in lieu of service. But all armies were disbanded at the end of a campaign, since the king no longer had the money wherewith to maintain them. During the Tudor period armies were raised in a very similar fashion; under Henry VIII the yeomen of the guard and gentlemen-at-arms prepared the way for the creation of a standing army.

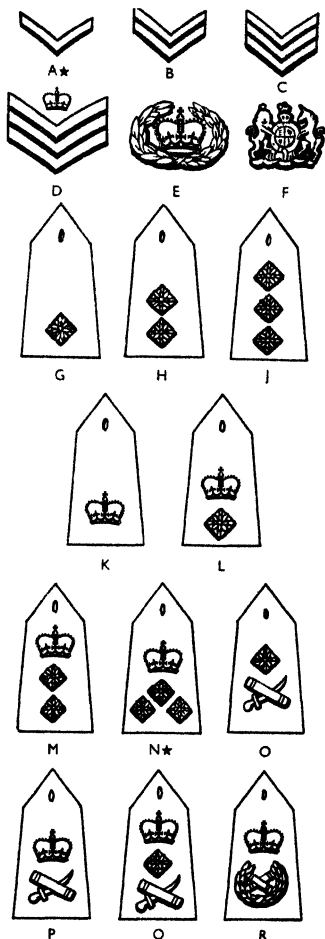

The accession of Charles I marks a new period, or at least the beginning of a new period. The army becomes a source of constant trouble between the king and his parliament. By accepting the Petition of Right Charles practically declared that the king had no right to keep a standing army in time of peace. After the Civil war the army became the most important factor in the politics of the country; the New Model Army may well be regarded as the first Brit. standing army. Cromwell at least realised that it was impossible to fight the Cavaliers, with the whole tradition of command behind them, save with a force that had some equally great object as its motive power. The result of this was the raising first of the 'Ironsides,' later of the New Model Army, a regiment and an army which were founded on the basis of strict discipline and spiritual enthusiasm. At one time Cromwell had a standing army of about 80,000 men, fanatically enthusiastic as to the principles of the Civil war and masters of the country. The Restoration naturally led to the disbandment of this force, which for many years had held down the Cavalier party now in power; but with the accession of Charles II the foundations of the present standard army were laid. Most of the forces were disbanded, but Monk's foot regiment (Coldstream Guards) was kept, and 2 regiments of life guards were formed from amongst the Cavalier supporters of Charles II. In addition, certain towns and fortresses were garrisoned with permanent troops. With the acquisition of ter. in Africa and India we get also the formation of permanent regiments for their garrison and protection. During the reign of Charles II there were formed at home also a few other regiments, among them being the King's Own and the Buffs. James II raised a standing army which at one time consisted of 20,000 men, two-thirds of whom were stationed at Hounslow Heath in order to overawe the Londoners. In spite of the protests of Parliament, to whom he had proposed the raising of a larger standing B. A. in lieu of a militia, he continued to raise men, to use martial law, and to billet his soldiers on private persons. This use of the royal prerogative was one of the many causes of James's overthrow in 1688. Following the accession of William III Parliament

took steps to ensure that the military forces of the country were under its control, and it is from 1689 that the standing army as a legal entity dates. The outbreak of the war of the Sp. Succession saw the raising of a large standing army, an army which reached the dimensions of about 200,000 men, but which was immediately reduced to a peace footing after the declaration of peace at Utrecht in 1713. During the early wars of the 18th cent. the B. A. distinguished itself in many battles: at no time perhaps was it better than during the campaigns of Marlborough. But during the Amer. War of Independence the glory and prestige of Brit. arms waned. The early efforts of the B. A. during the revolutionary wars were not altogether successful, but the new organisation and training under the Duke of York did much to increase its efficiency. Victories can after this be recorded almost everywhere, in Egypt, in India, and in Europe. Between Waterloo and the Crimean War the B. A. did not undergo many changes. Some battles were fought in India and the colonies, but the B. A. rested and supported itself upon the honours which it had won in the Peninsula and at Waterloo. It was a period of stagnation and rest, a rest which was to receive a rude shock in the disasters of the Crimean War. This war opened the eyes of the country to the absolute necessity for B. A. reform. Between the Crimean War and 1871 England received many lessons from the continental nations. France fought in Italy in 1859, but the real lessons came from Prussia, who proved the overwhelming value of a well-trained reserve in the Austro-Prussian war of 1866. The other nations realised that in order to keep on level terms their armies also must be reorganised, that the art of war must be more carefully studied, and these lessons were emphasised by the Franco-Ger. war of 1870-1. From that time the War Office received special attention from successive war ministers.

During the period between 1868 and 1874 when Cardwell was secretary of state for war, the B. A. was completely reorganised. The War Office was placed under unified control, short service was introduced, regular, militia, and volunteer units were linked together, and the purchase of commissions was abolished. Those reforms were consolidated when Childers became secretary of state for war in 1880, and the present system of co. regiments was adopted. During the periods of office of Brodrick (later Earl of Midleton) (1900-3) and Arnold-Forster (1903-5) extensive measures of decentralisation were introduced—among them the present system of local commands. With Arnold-Forster too came the abolition of the office of Commander-in-Chief, and the estab. of the Army Council (1904). Under Haldane (1905-12), the greatest of the secretaries of state, sweeping changes took place in the organisation of the auxiliary forces. The volunteers were replaced by the Territorial Force, and the Militia by the special Reserve. Haldane was also

responsible for the estab. of an efficient general staff, and the planning of an expeditionary force. His work bore fruit in 1914 when the dispatch of a force of 7 divs. to France was accomplished in a matter of weeks. Unfortunately, Kitchener, the secretary of state who took office at the outbreak of war, did not make use of the machinery Haldane had created in the Territorial Force for the reinforcement of the expeditionary force. Kitchener, owing to his long service abroad, was out of touch with military developments in his country, and set about the creation of a new series of armies. The delays in training and dispatch of reinforcements almost led to the destruction of the old regular army. The period between 1914 and 1918 was one of enormous expansion. The B. A.'s strength at the outbreak of war, including reserves, was 798,000; by March 1918 it had reached a peak figure of 3,859,000. Voluntary recruiting had proved insufficient to maintain a force of such a size and in 1916, conscription was resorted to for the first time. Despite the large numbers engaged, the First World War affected the B. A.'s basic organisation to a limited extent only. Of the 2 special arms created, the Tank Corps and the Machine Gun Corps, only the first survived. The Royal Flying Corps, originally formed in 1910, provided the basis of an independent Air Force in 1918. The cavalry army, which proved of limited service only during the war, survived for many years longer.

During 1919 the wartime armies were demobilised, and a new regular B. A. was brought into being. In 1921, the Territorial Force was reconstituted and remained the Territorial Army. In the following year, there were considerable reductions in the size of the regular B. A. Five Irish Infantry regiments were disbanded—the Royal Irish Regiment, the Connaught Rangers, the Dublin, and the Munster Fusiliers, and the Leinster Regiment. The 1st and 2nd Life Guards were joined to form 1 regiment and the regiments of the cavalry of the line reduced from 28 to 20 by amalgamations. Infantry regiments with more than the normal complement of regular battalions had these cut to 2. Few changes in B. A. organisation took place during the next 15 years. The most important development was the conversion of 2 cavalry regiments, the 11th Hussars and the 12th Lancers, into armoured car regiments in 1928. The 2 years before the outbreak of war in Sept. 1939, however, saw considerable changes. The remaining line cavalry regiments were mechanised. The last to be converted were the 1st Royal Dragoons and the Scots Greys. These 21 armoured regiments, together with their yeomanry counterparts, and the Royal Tank Regiment, were brought together in 1939 to form the Royal Armoured Corps. A great expansion of the Territorial Army (T.A.) took place and many T.A. infantry battalions were transferred to other arms. Provision was made at the beginning of 1939 for a regular

BADGES OF RANKS AND APPOINTMENTS
(*) IN THE BRITISH ARMY

army of 233,000 and a territorial army of 204,000; to maintain this strength conscription in peace time was introduced for the first time.

The war, when it came in Sept. 1939, brought considerable changes in the relative strength of the various arms. Artillery acquired still greater importance and the Royal Artillery was expanded enormously. The armoured regiments played a far more vital role than had their cavalry predecessors in the First World War, and sev. new regiments were raised. Infantry on the other hand suffered a relative decline. A number of infantry battalions were converted into regiments of the newly formed Reconnaissance Corps. An important new development was the use of airborne troops. This led to the formation of the Army Air Corps, the constituents of which still survive (the Glider Pilot Regiment, the Parachute Regiment, and the Special Air Service Regiment). The special needs of the time led to the formation too of a number of additional corps performing particular services such as the Corps of Royal Electrical and Mechanical Engineers, the Royal Pioneer Corps, the Intelligence Corps, the Army Physical Training Corps, and the Army Catering Corps. Nearly all these wartime creations still survive—exceptions are the Reconnaissance Corps and the Army Air Corps. The demand for troops in the field in the case of the Second World War was nothing like so great as it had been in the First World War—casualties were far fewer and the periods during which major operations were undertaken were much shorter. In consequence the peak figure of army strength, 2,920,000 (attained in June 1945) fell nearly a million short of that for the First World War.

The pattern of military development in the years following 1945 has been very different from that of the inter-war years. The age and service release scheme on which the Second World War demobilisation was based, did not come to an end until April 1949. Within a few years after demobilisation international tension caused a considerable increase in the number of men serving with the colours. By 1953 the strength of the active B. A. had risen to 451,400, a figure more than double the regular B. A. of the twenties and early thirties. National service was continued in peace time and it was not until the new defence policy of 1957, taking into full account the conditions of nuclear warfare, was announced, that its end could be envisaged.

In the reconstruction of the B. A. in the period immediately following the conclusion of hostilities, the diminished role of infantry in the Second World War was reflected in the measures adopted in dealing with the infantry regiments of the line. During the course of 1947 and 1948, their active army battalions were reduced from 2 to 1 by amalgamation and other means. (Eight of these 2nd battalions were resuscitated during the period of expansion in the early fifties but they disappeared again in 1955.) Though no corps of infantry was formed, the 64 line regiments were ranged in 13 brigades organised mainly on a geographical basis. The T.A. was reconstituted in 1947, and

a number of its units were converted to an armoured role.

The outbreak of the Korean war in 1950 and the B. A.'s heavy overseas commitments in Germany and elsewhere led to measures to strengthen the reserve forces. In 1950 an Army Emergency Reserve was created and to this and to the T.A. national servicemen who had completed their 2 years' service with the colours were directed for a part-time training period of 3½ years. In 1951 the wartime Home Guard was revived.

Since 1955, the relaxation of international tension and changed conditions of warfare have resulted in drastic alterations in the B. A.'s organisation. Overseas commitments have been considerably reduced and a beginning has been made with the development of formations adapted to nuclear warfare and the use of guided missiles. In 1955 a Mobile Defence Corps to supplement the work of the local civil defence units was formed. In the same year Anti-Aircraft Command was broken up and the Coast Artillery was disbanded in 1956. The need for small compact formations capable of independent action has resulted in the abolition of 2 T.A. armoured divs. and the amalgamation of a number of armoured yeomanry regiments. A guided-missile regiment was formed at the beginning of 1957. All these factors have resulted in a substantial reduction in manpower requirements. By 1962 it is envisaged that the active B. A. will be composed solely of personnel on regular engagements. Already in 1957 the T.A. has reverted to its former voluntary basis and national servicemen are no longer directed to it for part-time training.

In July 1957 details were issued of changes in the organisation of the B. A. (War Office White Paper, Cmd. 230), in connection with the decision to reduce the size of the armed forces in general. The reorganisation is scheduled for completion by the end of 1962. It was planned to reduce the number of line cavalry and infantry regiments by amalgamation to 17 and 48 respectively and to make corresponding reductions in the strengths of the other regiments and corps. See REGIMENT.

Organisation and administration. The body in which control of the B. A. is vested is the Army Council, set up in 1904, following the abolition of the office of Commander-in-Chief (q.v.). The Army Council now consists of 8 members, 3 civilian and 5 military. At its head is the secretary of state for war, who is responsible both to the sovereign and to Parliament for all matters relating to the B. A. The other 2 civilian members are the parliamentary and the permanent under-secretaries of state for war. The first acts as vice-president of the council and deputies for his chief in Parliament and the second is a civil servant who is mainly responsible for financial matters. The 5 military members are the Chief of the Imperial General Staff (C.I.G.S.), the Vice-Chief of the Imperial General Staff (V.C.I.G.S.), the Deputy Chief of the

Imperial General Staff (D.C.I.G.S.), the Adjutant-General, and the Quartermaster-General. The C.I.G.S. is the senior military member, and through the V.C.I.G.S. deals with military operations and intelligence, and through the D.C.I.G.S. with training, weapons, and equipment, and the Reserve Army (T.A., etc.). The Adjutant-General's responsibilities are manpower and recruiting, discipline, welfare, and other personnel matters, the medical services, etc. Under the Quartermaster-General come all matters relating to supply, transport, and maintenance.

To avoid over-centralisation, the B. A. is divided into a number of commands. Those at home are E., N., Scottish, S., and W. Commands, and N. Ireland Dist. (The last named is a local dist. with command status.) Those abroad are Middle E. Land Forces, Far E. Land Forces, and B. A. of the Rhine. Prior to the Second World War there was also an Aldershot Command and at the time of the threat of invasion in 1940 a S.E. Command was formed. Commands were first estab. as Army Corps Distts. in 1901 (the present designation was adopted in 1905). During the course of the Second World War they were given much greater authority and this they still enjoy.

The B. A. is made up of an Active and a Reserve Army. The Active Army is composed of those performing full-time service, either national servicemen or those serving on a regular engagement. Its strength at the end of 1956 was:

Male Officers:		
Regulares . . .	18,758	
Short Service . . .	5,342	
Extended Service . . .	2,612	
National Service . . .	4,258	
Others . . .	56	
	-----	31,026
Male Other Ranks:		
Regulares . . .	162,383	
Short Service . . .	1,538	
National Service . . .	178,327	
	-----	342,248
Boys: . . .		4,274
Women:		
Officers . . .	1,349	
Other Ranks . . .	4,951	
	-----	6,300
Total . . .		383,848

At the beginning of 1957 plans for a drastic reduction of the armed forces were announced. It was estimated that at the end of 1962 these would total about 375,000 of which the Active Army's share would be a little over two-fifths. This reduction in numbers would be coupled with a discontinuance of national service.

National service as a method of recruiting the Active Army had first been introduced during the First World War, but had been discontinued at the armistice. It was introduced for the first time in peace time in 1939 and was continued after the conclusion of hostilities in 1945. In the immediate post-war years the

period of service was 18 months but was extended to 2 years in 1949.

Regular service in its present form was first introduced in 1871. Prior to 1847 enlistment was for life; but in that year it was reduced to 10 years. The 1871 Short Service Act brought into being the system of a short period of service with the colours followed by a period with a reserve obligation. At present those who enlist for 3 years have a reserve obligation of 4 years, those who enlist for 6 years remain in the reserve for 3 years. There are, however, arrangements for a 22-year period of service, with release rights at 3-yearly intervals.

The Reserve Army includes the T.A. and the Army Emergency Reserve. The T.A. came into being in 1908 and was formed in the main from units of the volunteer force. As its title implies it is a force with an essentially local basis and the detailed administrative work in connection with it is carried out by co. Territorial Associations. Originally recruited on a purely voluntary basis during the years following the Second World War, national servicemen were directed into it to complete their service obligation. After 2 years' full-time service with the Active Army, they were required to undertake 34 years part-time training with the T.A. At the beginning of 1957 it was announced that national servicemen would be no longer directed to the T.A. and that this force would revert to its former purely voluntary basis. Though service with the T.A. is normally only a part-time obligation its members may be embodied for permanent service in any part of the world when the B. A. reserve is called out by proclamation; and they may be called out without a proclamation for the defence of the U.K. The 1957-8 Army Estimates made provision for a total T.A. strength of 285,000, including 5000 in the women's corps.

The Army Emergency Reserve (A.E.R.) formed in 1950 is the successor of the Special Reserve and the Supplementary Reserve. These 3 reserves have existed side by side with the T.A.; the first of them, the Special Reserve, was estab. in the same year. Though recruited on the same basis as the T.A. their organisation and functions have been markedly different. Territorial units have always retained their distinctly local character, those in the A.E.R. have been organised centrally and have been closely integrated with their regular counterparts. This has in the main been due to the fact that the latter have to a large extent consisted of technical and specialist personnel needed to bring the appropriate regular units up to strength or mobilisation. The formation of the Mobile Defence Corps in 1955 and the inclusion of this corps in the A.E.R. has meant a considerable increase in the A.E.R.'s strength. The 1957-8 Estimates provide for an A.E.R. estab. of 12,000 officers and 203,000 other ranks.

Supplementary to the T.A. and the A.E.R. there is the Home Guard (q.v.). This local defence force of the Second

World War period was revived in 1951. In the years immediately following its revival the Home Guard was organised on a cadre basis in certain parts of the country and in others provision was made for full battalion strength. It is now organised on a cadre basis only. The Active and the Reserve Army are together made up of the following arms and services: Household Cavalry; Royal Armoured Corps; Royal Regiment of Artillery; Corps of Royal Engineers; Royal Corps of Signals; Regiments of Foot Guards; Regiments of Infantry of the Line; the Glider Pilot Regiment; the Parachute Regiment; Special Air Service Regiment; Brigade of Gurkhas; Royal Malta Artillery; Royal Army Chaplains' Dept; Royal Army Service Corps; Royal Army Medical Corps; Royal Army Ordnance Corps; Corps of Royal Electrical and Mechanical Engineers; Corps of Royal Military Police; Royal Army Pay Corps; Royal Army Veterinary Corps; Military Provost Staff Corps; Royal Army Educational Corps; Royal Army Dental Corps; Royal Pioneer Corps; Intelligence Corps; Army Physical Training Corps; Army Catering Corps; Queen Alexandra's Royal Army Nursing Corps; Women's Royal Army Corps; Mobile Defence Corps.

The Household Cavalry comprises the Life Guards and the Royal Horse Guards. Both are organised as armoured car regiments, but provide mounted squadrons which are employed on state and ceremonial occasions. The Royal Armoured Corps is made up of the cavalry of the line, Dragoon Guards, Dragoons, Hussars, and Lancers, all of which have now been mechanised, their Territorial counterparts, the Yeomanry Regiments, and the Royal Tank Regiment. The Brigade of Guards consists of 5 regiments of Foot Guards (Grenadier Guards, Coldstream Guards, Scots Guards, Irish Guards, and Welsh Guards). Neither the Household Cavalry nor the Brigade of Guards are represented in the T.A. The Infantry of the Line comprises 64 regiments linked on the basis of local or traditional affinity into 13 brigades, e.g. the Lowland Brigade (the Royal Scots, the Royal Scots Fusiliers, the King's Own Scottish Borderers, and the Cameronians), and the Light Infantry Brigade (the Somerset Light Infantry, the Duke of Cornwall's Light Infantry, the Oxfordshire and Buckinghamshire Light Infantry, the King's Own Yorkshire Light Infantry, the King's Shropshire Light Infantry, and the Durham Light Infantry). The line infantry regiments all have regular battalions and either Territorial battalions or Territorial regiments linked with them. Of the remaining corps and regiments most have Territorial as well as Active Army units and personnel. Among the exceptions are the Military Provost Staff Corps, the Mobile Defence Corps, and the Brigade of Gurkhas. The Mobile Defence Corps forms part of the A.F.R. The Brigade of Gurkhas is one of the 2 corps not raised in the U.K. which form an integral part of the B. A. (the other is the Royal

Malta Artillery). The Brigade of Gurkhas is made up of 4 regiments which formed part of the Indian Army before 1947 (then 2nd, 6th, 7th, and 10th Gurkhas), together with engineers and signals units. The Royal Malta Artillery, unlike the Gurkhas, includes both Active Army and Technical personnel.

In addition to the corps and regiments listed above there are a number of local colonial units which come under direct War Office control and are linked with the B. A. These include the local forces in Gambia, Nigeria, Sierra Leone, Brit. Somaliland, Aden Protectorate, Gibraltar, and Jamaica, together with the Trucial Oman Scouts. The King's African Rifles which were taken over by the War Office at the beginning of the Second World War reverted to colonial control in 1957. It is anticipated that the units of the Royal West African Frontier still under War Office control will pass to the local administrations during the course of the next few years. (This has already happened in the case of the Ghana units.)

British Army pay. The system and rates of service pay and pensions were revised in 1958 (Cmd 365). The new codes of pay incorporated many changes designed to produce an increase in the numbers and experience of the regular forces. The new rates of pay would, it was hoped, lead suitable men and women to adopt a service career. A recruit would receive a higher rate of pay if he undertook to serve 6 years instead of 3, with a further increase for a 9-year commitment. The new rates were also designed to dissuade the regular soldier already serving in a short engagement from seeking release. In the B. A. there is now a common pay scale in the case of corporals and ranks below. Increases, whether for tradesmen or non-tradesmen, are governed by the qualification stars awarded to the individual and the period of service he has undertaken. A private soldier may have any one of 24 different rates of pay, a corporal any one of 28, and a sergeant any one of 16.

The minimum and maximum rates are given in the table opposite.

Increments of 7s. a week are paid to sergeants and of 10s. 6d. to staff sergeants and warrant officers on completion of 22 years' service. Bounties of £150 are paid to men who have undertaken 9 years' service and who agree within the 9 years to complete 22 years, and £100 to men who have undertaken 12 years' service who agree to complete 22 years. Additional pay ranging from 15s. 9d. to 43s. 3d. is granted for flying and similar duties. The marriage allowance, minimum rate, is 56s. a week in quarters, 77s. for others.

A new scale of pensions was introduced in 1956. Terminal grants were also increased in such a way that a private after 22 years' service receives £125, and a warrant officer £330.

The new code scales show a marked improvement on those in force before the Second World War. Then a recruit on entry into the service received 14s. a week; now his weekly pay is 84s. The

trained infantryman received 21s. a week in 1939; the amount is now 133s. The 1958 code rates of pay for commissioned officers are intended to offer terms which can stand comparison with salaries in civil life. The standard rates for regular officers are as follows:

	£ per year
Second Lieutenant	456
Lieutenant	517
after 3 years' service in the rank	657
Captain	766
after 6 years' service in the rank	985
Major	1149
after 8 years' service in the rank	1368
Lieutenant-Colonel with less than 19 years' service	1533
after 8 years' service in the rank	1752
Colonel	1934
after 6 years' service in the rank	2208
Brigadier	2299
Major-General	3029
Lieutenant-General	3759
General	4489
Field Marshal	5219

The marriage allowance for captains and commissioned ranks below is £355 (quarters) and £410 (others). The corresponding allowances for majors are £401 and £456, lieutenant-colonels and colonels £456 and £511, for brigadiers £520 and £574, and for those above the rank of brigadier £611 and £666. Additional allowances are paid under certain circumstances for rations, outfit, fuel and light, etc. Qualification pay, varying from 3s. 6d. a day for lieutenants to 7s. a day for majors, is paid to officers possessing certain qualifications. Officers in the Royal Engineers, Royal Corps of Signals, and Royal Electrical and Mechanical

Engineers may receive special qualification pay of 3s. a day. Retired pay and terminal grants were both revised in 1956. Regular officers now receive on retirement pay and grants as follows:

	Retired Pay £ per year	Terminal Grants £
Captains and below	500	1500
Major	625	1875
Lieutenant-Colonel	800	2400
Colonel	1000	3000
Brigadier	1150	3450
Major-General	1400	4200
Lieutenant-General	1600	4800
General	1900	5700
Field Marshal	2300	6900

impact, through its applications, upon society. The objects of the B. A. are achieved by ann. meetings, held in different cities of the U.K. in late Aug. or early Sept., conferences, research committees, collaboration with other scientific organisations, and pubs. The prin. pub. of the B. A. is *The Advancement of Science*, pub. quarterly. In addition to the presidential address, the programme of the meeting includes papers and discussions in 13 sections (mathematics and physics, chemistry, geology, zoology, geography, economics, engineering, anthropology and archaeology, physiology, psychology, botany, education, and agriculture), and the assembly of corresponding societies; excursions, exhibitions, demonstrations, and social events. The meeting provides many opportunities for informal discussion and contact between scientists and between scientists and laymen. No scientific or technical qualification nor

Hudson's Bay Co. In 1849 Vancouver Is. was given crown colony status and in 1853 the Queen Charlotte Is. became a dependency. The discovery of gold on the Fraser R. and the influx of pop. which followed resulted in the creation in 1858 of the mainland crown colony of B. C. to which the Stikine Ter. (estab. 1862) was later added. In 1866 the 2 colonies were united, and on 20 July 1871 the united colony joined the Canadian federation. The prov. is remarkable for its physical diversity. Main features are mt systems trending roughly parallel north-westerly and separating intermontane valleys, lake basins, and plateaux. The Rocky Mts (highest peak, Mt Robson, 12,972 ft) flank the E., while the W. is occupied by the Coast Range (highest peak, Mt Waddington, 13,260 ft). Between the Rocky Mts and the Coast Range lies a vast plateau system having elevations of 3000-4000 ft, and cut by deep riv. valleys.

Of the numerous rivs. the chief are the Fraser, Columbia (its upper course only), Skeena, Stikine, Peace, Liard, and the Nass. The Fraser, 695 m. long, is navigable by ocean steamships as far as New Westminster. The coast-line is deeply indented with many long and narrow inlets forming excellent harbours. There are sev. well-known passes over the Rockies, including the Kicking Horse Pass and Crow's Nest Pass, used by 2 branches of the Canadian Pacific Railway, and the Yellowhead Pass, crossed by the Canadian National Railway. The climate is as diverse as the physiography. The prov., spreading over 11 degrees of lat., with an average width of 700 m., has, within its own limits, climates which differ greatly. The littoral region is mild and humid, while the interior valleys and plateaux, with their high altitude, have colder and drier winters.

On the lower mainland the climate is everywhere equable and mild. Spring opens early, the summers are warm, and the winters mild and rainy. The pop. was 36,247 in 1871, of whom about 10,000 were whites. In 1947 the pop. was estimated at 1,044,000, of whom about 80 per cent were of Brit. stock. Victoria (Greater) (pop. 123,033), on Vancouver Is., is the cap. Other cities and tns on the is. are Nanaimo (pop. 12,570), Ladysmith, Duncan, and Port Alberni. The cities on the mainland include New Westminster (pop. 31,357), the old cap., and Vancouver. Vancouver (Greater) was founded in 1886, and has a pop. of 658,813 (1956); it is the largest city in the prov., and the third largest in all Canada. It is the W. terminus of the Canadian Pacific Railway, and possesses one of the finest natural harbours in the world. Also on the mainland is Prince Rupert (pop. 10,381), the most northerly city of its size in the dominion. From B. C. 6 members are sent to the dominion Senate, while 22 are entitled to a seat in the Federal House of Commons. The queen is represented by a lieutenant-governor appointed by the governor-general in council, and governing with the advice and assistance of a ministry or executive council. He is assisted by a prov. legislature of 52 members. The franchise is exercised by all persons, male and female, of full age of 19 years, who are Brit. subjects and have resided within the prov. for 6 months. Education is free and compulsory; there are about 80 high schools and over 1000 elementary schools. The univ. of B. C., situated near Vancouver, was founded in 1908 and opened in 1914. It is endowed by the prov. gov. The chief regions of settlement are in the S. part of the prov., on Vancouver Is., and in N. Central B. C. Particularly favoured are the valleys, which radiate southward from the mt. systems, notably Windermere, Kootenay, and the Okanagan, which, together with the Fraser R. valley, constitute probably the most fertile areas in the dominion. In 1930 the prov. became repossessed of its railway land and the Peace R. block. The lands, originally

assigned to the dominion gov. under the terms of confederation, comprise an area 40 m. wide across the prov. from E. to W. The Peace R. block is an area of 3,500,000 ac. exceptionally rich in fertility and natural resources. Together they represent many millions of ac. of crown lands within easy distance of transportation and ripe for settlement. Approximately 36,000 sq. m. in the prov. are estimated as available for agriculture, and about 800,000 ac. are cultivated. Fruit-growing, dairying, and mixed farming, together with poultry raising and the cultivation of small fruits, have all registered remarkable

National Film Board, Canada

progress in the prov. during the past few years. Other industries are mining, fishing, and lumbering. The mineral wealth of the prov. is very great. The prin. metals won are gold, placer and lode, silver, copper, lead, zinc, and coal. Other deposits include iron, both hematite and magnetite, galena, mercury, platinum, antimony, bismuth, plumbago, mica, and molybdenum, but these deposits are for the most part undeveloped. The development of hydro-electric power, for which there is an enormous potential, has been increased rapidly, and has resulted in many new industrial projects, as, for example, the reduction of aluminium at Kitimat. Numerous salmon canneries are in operation, and cod, halibut, and herring are also taken in great quantities. An industry of recent growth in connection with the fisheries is fish reduction, and numerous plants are now in operation. The chief industry of the prov. is lumbering. B. C. forests hold the greatest stand

of softwood in the Brit. Empire, estimated at approximately 360 billion ft of saw-timber. Douglas fir, red cedar, spruce, and hemlock are the chief woods. The prov. is in many respects the most favoured part of Canada, and particularly so in respect of its geographical position. Standing in the same relation to the Pacific Ocean as the U.K. does to the Atlantic the prov. is destined to become the great *entrepôt* for trade between the Orient, Australia, and the dominion. Before the Second World War some 54 steamship lines made Vancouver their port of call, and the port handled yearly 100,000,000 bushels of wheat for export. The other chief exports are fish, coal, gold, silver, minerals, timber, fruit, pulp, and paper. The prov. is traversed by 5000 m. of railway, and over 20,000 m. of gov.-built roads. The Canadian Pacific Railway has 3 main lines in the prov. and the Canadian National Railway 2. Branches connect with the U.S. railway system. The Pacific Great E. railway, owned by the prov., runs through it from N. to S. The Alcan highway runs from Fort St. John, B. C., to the Yukon boundary and thence via Whitehorse and Dawson to Fairbanks in Alaska.

British Columbian Pine, see DOUGLAS FIR.

British Commonwealth and Empire, free association of 10 sovereign member states—the U.K., Canada, Australia, New Zealand, the Union of S. Africa, India, Pakistan, Ceylon, Ghana, and Malaya—and their dependencies.

Formerly the ters. of the B. C. were recognised by their link with the Brit. Crown; but both the dominions of India and Pakistan are now reps., but remain nevertheless members of the B. C. These dominions accept the queen as the symbol of the free association of the sev. independent members of the B. C., and, as such, as head of the Commonwealth. The extent of the B. C. is conveyed graphically in the hackneyed but none the less true phrase 'the empire upon which the sun never sets,' for of the whole area of the land surface of the globe the B. C. occupies about one-fifth. In fact, of the 52,500,000 sq. m. which is roughly the extent of the land surface of the earth, the B. C. occupies about 14,000,000 sq. m. The Commonwealth is fairly evenly divided as between the N. and S. hemispheres, but from the other possible div., i.e. in the E. and W. hemispheres, the greater part of it lies in the E. The Commonwealth contains some of the loveliest and most productive of all lands in the world, lands that contain great agric. and mineral wealth. It has amongst its rvs. the largest and the greatest in the world, and part of it is bounded by the greatest chain of mts in existence. The types of race found in the

pop. of the B. C. are many and various. The pop. of the whole B. C. is probably about one-quarter that of the entire globe.

The sovereign states of the B. C. are the U.K., Canada, Australia, New Zealand, the Union of S. Africa, India, Pakistan, Ceylon, and Ghana (Gold Coast), and the Federation of Malaya became self-governing in 1957. The Irish Free State (now called the Rep. of Ireland) was created a dominion in 1922, but in Nov. 1948 the Eire Gov. by introducing the Republic of Ireland Bill took steps to remove the last vestige of Eire's constitutional partnership in the Commonwealth, though the Brit. Gov. declared that they would not regard the enactment of this legislation as placing Eire and its citizens in the category of foreigners (see IRELAND, *History*). Burma also became an independent state outside the B. C. after the Second World War. India, until the Second World War, was an empire, ruled over by a sovereign-emperor, the sovereign of England. It became the dominions of India and Pakistan in 1947. The Federation of Rhodesia and Nyasaland is self-governing in federal matters. Of its components, S. Rhodesia is self-governing in all but external affairs and defence, though the U.K. retains some reserve powers in respect of native policy. N. Rhodesia and Nyasaland retain the status of protectorates in all non-federal affairs. The U.K., Australia, and New Zealand are responsible for the administration of certain ters. as colonies, protectorates, protected states, or trust ters. Colonies are those ters. that have been annexed to the Crown, e.g. the W. Indies, Cyprus, Mauritius, Sarawak, Hong Kong. Protectorates have not been annexed, and their inhab. are not Brit. subjects like those of the colonies, but Brit. protected persons; otherwise there is little practical difference between the 2 forms of administration. Examples of protectorates are Uganda and Zanzibar in Africa and the Brit. Solomon Is. in Oceania. For historical reasons some ters. have a dual status, being part colony, part protectorate; examples are Nigeria and Kenya. Protected states are countries that, while retaining their sovereignty, have by treaty delegated certain rights and responsibilities to the U.K. gov.; e.g. Brunei in the is. of Borneo and Tonga in the Pacific. Trust ters. are former dependencies of powers defeated in war whose administration has been entrusted to one of the Commonwealth countries by the U.N. until they are fitted to govern themselves. Trusteeships replaced the League of Nations mandates when the League gave place to the U.N.O. Former mandated ters. now independent include Israel, Iraq, and Jordan. Tanganyika in E. Africa is a U.K. trust ter., W. Samoa in Oceania is a New Zealand trust ter. Togoland, the former Ger. colony in W. Africa, was divided in 1918 into Brit. and Fr. mandated ters., the Brit. zone being administered by the gov. of the Gold Coast. It now forms part of Ghana. The most important of the former protectorates of the B. C., Egypt, was created

a sovereign independent state again in 1922. The Sudan, formerly a condominium administered jointly by the representatives of the Brit. and Egyptian govts., under a Brit. governor-general (see also SUDAN), is now an independent state also.

Races. As may be imagined, in an area comprising one-fourth of the earth's inhab. and one-fifth of its land area, every kind of race and colour is to be found. In sev. places, e.g. Australia and Canada, white immigrants have virtually supplanted the original inhab. In others, e.g. S. Africa, the white minority pop. completely controls the administration. The vast majority of the pop. of India is of Aryan stock; there are, however, many descendants of the Dravidians (q.v.), whom the Aryans overcame on their descent into India 3 or 4 millenniums ago. In Ceylon are to be found the Sinhalese and Tamils, both of ant. culture. The Malay states have a brown pop., with nearly as many Chinese, the latter being immigrants of comparatively recent times. In S. Africa the aboriginal Bushmen and the Hottentots are still to be found, although in greatly diminishing numbers, the bulk of the native races belonging to the Bantu stock as is the case in Brit. central Africa. These Bantu (q.v.) are divided into many tribes; and there is a growing element in the Union of S. Africa as also in Brit. E. Africa, of Asiatic (chiefly Indian) immigrants. The people of the W. Indies (q.v.) are mainly Negroes (q.v.) or coloured, the descendants of African slaves with or without admixture of European blood. The white community is descended from Brit. immigrants. A few of the aboriginal tribes survive, and there are minorities of Indian and Chinese stock. There are still Red Indians in Canada, though they are few in number, and in the N. of that ter. are to be found the Eskimoos, a Mongoloid race. In Australia a pre-Dravidian race still exists, but its members are rapidly disappearing through their inability to adapt themselves to the customs of the whites. The natives (Maoris) of New Zealand, of Polynesian origin, are, on the other hand, entirely adaptable and are now increasing. The Pacific is. are inhabited by various primitive tribes.

British nationality. A new scheme of nationality legislation, whereby each member of the Commonwealth would define its own citizens while maintaining as far as possible a common status distinguishing citizens of all members from the nationals of foreign states, was inaugurated by the passing in the U.K. of the British Nationality Act, 1948, and of corresponding legislation in other Commonwealth countries. The situation in this respect is dealt with in detail in the article (pp. 76-82) in the *Commonwealth Relations Office List*, 1952, headed 'Commonwealth Nationality and Citizenship' (H.M.S.O.).

Religions. All the important religions of mankind are to be found in the B. C., together with the lowest sort of fetish worship. The white inhab. are Christians,

Protestants predominating. It is sometimes pointed out that the B. C. contains more Muslims than Christians; these are mainly in the African and Asiatic ters., particularly in Pakistan, which is known as the 'Islamic Rep. of Pakistan.' Buddhism flourishes in Ceylon. Many Africans are pagans, but large numbers are Christians or Muslims.

History. The B. C. owes its origin not to any excess of pugnacity or acquisitiveness in the Brit. nation, but to the fact that the British are a trading people. The Commonwealth grew with the development of overseas trade, and though there is an element of truth in the old maxim that 'trade follows the flag,' the flag—that is, the army and the administrator—has not seldom followed the trader and, sometimes, the missionary. At the opening of the period of overseas trading in 1583 England acquired its first colony, Newfoundland, of which possession was taken by Sir Humphrey Gilbert, and thereafter settlement overseas for trading purposes or the development of plantations was of frequent occurrence.

The dependencies of Great Britain can be very roughly divided into 2 groups, the larger producing ters. such as the Federation of Nigeria, Kenya, and the W. Indies (the dominions are, of course, still larger producing ters., but they are no longer 'colonies' in any sense), and the smaller colonies, which serve or have served as the stepping-stones between the homeland and its colonies. These smaller links of the Commonwealth are the coaling stations, the cable or wireless stations, and the naval harbours for the ships protecting the trade routes against enemy craft, privateers, or pirates. Gibraltar, Aden, Malta, Bermuda, and the Maldives afford instances of such links, and these are also valuable as air bases. Even before the days of steam as a motive power for ships and of cables for commerce, there was the need—greater indeed than now—for the trading vessels to call at friendly ports for supplies of food and water. Wherever, therefore, a well-estab. Brit. trade route lies, these smaller linking colonies are found. The 3 prin. trade routes are: (1) to the E., via the Mediterranean; (2) to the New World; and (3) to the Antipodes. Until the opening of the Suez Canal, the route to India and the Far E. was via the Cape of Good Hope. Along these sev. routes the British acquired the following ters., some of which have since become independent and some of which have been merged with other administrations: (1) To the E., via the Mediterranean and Red Seas: Gibraltar (1704); Malta (1814) (recognised as part of the B. C.); Cyprus (1878); Egypt (now independent) (1882); Aden (1839); Ceylon (1796); Straits Settlements (1786-1846—Penang ceded in 1786; Singapore, purchased 1819; Malacca, ceded in 1824; Labuan ceded in 1846); and Hong Kong (1841). (2) To the New World: Barbados, in the first half of the 17th cent., Jamaica (1655); and Trinidad (1797). (3) To the Antipodes and the former route to India via the

Cape: Sierra Leone (1787); Gold Coast—a small company gained a footing in the 18th cent.; gov. first assumed control in 1821, but withdrew and resumed control in 1850; St Helena (1659); Ascension and Tristan da Cunha (1815); Cape Colony (1806); Mauritius (1810); Seychelles (1794); and then on to the Far E. by the older route first mentioned. As for the larger ters., or those which are now no longer called colonies but self-governing dominions, their acquisition (or loss, as in the case of the U.S.A.) was naturally a longer process. India was conquered largely in the latter part of the 18th and the first half of the 19th cent., mainly

traced since 1783, when the Amer. colonies were finally lost, from the early 19th-cent. mixture of humanitarianism and commercial zeal; through the pessimism of the middle of the cent., when it was popularly held that the empire was on the verge of breaking up; to the outburst of imperialist fervour under the influence of Cecil Rhodes and Joseph Chamberlain at the end of the cent., and the sobering shock of the S. African war; followed by the growth of dominion status (q.v.); encouraged by the comradeship of the First World War, and culminating in the Statute of Westminster, 1931. But among the material things that have

Cabot, Hudson, Drake, Smith, Raleigh, Dampier, Penn, Anson, Chatham, Wolfe, Clive.

through military operations against Fr. rivals for settlement, the conquest of Burma, in further India, being completed in 1882. Canada was in the main settled in the 19th cent., though the provs. of Ontario and Quebec were conquered in 1759. Australia and New Zealand were settled in the first half of the 19th cent.; S. Africa was part settled and part conquered in the period 1850-1900; and other of the African colonies were acquired during the 'scramble for Africa' in the seventies and eighties of last cent.

The foregoing is a brief account of how the greater part of the B. C. came to be acquired. It is important, however, in considering the Commonwealth as an entity, to remember that it is an organism, and that side by side with the processes of growth are to be found the tendencies to decay. If a commonwealth is to grow, or even to maintain its position, the forces of growth must be stronger than those making for disruption. A unifying imperial sentiment and theory may be

served to keep the B. C. united are advances in science as applied to transport and communication. The steamship, the railways (notably the Canadian Pacific), the telegraph cable of the 19th cent., and the aeroplane, radiotelegraphy, and radiotelephony (including broadcasting) in this cent. have all played their part in the process of consolidation. The wide range of modern newspapers and news services is also a unifying factor. On the other hand, various inevitable developments tend to operate against Commonwealth unity. There has been, particularly since the First World War, an awakening or emphasising of racial consciousness, a craving for political expression in self-governing legislative and executive bodies—in a word, the demand for self-determination (q.v.) (see NATIONALISM). It is a remarkable tribute to Brit. colonial rule that so many former colonies, and not merely those peopled principally by descendants of Brit. immigrants, have decided to remain within the B. C. on achieving full

nationhood. No other empire can point to such an achievement.

Trade and finance. Despite the industrialisation of the Commonwealth—Canada, for example, is now one of the largest manufacturing nations of the world—there is no doubt that after the First World War Great Britain's trade with the overseas territories grew, while at the same time her trade with other countries declined, a process which was enhanced by the Ottawa Agreements (q.v.) of 1932. Since the Second World War, however, this tendency has not on the whole been maintained. Besides the trade between the colonies and the homeland, there is a

of the mother country and of each other, though in nearly all cases they grant a preference to such goods, as against those of other countries. In the same way that the dominions and one or two of the self-governing colonies have fiscal autonomy, they also have the power to borrow in the home or other countries. Before 1914 practically all colonial loans were floated on the London market, but after 1918 the U.S.A., having passed from a debtor to a creditor nation, received applications from various dominions, and state and industrial loans were secured from the New York money market. This process has gone far in Canada, for even in 1926

Cook, Pitt, Hastings, Raffles, Durham, Sturt, Brooke, Lawrence, Gordon, Livingstone, Rhodes.

growing direct trade between dominion and dominion, while certain dominions (particularly Canada with the U.S.A.) do a large direct trade with their neighbours. The share held by Great Britain's exports in foreign markets, as distinct from those of the Commonwealth, amounted (before the Second World War) on the average to about 20 per cent, but her share of the Commonwealth markets was more than twice that amount. In the 4 years, 1910–13, immediately prior to the First World War the production of Brit. exports taken by the Commonwealth was about 35 per cent, but in 1926 this figure was about 10 per cent higher. Again, of the imports into Great Britain, those from the Commonwealth have risen in the last 70 years from 22 per cent of the whole to 30 per cent. In 1938 the value of Brit. merchandise consigned to empire countries or dependencies was £234,816,000, as against only £11,470,000 foreign and colonial. The dominions and colonies mostly seek to protect their nascent industries by tariffs, even against the goods

it was estimated that of the foreign capital invested in that dominion the share of the U.S.A. was 3 parts to 2 parts of Great Britain. On the other hand, that great dominion has since entered the money market herself and made investments overseas, particularly in the W. Indies and Lat. America. After the First World War Australia was a frequent borrower, as the country was rapidly developing and the needs of the war were large. The aggregate debt of the Commonwealth and of the federal state before the Second World War much exceeded the pre-1914 national debt of Great Britain, though more than half of this was raised in the Commonwealth itself. In 1930 an economic crisis occurred in Australia, and an effort was made to restrict the policy of too frequent recourse to borrowing. New Zealand also has been a frequent applicant for the assistance of the London loan market. The S. African Union, which produces the bulk of the world's gold, is also a frequent borrower in London, where the union's loans have

a good reputation. In this dominion a central reserve bank was estab. in 1921, a precedent which was followed by the Labour Gov. in New Zealand in 1938. India, in 1926, adopted a definite gold standard with the rupee fixed at 1s. 6d., as against the 1s. 4d. ruling before the First World War. India has borrowed much from the London market, but, with the rapid industrialisation of the country, has provided funds for her own industries. So far as the crown colonies are concerned, the policy of the home gov. has been to encourage development loans as a means of promoting trade to relieve exceptional unemployment. Thus colonies such as Kenya and Nigeria have benefited by the fructifying influence of London's gold. Under the Colonial Development and Welfare Act, 1940, ann. sums of £5,000,000 for development and £500,000 for research in the crown colonies were made available for 10 years from 1941. Subsequent Acts passed in 1945, 1950, and 1955 made a total of £220,000,000 available for like purposes during the period 1946-50, while the practice of surrendering the unexpired portion of grants to the Treasury was abolished.

Communications. Closely allied with trade and finance is the question of communications. These have been greatly strengthened in the last 3 or 4 decades, and particularly since the 2 world wars. To the older modest forms of transport and communication by steamer, railway, and cable have been added the air-line and radio telegraphy and telephony. There has been a tendency in recent years to restrict the construction of new railway lines, and to concentrate on good roads for motor traffic. The car is opening up the Commonwealth at a quicker rate than was the case when reliance was placed chiefly on railways. The sea still remains the most important highway of Commonwealth communication, but air traffic is growing in vol. and importance, and the most distant parts of the Commonwealth can now be reached in a matter of days by aeroplane. In the last 30 years great progress has been made in linking the Commonwealth by wireless, or radio, telegraphy, and telephony, competition between the newer forms of communication and the older one of cables doing much to reduce cable rates. Broadcasting, on short-wave lengths, has put Great Britain and the B. C. literally on speaking terms with each other, and done much to strengthen the ties of sentiment which unite the motherland with her remotest colonial possessions.

Defence. The problem of defence of the B. C. has naturally varied throughout the hist. of the Commonwealth. Perhaps the most striking departure in the early years of the 20th cent. was when the dominions assumed the responsibility of protecting their own coasts and commerce by their own navies. The Act enabling them to do this, it is true, dated 1865, but marked developments in this direction have taken place only in the last 3 decades. Australia and Canada in particular now have fine navies which rendered much assistance in

the 2 world wars. In both world wars the Commonwealth played its part, contributing not only money but also men to the great struggles. As a corollary to this active participation in the wars, the dominions were represented at the peace conferences, and afterwards played their part as separate states in the Assembly and on the Council of the League of Nations, and, later, in the U.N. Assembly. Compulsory military training of their young manhood is now a part of the policy of sev. of the dominions. In the Second World War the dominions (the Rep. of Ireland remained neutral) all played a most prominent part, on land, on the sea, and in the air, and no less striking was their effort in the field of production. Notable contributions have been made in both world wars by the forces of the dependencies, particularly by E. and W. Africa, Rhodesia, Malaya, and Fiji.

Collaboration in imperial defence. A central organisation for defence was elaborated through the committee of imperial defence, following the report in 1904 of Lord Esher's War Office (Reconstitution) committee. This committee was abolished after the Second World War, when a defence ministry was created to discharge, *inter alia*, the tasks carried out before the war by the committee. Methods of collaboration between the various members of the Commonwealth are governed by the principle enunciated in the Statute of Westminster (1931). Though the dominions have a close interest in problems that affect the Commonwealth and empire as a whole, each of them has a special and distinct outlook on world affairs, dependent on its geographical position and its political and economic environment, and dominion govts. must retain full liberty of action. (The various dominions show increasing independence of action in the sphere of foreign affairs; during the Suez crisis in 1956, for example, New Zealand and Australia actively supported Brit. action, Canada and S. Africa maintained a non-committal attitude, while India, Pakistan, and Ceylon were actively critical.) Cooperation in Commonwealth defence has, therefore, always taken the practical form of promoting uniformity of organisation, training, and equipment, and maintaining close touch between staffs and interchanging officers in order to promote a common doctrine and outlook in military affairs. Collaboration in wartime between the forces from different parts of the Commonwealth has thus been easy and effective. During the Second World War no attempt was made to revive the Imperial War Cabinet of 1916-18, but this did not prevent the maintenance of a very close touch between the govts. of the Commonwealth and the making of common plans for military action and co-ordination of munitions production. After the war the U.K. Gov. proposed that there should be estab., in the caps. of each of the dominions, U.K. liaison officers who might join with the dominion chiefs of staff in studying regional security

problems. In 1947 Canada and the U.S.A. concluded a defence agreement which closely paralleled the procedure which has long been applied between the nations of the Brit. Commonwealth (interchange of individual officers, systematic exchange of observers, standardisation of arms and equipment, and availability of military, naval, and air facilities). One possible weakness in the Commonwealth as it now functions is the provision, tacitly accepted by the Imperial Conference of 1926, whereby the whole cost of defending its main highways of communication devolves on Great Britain alone. It is inevitable that members of the Commonwealth should at times pursue divergent and even contradictory foreign policies; indeed, this is a corollary of their complete independence. But there is, nevertheless, a continuous process of mutual consultation, in the form of prime ministers' and other ministerial and official conferences (see PRIME MINISTERS' MEETINGS), the day-to-day exchange of information and ideas through High Commissioners, and, for example, the close and continuous contact between Commonwealth delegations at the U.N. and other international organisations. All this indicates, and produces, a remarkable degree of agreement on basic principles, even where there are differences of emphasis, methods, or tactics.

Government. From the foregoing it will have been seen that for the larger part the Commonwealth is now self-governed, though there is naturally a wide difference between the degree of autonomy enjoyed by a dominion and that accorded to a self-governing colony. Even in the non-self-governing territories an increasing measure of responsibility is devolved upon the local govts., which in turn are increasingly representative of the local peoples. The W. Indian colonies, for example, and the 3 regions of the Federation of Nigeria, now enjoy a very high degree of self-gov. In times of acute crisis all or most of the units of the B. C. have in the past made common cause, as was shown in the war of 1939-45. This is facilitated by the consultative machinery of the Commonwealth. The queen is the symbol of the unity of the Commonwealth, and the smaller colonies and territories are ruled by governors and administrators appointed by the home gov., functioning through the Colonial Office, at the head of which is the secretary of state for the colonies. This official is always a member of the Brit. Cabinet, and until 1925 both 'dominion affairs' and the colonies were the concern of his dept. In July of that year, however, a new secretary of state for dominion affairs was created and a Dominions Office was estab. This took over from the Colonial Office business connected with the self-governing dominions. For a while the post of dominions secretary was also held by the colonial secretary, but in 1930 a separate minister was appointed for the former office. In 1947 the title of the Dominions Office was altered to 'Commonwealth Relations Office.' The dominion govts. now have their own envoys in

various foreign caps. and in each other's caps. Thus the sovereign independent status of the dominions has become accentuated. In its present form it would seem reasonable to suppose that the B. C., tested in the ordeal of 2 major wars, can form a 'core of stability' in the world which should help to make future world aggression highly improbable and promote equality of opportunity for all peoples, large and small. The measures which the constituent parts of the Commonwealth may take to ensure their own cohesion—itsself an essential factor in constructing the larger framework—will primarily depend on the extent to which each member of the Brit. combination understands the problems, characteristics, and circumstances of its fellow members. On the economic side of Commonwealth relations there has never been an attempt to create a closed economy or economic autarky either between the U.K. and the dominions or including the Colonial Empire; for, apart from the fact that any such attempt would have been contrary to the general trend of Commonwealth development, it would not even have been economically practicable.

Bibliography. For a detailed bibliography of the various members of the Commonwealth see articles on the individual countries making up its membership. British Council, The, estab. in 1934 and

in 1940 granted a royal charter, by the terms of which its purpose is the promotion of a wider knowledge of the Eng. language and the U.K. abroad, and the development of closer cultural relations between the U.K. and other countries for the benefit of the Brit. Commonwealth of Nations. The greater part of its funds is derived from grants voted by Parliament, amounting for 1957-8 to about £3,500,000. The executive committee of 30 is composed of members drawn from both sides of the House of Commons, the univs., industry, the trades union movement, and

specialists from overseas. In 1958 the Council had staff in some 65 foreign and Commonwealth countries and 20 centres in the U.K. to provide study programmes and services for students, professional visitors, holders of U.N. fellowships and Colombo Plan awards and others from overseas. It is responsible for accommodation and welfare services for colonial and other students in the U.K.

British East Africa comprises the Brit. dependent territories of Kenya, Uganda, and Tanganyika (q.v.), with or without the protectorate of Zanzibar (q.v.). TI

other fields of Brit. life, and 9 members are nominated by ministers. The work is carried out under the guidance of advisory committees of experts who, like the unofficial members of the executive committee, give their services in the public interest. Activities include maintaining or assisting Brit. cultural centres, Anglo-phil societies, and Brit. schools abroad; the encouragement of Eng. language teaching and Brit. studies in univs., schools, and other institutions; and the projection of knowledge of Brit. life and thought, particularly in the fields of literature, science, medicine, engineering, agriculture, social studies, music, drama, the fine arts and architecture, through the medium of books and periodicals, films, exhibitions, lectures, concerts, and theatrical performances. Scholarships and bursaries for the study in the U.K. of Brit. institutions, methods, and achievements are granted to graduates and

name has no official or political significance; it is a geographical expression merely. The whole region lies between Ethiopia and the Sudan in the N., the Belgian Congo and Belgian trust ter. of Ruanda Urundi to the W., and N. Rhodesia, Nyasaland, and Mozambique in the S., being bounded on the E. by Somalia (formerly It. Somaliland) and the Indian Ocean.

Although the E. African coast has been known to merchants for cents. the interior was until comparatively recent times known only to Arab traders, who penetrated to Lake Victoria and beyond in search of ivory and slaves. The first Europeans to explore the hinterland were the Ger. missionaries Ludwig Krapf and Johannes Rebmann; their discoveries revived interest in the search for the source of the Nile and inspired the journeys of J. H. Speke, Sir Richard Burton, James Grant, and Samuel White Baker

(qq.v.). Later David Livingstone (q.v.), already famous for his Central African travels, turned his attention to E. Africa. He and the other missionaries and explorers that followed him concentrated their attention on what is now Uganda, for only there did they find organised and comparatively advanced peoples and some immediate prospects of commerce. Elsewhere the tribes were extremely primitive—they did not, for example, understand the principle of the wheel—and they were moreover oppressed by savage inter-tribal wars and by the operations of Arab slave-raiders. It was the desire to liberate E. Africa from the slave-trade and to substitute for it peaceful commerce and the elements of civilisation that took the Brit. into E. Africa; though it was Germany that first, in 1885, declared a protectorate in the area, over what is now Tanganyika.

At that time the whole of the interior was claimed by the Sultan of Zanzibar, and the Ger. action raised the question of the extent of his dominions. An international commission ruled in 1886 that they were limited to the is. of Zanzibar, Pemba, and Mafia and a 10-m. wide strip of the coastland from Tungi Bay to Kipini. The interior was thereupon divided into Ger. and Brit. spheres of influence, the Brit. lying N. of a line from the mouth of the R. Umbo by Lake Jipe and the N. base of Mount Kilimanjaro to Lake Victoria. The line was later extended W. so as to place Uganda within the Brit. sphere. Zanzibar itself became a Brit. protectorate in 1890.

The administration and opening up to trade of B. E. A. was at first left to a commercial company, the B. E. A. Association, later incorporated under a Royal Charter as the Imperial B. E. A. Co. In 1895 Her Majesty's Gov. declared a protectorate over Uganda and the area to the E. of it, now called Kenya but then the E. African Protectorate. The frontiers have been modified sev. times since, the last time being when the prov. of Jubaland was detached from Kenya and ceded to Italy in 1925.

In 1905 the protectorates were transferred from the authority of the Foreign Office to that of the Colonial Office. By the Kenya Annexation Order in Council of 1920 that part of the E. African Protectorate outside the mainland dominions of the Sultan of Zanzibar was recognised as a colony, the remainder being still a protectorate but the whole being administered by the same Governor and Executive and Legislative Councils. The Sultan's domains in Tanganyika had been bought outright by the Germans. After the First World War, in which there was fighting between Ger. and Brit. forces in E. Africa, Tanganyika was handed over to Brit. administration under a League of Nations mandate, and Britain now administers it as a U.N. trust ter.

Closer union between Kenya, Uganda, and Tanganyika has often been advocated on both political and economic grounds, but the difference in status between the 3 ters. presents a difficulty, and there

is strong opposition to any proposals for union or federation especially from the traditional native rulers of Uganda—which, unlike Kenya and Tanganyika, has never been opened up to European settlement on any large scale. Machinery for dealing with certain affairs regionally has existed since the foundation of the Governors' Conference in 1926. The functions of the Governors' Conference grew in importance with the outbreak of war in 1939, and at the end of the war there was a general desire to consolidate the arrangements made for regional action through the permanent secretariat of the Conference. Finally an Order in Council of Dec. 1947 set up the E. Africa High Commission (q.v.) to deal with a large range of common services.

British Electricity Authority, evolved from the Central Electricity Board (1927–1948). After the nationalisation of the electricity industry by the passing of the Electricity Act, 1947, the B. E. A. was made responsible (as from 1 April 1948) to the Minister of Fuel and Power for the generation of electric current and for its sale to 14 area boards, which replaced the supply undertakings throughout England and Wales, and S. Scotland. Subsequently the Electricity Reorganisation Act, 1954, changed the title of the B. E. A. to Central Electricity Authority (q.v.) and a S. of Scotland Electricity Board took over the duties of generation in S. Scotland as well as the distribution duties of 2 area boards. In N. Scotland the generation and sale of electricity is the responsibility of the N. of Scotland Hydro-electric Board.

British Empire, term roughly synonymous with Brit. Commonwealth of Nations. The expression 'Brit. Commonwealth and Empire' is now frequently used, and in this usage 'Commonwealth' is taken to mean the self-governing Commonwealth countries and 'Empire' their dependencies. See **BRITISH COMMONWEALTH AND EMPIRE**.

British Expeditionary Force (B.E.F.). For operations abroad, the organization of the Brit. Army in 1914 provided for an expeditionary force of 6 divs. of infantry, each consisting of 598 officers and 18,077 men; with 54 field guns, 18 4.5 howitzers, and 4 heavy 60-pounder guns; and 1 div. of cavalry, consisting of 485 officers and 9412 men, with 24 horse artillery guns. In addition were auxiliary troops comprising engineers, signallers, and men of the Royal Flying Corps, besides troops for the line of communications. The famous B.E.F. which went out to France at the outbreak of the First World War numbered about 150,000 men. Only 4 infantry divs. with 1 cavalry div. were disembarked in Aug. 1914, the remaining 2 infantry divs., together with a second cavalry div., only reaching the W. front in mid Sept. The force was under the command of Gen. Sir John French, and its component corps under Sir Douglas Haig and Sir Horace Smith Dorrien, the 1st Cavalry Div. being commanded by Sir Edmund Allenby. The force was steadily augmented from the autumn of

1914 until by April 1915 it numbered some 750,000 men exclusive of colonial troops.

In the Second World War the B.E.F., commanded by Lord Gort, landed in France in Sept. 1939, and was finally evacuated from Dunkirk on 3 June 1940. By 21 Sept. the B.E.F. only consisted of 4 divs., and the 51st Fr. Div. was accordingly included in the Brit. command. The 1st Corps, consisting of the 1st and 2nd Divs., moved to the Belgian frontier, a distance of 250 m. from its assembly area, on 3 Oct.; the 2nd Corps, consisting of the 3rd and 4th Divs., began to arrive from Le Mans on 3 Oct. The commander of the 3rd Div. was Major-Gen. B. L. Montgomery (afterwards Field-Marshal Lord Montgomery). Major-Gen. H. R. L. G. Alexander (afterwards Field-Marshal Lord Alexander) commanded the 1st Div. The other 2 commanders were Maj.-Gen. H. C. Loyd (2nd Div.) and Maj.-Gen. G. C. Johnson, V.C. (4th Div.). At the time of the Dunkirk evacuation the B.E.F. numbered 250,000. In all 211,532 ft men and 13,053 casualties were embarked at Dunkirk (in addition to 112,546 allied troops, mostly French). See WESTERN FRONT IN SECOND WORLD WAR.

British Film Institute, see FILM INSTITUTE.

British Guiana, Brit. crown colony in S. America situated between the Orinoco and the Amazon. It is bounded by the Atlantic on the N., Surinam (Dutch Guiana) on the E., where the R. Corentyne separates them; by Brazil on the S. and SW.; and by Venezuela on the W. The country has an area of approximately 83,000 sq. m., but definite boundaries have only recently been settled on all sides. The seaboard is roughly 270 m. long. Only about 200 sq. m. along the coast and up the rvs. are cultivated. The colony was first partly settled between 1616 and 1621 by the Dutch W. India Co., who erected a fort at Kyk-over-al in the present country of Essequibo, and in 1624 a Flushing merchant, named Van Peere, made a settlement on the Berbice R. The first Eng. attempt at settlement was made by Capt. Leigh on the O'apock R. (now in Fr. Guiana) in 1604. The effort was followed by Robert Harcourt in 1613 and 1627, but his settlement was not permanent. Lord Willoughby, well known in the early hist. of Barbados, founded a settlement in Surinam in 1663, which was captured by the Dutch in 1667 and ceded to them at the Peace of Breda in exchange for New York. The Dutch kept their hold over the country with varying degrees of firmness, now yielding to France, now to England or Portugal, until 1796, when during the war of the Fr. Revolution, it was captured by a Brit. fleet sailing from Barbados. The ter. was restored to the Dutch in 1802, but was retaken by Great Britain in the following year, and finally ceded to her in 1814. In all Brit., Fr., and Dutch Guiana the physical characteristics are almost identical. On the Atlantic coast are alluvial deposits generally below sea level, and suffering

heavy rains which convert them into mud swamps. Sandbanks jut out to the ocean, of which some are shifting, some fixed through the roots of mangrove-trees. The alluvial areas extend for from 10 to 40 m. inland; the area beyond is formed chiefly of detritus caused by the passing of the earlier mt masses. The central area is a plateau of 3000 or 3500 ft. This is covered with a dense forest containing a wealth of timber. The colony is well watered by streams which enter the Atlantic. The large quantities of sediment brought down to their mouths and the rapids and other obstacles to navigation further upstream effectually hinder any commercial value they might have, though their use in irrigation is unquestionable, and sev. large-scale water control schemes have been planned. Small vessels can navigate them as far as the first rapids. This length of navigation varies in different cases between 10 and 150 m. The climate is hot and moist and uniform. During the larger part of the year the heat, averaging 80° F., is lessened by sea breezes. The rainfall is heavy and averages 90 in. annually. Naturally the flora of the dist. is luxuriant and abnormal. The vast numbers of trees contain woods suitable for shipbuilding (notably greenheart, found only in B. G., and mora), house-building, roofing, and cabinet-making; and the various products other than timber are balata, bark, resin, balsam, wax, fibre, oil, nuts. Food plants abound, as the sweet potato, arrowroot, tomato, guava, cherry, avocado, breadfruit, melon, banana, pineapple, yam, rice, and maize. Hundreds of species of creeper are found in great plenty. Among animal life the birds present the most striking features; vultures, eagles, owls, nightjars, humming-birds, bell-birds, trogons, puff-birds, parrots, kingfishers, trumpeters, herons, and divers are included. Not so prolific as one would imagine from the wildness of the country are the animals, though specimens of jaguar, tiger-cat, peccary, tapir, sloth, armadillo, ant-eater, agouti, opossum, raccoon, porcupine, monkey, alligator, and manatee abound. The native Indians lead a natural life in the woods. The W. part of B. G. contains the Parima Mts, the N. has the Imataca range, while the Acari Mts form the S. boundary. Mt Roraima (8740 ft) is the highest peak. Among the important rvs. are Corentyne, Berbice, Demerara, Essequibo, and Cuyuni. On the Potaro R., a trib. of the Essequibo R., are the famous Kaieteur Falls, which have a clear drop of 741 ft, and a total fall of 822 ft, or nearly 5 times as high as Niagara.

Over a third of the cultivable area is devoted to the growing of sugarcane; rice is the crop that comes next in importance, and coco-nuts, coffee, cocoa, and limes are also cultivated. Sugar is the colony's prin. export; shipments of sugar and molasses in 1955 were worth £8,500,000. Guiana is very rich in minerals, especially gold, the output of which in 1955 was valued at £170,000. The output of diamonds in 1955 was worth £280,000. Bauxite, the ore of aluminium, is present

in large quantities, the output in 1955 being 2,435,282 tons; exports were worth \$5,000,000. Manganese, iron, and mica have also been found. Apart from the products mentioned, B. G. exports rum, molasses, balata, and timber. The colony is divided into 3 provs., Berbice, Demerara, and Essequibo. The ports are Georgetown (pop. 110,000), the cap (largely destroyed by a fire 23 Feb. 1945), and New Amsterdam (pop. 9500). Before 1928 the constitution of the colony consisted of the court of policy and combined court, but as a result of the recommendations of the Wilson-Snell commission (appointed 1926), an Order in Council was passed which (as amended in 1935) provided for the estab. of a legislative council in place of the court of policy and combined court which had existed since 1831. The constitution was amended in 1943 and again in 1953, and then provided for universal adult suffrage, a 2-chamber legislature, and a ministerial system. The 1953 constitution had to be suspended after 6 months' operation to prevent Communist subversion of the gov. and a danger crisis in public order and economic affairs. A nominated legislative council took office in 1954, and some of its members were appointed ministers. In 1957 elections were reintroduced for 14 of the 24 seats in the legislative council. An airfield built by the U.S. forces during the war, 25 m. up the Demerara R., is now used as a civil airport. There are 80 m. of single-track railway; otherwise communication is maintained by riv. traffic (350 m.), by canal (39 m.), by motor roads (365 m.), by trails (about 200 m.), and by air. There are telephone and telegraph lines, and Georgetown wireless station is connected with 5 stations in the interior. A White Paper detailing a \$20 million 5-year development scheme came out in July 1956. The estimated pop. on 30 June 1955 was 485,000; comprising E. Indians: 223,000; Africans: 172,000; Coloured: 53,000; Europeans: 13,000; Chinese: 4000; Amerindians: 20,000. Aboriginal Indians are occupied chiefly in hunting, fishing, and cassava growing. See W. Beebe, C. I. Hartly, and P. G. Howes, *Typical Wild Life in British Guiana*, 1917; O. Richardson, *On the Diamond Trail in British Guiana*, 1925; E. Waugh, *Ninety-two Days*, 1934; Sir C. Clement, *A Constitutional History of British Guiana*, 1937; M. Swan, *British Guiana*, 1957.

British Gum, see DEXTRENE.

British Honduras, known also as **Belize**, Brit. crown colony in Central America. It is bounded on the E. by the Bay of Honduras, in the Caribbean Sea, and borders in other directions upon Mexico and Guatemala. The peninsula Yucatan lies to the N. Its area is 8866 sq. m., and its pop. in 1955 was estimated at 79,000. The centre of the country is crossed by the R. Belize, while on the NW. and S. respectively are the Rs. Hondo and Sarstoon, forming natural boundaries. The highest part of the land is 4000 ft. above sea level in the Cockscorn Mts. Along the coast the soil is low and marshy;

for 10 to 20 m. inland it remains flat, and then rises in a series of hills 500-4000 ft. high. Nearly half the land is covered in primeval forest; elsewhere is savannah land and open plains, covered with wiry grass and scattered pine-trees—good ground for cattle-rearing. About 180,000 to 200,000 ac. of land are under cultivation, the chief crops being sugar and maize. A great number of fruits are also grown, including bananas, plantains, citrus fruits, coco-nuts, and pineapples. The forests, however, are the most valuable possession of B. H., and mahogany, pine, and cedar are the staple products. Though B. H. lies in the tropics, the climate has, with some justification, been described as sub-tropical. The range of temp. is small, and for many months in the year there is always a strong sea breeze. Visitors are usually agreeably surprised at the coolness of the climate, even during the summer months. The colony's reputation of being unhealthy is probably a legacy of the days when yellow fever was common throughout Central America. While the colony is not exceptionally healthy, it is certainly by no means a hot-bed of deadly diseases. There was an outbreak of yellow fever in 1904 and again in 1921, and since then the proper measures of control have been enforced. Malaria is prevalent, but the very serious types of the disease are not common in the colony. In anti-malarial work B. H. has taken a prominent place. Dysentery is not at all common here and typhoid is very rare. Means of communication are poor, though roads connect the prin. tns, which also have telephone and telegraph facilities. There is wireless communication with Jamaica and New Orleans. There is an airfield at Stanley Field (10 m. W. of Belize). The country first became known to Englishmen about 1638, but it is thought that Columbus discovered the coast in 1502 when on his way from Cuba to find a passage to the Indies. It is probable that settlers from Jamaica visited the country and, finding logwood available, estab. themselves in what is now B. H. Very soon they came in contact with the Spaniards and Indians of Yucatan and there are records of many conflicts. The Spaniards made repeated attempts to expel the Englishmen and their slaves, but in 1670 Spain ceded in perpetuity all lands in the W. Indies and N. America held by the English at the time. In 1717 the Spaniards made a determined effort to reconquer the settlement, and again in 1754 and 1779. Even after the treaty of London, 1766, by which Great Britain gave up the Mosquito Coast for the settlement, Spain renewed her attacks, this time from Mexico, but he was finally defeated in 1789 on 10 Sept. at St George's Bay. The first settlers, from 1638 to 1786, managed their own affairs, electing magistrates at public meetings who discharged all executive and judicial functions. In 1765 the king gave a constitution to the people founded on the most customs. An executive council was first appointed in 1840 and, in 1853, a

legislative assembly was formally constituted, but in 1870 this latter body was replaced by a legislative council, with a lieutenant-governor subordinate to the Governor of Jamaica (first appointed in 1862) as president. Independence of Jamaica came in 1884 with the appointment of a governor and commander-in-chief. To-day the legislature comprises a legislative assembly in which elected members are in the majority. The executive council, the chief instrument of policy, is composed of the governor as chairman, 3 *ex officio* members, and 6 members of the assembly, including not fewer than 2 nominated members. Certain unofficial members of the executive council have been appointed to the oversight of particular departments as a step towards a ministerial system. The cap. is Belize, or Balize (pop. 27,000), a centre of the trade of Central America. Orange Walk, San Antonio, Corozal, El Cayo, Stann Creek, and Punta Gorda are other towns of some importance. There is a dispute of long standing with Guatemala over the ownership of B. H. After negotiations beginning in 1857, a boundary agreement with Guatemala over the question was finally reached, on the basis of actual Brit. occupation and embodied in a treaty or convention signed at Guatemala city on 30 April 1859. Joint commissioners were appointed in 1860 to settle the position of the terminal parts of the S. section of the boundary, but the whole matter fell through over the Guatemalan claim that the requirements of Clause 7 of the convention, concerning the alleged obligation on Britain to build a road between Belize and Guatemala city, had not been fulfilled. In 1929 joint commissioners were again appointed, but only to lead to a renewed claim by Guatemala over the implementation of Clause 7. Guatemala professed to be especially anxious concerning smuggling, which they contended would be more easily controlled were the Brit. Gov. to construct a road or combine waterways with a new roadway from Belize. Guatemala then invited Great Britain to 'return to her the entire ter. of B. H. for £400,000 in settlement of all Guatemala's claims for fulfilment of the treaty of 1859, or, alternatively, that Great Britain should pay to Guatemala £400,000 and grant a strip of land at a specified point necessary to give the dept of Petén an outlet to the sea, or, alternatively, Guatemala would forgo all claims for non-fulfilment of the treaty and Great Britain should pay \$50,000 with interest as from 1859, etc. Naturally none of these proposals was acceptable to Great Britain, and on 21 July 1937 Guatemala proposed that the matter be submitted to the arbitration of the Amer. president, a proposal which the Brit. foreign secretary accepted, with the substitution of the permanent court of international justice as arbiter—a proposal from which Guatemala shrank. Later, on 15 June 1940, President Ubico of Guatemala announced that 'efforts to incorporate B. H. with Guatemala would be suspended.' In Feb. 1948,

urged on probably by ill-founded if well-advertised 'claims' by the Argentine and Chilean Govs. to Deception Is. and other ter. belonging to the Brit. Falkland Is. Dependencies, and indeed to the Falkland Is. as a whole, Guatemala took the opportunity of preparing a coup against Brit. Honduras. The Brit. Gov. promptly sent the cruiser *Sheffield* to Belize, because of reports that irresponsible elements from Guatemala might try to invade the colony. The Brit. cruiser *Devonshire* sailed to Belize (28 Feb.) from Jamaica, carrying a number of troops of the Glos. Regiment to protect Brit. lives and property against harm by Guatemalan bands. *Consult G. Ireland, Boundaries, Possessions, and Conflicts in Central and North America and the Caribbean*, 1941.

Like other parts of Central America, B. H. is rich in archaeological remains, but they have been as yet but little investigated. Ruins of tus, pyramids, and temples of the early Maya period have been located in various parts of the colony; in ruins near Corozal, in the N., wonderful painted stucco-work was found; in the S. at Lubantán, megalithic terraces, mounds, and pyramids were discovered. In 1926-7 excavation was started at Lubantán by an expedition sent by the Brit. Museum. Among the structures of the Maya tn. which was, apparently, abandoned for some unknown reason long before the coming of the Spaniards, were found various interesting objects—bowls, vases, figurines, and masks of pottery, spear-heads and blades of stone, jadeite beads, and limestone pendants. The following year excavations were started at a site near Pusilha, and here, in a plaza surrounded by 6 flat-topped pyramids, were found fragments of 20 inscribed stelae. Six hundred eccentrically shaped flints and obsidian knives were also found. In the neighbourhood the remains of a bridge have been discovered—the only bridge known to exist near a Maya site (see MAYAS). See A. R. Gibbs, *British Honduras: an Historical and Descriptive Account of the Colony from its Settlement, 1670*, 1883; W. A. Morris, *The Colony of British Honduras, its Resources and Prospects*, 1883; M. S. Metzgen and H. E. C. Cain, *The Handbook of British Honduras*, 1925 (pub. by W. India Committee); T. Gann, *Mystery Cities*, 1925, and *Ancient Cities and Modern Tribes*, 1926; Sir J. A. Burdon, *Archives of British Honduras* (3 vols.), 1931-5; G. W. Dodds, *Report on Belize Harbour and some of the Rivers of British Honduras* (Belize Gov. Printing Office), 1936; J. E. Thompson, *Excavations at San José, British Honduras*, Washington, 1939; I. T. Sanderson, *Living Treasure*, New York, 1941; A. H. Anderson, *Brief Sketch of British Honduras*, Belize, 1927, 1944; S. L. Calger, *British Honduras, Past and Present*, 1951.

British India Steam Navigation Company was started in 1856, under the name of the Calcutta and Burmah Steam Navigation Co., for the purpose of conducting trade along the coast of India. During the Indian mutiny, 1857, it did great

service to the Brit. Gov. by conveying troops from Ceylon to Calcutta, and again offered its services in 1867 during the Abyssinian campaign. Its present name was adopted in 1862. Trade with the E. received a great impetus in 1869 with the opening of the Suez Canal. The S.S. *India* of this line was the first steamer to arrive in London from India via the canal. The trade of this company became very extensive, and normally its vessels visit the ports of India, Burma, the Straits Settlements, the Philippines, the Dutch E. Indies, Queensland, and, since 1872, the E. coast of Africa. The company and the P. & O. joined interests in 1914, and are the 2 predominant partners in the Inchcape group of Brit. shipping. Though possessing no vessels of outstanding size, a total tonnage of more than 400,000 places the company among the largest steamship owners in the world. The words 'Steam Navigation' in its title are becoming a misnomer, for the line has over 20,000 tons of motor ships. Brit. India vessels have a black funnel with 2 white bands.

British Industries Fair, ann. fair to promote Brit. trade and act as a shop window for Brit.-made goods. The first fair was held under official sponsorship in London in 1915, and showed that foreign goods then in short supply might be obtained from the empire; an additional section was opened at Birmingham in 1920. In 1945 the organisation of the London section of the B.I.F. was taken over by the Board of Trade when it absorbed the dept. of overseas trade, the original organiser. In 1954 responsibility for the London section was transferred to a private company, which ran the 1955 and 1956 fairs; after the 1956 fair the London section closed and the B.I.F. is carried on at Birmingham only where it has been organised by the Birmingham Chamber of Commerce since its inception. The Birmingham section is devoted to consumer goods, hardware, machinery, electricity, building, and kindred industries.

British Isles, archipelago off the NW. coast of the continent of Europe, from which it is divided by the N. Sea, the straits of Dover, and the Eng. Channel. It comprises Great Britain, made up of England, Scotland, and Wales; Ireland; the Orkney and Shetland Is., to the N. of Scotland; the Isle of Man, in the Irish Sea; the Scilly Is., off the coast of Cornwall; and the Isle of Wight and the Channel Is., in the Eng. Channel (q.v.). Total area is about 121,000 sq. m. The Isle of Man and the Channel Is. enjoy considerable administrative autonomy. Politically only N. Ireland is included in the term since the treaty with S. Ireland (1921), and in official use it has been superseded by 'Great Britain and N. Ireland.'

British Israelites, religious sect which claims that the Brit.-Amer. peoples are the 10 lost tribes of Israel, that the Brit. monarchy is directly descended from David, and that by a literal fulfilment of biblical prophecy these peoples are to rule the

world in preparation for the Millennium.

Modern Substitutes for Christianity, 1942.

British Legion, association of Brit. men and women who took part in the 2 world wars. It was founded in 1921, and formed by an amalgamation of 4 'ex-service' societies. These were the Comrades of the Great War, the National Association of Discharged Sailors and Soldiers (the 'Silver Badge' men), the National Federation of Discharged and Demobilised Sailors and Soldiers, and the Officers Association. These bodies united to form one national organisation under the leadership of Field-Marshal Earl Haig (q.v.), its first president. A royal charter of incorporation was received in April 1925. The legion is non-political and non-sectarian and open to all Brit. (or naturalised) men and women who served in the Crown forces, Red Cross, and similar associations during the wars. Its aim is generally to watch over the welfare of ex-service men and women and to secure legislation for their benefit. Through an employment bureau it seeks to find them employment. It furnishes legal and financial aid; assists the distressed ex-service man's family; cares for him, if tubercular, at an industrial vil. settlement; sees that he gets his pension; and in certain cases advances housing loans and small business loans. Its chief source of revenue is through the sale of 'Flanders Poppies,' which it manufactures in its poppy factory, and which the public buy each year on Poppy Day. The legion has branches at home and abroad; its H.Q. are in Pall Mall, London, S.W.1. Its motto is 'Service not self.'

British Medical Association, founded in 1832 as Provincial Medical and Surgical Association; it took its present name in 1856. Its objects are to promote the medical and allied sciences and to maintain the honour and interests of the medical profession. Its membership is upwards of 71,000 and it is recognised by the gov. and others as the representative body of the profession in Britain. Its H.Q. are at Tavistock Square, London, W.C.1, and there are also a number of branches and divs. at home and in the Commonwealth. Its policy is determined by representatives from its divs. and its executive is its Council. Its official organ is the *British Medical Journal* (weekly); it also publishes 14 specialist journals, and *Family Doctor*, a monthly magazine for the general public. Papers dealing with every branch of medical science are read at the ann. meeting, which is held at a different place each year (1957, Newcastle upon Tyne). The library of the association contains 70,000 vols. and 1650 current periodicals.

'**British Medical Journal**' is the official organ of the Brit. Medical Association. It is a contemporary and trustworthy record of the progress being made in every branch of medical science, and includes reports of all congresses, conferences, meetings of medical societies, etc., of

interest to members of the medical profession. It was started in 1840 as the *Provincial Medical and Surgical Journal*, became the *Association Medical Journal* in 1853, and received its present name in 1857. It is pub. weekly from the association's office, Brit. Medical Association House, Tavistock Square, London, W.C.1.

British Motor Corporation, the largest Brit. motor-car manufacturing concern, formed in 1952 by the merging of Austin Motor Co. and Morris Motors, including the Wolseley and Riley companies. The present production target (1956) is 12,500 cars per week. See AUSTIN, HERBERT.

British Museum, London, originated with the grant of £20,000 voted by Parliament in 1753 for the purchase of Sir Hans Sloane's collection of rare books, MSS., curiosities, and works of art, which had cost him £50,000. Montague House was bought for £10,250 as a place for their reception. To the Sloane collection were added the Harleian and Cottonian libraries, the former having belonged to Robert and Edward Harley, 1st and 2nd Earls of Oxford, and the latter to Sir Robert Cotton, whose grandson bequeathed it to the nation in 1700. In 1757 George II added to this collection the books collected by the kings and queens of England from the time of Henry VII, including the libraries of Crammer and Casaubon. In 1759 Montague House was formally opened as the B. M. Gifts, bequests, and purchases followed; in 1772 Parliament voted £8400 for the purchase of Sir Wm Hamilton's collection of vases, antiquities, and drawings; in 1799 the Rev. Clayton Mordaunt Cracherode bequeathed his library of books and prints; George III made a gift to the nation of the Egyptian marbles taken from Alexandria; and between 1805 and 1818 the State bought the Townley marbles, the Lansdowne MSS., the Phigalian marbles, the Elgin marbles, and the Burney library. The accommodation in Montague House was no longer sufficient, and preparations for a new building were placed, in 1823, in the hands of Sir Robert Smirke. A new building on the old site, the present B. M., was completed in 1847, facing S. on to Great Russell Street, the E. and W. wings being joined by a facade of columns, 37 ft in height, after the Ionic order. To the E. and W. are residences for the most important officers of the museum. King George III's library, presented by George IV in 1823, occupies the E. wing. Antonio Panizzi (q.v.), keeper of the dept of printed books, procured for the museum the bequest of the Grenville library, belonging to the Rt Hon. Thomas Grenville, of 20,240 vols., which had cost about £54,000. Increasing numbers of books and readers made it necessary to build a new reading-room; a grant for this was voted by Parliament in 1854, and the erection of the present circular reading-room, with its surrounding book-stacks, designed by Panizzi, was carried out under the direction of Sydney Smirke, and completed and opened in 1857. Alterations to the shelving have provided some 75 m. for the accommodation of books.

There are about 20,000 vols. in the reading-room to which the readers have free access; the total number of vols. now in the library is about 5,000,000. The B. M. is entitled to receive 1 free copy of every work pub. in the U.K. (see COPYRIGHT LIBRARIES).

The great increases in the B. M. collections during the last half of the 18th and first half of the 19th cents. made it necessary to move part of its wealth of material to a new home, and at the close of the Great International Exhibition of 1862 part of the site in S. Kensington was acquired for building a museum to house the natural hist. collections. This new building, commonly called the Natural Hist. Museum, was opened to the public in 1881. The Natural Hist. Museum's main function is scientific, i.e. to study, identify, and classify all objects of natural hist. so that they may be available for reference. Thus it is able to do because its collections are among the most complete and important in the world, both in size and for the rarities they contain. The second function, an educational one, is to make available the results of its scientific work, by exhibits in the public galleries, by lectures, and by the issue of general handbooks, and also monographs, bulletins, and catalogues for the use of the specialist. Its library contains perhaps the finest collection in the world on natural hist. subjects. The museum includes the 5 depts of zoology, entomology, palaeontology, mineralogy, and botany. Among the more noteworthy exhibits are the life-sized model of a Blue Whale, 91 ft long and the largest known kind of animal of all time. At the other end of the scale are viruses, minute forms of life intermediate between plants and animals and the cause of many diseases of human beings, plants and animals, from colds to foot and mouth disease. A fine collection of fossils and casts of dinosaurs and also of swimming and flying reptiles is to be seen in the dept of palaeontology. One of the rarest fossils is that of the earliest known bird, *Archaeopteryx*, which lived in the Jurassic period some 120 million years ago.

A bequest by Wm White (d. 1823) enabled a start to be made on a new wing at Bloomsbury (1879), jutting out from the S.E. angle. This wing was opened in 1882, and contains part of the depts of MSS. and oriental printed books and MSS. The latest addition to the museum was begun during the chancellorship of Sir Wm Harcourt (1892-4), when the ground at the back of the museum was bought from the Duke of Bedford. A handsome new suite of galleries, known as the King Edward VII galleries, was opened in 1914. The B. M. also has a building at Colindale, near Hendon, where newspapers are stored. The B. M. is divided into 11 different depts, classified as follows: I, printed books; II, MSS.; III, oriental printed books and MSS.; IV, prints and drawings; V, coins and medals; VI, Egyptian antiquities; VII, W. Asiatic antiquities; VIII, Gk and Rom. antiquities; IX, Brit. and medieval

antiquities; X, oriental antiquities; XI, ethnography; and the research laboratory.

I, II and III: Among the museum's many important possessions may be noted the great number of illuminated MSS., early documents of special interest, autographs of famous men and women permanently exhibited in show-cases, and the vast library of printed books described above. The Lindisfarne Gospels, 3 original copies of Magna Carta, the earliest known copies of the *Odyssey* and the *Iliad*, the *Codex Alexandrinus* (a MS. of the Bible written in uncial Greek before the end of the 5th cent.), the *Codex Sinaiticus* (q.v.) acquired in 1933, and the Luttrell Psalter (c. 1340) are noteworthy among countless other priceless MSS. of equal interest.

IV: There is a unique collection of prints and drawings of all W. schools, which includes examples of the work of Raphael, Michelangelo, Leonardo da Vinci, Rembrandt, Hogarth, and many others.

V: The collection of coins and medals, tokens, and paper money is representative of all countries and periods.

VI and VII: Near E. antiquities include the Egyptian monuments (2000 BC to AD 640), the Rosetta Stone which affords the key to hieroglyphics, and the Assyrian collection which includes sculptures excavated at Nimrud from the palace of Assur-nasir-pal (885-860 BC), at Khorsabad, Koyunjik and elsewhere by Layard, Rassam, Loftus, Sir H. C. Rawlinson, and Sir Leonard Woolley.

VIII: In the dept of Gk and Rom. antiquities are the beautiful Elgin marbles (q.v.), the sculptures of the Mausoleum at Halicarnassus (excavated 1857), sculptural remains from the anc. cities in Lycia (obtained by Sir C. Fellows, 1842-6), and some of the finest pieces of statuary representative of Gk and Rom. art to be found in the world. There is also a fine collection of antique vases, bronzes, gems, gold ornaments, etc.

IX: The dept of Brit. and medieval antiquities houses the gifts of A. W. Franks. The displays provide a record of life in Britain from the Stone Age to the medieval period and include the remarkable finds from Sutton Hoo excavated in 1939 and presented to the nation by their owner.

X: The oriental collection includes antiquities and works of art, including prints and drawings, from China, Japan, India, Indoesia, and central Asia from the neolithic period onwards, and of W. Asia and N. Africa from the beginning of the Islamic period.

XI: The dept of ethnography houses ethnographical and archaeological material from Africa, Australasia (including Oceania) and America (including its anc. civilisations), and from the more primitive peoples of Asia.

The research laboratory conducts scientific research into library and museum material, investigates methods of cleaning and repairing, and prepares the products of archaeological excavations for incorporation in the collections.

The B. M. is governed by a standing committee, the 3 prin. trustees of which

are *ex officio* the Archbishop of Canterbury, the lord high chancellor, and the speaker of the House of Commons. Administrative expenses are met by a vote under the Civil Estimates. A certain amount of damage was sustained by the B. M. during the Second World War, including the destruction of some 150,000 books at Bloomsbury, and some 30,000 vols. of bound newspapers at Colindale. Damage to the collections was, however, comparatively slight, since many objects had been moved to safer quarters.

British Music. The cultivation of music in Great Britain remained constant throughout hist. on the executive side, but fluctuated unsteadily in composition. When John Dunstable, who had won fame in sev. foreign countries, d. in 1453, his only equals among musicians of his own age were the Flemings Binchois and Dufay. All through the 15th cent. many Brit. composers appeared who, if they did not quite reach his eminence, held their own against their continental contemporaries, notably Fayrfax, Cornyshe, and Lionel Power. Early polyphony, serving mainly the church, had seen no such flowering except in France and the Netherlands. This was the first of the 3 peak periods of composition in Britain.

To the second period, that of the great Tudor school, Taverner and Tye formed an immediate link. The 16th cent., still doing great service to the church, also saw a secularisation of music in virginal and lute pieces, songs to the lute and music for consorts of viols. The fantasy (or fancy) (q.v.) for strings developed as something like an Eng. speciality, and one phenomenon of it, the *In Nomine* (q.v.), certainly did. This is the only purely Eng. invention in composition, with one more modest exception upon which we shall come presently. But the greatest contribution to the 16th cent., down to and a little beyond the death of Elizabeth I. is undoubtedly the Eng. madrigal, in which nearly all the finest and all the most delightful composers exercised themselves with a skill and grace equalling that of the contemporary poets (see MADRIGAL and under the composers' names there mentioned). Among the lutenists must be singled out John Dowland, one of the greatest song-writers of any age, and Campion, who was his own poet. Church music, even during the difficult Reformation period, continued to be served with great polyphonic works by such masters as Tallis, Byrd, Shepherd, Robert White, and Orlando Gibbons. A master of the string fantasy, John Cooper, who Italianised his name as Coperario, showed a certain dependence of Eng. on It. instrumental music, but the balance was redressed by Alfonso Ferrabosco the younger, of It. descent but b. in England, who is as much an Eng. composer as Handel was to be later. On the other hand John Bull and Peter Philips went to live in the Netherlands and became to all intents and purposes Flemings. Nevertheless Bull is among the Eng. masters of the virginal, cultivating the then typically Eng. form of variations.

The decline that came in the 18th cent. would have set in during the 17th had it not been for the dominating figure of Purcell, who did more than anyone else to bring an extraordinary change into the musical atmosphere, not unlike that from the Tudor to the baroque style in sculpture. There are other names that carry weight: Henry Lawes, who did much for the natural setting of Eng. words; Matthew Locke, who in his dramatic works made an approach towards full-scale opera; Henry Aldrich, architect as well as musician; John Blow, who wrote both church and dramatic music, and anticipated Purcell's ceremonial odes (another almost purely Eng. type); but the only composers *b. after Purcell* who came anywhere near him were John Eccles and Jeremiah Clarke. In sum, Purcell alone still makes Eng. 17th-cent. music universally important.

The 18th-cent. picture becomes crowded with composers, but shows no Brit. figure of outstanding greatness. Eng. music was at that time entirely enthralled by a foreign-born genius, Handel, who owes at least as much to his Eng. environment as music in Britain does to him. If composition declined, the cultivation of music, particularly in London, was more intense than ever, and became more lively and many-sided through an unlimited importation of foreign performers as well as composers. Opera flourished on a grand scale in Italy and more modestly in England as ballad opera (plays with songs) which would be another typically Eng. musical phenomenon if its music were original instead of borrowed from folk and popular song. Public concerts became fashionable. The most considerable Eng. composers in the 18th cent. are those born earliest in its course, Thomas Augustine Arne, and Boyce. Then comes a gradual descent. Thomas Linley wrote much pleasant theatre music and Charles Dibdin had a fine, robust vein of melody. James Hook and Wm Shield also were successful on the stage, and Stephen Storace could write very passable operas. Both he and Attwood had known Mozart in Vienna and learnt something from him. Three other composers, born almost too late in the cent. to belong properly to it as artists, represent that purely Eng. type of composition mentioned above—the glee (q.v.): namely Calcott, Webbe, and Crotch. But it was the elder Webbe who had developed the glee out of the earlier catch (q.v.), so that it may be said to belong to the 18th cent., though it was more assiduously cultivated in the 19th.

The 19th cent. began much as the 18th had finished, with foreign musicians as much in the ascendant as ever. But its early years saw the rise to maturity of one Brit. composer, the Irishman John Field who was a great pianist and important to the development of composition for his instrument, or his style influenced that of Chopin and others, and he anticipated Chopin by writing nocturnes. Field lived for many years in Russia, and another Irishman, Balfe, had some success there, as well as in Paris, with his operas; Balfe's

work was popular as was that of his compatriot Vincent Wallace, who had similar gifts. The next composer of some note was Sterndale Bennett, *b. 1816*, and then none appeared until the birth of Sullivan in 1842. Bennett won the admiration of Mendelssohn and Schumann at Leipzig, where Sullivan also studied later. The latter took himself very seriously as a composer and aimed at success with oratorios and symphonic music, only to find it in operetta, where indeed he is pre-eminent, if not in dash and comic spirit, certainly in variety of resource and elegance of craftsmanship. (Goring Thomas took his operas more seriously, but although they have musical quality, they lack dramatic life. The time for Brit. opera to flourish was not yet. Parry, who despised it, was in any case not suited to it with his placidly fluent technique, which is always unexceptionable and very rarely takes fire: Cowen cultivated it eagerly, but had little success; and Stanford, though he found it far more congenial and would certainly in an operatic country have had the following of secondary stage composers like Götz, Bruneau, or Catalani, failed for lack of opportunity rather than want of genius. Parry and Stanford between them, however, started what is now seen to be the third peak period of Brit. music and has by this time proved to be by far the longest, without showing any sign of decline. A much greater master than either, and in fact the major representative of this period, is Elgar. He stands head and shoulders above any other composer projecting into the 20th cent. as a striking and unrepeatable personality and a sovereign craftsman, though Delius had a vein of poetry that was his alone. The scene now becomes crowded with notable composers who had something to contribute to a busy Eng. revival. Somervell was lyrical, Bantock vigorous and pictorial; McEwen could handle the string quartet superbly, and Frank Bridge was an adept at any chamber music; Holst was enterprisingly experimental, Holbrooke amazingly prolific, Boughton eager to create a special type of national opera. Cyril Scott was the Eng. impressionist, John Ireland a sensitive poet, and Arnold Bax a late romantic with an exuberant imagination. But the greatest of that generation, who, although past his eightieth year, is still vigorously productive, and always freshly interesting, is Vaughan Williams, who may figure in the future as the fourth supreme Eng. master alongside Byrd, Purcell, and Elgar.

The 20th cent., which opens with Bliss, Howells, Benjamin, Moeran, and Peter Warlock, becomes so crowded with highly gifted but not as yet always settled personalities that it is impossible to name a few without injustice to many others. They must wait to be evaluated some time in the future. But two must be mentioned for outstanding mastery, Walton and Britten, and also because they stand at the head of a new phase, which is, at long last, the emergence of Brit. opera, recognised abroad as of international

importance. Other very gifted composers are working in this field, and it looks as though opera may take a place in 20th cent. B. M. not unlike that of the madrigal in the Elizabethan school, something based on foreign models but grown indigenous in the hands of artists who bring their own individuality to bear on it. Future generations may look upon Brit. opera as the typical neo-Elizabethan phase of music. See E. Blom, *Music in England* (Policen books), 1948, and E. Walker, *History of Music in England* (3rd revised ed.), 1952; see also under names of composers mentioned.

British South Africa Company, The, obtained a royal charter of incorporation in 1889, through the efforts of Cecil Rhodes, and has received supplemental charters in 1900, 1915, 1924, and 1954. Its object was to protect Rhodesia, to further commerce, and to develop mineral and other resources of the dist. over an area exceeding 700,000 sq. m. Dr Jameson was administrator of the company's ters. until the Transvaal raid, 1895-6, being succeeded by Earl Grey. In 1922 S. Rhodesia voted in favour of responsible gov., and a year later was formally annexed to the Brit. dominions. By an agreement between the Brit. Gov. and the company the company surrendered its rights and claims, buildings and assets, etc., used for administrative purposes, and its land and monopoly rights other than mineral rights under its concessions in S. and N. Rhodesia, in consideration of a cash payment of £3,750,000 and a half-interest for 40 years in the net proceeds of the disposal of land in NW. Rhodesia. On 29 June 1933 the mineral rights of S. Rhodesia were bought by the S. Rhodesian Gov. for £2,000,000, the gov. to assume all obligations imposed on the company by grants to other parties. Among the remaining assets of the company are: mineral rights throughout N. Rhodesia; citrus and other estates in S. Rhodesia totalling 134,000 ac.; a half-interest for 40 years from 1 Oct. 1923, in the net proceeds of the disposal of land by the gov. in NW. Rhodesia; about 16,000 sq. m. of mineral rights in Nyasaland; and about 81 per cent of the issued shares of Rhodesia Railways Trust.

British Thermal Unit (B.Th.U.), the amount of heat required to raise the temp. of 1 lb. of water by 1° F. The *Gas Therm* = 100,000 B.Th.U. If V = cu. ft consumed, H = declared heat value of the company's gas in B.Th.U.s per cu. ft, P = cost of therm in pence, B = total bill in pence—then $B = V \times H \times P \div 100,000$, whence the equivalent value in pence per 1000 cu. ft = $B \times 1000 \div V = H \times P \div 100$. See also CALORIE and METROLOGY.

British Transport Commission. The object of the Transport Act, 1947, was to

provide in Great Britain a publicly owned system of inland transport including port facilities but excluding transport by air. It provided for the estab. of the B. T. C., a body corporate consisting of a chairman and not less than 4 nor more than 8 other members, all to be appointed by the Minister of Transport; the duty of the B. T. C. was to provide 'an efficient, adequate, economical, and properly integrated system of public inland transport and port facilities within Great Britain for passengers and goods.' The 1947 Act also provided for the estab. of 5 executives to exercise the functions of the Commission as agents; these were the Railway Executive, the Docks and Inland Waterways Executive, the Road Transport Executive, the London Transport Executive, and the Hotels Executive; each executive also consisted of a chairman and not less than 4 nor more than 8 other members. The various undertakings taken over by the B. T. C. were purchased by the issue of more than £1,135,000,000 Brit. Transport 3 per cent Guaranteed Stock. The 1947 Act was sponsored by a Labour Gov. When the Conservative party was returned to power in 1951 they were pledged to return to private enterprise most of the road vehicles nationalised under the 1947 Act, and the Transport Act of 1953 which aimed at competition rather than integration was passed mainly with this object. The 1953 Act also provided for the abolition of most of the executives and only the London Transport Executive (q.v.) now remains; the reorganisation of the railways and the setting up of area authorities was also provided for; the railways and other of the B. T. C.'s activities now come under the direct control of the B. T. C., and 6 area boards have been set up covering roughly the 6 railway regions.

Railways. The railways were controlled by the Minister of War Transport under Defence Regulation 69 from the outbreak of war in 1939 and remained so until they were vested in the B. T. C. of 1 Jan. 1948; the assets at the date included 19,640 route miles (52,250 track miles) of line, over 20,000 locomotives, 40,250 carriages, and 1,223,630 wagons.

Canals. Under the 1947 Transport Act, 17 separately and independently owned undertakings, 2 State-owned, and about 30 owned by railway companies, comprising over 2000 miles of waterways, were transferred to the Commission. Most of the vessels using the canals are independently owned but the B.T.C.'s fleet includes 250 power driven craft and nearly 1000 dumb craft (including 650 coal floats).

Docks. Docks previously owned by the railway and canal companies at more than 50 places, including the great groups on the NE. coast and in S. Wales and comprising over 100 miles of quay, are vested in the B. T. C.

Road haulage. Nationalisation of goods road transport undertakings was effected by the B. T. C. serving notes of acquisition in writing on persons carrying on undertakings using vehicles under 'A'

and 'B' licences and whose activities 'consisted to a predominant extent of ordinary long-distance carriage for hire or reward.' About 40,000 vehicles were acquired in this way. Under the 1951 Act about 32,500 were to be sold to private enterprise, but the Transport (Disposal of Road Haulage Property) Act, 1956 permits the B. T. C. to retain 15,000 vehicles, 4,900 of which are for disposal—Brit. Road Services (Parcels) Ltd and Brit. Road Services (Meat Haulage) Ltd—later on.

Road passenger transport. Nearly 14,500 omnibuses in the provs. and Scot. land are owned by the B. T. C., mainly through the acquisition of the Tilling and Scottish Motor Traction groups; the B. T. C. also has large holdings in the Brit. Electric Transport group and other bus companies.

British transport hotels. These comprised the 45 hotels, 400 station refreshment rooms, and 500 daily refreshment car services hitherto operated by the railway companies. A few of the hotels have since been sold.

'British Weekly,' a journal of social and Christian progress, founded by Sir Wm Robertson Nicoll in 1886. It discusses current events from the Christian point of view. It covers religious, social, political, literary, and biographical topics, and the leading articles deal principally with theological and ethical questions.

British West Africa, see GAMBIA; GHANA (GOLD COAST); NIGERIA; SIERRA LEONE.

British West Indies, see WEST INDIES.

British West Indies Regiment, see WEST INDIA REGIMENT.

Britomartis, originally a mother goddess of E. Crete. A later myth identified her with Dictynna, a similar goddess of W. Crete. Pursued by Minos for 9 months, she flung herself into the sea. To account for the name Dictynna it was related that she was saved by being caught in a fisherman's net (*diktum*). She escaped to Aegina, where she was worshipped as Aphaea. At least as early as Euripides B. was identified with Artemis.

Briton Ferry, see NEATH.

Brittain, Vera Mary, novelist, b. Newcastle under Lyme. Her childhood was spent in Cheshire, and in 1914 she went from St Monica's, Kingswood, as an exhibitioner to Somerville College, Oxford. *Testament of Youth*, 1933, tells of her experiences as a Red Cross nurse in the First World War. In 1922 she started as a freelance journalist in London, and in 1925 she married George E. G. Catlin, an Oxford man who then held the Chair of Politics at Cornell. Her novels include *The Dark Tide*, 1923, *Not Without Honour*, 1924, *Account Rendered*, 1944, and *Born*, 1925, 1949. *Testament of Friendship*, 1940, is a tribute to her lifelong friend, Winifred Holtby (q.v.). *Lady into Woman*, 1953, is a hist. of women from Victoria to Elizabeth II.

Brittany (Fr. Bretagne), old prov. in

the NW. of France, forming a peninsula between the Bay of Biscay, the Atlantic Ocean, and the Eng. Channel, and comprising the modern depts of Finistère, Côtes-du-Nord, Ille-et-Vilaine, Morbihan, and Loire-Inférieure. The country was conquered by Julius Caesar in 57-56 BC. and was known to the Romans as Armorica. It is believed that in the 5th and 6th cents. there was a large influx into the country of Celts from Britain, fleeing from the Saxons, and the country became known as Britannia Minor. The Breton language belongs to the Celtic div. of Celtic and is allied to Welsh. To this day the Bretons maintain their distinctive customs and traditions, and their country is one of the most picturesque in Europe. In the 10th cent. B. was an independent duchy, and later was, for a time, a vassal prov. of France. During the Hundred Years War it sided alternately with England and France, and it was frequently a cause of dispute between the 2 countries. It was finally incorporated with France by Francis I in 1532. During the Fr. Revolution it supported the Bourbons. (See VENDEE, WARS OF THE). After the allied landings in Normandy in 1944, the U.S. Army, in accordance with the general strategy, began on 25 July a forceful break-out on the W. flank of the bridgehead; the whole of the Breton peninsula was rapidly in allied hands, with the exception of the fortified ports, Brest, Lorient, and St Malo. (See WESTERN FRONT IN SECOND WORLD WAR.) *See* Menpos, *Brittany*, New York, 1905; A. R. du Cleuziou, *La Bretagne*, 1947; Ralph Dutton, *Normandy and Brittany*, 1953.

Britten, Benjamin (1913-), composer, b. Lowestoft, educ. at Gresham's School, Holt, and Royal College of Music (scholarship for composition). He worked with G.P.O. film unit, 1935-7, and was in America 1939-42, being awarded the Coolidge Medal in 1941. His earliest pub. work was a *Sinfonietta* (chamber orchestra), in 1932. He has held no official or professional post, but lives a retired life in Suffolk, devoted wholly to composition. His catalogue, for one of his age, is enormous, and continues to grow rapidly; the following is an abridged abstract from it. Operas: *Peter Grimes* (after Crabbe), *The Rape of Lucretia* (libretto, Ronald Duncan, after Obeys), *Albert Herring* (after Maupassant), *Let's Make an Opera* (after Blake), *Billy Budd* (E. M. Forster, after Melville), *Gloriana*, *The Turn of The Screw* (after Henry James); incidental, film, and radio music; choral works, including *Hymn to St Cecilia* (Auden), *A Ceremony of Carols*, *Saint Nicholas*, *Spring Symphony*, *Sinfonia da Requiem*; *The Young Person's Guide to the Orchestra* (variations on Purcell), for orchestra; piano and violin concertos; *Les Illuminations*, *Serenade* for voice and chamber music; 2 string quartets; songs: *seven Sonnets of Michelangelo*, *The Holy Sonnets of John Donne*, *A Charm of Lullabies*, and *Winter Words* (Hardy).

Brittle Stars is the popular name applied to the animals of the class Ophiuroidea

among the Echinoderms. They have many points in common with the Asteroidea, or starfish, but they are more active and muscular have no anus, the ambulacral groove on the ventral surface is covered, and the arms contain no prolongation of the viscera. The name refers to the way in which these star-shaped creatures can break off an arm; when this is done another quickly grows in its place. They are sometimes known also as sand-stars, from being found on the beach. Typical Brit. species are *Ophiura ciliaris*, *Ophiopholis aculeata*, *Ophiocoma nigra*, and *Ophiothrix fragilis*.

BRITTLE STAR (*Ophiocoma nigra*)

The inset shows a small portion of one arm enlarged.

Britton, John (1771–1857), topographer and antiquary, *b.* near Chippenham, Wilts. In 1801 he co-ed. with Brayley (q.v.) the *Beauties of Wiltshire*, which proved very popular, becoming the first of the series *The Beauties of England and Wales* (1801–15), 9 vols. of which were written by B. and his friend, including the equally popular *Beauties of Bedfordshire*.

Briva Currellae, see BRIVE.

Brive (-la-Gaillarde), Fr. tn, cap. of an arron., in the dept. of Corrèze, on the Corrèze. It was known to the Romans as Briva Currellae, and has a 12th-cent. church. It has railway workshops, and manufs. of shoes, textiles, and paper, and a trade in stock, chestnuts, wine, and truffles. Cardinal Dubois and Brune (q.v.) were *b.* here. Pop. 33,500.

Brixen, see BRESSANONE.

Brixham, seaport in Devon, England, on the S. side of Tor Bay, principally noted as an ant. fishing port with appurtenant industries and as a favourite yachting harbour. B. was the home of the Rev. H. F. Lyte, author of 'Abide with me.' A cave on Windmill Hill was discovered in 1858 and contains many interesting palaeolithic remains. William

of Orange landed at B. in 1688. Pop. 8760.

Brixia, see BRESCIA.

Brixton, dist. and a parl. div. in the metropolitan bor. of Lambeth, London. It is much favoured by variety stago performers. There is a well-known market and a prison.

Briza, genus of Gramineae which occur in temperate climates, and of which 2 species grow in Britain, the *B. media*, or common quaking grass (q.v.), and *B. minor*, or small quaking grass. *B. major* is a species naturalised in Guernsey. *B. maxima*, a species from S. Europe, is sown as a border annual. All species are very slight, shaking with the least breath of air, and as pasture they yield little nutriment.

Brizio (or Brizzi), Francesco (1574–1622), It. painter, *b.* Bologna. He studied under Lodovico Carracci, and was perhaps his best pupil, executing some admirable work. B. was also an engraver of some note.

Brno: 1. Region (*kraj*) in central Czechoslovakia, bordering on Austria, part of the former prov. of Moravia (q.v.). The N. is mountainous, but the S. is lower-lying and is watered by the Thaya, a affluent of the Morava (q.v.). Area 2786 sq. m. Pop. 931,500.

2. (Ger. **Brünn**), Czechoslovak city at the confluence of the Svitava and the Svatka, cap. of the region of B. and former cap. of the prov. of Moravia. In the Middle Ages it was a fort. tn. was the seat of the Moravian margraves, and withstood many sieges. In 1645 it was vainly attacked by the Swedes, and in 1805 it was Napoleon's H.Q. before Austerlitz (see SLAVKOV). B. has a hill-top castle, a 15th-cent. cathedral, sev. other medieval churches, and a 16th-cent. tn hall. The modern suburbs are well-planned and spacious. The tn is the seat of a bishop, and has a univ. (1919), a technical univ. (1892), and academies of music and veterinary science. Mendel (q.v.) was abbot of the Augustinian abbey here. B. is a centre of the textile industry, particularly woollens, and has also engineering, chemical, and brewing industries. Pop. 273,200.

Broach, or **Bharoch**, situated on the r. b. of the Nerbudda, 203 m. N. of Bombay, in Bombay state, India, is a city of great antiquity. It is referred to as early as 216 AD by the author of the *Periplus*. Eng. merchants hired a house in 1614, and the Dutch estab. a factory in 1617. It is a great centre of the cotton industry and famous for its long-staple cotton.

Broach Spire, in architecture, a form of spire chiefly used in Eng. Gothic churches of the 13th and 14th cents., especially in Northants; in which an octagonal spire rises from a square tower without a parapet, the 'broaches' being the half-pyramids joining the square to the base of the octagon.

Broad Arrow, mark of the Brit. Gov. stamped on all gov. stores. Anyone defacing this mark is guilty of felony, and anyone unlawfully in possession of

goods thus stamped can be fined £200 and costs.

BROAD ARROW

Broad-bottom Administration, name satirically given to Henry Pelham's ministry, which lasted from 1744 to 1754, the year of Pelham's death. It was so called because it admitted every man of parl. talent or influence, irrespective of party.

Broad Sound, inlet in the E. coast of Queensland, Australia. It penetrates inland for over 50 mi. and its greatest width is over 30 m.

Broadbent, Sir William Henry (1835-1907), physician, b. Lindley, nr Huddersfield. After graduating at Owen's College, Manchester (1858), continued his studies at Paris. From 1858 to 1896 he was on the active staff at St Mary's Hospital, London. At the medical school he was lecturer on physiology, zoology, and comparative anatomy, and proved an excellent clinical teacher. From 1860 to 1879 he was physician to the London Fever Hospital. He was in attendance on the Duke of Clarence at his death, 1892, and Queen Victoria, Edward VII, and George V were at different times his patients. He received a baronetcy in 1893 and was made K.C.V.O. in 1901. His hypothesis to explain the unequal distribution of paralysis, in the form of homiplegia, is still unrefuted, whilst he first suggested with authority a separate centre for conception of ideation. His writings include *The Pulse*, 1890, and *Heart Disease* (with his son), 1907. His name is perpetuated in *B.'s sign* in adherent pericardium, which he described in 1895.

Broadcasting. Broadcasting in Britain. Until the passing of the Television Act, 1934, which legislated for the introduction of commercial television, B. was undertaken solely by the British Broadcasting Corporation (B.B.C.), a corporation estab. by royal charter to provide a public service of B. for general reception in Britain and overseas. See also INDEPENDENT TELEVISION AUTHORITY and TELEVISION, B.I.C.

When B. began in Britain in 1922, a limited company, the Brit. Broadcasting Co., combining the interests of 6 large wireless and electrical manufacturing firms, was granted a licence by the postmaster-general. The revenue was partly from royalties on the sale of receiving sets and partly from receiving licences collected by the post office. By 1926 a system of national and regional programmes, with transmitters in London,

Manchester, Birmingham, Newcastle, and Daventry, was well estab., and there were over a million licence holders. On the recommendation of the Crawford Committee a public authority was constituted under a royal charter—the Brit. Broadcasting Corporation—which came into being on 1 Jan. 1927. The staff, machinery, and assets of the old company were taken over. The royal charter required the corporation to obtain, in the same way as the company, a licence from the postmaster-general by virtue of his statutory powers under the Wireless Telegraphy Acts (consolidated in the Act of 1949). The licence states the terms and conditions under which the B.B.C. may estab. and use its transmitting stations and apparatus. It stipulates the financial conditions and does not allow the B.B.C. to derive revenue from advertising or from any sponsoring of programmes. Under the terms of the first licence in 1927 the broadcast receiving licence fee was fixed at ten shillings, payable to the post office, and the B.B.C. was to be financed by a share in the revenue from the licences.

The members of the corporation are its governors appointed by the Sovereign in Council. They are part-time appointments. The permanent executive staff is headed by the director-general. The governors are finally responsible for the sound and television programmes as well as the engineering operation. The links between studios and B. points and transmitting stations are provided by the post office which charges the B.B.C. a rental. Since 1953 national B. councils for Scotland and Wales have been responsible for the policy and the content of the Scottish and Welsh Home Services. The chairman of each national council is the corporation governor representing the area concerned.

The first royal charter was renewed in 1937 after parliamentary consideration of the Ullswater Committee's report. This new charter expressly charged the B.B.C. with the duty of carrying on the Empire Service which it had initiated in 1932. This charter also entrusted the B.B.C. with television B. in accordance with the recommendation of the Selsdon Television Committee, which was endorsed by the Ullswater Committee. The first high definition public television service in the world had already been started by the B.B.C. from Alexandria Palace on 2 Nov. 1936. The third charter was granted in 1947 when the B.B.C. was authorised to provide B. services for reception in other countries and places outside the Brit. Commonwealth. A worldwide service was in fact already in operation. In 1938 the Arabic Service and the Lat.-Amer. Service in Spanish and Portuguese began, and broadcasts in French, German, and Italian were introduced in Sept. of that year. These services were the beginnings of the external services of the B.B.C., which now include B.s in 41 languages and are received all over the world. Thirty-nine high-powered transmitters are in operation for these services, including 2 at Tebrau

in Johore which are operated by the B.B.C.'s Far E. station, mainly to rebroadcast the B.B.C.'s Far Eastern, Eastern, and General Overseas Services to the appropriate countries. Certain of the B.B.C.'s European Services are also rebroadcast by a high-powered medium wave transmitter in NW. Germany with a medium-powered relay in Berlin, as well as being rebroadcast over a VHF/FM transmitter in Berlin. The fourth charter was granted in 1952 for 10 years after parl. consideration of the Beveridge report and of gov. white papers issued by Mr Attlee's administration in 1951 and Mr

programmes are transmitted by 44 medium and long-wave stations and are also broadcast by a network of VHF stations using frequency modulation. Twelve VHF stations were in operation at the end of July 1957. By 1958 it is expected that 96 per cent of the population will be within the reach of VHF broadcasting. It was felt necessary to introduce this system because of the interference from foreign stations and from electrical apparatus.

The B.B.C. provides 4 main services for home listeners. The Home Service, running continuously from 6.25 a.m.

B.B.C.

BROADCASTING HOUSE, LONDON. TRANSMISSION REPRODUCTION ROOM
A general view of the machine room.

Churchill's administration in 1952. For the first time the licence which the B.B.C. acquired from the postmaster-general under the terms of this charter was described as 'a non-exclusive licence.' This was in anticipation of the Television Act of July 1954 and of the creation of the Independent Television Authority, and admitted the introduction of commercial television in competition with the B.B.C.'s television service.

Before the Second World War no licences were required for television reception. A combined sound and television licence was introduced in June 1946 and cost £2. At the same time the sound B. receiving licence was increased to £1. In June 1954 the combined sound and television licence was raised to £3, and in Aug. 1957 an excise duty of £1 was added bringing the licence to £4.

Eighteen transmitters radiated the B.B.C.'s television programme to cover over 98 per cent of the pop. at the end of 1957. The Home, Light, and Third

(7.50 a.m. on Sundays) to 11.08 p.m., is balanced to appeal to all sections of the community, presenting a wide range of music, drama, and outside broadcasts. Technical and scientific development as well as topical and cultural talks and features, programmes for schools and religious broadcasts are included in the output. News bulletins are broadcast at sev. daily fixed points, and when Parliament is in session there is a nightly broadcast on the day's proceedings in the House of Commons. Linked with this Basic Home Service are 6 Regional Home Services covering Scotland, Wales, Northern Ireland, and the North, Midland, and West of England. The Light Programme runs continuously from 6.45 a.m. (9.0 a.m. on Sundays) to midnight and is devoted to entertainment in the widest sense. The Third Programme, running continuously from 8.0 p.m. to 11.00 p.m. and from 5.0 p.m. to 11.00 p.m. on Sundays, is a cultural programme designed for the serious listener. Network

Three, designed for specialist minority audiences, introduced in the autumn of 1957, uses Third Programme frequencies and transmitters between 6.0 p.m. and 8.0 p.m. six days a week. The School B. Dept. of the B.B.C. sends out over 50 transmissions a week to nearly 28,000 in the U.K. (An experimental B. service for schools was first operated by the B.B.C. in 1927. The B.B.C. television B. service for schools began in 1957.)

The B.B.C. has played a leading role as patron of the musical life of Great Britain. In 1927 the B.B.C. took over the running

decided to broaden this policy to include the freest possible expression of serious responsible thought. Since 1947 a number of controversial religious broadcasts and debates have been broadcast.

Apart from the brief period of ban on controversial B., only 3 restrictions have been placed by the gov. on the corporation's programme activities. First, the rule laid down in 1927 that the B.B.C. must not express in broadcasts its own opinion on current affairs or on matters of public policy. It must maintain a policy of impartiality in any controversial

B.B.C.

THE B.B.C. IN NORTHERN IRELAND

A drama producer listening at the control room loudspeaker.

of the Henry Wood Promenade Concerts which have continued successfully ever since, with an interruption during the war years. The B.B.C. Symphony Orchestra, which was formed in 1930, has won an international reputation. In its domestic sound and television services the B.B.C. broadcasts in a year some 22,800 hours of programmes.

From 1923 to 1928 no broadcasts on matters of political, industrial, or religious controversy were allowed. This ban was lifted in 1928 when the B.B.C. was informed that the Brit. Gov. 'relied upon the governors to use the discretionary power entrusted to them . . . the responsibility for its exercise will devolve solely on the Governors. . . . After 1928 B. on political issues began to be seriously developed. In religious B. the B.B.C. itself avoided discussion of subjects likely to offend religious or moral susceptibilities, but in 1947 the governors of the B.B.C.

issue. Except in its own field of B. policy, the corporation holds no views on any public issue. The second restriction was the issuing of a formal notice by the postmaster-general in July 1955, limiting the anticipation of parl. debates by B. This was in fact the formalising of the 'Fortnight Rule,' which the B.B.C. had enforced for sev. years in agreement with the leaders of the parties, and from which it desired to disengage itself. Following the findings of a gov. committee of inquiry and an experimental period of suspension, the Prime Minister announced on 25 July 1957 that the rule was suspended for an indefinite period. (The postmaster-general's notice of 1955 was formally revoked in Dec. 1956). A further restriction issued by the postmaster-general in July 1955 required the corporation to refrain from sending any controversial party political broadcasts on behalf of any political party, other than the series

of party political broadcasts arranged by the corporation in agreement with the leading political parties, for B. throughout the U.K.

An agreement reached in 1947 between the B.B.C., the gov., and the opposition enables the gov. of the day to use the radio for ministerial broadcasts from time to time to make pronouncements of a factual nature, to explain legislation approved by Parliament, or to appeal to the public to co-operate in national policies. The agreement also provides for party political broadcasts which are allocated by agreement among the leading parties. The allocation and the details are arranged at an ann. meeting between the B.B.C. and the representatives of the main parties. Arrangements for B. during general elections are agreed between the parties and the B.B.C. before the election. The B.B.C. is required by its licence to broadcast any announcement at the request of a gov. dept. (in practice such announcements as police messages, outbreaks of animal diseases and the like). The B.B.C. is also required to broadcast an impartial day-to-day account of the proceedings in both Houses of Parliament. The B.B.C. initiated this practice in 1945, before it was laid down in the licence and agreement.

The B.B.C. publishes a weekly *Radio Times* (q.v.) with advance programme information. It has the highest circulation of any weekly pub. in the world (9 million approximately). Nearly 7 million illustrated pamphlets are sold yearly in conjunction with the broadcasts for schools.

Broadcasting outside Britain. The Netherlands are unique in that B. and T.V. are operated by free associations of listeners who pay membership fees to each association. The gov., which introduced a certain degree of unity and supervision by forming a radio union of the groups, issues licences. The revenue therefrom is distributed to the associations according to their proportion of members.

Germany was one of the countries which developed B. actively as a gov. service. Since the war, in the Federal Rep. of W. Germany, B. is no longer centralised. There are a number of independent organisations which are linked by a central working committee and each organisation follows a pattern or reflects the post-war occupation authorities—U.S.A., Britain, and France—in the way the B. bodies are organised. All of these are similar to public corporations and are financed by licensed revenue. The stations are as follows: Hamburg: Nord-Deutscher Rundfunk; Cologne: West-Deutscher Rundfunk; Frankfurt: Hessischer Deutscher Rundfunk; Stuttgart: Süd-Deutscher Rundfunk; Baden Baden: Südwest-Deutscher Rundfunk; Munich: Bayerischer Rundfunk; Berlin: Sender Freies Berlin; Rias (The American State Department Radio Organisation). Television has been developed in Hamburg, Cologne, Frankfurt, and Stuttgart.

In the U.S.S.R. radio development and production for the country as a whole

comes under the U.S.S.R. Ministry of Communications. Radio policy, programmes, and so on, however, are shaped by the radio committees which operate independently in each rep. No networks have been introduced over Moscow Radio since 1948. There are still 3 programmes: Moscow Home, Alternative Programme, and Third Programme. The Home Service broadcasts 49 hrs daily. Its foreign service has programmes in 36 languages. There are nearly 30,000 radio relay centres—wired wireles—in the U.S.S.R., which account for 16,000,000 individual loud-speakers. It is planned to double that number by 1960. Television services in the U.S.S.R. started soon after the end of the war. There are no commercial programmes and no advertising. Soviet designers are working on new types of television sets with screen measuring 35, 43, and 53 cm. in the diagonal. Research into colour television has been going on for sev. years, and colour television tests are made at Moscow's colour television centre. A 22-valve set, the 'Raduga,' has been adapted for colour television reception.

In Australia the official service is the Australian B. Commission, which was set up in 1932, and is responsible to the Australian Federal Parliament through the postmaster-general. Until 1948 it was financed from licence revenue. Since 1949 it has been financed from the Commonwealth Consolidated Revenue Fund. There are also 107 commercial B. stations in operation. A national television service began operating in Nov. 1956 and the commercial organisation, the Television Corporation Ltd., began transmissions in Sept. 1956.

The Canadian B. Corporation, which was inaugurated in 1936, is financed jointly by parl. grant and by commercial revenue. It is the national B. authority for both sound and television B., but it works closely in co-operation with privately owned commercial B. stations for the transmission of its programmes on a nation-wide coverage. The Canadian B. Corporation International Services, which operate on behalf of the Department of External Affairs, broadcast programmes in 14 languages on shortwave, and transmit recorded programmes in 3 other languages.

In the colonies experimental transmissions were going on as early as 1926 (British Guiana). In 1928 Kenya was the first station in the colonial territories to start regular radio broadcasts. Radio Hong Kong followed shortly afterwards, and in 1929 the first wired B. service was brought into operation at Port Stanley in the Falkland Is. Pioneering broadcasts began in Sierra Leone and in Ghana in 1934-5. In 1934 commercial B. began in Gibraltar and Barbados, and the following year in Malta and Fiji.

In 1936 the Plymouth Committee on Colonial B. recommended that B. activities should be developed as a public service by the gov. concerned. Their recommendations have been upheld and pursued.

The Central African B. Service has grown from a station in N. Rhodesia which was opened in 1941. In 1949, under the Colonial Development and Welfare Act, the Brit. Gov. made available 1 million pounds for the development of colonial B.; a further £250,000 was made available in 1952 and another £500,000 in 1955.

Since 1949 more than 40 B. schemes in 28 colonial territories have been completed or are under way. Thirty-one wireless and 13 wired B. services in the colonies transmit to audiences estimated at over 5 million. The B.B.C. has provided technical and organising advice and assistance, and has seconded engineers and programme staff to 7 colonial territories. The Nigerian B. Service became a corporation in 1957.

Broadcasting in the U.S.A. B. on a large scale began in the U.S.A. in 1920, when the possibilities of the medium for advertising purposes were recognised. A number of stations were set up by various trading concerns, including manufacturers of radio apparatus, and by 1924 over a thousand stations had been licensed. The result was uneven distribution and overcrowding of the ether, and a regulating law was passed in 1926. The following year the Federal Communications Commission was set up under the Secretary of Commerce. The Federal Communications Commission issues licences for the operation of a B. station, allocates wavelengths, and determines the strength of the station and the hours during which it operates. It can refuse to renew a licence if it is in the public interest to do so. Apart from this measure of control, B. in the U.S.A. is open to competitive private enterprise.

Later the broadcasters themselves formed an organisation called the National Association of Radio Broadcasters (now the National Association of Radio and Television Broadcasters) to protect and define good taste in presentation.

There are 4 major B. networks in the U.S.A., each of which has member stations from coast to coast. These member stations carry a certain number of network originated programmes per day, whether commercial or sustaining. The largest of these networks from the standpoint of affiliated members is Mutual Broadcasting System (M.B.S.) with 558 stations. Others are the National Broadcasting Co. (N.B.C.), Columbia Broadcasting System (C.B.S.), and the American Broadcasting Co. (A.B.C.). From the standpoint of gross advertising revenue N.B.C. and C.B.S. lead the field. N.B.C. has 194 affiliates, C.B.S. 204, and A.B.C. 338. In addition there are a number of other radio stations throughout the U.S.A. which operate independently. In July 1957 there were 3095 licensed amplitude modulation (AM), and 531 frequency modulation (FM) stations. According to figures issued in the UNESCO survey there are 127,000,000 radio sets in use in the U.S.A.

Television B. began in the U.S.A. in 1946; the network 'scheme' has been followed. On 1 Nov. 1957, 511 (including 27 non-commercial) television stations

were operating throughout the U.S.A. effectively covering over 75 per cent of the geographical area and available to over 95 per cent of the pop. In May 1957 there were an estimated 44 million television sets in use. Television in the U.S.A. operates, generally, from 7 a.m. until midnight, and sometimes as late as 1 a.m. in large metropolitan areas. The first all-colour station went on the air in Chicago in February 1956, transmitting from WNBQ (NBC/TV) 18 hours a day entirely in colour.

In addition, the U.S.A. has 22 television stations which transmit educational programmes. Some of these stations operate from funds donated to them from private grants from foundations or educational institutions.

The Amer. system of B. programmes is 'sponsored' by national advertisers, and consequently B. is entirely gratuitous to the public, while at the same time there is free competition to catch the public ear. The ann. revenue from advertisement amounts to some hundreds of millions of dollars and provides not only for the 'sponsored' programmes, but also for the 'sustaining' programmes which are produced by the B. company itself or by arrangement with cultural institutions and so on. Some stations are wholly supported by religious and educational institutions, and refrain from broadcasting advertising matter altogether. The privately owned Amer. system differs from that in force in Great Britain and the majority of European countries, where B. is financed out of revenue obtained by the State from the issue of licences for listening.

Broadcasting (Visual), see INDEPENDENT TELEVISION AUTHORITY and TELEVISION, B.B.C.

Broadmoor Institution, in Crowthorne par., SE. Berks, England, a state institution for criminal patients. It was built in 1863 and will accommodate 900 persons.

Broads, The, level dist., chiefly in Norfolk, but also in Suffolk. The B. are shallow lakes connected by 'dykes' to the rivers which intersect the country, viz. the Yare, the Bure, with its tributaries the Ant and the Thurne, and the Waveney. There is excellent yachting on the shallow broads, and the fish and wild-fowl, too, attract many holiday-makers. There is a profusion of vegetation peculiar to marshy dists. and of great interest to naturalists. Hickling (about 14 m. long) is the largest of the Norfolk B. Other Norfolk B. are W. Walsham and Coltishall—both of which are well wooded round their margins; Barton, near Stalham, the area of which is diminished by the encroachment of reeds; Horsey, which was inundated by the sea in 1938; Ormsby, Rollesby, and Filby, all contiguous to each other and not far from Caister; and Somerton. Oulton is the largest of the Suffolk B. The whole Norfolk Broad dist. is low-lying, being only 5 ft. above sea level. Hickling Broad, twice inundated by the sea, in the 13th cent. and in the reign of Charles II, is famous for a chancery suit in which a

local fisherman, as nominal plaintiff, attempted unsuccessfully to prove that the water was tidal so as to establish public rights of fishing and mooring. The famous bird sanctuary which surrounds and includes this Broad, estab. in 1910, has lately been acquired by the Norfolk Naturalists' Trust. A project recently put forward by the National Trust and the Norfolk Naturalists' Trust, had for its object the formation of a block of protected marshland covering a large area of the Norfolk B. as a home and resting-place for rare wild birds. See W. A. Dutt and others, *The Norfolk Broads*, 1903; E. L. Turner, *Broadland Birds*, 1924; J. Robinson, *Broadland Yachting*, 1928.

Broadside, simultaneous discharge of the guns on one side of a ship-of-war. This method was discarded on the introduction of iron-clad turret-ships in which the great advantages are that projectiles glance off the rounded turrets and that the weight of guns and armour is more evenly distributed.

Broadside, see CHAPBOOKS.

Broadstairs, seaside resort, on the E. coast of the Isle of Thanet, Kent, England, 2 m. by rail N.E. of Ramsgate. There are many preparatory and boarding schools, and several large convalescent homes for children. Dickens was a frequent visitor, and wrote *Black House* after his residence here. There are sev. plaques on the walls of houses at which he lived from time to time. Pop. 15,200.

Broadsword, sword with a broad, flat blade, which is generally used for cutting, but not stabbing. Much used by the Scottish highlanders among others.

Broadway: 1. Vil. of Wores, England, 5 m. from Evesham. Beautifully situated in the Cotswolds, at the foot of B. hill. Has 17th-cent. stone houses and a building said to have been the manor-house of the abbots of Pershore. Pop. 2000.

2. Busy avenue of Manhattan, New York City, U.S.A. Its N. part contains the shopping centre and theatre dist., and to the S. is the business and financial quarter.

Broadwood, John (1732-1812), b. in Berwickshire, and walked to London to become a cabinet-maker there. With the Swiss, Burkhard Tschudi (whose daughter he married), he founded the great London pianoforte house (entering into partnership with Shudi [as he later called himself] 1769, becoming sole proprietor 1782). Sev. generations of B.s have carried on the business. B.'s great-granddaughter was Lucy B. (d. 1829), collector and editor of folksongs.

Broadwood, Robert George (1862-1917), lieutenant-general, son of Thomas B., of Holmby, Sussex; entered army (12th Lancers), 1881; served Dongola expeditionary force, 1896, and in Sudan campaign, 1898. B. served in S. Africa, 1889-1902, as commander of 2nd cavalry brigade. A mounted force under him was ambushed by De Wet at Sanna's Post, a number of men and guns being captured. In 1901 B. captured Gen. A. Cronje and other prisoners, during operations in the

Free State. At the beginning of the First World War he commanded the troops in E. Anglia.

Broca, Pierre Paul (1824-80), Fr. anthropologist, b. at Sainte-Foy-la-Grande, Gironde. He studied at the Municipal College of Sainte-Foy and the École Polytechnique and Faculté de Médecine of Paris. In 1846 he became assistant in anatomy to the Faculté, and in 1853 was appointed prof. of surgical pathology. Founded the Anthropological Society of Paris, 1859; estab. the *Revue d'Anthropologie*, 1872; founded the École d'Anthropologie, 1872; member of the Legion of Honour, 1868. To him medical science owes the discovery of the seat of speech in what is commonly known as the 'convolution of B.' His most important publs. are *Des anéurismes et de leur traitement*, 1856, *L'Ethnologie de la France*, 1859, *Instructions générales pour les recherches anthropologiques*, 1865, *Instructions craniologiques et craniométriques*, 1875, and *Mémoires d'anthropologie* (4 vols.), 1871-1883.

Brocade, name given to a richly decorated fabric, with a slightly raised pattern, often woven with gold, silver, or gilt-silver threads. Oriental tissues, made in Persia and Asia Minor, especially from the 14th to 17th cent., are also called B.s. B. was made as early as the 13th cent. in Italy and Spain. The background was of heavy silk, or of some strong material with a soft silk face, on to which a flowered pattern of many colours was woven. At a later date, about the 16th cent., metallic and oriental fabrics became very popular. Now the word B. is applied to any rich material on which a raised pattern has been wrought. At the S. Kensington Museum there is a fine collection of old and modern B.s. which is of great interest to the decorative textile artist. Fine specimens may also be seen at various continental museums and exhibitions and at Dublin and Edinburgh.

Broccoli, Giovanni Battista (1772-1826), It. naturalist, b. Bassano. After holding the office of prof. of botany at Brescia he became in 1809 inspector of mines at Milan. He afterwards left Italy and went to Egypt where he held a commission as engineer, and d. at Khartoum. He wrote sev. important books, among them being *Conchyliologia fossile subapennina*, 1814, and *Dello Stato Fisico del Suolo di Roma*, 1820.

Broccoli, differs chiefly from cauliflower (q.v.) in being of harder constitution, but structurally similar. Varieties embrace white, purple, and green sprouting B., 'Calabrese', a tender form, and a branching B., known as Bouquet or Nine-star. With careful selection of varieties and sowing times, B. or cauliflower may be grown the year round. It produces its young flowers in compact heads, which are closely enveloped by leaves, and consequently become rather blanched in appearance.

Broch (A.-S. *burh*, burg; Scottish, brough, fortified enclosure), name applied to the round towers or strongholds existing in the N. and NW. of Scotland. About

five hundred are known in Caithness, Sutherland, Orkney, Shetland, and the Outer Hebrides. They were built during the Scottish Iron Age, and some at least were still in use at the time of the Norse raids. The essential features of construction are alike in all cases, though there is difference of detail. The interior diameter of the base varies between 25 and 35 ft. In the outer wall is a small doorway which is the only opening in this wall: it is defended by a small chamber within the wall on one or both sides of the entrance. There are holes for a sliding bar to guard the entrance. The ground-floor wall, which is about 15 ft thick, encloses a circular courtyard, open to the sky, in which a well is frequently

Copenhagen Univ., becoming prof. there in 1870. B. wrote a treatise on Spinoza (1857).

Brock, Sir Isaac (1769-1812), Brit. major-general, *b.* St Peter Port, Guernsey. Served in W. Indies, Holland, and Canada. In 1806 he took command of troops in Canada in view of the imminent outbreak of hostilities between Great Britain and U.S.A. With a small force he compelled the Amer. general Hull to surrender (1812). He was killed in the battle of Queenstown Heights.

Brock, Sir Thomas (1847-1922), Eng. sculptor, *b.* Worcester. Chief pupil of Foley (q.v.), afterwards his assistant. B. executed a bronze bust of Lord Leighton, 1873, and a marble one of Queen Victoria,

THE BROCH OF MOUSA

E.N.A.

found. Narrow, circling galleries, arranged in tiers, are built into the interior of the wall, and connected by a staircase from base to summit. These galleries are lighted and ventilated from the inner area or courtyard by means of windows placed in perpendicular rows, and separated from each other by single slabs of stone. No B. is complete in its upper parts, so that it is impossible to tell the original height and the number of galleries built into the inner wall; a height of about 40 ft is probable. Small, beehive-shaped chambers are built within the walls on the ground floor. The B.s often stand within an enclosure which contained round or oval huts. They were strongly defended, but there is ample evidence from their situations and from the relics found in them that the occupants were intensive farmers who were also concerned with a sea life. The B. of Mousa is exceptionally well preserved. See V. G. Childe, *Prehistoric Communities of the British Isles*, 1949 ed.

Bröchner, Hans (1820-75), Dan. philosopher. He studied theology and philosophy, and worked for some years at the

1901. Among his equestrian statues may be mentioned that of the Black Prince, set up in City Square, Leeds, 1901, and that of the Maharajahs Bahadur and Ranadip Singh for the cap. of Nepal. He designed statues of Richard Baxter (for Kidderminster, 1870), Robert Raikes (Victoria Embankment, 1888), Sir Bartle Frere (same place, 1896), Gladstone (Westminster Hall, 1902), Capt. Cook (the Mall, 1914), Rowland Hill, Sir Richard Temple (for Bombay), Sir Richard Owen, and Dr Philipott. The monument to Lord Leighton in St Paul's, and Longfellow's bust in Westminster Abbey, are further specimens of B.'s work. He designed and executed the imperial memorial to Queen Victoria in front of Buckingham Palace. Among his other works are 'The Moment of Peril,' purchased under the Chantry bequest for the nation; 'The Genius of Poetry'; 'Song,' 1891; 'Eve' (Tate Gallery). B. shows power as a portraitist; there is dignity and refinement in all his work. R.A., 1891; K.C.B., 1911; membre d'honneur de la Société des Artistes français.

Brocken, or **Blocksberg** (ancient Mons Brueterus), highest summit (3747 ft) of the Harz Mts (q.v.), in Germany. It has an interesting optical illusion, called 'the B. Spectre' (q.v.), caused by the projection of the spectator's shadow into the mist while the sun is setting. According to folklore it is the witches' meeting-place on Walpurgis-Night (see WALPURGA, ST), and here the witch scene in Goethe's *Faust* is laid.

Brocken Spectre, see ANTHELION.

Brookes, **Barthold Heinrich** (1680-1747), Ger. poet, b. Hamburg. His chief poetical works were pub. in 9 vols. as *Irdisches Vergnügen in Gott*, 1721-48. He trans. Marini's *La Strage degli Innocenti*, Pope's *Essay on Man*, and Thomson's *Seasons*. His poetry marks the transition from it. influence to that of Fr. literature. He started a simple, clear diction, and his reverential attitude towards nature and a religious interpretation of natural phenomena paved the way for Klopstock. See A. Brandl's life, 1878; also Strauss, *Brookes und Reimarus* (Gesammelte Schriften, II), 1876, and K. Lohmeyer, *Brookes in seinen Gedichten*, 1935.

Brookhaus, **Friedrich Arnold** (1772-1823), Ger. publisher, b. Dortmund, Westphalia; the founder of the well-known publishing firm of B. in Leipzig. He started business in Amsterdam, 1805, and was so successful that in 1817 he removed to Leipzig, where he combined the trades of book-printing and publishing. B. bought, 1808, the copyright of the *Conversations-Lexikon*, which had been begun by Löbel in 1796, and in 1810-11 completed the first ed. of this famous work. It was, from the first, a great success, and has been revised and kept up to date by new eds.; the 16th ed. was pub. 1952-7 at Wiesbaden; the publishing house having been removed there from Leipzig after expropriation by the Communist Gov. See A. Hübscher, *150 Jahre F. A. Brockhaus*, 1955.

Brookesby, **Richard** (1722-97), physician, b. Minehead, Somerset. He received his medical education at Edinburgh and Leyden, at which latter he proceeded M.D. 1745. He was M.D., Dublin and Cambridge, 1754, and became a fellow of the Royal College of Physicians in 1756. As physician to the army he served in Germany during the Seven Years War, 1756-63, and in 1764 pub. *Oeconomical and Medical Observations . . . tending to the Improvement of Military Hospitals*, considered the best book of the cent. on military sanitation. He settled in practice in London and attained a considerable reputation. He was the physician and friend of Johnson, Burke, and Wilkes, to the first two of whom he was also a generous benefactor.

Brockley, residential dist. in SE. London, partly in the bor. of Deptford and partly in Lewisham.

Brockram ('broken rock'), local name applied to certain breccias belonging to the Lower Permian age, which are found near Appleby, Penrith, Kirkby Stephen, and in other parts of the N. of England. These breccias consist of broken pieces of

limestone embedded in a red sandy matrix.

Brockton, formerly **N. Bridgewater**, in the co. of Plymouth, Massachusetts, U.S.A., on the New York, New Haven, and Hartford railroad, 30 m. S. of Boston. Its most important industry is the manuf. of boots and shoes (there are over 50 firms here), but it also manufs. leather goods, clothing, paper boxes, bakery products, and beverages, and has a printing industry. Pop. 62,860.

Brockville, tn on the N. shore of the St Lawrence R., and co. tn of the united cos. of Leeds and Grenville, Ontario, Canada, 72 m. S. of Ottawa. Called 'the City of the Thousand Is,' it has a fine harbour and is on the main line of the Canadian National railways, from Toronto to Montreal, and also on a Canadian Pacific branch line to Ottawa. Centre of a good dairy farm country. Has a collegiate institute and vocational school and business college. The tn owns 29 is. which are municipal parks used for camping. Industries include furnaces, hardware, electric cables, condensed dairy products, and petrol engines. The tn was founded in 1784 by United Empire Loyalists and takes its name from Gen. Sir Isaac Brock. Incorporated in 1832 as a tn with 1300 inhab. Pop. 13,560.

Brockwell Park, London recreation ground in Lambeth bor. between Tulse Hill and Herne Hill, opened to the public in 1892.

Brocomagus, see DRUMATH.

Brodhead, **John Romeyn** (1814-73), Amer. historian, b. Philadelphia, Pennsylvania; was called to the Bar at New York, but gave up his time to research in Amer. colonial hist.; was sent to Europe to gather material for the early hist. of New York; this was ed. in 15 vols. (1856-86) by O'Callaghan and Fornow. B. also wrote a *History of the State of New York* (2 vols.), 1853-71, covering the years 1609-64 and 1664-91. A third vol., planned to cover 1691-1789, was never completed.

Brodiaea, genus of cormous or bulbous plants, native to W., N., and S. America, family Liliaceae; about 30 species. Grown in gardens for their clusters of blue flowers in spring.

Brodick, vil. and watering-place of Arran, Scotland, on a bay of the same name. Near it is B. Castle, seat of the Duchess of Montrose. A steamer calls at B., Lamnish, and Whiting Bay, also at Lochranza during the season.

Brodie, **Sir Benjamin Collins** (1783-1862), surgeon, b. Winterslow Rectory, Wilts. He studied at St George's Hospital, London, to which he afterwards became assistant surgeon (1808) and surgeon (1822). He was elected fellow of the Royal Society in 1810 and awarded its Copley medal in 1811; he was president in 1858. B. was sergeant-surgeon to William IV and Victoria. He was president of the Royal College of Surgeons (1844) and the first president of the General Medical Council (1858). He wrote *Diseases of Joints*, 1818, and numerous medical papers which, with his

autobiography, were repub. in his *Collected Works*, 1865. Biography by T. Holmes, 1898.

Brodie, William (d. 1788), burglar, b. Edinburgh, the son of a cabinet-maker, who was a member of the town council; he succeeded to his father's business, was a deacon of the Incorporation of the Edinburgh Wrights and Masons, and a city councillor. He early acquired a taste for gambling, and in 1786 he became leader of a gang, which committed a number of burglaries in 1787. In 1788 they broke into the excise office, and though they escaped undiscovered, one of the gang turned king's evidence, and B. was finally arrested in Amsterdam and hanged. He is the subject of Stevenson and Henley's play, *Deacon Brodie*.

Brodie, William (1815-81), sculptor, b. Banff, but spent most of his life in Edinburgh. In 1877 he was elected secretary of the Royal Scottish Academy. He specialised in portrait busts, and numbered among his sitters Queen Victoria, whose bust executed by him is in Windsor Castle, and Sir James Simpson, of whom he executed the statue in Princes Street Gardens, Edinburgh.

Brody, tn in the L'vov Oblast of Galicia (q.v.), W. Ukraine, 50 m. NE. of L'vov. Pop. (1921) 11,000, before Second World War mostly Jewish. It was founded in 1584, and prior to the First World War was an important trading centre. Much fighting took place in 1914-16, 1920, and 1944.

Brodzinski, Kazimierz (1791-1835), Polish poet. Joined the Fr. army, taking part in the Russian campaign, 1812-13; 1826, prof. of Polish literature at Warsaw Univ. till it was closed, 1831. The idyllic poem *Wieslaw*, 1820, is B.'s chief work. He trans. the Book of Job and Schiller's dramas.

Broek, Dutch vil., with an exaggerated reputation for cleanliness, 6 m. NE. of Amsterdam, prov. of N. Holland. It has a great dairy farm. Pop. 1700.

Broekhuizen (Broukhuisus), Jan Van (1649-1707), Dutch poet and scholar, b. Amsterdam. He began as an apothecary, but forsook this employment after some years and entered the army, retiring on pension in 1697. His fame rests on his *Carmina* (Lat. poems), 1684; *Poemata*, pub. after his death in 1712; and on his eds. of Propertius, Tibullus, and Catullus. He also wrote a number of poems in Dutch on the model of Hooft, which were pub. collectively in 1712.

Brofel, Johannes, see AHO.

Brogan, Denis William (1900-), historian, b. Rutherglen near Glasgow, of Irish parentage. He was educ. at Rutherglen Academy, Glasgow Univ., Balliol College, Oxford, and Harvard. For a time he lectured on Amer. hist. at London Univ., was elected a fellow of Corpus Christi College, Oxford, in 1934, and in 1939 was appointed prof. of political science at Cambridge and elected a fellow of Peterhouse. He is one of the greatest interpreters of Amer. hist. to the Brit. people and of the Brit. outlook to Americans. During the Second World

War he was an intelligence officer with the B.B.C. and received the Legion of Honour. His works include *The American Political System*, 1933, Lincoln, 1935, *The Development of Modern France*, 1940, *The English People*, 1943, *The American Problem*, 1944, *The Era of Franklin D. Roosevelt*, 1950, *The Price of Revolution*, 1951, and *Politics in America*, 1954.

Broghill, Baron, see BOYLE, ROGER.

Broglie, de, name of a prominent Fr. family of Piedmontese origin, who emigrated to France in 1643. The founder of the Fr. line of the family, François Marie (d. 1656) distinguished himself as a soldier and became a general in the Fr. army. It was his grandson François Marie (1671-1745) who founded the ducal family, becoming both a duke and a marshal of the kingdom of France. He joined the Fr. army at an early age, taking a leading part in the war of the Sp. Succession. He was present at the battle of Malplaquet and at numerous other battles during the war. On the outbreak of war in 1733 he took part in the campaigns in Italy and was in the following year made a marshal of France. He afterwards became Governor of Alsace, and took part in the early stages of the war of the Austrian Succession (1740-8). His son, Victor François (1718-1804), was by the time his father d. recognised as one of the most promising Fr. generals. He served with distinction through the war of the Austrian Succession, but he estab. his great name as a soldier during the Seven Years War (1756-63). He took part in the whole of this campaign, and was made a marshal of France and a prince of the empire. After the war he did not take any active part in the military life of France, being in disgrace at the Fr. court, but in 1778 he was partially restored to favour and given command of the troops who were to operate against England. On the outbreak of the revolution he became an *émigré* and fought against the revolutionaries. His son, Victor Claude, Prince de B. (1757-1794), supported the Fr. Revolution, having previously fought in America, with Lafayette. After commanding the revolutionary army in Switzerland, and having been a member of the Jacobin Club and of the Constituent Assembly, he was guillotined by the Terror in 1794.

Achille Charles Léonce Victor, Duc de Broglie (1785-1870), Fr. statesman and diplomat, son of Victor Claude, Prince de B. (see *supra*). He took part in the diplomatic work of the Napoleonic empire, and was a member of the council of state. In 1814 he was invited to become a member of the Chamber of Peers by Louis XVIII. He had already had his peerage restored to him, and in 1815 he defended Marshal Ney and was the only member of his House who voted for his acquittal. In the following year he married a daughter of Madame de Staël. He took a prominent part in the politics of France between 1817 and 1830. Under Louis Philippe he was foreign minister, and signed a treaty with England. After Napoleon III's *coup d'état*, 1851, he retired from political

life and devoted himself to literary work. His literary work, while not of outstanding merit, won for him a place in the Fr. Academy.

Jacques Victor Albert, Duc de Broglie (1821-1901), Fr. writer and politician, eldest son of the above. Up to 1848 he took some active part in diplomatic missions, serving both in Madrid and Rome. The revolution of 1848, however, drove him from political circles, and he devoted his time to literature, being in 1862 elected a member of the Fr. Academy. In 1871 he again entered active politics and was for a short time Fr. ambas. in London. Hostile criticism led him to resign that post, and he re-entered the Chamber of Deputies. In 1873 he became president of the council and minister for foreign affairs, and later minister of the interior. In 1877 he again became premier, but was almost immediately forced to resign. After 1877 he devoted himself to literature and wrote a number of historical studies. Among his most important works are *Frédéric II et Louis XV*, 1885, and *Voltaire avant et pendant la Guerre de Sept Ans*, 1898.

Louis Victor, Prince de Broglie (1892-), Fr. scientist, b. Dieppe; youngest child of Victor, fourth prince and fifth duc de Broglie. Like his elder brother, the sixth duke, he has devoted himself to physical science, and at the age of 30 he produced a thesis on the 'wave-like' properties of matter. Since 1928 he has been prof. of theoretical physics at Paris Univ. In 1929 he was awarded the Nobel prize for physics, for his discovery of the undulatory nature of electrons. He became a member of the Fr. Academy in 1944; and a foreign member of the Royal Society in 1953. Pubs. include *Ondes et Mouvements*, 1926, *Conséquences de la relativité dans le développement de la mécanique ondulatoire*, 1933, *Une Nouvelle théorie de la lumière*, 1940, *De la mécanique ondulatoire à la théorie du Noyau*, 1943, and *Physics and Microphysics* (trans. Dr M. Davidson), 1955.

Brogue (Gaelic *brog*), originally a shoe made of coarse hide or half-tanned leather, formerly worn by the native Irish and the Scottish highlanders, now used of a style of rather stout shoe laced over the instep with ornamental punching on the winged toe-cap. The word is also applied to the pronunciation of English peculiar to the natives of Ireland.

Broiling, see COOKERY.

Broke, Sir Philip Bowes Vere (1776-1841), rear-admiral, was b. Broke Hall, near Ipswich. He entered the navy in 1792, and was made captain of the frigate *Shannon* in 1806. On 1 June 1813 he fought his famous duel with the Amer. frigate, *Chesapeake* (q.v.), and succeeded in flying the Brit. colours on the enemy's mast after fifteen minutes' fierce struggle. B., however, received a wound which permanently disabled him, and was obliged to retire from active service. He received a baronetcy in 1813, and two years later was created K.C.B.; promoted to the rank of rear-admiral in 1830. See his life by Dr Brighton, 1866.

Broken Hill: 1. Tn of N. Rhodesia, with an important mine of same name producing lead, zinc, and vanadium. It is a railway centre. Pop. (Europeans) 5000; (Africans) 40,000.

2. Mining city of Yancowinna co., New S. Wales, Australia, near the border with S. Australia, 700 m. W. of Sydney. It is the richest silver-mining centre of the continent to which Sturt referred in 1845 as a worthless country. Situated in a hot, arid area, only its prodigious mineral wealth has enabled B. H. to develop into a prosperous and comfortable city. The prin. minerals produced are silver, lead, and zinc. Pop. 32,000.

Broken Hill Proprietary (or B. H. P.), Australia's one large-scale heavy industry before the Second World War, and still by far the largest. Since the previous war it had developed at Newcastle, New S. Wales, the largest steel works in the Brit. Empire, and also a second plant at Port Kembla, 150 m. S. of Newcastle. In 1954-5 these 2 plants produced 2,162,000 tons of ingot steel. Port Kembla is now the larger of the 2 plants. The remarkable story of B. H. P. began in 1883, when a boundary rider working on a sheep station discovered traces of silver-lead in a corner of the station now known as Broken Hill. He induced 6 other men, including the station owner, to gamble \$100 each on his proposal to develop the mine which he surmised to be there. The mine, in fact, turned out to be exceptionally rich. In 1885 the B. H. P. Co. was formed; in 1886 it paid dividends at the rate of 63½ per cent, in 1888, 126 per cent, and in 1937 it was still paying 120 per cent. In 1889 the company found difficulty in getting high-quality iron-stone for its smelters, and so leased some neglected iron deposits in Spencer Gulf, S. Australia, and exploited these for 10 years, but only to provide iron for fluxing purposes. When, in 1911, the company saw that the prospects for non-ferrous mining at Broken Hill were limited, they turned their attention to the production of steel and, on the coal-fields of Newcastle, New S. Wales, began to build what was to become the largest steel plant in the Brit. Empire. Since 1935, when it absorbed its last possible competitor, it has enjoyed a monopoly in Australia. It controls the materials used in its processes; produces its own iron, limestone, dolomite, fluorspar, and coal; has built a plant to handle alloys; and owns the shipping required to move its materials to Newcastle, especially the iron ore from S. Australia. It is closely interlocked with workshops producing black and galvanised sheets, barbed wire, nails, wheels, axles, and so on through the role of steel-processing industries. In association with General Motors Holden Ltd, a partly Amer. concern, and the B. H. Associated Smelters Proprietary of Port Pirie, it began, in 1937, the biggest aircraft development in the hist. of Australia—a project of very great value to Australia when war broke out. B. H. P. is also interested in gold-mining. It is the prin. Australian

ally of Imperial Chemical Industries. B. H. P., as has been well said, 'sits at the centre of capitalistic power in Australia, a vertical and horizontal trust, and a holding company, and it certainly wields a good deal of political influence' (*Advance, Australia—Where?*, by Brian Penton, 1913).

Broken Knees, condition to which horses are liable after a fall upon what is called the knee-joint. The joint, however, corresponds to the wrist in man, and is composed of a number of delicately jointed bones. If the forelegs of a horse give way, it is apt to fall upon this joint, causing more or less severe injury. If only an abrasion of the skin occurs, the wound will cause little trouble, but if the sheath of the tendon is injured, or if the bones of the joint are fractured, healing is a slow process, and is likely to be accompanied by fever. Even when the treatment is successful and healing takes place in such cases, the action of the animal is likely to be impaired. See also HORSE, Diseases.

Broker, agent employed to negotiate bargains and contracts, sales and purchases of goods or services for a fee called brokerage. A B. does not act in his own name, nor does he have the custody of the goods about which he negotiates; he cannot sell the goods publicly; no personal liability attaches to him for the goods in which he deals. A B. usually specialises in one market, thus acquiring knowledge which gives him an advantage over the general merchant or private buyer or seller. As well as ordinary commercial B.s, there are stockbrokers (see STOCK EXCHANGE); insurance B.s, who effect general and marine insurance policies; bill-brokers, who buy and sell bills of exchange and promissory notes, making a profit on the difference between the discount at which they have bought or sold the note and the interest at which they have borrowed to effect the deal (in this kind of transaction they act not as agents but as principals, and are not therefore bill-brokers in the older sense of that term, which meant agents who, for a commission, discounted bills in London on behalf of country bankers); shipbrokers, who procure goods on freight or charter for outward-bound ships and clear vessels at the customs (as well as acting as insurance B.s); and pawnbrokers (q.v.), whose business is to advance money on goods pledged as security for the loan. See also COMMISSION. See Sir Oscar Hobson, *How the City Works*, 1956.

Brokerage, fee or commission given by a principal to a broker or mercantile agent as payment for a bargain concluded by him.

Bromal (CBr_2COH), yellow oily liquid formed by the action of dry bromine on alcohol. It boils at 172° and unites with water to form a solid hydrate, melting at 43° . It is decomposed by alkalis into formic acid and bromoform. The hydrate is used in medicine as a hypnotic, i.e. to produce sleep, in doses up to 5 grains, but its use is usually accompanied by gastric

disturbances. In larger doses it has a dangerous poisonous action upon the heart.

Bromberg, see BYDGOSZCZ.

Bromborough, see BEBINGTON.

Brome, Alexander (1620–66), Brit. poet, was an attorney by profession. Besides publishing a vol. of *Songs and other Poems*, 1661, in which he freely satirised the Stump Parliament, he tried his hand, as was the fashion, at elegies, epigrams, and trans.

Brome, Richard (d. 1652), Brit. dramatist. Little is known of his early life. It is certain, however, that he acted as a servant to Ben Jonson, from whom he acquired much of that writer's style and ability. Jonson himself referred to him in his lines 'To my faithful servant and most loving friend.' B. wrote for the Globe and Blackfriars theatres, and for the Cockpit in Drury Lane. His best-known plays include *The Northern Lass* 1632, *The Antipodes*, *The City Will*, *The Sparagus Garden*, 1635, and *A Joviall Crew*, 1641. He also collaborated with Thomas Heywood in *The Late Lancashire Witches*, 1634. A good notice of B. is to be found in Ward's *English Dramatic Literature*, 1875 (vol. II).

Brome-grass is the name of various species of true grasses belonging to the genus *Bromus*, occurring in temperate climates. Sev. species are common annuals in Britain, but they are of no value to the farmer. *B. secundinus* grows in fields, *B. racemosus* in meadows, *B. sterilis* and *B. mollis* in hedgerows. Some species of *Brachypodium* are called false B.

Bromeliaceae, family of monocotyledons, about 1000 species, native to tropical America; many epiphytic, others tree-like plants, with showy inflorescences and berry or capsule fruits. Genera include *Acanthostachys*, *Ananas*, *Billbergia*, *Bromelia*, *Canistrum*, *Portia*, *Dieckia*, *Hechtia*, *Pitcairnia*, *Puya*, *Tillandsia*, and *Vriesea*.

Bromfield, Louis (1896–1956), Amer. novelist, b. Mansfield, Ohio. He was educ. at Cornell and Columbia Unives. During the First World War he served with an Amer. ambulance attached to the Fr. Army from 1917 to 1919, receiving the Croix de Guerre. He won immediate notice with his first book, *The Green Bay Tree*, in 1924. *Early Autumn* won the Pulitzer Prize of \$1000 for the best piece of Amer. fiction in 1926, and *The Strange Case of Miss Annie Spragg*, 1928, consolidated his position as a writer of note. Other novels are *The Rains Came*, 1938, *Night in Bombay*, 1940, *Until the Day Break*, 1942, *Mrs Parkington*, 1943, and *Mr Smith*, 1951. Collections of short stories are *It had to Happen*, 1936, *It Takes all Kinds*, 1939, *Mainbar Farm*, 1948, and *Out of the Earth*, 1950.

Bromic Acid (HBrO_3), monobasic acid formed by passing chlorine into bromine-water; or by the action of dilute sulphuric acid in barium bromate; or by adding bromine to a strong solution of silver bromate. The acid is known only in its aqueous solution, forms salts called

bromates, and decomposes at 100° C. into water, oxygen, and bromine.

Bromide of Potassium (KBr), colourless or white crystalline solid prepared by the action of bromine on potassium hydroxide solution. It is used in medicine as a sedative in conditions such as epilepsy, delirium tremens, hysteria, sleeplessness, and anxiety states. Its excessive use leads to a condition called bromism, or brominism, characterised by skin eruptions, growing muscular and sexual weakness, mental dullness and feebleness, leading to extreme depression and melancholia. In photography B. of P. is used as a restrainer, and as a source of silver bromide for the sensitive film.

Bromine (symbol Br, atomic weight 79.916, atomic number 35), element, was discovered by Balard of Montpellier in 1826 in the mother-liquor obtained after the crystallisation of salt from concentrated bittern (salt water from the marshy dists. of Bouches-du-Rhône), and has since been found to exist in all sea-water and in most mineral waters and salt springs. It derives its name from *Gk bromos*, signifying stench, in allusion to its unpleasant smell. B. is at ordinary temps. a volatile, heavy, mobile liquid of a reddish-brown colour, giving off reddish-brown vapour and boiling at 59° C. The vapour when inhaled dilute resembles chlorine in smell and in attacking the throat and nose, but in addition it has a very harmful effect on the eyes. The liquid is very poisonous and produces burns on the skin. It is slightly soluble in water, the solution being known as bromine water, which has a slight bleaching action, and is used in analytical chem. for oxidation purposes. The presence of a salt of B., i.e. a bromide, can be detected by passing chlorine through the solution, when B. is liberated, and can be dissolved out by ether. It turns starch yellow. B. is one of the family of elements called halogens (sea-salt producers) owing to the similarity of their sodium salts to sodium chloride. The members are fluorine (F 19), chlorine (Cl 35.457), B. (Br 79.916), and iodine (I 126.92). They are very similar in properties, and show a gradation of properties corresponding to the gradation of atomic weights. They are univalent, and severally displace one another thus: fluorine displaces chlorine, B., and iodine, chlorine displaces B. and iodine, B. displaces iodine—from their salts. The properties of B. are intermediate between those of chlorine and iodine. Thus at ordinary temps. chlorine is a gas, B. a liquid, and iodine a solid. Chlorine and hydrogen unite slowly in daylight, but violently in direct sunlight, hydrogen and B. need to be heated to unite, while hydrogen and iodine combine only partially. The chief source of B. is the crude carnallite in the saline deposits of Staßfurt in Prussian Saxony and of the U.S.A. This substance contains B. combined with magnesium, the magnesium bromide forming 1 per cent. of the magnesium chloride in the crude deposit. The B. is liberated from the bromide by chlorine, which is separ-

ately generated. The hot mother-liquor flows down a tower filled with earthenware balls, and meets an up-current of chlorine. B. is liberated, and the vapour passes up out of the top of the tower into a worm, where it is condensed. The condensed vapour as it leaves the worm is collected in a bottle, while any uncondensed vapour passes into a tube of moist iron filings, where it forms iron compounds and none is wasted. Electrolytic methods have been employed for B. production, as it is found that on the electrolysis of the mother-liquor all B. comes off before any of the chlorine. In the U.S.A. B. is extracted on a very large scale from sea-water, which is acidified with sulphuric acid and then treated with chlorine. The prim. use of B. is in making ethylene dibromide, $C_2H_4Br_2$, a constituent of ethyl petrol. By passing hydrogen and B. through a hot platinum tube, hydrogen bromide, or hydrobromic acid gas (HBr) is produced, also by the action of B. on slightly moistened red phosphorus. It is a colourless, pungent-smelling gas which, when dissolved in water, forms a liquid strongly resembling aqueous hydrochloric acid. It reacts with metallic oxides, hydroxides, and carbonates to form bromides, salts which are widely used in photography, especially the bromide of silver.

Bromley, Sir Thomas (1530–87), judge. As crown counsel he prosecuted the Duke of Norfolk for treason. He succeeded Bacon as lord high chancellor. He delivered the classic judgment in Shelley's case (q.v.), and signed the warrant for the execution of Mary Queen of Scots.

Bromley, William (1769–1842), line engraver, became, in 1819, associate engraver of the Royal Academy. Besides being a constant exhibitor at the Royal Academy, he spent many years engraving the Elgin Marbles, after G. Corbould's drawings. Some of his better known works are 'Death of Nelson,' after A. Davis; 'Duke of Wellington,' after Sir Thomas Lawrence; and 'Woman taken in Adultery' (Rubens).

Bromley: 1. Municipal and parl. bor. of Kent, England, 10 m. from London, on the R. Ravensbourne. The fine Gothic church, containing monuments of sev. of the Bishops of Rochester, destroyed by enemy action in World War II, is being rebuilt. B. College provides endowed homes for 40 clergymen's widows. B. high school (founded 1883) is a public day school for girls. Bickley and Hayes are residential dists and the vil. of Keston is now incorporated in the bor. Pop. 64,800.

2. Dist. near Bow (q.v.), E. London. It contains a fine Tudor manor house.

Bromoform, or Tribromomethane ($CHBr_3$), bromine analogue of chloroform, is a clear, heavy liquid (sp. gr. 2.77) turning red on standing, owing to formation of bromine; discovered by Lowig in 1832, but its true nature discovered by Dumas. It is produced by adding bromine to alcohol or to an alcoholic solution of caustic potash. It is decomposed on boiling with caustic potash to

potassium bromide and potassium formate. B. smells and tastes like chloroform, and because of its high density it is used in separating-processes in mineralogy.

Brompton, residential dist. of Kensington, London, between Knightsbridge and Chelsea. It contains the B. Oratory (served by priests of the order of the Oratory of St Philip Neri), the Imperial Institute, S. Kensington Museums, and a hospital for consumptives.

Brömsebro, vil. in Sweden, 29 m. S. of Kalmar, near the mouth of the Brömse. Treaties were signed here between Denmark and Sweden in 1541 and 1645.

Bromsgrove, mkt tn of Worcs, and 13 m. SW. of Birmingham. It is situated in a pleasant, well-wooded country, has an Edward VI grammar school, and a fine church in the Decorated Eng. style. Minor industries are carried on. Pop. 28,550.

Bromus, see BROME-GRASS.

Bromwich, West, see WEST BROMWICH.

Bromyard, small mkt tn in Herefordshire, England, 10½ m. ESE. of Leominster. Pop.: urb. dist. 1695; eccles. dist. 2700.

Bronchi, main branches of the trachea. The trachea divides into the right and left main bronchus. These, ringed with cartilage in the same manner as the trachea, are the main air pipes into the right and left lungs respectively. The right bronchus is slightly larger than the left. The main B. split up into smaller B., and these in turn into minute end branches, or bronchioles, which terminate in the air cells of the lung tissue (see LUNGS). The bronchial system is exactly similar to the branching of a tree, and

BRONCHI

A, a bronchiole opening into two collections of air-sacs. B, the arrangement of the blood-vessels which lie underneath the epithelial lining (not shown) of two air-sacs.

because of this is known as the bronchial tree. The epithelium lining the larger tubes is ciliated, i.e. has spontaneously moving filaments, and these cilia sweep the secretions of the lungs and bronchial system always onwards and upwards towards the trachea, from where they are cleared from time to time by coughing. Bronchial tubes may become blocked either by superabundant secretions from inflammatory conditions, or by a growth or by a foreign body, in which case the section of lung supplied by the blocked tube is cut off from the air and collapses. It will remain

so unless or until potency of the tube is restored.

Bronchitis, inflammation of the bronchial tubes. Acute B. may be caused by infection from one or more of many organisms either already present in the system or conveyed from an external source, or may occur as an extension of an infection of the upper respiratory tract. It may also be caused by the inhalation of irritating substances such as gases or dusts, but in these cases secondary bacterial infection always occurs. The inflamed epithelium of the bronchial tubes secretes more mucous and this is coughed up as sputum, but owing to the inflammatory thickening of the lining of the tubes and their consequent narrowing, the secretions are often difficult to get rid of. The drainage is defective and so to cough is unproductive. B. is sometimes classified as B. or bronchiolitis according to whether the inflammation is in the larger or smaller tubes. This classification is largely theoretical, because the respiratory tract is continuous, and it is impossible to say from examination just where inflammation ends. In certain parts it may even extend beyond the bronchioles into the air cells, causing localised patches of pneumonia, while at others it may stop in the larger tubes. Therefore it is more usual now to refer to acute respiratory infection without attempting a precise anatomical definition of the extent of the infection. *Chronic B.* results from repeated or persistent inflammatory episodes in the bronchial tubes so that eventually they and the lung tissues are disorganised anatomically and functionally. Fibrous tissue takes the place of normal tissue, gaseous exchange is restricted, the sufferer is permanently short of breath and liable to acute exacerbations of his chronic condition. Industrial occupations which involve the inhalation of certain harmful dusts are predisposing causes of a chronic B. and fibrosis, called pneumoconiosis. We have also, for example, the anthracosis (q.v.) of coal-miners, the silicosis (q.v.) of quarry-workers and stone-masons, and the byssinosis (q.v.) of cotton operatives.

Bronchocele, diverticulum, or small blind passage, leading from a bronchus.

Bromesbury, dist. of London, near the W. boundary of Hampstead, in the urb. dist. of Willesden (q.v.).

Brongniart, Alexander (1770-1847), eminent Fr. chemist and mineralogist, b. Paris, the son of an architect. In 1797 he was appointed prof. of natural hist. at the Collège des Quatre Nations. Three years later he became director of the porcelain factory at Sèvres, which under his management became known far and wide for its work. He did not abandon purely scientific studies, and it was he who proposed the div. of reptiles into the 4 classes of Saurians, Batrachians, Chelonians, and Ophidians. Among his most notable works were his *Traité des arts céramiques* and the *Description géologique et minéralogique des environs de Paris*, in which he collaborated with Cuvier. He d. in Paris on 7 Oct.

Broni, It. tn. in Lombardy (q.v.), 10 m. SE. of Pavia (q.v.). It has a castle and a collection of incunabula. Pop. 7000.

Bronkerspuit, streamlet in the Transvaal, 40 m. from Pretoria, scene of a Boer ambush in the S. African war, 1880. After refusing to surrender, 56 men were killed and 101 wounded. It is still a matter of argument whether this was a 'justifiable attack or a treacherous massacre' ('Times' History of the Boer War, vol. i).

Bronn, Heinrich Georg (1800-62), Ger. geologist, was b. Ziegelhausen, near Heidelberg. His *Index Palaeontologicus* contains a record of fossils that has proved of great service to palaeontologists. He was successively prof. of physics and lecturer on zoology at Heidelberg Univ.

Bronstein, Lev Davidovich, see TROTSKY.

Brontë, Charlotte, Emily, and Anne, novelists and poetesses, were 3 gifted members of a singularly unfortunate family. Of the 3, Charlotte was long regarded as the most brilliant, and her work gained her a place among the leading novelists of her time; but Emily's *Wuthering Heights* is a story of remarkable realism and imagination. Anne had not the intellectual force of her sisters. Their strength and originality have kept for them a leading place in Eng. fiction which seems likely to prove permanent. Their father, the Rev. Patrick B., was Irish, their mother, Maria Branwell, a native of Cornwall. The 2 eldest children of the marriage, Maria and Elizabeth, were b. at Hartshead in Yorks; the rest, Charlotte (1816-55), Patrick Branwell (1817-48), Emily (1818-48), and Anne (1820-49), at Thornton, near Bradford. In 1821 the family removed to Haworth, in Yorks, to the living of which Mr B. had been presented. In this lonely place, on the border of the bleak Yorks moors, the children spent their youth. Their father was naturally of an austere disposition, and this was intensified by the death of the mother in 1821. Henceforward he spent most of his time in his own room, and allowed the household management to be in the hands of his eldest child, a girl of 8. This loneliness encouraged the children in imagining stories, and so we find them all interested in production of a juvenile magazine, Charlotte being specially versatile. In 1824 the girls were sent to a school for the daughters of clergymen, recently opened at Cowan's Bridge. Charlotte has described it as Lowood in *Jane Eyre*, and herself declared that her account was in no respect exaggerated. The B.s suffered intensely, and in 1825 the 2 eldest girls were removed, and both d. soon after their return home. The younger girls left the school in the autumn of the same year, and on Charlotte in turn devolved the duty of superintending the home and the younger children. She stayed at Haworth until 1831, and then went to a school at Roe Head house, where she later became a teacher, and spent some of the happiest years of her life. Again we have references to this period in *Jane Eyre*. Some

of the acquaintances made now became her lifelong friends. In 1835, however, her health gave way, and she had to resign her post. An aunt suggested that the sisters might attempt a small private school, since Charlotte found that the position of governess in a private house was quite unsuited to her. It was impossible to contemplate this without having some knowledge of French, and so from 1842 to 1844 Emily and Charlotte resided in Brussels. The period seems to have had little effect on the younger sister, as far as her subsequent literary work was concerned, but Charlotte studied not only the language, but the people, to be repro-

CHARLOTTE BRONTË

duced afterwards in living characters in *Villette*. During their separation, while Charlotte was in Brussels, and Anne in a situation as governess, they had been quietly pursuing their favourite occupation; and in 1845 they seem to have first discovered each other's poetical efforts. In the following year they issued a vol. of poems, by 'Currer, Ellis, and Acton Bell,' each one keeping her own initials. The little book was almost ignored, though what notices it did receive were not unkind. There is little real genius in it, with the exception of a number of pieces by 'Ellis Bell.' The young writers, however, were not discouraged, but forthwith each proceeded to write a novel. Charlotte's was *The Professor*; Emily's *Wuthering Heights*; Anne's *Agnes Grey*. The work of the 2 younger sisters was accepted; Charlotte's was rejected on the ground that the plot was too slight, but favourable consideration was promised to a longer novel. Nothing daunted, she began *Jane Eyre*, which was accepted in

1847. The success of the book was extraordinary. Charlotte had not cared for it, since its sensational plot was, she thought, unsuited to her powers. But the unusual characterisation, the masculine force of expression, and the powerful use of dramatic situations, took the reading world by storm. The name and personality of 'Currer Bell' were eagerly canvassed; but it was not until the pub. of her second book, *Shirley*, that the secret was revealed. In *Jane Eyre*, and later in *Villette*, she had made a more or less faithful autobiographical study. In *Shirley* (1849) she attempted to portray the character of her sister Emily. It abounds in humour, and is a delightful story, but it is said that she was deeply wounded by the reviews passed upon it. In the year between *Jane Eyre* and *Shirley* she had been passing through the most tragic period of her life. For years the only brother, Branwell B., had been a trial to his sisters. He was certainly not so gifted as they, and it has been said in his defence that the austerity of the Yorks parsonage and the melancholic tendencies of his sisters were enough to excuse much. Certain it is that when Charlotte returned from Brussels she found him a hopeless alcoholic, and the succeeding years, to his death in Sept. 1848, marked only a decline in his manhood. In Dec. of the same year, the brilliant but morbid genius Emily followed, and in 1849 the gentle Anne. Charlotte alone was left of the whole family. The fame which had disclosed her name in 1849 brought her many friends, and gave her the passport to the best literary society of London, but her retiring nature led her to prefer life in the N. country. In 1853 appeared *Villette*, her most charming story, showing her excellences and defects more plainly than either of the others. It is a better study of herself than *Jane Eyre*, and its quiet, delightful humour is more evident. 'Monsieur Paul Emmanuel' is her best creation, while her description of her school-teaching experiences is marked by shrewd characterisation. In 1854 Charlotte married Arthur Bell Nicholls, the curate of Haworth. He proved a kind partner, although he was opposed to the continuation of her literary work. She seems to have spent the last year of her life very happily. The usual comparison with Jane Austen is almost inevitable in connection with Charlotte B.'s work, since there is so evident a similarity between. Both were careful artists in words, and both were more at home with everyday types of humanity than with wild adventure. Both were rather portrait-painters than makers of plots. On the other hand, Jane Austen is far more a novelist of the ten-table than Charlotte B. The latter had far more dramatic power and more vigour; her work was, in a word, more ambitious than that of the earlier writer. Jane Austen wisely confined herself to the parlour and parlour topics; Charlotte B., if she did not range much further afield, yet shows a power of dramatic suggestion which is quite unlike anything in *Pride and Prejudice* or its

companions. Emily B.'s genius was of a more gloomy nature than that of her sister. *Wuthering Heights* (1847) is an extraordinary piece of work, one which fascinates by its strange wildness of treatment. Her characters may be unreal and strained, but the spirit of the bleak moor has seldom been better expressed. Her poetry, apart from her celebrated 'Last Lines', and 'The Old Stoic', gives little indication that she was one of the band who 'sing because they must.' Anne, the youngest, was the gentlest if least intellectual. Her 2 novels, *Agnes Grey*, 1850, and *The Tenant of Wildfell Hall*, 1848, are far weaker in treatment and texture than any of her sisters' work, her poetry, also, being below the average of that of Emily B.

There is a memorial to the B. sisters in Westminster Abbey, London, bearing the final line from Emily's 'Old Stoic': 'With courage to endure.' The 1932 ed. of the collected works of the B. sisters was ed. by T. J. Wise and J. A. Symington, in 20 vols. This includes, besides the novels and poems, life and letters (4 vols.), unpublished works (2 vols.), and a vol. of bibliography. See also C. K. Shorter, *Charlotte Brontë and her Circle*, 1896; C. Brontë and her Sisters, 1905, and *The Brontës: Life and Letters* (2 vols.), 1908; May Sinclair, *The Three Brontës*, 1912; B. E. Dimnet, *The Brontë Sisters*, 1924 (trans. from Fr. ed., 1910); I. C. Clarke, *Haworth Parsonage, a Picture of the Brontë Family*, 1927; E. F. Benson, *Charlotte Brontë*, 1932; E. M. Delafield, *The Brontës: their Lives recorded by their Contemporaries*, 1935; G. E. Harrison, *Haworth Parsonage, a Study in Wesley and the Brontës*, 1937; F. E. Ratchford, *The Brontës' Web of Childhood*, 1941; P. Bentley, *The Brontës*, 1947; Laura T. Hinkley, *The Brontës: Charlotte and Emily*, 1948; M. Lane, *The Brontë Story*, 1952; M. Spark and D. Stanford, *Emily Brontë*, 1953. For juvenilia of Charlotte B., see Fannie E. Ratchford, *Legends of Angria*, a compilation from early writings, 1933.

Bronte, tn in Sicily (q.v.), at the W. foot of Mt Etna (q.v.), 24 m. NW. of Catania (q.v.). It has sev. fine churches. The dist. produces wine, nuts, and olive oil, and there are woollen and paper manufs. Nelson (q.v.) was created Duke of B. in 1799 by Ferdinand I of Sicily. Pop. 20,000.

Bronx, The, formerly a dist. in Westchester co., New York; since 1898 northernmost of 5 bors. of New York city. Bounded by Harlem, Hudson, and East Rrs., and Westchester co. Area 41 sq. m. Contains B. Park, with its fine zoological and botanical gardens. Pop. 1,451,280.

Bronze, one of the earliest known alloys, formed of copper and tin in varying proportions, and often containing lead and zinc, together with small quantities of manganese, iron, and silicon. It is harder, more fusible, and less malleable than copper. The prin. varieties are gun-metal (q.v.) containing up to 10 per cent of tin and zinc and up to 5 per cent of lead; bell-metal (q.v.), up to 30 per cent

tin; phosphor B., up to 10 per cent tin and 0.5 per cent phosphorus; statuary-B., of which a representative composition is copper 78.5 per cent, tin 2.9 per cent, zinc 17.2 per cent, lead 1.4 per cent. Brit. B. coins are copper 95 per cent, tin 4 per cent, and zinc 1 per cent. B. is also used in machinery bearings and for pump-plungers, etc. See H. C. Dewa, *The Metallurgy of Bronze*, 1930.

Bronze Age. The, one of the 3 main stages in the worldwide development of prehistoric man based on the tools, implements, and weapons which he used. The scheme was first put forward in Denmark by J. C. Thomsen (see PREHISTORY) and later developed by Brit. and Fr. archaeologists. The B. A. was not a simultaneous phenomenon the world over. The use of the metal originated in Hither Asia, and its use, together with the great benefits in agriculture and general trade which it conferred, gradually spread to those regions where ore could be obtained under suitable conditions, and to areas such as Egypt and Mesopotamia where an organised trade was already in existence. In Europe, the Iberian peninsula and Ireland became important as centres of production.

In the Early B. A. in Britain, and against the background of the Neolithic and the Beaker Folk (q.v.), 2 cultural provs. are outstanding. In N. England, especially in Yorks, SW. Scotland, and Ireland, a characteristic thick and heavy pottery has given its name to the Food Vessel Culture, which seems in many places to have been a continuation of that of the Beaker Folk. It depended largely on sheep-raising and barley-growing, but by reason of its geographical situation, this prov. also took an important part in the metal trade between Ireland and the Continent. The people were of a distinct brachycephalic physical type. They wore woollen dresses which buttoned down the front. Little bronze was used, although the halberd was an important weapon, but there was a brisk trade in jet ornaments and in plano-convex knives of flint. In the food vessels themselves there is often more than a hint of Neolithic Peterborough pottery. The cultural prov. centred in Wessex between c. 1500 and 1400 B.C. derived much wealth from its agriculture and pastoralism. It was in profitable trade communication with central Europe and the E. Mediterranean on one hand, and with the gold-producing areas of Ireland on the other. It imported stone battle-axes and amber trinkets from Scandinavia, developed the socket as a mounting for weapons, and buried its cremated dead under large round barrows. (See BARROWS.) The Wessex Culture was ruled by aristocratic chieftains who were able to exchange their agric. wealth for the luxuries brought in by foreign trade.

The Middle B. A. saw the extended use of cremation, and the development of a special type of ceramic known as the 'overhanging rim' urn, together with the manuf. of the bronze rapier, palstave, and spearhead with loops on the socket. The

Urn Culture folk were still agriculturalists and pastoralists on a large scale; sheep-raising was widespread, and the economy was further supported by hunting. Many burials but few settlements are known, and an outstanding feature of the period is the construction of circular monuments of wood and stone which betoken a great ceremonial ritual. The Urn Culture saw a long survival in the highland region where it lasted until the Early Iron Age.

The Late B. A. in Britain is remarkable for a great development in the use of metal for tools, weapons, utensils, and such outstanding objects as shields, and musical trumpets based on the form of a cow's horn. Technique was at an advanced level, and many hoards of bronzes, which include smith's gear, broken goods, and foundry metal, point to the great importance of the itinerant smith. Such workers brought into Britain new types of bronzes from the Continent, among them the heavy slashing sword with leaf-shaped blade. The folk movements, of which this probably formed a part, introduced into S. England at least, about 800 B.C. new ideas in farming based on the use of the animal-drawn plough, and new styles of pottery known from their prin. places of discovery as Deverul-Rimbury urns. Earthworks on the downs of Wilts and Dorset have been identified as cattle ranches used at this time. Towards the very end of the B. A., say from 600 B.C. onwards, some forerunners of the Early Iron Age peoples began to appear sporadically in Britain, and in current archaeological thought the B. A. is said to terminate at about 450 B.C.

There is no convenient synthesis of B. A. material in Britain and the Continent, and what is said here must be regarded as no more than the briefest of outlines subject to modification as current research progresses. See ARCHAEOLOGY; BEAKER FOLK; IRON AGE; PREHISTORY; STONE AGE.

See Stuart Pigott, *British Prehistory*, 1949, Ch. III; Jacquetta Hawkes, *Guide to the Prehistoric and Roman Monuments in England and Wales*, 1951; Brit. Museum, *Later Prehistoric Antiquities of the British Isles*, 1953.

Bronze-wing is a name applied to many Australian species of the pigeon family Columbidae. *Phaps chalcoptera* is the common B., *P. elegans*, brush B., and *Ocyphaps lophotes*, crested B.

Bronzing, name given to various processes by which a bronze-like or other metallic surface is given to objects of metal, plaster, or wood. Plaster figures are made to have an appearance of old bronze by first painting green with paint mixed with shellac and then painting over with bronze powder, especially the more prominent parts. This bronze powder consists of finely divided brass, copper, aluminium, or other metal to which a particular depth of shade has been given by oxidation. New metal articles are made to have the green appearance so admired in bronze antiques by brushing over with a solution of sal-ammoniac and salt of sorrel boiled in vinegar. Again, metal

articles can be made almost any colour by immersions in suitable solutions such as platinum chloride. In printing, the design is printed with shellac instead of ink and the sheet treated with bronze powder, any surplus being brushed off carefully.

Bronzino, Il (Angelo Allori) (1503-72), It. painter, of the Florentine school, b. Monticelli, pupil of Jacopo da Pontormo (q.v.). Portrait-painter at the court of Cosmo I, Duke of Tuscany. Other works are 'The Descent of Christ into Hell,' in the Uffizi Gallery, Florence, and the magnificent allegory, 'Venus, Cupid, Folly, and Time' (National Gallery) in which he rose above his normal dignified level to greatness.

Bronzite, crystalline mineral with lustre giving it a resemblance to bronze. It is classed as a pyroxene of the rhombic section and is similar in composition to enstatite (which is magnesium silicate), but in addition contains 5 to 14 per cent of protoxide of iron. It is the sixth and most infusible mineral on Von Kobel's scale of fusibility, being fusible only in very small flakes before the blow-pipe. It is very slightly pleochroic and is foliated. Its presence is fairly common in igneous rocks.

Brooch (from Fr. *broche*, an awl or bodkin), ornamental dress-fastening, usually consisting of a disk or a semi-circle, with a fastening of the safety-pin type (*fibula*) attached to it. B.s. are of great antiquity, and were once worn by men as well as by women. The earliest B.s. were of bronze, and were often crude representations of animals. The early B.s. of Scotland and Ireland were of the ring shape, and often displayed rich ornamentation and fine workmanship. Sev. admirable examples are preserved among the highland families of Scotland, while one of the best Irish examples of these old Celtic B.s. is the Tara B. in the museum of the Royal Irish Academy, Dublin. Finds of Romano-Brit. and A.-S. work are skilfully enamelled. Early B.s. have also been found in Scandinavia and parts of S. and central Europe, where they seem to have originated.

Brook, Olive (1891-), actor, b. London. He served in the First World War and then went on the stage, playing his first part, in the provs.: Philip Evans in *Fair and Warmer*. He first appeared in London at the St Martin's Theatre, 1920, as Hugh Crauford in *Just Like Judy*, and later the same year as Foxcroft Grey in *Over Sunday*. He went to Hollywood in 1920, where he had a most distinguished and successful career for over 20 years. He was highly esteemed by Amer. audiences as being the typical Eng. gentleman, well dressed and behaved, restrained and polished, but he always showed strength and nervous tension in his performances. He has since returned to the stage and also played on television with success.

Brook, Peter (1925-), theatrical producer, b. London. Educ. Gresham's School and Magdalen College, Oxford; married Natasha Parry. He is regarded to-day as one of the most brilliant,

imaginative, and inventive of the younger school of producers. Since 1943 he has a long and notable list of productions, which include *Pygmalion*, *King John*, *The Lady from the Sea*, *The Brothers Karamazoff*, *Measure for Measure* (at Stratford-on-Avon), *Venice Preserved*, at the Lyric, Hammersmith, and *The Little Hut* in New York; and, also in New York, *Faust* in 1953, *The Dark is Light Enough*, *Both Ends Meet*, and *The House of Flowers*, all in 1954. Back in England he produced *The Lark* and, at Stratford-on-Avon, *Titus Andronicus* in 1955. He also designed the costumes and prepared the music for the latter productions. He is as much at home with opera as with plays, and has done distinguished work at Covent Garden, notably with the operas of Benjamin Britten. He directed the film version of *The Beggar's Opera* in 1953 and did a television production of *King Lear* in New York in the same year. He has written a play, *The Birthday Present*, for television. He is one of the youngest and most brilliant producers for the modern stage.

Brook Farm, in Massachusetts, 8 m. SW. of Boston, became in 1840 the scene of a communistic experiment, inspired by the transcendentalism of the time. The attempt was organised by George Ripley, who gathered around him a number of highly educated men and women to carry into practice the ideal of 'a more natural union between intellectual and manual labour.' Hawthorne resided on the farm for some time, and it was visited by Emerson and other well-known men of the day. The attempt ended in failure, and was abandoned in 1847.

Brooke, Alan Francis, see ALAN BROOKE, VINCOUNT.

Brooke, Baron, see GREVILLE, SIR F.
Brooke, Charlotte (1740-93), compiler, b. Cavan. Educ. by her father Henry B. (q.v.) she studied the Irish language, and after his death, being reduced to poverty, she pub. by subscription *Reliques of Irish Poetry*, 1789, the first noteworthy collection of trans. from early Irish verse.

Brooke, Frances (née Moore) (1724-89), Brit. novelist, wife of a chaplain to the Eug. Army in Quebec. She wrote first *The History of Lady Julia Mandeville*, 1763, which is notable for its descriptions of Canadian scenery. In her next novel, *The Excursion*, she made a butt of Garrick, the actor. Afterwards she wrote plays, the best of which were *The Siege of Sinope*, 1781, and *Rosina*, 1783, the latter a musical comedy.

Brooke, Henry (c. 1703-83), novelist and poet, b. Cavan, Ireland. He studied law at Trinity College, Dublin, but embraced literature as a career, producing poems, dramas, and novels. The only one of his works now read is *The Fool of Quality* (5 vols.), 1766-70, which was a favourite novel of John Wesley. His poem *Universal Beauty*, 1735, was admired by Pope, and is said to have suggested Erasmus Darwin's *Botanic Garden*.

Brooke, Henry (1903-), politician, educ. at Marlborough and Balliol College,

Oxford. He was M.P. for W. Lewisham, 1938-45, and M.P. for Hampstead since 1950. He was a prominent Conservative member of the L.C.C., 1945-55; in 1954 he became financial secretary to the Treasury. He was appointed Minister of Housing and Local Gov. and Minister for Welsh Affairs, 1957.

Brooke, Sir James (1803-68), Rajah of Sarawak, was b. Coombe Grove, near Bath, on 29 April, his father being in the service of the E. India Co. After being educated at Norwich, he entered the E. India Army in 1810, and, after being seriously wounded in the Burmese war, he finally quitted the service in 1830. While travelling in the E. he conceived the idea of putting down the plague of piracy in the beautiful is. of the E. Archipelago and bringing the blessings of civilisation to the inhab. Needless to say, no one but a very remarkable man, and one filled with the spirit of adventure, would have ever thought seriously of carrying out such a project, but B. tried and succeeded. Inheriting £30,000 on his father's death in 1835, he equipped a yacht, carefully trained his crew, and, after preliminary cruises, sailed in Oct. 1838 for Sarawak, on the NW. coast of Borneo. On arrival he found some of the native tribes in revolt against the Sultan of Brunei. He assisted in putting down the rebellion, and was rewarded with the title of Rajah of Sarawak. He immediately set to work to reform the prov., and his excellent gov. soon brought civilisation and prosperity into its train. He pursued vigorous methods against the pirates, but the rigour of his crusade brought him into trouble with the Brit. House of Commons, and he was charged with receiving 'head-money' for the pirates who were slain. After inquiry, however, he was exonerated. He was appointed governor of Labuan when that is. was purchased by the Brit. Gov. He received the honorary degree of D.C.L. from Oxford, and was created K.C.B. in 1848. He d. on 11 June at Burrator in Devon, an estate which had been purchased for him by public subscription. He was succeeded in Sarawak (q.v.) by a nephew.

Brooke, Rupert Chawner (1887-1915), poet, b. Rugby, where his father was a housemaster at the school. From there he went to King's College, Cambridge. He settled at the Old Vicarage, Grantchester, subject of one of his most famous poems, and numbered among his friends Edward Marsh, Gosse, Drinkwater, de la Mare, W. W. Gibson, W. H. Davies, and the Asquiths. In 1911 he was made a fellow of King's, pub. a small vol. of poems, and planned the anthology *Georgian Poetry* with Harold Monro (q.v.). In 1913 he had a year of travel, crossing America and going on to Hawaii, Samoa, Fiji, and Tahiti, but his plans were interrupted by the First World War. Obtaining a commission in 1914 he was with the Royal Naval Div. at Antwerp, and in 1915 was sent to the Dardanelles, but d. of septicaemia in Scyros, the fabled is. of Achilles. B.'s poems won great celebrity, both because the war sonnets in the

posthumous vol. *1914 and Other Poems* caught the prevailing spirit of splendid and selfless patriotism, and because he himself typified the flower of Brit. youth which was being ruthlessly sacrificed in the so-called 'war to end wars.' His *Complete Poems*, 1932, show his kinship with Keats and the Elizabethans. His critical work, *John Webster and the Elizabethan Drama*, was pub. in 1916 and vols. of his letters and collected prose in 1956. See J. Drinkwater, *Rupert Brooke, an Essay*, 1916; W. de la Mare, *Rupert Brooke and the Intellectual Imagination*, 1919.

Brooke, Stopford Augustus (1832-1916), clergyman and scholar, b. Letterkenny, Donegal. Educ. at Trinity College, Dublin, he carried off the prize for divinity and also for Eng. verse. He was ordained in 1857. After a couple of London curacies, he was in 1863 appointed chaplain to the Princess Royal at Berlin. After his return he became minister at St James's Chapel, York Street, a position he held until 1875, when he was appointed chaplain to Queen Victoria. He seceded from the Church of England in 1880, and was until 1895 Unitarian minister at Bedford Chapel. He made his mark quickly as one of the most prominent of Eng. men of letters. His chief pubs. are *Life and Letters of the Rev. F. W. Robertson*, 1865, *Freedom in the Church of England*, 1871, *Theology in the English Poets*, 1874, *English Literature*, 1876, *Riquet of the Tuft: a Love Drama*, 1880, *History of Early English Literature*, 1892, *Tennyson*, 1900, *The Poetry of Robert Browning*, 1902, *Ten Plays of Shakespeare*, 1905, *Studies in Poetry*, 1907, and *Ten More Plays from Shakespeare*, 1913. Late in life he took up painting, and succeeded remarkably. See L. P. Jacks, *Life and Letters of Stopford Brooke*, 1917.

Brookfield, vil. in NE. Illinois, U.S.A., suburb of Chicago. B. Zoo is near by. Incorporated, 1893. Pop. 15,500.

Brookings Institution, Washington, created in 1928 by the amalgamation of an Institute for Gov. Research, an Institute of Economics, and a Graduate School of Economics and Gov., all founded by Robert S. Brookings (1850-1932). Purposes: conduct of research projects in the social sciences; training of scholars; provision of research resources for U.S. and visiting foreign scholars; pub. of studies it has furthered.

Brookite, trimorphous form of titanium oxide (TiO₂). It is found in small brownish black, orthorhombic crystals in igneous rocks and is named after H. J. Brooke, an Eng. mineralogist of the early 19th cent. Occurs especially in Tyrol and Arkansas.

Brooklands, see MOTORING.

Brooklime, see VERONICA.

Brookline, tn in Norfolk co., Massachusetts, U.S.A., a wealthy residential suburb of Boston, with some manufs. Pop. 57,600.

Brookline Country Club, see CLUBS.

Brooklyn, formerly a city, is, since 1898, bor. of New York City, U.S.A. It is situated on Long Is., opposite Manhattan

bor. The 2 bors., between which flows the East R., are connected by the B., Manhattan, and Williamsburg bridges, and by the B.-Battery tunnel (1950). The water-front of B. is 35 m. long, whilst its docks, lined with immense warehouses, grain elevators, etc., are very extensive. On Wallabout Bay is the B. navy yard. Besides carrying on an enormous import and export trade, its manufs. are extensive, embracing sugar-refining, brewing, carpets, steam-bollers, glass, chemicals, clothing, processed foods, paper, etc. Among its many public buildings and charitable institutions may be mentioned the City Hall, of white marble, the Institute of Arts and Sciences, the B. Academy of Music, Museum, and Botanic Garden. B. is celebrated alike for its schools—including the Polytechnic for boys, B. College, the Pratt Institute, St. John's Univ., St. Joseph's College for Women, Lond. Is. Univ., Lond. Is. College of Medicine, etc.—and for its churches of all denominations, where the most distinguished preachers officiate. The city is very popular as a residential suburb of New York. It has also many public pleasure-grounds, including Washington Park and Prospect Park. The latter extends over 540 ac., and has 2 splendid boulevards. It lies on rising ground at the SW. of the city. The Dutch of New Amsterdam first founded the colony of B. (Breuckelen) in 1636. It was incorporated as a tn in 1816 and as a city in 1834. B. bridge cost \$25,094,577 and is 6016 ft in length. B. was long known as the City of Churches, but is now also a city of homes. The pop. is 2,738,175. The Soldiers' Monument was erected in memory of 148,000 soldiers who d. in the Civil war. The navy yard is one of the foremost in the country. The Children's Gardens contain a herbarium of 150,000 specimens. A noble monument in Prospect Park is in memory of the men and women of B. who d. in the First World War. B. public library contains 975,000 vols. The old B. Heights section of the tn has changed rapidly from a residential to a bustling business and apartments house dist. See also NEW YORK CITY.

Brooklyn Institute of Arts and Sciences, New York, has grown out of the Apprentices' Library Association, which was founded in 1824. The present institute was incorporated in 1890, and its object is to encourage every manifestation of art and science, especially as applied to daily life, and to provide facilities for anyone wishing to study any branch of art or science. For this purpose the B. I. is divided into a number of depts under various heads. Courses of lectures, etc., are organised and command a large attendance. The Brooklyn museum, comprising exhibits in the fine arts, in natural science, and in ethnology, was first opened under the auspices of the B. I. in 1897. The museum, which includes a children's section, is continually expanding, and among its activities numbers the pub. of science bulletins, memoirs of art and archaeology, and a quarterly periodical. The museum library contains 22,000 vols.,

and adjoining the museum are the Botanic Gardens of over 50 ac., visited by more than a million people each year. Another dept is the Brooklyn Academy of Music.

Brooks, Charles William Shirley (1816–1874), journalist and novelist, b. London. Beginning life as an articled clerk in a lawyer's office, he forsook law for journalism and after a time became connected with the *Morning Chronicle* as parl. reporter. He contributed 'Essence of Parliament' to *Punch*, and succeeded Mark Lemon as editor in 1870. He wrote various plays and novels, and pub. the results of a Russian tour in *The Russians of the South*, 1854. His novels include *The Gordian Knot*, 1860, *The Silver Cord*, 1861, and *Sooner or Later*, 1868. Life by G. S. Lazard, 1907.

Brooks, Maria (1795–1846), Amer. author, b. Medford, Massachusetts. She was a friend of Robert Southey, who praised her work and called her Maria of the W., after which she wrote under the name of 'Maria del Occidente.' She pub. poems entitled *Judith*, *Esther*, and other Poems, 1820, *Zéphel*, 1834, *Idomen*, or *The Vale of Yumuri*, 1843. See Griswold, *Female Poets of America*, 1849.

Brooks, Phillips (1835–93), Amer. preacher and author, b. Boston, Massachusetts. He entered the Protestant Episcopal Church, and first at Philadelphia, and later as rector of Trinity Church, Boston (1869–91), he estab. a high reputation as a preacher. He became Bishop of Massachusetts in 1891. He pub. various vols. of sermons and some well-known hymns.

Brooks, Van Wyok (1886–), Amer. literary critic, b. Plainfield, New Jersey. Educ. at Harvard, he worked in England for some time as a journalist. His first book, *The Wine of the Puritans*, 1909, was a social study. From 1908 to 1911 he did lexicographical work in New York, and after that was for 2 years instructor in English at Leland Stanford Univ. After returning to England in 1913 he wrote *America's Coming of Age*, 1915. In 1920 he settled at Westport, Connecticut. His best-known works are *The Ordeal of Mark Twain*, 1920, *The Pilgrimage of Henry James*, 1925, *Emerson and Others*, 1927, *The Life of Emerson*, 1932, *Sketches of Criticism*, 1932, *The World of Washington Irving*, 1944, *The Times of Mcville and Whitman*, 1947, his 5-vol. *Makers and Finders: a History of the Writer in America, 1800–1915*, 1936–52, *Scenes and Portraits*, 1954 (reminiscences), *Helen Keller*, 1956, and *From a Writer's Notebook*, 1958.

Brooks, William Robert (1844–1921), astronomer, b. Maldstone, Kent, and later emigrated to America. Prof. of astronomy, Hobart College, and director of the Smith Observatory, New York. Discovered many new comets, some of which are named after him.

Brooks's Club, see CLUBS.

Brookwood, see WORKING.

Broom, see BRUSHES.

Broom is the name given to sev. species of leguminous plants, but chiefly to those which belong to the genus *Cytisus*, a

native of Europe and the Mediterranean. The common B. of Britain is *C.* (or *Sarothamnus*) *scoparius*, an evergreen shrub in which the leaves have been reduced to scales. It grows in very poor soil, and attains a height of about 3 ft; the flowers are bright yellow and in structure resemble those of the pea (papilionaceous); the fruit is a dark brown legume with a curious explosive mechanism. The flowers are devoid of nectar, and are pollinated by insects which, attracted by the bright colour, visit the flowers to obtain food in the form of pollen. The leaves in the lower part are divided into 3 leaflets, but

the upper scale-like leaves are simple; the wood is a dark greeny-black, and is used in making besoms. *Cytisus albus*, the white B., is a native of Portugal, as is *C. patens*, the falsely named Irish B.; *C. proliferus*, a Sp. species, is used for fodder in Madeira. *C. purpureus*, the purple B., is a hardy plant, which when grafted with *Laburnum anagyroides* has produced a chimera, *Laburnocytisus × adami*. Species of *Genista*, while also included under the name of B., are more commonly called whin or furze, and are noted for their branches, which are reduced to thorns. *G. monosperma* is a native of Spain which grows on the coast, has white flowers, and yields a useful fibre.

Broom-corn, Common Millet, or *Panicum miliaceum*, is a species of the family Gramineae. Its seeds are widely used as a staple food. See MILLET.

Broom-rape, see ORORANCE.

Broome, William (1689–1745), Eng. writer and translator, educ. at Eton and Cambridge. Part-author of prose trans. of the *Iliad* (1712). He condensed Eustathius' notes on Homer for Pope; collaborated with Pope and Fenton in translating the *Odyssey* (1722–6). B. also pub. sermons and poems, and trans. Anacreon for the *Gentleman's Magazine*. See Dr Johnson, *Lives of the Poets*, 1799–1781; W. Elwin and W. J. Courthope, *Pope's Correspondence*, 1871–2.

Broome, seaport of W. Australia on the NW. coastline. The adjoining coast supplies more than three-fourths of the pearl-shell supply of the world. There is a fully equipped native hospital here. There is an air service to B. from Perth. Pop. 1264.

Broons, tn of France, in the dept of Côtes-du-Nord. It was the bp. of Bertrand du Guesclin. Dinan is 15 m. to the NE. Pop. 2400.

Brophy, John (1899–), novelist, b. Liverpool. In 1914, when not yet 15, he enlisted and fought for 4 years in the First World War. After it he studied at Liverpool Univ., spent 2 years as a teacher in Egypt, worked in an advertising agency and as a reviewer of fiction, and during the Second World War ed. *John o' London's Weekly*. In 1930 he collaborated with Eric Partridge (q.v.) in *Songs and Slang of the British Soldier, 1914–18*. Two early novels with a Liverpool background are *The Bitter End*, 1928, and *Waterfront*, 1934. *Immortal Sergeant*, 1942, and *Spearhead*, 1943, are war stories. *Gentleman of Stratford*, 1939, is a novel about Shakespeare.

Brora, vil. and resort of Sutherland, Scotland, some 17 m. NE. of Dornoch by road, at the mouth of the B. R. which here joins the N. Sea. Coal is mined. Pop. 1074.

Brosböll, Johan Karl Christian, see ETLEAR, CARIT.

Brosicus is a genus of Coleoptera in the family Carabidae, or ground beetles. They are carnivorous, and are remarkable for the almost total absence of indented striae on the elytra and for their large and strong mandibles. *B. cephalotes* is found under stones and rubbish on Eng. sea coasts.

Brose (Gaelic *brothos*), Scottish dish. It is called water-B. or beef-B. according to whether it is made with water or meat-liquor. Milk can also be used, but whatever the fluid it is poured boiling hot on oatmeal, and the ingredients are mixed by instant stirring. 'Athole B.', a highland drink, is made of honey and whisky.

Brosseley, par. now part of the municipal bor. of Wenlock, Shropshire.

Brosimum is a genus of Moraceae which grows in tropical America. The inflorescence is curious, consisting of one female and many male flowers, and the fruit is an achene. *B. galactodendron* is the cow-tree, or milk-tree, found in Guiana, which yields a milky latex. The fruit of *B. alicatrum* is broad-nut.

Brosmius is a genus of fish of the cod-fish family, Gadidae. *B. brosme*, the torsk, is dried and barrelled in the Shetland Is.

Brosses, Charles de (1709–77), Fr. writer and scholar, the first president of the parliament of Burgundy. In 1750 he pub. the earliest work on the ruins of Herculaneum. In his *Histoire des navigations aux terres australes* (2 vols.), 1756, he was the first to define Australasia and Polynesia. Besides contributing to the *Encyclopédie*, and publishing an ingenious theory on the origin of language, he wrote some famous letters on Italy, and brought

out, in 1777, a hist. of the 7th cent. of the Rom. rep.

Broth, liquid food prepared by decocting meat with bone and vegetables in water. The ingredients are mixed together in cold water and brought gradually to the boil; they are then allowed to simmer gently for some hours, after which the liquid is strained off. The 'food value' of B. is not high, as the nourishing albumen and gelatin remain in the residue in an indigestible form; its usefulness lies in the fact that it is a stimulant and a relish. The B. itself contains creatin and some albuminous and gelatinous matter from the meat, and colouring and mucilaginous substances, a little albumen and volatile oils and salts from the vegetables.

Brothers, Richard (1757-1824), naval officer, b. Newfoundland, and educ. at Woolwich; famed more for his religious mania than his marine achievements. During his chequered career he became fired with the idea that he was 'the nephew of the Almighty.' He prophesied the death of the king and the end of monarchy, and was confined as a criminal lunatic. Later removal to a private asylum enabled him to produce many pamphlets which converted a few zealots. He foretold the violent death of Louis XVI. B. was one of the founders of the belief that the Eng. people represent the 10 lost tribes of Israel (see BRITISH ISRAELITES).

Brothers, Lay, professed religious who are employed as servants in monasteries. Similarly there are lay sisters. They are bound by monastic rules, but are not destined for holy orders. The earliest instance of L. B. occurred in the monastery of Vallombrosa, early in the 11th cent.

Brotton, see SKELTON and BROTTON.

Brutula is a GENUS of marine teleost fish which is a type of the family Bratulidae, order Percormorphi. It is distinguished chiefly by the dorsal and anal fins being united with the caudal. *B. barbatus* comes from the Antilles.

Brouage, Fr. seaside vil. in the dept of Charente-Maritime, once an important port, now silted up. Champlain (q.v.) was b. here. Pop. 250.

Brough, Lionel (1836-1909), actor, b. Monmouthshire, son of a dramatic author. B. was errand-boy in editorial offices of the *Illustrated London News* when about 13. His first appearance on the stage was in Dec. 1854; 6 months later he withdrew to become assistant publisher of the *Daily Telegraph* and soon after took a position on the *Morning Star*. He became a professional actor in earnest in 1864. Tony Lumpkin was one of his most noted characters. Among his Shakespeare parts were Sir Toby Belch, Touchstone, and the host of the 'Garter' in *The Merry Wives*. Other roles of his were Bumble in *Oliver Twist* and Brismouche in *A Scrap of Paper*. He appeared in Terry's *Sweet Nell of Old Drury*, 1901, and in *Into the Light* at the Court, 1908.

Brough, mrkt tn of NE. Westmorland, England, 9 m. SE. of Appleby. There are ruins of a Norman castle; a great fair is held annually 2 m. away. Pop. 750.

Brougham, Henry Peter, Baron Brougham and Vaux (1778-1868), lawyer and politician, b. Edinburgh, and educ. at Edinburgh high school and Edinburgh Univ. where he was a scholar of great distinction. He was admitted to the Faculty of Advocates in 1800, but saw no hope of future preferment in a career at the Scottish Bar, and so in 1805 he came to London, entered at Lincoln's Inn, and in 1808 was called to the Eng. Bar. In 1802 the *Edinburgh Review* had been founded, and B. became one of its first and most capable contributors, so that by the time he arrived in London he was already well known. He speedily became prominent amongst the Whig politicians, and was employed on a diplomatic mission to Portugal during 1806. He produced also a great number of political pamphlets during 1807, and was of great help to the Whigs during that period. But his hopes of a seat in the Commons were still unfulfilled, and in 1808, after being called to the Eng. Bar, he joined the N. circuit. About this time he became an ardent supporter of the movement for the abolition of slavery, a movement with which his name will ever be closely associated. In 1810 he became a member of Parliament. In a very short time he had won for himself a considerable reputation as a speaker and politician, and was regarded by most people as the future leader of his party. From 1812 to 1816 he was out of Parliament, having been defeated at Liverpool, but it was during these years that B. became the adviser of the Princess of Wales. In 1816 he had again entered Parliament and did some useful work, especially on the committee which inquired into the state of education amongst the poor of London. But in 1820 he was appointed attorney-general for the queen, and conducted her defence when the ministers introduced a Bill for her deposition and for the dissolution of her marriage to George IV. He defended her ably, and the Bill was not taken any further by the ministers. His conduct of this case raised him high in his profession, and he shared in the triumph of the queen and the people over the court and the ministers. His reputation as a lawyer was now securely founded, and he was soon enjoying an immense practice on the N. circuit. In 1830 he was returned to Parliament as the member for York. The gov. under the Duke of Wellington, defeated shortly afterwards, resigned, and Earl Grey was sent for by William IV. In the Whig ministry that Grey formed B. was made lord chancellor, and created Baron B. and Vaux. The passing of the Reform Act was in a great measure due to the skill with which he defended the Bill, but with the passing of that Bill the authority of B. began to decline. His manner had been becoming dictatorial, he regarded himself as indispensable, and he probably used the *Edinburgh Review* to increase his influence and for self-glorification. In 1834 Grey resigned, and B. remained for a time with Melbourne. But his conduct was rapidly becoming too indiscreet, and his betrayal of the confidence of Melbourne

on the dismissal of the ministers was the finishing act of his official career. The formation of the second Melbourne ministry in 1835 did not lead to his re-appointment as chancellor, the seal being put in commission; B. never forgave the Whigs for this, and during the rest of his career he spoke as an independent member. In 1860 he received a second patent of peerage with remainder to his younger brother Wm, the patent setting forth that the peerage was given in recognition of his services to the cause of education, and in the movement for the abolition of slavery. He d. at Cannes, having been mentally ill during the last 2 years of his life. In addition to his reputation as a voluble speaker, he was also known by the amount of his writing and correspondence and his interest in law reform and popular science. He was one of the founders of London Univ. See his autobiography, pub. 1871, and life by C. T. Garratt, 1935.

Broughton, Baron, see HOBIHOUSE.

Broughton, Rhoda (1840-1920), novelist, b. Segrwyd Hall, near Denbigh, N. Wales, the daughter of the Rev. Delves Broughton. She came into prominence as a novelist of the popular type while still in her twenties, and continued to produce works of fiction for many years. Among her best-known novels are *Come up as a Flower*, 1867, *Not Wisely but Too Well*, 1867, *Red as a Rose is She*, 1870, *Joan*, 1876, *Belinda*, 1883, *Dear Faustina*, 1897, *Lavinia*, 1902, *Concerning a Vow*, 1914, and *A Fool in her Folly*, 1920.

Broughton-in-Furness, par. and mkt. tn. with railway station 9 m. SW. of Conlston, pop. 1136. Here is Broughton Tower with a superb view, now Lancs County Council School for Delicate Children.

Broughty Ferry, suburb of Dundee (q.v.) on the Firth of Tay, a resort with a sandy beach. Pop. 12,566.

Broumov (Ger. Braunau), Czechoslovak tn in the prov. of Hradec Králové (q.v.), on the Steine. Pop. 4600.

Broussa, see BURSA.

Broussais, François Joseph Victor (1772-1838), son of a physician, was b. St Malo. After taking a medical degree in Paris, he served as an army surgeon, and in 1814 was appointed assistant prof. at the military hospital of Val-de-Grâce. About this time he introduced a theory of medicine, which asserted that life was sustained only by excitation or irritation, and that all diseases were at first local, but were made general by the 'sympathy' of the other organs. His views were explained in his *Examen de la doctrine médicale généralement adoptée*, 1816: they met with some acceptance at first but were eventually refuted. B. became prof. of general pathology at the Academy of Medicine in Paris in 1830, and d. at Vitry-sur-Seine.

Broussonetia is a dioecious tree of the family Moraceae. From the inner bark of *B. papyrifera*, or paper mulberry, the Chinese and Japanese manu. paper, and the S. Sea Islanders the prin. part of their clothing.

Brouwer, Adriaen, see BRAUWER.

Brower, Jacob Vradenberg (1844-1905), Amer. explorer and archaeologist, b. York, Michigan. He served during the Civil war in both cavalry and navy, and was a member of the Minnesota legislature, 1867-73. B. discovered many prehistoric mounds at Mille Lac and other places in Minnesota. Among his works are *The Mississippi River and its Source*, 1893, *Prehistoric Man at the Head Waters of the Mississippi*, 1895, *The Missouri River and its Utmost Source*, 1896, *Quivira*, 1898, *Harehoy, Mille Lac, 1899*, and *Kansas, Monumental Perpetuation of its Earliest History, 1541-1896*, 1902.

Brown, Alice (1857-1948), Amer. authoress, b. Hampton Falls, New Hampshire. She was a prominent figure in Amer. literature over many years, belonging rather to the old school of New England writers who took New England life for their themes. Among her books are *Meadow Grass*, 1895, *Tiverton Tales*, 1899, *The Story of Thyra*, 1909, *Homespun and Gold*, 1920. Her play *Children of Earth*, 1915, won the ten-thousand-dollar prize offered by Winthrop Ames, an Amer. theatrical producer.

Brown, Charles Brookden (1771-1810), Amer. novelist. His parents were Quakers of Philadelphia, where he was b. His delicate constitution favoured a retiring disposition and a capacity for study. His works are extremely terse in style and weird in conception, and include *Vieland*, 1798, *Arthur Merwyn*, 1799, *Ormond*, 1799, and *Edgar Huntley*, 1801.

Brown, Ford Madox (1821-93), painter. His father was a retired navy purser living at Calais, where B. was b. His grandfather, John B. (q.v.) founded the Brunonian theory of medicine. He was sent at the age of 14 to study art at Bruges. His prin. instructor was Baron Wappers, at Antwerp, who was regarded as the head of the Belgian school. He first exhibited in 1837, and 3 years later exhibited in England at the Royal Academy, the picture being 'The Giaour's Confession.' In 1843 he took part in the competition for the mural decoration of the Houses of Parliament, and his pictures received very high praise but no prize. After some years of travel, he came in contact in London with D. G. Rossetti and the young Pre-Raphaelites (1848), being much influenced by their ideas. Among his chief works are 'Manfred on the Jungfrau,' 'Chaucer at the Court of Edward III,' 'Cordelia and Lear,' 'Christ washing Peter's Feet,' 'Work,' 'Romeo and Juliet,' 'The Last of England,' and historical panels for Manchester to hall. He was twice married, and left 3 children: Lucy, who married W. M. Rossetti in 1874; Catherine, who married Dr Hueffer; and Oliver, himself an artist, who d. in his twentieth year (1874). See *Pre-Raphaelite Diaries and Letters*, ed. by W. M. Rossetti, 1900.

Brown, Francis (1849-1916), Amer. O.T. scholar and theologian, b. Hanover, New Hampshire. Prof. of Heb. and the cognate languages (1890) and President (1908) of the Union Theological Seminary, New York. He also taught Greek, and

was the first Amer. scholar to teach Assyrian (in 1885 he pub. a little book on *Assyriology*). In 1884 he co-edited the newly discovered *Teaching of the Twelve Apostles*, but the lasting monument of his scholarship is the *Hebrew and English Lexicon of the O.T.* (ed. with Profs. S. R. Driver and C. A. Briggs), 1891-1906. He was the leader of the liberal Presbyterian group.

Brown, George (1818-80), Canadian politician, b. and educ. in Edinburgh; removed to New York in 1838, and was engaged in journalism. In 1843 he went to Toronto and founded there in 1844 the *Toronto Globe*. In 1852 he entered the Canadian Parliament, and in 1858 led a coalition gov. for a brief space of time. During 1864-5 he led the Reform section of the Coalition Gov., resigning on account of a difference of opinion regarding a reciprocity treaty with the U.S.A. In 1864 he was delegate to conferences at Charlottetown and Quebec, and in 1865 went on a mission to London. In 1873 he became a dominion senator, and in 1874 was joint Canadian plenipotentiary with Sir Edward Thornton at Washington. He was shot by a discharged employee in 1880. A man of unrestrained vehemence, he had excited Protestant suspicion of Quebec, and made himself one of the most hated men of his time.

Brown, George Douglas (1869-1902), novelist, b. Ayrshire. Educ. at Glasgow Univ. and Oxford, he started on his literary career in London. He pub. *Love and a Sword*, 1899, and his *House with the Green Shutters*, written under the pseudonym of George Douglas, attracted much notice, 1901. It represents some of the harder aspects of Scottish life, and is useful to contrast with the works of Barrie and Ian Maclaren. See E. Muir, *Latitudes*, 1924.

Brown, Henry Kirke (1814-86), Amer. sculptor, was b. Leyden, Massachusetts. After studying in Europe, he returned to his native country in 1846, and executed some notable works, including an equestrian statue of Washington in New York, and one of Gen. Scott in Washington.

Brown, Horatio Robert Forbes (1854-1926), historian, b. Nice; educ. at Clifton College and at New College, Oxford. In 1878 he visited Venice, and began studying its life and hist. His numerous contributions to Venetian hist. and literature include *Life on the Lagoons*, 1884, *Venice*, 1893, *In and around Venice*, 1905, *Studies in the History of Venice*, 1907, and *Calendar of State Papers* (covering the period 1581-1613), compiled 1894-1905. His life of John Addington Symonds, pub. 1895, was supplemented in 1923 by *Letters and Papers*.

Brown, Ivor John Carnegie (1891-), journalist and author, b. Penang. He was educ. at Cheltenham and Oxford, entered the Civil Service in 1913 but abandoned it for journalism, and was dramatic critic successively of the *Manchester Guardian*, the *Saturday Review*, the *Sketch*, and *Punch*. From 1942 to 1948 he ed. the *Observer*. In 1915 he pub. a novel, *Years*

of Plenty. Others of his works are *The Meaning of Democracy*, 1920, *Masques and Phases*, 1927, *Brown Studies*, 1930, and *I Commit to the Flames*, 1934. He also wrote books on *H. G. Wells*, 1922, and *Shakespeare*, 1949, and a number of small popular works on the meaning and etymology of out-of-the-way words: *A Word in Your Ear*, 1942, *I Give You My Word*, 1945, and others. In 1939 he was prof. of drama of the Royal Society of Literature, and from 1940 to 1942 director of drama for C.E.M.A.

Brown, John (1715-66), poet and playwright, b. Northumberland. Educ. at Wigton and Cambridge, he was known as 'Estimate Brown.' He made a clever defence of utilitarian philosophy in his *Essay on the Characteristics of Shaftesbury*, 1751. His *Estimate of the Manners and Principles of the Times*, 1757, which was a vehement satire on luxury and the like, was exceedingly popular, whilst his *Barbarossa*, 1754, was played with success by Garrick. An attack of melancholy, coupled with a hereditary tendency to insanity, accounts for his suicide.

Brown, John (1722-87), of Haddington, b. Carpow, near Abernethy, Perthshire, the son of a poor weaver. He lost both father and mother at an early age. He studied Greek, Latin, and Hebrew while working as a herd-boy. He served with the gov. forces in the '45, was a schoolmaster from 1747 to 1750, and became a pastor at Haddington in 1751. Refusing a call to New York in 1784, he continued to live at Haddington on a stipend of £40 or £50 a year until his death. In 1768 he was appointed prof. of theology to the Associate Burgher Synod. His works included *A Dictionary of the Holy Bible*, 1769, and *The Self-Interpreting Bible*, 1778.

Brown, John (1735-88), Scottish physician, was the founder of the Brunonian system of medicine. Being a lad of promise, he was admitted free to the lectures at Edinburgh Univ. In 1780 he pub. his *Elementa Medicinæ*, in which he explained a new system of treatment. Written in Latin—he was famous as a Latin scholar—this book gained him a worldwide reputation. The Brunonian theory attributed disease processes to a state of too great or too little excitability of the tissues; treatment resolved itself into stimulation if the excitability was lessened and soothing remedies if the excitability was too great.

Brown, John (1784-1858), son of John B. of Whithorn (1754-1832), and grandson of John B. of Haddington (q.v.). He studied at Edinburgh Univ. and the Burgher Theological Hall, Selkirk. He held successively the pastorates of Rose Street Church, Edinburgh (1822-9), and Broughton Place, Edinburgh. In 1830 Jefferson College, Pennsylvania, conferred upon him the degree of D.D., and in 1834 he was elected prof. of exegetical theology. He was engaged in many controversies, notably in the Atonement controversy of 1840-5. In 1845 he was tried for his views before the synod, but was honourably acquitted. He was a voluminous writer on religious subjects.

Brown, John (1800-59), one of the most famous of Amer. abolitionists, was *b. Torrington, Connecticut, 9 May, of Amer. colonial and revolutionary ancestors.* He was said to have been descended from a pilgrim on the *Mayflower*, and certainly displayed a stern religious spirit which bordered on fanaticism. He studied for a time for the Congregationalist ministry, but discontinued at the age of 18, and then led a wandering life, being at times a land surveyor and a sheep raiser, but was more or less a failure. He then tried farming in sev. of the E. states, and finally settled in Kansas in 1855, whither 5 of his sons had preceded him. A great struggle was then going on in the U.S.A., for as the middle and far W. were being opened up by settlers, the S. slaveholders were trying to secure them as ters. where slavery was allowed. The abolitionists on the other hand tried to make them 'free soil,' that is, localities where slavery was not permitted. Kansas was a battle-ground between the 2 hostile forces. B. soon took an active part in this contest, and was one of the leaders in the Pottawatomie massacre, in which a number of pro-slavery farmers were killed. This made B.'s name known all over the U.S.A., and it became anathema to the S. Meanwhile B. was planning to have a place in the Virginia mts where escaped slaves could find a refuge and defend themselves against their pursuers. To this end he settled on a farm near Harper's Ferry, in which tn there was located a gov. arsenal. To procure sufficient arms for his slaves' harbour of refuge, on 16 Oct. 1859, with 21 men, including sev. Negroes, he seized the arsenal and held a number of leading citizens of the tn as hostages. Gov. troops were quickly sent there, and by the irony of fate they were under command of Col. Robert E. Lee, who in the Civil war shortly to follow became Commander-in-Chief of the Confederate armies. B. was captured, but only after he had been badly wounded and 2 of his sons killed. This was on 18 Oct. He was put upon his trial and convicted of treason, murder in the first degree, and criminal conspiracy with slaves and was hanged at Charlestown 2 Dec. 1859. The verdict and execution were strictly legal, but they made of B. a hero in the N. He became a martyr, a latter-day saint, a legend. Only a few years later and N. troops were going into battle or marching through a beaten S., singing a song which immortalised B.'s name:

'John Brown's body lies a-mouldering in the grave,

But his soul goes marching on!'

Brown, John (1810-82), doctor and essayist, *b. Biggar, Lanark.* At Edinburgh Univ. he studied under the eminent surgeon Syme, to whose qualities his pen paid an affectionate tribute in later years. Conscientious and painstaking as a medical man, he was, at heart, more devoted to literature than to medicine, though always diffident of his literary powers. He wrote little, but wrote that little extremely well. His chief pubs. were the

collection of essays known as *Horae Subsecivae*, 1858-82, and *John Leech*, 1877. In the latter he tells us that it was he who originated the first national exhibition of roses in London. He is chiefly remembered for his charming, quaintly written essays, among which *Rab and his Friends*, 1859, and *Marjorie Fleming*, 1863, are perhaps the best known. Except for 2 years at Chatham (1831-3) as assistant to a Scottish doctor, he spent all his life in Edinburgh, where he *d.* His letters, ed. by his son and D. W. Forrest, D.D., were pub. in 1907, with biographical introductions by Elizabeth T. McLaron.

Brown, Sir John (1816-96), steel and armour-plate manufacturer, *b. Sheffield*, son of a slater. At 14 he became an apprentice in a file and table cutlery manufactory, of which he ultimately became the manager. He invented the conical steel buffer for railway wagons, was the first to make steel rails, carried on and improved the Bessemer process, and invented a method of rolling armour-plate. Hammered armour-plate had been used hitherto, but B.'s method was so successful that he received orders from the Admiralty for armour-plate for about three-fourths of the ships of the navy. In 1856 he started the huge Atlas works for the manuf. of armour-plate, railway buffers, ordnance forgings, railway carriage axles and tyres, and steel rails. B. received a knighthood in 1867, and was much honoured in his native tn, of which he was twice mayor and master-outlet.

Brown, John (c. 1825-83), Queen Victoria's personal servant, was *b. Crathlie, Aberdeenshire*, second of the 9 sons of a small farmer. In 1849 he became gillie to Albert, the prince consort; in 1851 he began to lead the queen's pony when she went riding; and in 1858 he entered her service at Balmoral. For the last 19 years of his life he was her personal attendant and confidant.

Brown, Lancelot, known as 'Capability Brown' (1716-93), landscape gardener and architect, *b. Kirkcaldy, Northumberland*, was employed as a gardener in early life. He laid out the grounds at Kew and Blenheim. From c. 1740 to c. 1749 he collaborated with the architect Wm Kent (q.v.), the real father of landscape gardening; but from 1751 onwards he had a very large architectural practice, consisting mainly of country houses. In 1772 he took into partnership Henry Holland (q.v.), who married his daughter in 1773. See biography by D. Stroud, 1950.

Brown, Peter Hume (1849-1918), historian, *b. Tranent, E. Lothian.* He was educ. at the Free Church School, Prestonpans, becoming a pupil teacher. B. taught at schools in Wales and Newcastle upon Tyne, and opened a school at Edinburgh in 1875. In 1901 he was appointed Fraser prof. of ancient Scottish hist. and palaeography at Edinburgh Univ. and he was appointed historiographer royal for Scotland in 1908. His *History of Scotland* (3 vols., the last appearing in 1909) is still the standard hist. on the subject. B.'s other works include *George Buchanan and*

his *Times*, 1890, *John Knox, a Biography*, 1895, *Scotland in the Time of Queen Mary*, 1904, and *The Union of 1707, a Survey of Events*, 1907.

Brown, Robert (1773-1858), botanist, b. Montrose, and a schoolfellow of Joseph Hume and James Mill. He entered first the Marischal College, Aberdeen, and afterwards removed to Edinburgh Univ. His ability and his application attracted the attention of his prof. In 1795 he obtained a commission and served in the N. of Ireland. He became a protégé of Sir Joseph Banks, who gave him the post of naturalist in an expedition which was setting out to explore the coast of Australia. The expedition returned in 1805 to England with a rare collection of specimens numbering about 4000. In 1810 he pub. his greatest work, *Prodromus Florae Novae Hollandiae et Insulae Van Diemen*. In the same year he became private secretary to Sir Joseph Banks. The library and collection of Sir Joseph Banks were, on his death in 1820, bequeathed to B. for life. In 1827 he made them over to the Brit. Museum and became keeper of its botanical dept. He held this position until his death in 1858. He was F.R.S.

Brown, Thomas (1663-1704), satirical writer, b. Shifnal, Shropshire. He studied at Christ Church, Oxford, where he is said to have escaped expulsion by extemporizing the famous verse:

I do not love thee, Doctor Fell,
The reason why I cannot tell;
But this I know, and know full well,
I do not love thee, Doctor Fell;

Dr Fell, dean of the college, having set B. the task of extemporizing a trans. of Martial's epigram, *Non amo te, Sabidi, nec possum dicere quare; Hoc tantum possum dicere, non amo te*. B. was for a time a schoolmaster near London, in which city he afterwards lived by his pen. His writings are numerous and miscellaneous, and, while witty, are coarse and frequently vulgarly abusive.

Brown, Thomas (1778-1820), Scottish metaphysician, b. Kilmarnock, and educ. at the univ. of Edinburgh, where he attended the lectures of Dugald Stewart, prof. of moral philosophy. He abandoned his arts course for medicine, becoming doctor of medicine about 1803, and in 1806 a partner with Dr James Gregory. Resigning his practice in 1810 in order to assist Dugald Stewart, he became a popular lecturer, holding the position until his death. He wrote many poems of no outstanding worth, but his philosophical works show great merit and power of analysis, although now little known. His pubs. include *Observations on the Zoonomia of Erasmus Darwin*, 1798, *An Inquiry into the Relation of Cause and Effect*, 1805, and *Lectures on the Philosophy of the Human Mind*, 1820.

Brown, Thomas Alexander, see BOLDREWOOD, ROSE.

Brown, Thomas Edward (1830-97), poet and schoolmaster, b. Douglas, Isle of Man. Educ. at King William's College and Christ Church, Oxford, he took a double first and became a fellow of Oriel. After

a short period as a headmaster at Gloucester, he accepted the headmaster of Clifton's (Dr Percival) offer of the position of master for the modern side. He pub. a number of poems and collections of poems, the chief of them being in the Manx dialect, amongst which may be mentioned, *Poet's Le Yarns*, 1881, *The Doctor and other Poems*, 1887, *The Manx Witch*, 1889, and *Old John*, 1893. His collected poems were pub. in 1900, and his letters were ed. in the same year. See T. E. Brown, *A Memorial Volume*, 1930.

Brown, see PIGMENT.

Brown, Mount, peak in the Rocky Mts. on the frontiers of Brit. Columbia, and near the source of the Columbia R. Height 9055 ft.

Brown Bess, name (obsolete since the introduction of the rifle) given by the infantry of the Brit. Army to the flintlock musket used by them from the late 17th to the early 19th cent. See also FIREARMS.

Brown-Séguard, Charles Edward (1817-1894), doctor and physiologist, b. in Mauritius. His father was an American in the naval service, and his mother a Frenchwoman, but he always wished to be known as a Brit. subject. He took his medical degree at Paris in 1846, and returned to Mauritius intending to practise there; however, he went from there to America in 1852. He attracted considerable attention by his lectures on the pathology of the nervous system. In 1864 he became prof. of physiology at the univ. of Harvard, and 5 years later he returned to Paris as prof. of pathology in the School of Medicine there. Later, in 1873, he set up in New York as a practitioner and a nerve specialist, but again returned to Paris when, in 1878, he became the prof. of experimental medicine in the Collège de France. He remained in this position until his death. His experimental work was of the greatest importance in the development of our knowledge of internal secretions (hormones, q.v.) and of the nervous system. See life by J. M. D. Olmsted, 1946.

Brown-shirts, see S.A. and S.S.

Brown Spar, variety of dolomite containing carbonate of iron. Its colour inclines to red or brown. The term is sometimes applied to examples of ankerite, siderite, and brannerite.

Brown University, at Providence, Rhode Is., was founded on a non-sectarian basis by Philadelphia Baptists in 1764, as Rhode Is. College. It assumed its present name in 1804, honouring a substantial benefactor, Nicholas Brown. The Univ. Library contained 825,000 vols. in 1956; the renowned John Carter Brown Library 30,000 items of Americana. The separate women's college, added in 1891, has borne the name Pembroke College since 1928; with 147 students in 1955, it has the same teaching staff as B. U. The univ. teaching staff numbered 500 in 1955; students, 3400.

Brown Willy, the highest point (1375 ft) in Cornwall, England. It is 10 m. NE. of Bodmin.

Browne, Charles Farrar, pseudonym Artemus Ward (1834-67), Amer. humorist,

b. Waterford, Maine, son of an engineer. He learned the printing trade and worked for various country newspapers, his earliest literary production, 'The Surrender of Cornwallis,' appearing in the *Boston Carpet Bag* in 1852. The first of the Artemus Ward series appeared in the *Cleveland Plain Dealer* in 1858, and embodied the fiction that B. was a traveling showman of waxworks and tame animals. In the following year he joined the staff of *Vanity Fair* in New York, and his contributions were collected as *Artemus Ward: His Book*, 1862. President Lincoln enjoyed his work, and opened the fateful cabinet meeting which resulted in proclaiming freedom for slaves in 1862 by reading out B.'s 'High Handed Outrage in Utica.' Going on a lecture tour, B. worked through California and Nevada to Salt Lake City, then returned to New York, where he lectured on 'Artemus Ward among the Mormons.' In 1866 he sailed for England, where he made the Savage Club his H.Q., and contributed to *Punch*, but d. in Southampton of consumption. Like other Amer. humorists, B. secured his comic effects partly by pretended illiteracy, bad spelling, and atrocious puns. His complete works appeared in 1871. See E. P. Hingston, *The Genial Showman*, 1870, and life by D. C. Seitz, 1919.

Browne, Edward Granville (1862-1926), orientalist, son of Sir Benjamin C. B., shipbuilder, of Newcastle upon Tyne. Educ. at Eton and Cambridge, he studied medicine at Cambridge and in London, but devoted himself chiefly to the study of Persian. Travelled in Persia, 1887-8. Pubs. include trans. from Persian; also *A Year amongst the Persians*, 1893 and 1926 (including a memoir in the 1926 ed.) and a *Literary History of Persia* (4 sections), 1902-24.

Browne, Edward Harold (1811-91), bishop, b. Aylesbury, and educ. at Eton and Cambridge. He was a fellow and tutor of Emmanuel College. In 1843 he became vice-principal of Lampeter College, and was later appointed Norrisian prof. of divinity at Cambridge. In 1850-1853 appeared his famous book, the *Exposition of the Thirty-nine Articles*, a book which was for a long time the standard work on this subject and which ran into many eds. He became Bishop of Ely in 1864, and was one of the most prominent churchmen of the time. In 1873 he was trans. to Winchester, which see he resigned owing to ill health in 1890.

Browne, George, Count de (1698-1792), soldier, b. Camas, Limerick, in Ireland. On completing his studies at Limerick, he entered (1725) the service of the elector palatine, since, as a Catholic, he was excluded from many appointments in his own country. From Germany he passed into the Russian Army, where he quickly distinguished himself. After successfully quelling a revolt against the Empress Anne, he took an active part in the wars against Poland, France, and Turkey. His whole life was full of adventure: he was taken prisoner by the Turks, and seven times sold as a slave. Later he fought in

the Seven Years War, and was wounded at Zorndorf. He was made major-general and then field-marshal by Peter III. For the last 30 years of his life he was governor of Livonia and Estonia.

Browne, Hablot Knight (1815-82), illustrator, best known by his pseudonym 'Phiz.' He was b. of poor parentage at Lambeth. He received what artistic training he had during his apprenticeship to Finden, the steel engraver. He succeeded Seymour as illustrator of Dickens's *Pickwick*, and his visualisation of Dickens's characters has become inseparable from them. He was the creator of the Sam Weller which all readers of Dickens know, and amongst other very successful creations of his may be mentioned Mrs Gamp, Tom Pinch, Maj. Bagstock, Micawber, and David Copperfield. He signed his drawings 'Phiz' to match Dickens's 'Boz.' He executed some drawings for *Punch*, and did most of the illustrations for Lever's works and some for Harrison Ainsworth, producing also some water-colours. In 1867 he had a stroke causing slight paralysis, after which he did no more really successful work. In 1878 he was awarded a pension by the Royal Academy. See F. G. Kitton, *Phiz*, 1882.

Browne, Maximilian Ulysses (1705-57), descendant of an Irish Jacobite family, b. Basel. His father and uncle were 2 of the exiles of 1690, his father entering the Austrian service and becoming ennobled, whilst his uncle entered the Russian service and became a field-marshal. He himself entered the service of Austria at a very early age, and was rapidly advanced. He took part in the 11 campaigns of the Austrian Army and distinguished himself also whilst fighting against the Turks. He was early in the field during the war of the Austrian Succession (1740-8), and it was owing to his efforts in the field that the success of Frederick the Great was restrained. At the end of the war he was promoted to the rank of commander-in-chief of the army of Bohemia, and in 1753 he became a field-marshal. He was still an active officer when the Seven Years War (1756-63) broke out, and he took an active part in the early campaigns. He commanded the Austrians at the battle of Lobositz (1756), where he was defeated, but retreated in good order. He was mortally wounded at the battle of Prague.

Browne, Robert (c. 1550-1633), founder of the Brownists, b. Toilethorpe, near Stamford, of an ancient and well-known family. Educ. at Corpus Christi College, Cambridge, he was for a time a schoolmaster. He took orders, but his licence to preach was revoked when he began to attack and condemn the Estab. Church. So fiercely did he denounce its gov. that he was imprisoned in 1581 by order of the Bishop of Norwich, and only released through influence. After sev. imprisonments he retired to the Netherlands and formed a church, which was not very successful and soon broke up. Meanwhile, in his *Booke which sheweth the Life and Manners of all True Christians*, he put forward the theory on which modern Congregationalism has been built up.

After some years at Middelburg, he returned to Britain and stayed for some time in Scotland. He then returned to his home, and tried to spread his doctrines there. He again suffered imprisonment, but his attitude towards the Estab. Church changed, and he accepted a position at St Olave's Grammar School, and finally became vicar of a church in Northants. Here he stayed 43 years, but always a man of violent temper, he was in 1630 imprisoned for an assault on a constable, and died in jail. His defection did not break up his sect. They survived in the Netherlands for a considerable time, and many migrated to America. In England they took the name of Independents or Congregationalists.

Browne, Sir Thomas (1605-82), author and physician, *b.* London, son of a merchant. He was educ. at Winchester and Pembroke College (then known as Broad-gates Hall), Oxford, after which he studied medicine at continental univs., including Leyden, where he graduated. After prolonged travel abroad, he finally, in 1634, settled in practice at Norwich. His claim to renown rests on his *Religio Medici* (written, according to authentic tradition, at Shipden Hall, Halifax, an old house and park since somewhat rudely encroached upon by industry), pub. (though not designed for pub.) in 1642, but probably written in 1634 or 1635, though his *Hydriotaphia, or Urne Buriall* (pub. 1658) probably displays best the peculiar force of his genius and the old-world flavour of his majestic style. His other chief work, *Inquiries into Vulgar Errors* (more fully *Pseudodoxia Epidemica*, or *Inquiries into very many commonly received Tenets and commonly presumed Truths, which examined prove but Vulgar and Common Errors*), was pub. in 1646. He is, indeed, one of the most original of Eng. writers. Whilst civil war devastated the country, he was serenely absorbed in metaphysical speculation on the mysteries of life. His work is steeped in the mysticism of Plato, so that he beholds the world merely as an image, and he seems to look on all things rather in the spirit of the modern transcendentalist. Introspective and sceptical though he was, his 'religion of a doctor' is thoroughly impregnated with the feeling of the essential mystery underlying true religion. His other writings are *The Garden of Cyrus*, or the *Quincuncial, Lozenge, or Network Plantations of the Ancients, Artificially, Naturally, Mystically Considered*, 1658, *Certain Miscellaneous Tracts* (mostly addressed to Sir Nicholas Bacon), 1683, and *Christian Morals*, 1716. Knighted in 1671 on account of his royalist sympathies in the Civil war. He married in 1641, and the mild scorn expressed in the *Religio Medici* for that 'trivial and vulgar way' of union does not appear to have prevented him and his wife Dorothy from enjoying an exceedingly happy married life. He *d.* at Norwich. The best ed. of the complete works is that by Simon Wilkin, 4 vols., 1836 (3 vols. (Bohn), 1851), where full biographical and bibliographical information will be found. Prefixed to it is

Johnson's famous *Life*. See also 6-vol. ed. by G. Keynes, 1928-31; life by Sir E. Gosse, 1905; R. Sencourt, *Outflying Philosophy*, 1925.

Browne, William (c. 1590-c. 1645), poet, *b.* Tavistock, Devon. He was educ. at the grammar school there, from which he went to Exeter College, Oxford, and afterwards was entered at the Inner Temple. He is said to have been received into the household of Wm. Earl of Pembroke, but little is known of his later life. His poems, which are mainly descriptive, are rich and flowing, and true to the scenes he depicts, but lack deep feeling. They show the influence of Spenser, and B. in turn had some influence on such poets as Milton and Keats. His chief works were *Britannia's Pastorals*, 1613-16, *The Shepherd's Pipe*, 1614, and *The Inner Temple Masque*, 1615. He was the author of the famous epitaph on the Countess of Pembroke, long attributed to Ben Jonson, beginning 'Underneath this sable hearse.' There are eda. of his works by W. C. Hazlitt, 1868-9, and G. Goodwin, 1894. See also F. W. Moorman, *William Browne*, 1897.

Browne, William George (1768-1813), traveller, was fired to explore by reading Bruce's *Travels*. In 1792, after careful examination, he concluded that the ruins at Siwah were not those of the temple of Jupiter Ammon. Though later he journeyed through Syria, Asia Minor, and the Levant, his most important expedition (1793-6) was to Darfur, when he acquired trustworthy information as to the Nile's course. He was murdered by bandits, it is said, whilst travelling towards Teheran. A dry, affected style spoils his *Travels in Africa, Egypt, and Syria*, 1799.

Brownell, William Cray (1851-1928). Amer. critic. He was educ. at Amherst College and for 2 years (1879-81) was art critic to the *New York Nation*. From 1890 onwards he acted as literary adviser to the publishing house of Charles Scribner. His first book, a sympathetic study of France, called *French Trails*, appeared in 1889, but with the pub. of *French Art* in 1892 he firmly estab. his position in the profession of criticism. He wrote a series of incisive studies of the Victorian and Amer. 'prose masters,' which appeared in 1901 and 1909 respectively. Other books are *Newport*, 1896, *Criticism*, 1914, *Standards*, 1917, *The Genius of Style*, 1924, and *Democratic Distinction in America*, 1927.

Brownhills, urb. dist. in Staffs, England, in the Cannock parl. div., with important coal-mines; near the Essington Canal and on the Rom. Watling Street. Pop. 21,480.

Brownian Movement, name given to a phenomenon discovered by Robert Brown, a botanist, in 1827. On viewing through a microscope a liquid such as gamboge solution, in which small particles are in suspension, these particles are seen to be in constant motion backwards and forwards without any regularity or co-operation. Brown suspected living matter, but it has been shown by Gouy and Perrin that the phenomenon would follow from

the molecular structure of matter, being produced by molecular bombardment, arising from thermal motion. In 1905 Einstein arrived at a satisfactory quantitative theory. The phenomenon is closely related to sedimentation equilibrium in an emulsion of very small particles. An equilibrium is reached in which the density of the particles decreases gradually with increasing height.

Brownie, in the folk-lore of Scotland a goblin of the most obliging kind. He was never seen, and was only known by the good deeds which he did. He usually attached himself to some farmhouse in the country, and he was only noticed by the voluntary labour which he performed during the night. He would churn, or thresh the corn, or clean all the dairy utensils, or perform some equally good-natured labour. The country people had great faith in the good works of the B. and believed in him implicitly. His reward was usually a dish of cream. The B. bears a strong resemblance to Robin Goodfellow in the English and the Kobold of Ger. literature, whilst some comparison can be made between him and the household gods of the Romans and the Russian domovoy. B.s were often the cause of the mysterious disappearance of things, and in this respect can be compared to the pixies of SW. England. Practically every known folk-lore has its special fairy which can be compared to the B.

Brownies, see GIRL GUIDES.

Browning, David Clayton (1894-), author and journalist, b. Glasgow. He was educ. at Glasgow and Oxford Univs. and was leader-writer for the *Glasgow Herald*, 1925-31. He has since specialised in compiling literary works of reference, including *Everyman's English Dictionary*, 1942, *Dictionary of Quotations and Proverbs*, 1951, *Dictionary of Shakespeare Quotations*, 1953, and *Dictionary of Literary Biography: English and American*, 1958. He also revised and modernised Roget's *Thesaurus*, 1952.

Browning, Elizabeth Barrett (1806-61), poetess, b. Carlton Hall, Durham. The greater part of her life was spent in Herefordshire, at a place called Hope End. Suffering from injury to her spine, for many years she was under the shadow of threatened consumption, and frequently experienced family bereavements, circumstances which affected her style of writing in no small degree. Among these bereavements was the death by drowning of a brother, the witnessing of which gave her a shock the effect of which never left her. A helpful influence was that of her husband, Robert B., the poet, whom she married in 1846 against the wishes of her family. Previous to this she had pub. sev. literary works. In 1826 appeared *An Essay on Mind, and other Poems*. Her trans. of Aeschylus's *Prometheus Bound* was pub. in 1833 and *The Seraphim* in 1838, while during this period she contributed to the *Athenaeum* and other periodicals. In 1844 appeared an issue of *Poems*, in 2 vols., and a new, greatly enlarged ed. in 1850. The first of these vols. contained the poem *Lady Geraldine's*

Courtship, leading to her acquaintance with her future husband. The marriage proved an ideal one, and Mrs B. was restored to comparative health by her residence in Florence, where the only child of the marriage was b. In 1852 appeared *Casa Guidi Windows*, Italian in setting and sentiment. *Aurora Leigh* in 1856 was a long 'sociological' romance or 'novel in verse' and proved a distinct departure from her previous work. In the *Poems before Congress*, 1860, her husband's influence was plainly discernible. She d. at Florence in 1861, and in the next year a vol. of *Last Poems* was issued. It has been said that Mrs B.'s popularity was

ELIZABETH BARRETT BROWNING

assured when her husband's was still problematical. Certain it is that up to the pub. of *The Ring and the Book* she was by far the better known. Her easy style, incoherent and fatally voluble though she might be occasionally; her interest in her own time, as exemplified in *The Cry of the Children*; her romantic tendency which sometimes leads her into 'gush,' as in the *Rhyme of the Duchess May*—all these combined to make her peculiarly acceptable to the reading public at large. She has been called the greatest Eng. poetess, but her work, though musical and metrically beautiful, is so marred by her inability to understand the value of rhyme sounds, that as an artist she is inferior to Christina Rossetti. She certainly is the most voluminous poetess, and has impressed her character best upon her work. Her supply of words is extraordinary, and she has a wonderful power of pathos. She is at her best in lyrical work; with the exception of one or two pieces, practically all her other writing might with advantage be compressed. In the *Sonnets from the Portuguese*, 1850, which were addressed to her

husband, we have work of such exquisite beauty that it bears comparison in tone, sentiment, and execution with some of the best in our language. There are many of the shorter pieces of whose beauty much might be said. Her faults, if obvious, are but blemishes; and the jewels of her work are to be ranked for ever as precious stones and set in the casket of our literature. Eds. of her works are innumerable. Collections of her letters were pub. in 1897, 1929, and 1954. See lives or studies by J. H. Ingram, 1888; K. E. Royds, 1912; J. C. Willis, 1928; J. C. Clarke, 1929; D. Hewlett, 1953; also D. Creston, *Andromeda in Wimpole Street*, 1932, and Virginia Woolf, *Flush, a Biography*, 1933.

Browning, John Moses (1855-1926), inventor of small arms, b. Ogden, Utah, son of Jonathan B., a gunsmith and a member of the Mormon community. His name is a household one in connection with numerous small arms, especially automatic. His breech-loading single-shot rifle was patented in 1879 and bought by the Remington Co. His next patented designs were those for his repeating rifle, 1884, and the Colt machine-gun, which later was accepted by the U.S. Army. It was in 1895 that B. patented his box magazine. Perhaps his best-known weapon is his 'B. pistol,' which was manuf. at Liège in large quantities and much used in the First World War. During that war the war dept of the U.S.A. held a test of guns, the result being that a new weapon, designed by B. and capable of firing nearly 40,000 rounds before suffering a breakage, was adjudged the best. It was also during the First World War that B. designed an automatic rifle weighing no more than 15½ lb., this design also being adopted by the U.S. Army. Both B. automatics were used by U.S. troops in the Second World War. The Winchester and Stevens sporting rifles and other types of sporting weapons were also B.'s designs. See also FIRE-ARMS.

Browning, Oscar (1837-1923), writer and historian, b. London. He was educ. at Eton and King's College, Cambridge, becoming fellow and tutor of his college. In 1860 he became a master at Eton, and later a univ. lecturer in hist. at Cambridge. He took a prominent part in univ. movements, including those for univ. extension and the training of teachers; he aroused enthusiasm for the study of political science and modern political hist. Three times he stood unsuccessfully for Parliament as a Liberal. Among his contributions to modern hist. are *England and Napoleon in 1803*, 1887, *The Flight to Varennes*, 1892, *A History of the Modern World, 1815-1910*, 1912; and to lit. hist.: *Dante: his Life and Writings*, 1891, *Guelphs and Ghibellines*, 1893, *The Age of the Condottieri*, 1895. See also his *Memoirs of Sixty Years*, 1910, and *Memoirs of Later Years*, 1923.

Browning, Robert (1812-89), poet, b. Camberwell. His father was an important official in a bank, and his mother, whose maiden name was Wiedemann, was of Scottish-Ger. descent. Robert never

devoted himself to any profession, being first and last a man of letters. His education was not that of the ordinary young Englishman of means, but was privately obtained. During his youth he was noted for his passionate devotion to literature and music, and his intellectual promise was always considered great. Yet, while Tennyson successfully wore down all criticism, and perhaps increased his renown by the acceptance of the laureate's crown, B. had to struggle against the storm of adverse opinion for nearly 40 years before his worth was fully recognised. The essential defects of the poet, as they are generally and perhaps unjustly called, are seen in equal measure in his late and early work. He himself dismissed *Pauline*, 1835, as unworthy of inclusion among his later works. It is a study in autobiographical form of the development of a soul through many adverse experiences to final peace, and it is a difficult poem because the causes of the successive mental states are unexplained. *Paracelsus*, 1835, an imaginative reconstruction of the physician's life, has more of beauty and of interest. Here we get the breathlessness of hurried simile crowding against simile, which later gave rise to much of the criticism of his work on the score of obscurity; but here also are the peculiarly rapid blank verse and his original lyric form. In 1837 he wrote a drama, *Strafford*, at the request of Macready, who produced it at Covent Garden (1 May 1837), but he was more felicitous in using the dramatic form without much thought of practical application to the stage, as, for example, in *Pippa Passes*, a dramatic fantasy based on the idea of unconscious influence. He was interested less in the conflict of a group of characters than in the fortunes of a single mind; and to give this psychology something of objectivity, he invented the 'dramatic monologue,' as exemplified in *Fra Lippo Lippi*, *Andrea Del Sarto*, and *Saul*. His other avowed dramas are *King Victor and King Charles*, on an episode in the annals of the house of Savoy; *A Blot in the 'Scutcheon'*, a strong domestic drama, but overcharged with narrative; *The Return of the Druses*, a 5-act tragedy on the tyranny of the knights of Rhodes; *Colombe's Birthday*, on true love's triumph over worldly ambition; *Luria*, dramatising a fictitious episode in the 15th-cent. struggle between Florence and Pisa, the interest being essentially psychological. In 1840 appeared the poem *Sordello*, the tale of an obscure Mantuan troubadour mentioned by Dante, in which, once again, the real interest is in the development of a soul, though the 'dramatic' background is concerned with the struggles of Guelphs and Ghibellines and of emperor and pope. *Bells and Pomegranates*, a series of 8 pamphlets issued between 1841 and 1846, included *Dramatic Lyrics*, 1842, and *Dramatic Romances and Lyrics*, 1845. In 1846 B. married Elizabeth Barrett, the poetess, and for the sake of her health removed to Florence. The marriage proved an ideal one; he speaks again and

again of his wife in reverent, loving verse. 'My perfect wife,' he calls her. During this period he produced *Christmas Eve and Easter Day*, 1850—companion poems, dealing, the one with evangelicalism, Rom. Catholicism, and rationalism, the other with the essentials of Christian faith and practice—and *Men and Women*, 1855, which, like his previous *Dramatic Lyrics*, 1842, and later *Dramatis Personae*, 1864, exploit, with considerable success, his device of the 'dramatic monologue'; in all these will be found some of his best work, particularly in the last-named. After Mrs B.'s death, which occurred in 1861, B. returned to London, and gave himself up to work. In 1868-9 appeared *The Ring and the Book*, a huge poem of more than 20,000 lines, which was more than favourably received. It is based on an old MS. B. read in Italy, telling of the murder of a girl-wife by her nobleman husband. The tale is told and retold by each one of the actors, and wonderful art is used in the differentiation of the various characters. The poem is remarkable for its dramatic power and variety, but still more for its boundless humanity and a sustained psychological perception which can have rarely been equalled in poetry. Having at last gained attention, B. let few of the next 15 years pass without at least one or two vols. from his pen. These included *Balaustion's Adventure*, 1871, founded on an incident in Plutarch and embodying a 'transcript' of the *Alceste* of Euripides; *Prince Hohenstiel-Schwangau*, 1871, a study of Napoleon III; *Fifine at the Fair*, 1872, an inquiry into the relations of men and women in which casuistry and truth concerning uncertainty in love are strangely blended; *Red Cotton Night-cap Country*, 1873, and *The Inn Album*, 1875, both melodramas of modern life; *Aristophanes' Apology*, 1875, a sequel to *Balaustion's Adventure*, introducing *Heracles*, another 'transcript' from Euripides; *Pacchiarotto and how he worked in Distemper*, 1876, in which B. makes an ineffective and not very dignified attack on his critics; a trans. of the *Agamemnon* of Aeschylus, 1877; *La Saisiaz*, 1878, inspired by the death of a friend, Miss A. E. Smith; *The Two Poets of Croisic*, 1878, a narrative poem, concluding on the note that happiness must be the final test of poetic merit; *Dramatic Idylls*, 1879-80, and *Jocoseria*, 1883, in both of which B. returns to the method of *Dramatic Lyrics*; *Ferishah's Fancies*, 1884, a dozen fables, ascribed to a dervish, expressing B.'s religious and moral views, followed in each case by a lyric interpreting its lesson in more emotional terms; *Parleyings with Certain People of Importance in their Day*, 1887, a series of critical character studies; and *Asolando*, 1889, a final miscellany remarkable for its fine 'Epilogue,' summing up B.'s characteristically optimistic outlook. The greater part of these are written in the curious blank verse which he now affected, and are all marked by the blemishes which even his greatest admirers cannot deny he exhibited in his work. Yet in these appear some of his loveliest

lyrics, and indeed it can be affirmed that *Asolando*, which was pub. almost on the same day on which his death took place in Italy, contains work as beautiful in form and thought as that in his *Dramatis Personae* of a quarter of a cent. earlier. Any estimation of the value of B.'s work must be made more difficult by the fact that towards the close of his life he received an adulation which was as unwise in its attitude as unsuited to his dignity. From the formation of the now defunct Browning Society in 1881 his adherents formed themselves into a kind of defensive and offensive alliance, ready to accept all his doings as good, and to challenge the world on his behalf. Most unwisely, they gave colour to the often reiterated charge of obscurity laid against the poet, by producing handbooks to his works, and even a cyclopaedia to all B. references. Such blind devotion defeated its own ends by making the general reader suppose that B. was 'difficult,' and so led to comparative neglect. But following the long period of uncritical neglect and of an equally uncritical cult, which rendered impartial judgment almost impossible, there is clear evidence to-day that, while much of his voluminous writing will be allowed to fall into oblivion, what survives will be accounted among the permanent treasures of modern literature—not least some of his lyrics, such as 'The Last Ride Together,' 'Prospect,' and 'Love among the Ruins,' which are noble examples of his art. Though so much of his work is concerned with medieval Italy, yet he is essentially the Englishman in Italy, patriotic in heart, although by choice cosmopolitan. He is, again, the poet of the It. Renaissance, and seems to have caught the very spirit of it; witness the cruel beauty of 'My Last Duchess' or the grotesque pathos of 'The Bishop orders his Tomb,' to choose only 2 out of many. His interest in art and music is probably a result of early inclination, and his later surroundings. In his attitude towards nature it may be taken generally that, like Wordsworth, he gives her a personality, but, unlike him, considers that personality distinct from, and usually hostile to, the human. But it is in his dramatic lyrics and monologues that he is most often at his greatest. Such pieces as 'The Last Ride Together,' 'Rabbi Ben Ezra,' and 'Holy Cross Day,' will be remembered when his more ambitious works of greater length lie forgotten. Through them we see the poet himself, hopeful always, tolerant of others, and believing, God being in His heaven, that the best was yet to be. There are few poets who so unconsciously disclose themselves in their works. B.'s ethical teaching is strenuous and militant—life is to be faced boldly and not evaded. B.'s views of poetry and art faithfully reflect these ethical principles and in them unite high spirituality with the frankest acceptance of the natural world (e.g. in *Fra Lippo Lippi*). From the beginning to the end of his long literary career, B. proclaimed God, immortality, and the goodness of

things, and if, none the less, he emphasises the ugliness and evil of the world, he does so in order to prove that the basis of faith remains unshaken even in the worst conditions. It has been well said that B.'s own life had been, in the best sense, fortunate, so that he knew little of the evil which, in the abstract, fascinated him, and had he known more of life he might have come to realise evil as a fierce and positive corruption in human life, and that realisation would have deepened his poetry. See lives by W. Sharp, 1890; A. Waugh, 1903; G. K. Chesterton, 1903; E. Dowdon, 1904; W. H. Griffin and H. C. Minchin, 1910 (revised ed., 1938); Fanny Browning, *Some Memories of Robert Browning*, 1928. See also A. Orr, *A Handbook to the Works of Browning*, 1885, 1887; A. Symons, *An Introduction to the Study of Browning*, 1886, 1906; W. R. Inge, *The Mysticism of Robert Browning*, 1906; F. Rhys, *Browning and his Poetry*, 1914; B. Miller, *Robert Browning: a Portrait* 1952.

Brownists, see BROWNE, ROBERT.

Brownsea, is in the entrance of Poole harbour, Dorset. Also known as Branksea. On it are a Gothic church and a Tudor castle.

Brownson, Orestes Augustus (1803-76), Amer. philosopher and theologian, was b. Stockbridge, Vermont. He was in turn a Presbyterian, a Universalist, an Independent, a Unitarian, and a Rom. Catholic. He wrote strongly and with great fervour on all the theological and philosophical questions which agitated his times. He founded the *Boston Quarterly Review*, 1838, and *Brownson's Quarterly Review*, 1844. His chief works were *Charles Elwood, or the Infidel Converted*, 1840, a book in which he strongly supported the Rom. Catholic Church, and *The American Republic: its Constitution, Tendencies, and Destiny*, 1865. See A. M. Schlesinger, *Orestes A. Brownson*, 1939.

Brownsville, co. tn of Cameron co., Texas, U.S.A., on the Rio Grande, 25 m. from its mouth in the Gulf of Mexico. In 1846 there was a notable bombardment of a small U.S. force which had occupied the place. The Amer. Army defeated a superior number of Mexicans near here. Pop. 36,000, of whom many are Mexicans.

Brownwood, city in Brown co., Texas, U.S.A. Pop. 20,000.

Broxburn, vil. of W. Lothian, Scotland, 6 m. SE. of Linlithgow, and adjoining Uppahall (q.v.), chiefly known for its shale oil works. Pop. (with Uppahall) 9530.

Bruay-en-Artois, Fr. tn in the dept of Pas-de-Calais. It is an important coal-mining tn. and has brewing, glass-making, and sugar refining. Pop. 31,700.

Bruce, Sir David (1855-1931), military physician, b. Melbourne, Australia. Educ. at Stirling High School and Edinburgh Univ. Entered R.A.M.C. 1883. Assistant prof. of pathology, Netley, 1889-94. In 1899, fellow of Royal Society, for which he undertook commissions of inquiry into diseases in Malta, Uganda, and Nyasaland. In Malta he discovered the cause of Malta fever (brucellosis), and in Africa

he showed that the tsetse-fly was the carrier of the organism causing sleeping-sickness or trypanosomiasis. He was knighted in 1908. In the First World War he was chairman of the pathological committee of the War Office. President Brit. Association, 1924.

Bruce, Edward (c. 1549-1611), Scottish lawyer. He accompanied King James to England on his accession, having, in 1601, by his diplomacy opened up the famous correspondence between his master and Sir Robert Cecil.

Bruce, James (1730-94), explorer of Africa, b. Stirlingshire, and educ. at Harrow and Edinburgh Univ. He studied for the Bar, but entered the wine business on marrying the daughter of a wine merchant. The sudden death of his wife, within less than a year of their marriage, led to his travels in Spain and Portugal. He examined some E. MSS. in the Escorial, and his enthusiasm led to the adoption of his career as an explorer. He was selected as Brit. consul of Algiers, and given a commission to study the anet remains there. In 1765 he explored the ruins of Barbary, and travelled to Tripoli and thence to Candia. He subsequently travelled through Syria, staying at Palmyra and Baalbek. He reached Alexandria in 1768, and successfully accomplished a long-cherished dream, the discovery of the source of the Blue Nile in 1770. His *Travels to Discover the Source of the Nile*, 1790, shows familiarity with Lat. and Gk texts, and in this he is to be compared with James Silk Buckingham (q.v.). The scepticism with which his account was received in London proved a great disappointment, and he retired to his estate at Kinnaird. Though a man of notorious vanity, he recovered from his pique sufficiently to publish an account of his travels in 1790, and though the expert criticism of its authenticity was then strong, the main facts have since been corroborated, notably by Lt.-Col. Playfair. His unfinished autobiography was pub. in part in the (1805, 1813) eds. of the *Travels*.

Bruce, James Robert Thomas, see ELGIN, EARLS OF.

Bruce, Michael (1746-67), poet, b. Kinrosswood, Kinross-shire, son of a poor weaver. His education was seriously hampered by his interrupted attendance at school, for he was often required to act as herdsman. Circumstances proved sufficiently kind to allow his subsequent entry into Edinburgh Univ. for 4 sessions, and for a short time he kept a school. His longest poem, *Locheven*, written in spite of broken health, shows the influence of James Thomson. His best poem is his *Elegy written in Spring*. His promising career was cut short by consumption in 1767. The authorship of the famous 'Ode to the Cuckoo' beginning 'Hail, beauteous stranger of the grove' is contested, some ascribing it to B., others to his editor, the Rev. John Logan, but the evidence is strongly in favour of B.'s claim.

Bruce, Robert (1274-1329), King of Scotland. The B.s were of Norman

origin, and B.'s grandfather, with John Balliol, had claimed the Scottish throne in 1290. On the death of his father in 1304, B. became 6th lord of Annandale. At the beginning of his career he supported Edward I, hoping, probably, to secure his father's accession to the Scottish throne. As Earl of Carrick he swore fealty to the Eng. monarch at Berwick, and in 1297 renewed his oath at Carlisle. Shortly after this, however, he served under Wallace (q.v.), but after the capitulation of Irvine he was again at peace with Edward. In 1298 he rebelled once more, and burned the castle of Ayr, whilst 5 years later he fought on the Eng. side, during the siege of Stirling. From then onward, however, B. vacillated no longer; he was soon to become prime champion of Scotland's independence. His secret alliance with Lamberton, Bishop of St Andrews, undertaken as a means of defeating Edward's ambitious projects, was an important step in his career. Of all the clergy, Lamberton had been the most loyal supporter of Wallace, and was therefore, after his meeting with B., a firm bond of union between the 2 leaders in the national movement. But the turning-point in B.'s career was the murder of the Red Comyn, in 1306, on the high altar of the church of the Friars Minor, Dumfries. B. had probably made some compact with Comyn, who was Balliol's nephew, as to their respective claims to the throne. While they were together in the church, a violent quarrel ensued, in the course of which B. fatally stabbed his rival. Hastening to Lochmaben Castle, B. gathered his adherents together, and 2 months later was crowned king by the Bishop of St Andrews at Scone. He now had to reckon with both the English and the Comyn party. In June 1306 he was surprised by the Earl of Pembroke, Commander-in-Chief of the Eng. Army, in Methven wood, and had to seek refuge in the moors of Athole. Two months later he suffered a second defeat, near the head of Loch Tay, at the hands of the Comyn's uncle, lord of Lorn. Leaving his queen at Kildrummy Castle, Aberdeenshire, he was obliged to lead a wanderer's life in the W. Highlands, until he managed to escape to the is. of Rathlin (off Antrim, Ireland). Many tales survive of the hairbreadth escapes of B. and of his courage throughout all difficulties. Meanwhile his friends at home gave him up for dead, and Edward proceeded with his work of vengeance. B.'s lands were confiscated and he and his followers were excommunicated. But B.'s days of hardship and defeat were nearly over. Early in 1307 he landed at Carrick, and though he was forced for a time to take refuge in the hills of Ayrshire, he rallied his forces, and at Loudon Hill subdued the English under the Earl of Pembroke. His final success was assured by the death, in 1307, of his formidable adversary, King Edward. By 1311 B. was in possession of all the great castles, with the exception of Stirling. And this stronghold, too, fell into his hands after his memorable defeat of the English at Bannockburn (1314), in

which his superior generalship deprived the enemy of their huge numerical advantage. In 1318 B. captured Berwick, which was henceforth a Scottish, instead of an Eng., frontier tn. On the accession of Edward III, the Scots made wide incursions into the N. countries, but the treaty of Northampton (1328) ended hostilities. By its chief clause 'Scotland shall remain to Robert, King of Scots, and his heirs, free and undivided from England, without any subjection, servitude, claim, or demand whatsoever.' The last 2 years of B.'s life were passed at Cardross Castle, on the Firth of Clyde. He d. of leprosy, which he had contracted during his campaigns. On his death his heart was extracted, embalmed, and given to Sir James Douglas, who was to have carried it to Jerusalem, but he d. whilst fighting the Moors in Spain. The relic was finally deposited in the monastery of Melrose, whilst B.'s body was buried in the abbey church, Dunfermline. B. is remembered as Scotland's national hero. He had undoubted military genius, and possessed a strength of character and an ability to inspire devotion which brought him loyal followers even in moments of complete defeat. See life by Agnes Mure MacKenzie, 1934.

Bruce, William Speirs (1867-1921), Scottish explorer and geographer, son of Samuel Noble B., an Edinburgh surgeon. In 1892 he went out as naturalist of the *Balaena*, one of a little fleet of 4 ships bound for the Antarctic and the adjacent seas. This Dundee whaling expedition went out to look for the commercially valuable Greenland whale. But the Royal Society and the Meteorological Society equipped the fleet with scientific instruments, and appointed officers to undertake the work of observation and research. In 1902 he was the leader of an expedition of which he wrote a report: *The Scottish National Antarctic Expedition—Scientific Results of the Voyage of the S.Y. 'Scotia' during the Years 1902-4*. On this expedition he discovered Coats Land. In 1911 he issued *Polar Exploration*. His later studies were chiefly of Spitzbergen, which he had visited at the end of the last cent., and which he revisited 1906, 1912, 1914, and 1919. His obituary appeared in the *Scottish Geographical Magazine*, vol. xxxviii, Jan. 1922.

Bruce of Melbourne, Stanley Melbourne Bruce, 1st Viscount (1883-), Australian statesman, was b. Melbourne (Victoria), son of John Bruce, and was educ. at Melbourne Grammar School, and at Trinity Hall, Cambridge. He was called to the Bar in the Middle Temple in 1907; but soon afterwards became a partner in the Australian importing firm of Paterson, Laing & Bruce. He served in the First World War as an officer of the Royal Fusiliers; was wounded at Suvla Bay, and again in France; and, having been awarded the Military Cross, was invalided, and returned to Australia in 1917. In 1918 he entered the Commonwealth Parliament as member for Flinders. In 1921 he represented Australia at the League of Nations Assembly, and became

Commonwealth treasurer; second-in-command to Wm Morris Hughes, the Prime Minister—an ex-member of the Labour party, who had formed a National party, to which B. adhered as a member of the Liberal wing. In 1923 on the resignation of Mr Hughes, B. became Prime Minister and minister for external affairs, forming a coalition of the National and Country parties. He was in London in 1923, and was made a privy councillor. He also attended the Imperial Conference of 1926. He added to his duties those of minister of health, 1927-8, and of minister of terra., 1928-9. In 1929, having been frustrated in his efforts to work the Commonwealth Labour Arbitration Law, he introduced a Bill to abolish the federal jurisdiction in arbitration cases. He was outvoted on this measure, the opposition being led by his former chief, Mr Hughes, and was heavily defeated at the ensuing general election, being succeeded as premier by the Labour leader, Mr Scullin. Became resident minister in London in the late Joseph Lyons's first Cabinet, 1932, and, later, high commissioner for Australia in London. President of the Council of the League of Nations, 1936. His long term of office as high commissioner for Australia in London was not ended until 1945. Since 1947 B. has been chairman of the Finance Corporation for Industry. Raised to the peerage after the war.

Brucea, genus of shrubs of the Simarubaceae, named in honour of James Bruce, 1730-94 (q.v.), the traveller in Ethiopia, and is said to be a tonic and an astrigent; the leaves and seeds of *B. sumatrana* are intensely bitter and possess the same medicinal properties.

Bruch, Max (1838-1920), Ger. composer, b. Cologne. His early teaching was by his mother. He won the Mozart Prize at Frankfurt and then studied under Hiller and Reinecke at Cologne and afterwards became a music teacher there. His first opera was a setting of Goethe's *Schmerz, List und Rache* (Cologne, 1858); his second, *Lorelei* (Mannheim, 1863). Later he went to Berlin where he wrote an indifferent opera, *Hermione*, on Shakespeare's *Winter's Tale* (1872). He resided in England from 1880 to 1883 and was for a time conductor of the Liverpool Philharmonic. In 1893 he was made director of the Hochschule in Berlin. His reputation in Germany rested chiefly on such works as *Frithjof*, 1864, for male chorals and orchestra and *Odysseus*, 1872, for mixed chorus and orchestra; but he was best known in England for his works for violin or cello with orchestra, of which the G minor Violin Concerto is the most famous, others being *Kol Nidret* for cello and the *Scottish Rhapsody* for violin.

Bruchsal, Ger. tn in the *Land* of Baden-Württemberg (q.v.), 35 m. NW. of Stuttgart (q.v.). It has a famous baroque castle (badly damaged in the Second World War), once the residence of the prince-bishops of Speyer (q.v.), and there is also a fine baroque church. The tn is an important centre of communications. Pop. 18,500.

Bruchus is the typical genus of the coleopterous family Bruchidae. The females deposit their eggs in the seed-cases of leguminous plants, and the matured larva feeds on the seeds, and may thus do much damage. *B. pisi* is a native of Britain which devours peas, *B. fabae* beans, and *B. granarius* vetches and beans.

Brucine ($C_{22}H_{32}O_4Na$), vegetable alkaloid found in company with strychnine in *nux vomica* and false *Angostura* bark, from which latter it was first isolated in 1819 by Pelletier and Caventon. B. is a tertiary base closely allied with strychnine, but is more soluble in alcohol and water, is less bitter, and has a much less poisonous effect on the system. The anhydrous alkaloid melts at 178°. The crystalline form is prismatic and contains ordinarily 4 molecules of water. It turns a bright red colour with nitric acid, which yields nitro-derivatives, and at the same time acts as an oxidizing agent.

Bruck: 1. Austrian tn in the prov. of Lower Austria, on the Leitha. It has a fine castle and anc't houses. Pop. 8300.

2. Tn in Switzerland (see *Brugg*).

Bruck an der Mur, Austrian tn in the prov. of Styria. It has interesting old buildings, and manufs. iron, paper, and cables. Pop. 12,000.

Brückenaue, Ger. spa in the *Land* of Bavaria, 170 m. NNW. of Munich (q.v.). There is also a spa at Bad B., 3 m. distant in the valley of the Sinn. Pop. 7000.

Brucker, Johann Jakob (1696-1770), Ger. historian of philosophy. He was a native of Augsburg, and was educ. at Jena Univ., where he graduated in 1718. In 1723 he became par. minister of Kaufheuren, and 8 years later was elected a member of the Academy of Sciences at Berlin. His chief work is *Historia Critica Philosophiae*, 1742-4, which attained immediate success. His other works, now little known, include *Ottium Fidei-cum*, 1731, and *Erste Anfangsgründe der philosophischen Geschichte*, 1751.

Bruckner, Anton (1824-96), Austrian composer, son of a vil. schoolmaster, was destined for a teaching career, but was taught the organ; and at the age of 13, when his father d., he went as chorister to the monastery of St Florian, where he received more systematic training in music. He composed much while filling various teaching posts, but it was not till the age of 31 that he was appointed organist at Linz Cathedral. He took a severe course of study under Sechter during visits to Vienna, another in orchestration and form under Kitlzer at Linz, and only at the age of 40 did he write his first mature work, the *Mass* in D minor. In 1868 he became prof. at the Vienna Conservatory, in 1869 he visited France, and in 1871 England as organ virtuoso. In 1878 he was appointed to the court chapel, but he was never comfortably off to the end of his life and his works made headway very slowly. He wrote a vast amount of sacred and secular choral music on a small scale, but little else, even for the organ; his important works are his *Masses* and *Te Deum*, the

string Quintet, and particularly his 9 symphonies which, though desultory in form, show his greatness by grandeur of conception, splendour of orchestration, and expansive melodic beauty. He was too easily induced by his professional friends to revise, cut, and rescure the symphonies, with the result that various versions exist to confuse students and to provoke endless quarrels among experts.

Bructerus, Mons, see BROCKEN.

Brudenell, James Thomas, see CARDIGAN, EARL OF.

Brueghel (Breughel), Pieter the Elder (c. 1529-69), Flem. painter and founder of the family of that name, which became famous for painters. *B.* at Brueghel, near Bruges, he was the son of a peasant. He worked in early life as engraver, afterwards travelling fairly extensively in France and Italy. He became a member of the academy of Antwerp about the year 1551 and *d.* in Brussels. His work is distinguished by its humour and satire, being somewhat influenced by Bosch (q.v.), though in such works as 'Peasant Dance' he shows a great individual genius. His son **Pieter** (1564-1638) is known as *Hell B.*, because of the weirdness of the subjects which he usually chose to paint. Another son, **Jan** (c. 1568-1625), known as *Velvet B.*, is noted for his studies of still life and for his landscapes and seascapes. He travelled extensively in Italy, living for some time there. He painted parts of the landscapes of some of Rubens's pictures.

Brueys, David Augustin de (1640-1723), Fr. theologian and dramatic author. *B.* early abandoned his career as a lawyer, and gave himself up to theological controversy. He was converted by Bossuet from Protestantism to Catholicism, became a priest, and wrote now chiefly with the object of converting Protestants. An ardent frequenter of the Comédie-Française, *B.* soon began to write plays himself, generally in collaboration with Jean Palaprat, so as to avoid publishing in his own name. He gained his reputation chiefly as the author of *Le Grandeur, Soit toujours soi*, and *L'Avocat Patelin*. This last comedy (an adaptation of a medieval farce) gave rise to the adjective *patelin*, applied to a person who tries to gain his ends by flattery and fine words.

Bruges, Roger of, see ROGIER VAN DER WEYDEN.

Bruges (Flem. *Brugge*), the city of bridges, cap. of the prov. of W. Flanders, Belgium, situated about 60 m. NW. of Brussels and 8 m. from the N. Sea, at the junction of sev. important railways and canals. The tn still keeps its medieval appearance to a very great extent, and the effect of this is added to by the retention of its old city walls and its medieval fortified gates, making of *B.* the most picturesque tn of Belgium. The old city is remarkable for the antiquity and grandeur of its old Gothic buildings. In particular 2 of its Gothic buildings, both of which date back to the 14th cent., may be mentioned, the cathedral of St-Sauveur and the church of Notre-Dame. The cathedral still has

a magnificent appearance, though it was much damaged by fire in 1839, and contains a number of interesting and valuable pictures. The church of Notre-Dame contains the tomb of Charles the Bold and of his daughter Mary of Burgundy, and has also a collection of marble statues, one of which, the 'Virgin and Child,' is by Michelangelo. Amongst other buildings of interest which may be mentioned are the Halles (market-hall) with a Gothic belfry and the most magnificent chimneys in Europe, the Palace of Justice, and the Hôtel de Ville. The chief manuf. of the tn is lace, which gives employment to a very great number of people. Other

THE GOTHIC BELFRY OF BRUGES

manufs. are linen, woollen, and cotton, yeast, bristles, embroidery, and printing. By means of its canal communications it can trade with a number of the ports of Europe, and in particular mention may be made of the ship canal to Zeebrugge, which has opened up and developed the trade with Hull. The foundation of *B.* goes back to before the 7th cent., and the tn owes its name to the fact that the city originated at a bridge (*brug*) over an inlet of the sea. The spot was first fortified by Count Baldwin of the Iron Arm, who made it his chief residence. By the 12th cent. it was recognised as the most important tn in, and the cap. of, Flanders, and it was here that the various counts were proclaimed. During the 13th and 14th cents. *B.* claimed equal place with Ghent, and was the recognised centre of the Hanseatic League (q.v.) in middle N. Europe. Its commerce was developed along wise lines, and it speedily assumed, and for some time kept, the premier position amongst the trading tns of Europe.

The order of the Golden Fleece was instituted here by Philip the Good in 1430. In the 15th cent. it rose up in revolt against the Duke of Maximilian, and the measures of repression which were adopted gave the first severe blow to the trade of the city. Its pop. at this time probably exceeded 200,000. The decline was completed by the persecution of Alva and Philip II; and additionally by the silting up of the estuary on which the city was

1523. The par. church of B. dates from 1480.

Brugmansia, genus of solanaceous shrubs now included in *Datura* (q.v.). *B. arborea*, Angel's Trumpet, a Peruvian shrub, is *Datura arborea*; *B. knightii*, Mexico, is *D. cornigera*; and *B. sanguinea*, Peru, is *D. sanguinea*; all grow outdoors in mild dists.

Brugsch, Karl Heinrich (1827-94), eminent Egyptologist, was the son of a

Belgian Embassy

BRUGES: THE TOWN HALL

situated. Many of the traders and merchants fled the tn, and its prosperity rapidly declined. It was captured by the French in 1794, and became part of the United Netherlands in 1815. Later, in 1830, it became a part of the kingdom of Belgium. It was occupied by the Germans during the 4 years of the First World War, but little damage was done to it. It was again occupied by the Germans from 1940 to 1944. In 1942, when the Germans organised a defensive line along the coast 12 m. deep, the city became crowded with refugees from the coastal belt. The pop. is (1955) 51,700.

Brugg, small tn in the canton of Aargau, Switzerland. In the museum are many relics of the Rom. camp Vindonissa. The large mental hospital of Königsfelden has taken the place of the abbey, dissolved in

cavalry officer, and was b. Berlin. The patronage of Frederick William IV enabled him to visit the prin. museums of Europe, and he first went to Egypt in 1853, being sent there by the Prussian Gov. He there made the friendship of Mariette, the Fr. archaeologist, and joined him in his excavations at Memphis. He was for some time prof. of oriental languages at Göttingen; afterwards (1870) became director of the school of Egyptology at Cairo. Among his chief works were *Geographische Inschriften altägyptischer Denkmäler*, 1857-60, and *Geschichte Ägyptens unter den Pharaonen*, 1877.

Brühl, Heinrich, Count von (1700-63), chief minister and favourite of Frederick Augustus II (otherwise known as Augustus III), King of Poland and elector of Saxony, b. Weissenfels. Beginning life

as a page in the service of the Duchess Elizabeth of Saxe-Weissenfels, he became Prime Minister to Augustus II in 1746, and aided and abetted that monarch in all his extravagant ways. He played fast and loose with the finances of the country to such an extent that when the Seven Years War broke out, Augustus could only send a small force to meet Frederick of Prussia, and his army was hopelessly beaten by Frederick at Pirna. His library of 62,000 vols. now forms part of the library at Dresden.

Brühl, Ger. tn in the *Land* of North Rhine-Westphalia (q.v.), 28 m. S. by E. of Düsseldorf (q.v.). It has a fine 18th-cent. rococo palace, and has coal and iron industries. Pop. 30,000.

Brun, Cornelius, *see* BRUYN.

Bruise, extravasation of blood into the tissue from small blood vessels ruptured by injury. When a B. occurs in the superficial tissues the familiar discoloration, together with slight swelling, is to be seen shortly after the injury, disappearing gradually and changing colour as the blood pigment in the B. disorganises. As a rule an injury which breaks the skin does not cause a B., since the bleeding is then external and not into the tissues. Internal B. causes no visible signs, but the patient is conscious of discomfort in the affected part. In more severe types of injury correspondingly larger blood vessels may be ruptured and the extravasated blood forms into localised collections which are absorbed gradually or may have to be evacuated. These collections of blood are known as haematomata.

Brulov, or Brylov, Constantin Karl Pavlovich (1799-1852), Russian painter, b. St Petersburg and d. at Marciano, near Rome. He studied Raphael in Rome, and on his return to Russia was appointed painter to the court, and in 1836 prof. at the St Petersburg Academy. His huge 'The Last Day of Pompeii' had a sensational success in Russia and was praised beyond its merits by Gogol and Pushkin.

Brumaire ('foggy month'), second month of the Fr. revolutionary calendar, estab. in France in 1793. The 18th B. (of the year VIII), corresponding with 9 Nov. 1799 of the Gregorian calendar, was the day on which Napoleon overthrew the Directory and replaced it by the Consulate. *See* CALENDAR.

Brumath (Rom. *Brocomagus*), Fr. tn in the dept of Bas-Rhin. The forest of B. is a favourite resort of the Strasburg townsfolk. Vines are grown. Pop. 5700.

Brummell, George Bryan (1778-1840), dandy, known as 'Beau Brummell,' b. in London. He was educ. at Eton and Oriel College, Oxford, and a few years later, upon inheriting a fortune of £30,000, he gave himself up to the pleasures of society in London. He attained notoriety for his taste in dress, though that, while elegant and precise, was never extravagant. For many years he enjoyed the patronage of the Prince of Wales (afterwards George IV), but they quarrelled in 1813, and soon afterwards gambling losses drove him to France. He lived at Calais

for 14 years, and then (1830) was appointed consul at Caen. A few years later he sank into imbecility, and d. in the asylum of Bon Saurvoir, Caen. *See* life by V. Woolf, 1930. *See also* W. Connolly, *The Reign of Beau Brummell*, 1940.

Brun, Charles Le, or Lebrun, *see* LE BRUN.

Brun, Cornelius, *see* BRUYN.

Brun, Marie Louise Elisabeth Vigée le, *see* LEBRUN.

Brun, Rudolf, Swiss magistrate, d. in 1360. He headed an insurrection in his native tn of Zurich, had himself proclaimed dictator, and prevailed upon the people to establish a new constitution. These events led to his becoming the first burgomaster of Zurich. After a long struggle with the deposed magistrates the Emperor Louis of Bavaria persuaded him to receive a pension and a sum of money in exchange for which he made peace.

Brunanburh, site of a battle in 937 in which Athelstan and his brother Edmund defeated a powerful alliance consisting of Norsemen and the Kings of Scotland and Strathclyde. B. has never been identified, and has been variously placed in dists. as far apart as Dumfriesshire and Lincs. As a result of this victory Athelstan became the first king to reign undisputed over all England. A ballad vividly commemorating the victory is in the *Anglo-Saxon Chronicle*; Tennyson used this as the basis of one of his poems. *See* A. Campbell, *The Battle of Brunanburh*, 1938.

Brunck, Richard François Philippe (1729-1803), Fr. classical scholar, was b. Strasburg, and educ. at the Jesuits' College, Paris. As military commissary he participated in the Seven Years War. He pub. many eds. of the Gk classics, the first being the *Anthologia Graeca*, in which his innovations on the conventional mode of criticism, startled European scholars. He took part in the revolution, lost his pension, and was imprisoned at Besançon.

Brundisium, *see* BRINDISI.

Brune, Guillaume Marie Anne (1763-1815), Fr. marshal, b. Brives-la-Gaillarde, Corrèze. He commenced studying for law in Paris, and later became a journalist. His friendship with Danton was begun here and also his alliance with the Jacobins. He took part in the military operations of the 13th Vendémiaire as a brigadier-general. He served under Napoleon in 1796, and 2 years later commanded the Fr. Army in Switzerland. Against the Anglo-Russian attack on Amsterdam in 1799 he won a complete victory. On Napoleon's adoption of the imperial title in 1804 he was appointed marshal. In Aug. 1815 he was murdered by the royalists.

Bruneau, Alfred (1857-1934), Fr. musical composer, b. Paris. He studied under Massenet, and took second Prix de Rome at Paris Conservatoire. Best known as a writer of dramatic music, he produced his first opera in 1887; *Le Rêve*, which followed in 1891, was not only generally praised but notable as a work which strongly influenced the development of the modern Fr. school. Opinion is divided on

the merits of his later work, some critics regarding his technique as rather crude. The libretto of *Le Rêve* was written by Louis Gallet after Zola's novel, and after that B. worked in close co-operation with Zola, basing sev. operas, including the best, *L'Attaque du moulin*, 1893, on his work and inducing him to write 3 librettos himself: *Messidor*, 1897, *L'Ouralgan*, 1901, and *L'Enfant-roi*, 1905. He was music critic to *Le Figaro*.

Brunel, Muslim sultanate situated on the NW. coast of Borneo. It is a Brit. protected state. Area about 2226 sq. m., with a coastline of 100 m., lying between 4° 2' and 5° 3' N. lat. and 114° 4' and 115° 22' E. long.; pop. 48,000. Under Brit. administration since 1906. The chief tn bears the same name as the sultanate and has a pop. of 12,000. The only other tn of any size is Kuala Belait at the SW. end of the state's seaboard. Climate, hot and moist with cool nights. The interior is largely jungle with much timber of value. Rainfall varies between 100 and 200 in. for different parts of the state. B. is the largest producer of crude petroleum in the Commonwealth after Canada. Oil was first found in 1914, but there was no production on a commercial scale until 1932. Crude oil exports in 1955 were worth nearly \$41,000,000; a part went to Sarawak for refining. Other exports are rubber, firewood, and a little cutch; rice is grown for local consumption. Local crafts include the manuf. of silverware and brassware and the weaving of silk and cotton sarongs. The B. silversmiths are perhaps the most famous of the Malay Archipelago. The forests of B. represent one of the greatest potential assets of the state, but are not exploited at present. There are 2 wireless stations. The state has an interesting and somewhat varied hist. A state named Puni, 45 days' sail from Java, is mentioned sev. times in the annals of the Sung dynasty, which ruled over S. China AD 960-1280, and it is practically certain that the reference is to B. In the 14th cent B. owed allegiance to Malacca. By the 16th cent. it had risen to great power and, in the reign of Sultan Bolkia, its authority extended not only over the whole of the is. of Borneo, but also over the Sulu Is. and part of the Philippines. The first European account of B. is that of Pigafetta, who sailed with Magellan on his famous voyage round the world. Pigafetta saw B. in 1521 and was greatly impressed by the splendour of the court and the size of the tn. Towards the end of the 16th cent. the power of B. began to decline and by the middle of the 19th cent. it had fallen hopelessly into decay. By a treaty made in 1888 B. was placed under the protection of Great Britain, and in 1906 administration was entrusted to a Brit. resident; the governor of Sarawak is high commissioner for B.

Brunel, Isambard Kingdom (1806-59), son of the equally famous engineer, Sir M. I. B. (q.v.), b. Portsmouth. At a very early age he showed the possession of those qualities which are essential to a good engineer and draughtsman, and he

was sent at the age of 14 to the Collège Henri Quatre in Paris to study. Three years later he entered his father's office, and in 1831 his plans for the Clifton suspension bridge were adopted, and he was put in charge of the work. The bridge, however, was not completed until after his death, owing to lack of funds, but his plans were strictly adhered to, and the chains of the Hungerford suspension bridge were used in its construction, since that bridge, erected by him in 1841-5, had been superseded by the Charing Cross railway bridge in 1862. From 1833 to 1848 he was the chief engineer of the G.W.R.; here he achieved many triumphs, especially in his construction of canals. In addition to his work as a railway engineer, B. also constructed the first steamboat which made regular voyages between America and this country; this was the *Great Western*, which he constructed for the railway company of that name. He was also the designer of the *Great Britain*; his greatest achievement was the construction of the *Great Eastern*, but he only lived long enough to see her get afloat, and did not witness the beginning of her great voyages. The *Great Eastern* started on its first voyage on 7 Sept. 1859, and on 15 Sept. the great engineer d. In addition to his railway and ocean steam navigation work he also helped in the construction of many docks throughout the country. His skill and ability were generally recognised throughout England, and he was made a F.R.S. and an hon. D.C.L. of Oxford.

Brunel, Sir Marc Isambard (1769-1849), inventor and engineer, b. Hacqueville in Normandy. He was originally intended for the church, but showed a natural ability for mathematics and mechanics, and ultimately joined the navy. With the navy he served for some 6 years, until, on returning to France in 1792, he found the revolution at its height, and being a pronounced royalist, he left the country for the U.S.A. Here, in 1793, he began his career as an engineer. He became chief engineer for New York, and erected a new arsenal for the city, fitting it with some ingenious machinery for boring of his own invention. He sailed for England in 1799, and submitted some plans for making ships' blocks, which were ultimately accepted by the gov. His machinery saved the gov. a considerable amount of money in the first year's working, and he was appointed to carry out many other plans for the gov. at various dockyards. He made experiments in steam navigation, and advised the gov. to adopt steam tugs for taking warships out to sea, but in 1814, after some actual experiments, the gov. refused to adopt the idea. In 1821 he became a bankrupt owing to his financial mismanagement and also owing to the fire which destroyed his sawmills at Battersea. His chief claim to fame—and he has many—is the part which he played in the construction of the tunnel under the Thames. The start was made in 1825; the riv. broke through the roof twice, once in 1827 and again in 1828. The work was

discontinued in the latter year, and was not again taken up until 1835, the tunnel being finally opened in 1843. Together with his son, I. K. B. (q.v.), he made many experiments. Knighted in 1841, and in 1829 received the order of the Legion of Honour.

Brunelleschi, Filippo (1379-1446), It. architect, b. Florence. To him a revival of the Rom. style is largely attributed. His natural taste for craftsmanship altered his father's intention of arranging for him to follow the profession of notary, and he was accordingly apprenticed to a goldsmith, where he quickly mastered all that was to be learnt. Unsuccessful with a design for the Baptistry gates in Florence in 1401, he then went to Rome to study ancient buildings. Returning to Florence in 1407, he submitted a competitive design for the completion of the cathedral there with a cupola. In this competition he was successful, but the execution of his design did not begin till 1419, and the lantern on the cupola was not erected until after his death. His other buildings, all in Florence, included the churches of S. Lorenzo, 1425, and S. Spirito, 1433; the Pazzi Chapel, c. 1420; the Ospedale degli Innocenti, 1445; and the Pitti Palace, begun 1435.

Brunetière, Ferdinand (1849-1906), Fr. author and critic, b. Toulon. He began to write for the *Revue des deux mondes* in 1875, and became its editor in 1893. From 1886 to 1895 he was prof. of the Fr. language at the Ecole Normale; during this time, too, he lectured with great brilliance, chiefly on Fr. literature. An event in B.'s life—his conversion from materialism to Catholicism—caused an immense sensation throughout France. He was a leader of the conservative critics. Although at first a follower of the evolutionist theory, he later attacked the scientific approach to literature. Among B.'s most important works are *Le Roman naturaliste*, 1883, *Etudes critiques sur l'histoire de la littérature française*, 1886-1907, *L'évolution des genres dans l'histoire de la littérature*, 1890, *L'évolution de la poésie lyrique en France au XIX^e siècle*, 1894, *Nouveaux Essais sur la littérature contemporaine*, 1895. In *Le Roman naturaliste* he wages war against the Fr. realist or naturalistic writers, especially those of the school of Zola.

Brunhilda: 1. In the *Nibelungenlied*, Queen of Iceland (Isenlant), wooed by Siegfried for the King of Burgundy, Günther. Kriemhild, sister of Günther, and wife of Siegfried, excites the envy of B., whose friend, Hagen, one of Günther's followers, discovers the vulnerable point in Siegfried's enchanted body, treacherously slays him, and steals the Nibelung hoard and buries it in the Rhine. In the original Norse legend B. was the beautiful daughter of Odin, who, having disobeyed his orders, was cast into a deep sleep on the rock of Hendaftjell and guarded by a wall of fire. Here she had to remain until a hero, daring all for her sake, penetrated the wall and freed the 'warrior woman.'

2. A princess of the Visigoths. The

daughter of the Visigothic king, Athanagild, she was married to Sigbert, King of Austrasia. She was cruelly put to death in 613.

Bruni, Leonardo (1369-1444), It. scholar, b. Arezzo, from which place he obtained the name of Leonardo Aretino by which he is often known. In 1405 became papal secretary, and held the position for 10 years under 4 consecutive Popes. He then went to Florence, where he gained the friendship of the Medici family and through them the state chancellorship in 1427, which he held until his death. He did much to advance Gk learning in Italy, particularly by his trans. into Latin of the works of Demosthenes, Plutarch, Aristotle, and Plato. His *History of Florence* was first pub. in 1610.

Bruzaceae, family of dicotyledonous shrubs, natives of S. Africa. The flowers are hermaphrodite, arranged in whorls of 5, with either 2 or 3 united carpels containing sev. ovules, or with a single carpel containing 1 ovule. The fruit is a capsule or a nut. Genera include *Berzelia*, *Brunia*, *Lincozia*, *Raspalia*, *Staaria*, and *Thamnea*.

Brünig Pass, over the Swiss Alps, joining Meiringen and Luzern. It is about 3400 ft at its highest point. In 1889 a railway was opened up, which was electrified in 1941.

Brünig, Heinrich (1884-), Ger. statesman and economist, b. Münster. He was educ. at Munich, Strassburg, Münster, and Bonn Univs., and later served in the First World War. After the war he became secretary to Stegerwald, founder of the Catholic trade union movement and Prussian minister for social welfare, and in 1924 he entered the Reichstag. In 1929 he was elected par. leader of the Catholic Centre party—a victory of the anti-Socialist right wing. When, in 1930, Hindenburg accepted him as chancellor of the Reich, B. was the youngest man who had ever held that office. It was a time of acute financial crisis, and B. resorted to rule by emergency decrees owing to the inability of any party to provide a working majority in the Reichstag. He attempted to reach agreement with Hitler, but he was fundamentally anti-Nazi, and as the Nazi influence grew, Hindenburg withdrew his support from B., who resigned, 1932. Though his gov. led directly to the Nazi assumption of power, there is no doubt that B. personally was a conscientious chancellor of Christian principles and sincere intentions, who, however, lacked the vital capacity to control events. He left Germany soon after Hitler gained power, lecturing at Oxford, and then going to live in the U.S.A. He returned to Germany after the Second World War, to become prof. of political science at Cologne Univ. (1951).

Brunings, Christian (1736-1805), Dutch hydraulic engineer, b. Neckerau, who was given the control of the dykes in Holland, and in this capacity carried out sev. important improvements. He is best known by an instrument, bearing his own name, which he invented, and which

enables the rapidity of a stream to be gauged.

Brünn, *see* BRNO.

Brunne, Robert of, *see* MANNING, ROBERT.

Brunnen, vil. in Switzerland, the most frequented place on the lake of Luzern after Luzern itself. It lies on the St Gotthard railway, has a rack and pinion railway, many hotels, and very picturesque scenery. The Forest Cantons renewed their league here in 1316.

Brunner, Emil (1889-), Swiss Protestant theologian, b. Winterthur. With Barth (q.v.), pastor of a neighbouring par. during the First World War, he led a revival of the Renaissance tradition by developing 'dialectic theology' (Christian revelation) against modernism and liberalism. B. and Barth differed, however, concerning the balance between reason and revelation, B. holding that the latter is in congruity with anthropology and the fulfilment of hist. He became a follower of Frank Buchman (q.v.). Works include *Das Symbolische in der religiösen Erkenntnis*, 1914, *Die Mystik und das Wort*, 1924, *The Word and the World*, 1931, *Wahrheit als Begegnung*, 1938, *Gerechtigkeit*, 1943, and *Christianity and Civilisation (First Part: Foundations)*, 1948.

Brunner, Heinrich (1840-1915), Ger. juriconsult and historian, b. Weis, Upper Austria. He studied at Vienna, Göttingen, and Berlin, taught Ger. law at Vienna, was appointed prof. at the univ. of Lemberg in 1866, at Prague in 1870, and afterwards at Strasburg. In 1872 he became prof. of Ger. civil, commercial, and maritime law at Berlin. B. did most valuable research work in the hist. of Fr. law, studying minutely the early laws and institutions of the peoples of W. Europe, especially the Franks. He was the leading authority on modern Ger. law. His chief works are *Die Entstehung der Schwurgerichte* (dealing with the Eng. and Fr. jury systems), *Deutsche Rechtsgeschichte* (contained in vols. I. and II. of *Bindung's Handbuch der deutschen Rechtswissenschaft*, 1887-92), and contributions to *Monumenta Germaniae historica*.

Brünnow, Franz Friedrich Ernst (1821-1891), Ger. astronomer, b. Berlin. He graduated Ph.D. in 1843 at Berlin Univ., and worked for some years at the Berlin Observatory. In 1847 he was appointed director of the Düsseldorf Observatory, and 4 years later succeeded Galle as first assistant at the Berlin Observatory. In 1854 he accepted the offer of director of the new observatory at Ann Arbor, Michigan, and in 1860 he went to the observatory of Albany, N.Y., as associate director, returning to Ann Arbor the following year. In 1866 he accepted the professorship of astronomy in Dublin Univ. and astronomer royal of Ireland, and carried out valuable work there in stellar parallaxes. His chief pub., *Lehrbuch der sphärischen Astronomie*, appeared when he was at Düsseldorf, and in 1865 was trans. by himself into English; it has since been trans. into 4 other languages.

Bruno, St (c. 1030-1101), founder of the Carthusians (q.v.), b. Cologne and

educ. there and at Rheims and Tours. His ability and knowledge were famous throughout the Church, and he was speedily advanced. But having protested against the evil-doing of one of the archbishops, he was forced to seek safety in flight. Later he was offered eccles. preferment, but his appointment was opposed and he retired to a desert near Grenoble, where he founded the Carthusian order, 1084. He was again offered preferment in the Church, but declined it, and devoted himself to his order. He was the author of some commentaries on the Psalms and the Pauline Epistles, but none of his works is extant.

Bruno, Giordano (c. 1548-1600), It. philosopher, b. near Nola. At the early age of 15 he joined the Dominican order, and was ordained priest in 1572. Accused of heresy, he left Italy and travelled via Geneva and Toulouse to Paris, where he arrived in 1581. After 2 years in the Fr. capital, where he lectured and wrote sev. works, B. went to England, lectured for some time at Oxford, and wrote those works for which he is principally famed: *Cena della Ceneri*; *Della Causa, Principio, ed Uno*; and *Del' Infinito, Universo, e Mondì*. Disgusted with Eng. life and with the intellectual atmosphere of Oxford, he returned to Paris, whence he made his way to Wittenberg, Prague, Helmstadt, and Frankfurt. Here he pub. 3 metaphysical treatises: *De Triplici Minimo et Mensura*; *De Monade, Numero, et Figura*; and *De Immenso et Innumerabilibus*, 1590. From Frankfurt B. went to Zürich, and thence to Venice, where he was arrested by the Inquisition (1593) and brought to Rome. After languishing in prison for 7 years, he was finally excommunicated and burned at the stake (17 Feb. 1600). Apart from his rejection of Aristotle's astronomy in favour of the Copernican system, B.'s thought tended towards pantheism. God, he maintained, is the universal and unifying substance of all phenomena, which proceed from Him of necessity; the universe is the realisation of the divine intellect. His Lat. works were ed. by F. Fiorentino and others (1879-01), and the It. writings by B. Croce and G. Gentile (1907, etc.). *See* G. Gentile, *Giordano Bruno nella Storia della Cultura*, 1907, and W. Boultong, *Giordano Bruno*, 1916.

Bruno the Great (c. 925-65), Archbishop of Cologne and later Count of Lorraine, was the third son of Henry the Fowler (q.v.). He was one of the most important men of his time, distinguished for piety and learning. To him are ascribed a commentary on the Pentateuch and a vol. of lives of the saints.

Brunonia, family Goodeniaceae; genus of one species, *B. australis*, a stemless perennial herb with blue flowers of Australia, needing greenhouse conditions in Britain.

Brunonian System, in medicine a system which regards disease as due to variations in a natural stimulus, its excess causing sthenic and its deficiency asthenic diseases. *See* BROWN, JOHN (1735-83).

Brunow, Ludwig (1843-?), Ger. sculptor,

b. near Lübz in Mecklenberg-Schwerin. He was at first a carpenter, but going to Berlin in 1866 he found a patron in Friedrich Eggers, with whose help he was trained as a sculptor. In 1871 he produced the group 'The Harbinger of Love and the Fulfilled Dream,' a 'Pegasus,' and the reliefs 'Bride of Coriath' and 'Family Happiness.' After 2 journeys to Italy he was commissioned to execute colossal figures of the emperors Frederick I and Frederick William II, as well as many groups and busts. The date of his death is unknown.

Brunsbüttel, Ger. vil. in the *Land* of Schleswig-Holstein (q.v.), 50 m. SW. of Kiel (q.v.). It stands at the point where the Kiel Canal enters the Elbe (qq.v.). On the opposite bank of the canal is the modern industrial tn of Brunshüttelkoog (pop. 11,000).

Brunswick, Friedrich Wilhelm, Duke of (1771-1815), Prussian general. Deprived of his duchy by the treaty of Tilsit in 1807, he took up arms against France, whose sworn enemy he became. He fought in the Austrian campaign of 1809, and, refusing to lay down his arms on the conclusion of peace, went with his troops to England and put himself at the service of the Brit. Gov., in whose service he fought in Portugal and Spain. He was reinstated in his sovereign rights in 1815, but was killed at Quatre-Bras.

Brunswick, Karl Wilhelm Ferdinand, Duke of (1735-1806), Prussian soldier, married Augusta, a sister of George III, and served in sev. campaigns. In 1780 he became duke on his father's death, and in 1792 he led the Austrian and Prussian Army that was so signally defeated by the French at Valmy. He held a high command in the allied armies until, commanding the Prussians, he was wounded at Auerstadt and d. subsequently. His son, Friedrich Wilhelm (q.v.), commanded Brunswick troops at Quatre-Bras.

Brunswick (Ger. **Braunschweig**): 1. Former Free State, later *Land*, of N. Germany, now part of the *Land* of Lower Saxony (q.v.). It consisted of 3 larger and 6 smaller enclaves in Prussian Saxony and Hanover: the prin. div., containing B. city, was oval in shape, and lay between Prussia and Hanover; the second, a long, irregular stretch of land, divided Hanover; the third, of irregular shape, was surrounded almost entirely by Prussian ter.; and the remaining 6 divs. were mainly in Prussian ter. clustered around the Hanover boundaries. The total area was 1424 sq. m.

History. In the 10th cent. the lands which later formed B. were in the possession of the family of Brunos, whence the name B. is derived. They passed in the 12th cent. into the hands of a member of the Welf family (see **GUELPHS**), Henry the Proud, and from him to his son, Henry the Lion (q.v.). When Henry incurred the displeasure both of the Pope and of the emperor, he was allowed to keep his B. lands, and in this way they passed into the hands of Otto, his grandson, who was made Duke of B. and Lüneburg by Frederick II. Between the 13th and

16th cents. the duchy underwent a number of changes. It was divided first into the duchies of Lüneburg and B., and again the latter was continually a bone of contention and underwent a number of divs. until, in the 16th cent., it was again united under Duke Julius, who not only reunited it, but added to it also. In the 16th cent. an important div. of the duchy of Lüneburg took place, and one of the divs. made then ultimately became the kingdom of Hanover. After this div. the duchy of B. was ruled in the direct line until the 18th cent. (1735), and again from that date until 1884. B. took an important part in the Franco-Ger. war (q.v.) and became a state of the Ger. Empire in 1871. In 1884 the direct line of dukes failed, and the duchy should have passed to George, Duke of Cumberland, who had until just previously to that time been King of Hanover, but had been deposed by Prussia. Prussian influence was brought to bear, however, and a Prussian prince was elected to the duchy in 1885. In 1906 the Prussian regent d.: the claims of the Duke of Cumberland were again overlooked, and Duke John Albert of Mecklenburg-Schwerin was chosen as regent. On 21 May 1913 Ernst August, son of the Duke of Cumberland, married the Kaiser's daughter, Victoria Louise, and took the oath of allegiance to his father-in-law. On 1 Nov. 1913 he ascended the throne, and reigned until 8 Nov. 1918, when the revolution forced him to abdicate and an extremist Socialist gov. was formed. After various changes a moderate Socialist gov. was returned in 1927, but this gave way in 1933 to the Nazi regime; the state was then under a stadtholder, who was the representative of the chancellor, Hitler (q.v.). In the Second World War B. was overrun by Amer. forces in Mar.-April 1945. See **WESTERN FRONT IN SECOND WORLD WAR**.

2. Ger. city in the *Land* of Lower Saxony (q.v.), on the Oker, 35 m. E. by S. of Hanover (q.v.). It was founded by Henry the Lion (q.v.), and was an important member of the Hanseatic League (q.v.). During the Reformation it favoured the doctrines of Luther (q.v.), and took an active part in the social and religious wars of the period. It was the scene of a violent revolution in 1832, and it became municipally self-governing in 1834. In 1919 it was for a time in the hands of Red revolutionists, until Ger. gov. troops occupied the city on 17 April. During the Second World War much of the city was gravely damaged by bombing in 1944, especially on 30 Jan., 15 and 29 Mar., and 8 April (see **AIR RAIDS**). There has been a great deal of reconstruction since the end of the war. The Romanesque cathedral (1173-95) contains the magnificent tomb of Henry the Lion, who is also still commemorated by the 'B. Lion,' a bronze statue he erected in 1166. Another tomb in the cathedral is that of Queen Caroline (q.v.), the wife of George IV. There are sev. other notable churches and a 14th-15th-cent. tn hall. The timbered houses for which B. was famous were destroyed in the war. Motor

vehicles, pianos, calculating machines, optical instruments, and foodstuffs are manuf. Pop. 241,850.

Brunswick: 1. Formerly a tn. of co. Bourke in Victoria, Australia, 4 m. N. of Melbourne; now included in Melbourne.

2. Co. seat of Glynn co., Georgia, U.S.A. It is situated on St Simons Sound, and is an important port. Its exports are cotton, yellow pine lumber, and naval stores. There are shrimp and crab processing plants, shipyards, and creosoting works. It has steamship communication with New York and Savannah. Pop. 17,954.

3. City in Cumberland co., Maine, U.S.A. It is situated on the S. bank of the R. Androscoggin, close to its mouth, 25 m. NE. from Portland. It is noted for the Bowdoin College at which Longfellow and Hawthorne graduated. There are cotton and paper mills and food canneries; B. is the trade centre for a resort area. Pop. 11,000.

Brunswick, New, see NEW BRUNSWICK.
Brunswick Black, composition of lamp black (q.v.) and turpentine, or of asphaltum, rosin, and turpentine, used for giving a jet-black appearance to iron articles.

Brunswick Green, light green pigment. The term is applied to: (1) oxychloride of copper, prepared by the action of sal ammoniac on copper filings, or by boiling copper sulphate with a small quantity of bleaching powder; (2) carbonate of copper; (3) a mixture of Prussian blue, or indigo, with chrome yellow, a small quantity of gypsum being added.

Brunton, Sir Thomas Lauder (1844-1916), physician, b. Hiltonshill, Roxburghshire. He was educ. at Edinburgh Univ. In 1870 he was lecturer in materia medica and pharmacology at Middlesex Hospital; in 1871 he occupied a similar post at St Bartholomew's Hospital; 1874, assistant physician there; 1895, physician; resigned in 1905, and became consulting physician at the same hospital. In 1886 he was a member of a commission to report on the treatment of hydrophobia, and he went to Paris to study Pasteur's system. He made a special study of the action of drugs and their application in disease; he introduced amyl nitrite in the treatment of angina pectoris and made important observations on the action of digitalis. Prin. works: *The Bible and Science*, 1881; *Disorders of Digestion*, 1886; *A Textbook of Pharmacology and Therapeutics*, 1888; *Collected Papers on the Circulation and Respiration*, 1906. He was knighted in 1900 and created baronet in 1908.

Bruny Island is situated off the SE. of Tasmania. It is 32 m. long, from 1½ to 10 m. broad, and has an area of 160 sq. m. Coal-mining is the chief industry.

Brush, in electrical engineering: a contact sliding on a rotating slipring or commutator (see ELECTRIC MACHINES).

Brush Discharge, see ELECTRIC DISCHARGE.

Brush Turkey, or *Alectura lathami*, is a species of the family Megapodidae, or mound-birds, found in Australia. The birds lay their eggs in mounds of earth or

sand, and the mature bird is about the size of a turkey, brownish-black in colour.

Brushes, instruments used for removing dust or dirt from the surface of anything, and also for applying paint or some similar substance to a surface. The instrument, when made of long twigs, usually of birch, is called a broom, a name which is equally applied to the instruments which are used for household purposes when the handle is long. The materials generally used for the manuf. of B. consist of either the hair of various animals or vegetable fibre or nylon. B. made of steel wire are used nowadays for a variety of purposes, such, for example, as cleaning the inside of a boiler, or for cleaning tubes. B. may be divided into two classes, compound and simple. The latter kind of brush is best exemplified in the hair pencils of artists, and is made of one single tuft of hair. They are usually bound with quills. The compound brush can again be divided into two, 'set' brush and 'drawn' brush. Of the former the best example is the ordinary house-brush, and of the latter the hairbrush. Many kinds of fibre-made B. are usually made by machinery; one of the best brush-making machines being patented in America in 1870—the Woodbury machine. Revolving B. and various other contrivances of this description have been used frequently for the cleaning of the streets, and as early as the end of the 17th cent. one of these machines was in use in London.

Brusilov, Aleksey Alekseyevich (1853-1926), Russian general, an outstanding representative of National Bolshevism (q.v.). In July-Aug. 1917 he was Supreme Commander-in-Chief of the Russian forces; after the October Revolution (q.v.) he served in the Red Army. During the Polish-Soviet war (1920) B. appealed to all Russian officers to join the Red Army. See his *A Soldier's Notebook, 1914-18, 1930*.

Brussels (Fr. *Bruxelles*; Flem. *Brussel*), cap. of Belgium and of the prov. of Brabant, situated nearly in the centre of the kingdom in lat. 50° 51' N, long. 4° 21' E. It is built in the valley of the R. Senne and on the surrounding hills. The climate is healthy, but is variable and usually humid. As the most important tn in the kingdom, B. is the centre of legislation, education, and of artistic life. It contains the royal seat, the chief courts, the chamber of commerce, and is the centre of the prin. banks of the country. It is also a most important industrial centre for all kinds of manufs. Its lace is still considered to be the best in Europe. B. is connected with Antwerp by a ship canal to the R. Rupel, trib. of the Scheldt. It is a junction of sev. international railways and airways. The pop. of the city of B. was 175,000 at the end of 1955, and of Greater B., 1,362,000, including the 17 suburbs: Anderlecht, Auderghem, Etterbeek, Evre, Forest, Ganshoren, Ixelles, Jette, Koekelberg, Molenbeek-St-Jean, St-Gilles, St-Josse-ten-Noode, Schaerbeek, Uccle, Watermael-Boitsfort, Woluwe-St-Lambert, and Woluwe-St-Pierre. The boulevards which

surround the city proper owe their origin to Napoleon. The upper tn, traversed by the rue Royale and the rue de la Régence leading to the Palais de Justice, is the best residential quarter. B. is one of the most modern tns in Europe and in many respects it compares favourably with Paris. Amongst its many buildings may be mentioned the king's palace, which occupies the site of the old palace, burnt down in 1731, and has been much improved of late years. The whole city

Belgian Embassy

BRUSSELS: THE TOWN HALL

is known for the beauty and antiquity of its buildings and for the magnificence of its squares and avenues. The Grand-Place, in the old part of the tn, is one of the finest and most interesting of all the squares in Europe, both from the interesting historical events which have taken place there and from the beauty of the surrounding buildings. In this square are to be found the Hôtel de Ville (15th cent.), the Maison du Roi, and 17 famous guild houses of the industrial corporations. Other medieval buildings are the churches of St Gudule, Notre-Dame des Victoires, and Notre-Dame de la Chapelle. A number of these buildings contain very fine interior decorations. The free and independent univ. was founded in 1834 by the Belgian Liberals. B. was probably a military camp during Rom. times, and is first mentioned by a name resembling B. in the 8th cent. In the 10th cent. it

is mentioned by the Emperor Otto, and in the course of time it became the centre of the gov. The Dukes of Brabant for some considerable time dwelt in it, building their castle on the site of the present royal palace. This palace afterwards became famous as the palace of the Netherlands, and witnessed the abdication of the Emperor Charles V. During the war of the Protestant Succession it was bombarded by the Fr. general Villeroi in 1695 and great damage was done to it, a number of churches and many houses being destroyed by red-hot shot. During the Fr. Revolution the rep. was proclaimed here, and after the revolution of 1830 B. became the cap. of Belgium. On 20 Aug. 1914 the Ger. Army made a triumphal entry into unfortified B. The main body marched on to Mons and Charleroi on the road to Paris. On 2 Sept., Marshal von der Goltz was appointed governor-general of Belgium, and made his H.Q. in B. The Belgian troops retreated from Antwerp in Oct. to a few miles from the Fr. frontier and for 4 years B. was occupied by the Germans, although 'underground' Belgian resistance continued throughout, in spite of Ger. reprisals. On 22 Nov. 1918 the citizens welcomed home King Albert and Queen Elizabeth, who had never left the remaining unconquered strip of their country. In the great hall of the Royal Museum of the Army are preserved many relics of the war, but the *Tir National*, the shooting range just outside the city, with 4 posts marking the spot where 35 civilians were shot for defying the Ger. invaders, is a greater stimulus to Belgian patriotism. There is also a monument near the Avenue Longchamp to the Brit. Nurse Cavell (q.v.), who was shot for helping Brit. prisoners to escape. In 1923 the Brit. monument commemorating the brotherhood of the Brit. and Belgian nations, a replica of that on the Victoria Embankment, was unveiled at B.

In the Second World War B. was occupied by the Germans from 17 May 1940, until liberated by Gen. Dempsey's Second (Brit.) Army on 3 Sept. 1944. On one or more occasions in 1940 the Germans deliberately bombed B. by night and laid the blame on the Brit., but the ruse was soon exposed. Once again the *Tir National* was the scene of brutal executions, some 400 patriots being shot and buried by the Germans. The univ. was closed on 18 Aug. 1942, because of the hostility of the profs. to Germany's 'New Order' (q.v.). As a final act of cruelty the Germans, on the eve of their retreat, set fire to the Palais de Justice, and the lofty cupola, which dominated the whole city, was completely burnt out. The Belgian Cabinet returned from London to B. on 8 Sept 1944.

A great international exhibition was held in B. in 1958, the first of its kind since the Second World War.

'Brussels,' ship belonging to the then Great E. Railway Co. While conveying passengers between Harwich and Rotterdam in July 1916, it was captured by a Ger. torpedo-boat flotilla and the captain,

C. A. Fryatt, was shot on a charge of having attempted to ram a Ger. submarine in Mar. 1915. The *B.* was sold to Mr T. B. Stott, a Liverpool shipowner, at the Baltic Exchange, for £3100, on 19 Aug. 1920. See FRYATT, CAPT.

Brussels Conferences. A number of international conferences have been held in Brussels. In 1874 a conference attended by most European powers met there at the suggestion of the Tsar, its object being to improve the conditions of prisoners-of-war, etc. No important re-

cruciferous plant. The main stem of the plant bears numerous lateral leaf-buds in the axils of the leaves, each bud a kind of pygmy cabbage. The sprouts are succulent, and are eaten as a vegetable, coming into season in the autumn and winter.

Brussels Treaty (1948), 50-year treaty of collective military aid and economic and social co-operation signed by Great Britain, France, Belgium, the Netherlands, and Luxembourg, at Brussels on 17 Mar. 1948. It gave concrete form

D. McLeish

BRUSSELS: THE BOURSE

sults followed. In 1876 King Leopold summoned representatives (quite unofficial) of the great powers to decide on the best way of exploring and opening up Africa to European trade and civilisation. The outcome was the creation of the Congo Free State. In 1890-1900 the anti-slavery conference met at Brussels for the purpose of suppressing the slave trade in Africa. In 1901 an international conference on sugar bounties was held there. Since the First World War Brussels has somewhat lost its old position as the *venue* of international conferences. In 1920 the financial experts of the Allies met there, prior to the Spa Conference, in the endeavour to fix the total of reparations to be paid by Germany. In 1937 a conference met at Brussels to try to deal with the Jap. invasion of China. In 1948 the Brussels Treaty (q.v.) was signed here.

Brussels Sprouts. *Brassica oleracea* var. *gemmifera*, variety of the cabbage, a

to the policy of a W. Union as formulated in outline by Ernest Bevin, Brit. foreign secretary, after the failure of the 4 major allies to agree upon the terms of the Ger. peace treaty at a time when the menace of Russian Communism called for solidarity among the nations of W. Europe. Aimed, however, against no individual nation, it is no ordinary treaty but is one which is designed to defend and to enrich the W. way of life. By the economic clauses of the treaty, the parties undertake so to organise and co-ordinate their economic activities as to produce the best possible results by the elimination of conflict in their economic policies, the co-ordination of production, and the development of commercial exchanges. A consultative council provides the instrument by which these aims may be realised. Article IV, which is based on Article 51 of the Charter of the U.N. (q.v.), is the core of the treaty. It carries the assurance of automatic assistance to any

one of the contracting parties which becomes the object of armed attack in Europe. Each of the signatories undertakes to give assistance to any one of its partners without waiting for agreement on a joint plan of action. Nor is the undertaking limited to attacks on the territory of the 5 nations; the words 'in Europe' may be taken to include an attack upon allied interests anywhere on the Continent. Outside Europe there is no automatic obligation. Article VII provides that the consultative council may be convened 'in case of the renewal by Germany of an aggressive policy; with regard to any situation which may constitute a threat to peace in whatever area this threat should arise; or with regard to any situation constituting a danger to economic stability.'

Brut, or **Brutus the Trojan**, hero of Brit. legend. According to Geoffrey of Monmouth, the hero who gave his name to Britain. This story is also related by the Anglo-Norman, Geoffrey Gaimar, who based his rhymed chronicle, *Estorie des Bretons* (not extant) on the version of Brit. hist. put forth by Geoffrey of Monmouth; by Geoffrey Wace; and by Layamon. Wace's *Brut d'Angleterre* (1155) is a liberal paraphrase of Geoffrey of Monmouth's work and soon eclipsed Gaimar's metrical chronicle. Wace did not, however, add much of any consequence to Monmouth's hist., though he does speak of the round table, a subject not mentioned by Geoffrey of Monmouth. Layamon, whose *Brut* (early 13th cent.) is an expansion of Wace's hist. or romance of chivalry, surpasses Wace in realism and fire even more than Wace surpasses Geoffrey of Monmouth. B. is supposed to have been the grandson of the 'pious Aeneas'; he was banished from Italy, and after many adventures reached Britain. He is supposed to have founded a new city of Troy (Troynovant), which was erected on the present site of London.

Bruté, **Simon William Gabriel** (1779-1839), Amer. prelate and first Rom. Catholic bishop of the diocese of Vincennes, Indiana, U.S.A., was b. Rennes, France. In 1810 he settled in Baltimore, Maryland, whither his interest in missions and his acquaintance with Bishop Flagnet of Kentucky had drawn him. He held an unrivalled place in the Amer. Church from 1818 to 1834, being constantly consulted by the clergy, and frequently lecturing and teaching. Characteristic stories are narrated of the high respect in which he was held by the Indians, who called him the 'Chief of the Black Robes.' See J. R. Bailoy, *Memoirs of the 1st Rev. S. W. G. Bruté*, New York, 1861.

Bruton, picturesque small tn of Somerset, England, 11 m. from Frome, formerly the seat of a priory, to-day chiefly an educational centre for nearly 1000 children. Pop. 1800.

Brutus, **Decimus Junius** (84-43 BC), served first in Gaul under Caesar, who afterwards made him commander of his fleet. Later he was made master of the horse and governor of Gaul, and Caesar, who held him in much esteem, made him

his heir in the event of Octavian's death. But in spite of this, he was one of the conspirators in the plot against his benefactor. Afterwards he fought with brief success against Antony, but was betrayed to, and put to death by, the latter soon after the siege of Mutina in 43 BC.

Brutus, **Lucius Junius**, one of the first 2 consuls, 509 BC. According to legend his father and brother were both murdered by the Tarquins; Junius escaped by feigning madness. B. took a leading part in the expulsion of the kings, and put his own sons to death for conspiring to restore them. He was killed in single combat by Aruns, son of Tarquin.

Brutus, **Marcus Junius** (79-42 BC), one of the murderers of Julius Caesar, and a governor of Cisalpine Gaul; lost his father when he was only 8 years old, and was trained by his uncle, Cato, in the principles of the aristocratic party. During the early part of his manhood he practised as an advocate. His mother, Servilia, was half-sister of Cato of Utica. On the outbreak of civil war (49) he joined Pompey, despite the fact that it was at the latter's order that his father had been slain (77 BC). After the battle of Pharsalus (48) Caesar pardoned him and made him governor of Cisalpine Gaul in 46, praetor in 41, and promised him the governorship of Macedonia. But notwithstanding the many obligations he was under to Caesar he was persuaded by his friend, Gaius Cassius, to join the conspiracy against his benefactor under the delusive idea of again establishing the rep. After the murder of Caesar, B. seized Macedonia, and having joined forces with Cassius, who was then commanding in Syria, the two opposed their united forces to the armies of Octavian and Antony. Two battles were fought near Philippi (42). B. being victor in the first, but in the second battle he was defeated, and took his own life. During his short life he was an earnest student of literature and philosophy, but appears to have been deficient in judgment and originality, this being the character given to him by Shakespeare (see *Julius Caesar*). He wrote some philosophical treatises and some poetry, but nothing whatever of these has come down to us. His only extant writings consist of portions of his correspondence with Cicero.

Bruun, **Malte Conrad**, see MALTE-BRUN.

Brûx, see MOST.

Bruxelles, see BRUSSELS.

Bruyère, **Jean de La**, see LA BRUYÈRE.

Bruyn, **Brun**, or **Bruin**, **Cornelius** (1652-1719), Dutch painter and traveller, b. The Hague. He studied painting in Rome and Venice, and visited Asia Minor, Egypt, Russia, and Persia. From the drawings made during his travels he obtained sufficient data to publish 2 profusely illustrated vols. of his journeys, the prin. value of which lies in the beauty of the plates.

Bry, or **Brie**, **Theodorus (Dirk) de** (1528-1589), Ger. publisher and engraver, b. Liège. He set up as a printseller and bookseller at Frankfurt, and it is supposed that his career as an engraver began

rather later. He executed many fine etchings and engravings for various books of voyages and topography, including a voluminous *Collectiones Peregrinationum in Indiam Orientalem et Indiam Occidentalem* (*Collections of Travels to the East and West Indies*), in gathering which he was assisted by Hakluyt. He excelled also in such series as 'The Wise and Foolish Virgins,' a set consisting of 10 plates; 'The Muses,' in 9 plates; a 'Dance of Peasants'; 'Dance of Lords and Ladies'; etc. That B. lived for a time in London is attested by the existence of 2 extremely rare sets of plates executed by him there; these are a 'Procession of the Knights of the Garter,' a set consisting of 12 parts, and 'Sir Philip Sidney's Funeral Cortège.' B. signed his work sometimes with his initials, sometimes with a monogram, and at other times with 'Toroumas Brancieus.' His son, Johannes T. de B. (1561-1623), carried on his business after his death.

Brya is a genus of leguminous plants found in central America and the W. Indies. *B. Ebenus* is noted for its wood, known as Jamaica ebony or cocoo-wood.

Bryan, William Jennings (1860-1925), Amer. politician, b. Salem, Illinois, and educ. at Illinois College and Union College of Law, Chicago. In 1891 he was elected to Congress from the First Dist. of Nebraska, which had always been Republican, but the Democrat B. carried it on the strength of his 'free silver' speeches. He served 2 terms in Congress, and took a leading part in the debates on the questions of bimetalism and free trade. When the presidential convention of the Democratic party met in Chicago in 1896, it was known that the issue would be joined between the gold standard Democrats of the E. and the free silver forces of the W. and S. While the old experienced politicians were trying to agree on a presidential nominee, B. upset all their plans and changed the currents of Amer. political hist. by making one of the greatest speeches of his career. He swept the convention off its feet by a speech for free silver in which he used his famous phrase: 'You shall not crucify mankind on a cross of gold!' B. was nominated for the presidency on a free silver plank. The Republicans promptly nominated Wm McKinley on a gold standard. There ensued one of the most exciting campaigns in the hist. of the country. But, though B. had carried states like Colorado and Washington, that had always been considered safely Republican, McKinley secured 271 electoral votes to 176 for B. Undismayed by the defeat of 1896, the Democrats renominated him for president against McKinley in 1900. This time he coupled with free silver a bitter crusade against imperialism growing out of the U.S.A. having annexed the Philippines, Guam, and Puerto Rico as a result of the victories in the war with Spain. B. once more went down to crushing defeat. But once more in 1908 the Democrats nominated B. and once more B. lost. When Woodrow Wilson was elected president, he named B. as secretary of state. B. held office until June 1913, when he

resigned because of the firm attitude the President took after the Germans sank the *Lusitania*. He also pub. various books, among them *The First Battle*, 1896, and *Speeches*, 1909. See his memoirs, completed by Mrs B. after his death (1925).

Bryan, city in Brazos co., Texas, U.S.A. The Agric. and Mechanical College of Texas is 5 m. away. Pop. 18,000.

Bryanites, see METHODISM.

Bryansk: 1. Oblast in central Russia, SW. of Moscow. It is situated largely in the Desna Poles'ye lowland, and partly covered with mixed forests (B. Forests). It has large peat deposits. Area 13,400 sq. m.; pop. (1956) 1,551,000, mostly Russians (before the Second World War also Jews). There are engineering, cement, glass, cloth, wood-processing, and other industries, grain, potato, and hemp growing, dairy cattle and hog raising, and bee-keeping. The prin. tns are B. and Klinty. B. industrial area has been prominent since the 18th cent.

2. Cap., economic and cultural centre of the above, on the R. Desna. In 1956 it absorbed Bezhitsa (q.v.). It is a large industrial and transportation centre (locomotives, rolling stock, other engineering, cement, clothing, meat processing, large peat-fed power station; 6 railway lines). It is on the gas pipeline Dashava (q.v.)-Moscow; an oil pipeline is under construction from Kuybyshev. Pop. (1956) 185,000 (without Bezhitsa, 111,000; 1913, 31,000). B. has been known since 1146 as a fortress and cap. of a principality; from the 14th cent. it was Lithuanian, from the 16th cent. Muscovite. Since the 1860's it has been the administrative centre of B. industrial area.

Bryant, Sir Arthur Wynne Morgan (1899-), historian, b. Dersingham, Norfolk, son of Sir Francis B. Educ. at Harrow and Oxford, he was a pilot in the Royal Flying Corps in the First World War, and afterwards was called to the Bar at Inner Temple. His works include 3 vols. on Pepys: *The Man in the Making*, 1933, *The Years of Peril*, 1935, and *The Saviour of the Navy*, 1938; lives of Charles II, 1934, George V, 1936, and Stanley Baldwin, 1937; and a Brit. historical series: *The Years of Endurance*, 1793-1802, 1942, *Years of Victory*, 1802-1812, 1944, and *The Age of Elegance*, 1812-1832, 1950. *English Saga*, 1940, is a survey of the last hundred years, and *The Turn of the Tide*, 1957, based on the diaries of F.-M. Lord Alanbrooke, deals with the Second World War. B. was made a C.B.E. in 1949 and knighted in 1954.

Bryant, Sophia (1850-1922), school-mistress, daughter of Dr Wilcock, Irish national educationalist. Widowed soon after marriage, she pursued her studies, and in 1884 received the doctorate of science in the univ. of London, being the first woman to achieve this distinction. She was very interested in child psychology, at that time receiving the attention of a growing number of educationalists. Her *Experiments in Testing the Character of School Children* was a pioneering

and influential study. After being mathematical mistress at the N. London Collegiate School, she succeeded the well-known Miss Buss in 1895 as its head mistress. She also served on the Royal Commission on Secondary Education in 1894. Litt.D., Dublin, 1904. Killed while mt climbing in the Alps.

Bryant, William Cullen (1794-1878), Amer. poet and journalist, b. Cummington, Massachusetts. Admitted to the Bar in 1815, he practised law at Plainfield, Massachusetts, and later at Great Barrington. During this time he gained a reputation as a poet, and in 1821 delivered 'The Ages' as the Phi Beta Kappa poem at Harvard. In 1825 he removed to New York, and became co-editor of the *New York Review*, and in 1828 took up the editorship of the *New York Evening Post*, in which position he remained till his death. His journalistic work, mainly concerned with the anti-slavery movement, is marked by simplicity and vigour of style, together with common sense and breadth of view. He is best known, however, as a poet, and issued sev. vols. of collected poems. Among his most famous verses are 'Thanatopsis,' 'To a Waterfowl,' 'The Death of the Flowers,' 'My Country's Call,' 'The Battlefield,' and 'The Flood of Years.' He also pub. *Letters of a Traveller*, 1850, *Letters from Spain and Other Countries*, 1859, *Letters from the East*, 1869, *Orations and Addresses*, 1873, and metrical versions of the *Iliad* and the *Odyssey*, 1870-2. See Parke Godwin (ed.), *Life and Works*, 1883-4, and lives by J. Bigelow, 1890, and W. A. Bradley, 1905.

Bryaxis is a genus of Coleoptera of the family Psclaphidae. They are tiny beetles with very short elytra, which cover only half the abdomen, and they are found in moss occasionally, but usually in ants' nests.

Bryce, George (1844-1931), Canadian clergyman and educator, b. Mt Pleasant, Brantford, Ontario. Graduated at Univ. of Toronto, 1867. Ordained to Presbyterian ministry, 1871. He founded Manitoba College and was principal, 1877-1909. Moderator of Presbyterian General Assembly of Canada, 1902; president of Royal Society of Canada, 1909-10. B.'s works include *Manitoba: Infancy, Growth, and Present Condition*, 1882, *John Black, the Apostle of Red River*, 1898, *The Remarkable History of the Hudson's Bay Company*, 1900 (3rd ed., 1910), *Mackenzie, Selkirk, and Simpson in Makers of Canada*, 1905 (new ed., 1926), *Romantic Settlement of Lord Selkirk's Colonists*, 1909, *Short History of the Canadian People*, 1910, and *Canada and the Northwest*, 1912. Collaborated with W. W. Campbell in *The Scot in Canada*, 1911.

Bryce, James, Viscount, of Dechmont, co. Lanark (1838-1922), Brit. statesman and historian; b. Belfast, and educ. at Glasgow and Trinity College, Oxford. In 1864 he pub. a monograph, *The Holy Roman Empire*, an enlarged form of his Arnold prize essay, which gained him an immediate reputation as an historical writer. In 1867 he became a barrister at Lincoln's Inn, and in 1870 was appointed

regius prof. of civil law at Oxford. He entered Parliament in 1880 as Liberal member for the Tower Hamlets, and rapidly became prominent among the followers of Gladstone. In 1885 he was returned for S. Aberdeen, and in 1886 became under-secretary for foreign affairs under Lord Rosebery. During Gladstone's next ministry B. became chancellor of the duchy of Lancaster, with a seat in the Cabinet, in 1892; and in 1894 president of the Board of Trade in Lord Rosebery's administration. He was an original fellow of the Brit. Academy, founded 1902, and chairman of its historical and archaeological committee. In 1905 he was appointed chief secretary for Ireland, and in 1907 succeeded Sir Mortimer Durand as Brit. ambas. to the U.S.A., resigning in 1912. He was made a viscount in 1914. Soon after the outbreak of the First World War, B. presided over a committee of jurists appointed to inquire into alleged Ger. outrages in Belgium. As a politician, he was conspicuous in his advocacy of Home Rule for Ireland, the abolition of univ. tests, international copyright, and revision of the statute law. His pubs. include *The American Commonwealth*, now a classic, 1888, *South America*, 1912, and *Modern Democracies*, 1921. See life by H. A. L. Fisher, 1927.

Brydges, James and John, see CHANDOS. **Brydges, Sir Samuel Egerton** (1762-1837), bibliographer and genealogist, b. Kent. He was educ. at Maidstone, Canterbury, and Cambridge. In 1787 he became a barrister, but 5 years later he left his profession, preferring a quiet country life. His bibliographical works include *Censura Litteraria, containing Titles, Abstracts, and Opinions of Old English Books* (10 vols.), 1805-9, *British Bibliographer* (4 vols.), 1810-14, *Restituta, or Titles, Extracts, and Characters of Old Books in English Literature revived* (4 vols.), 1814-16. His other works were eds. of E. Phillips's *Theatrum Poetarum Anglicanorum*, 1800, Collins's *Peagee*, 1812, and of many rare Elizabethan authors. In 1808 he was made a knight of the Swedish order of St. Joachim. From 1812 to 1818 he sat for Maidstone, and afterwards lived abroad, chiefly at Geneva. See his autobiography, 1834.

Bryher, one of the inhabited Scilly Is. Area 317 ac.; pop. 80.

Brylov, Constantin Karl Pavlovich, see BRÜLOV.

Brynjúlfsson, Gísli (1827-88), Icelandic poet and scholar, who for the greater part of his life resided in Copenhagen, where he was lecturer in Icelandic at the univ. He was deeply affected by the liberation movement that spread over the Continent about the middle of the 19th cent., and many of his poems are written in praise of freedom. Like most other Icelandic poets of his time he was influenced by Byron.

Brynmawr, mrrkt and mining tn in Breconshire, Wales, 14 m. from Brecon. Pop. 6370.

Bryology (Gk *bruron*, moss; *logos*, speech), the science of botany which treats of mosses (q.v.) and liverworts.

Bryonia (Bryony), an Old World genus of Cucurbitaceae, which is represented in Britain by *B. dioica*, the white bryony of our hedges. The root was formerly much used in rural pharmacy, and the flowers are the sole source of food of the bees of the species *Andrena florea*. The black bryony (*Tamus communis*), another common hedge plant, belongs to an entirely different family, and is poisonous. See TAMUS.

Bryonin is an amorphous, bitter substance which can be extracted by boiling water from the root of *Bryonia dioica*. It is a yellowish-white substance, sometimes tinted with red or brown. It is a drastic purgative, and poisonous in large doses.

Bryophyllum, succulent genus of Crassulaceae, is common to S. Africa and Madagascar. It is remarkable for the adventitious buds which occur on the margins of the leaves. *B. pinnatum is cultivated in Brit. hot-houses, and *B. proliferum is another common species.**

LEAF OF BRYOPHYLLUM

1. Roots of young plant. 2. Young plant.
3. Young plant detached. 4. Leaf.
5. Section of leaf. 6. Flower.

Bryophyta (Gk *bruron*, mossy seaweed; *phuton*, plant), one of the large divs., groups, or phyla of the plant kingdom, which includes the 2 classes Liverworts (Hepaticae) and Mosses (Musci). The B. consist of plants consisting entirely of cells, no vessels being formed in any part. The sexual organs consist of archegonia and antheridia. The antheridia are usually stalked ovoid or globular structures producing a large number of biciliate sperms, while the archegonia do not differ in essentials from those of the Pteridophyta; but both liverworts and mosses show alternation of generations, and are thus distinguished from Thallophyta. The most conspicuous stage in their life-hist., either the leafy plant of a moss or the green leaf-like thallus of a liverwort, is the gametophyte generation, while the sporogonium is the sporophyte generation which remains attached to the gametophyte, and is to a large extent dependant on it. All the B. are simple in form and structure.

Bryozoa, see POLYZOA.

Bryum, genus of mosses, belongs to the family Bryaceae. The species are

exceedingly numerous, and are found in great abundance in Great Britain. Among these are *B. lacustre*, *B. pendulum*, *B. cuspidatum*, and *B. arcticum*. *B. argenteum*, with silvery leaves, grows on waste ground, clindors, roofs, etc., and is common even in industrial dists.

Brzeg (Ger. *Brig*; anct *Civitas Altae Ripae*), tn of Poland, in Opole prov., on the Odra (q.v.), 27 m. NW. of Opole (q.v.). From 1311 until 1675 it was a duchy belonging to the Piast dynasty (see POLAND, *History*); it then passed to the Hapsburgs (q.v.). Before coming under Polish control in 1945 it was part of Ger. Silesia (q.v.), and had a large Ger. pop. Chemicals are manuf. Pop. 8000 (1939, 31,419).

Brzezany, see BEREZHANY.

Bual Wine, see MADEIRA WINE.

Bubastis (modern Tell Basta, near Zagazig), Gk name of Bastet, the lioness-headed Egyptian goddess of Bast, and of her city. After the New Kingdom the cat was especially the animal of B. Many bronze statuettes of the goddess show a cat-headed woman holding in her right hand a lion aegis and on her left arm a basket. She was considered mother of Nefertem. B. is the largest anct site in the Delta after Tanis, with ruins of all periods from the Pyramid Age, including a large temple and cat cemetery. There is a royal residence of the 22nd dynasty. Herodotus describes a riotous festival of B.

Bubble, South Sea, see SOUTH SEA BUBBLE.

Bubble-shell, see BULLA.

Bubo (Gk *boubōn*, the groin), swelling and inflammation of a lymphatic gland, particularly of the groin, and usually associated with gonorrhea, syphilis, or plague (qq. v.).

Bubo is the Lat. term for a genus of owls of the Strigidae family. The species are characterised by a small ear flap and 2 tufts or feathered horns on the head, while the legs are feathered to the toes. *B. ignavus* is the eagle-owl common to Europe, Asia, and Africa. See also EAGLE-OWL.

Subonic Plague, see PLAGUE.

Bucaco (Busaco, Bussaco), mt ridge (1795 ft) of Portugal, in Beira Litoral prov. (q.v.), 12 m. NNE. of Coimbra (q.v.). It is the site of a monastery, and here Wellington (q.v.) repulsed the French under Masséna (q.v.) in Sept. 1810 (see PENINSULAR WAR).

Bucaramanga, city, cap. of Santander dept., Colombia, on R. Lebrija. Centre of the coffee trade, has large mines of gold, copper, and iron close by. It is a coffee market and general trading centre, with a range of light industries. Railway communication with Magdalena and an airport. Pop. over 112,000.

Bucarest, see BUCHAREST.

Buccaneers. Name applied to the bands of piratical adventurers, of various nationalities, who had their H.Q. in the W. Indies during the 17th cent. Their existence seems at first to have been an outcome of the semi-independent, semi-national expeditions against Spain of

Drake, Hawkins, and Davis, for the early B. confined their operations to reprisals against Spain. In 1625 a band of Eng. and Fr. adventurers founded a settlement on St Christopher, from which they made cattle-hunting raids into Santo Domingo, drying the flesh and selling it to passing vessels. Their name of *boucanier* (French) came from the Indian *boucan*, a term used of the apparatus on which the meat was cured. In 1630 they removed to Tortuga del Mar, a small is. in the Bahama Channel to the NW. of Santo Domingo, which lay in the main route of trading vessels. They were joined by kindred spirits from all parts of the world, and for many years were a terror to Sp. ships and settlements on the neighbouring is. and mainland, the Sp. capture of the stronghold in 1636 having no permanent effect. Their early leaders included the Frenchman Montbars, known as 'The Exterminator,' L'Ollonais, and Peter the Great of Dieppe, the famous Welshman Henry Morgan, Michael de Busco, Bartolomeo el Portuguez, Manavelt, and Van Horn. In 1654 they captured and sacked New Segovia, in Honduras, and later plundered Maracaibo and Gibraltar, on the Gulf of Venezuela, and settled at Providence in the Bahamas. Their footing was still more firmly estab. in 1655 by the capture of Jamaica by the British, who lent them a kind of indirect support as fellow enemies of Spain. Operations from Jamaica were directed by Morgan, who seems to have possessed qualities of chivalry, valour, and brilliant generalship, as a set-off to his undoubted cruelty on many occasions. He was especially successful at the sack of Puerto Bello, but seems to have become too strong to please the British, as in 1670 a treaty to suppress buccaneering was concluded between Great Britain and Spain. Morgan's answer to this, in 1671, was to cross to the mainland with a fleet of 39 vessels, and, after marching across the Isthmus and fighting a pitched battle, to sack and burn Panama in circumstances of great barbarity. He later made terms with the Brit. Gov., was knighted by Charles II, and became deputy-governor of Jamaica. In 1680 the B. crossed the Isthmus of Darien, and, under the command of John Coxon, took Santa Maria and some Sp. vessels in the Bay of Panama. Then, while some returned to Jamaica, others, commanded by Sharp, Watling, and Hawkins, went through the S. Sea to Cape Horn, by which route they returned, laden with enormous wealth. In 1683 6 vessels of the B., under Van Horn, sacked Vera Cruz, while another section, under John Cook, went to Cape Horn, were joined by a vessel sent out from England under Eaton, and ranged the Pacific for 2 years, commanded by Davis and Swann. In 1685 they returned to Panama, and were joined by 2 other parties, a Fr. one under Grognet and L'Escurier, and an Eng. one under Towmley. This was the height of their power, for with wealth and security as arose and the French and Eng. separated. In 1688 an Eng. returned from plundering León and

Realejo, in Nicaragua, and some of its members joined a Fr. expedition against Cartagena. When the war between England and France broke out in 1689, however, the alliance came to an end, and the B. were harried by both countries. In 1697 an Eng. and Dutch fleet fought them off Cartagena, and after the peace of Ryswick in 1701 they gradually deteriorated into cut-throat desperadoes, without redeeming qualities. See W. Dampier, *Voyages*, 1697; J. Burney, *History of the Buccaneers of America*, 1816; J. Esquemeling, *Buccaneers of America*, 1678 (Eng. trans. 1741 and 1893); and the books on the subject by Wafer, Ringrove, Sharp, Thornburg, Archenholz, Stockton, Capt. Johnson, Lyle, and Haring.

Buccari, see BAKAR.

BUCCINA

Buccina, Rom. military brass wind instrument of the shrill horn or cornet kind in use in anct Rom. times. It was bent into the shape of the letter C, was about 12 ft in length, of narrow cylindrical bore, and blown by means of a cup-shaped mouthpiece.

Buccinator (Lat., 'trumpeter'), thin flat muscle of the cheek, forming the lateral wall of the mouth. It is so called because that part is distended in blowing a trumpet. Its action is to close the mouth (as in biting), to maintain the tone of the cheeks, and to prevent food collecting between the teeth and the lips.

Buccino, It. tn. in Campania (q.v.), 32 m. ESE. of Salerno (q.v.). It has a castle, old walls, and a Rom. bridge. There are quarries of fine marble near by. Pop. 6000.

Buccinum, see WHELK.

Buccleuch Family. Anct and distinguished Scottish ducal house, tracing its descent from Sir Richard le Scott (1249-1286), who was famous in the reign of Alexander III of Scotland. The first of the family to receive the title of B. was Sir David Scott of Branxholm, who sat in James III's Edinburgh parliament of 1487 as 'Dominus de B.' The Sir Walter Scott of Branxholm and B., mentioned in Scott's *Lay of the Last Minstrel*, was his grandson, and lived about 1490-1552. He fought in the battle of Pinkie, 1547, and was killed in a skirmish with Sir Walter Kerr of Cessford, in Edinburgh. His great-grandson, bearing the same name, 1565-1611, was warden of the W. Marches, and was raised to the peerage in 1606 as Lord Scott of B. He is remembered for his rescue of 'Kinmont Willie' from Carlisle Castle, as well as for his services in the Netherlands, and in organising border bands for foreign service. The title of Earl of B. was bestowed in 1619 upon a Walter Scott who commanded a Netherland regiment against Spain. The first Duke of B. was James, Duke of Monmouth, the illegitimate son of Charles II, who received the title in 1663 on his marriage to Anne, Countess of B. When he was beheaded in 1685 the duchess retained the title in her own right. She was succeeded in 1732 by her grandson, Francis, as 2nd Duke of B. The present (1957) holder of the title is the 8th Duke of B. and 10th Duke of Queensberry. He succeeded to the title in 1935. Lady Alice Montagu-Douglas Scott (1901-), his sister, married the Duke of Gloucester on 6 Nov. 1935.

Bucconinae, see **PUFF-BIRDS**.

Buccentaur was a figure representing half a man and half an ass or bull. It was probably used as a figure-head for a ship. It was also the name of the state ship in which the dogs of Venice sailed every year on Ascension Day to the Adriatic Sea. He then performed the rite of dropping a ring into the water, thus wedding the sea in the name of the ro-p.

Bucephalus, favourite horse of Alexander the Great. B. d. in 326 BC, during Alexander's Indian campaign, and his master built the city of Bucephala in memory of him.

Bucer, or **Butzer**, Martin (1491-1551), Ger. Protestant reformer, b. Schlettstadt in Alsace. Becoming a Dominican in 1506, he was sent to study at Heidelberg, where he met Erasmus and Luther (qq.v.). In 1521 he apostatised from his order, and went through a form of marriage with a nun. Excommunicated in 1523, he settled at Strasbourg, where Henry VIII of England consulted him about the nullity. Having refused to sign the Interim of Augsburg (1548), he accepted an invitation in the following year from Crammer, and was installed as regius prof. of divinity at Cambridge. B. d. 3 years later, and was buried at Cambridge; but his body was subsequently disinterred and burned under Mary.

Buch, Christian Leopold von (1774-1854), Ger. geologist, b. Brandenburg;

studied in the School of Mines at Freiberg, and was a member of numerous learned societies besides holding an official position at the Prussian court. His pub. works are very numerous.

Buch, old dist. of France, a subdivision of Bordelais (q.v.), now in the dept of Gironde. The cap. was La Teste-de-Buch.

Buchan, Alexander (1829-1907), Scottish meteorologist, educ. at Edinburgh Univ., taught from 1848 to 1860, when he was appointed secretary to Scottish Meteorological Society. In 1878 B. became curator of library and museum of Royal Society of Edinburgh. His works include contributions to the *Challenger* expedition reports, 1889 and 1895; on *Atmospheric Circulation* and *Oceanic Circulation*; *Handy Book of Meteorology*; *Introductory Text-book of Meteorology*, 1871. He wrote the article on meteorology for the ninth ed. of the *Ency. Brit.*

His famous weather forecasts resulted from a long and careful scientific study of weather conditions in Scotland. He asserted that there were certain periods in the year when the temp., instead of rising, would remain stationary or would fall; others when, instead of falling, it would remain stationary or would rise. Two of the cold periods occur in the middle of May and from 11 April to 14 April; the April period consists of the 'borrowing days.' A recent examination of weather records did not support this hypothesis for London in the present cent.

Buchan was also a pioneer investigator into the Atlantic depressions and their influence of the climate.

Buchan, Anna, see **DOUGLAS, O.**

Buchan, David (1780-11837), Brit. naval commander and Arctic explorer. In 1811 he explored the Exploits R. in Newfoundland, and travelled about 160 m. into the interior. In 1818 he was in command of an Arctic expedition; he reached Spitsbergen with the *Trent* and *Dorothea* (see **BEECHER, F. W.**). Some years later he was lost at sea with the vessel *Upton Castle*.

Buchan, Elspeth (1738-91), Scottish religious enthusiast, founder of sect known as Buchanites. She claimed prophetic inspiration and divine powers. After separation from her husband she met the preacher Hugh White, 1783, and persuaded him to believe her the woman and himself the man-child of Rev. xii. The sect, always small, was banished from Irvine, 1784, and settled near Dumfries. Burns spoke alightingly of it in a letter, 1784. Members enjoyed community of wives and goods. The sect became extinct in 1848. See J. Train, *Buchanites from First to Last*, 1846.

Buchan, John, 1st Baron Tweedsmuir (1875-1940), author and administrator, b. Perth, Scotland, eldest son of the Rev. John B. Educ. at Glasgow Univ. and Brasenose College, Oxford, he won the Newdigate Prize, 1898. In 1901 he became private secretary to Lord Milner, who was then high commissioner for S. Africa. He was home again in 1903, and became a director of the publishing house

of Nelson. During the First World War he was on H.Q. staff, 1916-17. In 1917 he became director of information. He entered Parliament as member for United Scottish Univs. at a by-election in 1927, became president of the Scottish Hist. Society, 1929-33, and was made a Companion of Honour, 1932. He was lord high commissioner to the Assembly of the Church of Scotland, 1933-4. He was raised to the peerage in 1935 when he succeeded Lord Bessborough as Governor-General of Canada. As governor-general he was universally popular throughout Canada, where he made contact with all classes of the pop., and, despite recurrent ill health, travelled extensively. During his tenure of office he visited President Roosevelt, and in 1937 made a 10,000-m. journey into the Arctic circle and N. Brit. Columbia. In 1937 he was made a Privy Councillor, and in the following year, when home on leave, was installed as chancellor of Edinburgh Univ. Puba. (mostly novels) include *Scholar Gipsies*, 1896, *John Burnet of Barn*, 1898, *The Half-hearted*, 1900, *The Watcher by the Threshold*, 1902, *The African Colony: Studies in Reconstruction*, 1903, *A Lodge in the Wilderness*, 1906, *Prester John*, 1910, *Sir Walter Raleigh*, 1911, *The Thirty-nine Steps*, 1915, *Greenmantle*, 1916, *Poems, Scots and English*, 1917, *Mr Standfast*, 1919, *A History of the Great War*, 1921-2, *Huntingtower*, 1922, *Midwinter*, 1923, *The Three Hostages*, 1924, *Lord Minto, a Memoir*, 1924, *John Macnab*, 1925, *The Dancing Floor*, 1926, *Witch Wood*, 1927, *Montrose*, 1928, *The Courts of the Morning*, 1929, *The Gap in the Curtain*, 1932, *Gordon at Khartoum*, 1934, *The King's Grace*, 1935, *The House of the Four Winds*, 1935, *The Island of Sheep*, 1936, *Augustus*, 1937, and *Sick Heart Riser*, 1941; also lives of Julius Caesar, Oliver Cromwell, and Sir Walter Scott. See his autobiography, *Memory Hold the Door*, 1940, and *John Buchan by his Wife and Friends*, 1945.

Buchan, Peter (1790-1854), collector of Scottish ballads, b. Peterhead, related to the Earl of Buchan. He learned printing and set up a press at Peterhead. His works include *Gleanings of Scotch, Irish, and English: Scarce Old Ballads*, 1825, and *Ancient Ballads and Songs of the North of Scotland*, 1828. The MS. of a further collection was ed. for the Percy Society by J. H. Dixon and pub. in 1845 as *Scottish Traditional Versions of Ancient Ballads*. Two other vols. remain unpub. in the Brit. Museum.

Buchan, dist. in the highlands of Scotland, lying partly in the NE. of Aberdeenshire and partly in Banffshire. B. Ness, about 3 m. S. of Peterhead, is the most easterly point in Scotland. The coastline is mostly high and rocky, and below the Ness, in the granite cliffs, there is a curious hollow, known as the Bullers (Boilers), some 200 ft deep, into which the sea rushes at high tide through a natural archway. The tns of Peterhead, Old Deer, and Fraserburgh are included in the dist. of B. The Comyns were earls of it till they forfeited the title in 1309.

There are sev. interesting ruined castles, and the remains of the abbey of Deer.

Buchan Ness, most easterly cape of Scotland, in Aberdeen co., sometimes called Boddam Point, with a lighthouse. Near by are the Bullers of Buchan (see under BUCHAN).

Buchanan, George (1506-82), historian and scholar, b. at Killearn, Stirlingshire, the son of a poor farmer. He was brought up in humble circumstances by his widowed mother. In 1520 his uncle sent him to the univ. of Paris. Five years later he graduated as B.A. from St Andrew's Univ., and in 1528 obtained his M.A. degree at Paris. For the next 3 years he was regent at the college of Ste Barbe. In Paris B. began to favour Protestantism, and his first poem, *Somnium*, which he pub. on his return to Scotland in 1537, was a bitter attack on the Franciscans. He followed this with *Franciscanus*, which expressed the sentiments of *Somnium* in bolder and more violent language. As a result, B. was arrested in 1539, but he escaped to France and became prof. of Latin at the college of Guienne, Bordeaux—an appointment which he owed to his friend, Andrew Govea. While there he trans. Euripides' *Medea* and *Alcestis*, and wrote his 2 great tragedies, *Baptistes* and *Jephthes*. From 1544 until 1547 he taught at the college of Cardinal le Moine, Paris. Then, again through Govea's influence, he was appointed lecturer at the univ. of Coimbra, Portugal. On Govea's death he was at once exposed to religious persecution. He was confined in a monastery for a time, on the orders of the Inquisition, and there he began his famous Lat. paraphrase of the Psalms. On his return to Scotland, B. became classical tutor to Queen Mary (1562), and she gave him the revenue of Crossraguel Abbey. In spite of this he energetically supported the lords in their struggles against the queen. In 1567, shortly after Mary's imprisonment at Lochleven Castle, he was elected moderator of the General Assembly, having then definitely adopted Protestantism. With Moray, who had appointed him principal of St Leonard's College, St Andrews, in 1566, he attended the Conference of York, where Mary's alleged complicity in Darnley's assassination was discussed before Elizabeth's commissioners. In his *Detectio Mariae Reginae* B. stated in the strongest terms the lords' case against their queen, and his forcefully expressed views have influenced popular opinion on the subject ever since. In 1570 he was chosen as preceptor to the young James VI. In 1578 he resigned his position as keeper of the Privy Seal, and devoted his remaining years to his *History of Scotland*. B. was the most distinguished Brit. humanist of his day, and had a reputation throughout Europe. His *History* is a valuable contribution to literature. His account of contemporary events is of particular interest, although extremely biased. His tract *De Jure Regni*, in which he argued that sovereigns exist by the will and for the good of the people, had a profound influence on 17th-cent. statesmen. As a

writer B. shows himself possessed of a poet's imagination and a philosopher's power to think. See life by P. Hume Brown, 1890.

Buchanan, James (1791-1868), fifteenth President of the U.S.A., b. near Mercersburg, Pennsylvania; graduated at Dickinson College in 1809; called to the Bar in 1812. In 1813 and 1814 he was elected to the Pennsylvania legislature, and in 1821 became a member of Congress. In 1832 he was sent by President Jackson as minister to Russia, where he concluded a commercial treaty securing privileges for the U.S.A. in the Black and Baltic Seas. After his return in 1833 he was elected to the Senate, where he was a consistent supporter of Jackson and an advocate of the annexation of Texas. He left the Senate in 1845 to become secretary of state to President Polk, in which capacity he had to deal with the NW. boundary dispute with England. In 1853 he was sent by President Pierce as minister to Great Britain, where he was mainly engaged upon central Amer. affairs. In 1856 he was elected President of the U.S.A., in which office he supported the continuance of slavery, and was much influenced by the threats of secession of the S. states. He was succeeded by Lincoln in 1861, and retired into private life. In 1866 he pub. a defence of certain of his actions, entitled *Mr Buchanan's Administration on the Eve of the Rebellion*. See his life by G. T. Curtis, 1883.

Buchanan, Robert Williams (1841-1901), poet, novelist, and dramatist, b. Caverswall, Staffs. Educ. at Glasgow High School and Univ., he took up journalism in London together with David Gray (q.v.). His first collection of poems, *Undertones*, appeared in 1860, and was followed in 1865 by *Idylls and Legends of Inverburn*, and in 1866 by *London Poems*. These last, dealing with the life of the London poor, reach a very high level. His other poetical work includes *The Book of Orm*, 1870, *Balder the Beautiful*, 1877, *The City of Dreams*, 1888, and *The Wandering Jew: a Christmas Carol*, 1893. His verse exhibits considerable power, but tends to become assertive and egoistic. His chief success in the drama was *Sophia*, an adaptation of *Tom Jones*. *Lady Clare*, adapted from Ohnet's *Le Maître de Forges*, and *Joseph's Sweetheart*, adapted from Fielding's *Joseph Andrews*, were also well received. His novels once had a considerable reputation and include *The Shadow of the Sword*, 1876, *God and the Man*, 1881, *Alone in London*, 1884, *The Charlatan*, 1894, *The Strange Adventures of Miss Brown*, 1895, and *The New Rome*, 1899. He also wrote *The Land of Lorne*, 1871, *David Gray*, 1868, and *The Hebridean Isles*, 1882. Two reviews by him, 'The Fleshly School of Poetry,' attacking D. G. Rossetti, 1871, and 'The Voice of the Hooligan,' 1899, dealing with Kipling, roused much critical opposition.

Buchanan, extensive par. (41,000 ac.) in Stirlingshire, Scotland, lying to the E. of Loch Lomond, mostly mountainous with little cultivation. Five of the is. in the

loch belong to B. par. B. Castle is a seat of the Duke of Montrose. Pop. 600.

Bucharest (București), cap. city of Rumania, on the R. Dimbovitza. It stands in a fertile plain, 265 ft above sea level. The city was much improved during the latter part of the 19th cent., and though the suburbs still contain many mean and narrow streets of an oriental aspect, the central part is mainly modern, being well paved, containing many handsome buildings, as well as sev. gardens and a famous public parade. B., which is the seat of the head of the Rumanian Orthodox Church, and also a Rom. Catholic episcopal see, is noted for its

Paul Popper

BUCHAREST: UNIVERSITY SQUARE

numerous churches. Among the most famous are the Gk cathedral, 1656, the Rom. cathedral, 1875-84, the Domnitzer Balasa, St Spiridon, and the chapel of Stravropolos. Its univ. was founded in 1864. The royal palace, standing on the Calea Victoriei, was rebuilt in 1883. In the same street are the National Theatre and the post office, while other prominent buildings are the National Bank, on the Strada Lipsani, the Athonaeum, 1887, the Palace of Justice, Picture Gallery, Academy of Sciences, and Central Library with between 800,000 and 900,000 vols. The chief public gardens are the Cismegiu and the Kisler, traversed by the promenade known as the Chaussée, and there are some fine monuments, including those to Ion Eliade Radulescu and Michael the Brave. B. has a large trade as an exchange between Austria and the Balkan Peninsula, and considerable quantities of textiles, grain, hides, metal, coal, timber, and cattle, pass through it. Its pre-1941 manufs. included flour, beer, soap, candles, bricks, textiles, ironware, and chemicals,

and the transit trade in petroleum, timber, and agric. products is large. It is the centre of the national railway system. The climate is continental, with great extremes. From the end of the 14th cent. till 1698 B. was the residence of the Prince of Wallachia; in 1789 it was taken by Austria and held for 2 years; and it suffered from plague in 1794 and 1812, from earthquake in 1802, and from fire in 1847. It became the cap. in 1859. Treaties were signed here in 1812 between Turkey and Russia, in 1886 between Serbia and Bulgaria, in 1913 the one ending the Balkan wars, and in 1918 (see next article). The fortifications, constructed after plans by Brialmont during 1885-96, are very extensive, forming a circle over 40 m. in circumference round the city with 18 outer forts. But it was not possible to defend them during the First World War, and the city surrendered in 1916 without resistance to the Germans, who held it until 1918. There are air services to Belgrade and Istanbul. During the Nazi-inspired unrest in 1941 there was a rising of the Iron Guard in B., and large numbers of Jews were massacred in street fighting. During the westward advance of the Russian armies early in 1944 B. was heavily bombed by the Americans, notably on 4 April, when some 3000 persons were killed. The object of the raid was to disorganise transport and this was achieved. On the fall of the dictator Antonescu, the new gov. tried to 'liquidate' its relations with Germany, but the Ger. Army and Air Force in Rumania, disregarding assurances, attacked Rumanian army units and the civilian pop. in B. and elsewhere. The new gov. then turned its forces against the Germans, who were soon driven out of the cap. The Russians entered B. on 31 Aug. 1944. Pop. (1948) 1,042,000.

Bucharest, Treaty of (1918). Treaty signed between Rumania and the Central Empires on 7 May 1918. The Rumanian armies, after the defection of the Bolshevik forces from the Entente cause, rapidly gave way before the reinforced armies of von Mackensen. The defeat at Argos in Dec. 1916 and the loss of Tirgoviste, on the edge of the great Rumanian oil-field, rendered effective resistance ever more difficult. But the fighting dragged on for another 12 months, by which time B. and Braila had fallen to the Ger. forces, and the Rumanians were compelled to sue for an armistice. In May 1918 a treaty was signed at B. which in effect was a complete capitulation to Ger. demands. The treaty was of course nullified by the armistice of 11 Nov. 1918. For the T. of B., July 1913, see BALKAN WAR, THE.

Buchenwald, site of one of the main Ger. concentration camps (q.v.), situated near Weimar. The camp was started in 1934 by the Nazis. On 1 April 1945 the number in the camp was 80,813. A few days before the arrival of the Amer. forces (11 April) the Germans removed over 20,000 internees in order to prevent the Allies from learning too much about the camp. The internees, who included

persons of all European nationalities, comprised political prisoners and Jews from Germany; later, as the Reich expanded, political prisoners and Jews from Austria, Czechoslovakia, Poland, etc.; and, from 1940, men and youths imported for forced labour from occupied countries. It appears that up to 1 April 1945, the total number of those who had d. or been killed at B., or immediately on removal therefrom to subsidiary 'extermination camps,' was 51,572. Detailed camp records, including nominal rolls, were left behind by the Nazis. The Amer. medical and sanitary authorities were soon preoccupied with the cleaning of the camp, a task performed partly by Ger. civilians from the vicinity, parties of whom were brought daily to see what had been done in their name and in their midst. The impression gained by a Brit. parl. delegation which, at the invitation of Eisenhower and on the injunction of Churchill, visited B. on 21 April, even when conditions had been improved considerably in the meantime by the Americans, was of intense squalor, with an odour of dissolution and disease pervading the entire camp. Before the arrival of the Americans the number of deaths in the camp was about 100 a day. For those suffering from tuberculosis or dysentery there was a rough hospital hut 80 ft long by 24 ft wide, containing on an average a sick pop. of from 700 to 1300. Operations were performed without anaesthetics on a crude operating-table in full view of the other patients. Each night the dead were flung into a small annexe at one end of the hut and each morning collected and taken into carts to the crematorium or, if required as specimens, to the pathological laboratory of the Nazi doctors. Children in the camp were made to work 8 or more hours a day all the week. When the parl. delegation visited the camp there were still 800 children in it. Access to the basement of the mortuary block was by a steep stone staircase or by a vertical chute below a trap-door, down either of which refractory or useless prisoners were precipitated for execution. The 40 strong hooks for the gibbets were hurriedly removed by the Nazis before they left the camp. There was also a heavy wooden blood-stained club which was used for knocking out any who died slowly. To the yard outside the crematorium came the carts packed closely with the ordinary corpses from the dysentery and other huts, mostly stripped. Most of these appeared to have died of hunger or disease but not by violence. The delegation were told of scientific experiments, such as the infecting of prisoners with typhus in order to obtain serum from them, by the camp Nazi doctors. Various experiments in sterilisation were practised on Jews. Later the policy of exterminating the Jews superseded that of castrating them. It was the parl. delegation's considered and unanimous opinion, on the available evidence, that a policy of steady starvation and inhuman brutality was carried out at B. for a long period of time, and that such camps as B. marked the lowest point of degrada-

tion to which humanity had yet descended. (See Cmd. 6626, 1945, H.M.S.O.) B. was the first of the main concentration camps to be overrun by allied forces and so lent itself to speedy investigation; but other camps were equally terrible, and some even worse. These included, for example, Belsen, Auschwitz, and Dachau (qq.v.).

Bucher, Lothar (1817-92), politician, educ. at Berlin Univ. In 1848 he entered the Prussian national assembly, becoming an active leader of the extreme Democrats. In 1860 B. was charged with various political offences, and fled to England where he worked as a journalist. In 1860, on returning home, B. became Lassalle's literary executor. But his political views soon changed radically, and in 1864 he accepted a post in the Foreign Office from Bismarck, and became his private secretary. B. drew up the text of the N. Ger. Confederation constitution, and took part in many diplomatic missions.

Buchez, Philippe Benjamin Joseph (1796-1865), Fr. philosopher, b. Matagne-la-Petite; began to practise as a physician in 1825. He was concerned in the organisation of the Fr. Carbonari Society, being strongly opposed to the Bourbon restoration, and was arrested on a charge of conspiracy. Shortly afterwards he joined the Saint-Simonian Society, but left it in 1829 to found a Neo-Catholic school known as Buchezism, the doctrines of which he expounded in *L'Européen*, later called *La Revue nationale*, 1831-48. His philosophy is also described in *Introduction à la science de l'histoire*, 1833. After the revolution of 1848 he became deputy mayor of Paris, a member of the Constituent Assembly, and then president of that body. His other works include *Essai d'un traité complet de philosophie au point de vue du Catholicisme et du progrès*, 1839-40, *Histoire de la formation de la nationalité française*, 1859, *Traité de politique et de science sociale*, 1866, and, with Roux-Lavergne, *L'Histoire parlementaire de la Révolution française* (40 vols.), 1833-8.

Buchman, Frank Nathan Daniel (1878-), Amer. Protestant minister, b. Pennsylvania, Pennsylvania. From 1902 to 1907 he was in charge of a hospice for under-privileged boys in Philadelphia. In 1908, while at Keswick, Cumberland, England, he listened to a sermon about the Cross which changed his life. In 1921, believing that the world was at the start of a breakdown in civilisation, he resigned his univ. post to devote his life to creating an answer to this situation and forging a world force capable of bringing this answer to the world before it was too late. In that year he initiated the Oxford Group (q.v.) at Oxford, and in 1938 launched Moral Rearmament (q.v.). It is claimed that as the friend and adviser of statesmen and ordinary people in many nations, he has been responsible for the solution of political, racial, and industrial crises, and that his main contribution to this age has been the spread across the world of an ideology which is the superior alternative to Communism and anti-Communism. See his book, *Remaking the World*, 1953.

Büchner, Friedrich Karl Christian Ludwig (1824-99), Ger. physician and philosopher, b. Darmstadt; studied at Giessen, Strasbourg, Würzburg, and Vienna. In 1852 he became a lecturer at Tübingen, but the controversy raised by his *Kraft und Stoff*, 1855, made it necessary for him to resign and take up a private practice in Darmstadt. His later works include *Aus Natur und Wissenschaft* (2 vols.), 1862-84, *Der Mensch und seine Stellung in der Natur*, 1870 (Eng. trans., 1872), *Licht und Leben*, 1881, *Der Fortschritt in Natur und Geschichte im Licht der Darwinischen Theorie*, 1884, *Die Darwinische Theorie* (5th ed.), 1890; also *Im Dienste der Wahrheit* (a selection of his posthumous essays with a memoir by his brother), 1899.

Buchu, or Bucky, see BAROSMA.

Buck, Dudley (1830-1909), Amer. composer, b. Hartford, Connecticut; studied in Germany and France; returning to America he was organist at Hartford and Brooklyn. He composed church and other choral music, operas, cantatas, and also wrote some books on musical subjects. Best known among his works are the cantatas *Columbus*, 1876, *Golden Legend*, 1880, and *Light of Asia*, 1885.

Buck, Lafferto (1837-1900), Amer. engineer, famous as a builder of bridges, of which he constructed a number in U.S.A. and S. America. His most important achievement was his rebuilding of the suspension bridge at Niagara Falls.

Buck, Pearl (1892-), Amer. novelist, b. Hillsboro, W. Virginia. Her father, Absalom Sydenstricker, was a missionary, and she was educ. at a boarding school in Shanghai. In 1917 she married Dr J. L. B., a missionary, and lived in Nanking, where she taught English at the univ. Her first book, *East Wind, West Wind*, 1929, was followed by *The Good Earth*, 1931, which won the Pulitzer prize and the Howells medal of the Amer. Academy of Art and Letters, and led ultimately to her receiving the Nobel prize for literature in 1938. Others of her novels about China were *Sons*, 1931, *Dragon Seed*, 1942, *Peony*, 1948, and *The Child Who Never Grew*, 1951. *My Several Worlds*, 1955, is an autobiography.

Buck-bean, or *Mengyanthes trifoliata*, is a European species of Gentianaceae. It is often called bog-bean.

Bückeburg, Ger. tn in the Land of Lower Saxony (q.v.), 30 m. WSW. of Hanover (q.v.). It was the former cap. of Schaumburg-Lippe (q.v.), and has a baroque palace, and a baroque Protestant church in which Herder (q.v.) was once court preacher. Pop. 11,500.

Bucket-shop, office of a share-broker who is not a member of the Stock Exchange, and, consequently, not subject to its rules and penalties, and whose deals in stocks and shares are usually speculative and may involve fraud. There are, however, 'outside' brokers who carry on a perfectly proper business. The term originated in the small lift or 'bucket' by which members of a gambling exchange reach a Chicago office.

Buckeye, common name given to certain species of *Aesculus* (q.v.). *A. californica*

is the Californian B., *A. glabra* the Ohio B., *A. ocellandra* the Sweet B., *A. parva* the Red B., all of N. America.

Buckfastleigh, urb. dist. of Devon, England, 7 m. NW. of Totnes, in the valley of the R. Dart. Near by is Buckfast Abbey, rebuilt by the Benedictine monks themselves (the abbey church was erected between 1907 and 1938). Fossilised remains of prehistoric animals have been found in local caves. B. has the H.Q. of the Devon Spelaeological Society. Pop. 2600.

Buckhaven and **Methil**, joint burgh of W. Fife, Scotland, in the par. of Wemyss (q.v.), on the N. shore of the Firth of Forth. Coal is exported, and Methil (pop. 15,000), where a new dock was built in 1911, is one of the chief coal ports on the Firth of Forth. 'Redd coal,' known as sea-coal, has been washed ashore by the tide at Buckhaven, (pop. 20,241), covering the once sandy beach.

Buckhound, name applied to the stag-hounds at one time bred particularly for the purpose of buck-hunting. A royal pack was kept, and a nobleman held the mastership. In 1901 the hunt and mastership were abolished.

Buckhurst Hill, see CHIGWELL.

Buckie, chief tn of the fishing dist. from Banff to the mouth of the R. Spey, on the Moray Firth, in Banffshire, Scotland, with a fine harbour (area 9 ac.) and good quays. A substantial fleet lands white fish here, and there is an old-estab. connection with the herring fishery. Pop. 8000.

Buckie, see WHELEK.

Buckingham, George Villiers, 1st Duke of (1592-1628), courtier, b. Brooksby, Leics. In 1614 he was introduced at court, and, on the fall of Somerset, his good looks at once made him King James's prin. favourite. In 1618 he was created Marquess of B. and made duke in 1623. Remunerative offices and monopolies, gifts of rich lands, and the dowry of his wife, the Earl of Rutland's heiress, made him one of the wealthiest peers in the kingdom. B. soon acquired great influence over the Prince of Wales, whom he persuaded to accompany him to Madrid in 1623 in an attempt to further the projected Sp. marriage. His arrogance was one of the causes of the failure of the negotiations. The subsequent attempts of B. to win over public opinion by capturing Sp. treasure ships at Cadiz were abortive. In 1626 Charles dismissed his second Parliament, as it had instituted an impeachment of his favourite before the House of Lords. In 1627 B., having raised a forced loan, commanded an expedition to La Rochelle, to help the Huguenots. As the expected reinforcements never came, he had to abandon his siege in the Is. of Ré and return home in disgrace. On 7 June 1628 Parliament demanded the surrender of B., and to save his friend the king prorogued Parliament. Popular feeling ran high and lampoons against the duke were freely circulated. Finally, John Felton, a half-mad subaltern, assassinated him at Portsmouth, where he was about to embark for La Rochelle. He left 3 sons

and 1 daughter, of whom George, the second son (q.v.), succeeded to the dukedom.

Buckingham, George Villiers, 2nd Duke of (1628-87), courtier. After his father's death he was brought up with Charles I's children. He joined the Royalists in 1648, had his estates sequestered, and took part, with Charles II, in the battle of Worcester. In 1657 he married Lord Fairfax's daughter, and at the Restoration recovered his lands. In 1674 he killed the Earl of Shrewsbury in a duel, while the countess, his mistress, is said to have looked on, disguised as a page. Four times imprisoned in the Tower for ridiculous exploits of ambition, he was partly responsible for Clarendon's downfall, joined the Cabal, and on its break-up in 1673 intrigued with the Whigs. Of his literary talent there can be no doubt; an example of this is his *Rehearsal*, a witty travesty of the stilted style of Dryden's tragedies. But he was destitute of principle, and was one of the wildest *roués* of a court the immorality of which is notorious. There is a brilliant, satirical sketch of him as *Zimri* in Dryden's *Absalom and Achitophel*.

Buckingham, James Silk (1786-1855), traveller and miscellaneous writer, b. near Falmouth, early adopted a seafaring life, visiting the W. Indies and America. Later he turned to literature, and in 1818 founded the *Calcutta Journal*, which was suppressed by the E. India Co., because in it B. agitated for a free press and various other reforms, including the abolition of suttee. From 1824 to 1829 he conducted the *Oriental Herald*, and by means of this and his lectures paved the way for the abolition of the company. He pub. sev. books of travel and an autobiography. His *Travels in Mesopotamia*, 1827, though now out of date, contains much valuable archaeological information. See R. E. Turner, *James Silk Buckingham*, 1934.

Buckingham and Chandos, Richard Plantagenet Temple Nugent Brydges Chandos Grenville, 2nd Duke of (1797-1861), only child of the 1st duke, known as Marquess of Chandos after 1822, and educ. at Eton and Oxford. He was M.P. for Bucks, 1818-39, and introduced the tenant-at-will clause into the Reform Bill of 1832, extending co. franchise to £50 (known as the Chandos clause). His estates were heavily encumbered, and his own expensive habits resulted in his becoming bankrupt for over a million, 1847. Many of his estates were sold, 1848, including his valuable collections of pictures, china, books, and furniture at Stowe. Among his works are *Memoirs of the Court and Cabinets of George III*, 1853-1855, *Memoirs of the Court of England, 1811-20*, 1856, and of courts of George IV, William IV, and Victoria, 1859-61. His *Private Diary* appeared 1862.

Buckingham (or Buckinghamshire) and Normanby, John Sheffield, 1st Duke of (1648-1721), son of the Earl of Mulgrave, he succeeded to his father's title in 1658, and served in the navy, commanding the expedition to relieve Tangier, 1680.

the divorce law, and introduced the Matrimonial Causes Bill. In 1929 he was chairman of the Political Honours Review Committee—a testimony to his integrity. Viscount, 1933.

Bucknill, Sir John Charles (1817-97), physician, b. Market Bosworth, Leics. Educ. at Rugby under Dr Arnold and at Univ. College, London, qualifying in 1840. From 1844 to 1862 he was first medical superintendent of Devon Co. Asylum and there began his life's work. He advocated humane 'no-restraint' methods of treatment. In 1853 he founded the pioneer *Journal of Mental Science*, which he ed. until 1862; he was also a co-founder of the jour. *Brain*. In 1862 he became a visitor in lunacy. He was elected fellow of the Royal College of Physicians in 1859 and delivered its Lumleian Lectures in 1878. He was knighted in 1894. B. wrote *Unsoundness of Mind in Relation to Criminal Acts*, 1857, *Manual of Psychological Medicine* (with D. H. Tuke), 1858, *The Medical Knowledge of Shakespeare*, 1860, *The Mad Folk of Shakespeare* (2nd ed.), 1867, *Notes on Asylums for the Insane in America*, 1876, and *Care of the Insane and their Legal Control*, 1880. See *Dictionary of National Biography*, 1st supplement, vol. 1.

Buckram was once a rich woven cloth, considered especially suitable for church vestments. Thus the Bishop of Exeter, in 1327, presented his cathedral with banners of red and white B. To-day it denotes coarse linen or cotton fabric stiffened with glue or size. Its stiffness renders it useful for lining belts, collars, bonnets, etc., and also for bookbinding.

Buckskin, twilled cloth, made of wool, with the nap cropped off very finely. B. breeches are made of this material. It is also a soft leather made from sheep- or deer-skin.

Buckstone, John Baldwin (1802-79), dramatist, actor, and theatrical manager, b. Hoxton; was destined for the sea, but refused, and after a short time in a solicitor's office, took to theatrical pursuits. He joined a company of strolling players, and rapidly attained a reputation as a low comedian. In 1823 he first appeared in London as Ramsay in *The Fortunes of Nigel*; in 1824 joined the Coburg company, and in 1827 D. Terry's company at the Adelphi, appearing there in his own play, *Luke the Labourer*. His connection with the Haymarket began in 1833, and in 1853 he became manager there. His numerous plays were mainly successful owing to his knowledge of stage effect.

Buckthorn is the name given to various species of *Rhamnus*, the typical genus of the family Rhamnaceae. *R. cathartica* is the common B., with opposite leaves and thorny twigs; the berries have cathartic properties, and their juice is used in the manu. of sap-green. *R. frangula*, the Alder B., has scattered leaves; the wood produces a light charcoal used in making gunpowder, and the bark is cathartic. Both these species are natives of Britain. The Sea B., *Hippophae rhamnoides*, not

BUCKTHORN

related to the above, is a willow-like shrub with silvery leaves.

Buckwheat, or *Fagopyrum*, is a genus of Polygonaceae, closely allied to the rhubarb. It derives its name probably from O.E. *boc*, beech; cf. the Ger. trans. 'beech-wheat' in Barnaby Googe's version of Horesbach's *Husbandry*, 1577: 'I had rather call it Beechwhoute, because the graine thereof is three-corned, not unlike the beechmast both in colour and form.' Beechmast was also called buckmast in O.E. At least 3 species of *Fagopyrum* are recognised: *esculentum*, *tartaricum*, and *emarginatum*, the first of these being the species cultivated in this country. B. is a native of central Asia and has been cultivated in Europe since the Middle Ages, primarily for its 'grain' but sometimes as a forage crop or green manure. B. is not a true cereal, and although it needs plenty of sunshine and warmth it will grow on much poorer soils than the true cereals. The grain has a thick, hard husk and is only fed in the whole condition to poultry. The crop is relatively unimportant in Britain, and is the sole representative in our cropping of an insignificant botanical family which, however, includes sev. important weeds such as docks, sorrels, black bindweed, and knot grass. As a cereal grown for human consumption in the form of B. cakes, B. is cultivated especially in N. America. B. flour is made from the 'seed' or kernel of the fruit. The chief states given to the cultivation of B. in the U.S.A. are Pennsylvania, New York, and Minnesota. The average yield for the whole of the U.S.A. is 14,000,000 bushels. In Canada the average yield is 10,000,000 bushels.

Bucolics (derived from the Gk word *boukolos*, a herdsman) has come to be a synonym for pastoral poetry (q.v.). Theocritus wrote a delightful collection of B., which breathes the simple charms of country life. B. is assumed to have been the title which Virgil originally gave

to his pastoral poems or *Eclogues*, wishing probably to invite comparison between his poetry and that of his famous rival. In the grammarians the B. of Virgil are also called *Eclogae*. The framework of Milton's *Lycidas* is bucolic, for the poet pictures himself and his friend as shepherds 'nursed upon the selfsame hill.' Ronsard gathered his eclogues together under the title *Les Bucoliques*, but otherwise the term has not been used by modern, as opposed to classical, poets. However, the adjective bucolic is frequently used to describe the character of such a work as Sidney's *Arcadia*.

Bucovina, see BUKOVINA.

Bud is the term used to indicate an undeveloped shoot. It is called a leaf-bud if it develops into a shoot bearing leaves, and a flower-bud if it bears a flower, which is really a modified shoot. If it appears at the apex of a stem it is said to be terminal, if in the axil of a leaf it is axillary or lateral, and if from any other part it is adventitious. If sev. B.s occur in the axil of a single leaf they are called *accessory* B.s. In some cases B.s remain undeveloped for a long time, when they are said to be latent, or dormant, and these are of great importance when frost has destroyed the early B.s. Winter B.s are often prevented from dying by loss of moisture by such developments as the secretion of resin, as in the horse chestnut, or a covering of hair, as in the willow. On the outside a B. is covered by overlapping B. scales, which represent modified leaves (as in lilac) or parts of leaves (leaf bases in horse chestnut, stipules in beech). The colour and shape of the B.s provide a useful means of identifying trees in winter; e.g. the black B.s of the ash and the cigar-shaped ones of the beech are quite characteristic. Water plants often hibernate in the form of special winter B.s (turiones). The Brussels sprout is an example of a large axillary B.

Buda, see BUDAPEST.

Budapest, cap. city of Hungary. It is in the N. of the country, at the W. edge of the Alföld (q.v.). The R. Danube (q.v.) divides the city into 2 parts: *Buda*, built on the hilly ground of the W. bank; and *Pest*, built on the plain land of the E. bank. This site, at an easy crossing of the riv., has been inhabited since early times; the remains of a Bronze Age settlement have recently been found, and there are also remains of Celtic settlements. In Rom. times an important tn, *Aquincum* (q.v.), developed on the W. bank; it decayed after the barbarian incursions, but it formed the core of a new settlement, *Óbuda*. *Óbuda* and *Pest* were devastated by the Tartars (q.v.), and Béla IV (q.v.) then constructed a new fortress at *Buda*, near the Gellért hill. Here also Sigismund (q.v.) later erected a palace, and *Buda* became the residence of the king. In the 16th cent. *Buda* and *Pest* were taken by the Turks, and they remained in Turkish hands until 1686, when, on the expulsion of the Turks, they came into the possession of the Hapsburgs (q.v.). Under the rule of Vienna, *Buda* expanded,

and many of the most notable buildings existing to-day, particularly those in the baroque style, date from this time. The growth of *Buda* was limited by the hilly nature of the ground on the W. bank, and in the early 19th cent. a great deal of building took place on the flat E. bank. *Pest*, previously undistinguished, now developed rapidly, although it was still a separate tn from *Buda*. Eventually, in 1872, the city of B. was formed by the unification of *Buda*, *Pest* and *Óbuda*. After the First World War B. suffered damage at the hands of the Bolsheviks (see BELA KUN), and, subsequently, at the hands of the Rumanians (see HUNGARY, *History*), who occupied the city Aug.-Nov. 1919. In the Second World War, B., garrisoned by Germans and Hungarians, was encircled by the Russians at Christmas, 1944, but it was not taken until 13 Feb. 1945 (see EASTERN FRONT in SECOND WORLD WAR). During the 7 weeks of bitter fighting whole areas of the city were reduced to desolation, and scarcely a building in the city remained undamaged. At the end of the war B. was extensively reconstructed, but it suffered damage again during the anti-Russian risings of Oct.-Nov. 1956, when there was much fighting in the city.

Before the Second World War, the Danube at B. was spanned by 7 bridges; all of these were blown up by the Germans before the city fell to the Russian troops, but 6 have since been rebuilt and 2 new bridges have also been built. The riv. at B. divides to form 3 is.: Margaret Is. in the centre of the city, used as a park; Csepel Is. (q.v.) to the S.; and Szentendre Is. to the N. The part of the city on the W. bank, *Buda*, stands on and around 2 hills. One of these, the Gellért hill, is a rocky height rising 770 ft out of the riv. in the heart of the city. It is crowned with a citadel built in 1851 to replace a wooden Turkish fort. A pillar on which stands an immense statue, representing 'Liberty', now towers over the fort. N. of the Gellért hill is the *Várhegy*, the Castle hill, on the S. end of which stands the former royal palace: a neo-baroque palace built here in the 18th cent. by Maria Theresa (q.v.); it was enlarged at the end of the 19th cent. into a huge structure containing 860 rooms. During the Second World War the Germans held out for a long time on the *Várhegy*, and the dist. was, in consequence, the most severely damaged part of the city. The palace itself suffered grievously, but the slow work of reconstruction was begun soon after the end of the war. The bombardment of the hill laid bare the lives of the old ramparts and the remains of medieval buildings; in some places the streets and buildings of the hill have been reconstructed according to the medieval pattern. Among the other notable buildings on the hill is the Matthias church, or Coronation church (13th cent.; restored 18th-19th cents.) in which sev. kings of Hungary (including the Emperor Charles I, q.v.) were crowned. The riv. front on this side of the Danube has picturesque streets and many interesting buildings,

including the magnificent baroque church of St Anna (18th cent.).

On the E. side of the riv. the city is built to a roughly concentric plan, with 3 semi-circular roads, *Körúts*, the innermost of which encloses the *Belváros*, the oldest part of Pest. The outermost *Körút*, called the *Great Körút*, forms the E. boundary of the city, and is one of the main shopping centres of B. The *Körúts* are intersected by a number of straight roads running from the centre of the city; of these the most important are the *Rákóczi út* and the *Szédlán út*. The famous riv.-bank promenade, the *Corso*,

BUDAPEST

E.N.A.I.

is also on this side of the riv. Among the most notable buildings of the E. bank are the splendid neo-Gothic Parliament House (1884-1904), the dist. around which is the administrative heart of the country, the Academy of Sciences, the National Museum, and the State Opera House; all these buildings date from the 19th cent.

B. has a univ., a technical univ., and colleges of agric. sciences and economic science. There are iron and steel, textile, rolling-stock, motor-vehicle, chemical, electrical, paper, and brewing industries. Pop. 1,757,000. See C. Holland, *Hungary: the Land and its People*, 1935; E. de Megyery, *Budapest Scrap Book*, 1938; G. Pálóczy-Hirvát, *In Darkest Hungary*, 1945; Z. Hlász (ed.), *Hungary*, 1956.

Budd, William (1811-80), physician, b. N. Tawton, Devon; educ. in London, Edinburgh, and Paris. M.D., Edinburgh, 1838; gold medallist for essay on acute rheumatism. In 1839 B. began his life-work—study of the origin and transmission of typhoid fever. In 1842 settled

at Bristol, becoming physician to Royal Infirmary there, 1847-62. B. zealously promoted Bristol water-works, and did much for the improvement of sanitation. In 1873 ill health obliged him to give up practice. Chief work: *Typhoid Fever, its Nature, Mode of Spreading, and Prevention*, 1873. Others are *Malignant Cholera*, 1849, *Siberian Cattle Plague*, 1865, *Cholera and Disinfection*, and *Scarlet Fever and its Prevention*, 1871.

Buddh-Gaya, or **Bodh-Gaya**, vil. in Bihar state, India, dwelling-place of Buddha, resorted to by pilgrims as having once been the centre of Buddhist religion. There is a fine anc. temple, of which the shrine is now used by Hindus. It was built over an earlier temple of the time of Asoka.

Buddha and Buddhism. Buddhism is a religion that derives its name from its founder, Buddha, or, more correctly, 'The Buddha,' which means 'The Awakened' or 'The Enlightened.' Despite the fact that Buddhism numbers among its adherents about one-third of humanity, the amount of exact information concerning the foundation of this remarkable faith is far from exhaustive. There appears, however, to be a general consensus of opinion among orientalists that Buddhism had its origin in the N. of India in the 6th cent. bc from a Hindu prince named Siddhartha, or, as he is often called, Gautama. There are those who doubt whether Gautama (or Buddha) was an actual historical person, as there are those who question the historical existence of Christ; and it may be remarked that, as in the case of Christianity, the founder of Buddhism wrote nothing himself. It was only after his death that councils were held by the adherents of the new faith to settle the canon of its sacred writings and to fix its doctrine. These councils numbered three, the first being held by his chief followers immediately after the death of Buddha, in the 5th cent. bc. Schism and secession led to the holding, a cent. later, of a second council in order to uphold the doctrine against the schismatics; but it was not till 244 bc that Asoka, King of Magadha (now Bihar), summoned a third council to fix the canon more precisely. This was apparently not reduced to writing till about 150 years later, when the canon stood substantially as it does now. The sacred writings are divided into 3 parts (the Triptaka or 'triple basket'): (1) For the laity; (2) for devotees, i.e. monks, etc.; and (3) a metaphysical section. The prin. texts are the Sanskrit version of Nepal and the books of the Ceylon Buddhists in the Pali language (see PALI), and the Chinese trans. of Sanskrit MS. The story of the life of Buddha and a brief summary of his teaching is given in fluent verse by Sir Edwin Arnold in his *Light of Asia*, and may be briefly outlined here. Prince Siddhartha was the son of Suddhodana, King of Kapilavastu, a kingdom situated near the boundary of Oudh and Nepal. His mother's name was Mays, and according to some legends Buddha's was a virgin birth. The date of his birth has been

approximately fixed at 560-550 B.C. Many are the stories told to show how in early life the young prince evinced that pre-occupation with the sufferings of all sentient beings which was to set him on his life's mission, viz. the search for the solution of the problem of pain. This pre-occupation alarmed the king, for he feared his son would abandon his high station as ruler. In the belief that 'love will cure these thin distempers,' on the advice of his ministers the king married his son at an early age to Yasodhara, a beautiful princess. ('The thoughts ye cannot stay with brazen chains A girl's hair lightly binds.') She bore him a son and they lived together for 12 years (till Siddhartha was 30) in a most luxurious and closely guarded prison palace. But the prince's mind still dwelt more and more on mortal ills—the pain and vanity of existence from which even death offered no escape (for Buddha accepted as unquestioningly as his contemporaries the Brahmanic doctrine of the cycle of lives). At last, breaking from his triple-guarded prison, leaving his loved wife and child, he became a religious mendicant, and for 6 years, while practising a rigorous asceticism, he studied the teachings of the Brahmins. But he was unconvinced that the 'Path' was to be found in their teaching, and less still in the self-inflicted flesh-mortifying torture of the fakirs. About this time he underwent a severe test, Mara, the Prince of Darkness, seeking by fierce temptation to turn him from his quest. At last, after sitting under a tree for weeks plunged in profound meditation on the cause of things, Buddha emerged into that state of enlightenment in which he understood the cause of suffering and, consequently, its cure. The tree under which Buddha sat during his meditation is known to Buddhists as the Bodhidruma (the tree of intelligence). The spot on which this tree stood is believed by the devout to be the centre of the earth, and in the courtyard of an ancient temple in Bengal stands a pipul-tree which is claimed to be the descendant of the Bodhidruma (or, as it is sometimes called, the Bo-tree). The original Bo-tree was said by the Chinese priest Hsuan Chuang to be still standing 1200 years after the death of Buddha. The solution of his problem—the world's problem—having been vouchsafed, Buddha spent the last 40 years of his life in preaching his new gospel. He returned to his wife, who became one of his first converts; converted Bimbisara, King of Madagadha; and travelled widely in the N. of India. Buddha died at the age of 80 at Kusinagara (Oudh). From this time onwards, the new faith spread rapidly over the whole Indian peninsula, and in the 3rd cent. B.C. was carried to Ceylon. In A.D. 65, while Nero was persecuting Christians, Emperor Ming, of the later Han dynasty, sent his first Chinese envoys to India seeking the Buddhist faith; and 3 years later, with the arrival at Loyang of Indian monks, the first Chinese Buddhist temple, the White Horse monastery, was built in the Chinese cap. Thirteen different sects

developed in China, of which the *Ch'an* (Jap. *Zen*) school has been the most popular. From Ceylon Buddhism spread to Burma (5th cent. A.D.) and Siam (7th cent. A.D.). Its ever-zealous missionaries carried the tidings even further afield, and at the present day, although Buddhism is almost extinct in the country of its origin, being unable to compete with the old Hinduism, it is the most widely spread religion of Asia. In India the Nepalese and other Himalayan tribes are Buddhists, and Buddhism flourishes in Ceylon. Burma and Siam are still Buddhist, the majority of the Chinese, many of the Japanese, the Mongolian peoples of Tibet and central Asia, and even the Tartars of SE. Russia, are adherents of one form or another of this world-embracing faith. The number of Buddhists in Asia is estimated at 150,000,000 and there are said to be also 180,000 Buddhist inhab. of N. America, of whom about 11,000 dwell in Canada. In briefly describing the doctrines of Buddhism it will be well to compare them with the tenets of Christianity. Both systems realise the inadequacy of mundane existence; both may not unfairly be termed pessimistic; but the remedy of Christianity is 'life more abundantly,' while that of Buddhism is 'Nirvana,' or 'enlightenment through the denial of existence.' Holding that existence on the whole is an evil, and that death offers no release from existence—for incarnation but leads to renewed incarnation—the Buddhist ardently desires to escape from this cycle of lives, not by annihilation, as often erroneously alleged, but by losing his individuality in the universal life. 'The Dewdrop slips into the shining Sea.' The more man 'acquired merit' in his chain of lives the sooner was Nirvana attained. At the basis of Buddhism are the Four Sublime Verities taught by Buddha, viz. (1) that pain exists; (2) that it is brought about by attachment or desire; (3) that Nirvana alone can end pain; and (4) that the way to Nirvana is only to be attained by following the 'Eightfold Path': Right Doctrine, Right Purpose, Right Discourse, Right Behaviour, Right Purity, Right Thought, Right Lowliness, Right Rapture; and by acquiring merit by these means the Law of Karma ensured a more rapid release from 'life's fitful fever.' All the foregoing may be summed up in the word renunciation, i.e. freedom from *attachment* which alone causes existence. Attachment springs from desire, and desire from sensation, which in turn is the product of ideas. So that existence is the product of ideas. Buddha taught that ideas were mere illusions, and that if man will but free himself of his illuded ideas enlightenment can be attained. In order to achieve this one has to prove that nothing in the mundane world is not transitory and imaginary; for the knowledge of the world is based on perception, which in turn relies on our sense data—a factor subject to time and space, and therefore necessarily transitory and universal. In analysing 'consciousness' of the (illusory) existence of the world,

there was developed by later schools an elaborate system of epistemology or *wei-shih*, which was so abstruse that most Buddhists could hardly understand it. Consequently the more direct method of 'sudden awakening' taught by the *Ch'an* school has prevailed in China and Japan for the last 14 cents. Perhaps the most marked feature of Buddhism is not its fatalism, which it shares with other E. faiths, but the fact that the Law of Karma cannot be set aside by any divine

Buddhism. The erection of *stupas* over Buddhist relics, the foundation of monasteries, the *Chaityas*, or halls of worship, that were later built, the belief in a succession of Buddhas and Bodhisattvas or beings who in later ages will be Buddhas, the erection of images of the Buddha, are definite stepping-stones in the development of the religion. As might be expected of a religion that has altered so greatly and is professed so widely, there are numerous forms of Buddhism practised to-day. A

being. Buddha was not concerned to dispute the existence of gods, but they, if they existed, were as much subject to the cycle of change as was man. Some Buddhist nations have no word in their language for 'God' in the sense of being an arbiter of the fate of man. It may sound somewhat startling to assert that one-third of mankind is atheist, and it cannot be denied that Buddha is to-day worshipped and prayed to by multitudes of his followers, but the truth is that Buddha himself never claimed to be more than a man, and taught that a man's future was solely in his own keeping. The Buddhist religion as now practised is, however, very different from that preached by Buddha himself, and this is largely due to the competition for supremacy in India of Hinduism, Jainism, and

schism that occurred in the second century AD contributed largely to this: the Buddhist faith then divided into two schools, the Hinayana, or Little Vehicle, and the Mahayana, or Great Vehicle, the latter being cast in a somewhat Brahmanical mould. A Buddhist pantheon came into being; elaborate and beautiful temples and images were erected; elaborate and gorgeous ritual was practised. This is the school of Buddhism that is followed in Nepal, in Tibet, Mongolia, China, Japan, and Korea; the more southerly countries—Ceylon, Burma, Siam, Indo-China—follow the older Hinayana school. Though each belongs to the Mahayana school of Buddhism, there are, however, enormous differences between the Lamaism of Tibet and Mongolia, the Foism of China, and the Buddhism of Japan which has incorporated

more than a little of native Shintoism. Consult J. L. Burnout, *Introduction à l'histoire du Bouddhisme indien*, 1844; Sir E. Arnold, *The Light of Asia*, 1879; H. Fielding, *The Soul of a People*, 1898, and *The Inward Light*, 1908; W. A. Smith, *A History of Fine Art in India and Ceylon*, 1911; Sir C. Elliot, *Hinduism and Buddhism, an Historical Sketch*, 1921; A. Berridale Keith, *Buddhist Philosophy in India and Ceylon*, 1923; A. K. Coomaraswamy, *Buddha and the Gospel of Buddhism*, 1928; C. A. Blofield, *The Jewel in the Lotus*, 1948; Arthur Waley, *The True Tripitaka*, 1950; Chan Wing-tsit, *Religious Trends in Modern China*, 1953.

Budding is an operation in horticulture performed for the reproduction of plants and the formation of varieties. It can be done in many ways, but the plants which are concerned in the operation must be closely related botanically, e.g. roses bud upon roses, apples upon pears, apricots upon plums, or pears upon medlars. In shield-budding a bud from the wood of the present season's growth is cut from its parent in the months of July and Aug. when the bark separates freely from the wood. The operator then makes a cut in the shape of a T in the bark of the stock near the ground, slightly loosens the bark, raises it, and places inside it the bud. He then tightly binds up the bark above and below the bud with about a foot of raffia until the bud unites with the stock, when he removes the binding. If the operation is successful the tree which has been budded is cut short above the new member in the following spring, in order that all the strength from the root may be forced into the bud. By means of B., and other forms of grafting, woody plants can be propagated much more rapidly than they can be grown from seed. Moreover the seeds of many cultivated plants do not breed true, whereas B. gives plants which are exact replicas of their parents. See GRAFTING.

Buddleia, named after Adam Buddle, is a genus of shrubs and trees of the Loganiaceae. *B. globosa*, a native of Chile, is common in our gardens; *B. alternifolia*, *B. davidi* and its varieties, of China, are favourite hardy shrubs; *B. asiatica*, an E. Indian evergreen, is grown in green-houses.

Buddon Ness, cape on the E. coast of Angus, Scotland, with 2 lighthouses.

Budé, or **Budaus**, Guillaume (1468–1540). Fr. classical scholar, b. Paris; studied there and at Orleans, devoting himself especially to Greek. He was secretary to Louis XII, librarian to Francis I, and provost of the merchants of Paris, and was also sent on sev. missions to Rome. He was a devoted student, and his numerous learned works include *Annotations in Pandecta*, 1508, the *De Asse*, 1514, and *Commentarii Linguae Graecae*, 1520, an extensive collection of lexicographical notes.

Bude, seaside resort on the N. coast of Cornwall, England. B. Castle was the residence of Sir Goldsworthy Gurney, who invented the Bude light. Pop. (with Stratton), 5300.

Budějovice, see ČESKÉ BUDĚJOVICE.

Budge, Sir Ernest Alfred Thompson Wallis (1857–1934), orientalist, b. Cornwall, and studied at Cambridge, where he won distinction in the Semitic languages. He conducted excavations at Aswān in Egypt, in the Sudan, and in Mesopotamia, and was later appointed keeper of Egyptian and Assyrian antiquities in the Brit. Museum. He was knighted, 1920. He issued numerous trans. from ancient Semitic tongues. His *Syriac Book of Governors of Thomas of Marga*, 1893, gives a vivid picture of 9th-cent. monastic life in Mesopotamia. Among his many other works are *Babylonian Life and History*, 1884, *The Dwellers on the Nile*, 1885, *The Isosetta Stone and Decree of Canopus*, 1910, *The Queen of Sheba and Menyelek*, 1921, *The Rise and Progress of Assyriology*, 1925, and *History of Ethiopia*, 1928.

Budgell, Eustace (1685–1736), essayist, b. St Thomas, near Exeter. Educ. at Christ Church, Oxford, he afterwards entered the Inner Temple, but soon gave up legal studies for literature. He was a cousin of Addison, and he took part in writing the *Tatler*, contributed 31 papers to the *Spectator*, and also wrote for the *Guardian*. Later, he became under-secretary to Addison, chief secretary of the lords justices of Ireland, and deputy clerk of the council. When Addison became prin. secretary of state in England, he procured for B. the post of accountant and comptroller-general in Ireland (1717); but the next year B. pub. a lampoon directed against the Duke of Bolton and his secretary, E. Webster, which lost him his position. He was involved in the S. Sea Bubble, losing £20,000, and eventually he drowned himself in the Thames.

Budgerigar (*Melopsittacus undulatus*), Australian bird of the parrot family, Psittacidae. Popularly known as the lovebird. There are some 30 recognised shades of colour but among the more rare are white-flighted, opalines, and yellow-faced greys. See also PARAKEET.

Budget, account of the finances of a state, or, by analogy, of some smaller body, presented at a definite time by the responsible minister. Under the present procedure in Great Britain the chancellor of the exchequer presents his B. to the House of Commons during April. His statement falls into 2 parts: an account of the results of revenue and expenditure during the past 12 months, ending on 31 Mar., showing what surplus or deficit there has been compared with his estimates of the previous year; and an estimate of the revenue and expenditure for the ensuing 12 months, a balance being struck by the remission of old or the imposition of new taxes, with reference to the surplus or deficit on the past year.

Budisin, see BAUTZEN.

Budleigh Salterton, urb. dist. of Devon, England, 4½ m. E. of Exmouth, on the coast. It ranks amongst the most pretty

and secluded of Devon watering places, endowed with many natural beauties. Pop. 4000.

Budrio, It. tn, in Emilia-Romagna (q.v.), 10 m. E. of Bologna (q.v.). Pop. 18,000.

Budweis, see ČESKÉ BUDĚJOVICE.

Buell, Don Carlos (1818-98), Amer. military officer, b. Ohio. Graduated at W. Point, 1841; served in Seminole and Mexican wars, under Gens. Taylor and Scott. In the Civil war B. took part with Grant in the battle of Shiloh, and defeated the Confederate army at Perryville.

Buenos Aires: 1. The largest prov. of the Argentine Rep., having a coastline of 740 m. to the E. and S. on the Atlantic, from the mouth of the Plata to that of the Río Negro, and bounded on the N. by the R. Paraná and the provs. of Santa Fé and Córdoba, and on the W. by the ter. of La Pampa and the prov. of Córdoba. It is for the most part a plain, well watered with rivers and lakes. Though many of these are useless for navigation, they add greatly to the fertility of the country, while the Paraná, with its estuary

BUENOS AIRES

B.O.A.C.

The Avenida 9 de Julio, which is reputed to be the widest street in the world.

Superseded for not following up his victory, he refused to hold further offices when offered to him. B. resigned his commission, 1864. He became president of Green River Ironworks, 1865-70, and engaged in mining enterprises. See J. B. Fry, *Operations of the Army under Buell*, 1884.

Buen Aire, or **Buen Ayre**, see BONAIRE.

Buenaventura, main port on the Pacific coast of Colombia on Cascajal is., the terminus of a railway to Cali. The mean temp. is 85° and the average ann. rainfall 350 in. It exports gold, platinum, coffee, sugar, and hides. Steamers of sev. lines call here. Pop. 14,520. Rain falls nearly every day. B. was destroyed by fire in 1931, but has been rebuilt. The section of Pan Amer. highway between B. and Cali (Carretera al Mar) was opened in Jan. 1944.

the Plata, and the Río Salado, are valuable navigable streams. The only hilly country occurs in the extreme S. of the prov. The climate is mild, being considerably tempered by the Atlantic breezes. The main drawback is the Pampero, a destructive hurricane which blows from the S. in the summer. The soil is very fertile, and cereals (including half Argentina's wheat), tobacco, and fruit are grown, but cattle-grazing (there are some 15,000,000 head of cattle here, one third of the cattle of Argentina) and sheep-rearing (18,000,000) are the prin. industries. The affairs of the prov. are administered by a governor and vice-governor, and a congress, all completely independent of the central gov. The chief tns are the Federal cap. B. A., the prov. cap. La Plata, Zárate, and Bahía Blanca. Area 116,332 sq. m.; pop.

(excluding the city of B. A.) 5,023,264 (1955).

2. The Federal cap. of the Argentine Rep., on the W. bank of the Plata, 150 m. from the sea. Greater B. A. is now called the Federal District, with an area of 77 sq. in. The Plata is here almost 30 m. wide, but very shallow, so that the 2 entrances to the docks have to be kept open by continual dredging. The city stands on a level plain, very little above sea level, and has a mild and moist climate. There is a luxurious splendour about the city, with its sunny boulevards (the chief being the Avenida de Mayo) lined with imposing buildings. Belgrano is the finest of its many suburbs. The streets are regularly laid out at right angles to each other and well lighted. Many are planted with trees, and there are numerous open squares and sev. fine parks, the most famous being Palermo Park (840 ac), which has a motor track and flying ground. The main buildings are the Rom. Catholic cathedral dating from c. 1600, the chapel of Santa Felicitas, the Casa Rosada, or Gov. House, the univ., the opera house, and various gov. and municipal buildings and first-class hotels. B. A. is the terminus of the railway lines, and has excellent tramway, cable, and telephone services, and a fine modern airport. Sev. thousand head of cattle are killed and chilled daily in some of the slaughter-houses in the vicinity. The city has been virtually rebuilt since 1900. Avenida 9 de Julio is the widest street in the world. In a normal year over 3500 ships enter and leave the port of an aggregate of more than 20,000,000 tons of cargo, nearly a third of which is Brit. The municipal gov. is exercised by a mayor appointed by the president of the Argentine Rep. with the approval of the Senate; he is assisted by a council of 30 elected members. The univ., which has an average of over 20,000 students, was founded in 1821. There are 30 theatres. There is a museum and a national meteorological bureau. Air routes for mails and passengers radiate from B. A. to many stations in the Argentine Rep. and to other countries. B. A. prospered, as indeed did so many S. Amer. cities, throughout the Second World War period. The life of the city is comparable to that of Paris before 1914, and its seaside resort of Mar del Plata adds to its attractions. The suburbs of B. A. on Saturdays and Sundays give the impression of one huge sports club, where thousands of young men and women take part in every kind of game and exercise under the best possible conditions. The Club de Gimnasia y Esgrima, with a membership of 30,000, gives for a small subscription gymnasia, swimming baths, fencing, boxing, pelota courts, music and foreign language teachers, a library, and ballroom. Pop. 3,554,906.

Buff, Charlotte (1753-1828), famed in Ger. literature for winning Goethe's love, b. Wetzlar. In 1772 Goethe visited Wetzlar, was often at her father's house, and fell deeply in love with Charlotte,

who was engaged to Kestner and married him 1773. She was the prototype of his heroine in *Leiden des jungen Werthers*, 1774. Thomas Mann described an imaginary meeting of Charlotte and the old Goethe in his *Lotte in Weimar*, 1939.

Buff Leather, flexible dry cream or white leather made from cattle hides. The grain layer of the hide is removed, the leather is oil tanned (see **LEATHER**) with cod oil, and the surface finely abraded with pumice and sand to produce a velvet-like nap. It is not frequently encountered nowadays, but is used for soldiers' ceremonial belts, facings, and other purposes, and occasionally in luggage.

Buffalmacco, Buonamico (1262-1340), early Florentine painter. He was a disciple of Andrea Tafi, and to him are attributed some fading frescoes in the old Badia Church in Florence. He is better known through Boccaccio and Sacchetti as a wit and practical joker.

Buffalo, city, co. seat of Erie co., New York, U.S.A., twelfth largest city in U.S.A., founded under the name of New Amsterdam in 1803 by Joseph Ellcott, agent of the Holland Land Co., slopes upon the NE. extremity of Lake Erie. Until 1810 it retained its original name; tradition derives its present name from the herds of buffaloes that used to frequent the Buffalo Creek region. The greater probability, however, is upon the side of its derivation from the name of an Indian chief. All but destroyed in 1813 by a Brit., Canadian, and Indian force, it rose to the rank of a city in 1832, and in 1853 annexed its erstwhile rival, Black Rock. With the completion of the Erie Canal in 1825, B. rapidly advanced into the forefront of commercial importance. It has direct passenger and freight connection with the great ports of the lakes; it distributes the manuf. products of the E. to the W., and the raw products of the W. to the E.; it stands as a junction between ship and rail; and it is the port of entry of the Buffalo Creek customs dist. Ten thousand ships enter its harbour yearly, and barges up to 2000 tons ply the canal from B. to the sea. The city has fine airport facilities, and many railways meet there. It is among the prin. grain and flour markets of the world. In B. in 1843 Joseph Dart constructed the first grain elevator. Among its manufs. are foundry and machine shop products, linseed oil, cars and ship construction, soap and candles, flour and grist mill products, lumber and planing mill products, clothing, iron and steel products. Its industries include printing, publishing, meat-packing, petroleum-refining, ship-building, brick, stone, and lime working, lithographing, the making of patent medicines and chemicals, copper smelting and refining. Its altitude, temperate climate, excellent drainage, and water supply make B. an attractive, residential city, with a pop. which has steadily and rapidly increased. It is second in pop. in New York state. It is beautifully laid out with spacious streets, most of which are bordered with trees,

and with squares, and is encircled by 1030 ac. of parks linked together by boulevards and driveways. Here are the univ. of R., Canistota College, D'Youville College, and a Catholic teachers' college, also, the Grosvenor Library, Albright Art Gallery, City Hall (1932), Prudential Building, and Larkin Building (designed by Frank Lloyd Wright). On 7 Aug. 1927, the International Peace Bridge, connecting B. with Fort Erie, Canada, was dedicated in the presence of the Prince of Wales and the Brit. Prime Minister. Pop. 580,132.

Buffalo, Eng. name of *Anoa* and

rugose mass impenetrable to bullet, and extending to the back of the head, then spreading horizontally and curving upwards and inwards to the tips, which are usually some 4 ft apart. Like the Indian B. it is fond of water, which it visits at more or less regular intervals during the 24 hours, and has a habit of plastering its head with mud which, when dried by the sun, acts as a protection from the sting of the gadfly. The African B. is the most formidable of the large game of S. Africa and is both fierce and untameable. The Amer. bison, belonging to a different genus and distinguished by

National Film Board, Canada

BUFFALO IN ELK ISLAND NATIONAL PARK, ALBERTA

Syncerus, genera of large ruminant mammals, belonging to the family Bovidae or ox family, and found chiefly in India and Africa. It is distinguished by its somewhat triangular horns, which arise close together from flattened bases set low in the skull. The Indian B. (*A. bubalis*) or Indian water B. is a heavy animal, with thick hide covered sparingly with coarse black hair, usually with long horns compressed at the base and curved in the form of a half-moon and set on a straight head, with small ears. It lives in herds in the jungles of the plains, and there are domesticated breeds. The African or Cape B. (*S. caffer*) is almost equal in size but not so heavy as the Indian B., though fully equal in strength and courage to its Indian congener, from which, however, it is easily distinguished by the fact that its horns are immensely broad at the base, where they approximate so closely as almost to meet, thereby forming, particularly in old bulls, a solid

its humped body and small horns, is often termed a B. (see BISON).

'Buffalo Bill,' see CODY, WILLIAM FREDERICK.

Buffon, George Louis Leclerc, Comte de (1708-88), Fr. naturalist, was of rich and noble parentage. His life was rigorously devoted to science, but for some time he studied law at the Jesuit College in Dijon. Here he met Lord Kingston, in whose company he toured in France and Italy, and travelled to England. Having built up a reputation as the translator of Newton's *Fluxions* and Hales's *Vegetable Statics*, he was appointed keeper of the Jardin du Roi, the Fr. zoological gardens. It was probably this appointment which induced him to embark on his colossal *Histoire naturelle* (1749-87), in which Daubenton and others collaborated. Although its style is often turgid and ultra-rhetorical—it was this which Rousseau and his other contemporaries at home and abroad so frankly admired—it was, in

spte of its many unsupported hypotheses, the first work to suggest the existence of evolution in the animal world. Inspired by a genuine love of learning, he undoubtedly raised the status of biological science. His membership of most of the learned societies of Europe attests his wide reputation. See L. Roulé, *Buffon et la description de la nature*, 1924.

Bufs, *The (Royal East Kent Regiment)*, formed in 1665 from Eng. troops previously in the service of Holland. The regiment can thus claim a link with the Eng. volunteers who joined the Dutch forces in 1572. It ranks third among the regiments of the line. It was first known as the Holland Regiment. Served under William III in Flanders; in Cadiz expedition 1702; then, under Marlborough, at Blenheim, Ramillies, Oudenarde, and Malplaquet, and in 1743 under George II at Dettingen. It served with distinction under Wellington in the Peninsula. It also bears honours for Punniar, Crimean War, China War, S. Africa, 1879 and 1899-1902, and Chitral. During the First World War it raised 16 battalions, which served in France, Flanders, Macedonia, Palestine, and Iraq. In the Second World War the B. were part of the famous Eighth Army (q.v.) in Italy and were in severe fighting at Termoli (Oct. 1943) and around Biferno, and later in battles across the Trigno R. A unit of the B. formed part of the Brit. garrison in Leros during the war. A battalion of the B. was one of the first to break through the Hitler line on the It. front in 1944, and a rifle battalion took the major part in clearing the Germans from the Tavigliano area. Other units fought in Malaya in 1941-2. The B. have been associated with E. Kent since 1782. The King of Denmark is colonel-in-chief of the regiment. Danish volunteers served with the regiment in the Second World War. The 2 Kent regiments, the Bufs and the Queen's Own Royal West Kents, are to be amalgamated by 1962. See Knight and others, *Historical Records of the Bufs*, 1905-51.

Bufo is the typical genus of the toad family Bufonidae, species of which are found all over the world except Madagascar and Australia. *B. vulgaris* is the common toad of Britain; *B. calamita* is the natterjack. See TOAD.

Bug, name of 2 rvs. in E. Europe.
1. The **S. B.** (Ukrainian Boh) rises in Podolia and flows SE. into the Dniester estuary of the Black Sea. Length, 415 m. Chief port, Nikolayev. It formed the demarcation line between the Ger. and Rumanian zones of occupation 1941-3.

2. The **W. B.**, a right trib. of the R. Vistula. It rises in Galicia, forms part of the frontier between Russia and Poland, and joins the Vistula near Warsaw. Length, 440 m. Chief port, Brest.

Bug is a term variously applied to all members of the order Hemiptera, or Rhynchota, or to those only which belong to the section Hemiptera-Heteroptera. Little is known about many of them, but over 20,000 species from all parts of the world have been classified. As they all

feed on the juices of plants or the blood of mammals, they are extremely injurious to the human race. The chief characteristic of B.s is the sucking or biting mouthparts, which are in the form of a proboscis or beak. The wings, which are absent in some species, e.g. *Cimex lectularius*, are nearly always 4 in number. The anterior pair in the Heteroptera have the distal half membranous and the basal half thickened, while in the Homoptera they are of the same consistency throughout. A great many of these pests are provided with *stink-glands*, which emit an extremely unpleasant odour. The rate at which they increase is enormous and it may here be noted that *Acanthosoma griseum*, a field-bug, is one of the few insects which protect and care for their young. The boatfly (q.v.) is an aquatic species which preys on insects and fish; members of the family Cuspidae feed on fruit, lichens, and grass, and cause the 'buttoning' of strawberries; others which are vegetable-feeders surround themselves with a foamy mass known popularly as 'frog-spittle'. The bed-bug is a well-known creature which infests man, preying on him by night and sucking his blood; the cinch-bug (*Blissus leucoplerus*) sucks the juice of plants; the squash-bug (*Anasa tristis*) feeds on squashes and pumpkins; the cotton-stainer (*Dysdercus suturalis*) injures cotton; the family of Aradidae live under bark; and *Halobates* is a marine genus. When used in its widest sense, the term B. includes the aphidae (q.v.), cochineal, and lac-dye insects.

Buga, mkt tn of Valle del Cauca, W. Colombia, on the railway from Cartagena to Buenaventura. Agric. and cattle-raising centre. Pop. 19,600.

Bugaeu, see BELLEVUE.

Buganda, prov. of the Uganda Protectorate, inhabited by the Buganda, a Bantu-speaking people. It is recognised as a native kingdom under its ruler, the *kabaka*. It comprises the dists. of Mengo, Masaka, and Mubende, together with 5 is. in Lake Victoria. These is. were entirely depopulated through epidemics of the sleeping sickness at about the time of the First World War, and instead of the former pop. of 3,000,000 there are now only about 850,000 in the whole of B. The area is 25,390 sq. m., of which 8,320 sq. m. is water. Compared with other parts of Africa, the people have a high literacy rate. They are extremely intelligent and more advanced politically than most tribes. A large percentage is said to profess Christianity, but it is also true that witchcraft is widespread. The Buganda are essentially agriculturists. Their staple diet is banana. B. is the richest area of Uganda, and attracts great numbers of labourers from surrounding tribes. The township of Mengo is the seat of the native gov. Kampala, in the Mengo dist., is the commercial centre of the protectorate. The conurbation of which it is the nucleus comprises a number of hills each tending to be appropriated to some special purposes: Nakasero, the gov. residential area at its foot, and on its summit the remains of the old gov. fort;

Kilolo, which has a wireless station; Rubaga, Rom. Catholic cathedral and H.Q. of the White Fathers; Makerere, where is the new college of almost univ. status and other gov. educational establs. In the tu of Kampala itself the outstanding buildings are the high court fronted by gardens in which is the war memorial, the gov. Indian school in old Kampala and the agric. laboratory. In the dist. of Masaka is the Buddu low-lying forest land; Muhende is a scrub-covered, scantily populated area but contains a quantity of game, particularly elephants and buffalo in Buyago and N. Singo. Brit. influence in B. came in 1890. As with other Europeans who had been in the country, they were struck with its highly developed kingship. Under the king, who has complete ritual and political power, are co. (*saza*) and sub-co. (*Gombolola*) chiefs appointed by him to rule over the peasants. The *kabaka* is assisted in gov. by 3 ministers and the *kukiko* (council or parliament). There was an elaborate system of tribute, an efficient judiciary, a form of conscription, and a census. In 1890 the Brit. E. Africa Co.'s officers, after Germany had repudiated the activities of the notorious Carl Peters (who had tried to extend Ger. influence by concluding a treaty with the King of Uganda) became the accepted advisers of the *kabaka*. The officers rendered heroic service in establishing peace and order, and in 1893 the whole of Uganda became a Brit. protectorate. The British preserved the monarchy of B., doing everything possible to promote its usefulness. In 1953 B. became the centre of controversy when the *kabaka*, Mutesa II, was exiled by the Brit. Gov. on the grounds that he had failed to carry out his obligations under the agreement of 1900, by which the Brit. Gov. agreed to recognise the *kabaka* as long as he co-operated loyally. Moreover, he had stated publicly that he would oppose the declared policy of the Brit. Gov. The *kabaka* contended that the Brit. aim of an E. African Federation would be detrimental to B., and practically demanded independence for B. within the Commonwealth within a specified time. As a result of a conference (1954) at Namirembe, constitutional arrangements were arrived at which were approved by the Brit. Gov. and the B. *kukiko*, and the *kabaka* was allowed to return in Oct. 1955. See J. H. Speke, *Discovery of the Source of the Nile*, 1863 (in Everyman's Library); J. Roscoe, *The Baganda*, 1911; L. Mair, *An African People in the Twentieth Century*, 1934; A. I. Richards, *Economic Development and Tribal Change*, 1955.

Bugasóng, or **Bugasán**, coast tn on W. of Panay, Philippine Is., about 30 m. from San José de Buenavista. It grows hemp and rice. Pop. 15,642.

Bugayev, see **BELYY**.

Bugeaud de la Piconnerie, Thomas Robert (1784-1849), Fr. soldier, who rose from private to the rank of colonel. He took part in the Napoleonic wars; in 1815 commanded the advance guard of the army corps of the Alps. Chosen deputy

for Périgueux in the July revolution of 1830. Afterwards created marshal by Louis Philippe, who sent him into Algeria to quell the Arabs, 1837. He was appointed Governor-General of Algeria in 1840, when he organised the famous Zouave regiment; after his subjugation of the Moors in 1844, received the title of duc d'Isly. Died of cholera. See *Memoirs* 1884.

Bugenhausen, Johann (1485-1558), Ger. reformer, b. Wollin, Pomerania; studied at Greifswald; ordained 1509. In 1520 he was converted to Lutheranism by reading Luther's *De Captivitate Babylonica*. He matriculated at Wittenberg in 1521, and helped Luther in his trans. of the Bible. In 1524 he wrote a commentary on the Psalms, and from 1537 to 1542 was organising the reformed church in Denmark.

Bugey, dist. in France, in the old prov. of Burgundy, now part of the dept of Ain. Its cap. was Belley.

Bugge, Elseus Sophus (1833-1907), Norwegian Germanist and philologist, b. Laurvig; educ. at Christiania, Copenhagen, and Berlin. In 1866 he became the first occupant of the chair of comparative philology and Old Norse at the univ. of Oslo. His numerous authoritative works on Norse literature and archaeology, and Germanic philology, include *Norroen Fornkvæði*, an ed. of the Edda songs, 1867, *Norroene Skrifter af sagnhistorisk indhold*, an ed. of the *Volsunga* and *Hervarar* sagas, 1864-73, and *Lyskische Studier*, 1897 (Eng. trans., 1899).

Buggy, light vehicles for 1 or 2 persons, especially in the U.S.A., India, and the colonies. Those formerly much used in America had 4 wheels and were drawn by 2 horses or sometimes 1. Another type of B., less popular, had 2 wheels only. One kind, the Indian, is fitted with a hood, while the Amor. B. was either covered with a hood or open. The origin of the name is unknown.

Bugis, people who inhabit the S. of the Celebes Is., Indonesia, also Borneo and the Philippines. They are of Malayan origin and are Mohammedans. Formerly well known as pirates and travellers, they now trade in cloth and are noted ship-builders and filigree workers.

Bugle, wind instrument, made of copper, with pieces of brass soldered on to the most exposed parts to prevent wear. Compared with the trumpet, its tube is shorter and more conical, and the bell less expanded. As its notes are peculiarly penetrating, it has been widely adopted for giving directions to large or scattered bodies of troops. Used at first for infantry only, it has now supplanted the trumpet for cavalry and artillery too. It is in the key of B \flat and treated as a transposing instrument, so that its notes are written in the key of C, sounding a whole tone lower. Having no valves, it can produce only the 'open' notes of the natural harmonics which are employed for military signals. The written notes are C (below the treble staff), G, C, E, G. The 3 other notes, C (octave lower), and B \flat and C above, are somewhat ineffectual.

The cornet has now quite superseded the Kent B., which was fitted with keys to increase its compass, and which at one time was one of the most popular instruments in brass bands. The B. calls, contained in the drill manual, are known alike to officers and to the rank and file. One G signifies 'right,' 2 Gs 'centre,' and 3 Gs 'left,' while more elaborate calls mean 'Advance,' 'Cease Fire,' 'Assemble,' 'Charge,' etc.

Bugloss, popular name of certain plants of the family Boraginaceae. The plant particularly known as B. is the ann. herb, *Lycopsis arvensis*, one of the weeds of cultivated ground. The B. grows wild in meadows or fields to a height of about a foot, bearing clusters of blue flowers. The plant is covered with sharp bristles. The name B. is also applied to *Echium vulgare*, or viper's B. (q.v.).

Bugul'ma, tn in Tatar Autonomous Rep. (Russia), 140 m. SE. of Kazan', in Tatar-Bashkir oilfields. It has oil-extraction (since 1949) and food industries, and is a local cultural centre. Pop. (1956) 53,000 (1926, 14,000). It was founded in 1741. B. was cap. of B. Oblast within Tatar Rep. 1952-3 (abolished).

Buhl Work, or **Boule Work**, kind of marquetry invented by a Fr. cabinet-maker, André Charles Boulle (1642-1732). It consists of a skillful inlaying of tortoiseshell, enamel, rosewood, and various pierced metals, and has a highly decorative effect when applied to ornamental pieces of furniture. Boulle was patronised by Louis XIV, and his work is still valued by collectors.

Buhrstone, or **Burrstone**, siliceous rock deriving its name from the rough surface presented. It is largely used for millstones and for grinding.

Builder, person who builds. It is incorrect to apply the term to the person who commissions and pays for a building—he is the 'building owner'; the term is also often applied incorrectly to masons and bricklayers.

In modern practice there are 3 types of B.: (i) the building contractor, who employs masons, bricklayers, carpenters, plumbers, painters, etc., and undertakes contracts to erect buildings; (ii) the jobbing B., who undertakes small jobs in all trades, but without a binding contract; and (iii) the speculative B. who erects houses or other buildings as a speculation at his own risk, on land that

he has bought, in the expectation of making a profit by selling each house and its site to prospective purchasers. Speculative building has been practised in England since the 17th cent. The Institute of Builders has its H.Q. in London. There are also federations of employers and operatives.

Building. Provision of shelter for man and his goods comes second only to the provision of food, both in hist. and in economics. The basic and universal requirements of the B. are that it should be structurally stable and that it should provide protection from the weather. In temperate climates, with the advance of living standards, almost equal importance attaches to other requirements such as heat and sound insulation, fire protection, and sanitation. The structural components may be as simple as the tent pole or as complex as the modern steel or reinforced concrete skeleton. Between these extremes is the most common structural system: load-bearing walls supporting a roof carried on beams or trusses. Since the Second World War methods of prefabricating sections of B.s. in timber, reinforced concrete, or light metals have been widely developed. Another important development has been the drawing up, originally under the supervision of the Ministry of Works, until responsibility was transferred to the Brit. Standards Institution, of a comprehensive system of Codes of Practice. These Codes aim at standardising good practice in all details of the design, construction, and servicing of B.s. See also ARCHITECTURE; DOOR; ROOF; SANITATION OF BUILDINGS; SOUND INSULATION; WALLS; WINDOW; and articles on various B. trades and materials. Consult C. C. Hardsyde, *Building Materials, Science and Practice*, 1950; W. F. Cassie and J. H. Napper, *Structure in Building*, 1952; G. A. and A. M. Mitchell, *Building Construction and Drawing*, 1956; R. Llewelyn Davies and D. J. Petty, *Building Elements*, 1956.

Building By-laws. With the object of securing a measure of conformity with sanitary principles in the construction of buildings, various Public Health Acts vest local authorities with power to make by-laws with respect to all buildings. The Public Health Act of 1875 enacts that every urb. and rural authority may make by-laws with respect to the structure of walls, foundations, roofs, and chimneys of new buildings for securing stability and the prevention of fires, and for purposes of health; also, with respect to the drainage of buildings and to the sufficiency of the space about buildings, so as to ensure a free circulation of air and proper ventilation. The Act also enables the local authority to frame by-laws with respect to existing buildings. Where an owner contemplates building operations he is required by the by-laws of most if not all local authorities to deposit plans of his intended buildings for the approval of the local authority, under pain of having his work pulled down, if he commences to build before the local authority signifies its approval and the building is not in

conformity with the by-laws. Approval or disapproval must be signified by the local authority within 1 month of the deposit of the plans. Consult *Ministry of Housing and Local Government, Model Bye-laws, Series iv, Building, 1953*.

Building Certificates are given at certain stages of building operations, by an architect to a builder or contractor, who, in his turn, presents them to the employer for payment. Interim certificates are those authorising payments on account during the progress of the contract, generally up to 80 per cent of the value of the work done. On completion of the contract a certificate is usually given up to 90 per cent of the value, leaving 10 per cent outstanding as retention money. At the end of the maintenance period a final certificate is given.

Building Lease, lease granted usually for a long term of years to a builder for the purpose of erecting, improving, adding to, or repairing buildings. The term does not include leases granted on the terms of merely keeping existing buildings in repair. A B. L. may be granted prior to the commencement of the building operations, but the general practice on the part of owners of land who are developing an estate is to enter into an agreement with the builder by which the latter covenants (see COVENANT) to build and the owner covenants to grant leases at a ground rent as and when the buildings are completed on any specified part of the land. The absence in a B. L. of a covenant to build is fatal to its validity. A mortgagor while in possession has power in the absence of a stipulation to the contrary to grant B. L.s for a term not exceeding 99 years. So, too, a mortgagee if in possession; if not, then only by virtue of an express power to grant leases. A tenant for life under the Settled Land Acts may grant B. L.s of the settled land for 99 years, so as to bind his successors; and may insert therein an option to purchase the freehold.

Building Society. B.S.s perform 2 distinct but mutually dependent functions. Firstly, they accept money from the public, pay interest on it, permit easy withdrawals, and generally provide a popular and convenient investment service. Secondly, they lend money on the security of freehold and leasehold properties by way of mortgage.

The earliest B. S. of which any record exists was founded in Birmingham c. 1775. Members of these early societies consisted of a small group of people with the common desire to own a house of their own. Each member agreed to pay to the society a fixed monthly sum and the accumulating funds were used to purchase the land and gradually to construct the houses. When every member had moved into his house the society was dissolved. During the 19th cent. these 'terminating' societies were gradually replaced by 'permanent' societies which borrowed from people who had money to invest but who did not themselves want to buy a house. The development of the permanent society and the granting of the right of incorporation in 1874 led to a great expansion of

activity, and by 1919 the total assets of all societies had reached the sum of £77 million. During the years between the 2 world wars B. S.s helped over 2 million people to become the owners of their own houses and by 1939 their total assets had increased tenfold to £773 million. Since 1945 there has been another rapid expansion, and at the end of 1956 total assets stood at £2,234 million, although allowance must be made for the decrease in the value of money since 1939.

B. S.s were first certified under the Friendly Societies Acts of 1829 and 1834, and in 1836 the first Building Societies Act was passed. This extended the friendly society regulations to B. S.s (in so far as they were applicable) and bound all members of a society by its rules. The society's property was vested in trustees. The Building Societies Act of 1874 is the basis of present practice and under its provisions the societies became corporate bodies possessing full legal powers corresponding to those of a limited company. Subsequent B. S.s Acts were passed in 1875, 1877, 1884, 1894, and 1939, but only the last two are of major significance. A gov. official known as the Registrar of B. S.s supervises the formation and conduct of societies under powers derived from the B. S.s Acts. The movement is nationally represented by the B. S.s Association which, at the end of 1956, had 350 members with combined assets representing 82 per cent of the assets of all societies in Great Britain.

There are 2 classes of investors in B. S.s, known respectively as shareholders and depositors, the former being much the more numerous. Most societies issue 2 different kinds of share, which are generally called paid-up shares and subscription shares. Paid-up shares are usually issued in fixed multiples of £5 or more and the liability of the shareholder is limited to the total amount invested. A subscription shareholder undertakes to pay a fixed monthly sum for an agreed period, at the end of which he becomes a fully-paid shareholder. These subscription schemes have been designed to encourage regular saving. Shareholders are members of the society and have the right to vote at all general meetings. Should the society be wound up, its net assets would be divided amongst them according to their holdings.

B. S. shares can be withdrawn in cash by the investor on giving notice to the society and prompt withdrawal facilities are normally available. It will be apparent that shares in a B. S. are quite different from shares in a limited company and they are not dealt in on the Stock Exchange. In contrast to shareholders, depositors are not members of the society and they rank as prior creditors if the society should be wound up. For this reason, they receive a lower rate of interest. For the use of their money shareholders and depositors receive interest which is paid every half-year or year. The rate of interest is normally fixed by the directors and may be varied from time to time according to changes in

By special arrangement with the Board of Inland Revenue, the income tax (but not surtax) due on interest received from a B. S. is paid by the society. At the end of 1956, 3,240,095 shareholders and 571,301 depositors had invested £1,913,271,000 and £193,965,000 respectively in B. S. The money contributed by shareholders and depositors can be lent only on the security of a first mortgage of freehold or leasehold property and, in practice, B. S.s lend their funds mainly on the security of private dwelling houses purchased for owner-occupation.

When the directors of a society receive an application for an advance they have 2 main forms of security to consider: that offered by the property and that offered by the financial standing of the applicant. The Building Societies Act, 1939, laid down various classes of additional security which could be provided by, or on behalf of, a borrower for the purpose of supplementing the security offered by the property, e.g. a guarantee given by a local authority under the provisions of the Housing Act, 1940. If the advance offered by the society is acceptable to the potential borrower the society's solicitor investigates the title to the property and prepares the mortgage, after which a date is fixed for completion of the transaction. Although the borrower becomes the owner of the house, the deeds are retained by the society until the mortgage has been repaid.

Nearly all B. S. mortgages provide that the amount of the loan is to be repaid by monthly instalments over a period which may vary between 5 and 25 years. The most usual form of repayment is by means of a fixed monthly sum, part of which represents interest on the outstanding advance and part an instalment towards the repayment of the loan. As the loan is paid off the proportion of interest decreases and the instalment of principal increases correspondingly. If desired, mortgages can be combined with schemes of endowment and life assurance so that in the event of the mortgagor's death the deeds can be handed over to his dependants clear of debt. The rate of interest charged on a mortgage is dependent upon a number of factors, which include the general level of interest rates, the rates paid to investing members, the rate of income tax, and the level of management expenses. The borrower pays interest to the society gross but obtains an allowance in respect of the interest paid against his liability to pay income tax. At the end of 1956 there were 2,057,873 mortgages outstanding with B. S.s representing a total of £1,881,664,000 due from borrowers.

The B. S. idea has spread, particularly in Commonwealth countries, and since 1831 there have been similar organisations in the U.S.A. known as Savings and Loan Associations. The future development of B. S.s, like that of any other institution in the national life, is difficult to predict, but it is anticipated that by adapting their traditional objects to the needs of the time they will be assured of a steady growth and prosperity.

Building Stone. The use of stone quarried from the earth for building dwellings and monuments dates from very early times. Stone for building needs to be strong enough to support heavy loads, and capable of being worked by the mason's tools or by machine. It needs also to be resistant to weathering, especially if it is to be used in large tns where the rain-water is relatively acid. Granites, sandstones, and limestones are most commonly used for building; granite is the strongest and most durable, limestone is the lightest in colour and the easiest to clean.

Granites occur mostly in great masses, which may cover hundreds of sq. m. of country. In England the granites of Cornwall are the most important, but the Leic. granite (Mountsorrel) and the Shap granite are also widely used. In Aberdeen granite is the prin. B. S., and much polished and cut granite is exported for ornamental work. Abroad, much granite is quarried in N. America, Canada, Norway, Sweden, and Russia.

Sandstone, perhaps the most widely used of B. S.s, consists of grains of sand cemented together by silica or by calcium carbonate, and ranging in colour from almost white to red, according to the amount of iron present.

Limestones consist chiefly of calcium carbonate. They weather gradually, so that surfaces washed by rain are self-cleaning; it is on sheltered surfaces that dirt tends to collect. Bath stone and Portland stone are widely used, the latter having furnished the material for St Paul's Cathedral. Magnesian limestone, or dolomite, occurs in varying qualities, and much of it affords good building material. The siliceous dolomite of Mansfield has been used in many important buildings. Crystalline limestone, or marble, is used chiefly for statuary and interior embellishment, the most famous kind being produced at Carrara in Italy.

Cast stone is a superior kind of concrete (q.v.) incorporating crushed natural stone as an aggregate.

The durability of B. S. depends on careful selection at the quarry and good practice in building, particularly as regards choice of mortar, provision of damp-proof courses, and design of details to shed water. Inappropriate methods of cleaning or restoration may hasten decay. See R. J. Schafer, *The Weathering of Natural Building Stones*, 1932, and E. G. Warland, *Constructional Masonry*, 1946. See also MASONRY.

Bulth Wells, nrh. dist., par. and tn of Breconshire, Wales, a noted salmon-fishing centre. The tn was largely rebuilt in the 18th cent. after a disastrous fire. Pop. 1777.

Bulrette, Pierre Laurent, see BELLOY, DORMANT DE.

Butenzorg, see BOGOR.

Bujalance, Sp. tn in the prov. of Córdoba, with manufs. of textiles and leather. Pop. 11,500.

Buinard, see BORNARD.

Buká'a, El, see COELE-SYRIA.

Buke, see SAMURAI.

Bukhara, or Bokhara: 1. Formerly a khanate of Central Asia. From 1865 to 1921 it was ruled by emirs, nominally independent, but under Russian control. In the latter year a Soviet revolution broke out and the emir fled to Afghanistan and in the following year Enver Pasha, as Commander-in-Chief for the emir, led an anti-Soviet rising, but was defeated and killed. It is now: 1. an oblast (prov.) of the Uzbek S.S.R. of the Soviet Union. It includes the lower Zeravshan valley and a large section of the Kyzyl-Kum desert. Cotton, silk, and fruit are cultivated. Pop. 480,000.

2. A tn consisting of 2 separate cities, the old and the new. The old city was the cap. of the khanate, and in its prime was a centre of Islamic culture. It is surrounded by trees and gardens, and is composed of one-storied brick houses with numerous mosques. It is (or was) a very important market for the products of Russia, Persia, India, and China, with its own industries of silk, cotton, leather, and cutlery. One section of the 7-m.-long bazaar was set apart for literature. There is a citadel containing the emir's palace and the water supply; and the city wall has 11 gates. The inhab. are Uzbeks, Turkomans, Afghans, Arabs, Hindus, and Jews. Pop. 60,000. New B., now known as Kagan, is 6 m. from the old city. It has railway workshops and a cotton processing industry. Pop. 30,000.

Bukharest, see BUCHAREST.

Bukharin, Nikolay Ivanovich (1888-1938). Russian politician, prominent theorist of the Bolshevik party, called by Lenin 'the darling of the Party.' He was the leader of 2 major oppositions, the Left Communists (q.v.) against Lenin in 1918 and the Right Opposition (q.v.) against Stalin 1928-9. He was executed after figuring as the main defendant in a show trial during the Great Purge. See his *The A.B.C. of Communism*, 1922; I. Deutscher, *Stalin*, 1949; L. B. Schapiro, *The Origin of the Communist Autocracy*, 1955.

Bükk Hills, see MISKOLC.

Bukovina ('Beech-tree country,' Ukrainian *Bukovyna*, Rumanian *Bucovina*, Ger. *Buchenland*), historical name, known since 1392, of an area in E. Europe, in the Carpathian foothills and the upper reaches of the Dniester, Prut, and Seret Rs. B. belonged to Roman Dacia, was laid waste by the Huns, and colonised by E. Slavs from the 6th cent. and by Rumanians from the 12th cent.; it was the core of the Moldavian principality formed in the 14th cent., which in 1512 fell under Turkish suzerainty. It was ceded to Austria in 1775, granted autonomy in 1861, and occupied by the Rumanians in 1918. The St Germain peace treaty of 1919 adjudged S. B. to Rumania, the Sévres treaty of 1920 the whole of B. As a result of a Soviet ultimatum N. B. (with a Ukrainian majority) was ceded to the U.S.S.R. in 1940 (see CHERNOBYL, 1). 1941-4 N. B. again belonged to Rumania, but was finally ceded to the U.S.S.R. in the 1947 peace treaty. S. B. forms the Suceava and Botosani dists. of Rumania.

Bulacan: 1. Prov. of Luzon, Philippine Is. A hilly dist., containing spurs of the Caraballo Mts. and watered by the Pampanga R. The soil is fertile and there is considerable mineral wealth. Area, 1021 sq. m.; pop. 341,200.

2. Tn in above prov. on the Pampanga delta, 15 m. from Manila. Pop. 13,242.

Bulair, Isthmus, neck of land connecting the Gallipoli Peninsula, with Turkey at its N. end. When the Anglo-Fr. army landed on the S. portion of the peninsula in April 1915, the Turkish reserves were situated at B. A landing here was contemplated, but not attempted.

Bulak, the port of Cairo, situated on the Nile; it is connected with Cairo by an electric tramway and forms a NW. suburb of the city and industrial quarter. Pop. (1947) 232,602.

Bularchus, Lydian, is mentioned by Pliny as the painter of a large picture representing the capture of Magnesia (716 bc). It is said that Candaules, King of Lydia, purchased this painting for its weight in gold.

Bulawayo, cap. of Matabeleland and commercial cap. of S. Rhodesia. It stands on a table-land between the Limpopo and Zambesi Rs., 676 m. by railway W. of Beira, the nearest port. Gold is mined in the neighbourhood and coal also is to be found. B. is the most important railway centre in S. Rhodesia, and the H.Q. of the Rhodesian and the Beira and Mashonaland railways. It is surrounded by a wide expanse of excellent grazing country. From these facts the importance of the tn may be gauged. Its site was selected in 1893, and is 3 m. N. of the old royal kraal of Lobengula, which was the H.Q. of the Matabeles. To this fact B. owes its name, which means 'the place of the killing.' The *indaba* or judgment tree has been left standing. During the Matabele wars of 1896, B. was successfully defended, and the tn now contains a monument in memory of the pioneers killed on that occasion. Like most of the S. African tns, B. is built on the rectangular system around a market square, the thoroughfares running from N. to S. being streets, those running from E. to W. being avenues. Among the prin. buildings are the gov. house, once the property of Cecil Rhodes, the municipal buildings, market house, court house, memorial hospital, library, and museum. The last, which was opened in 1910, contains objects found at Zimbabwe and other anc. ruins in Rhodesia. Some of the golden objects found in the Zimbabwe Ruins were stolen from the museum. There are sev. fine hotels and modern buildings. The Matjesumshlope R. runs along the E. side of the tn, and its valley has been converted into 2 parks; in N. Park is a zoological garden. The Rhodes estate, now a gov. experimental farm, 115,000 ac. in extent, lies 5½ m. from B. In the neighbourhood are the Matopo Hills, where Rhodes and Jameson were buried. A huge bronze statue of Rhodes by the late John Tweed stands in Main Street. Bushman paintings are to be found in the vicinity, and

14 m. to the W. of the tn lie the Khamsi ruins of unknown antiquity. Pop. (including suburbs) 1955, 133,400 (40,000 Europeans.)

Bulb, in botany, a modified underground shoot consisting of a short, thickened, disk-like stem, or plate, surrounded by a number of overlapping leaves which contain reserve material for the next season's plant. Adventitious roots grow at its base, and usually small buds arise in the axils of the innermost leaves. The B.s of the onion and hyacinth are said to be *tunicated*, i.e. the leaves completely envelop the modified shoot like a tunic; the B. of the lily is *scaly*, or *imbricated*, i.e. the leaves merely overlap one another. The crocus B. is in reality a *corm*, or solid fleshy stem bearing membranous leaves.

Bulbul, Arabian and Persian name for a species of nightingale (probably *Luscinia hafizi*) introduced by Moore and Byron into Eng. poetry.

Bulford, vil. of Wilts, England, on the Avon, 2½ m. to the NE. of Amesbury. Has a large military camp. Pop. 992.

Bulgakov, Sergei Nikolayevich (1871-1944). Russian philosopher, economist, and theologian. He started as a Legal Marxist (q.v.), but later became an Idealist and an Orthodox priest; he was a Constitutional Democrat member of the State Duma. B. was expelled from Soviet Russia in 1922, and lived in Paris as a professor at the Russian Theological Institute. His works in English are *Social Teaching in Modern Russian Orthodox Theology*, 1934, *The Orthodox Church*, 1935, and *The Wisdom of God*, 1937.

Bulganin, Nikolay Aleksandrovich (1895-). Russian Communist. He joined the Bolshevik party in 1917, and worked in leading positions in the Cheka (q.v.), 1918-22, and in the Supreme Council of National Economy, 1922-7. He was manager of the Moscow Electroworks, 1927-31, chairman of the Moscow City Council, 1931-7, chairman of the Council of People's Commissars (Prime Minister) of the Russian Federated Rep., 1937-8, and chairman of the Board of the U.S.S.R. State Bank and deputy chairman of the U.S.S.R. Council of People's Commissars, 1938-41. During the Second World War B. was a 'member of the military council' (i.e. political commissar) of the Western front, 1941-3, working for a time with Zhukov (q.v.) when the latter was commanding the front; he was also a member of the State Defence Committee (q.v.) and deputy People's Commissar for Defence from 1944. He was Defence Minister, 1947-9, and again, 1953-5, and simultaneously deputy Prime Minister, 1947-55. He has been a member of the Central Committee of the Communist party since 1934, and a member of its Politburo (q.v.) since 1948; at the end of the war he was made a marshal. After Stalin's death B. was at first a secondary figure in the new collective leadership, but after Malenkov's (q.v.) resignation in 1955 he became Prime Minister and formed with Khrushchev (q.v.) a kind of dumvirate in which he plays the second role.

Bulgar, or **Great Bulgar**, cap. of Volga Bulgarians (q.v.) and economic centre of the Volga region in 10th-15th cents., with international fairs. It was destroyed by Muscovite troops in 1431. Its ruins are at Bolgary, vil. in the Tartar Rep., 60 m. S. of Kazan.

Bulgaria (*Narodna Republika Bulgaria*), rep. in E. Europe, in the Balkan Peninsula (q.v.), bounded N. by Rumania, E. by the Black Sea, S. by Greece and Turkey, and W. by Yugoslavia (qq.v.). Area 42,796 sq. m.

Geography. The R. Danube (q.v.) forms the N. boundary of the state, except in the NE. dists. Between the riv. and the Balkan Mts (q.v.) lie the Bulgarian lowlands, the average width of which is about 60 m. S. of the Balkan Mts is E. Rumelia (q.v.), which is crossed W.-E. by the fertile valley of the Maritza (q.v.) and its tribs. On the S. boundary stretch the Rhodope Mts (q.v.). The climate of the country is of the continental type, with hot, dry summers and cold winters; there is much rain in spring and autumn. The uplands experience extremes of temp. Forests, composed mainly of oak, beech, larch, thorn, and elder, cover 7,593,875 ac., of which the greater part is economically useful. There are orchards of plums, walnuts, apples, pears, and cherries. Bear, wild boar, red and roe deer, chamois, wolves, squirrels, eagles, and wild-fowl are plentiful.

Constitution. The Bulgarian People's Rep. was proclaimed by the National Assembly on 15 Sept. 1946. The constitution of 4 Dec. 1947 provides for a National Assembly of 1 chamber only, in which is vested supreme authority. The deputies of the National Assembly are elected by universal suffrage, all citizens over the age of 18 being eligible to vote and to hold office. The National Assembly elects the Presidium, the highest organ of the state, which consists of a chairman, 2 deputy chairmen, 15 members, and a secretary.

Local administration and justice. In 1949 B. was divided into 14 provs. (*okrag*), 2 of which were subsequently abolished. The names of the present 12 provs. are as follows: Blagoyevgrad, Burgas, Khaskovo, Kolarovgrad, Plovdiv, Plovdiv, Ruse, Sofia, Stalin, Stara Zagora, Tyrnovo, and Vratsa (qq.v.). These provs. are subdivided into 95 dists. (*okolya*). The constitution provides for the election of members of the Supreme Court by the National Assembly; other judges are elected by the people. The lower courts have lay assessors as well as jurists. Prosecutors in the courts are appointed by the Procurator General, the chief official of the legal system, who is elected for a period of 5 years by the National Assembly. The code of criminal procedure (introduced in 1952) is based on Soviet law.

Population, religion, education, chief towns. The pop. in 1953 was 7,450,000. National minorities, totalling over 1,000,000, include Turks, Macedonians, Armenians, and Jews. Some 6,000,000 of the inhab. belong to the E. Orthodox

Church (disestablished in 1949). In 1953 the Bulgarian Patriarchate was revived, and the first Patriarch since 1393 was elected. In 1949 there were 638,000 Turkish Muslims; 123,000 Bulgarian Muslims (known as *Pomaks*); 56,000 Rom. Catholics; 23,000 Armeno-Greeks; 20,000 Jews; and 15,744 Protestants. The relations of churches in B. with churches or missions abroad are under the supervision of the Ministry of Foreign Affairs. No church may maintain schools or colleges (except theological colleges). Elementary education in the state is free and obligatory for children between the ages of 7 and 15, and the educational system is organised on Soviet lines. There are about 6800 schools (excluding 1071 Turkish and 16 Armenian schools), and there are 2 univs. (at Sofia and Plovdiv). The Academy of Sciences has 32 institutes. The prin. tns are Sofia (the cap.), Plovdiv, Stalin, Ruse, Burgas, Pleven, Stara Zagora, Sliven, Kolarovgrad, Yambol, Tolbukhin, and Dimitrograd (qq.v.).

Language and literature. The original Bulgarian tongue was Ural-Altaic, but it has left only a few traces in the Slavonic speech adopted by Bulgars who settled in the Balkan Peninsula. The Bulgarian-Slavonic tongue is closely allied to the Russian, but some Serbian, Gk, Romanic, Albanian, and Turkish elements have found their way into the language. Peculiarities include a considerable loss of nominal inflections and a suffixed article. The earliest Bulgarian literature came to an end with the completion of the Turkish conquest, 1396. From then on B. produced no written literature until 1762, from which date the start of the Bulgarian renaissance may be dated, when Paisy (q.v.) of Khilendar compiled the *Slaveno-Bulgarian History* in a spirit of patriotic exhortation. Only after the need for educational books in modern Bulgarian had been satisfied did imaginative literature begin to appear. The first writers of importance are Lyuben Karavelov (1837-79), the short-story writer; Petko Slaveykov (1827-95), the poet; and Khristo Botev (1846-76), the poet (qq.v.), killed in an abortive rising against the Turks. The outstanding figure of Bulgarian literature, and the greatest shaper of the literary language, is Ivan Vazov (q.v.) (1850-1921), novelist, poet, and dramatist, most of whose work appeared after the liberation. His near contemporaries were Pencho Slaveykov (q.v.) (1866-1912), poet and son of the poet Petko Slaveykov; Stoyan Mikhailovskiy (1856-1927) and Aleko Konstantinov (q.v.) (1863-97), satirical story writers; Petko Todorov (1879-1916), dramatist; and P. K. Yavorov (1879-1914), dramatist and poet. Dimcho Debelyanov (1887-1916), a sensitive poet, was killed in the First World War. A few of the many others that might be mentioned are Elin Pelin (1878-1949) and Yordan Yovkov (1884-1937), short-story writers, and Nikola Raynov (1893-) and Elisaveta Bagryana (1893-), poets. From 1944 Bulgarian literature took the direction usual in countries satellite to the U.S.S.R.

Agriculture. Of the total acreage of 25,488,343, 12,058,480 ac. are cultivated. Since 1945 no one may own more than 49.4 ac. Historically the country has been one of small peasant proprietors, but in 1953 there were 2747 co-operative farms (comprising nearly 569,000 household units) and 100 state farms. The chief products are wheat, rye, barley, oats, maize, potatoes, fruit, vines, cotton, tobacco, and sugar-beet. Silk is also produced. The following livestock targets were laid down for 1957: 9,700,000 sheep and goats; 2,200,000 pigs; 2,090,000 cattle; and 8,000,000 poultry.

Industry and commerce. On 23 Dec. 1947 private industry was nationalised: the property of private firms was transferred to the State, together with business profits in the owners' private accounts. State economic planning was begun with a Two-year Plan, and there have since been 2 Five-year Plans (1949-53; 1953-1957). Seven new power stations have been built since 1950, textile mills have been built at Plovdiv and Sliven, and a chemical plant has been built at Dimitrograd. The coal resources of the country consist mainly of young lignite, and some copper, tin, zinc, and lead are found. Sixty per cent of imports come from the U.S.S.R., to which country goes 52 per cent of exports. Exports to W. Europe in 1954 were valued at 27 million dollars (U.S.A.), and imports from W. Europe at 18 million dollars.

Communications. There are about 14,000 m. of roads and 2800 m. of railway (state-owned). Sofia is linked by air with Moscow, Budapest, and Prague. The Bulgarian airline T.A.B.S.O., has airports at Sofia, Plovdiv, Burgas, Stalin, Stara Zagora, Gorna Oryahovitsa, and Tynovo. In 1956 the country had 9 ocean-going ships, in addition to a number of riv. steamers.

Defence. The strength of the Bulgarian Army in 1955 was estimated as 175,000 men. There are 3 army regions: Sofia, Plovdiv, and Stalin. The number of security police is estimated as 80,000. The air force is organised in fighter, escort, and tactical bombing divs.

Currency, etc. The unit of currency is the *lev* (plural *leva*). The parity is: 1 rouble (Russian) equals 1.70 *leva*. The metric system (q.v.) is in general use.

Historical. B. was originally inhabited by Thracians, and under the Romans formed the prov. of Moesia. Later it was occupied by Slavonic tribes. The Bulgars were originally a Ural-Altaic people. They came traditionally from the banks of the Volga and crossed the Danube in the 6th cent., and occupied the E. They overcame the Slavs, adopted their language and customs, and soon became a great Slav power. In 870 Boris, their chief, adopted Orthodox Christianity, and the Bulgarians became dependent on the patriarchate of Constantinople. The Bulgarians were victorious against the Magyars and Greeks in the 9th and 10th cents. Simeon, their prince, assumed the title of 'Autocrat of all the Bulgarians and of all the Greeks,' and Serbs and

Byzantines paid tribute to him. The Bulgars dominated Macedonia, Thessaly, Epirus, and Albania. Towards the end of the 10th cent., however, their power began to decline. At the end of the 10th cent. part of E. B. was incorporated with the Bulgarian Empire, and in 1018 the W. Bulgarian kingdom became a Byzantine prov. In 1186 a third Bulgarian kingdom was formed in the N. by a successful rebellion, and remained in existence until 1396, when it was conquered by the Turks. Under the influence of Byzantium and of Christianity, B. had attained in the Middle

Bulgarian prov., S. of them, known as E. Rumelia, it granted administrative autonomy. In 1885 E. Rumelia was incorporated with the Bulgarian state. Taking advantage of the Young Turk revolution, 1908, and Austria's annexation of Bosnia-Herzegovina, Ferdinand, the Bulgar ruler, repudiated the last shreds of Turkish suzerainty. This action was allowed to stand by the great powers. In 1912 B., with Serbia, Greece, and Montenegro, formed the Balkan League, and with its allies formulated the demands which led to the Balkan first war between

E.N.A.I.

THE VALLEY OF THE ISKER, NEAR KARLUKOVO, BULGARIA

Agos a degree of civilisation equal to that of W. nations, but this was largely destroyed by the invasions of Tartars and Osmanli. For close upon 500 years the Bulgars were subject to the rule of the Ottoman Empire, and many of them adopted Mohammedanism. In 1876 the Turks and the Mohammedan Bulgars (known as Pomaks) massacred sev. thousand Christian Bulgars as a reprisal measure after rebellions in other parts of Turkey's Christian ters. These 'Bulgarian atrocities' awakened horror throughout Europe, and especially in England, and suggestions were made for forming 2 autonomous states. The Porte refused to make concessions, and in 1877 Russia, as guardian of the Slav races of Turkey, declared war. As a result of the war, the Berlin treaty (1878) constituted an autonomous though tributary B., N. of the Balkans, whilst to the mainly

the League and Turkey. To B.'s lot fell the heaviest fighting, and to her troops and generals the success of the war was largely due. Subsequently the second Balkan war robbed B. of most of what she had gained in the previous year's fighting, and resulted in her isolation from her other Balkan neighbours (*see* BALKAN WARS).

Bulgaria and the First World War. B. entered the war in Oct. 1915, and almost exactly 3 years later surrendered unconditionally to the Entente forces. The hist. of this ill-starred country, after it became a sovereign independent state, was one of victimisation to dynastic ambitions. After the abdication of Prince Alexander of Battenberg (elected ruler in 1879) the throne was offered to the wealthy and ambitious Prince Ferdinand of Saxe-Coburg (1887). In 1908 Ferdinand proclaimed himself King of B. and,

3 years later, changed his title to tsar. Many of B.'s misfortunes may be attributed to the overmastering aspirations to power of this monarch, who, after the fiasco of the Balkan wars of 1912-13, sought to retrieve his country's ruin by intrigues with Germany, the outcome of which was the loss of his crown and, to the country, not only of everything it had won in the Balkan wars, but of its prosperity for years to come.

It was obvious at the very outset of the First World War that B., standing in the highway of Ger. aspirations S.E. to Bagdad, would sooner or later be involved. What was not obvious, at least to the Entente diplomats, was that the Bulgarian king and his Cabinet had definitely decided, long before the Bulgarian armies crossed the Serbian border late in 1915, to throw in their lot with the Central Empires. Ferdinand's prin. object was dynastic aggrandisement. He had visions of the sure triumph of the Central Empires, with Germany's trade and prosperity reaching out overland towards India and his own kingdom, enlarged beyond recognition, a member of the new Kaiserbund of *Mittleuropa* and the natural corridor between the new Germany and Asia Minor, and the custodian of the great Ger. railway from Berlin to Bagdad. But as regards the Bulgarian people at large, ill-educated peasantry for the most part, it may be assumed that the one thing, if any, that stimulated their war ardour was their dislike of their Serbian and Gk neighbours. The Allies made unsuccessful attempts to win B. over to their side early in the war. The mobilisation of the Bulgarian Army in the early autumn of 1915 in the alleged interests of 'friendly neutrality,' coupled with the presence in this army of large numbers of Ger. officers, caused the Russian Gov. on 3 Oct., in concert with the other Entente powers, to send an ultimatum to B. This led to war within 3 days. On 7 Oct. Austro-Ger. troops invaded Serbia, and 4 days later the Bulgarian armies, under the direction of Ger. officers, crossed the Serbian frontier from the E. Shortly afterwards a secret Germano-Bulgarian treaty was revealed, by which B., as the price of her aid in siding with the Central Empires, was promised Albania, together with Gk and Serbian Macedonia. On 15 Oct. 1915 Great Britain sent a note to the Bulgarian Gov. to the effect that a state of war existed between the 2 countries. On 22 Oct. the Bulgarians captured Uskub (Skopje). The Serbian Army fled before the combined Austro-Ger.-Bulgar drive into Albania with the loss of its artillery and transport. Thereafter all was quiescent for many months, the Allies, operating from Salonika, hesitating to move forward for fear of treachery on the part of Constantine, King of Greece. It was not till late in Aug. 1916 that the campaign was renewed, when the Bulgarians moved on Kavalla. In Sept. 1918 the Balkan front once again blazed into activity, and in a few weeks the Bulgarian Army, defeated and outclassed, was in headlong retreat. On 30 Sept.

1918 the Bulgarian envoys came to Salonika and signed an armistice with Franchet d'Esperey, Commander-in-Chief of the army of the Orient. The most important effects of this unconditional surrender were that the direct Ger. route to Constantinople fell under allied control; the Lower Danube ceased to be available for enemy traffic, while Germany and Austria-Hungary found themselves unable to reinforce or supply Turkey except through Black Sea ports.

By the treaty of Neuilly, 1919, B. ceded to Greece her Thracian ters., thus losing her access to the Aegean Sea; though an economic outlet to it was provided by the treaty, the exact terms remain a subject of dispute. To Rumania B. lost S. Dobruja, her richest wheat-growing land, and she also lost a strip of ter. to Yugoslavia. Ferdinand had meanwhile abdicated in favour of his son, Boris. Sev. years of internal instability followed. In 1934 a military *coup d'état* overthrew the gov. of Agrarians and Democrats, and the king was forced to agree to the formation of what was in effect a semi-military dictatorship to offset the political and moral deterioration of his country. The new gov. turned upon the Macedonians, whom the army soon reduced to obedience or expelled. The gov. was so hostile to Boris that he was in danger of deposition, but his diplomacy and popularity with the peasantry, in conjunction with the dissensions in the army, saved his throne, and ultimately the militarist combination fell to pieces and the king was from 1935 virtual dictator of the country. In 1938 the king won a diplomatic success by securing the release of B. from the punitive clauses of the treaty of Neuilly; but by that time European peace was threatened, and the outbreak of war found B. with next to no market for its produce save Germany; the army was entirely dependent on Ger. weapons, Ger. intrigue was rife, and the general staff was largely pro-German. Though the army was not used against Russia and diplomatic relations were retained with the U.S.S.R., B. joined in the signing of the second anti-Comintern Pact; Bulgarian troops and Macedonian bandits oppressed Greeks and Yugoslavs, and war was declared on Great Britain and the U.S.A. Ger. troops entered the country in Mar. 1941 and occupied Black Sea ports, though B. was not officially at war with Russia. In 1943 the king *d.* mysteriously, and was succeeded by his infant son, Simeon. On 26 Aug. 1944 the gov. declared B. to be neutral in the Russo-Ger. war, and Bulgarian delegates to Cairo tried to secure eleventh-hour terms of peace from Great Britain and the U.S.A. Russia, however, refused to recognise the so-called neutrality of B. and called upon B. to declare war against Germany, and when no satisfactory reply was received by 5 Sept., Russia declared war on B. B. could only sue for an armistice, and on 7 Sept. its gov. declared war on Germany. Hostilities with Russia ceased a few days later. An armistice with the U.N. was signed in Moscow on 28 Oct. Russian

troops were now occupying B. and their influence on the political events which followed is obvious.

Sept. 9, 1946, second anniversary of the Bulgarian revolution, by which the Fatherland Front had seized power, was marked by the proclamation of a People's Rep. after the Soviet model for which the plebiscite of the previous day had given a large majority. The young King Simeon was forced to abdicate. The Fatherland Front had been formed during the war by the Communist, Agrarian, Socialist, and Zveno (professional and army class) parties. It provided the political leadership of the Partisan movement, and had finally brought the Bulgarian Army into the war on the allied side. By late 1946 Communist control in B. was virtually complete. A general election was held on 27 Oct. 1946. The Fatherland Front obtained 364 seats (277 of which went to the Communists) and the opposition 101. In Aug. 1947 the opposition Agrarian Union was dissolved and its leader, Petkov, was hanged on 23 Sept. on a charge of treason. The peace treaty was signed in Paris on 10 Feb. 1947.

Since the end of the Second World War B. has proved a generally subservient satellite of the U.S.S.R. The elections of Dec. 1949 gave the Fatherland Front over 97 per cent of the votes. Since then one-party gov. has been acknowledged in theory as well as in fact. In the same year B. had followed official Soviet policy with regard to Yugoslavia, and had abrogated her treaty of friendship with that country, signed in 1947. In 1950 Soviet citizens in B. were accorded special status, including the right to hold any public office.

Though intermittent changes in the leadership of Bulgarian affairs has suggested that B.'s stability as a Communist state may be more apparent than real, the rebellions against Soviet domination, shown at various times and in varying degrees in other Communist countries (e.g. Yugoslavia, Poland, and Hungary), have not had any pronounced effect in B., though in 1956-7 it was admitted, after the Hungarian rising, that disaffection existed among a section of the student pop. in Sofia. It should be remembered, however, that B. has had no real experience of democracy as it is practised in W. Europe; and that the existing regime has conferred substantial benefits on the peasant majority of the pop. in such spheres as economics and education, etc.

Seton-Watson, *The East European Revolution*, 1950.

Bulgarian Milk, milk containing lactic acid. Sour milk has long been looked upon as a healing agent, and the hastening of the souring process by introducing a portion in which the bacteria have already been at work is an idea borrowed from the Bulgarians and Tartars. The bacteria help in the formation of lactic acid, which acts as a preservative, preventing further decomposition. It is suggested that when sour milk is taken as food, the bacteria multiply in the intestines and aid digestion by preventing harmful fermentation.

Bulimia, Boulimia, or Bulimy, insatiable hunger (Gk *boulimia*, from *bous*, ox; *limos*, hunger).

Bulinus is the name of a large genus of land-snails comprising over 1000 species. They have external shells, and are related to the hedge- and grass-snails.

Bulkheads: 1. The partitions which divide up the internal spaces of a ship. They are generally transverse and water-tight, but they may be longitudinal and partially or completely non-water-tight, as the circumstances may require. In warships particularly the transverse water-tight B. are very numerous, to check the entrance of water through damage while in action, and, as a rule, each bulkhead is fitted with an hydraulically worked door which closes automatically when the compartment is flooded. The subdivisions required by Lloyd's Register for all steamers are 4, i.e. one bulkhead at each end of the machinery spaces and one at a reasonable distance from each end of the ship. For larger steamers other B. have to be fitted according to their size. The bulkhead nearest the bows is called the collision bulkhead and that nearest the stern the after-peak bulkhead. In sailing ships the collision bulkhead only is required.

2. The sea-walls which mark the line of the shore and from which the piers and quays project.

3. A general term for a partition in mines and tunnels, etc., sometimes solid and sometimes provided with a door for passage of men and materials.

Bulkley, Lucius Duncan (1845-1928), Amer. dermatologist, educ. at Yale and the Medical Dept of Columbia College, New York, where he qualified, 1869; later studied medicine in Europe. Took a leading part in the foundation of the New York Skin and Cancer Hospital, where he acted as consulting physician and later held similar positions in other New York hospitals. Pubs.: *Eczema and its Management*, 1881; *Manual of Diseases of the Skin*, 1898; *Compendium of Diseases of the Skin*, 1912; *Cancer, its Causes and Treatment*, 1915-17; *The Medical Treatment of Cancer*, 1919; *Cancer and its Non-surgical Treatment*, 1921; *Cancer of the Breast*, 1925.

Bull, George (1634-1710), learned Eng. churchman, educ. at Tiverton School and Exeter College; would not take the oath of allegiance to the Commonwealth, and was privately ordained, in 1655, by Bishop Skinner, who thereby committed a capital offence. As minister of St George's, near Bristol, he followed the

liturgy under the cloak of extemporary devotion. In 1658 he became rector of Suddington, near Cirencester; 1686, archdeacon of Mlandaff; 1705, Bishop of St David's. His *Harmonica Apostolica*, 1659, written in Latin, deals with the views of St Paul and St James on justification, but the work which estab. his high reputation was entitled *Defensio Fidei Nicenae*, 1685.

Bull, John (c. 1562-1628), Eng. organist, virginal player, and composer, b. perhaps in Somerset; he became organist of Hereford Cathedral in 1582, and in 1585 was admitted to the Chapel Royal. He was the first prof. of music at Gresham College, and one of the musicians of Prince Henry. He left England in 1613, settled in Brussels at first, but in 1617 he became cathedral organist at Antwerp, where he d. He is important as a brilliant composer of virginal pieces.

Bull, John, popular term for the typical Englishman. It took its rise from Arbuthnot's *History of John Bull*, 1712 (in which the Church of England figures as his mother), a political skit satirising the Duke of Marlborough, and stirring up public feeling against France. J. B. begins to figure frequently in broadsides and caricatures about the time of the Fr. Revolution. The idea has since evolved in *Punch* and other humorous papers.

Bull, Ole Borneman (1810-80), Norwegian violinist, b. Bergen, and largely self-taught. In 1828 he appeared at a concert, and was so successful that in 1829 he went to Cassel to study under Spohr. He soon returned to Bergen, but in 1832 made his true début in Paris. Here he heard Paganini, and adopted his style of playing. He performed with great success all over the Continent till 1839, when he went into retirement for a few years. In 1843 he went to America, which he frequently revisited. His technique was brilliant and he showed to best advantage in the national fantasias of his own composition.

Bull, see Ox.

Bull, papal instrument, ordinance, letter, or decree, issued by the Apostolic Chancery, and differing from briefs down to 1878 in being written in Gothic script. At that date Pope Leo XIII ordered the use of Lat. script, and restricted the use of the very anct leaden seal to important B.s, replacing it in other cases by a red one. B.s are written on parchment, to which the seal is attached by a yellow or red silk cord when concerned with the granting of favours, but by a grey one when dealing with the administration of justice. The name comes from the Lat. *bullā* (see *BULLA*), a capsule of wax surrounding a seal; the term being extended to the seal itself, and then to the document. All B.s begin with the name of the pope, followed by *Servus servorum Dei*. Among the most famous B.s of hist. are *Clericis Laicos*, 1296, and *Unam Sanctam*, 1302, issued by Boniface VIII against Philip le Bel of France, both dealing with the taxation of church property (see under *CLERICIS LAICOS*); *In Cœna Domini*,

1362, issued against heretics by Urban V; *Execrabilis*, 1460, in which Pius II declared the papal superiority over the councils; *Etsurge Domine*, 1520, issued by Leo X against Luther and burned by him; *Regnans in Excelsis*, 1570, in which Pius V excommunicated Elizabeth I of England; *Unigenitus*, 1713, which condemned Quesnel; *Dominus ac Redemptor Noster*, 1773, issued by Clement XIV to abolish the Jesuits; *Ecclesia Christi*, 1801, which estab. the Concordat with France; *Sollicitudo Omnium*, 1814, by which Pius VII restored the Jesuits; *Ineffabilis*, 1854, proclaiming the doctrine of the Immaculate Conception, *Pastor Aeternus*, 1870, in which Pius IX proclaimed papal infallibility, and *Munificentissimus Deus*, defining the Assumption of the Blessed Virgin as an article of faith, 1950.

Bull, amusing and unintentional blunder in speech, due to the conjunction of incompatible ideas, and implying an evident contradiction in terms. B.s are usually associated with Ireland, and many of the best examples are Irish. One of the most famous is that made by a speaker during the Parnell Commission, himself a soldier who had run away during action, who stated that it was 'better to be a coward for a few hours than to be dead all the rest of your life.' See R. L. Edgeworth, *Essay on Irish Bulls*, 1802.

Bull, The, see TAURUS.

Bull-baiting, formerly a popular sport in England. A bull, with the points of its horns protected, was fastened to a stake and attacked by bulldogs. The sport was abolished by law in 1835.

Bull-fight. Combats of men with bulls have for long been a favourite national sport with certain of the Lat. races. They appear to have been common in Greece and Rome, and still exist in Portugal, France, Mexico, and especially in Spain, where they were abolished by Charles IV, but reintroduced by Joseph Bonaparte. Up to the Sp. Civil War (1936-9) B.s were held in all the large towns of Spain, particularly in Madrid, either for personal profit or for charitable objects. But since the war the sport has waned. The bulls are bred in Castile and Andalusia, the former being preferred. The most famous fights were held in the Plaza de Toros at Madrid, a kind of open-air circus, surrounded by tiers of seats and boxes, and capable of accommodating 10,000 to 12,000 people. The typical B. begins with a processional entry of the combatants, in which the matadors lead, being followed by the banderilleros, the picadors, and lastly the *monos sabios*, or attendants with spare horses. After saluting the mayor, the picadors, dressed in a picturesque national costume, armed with lances, and mounted on worn-out horses, take up their position in the centre of the arena. A bull is then let out, and the picadors attack it with their lances. The horses are urged on by attendants with sticks, who are dressed in blue and red, and when a horse is either wounded or throws its rider, the banderilleros attract the attention of the bull by waving their red and yellow capes while

the picador makes his escape. The banderilleros save themselves by leaping over the barricades. After the picadors have fought for some time, they leave the ring and are succeeded by the banderilleros, who infuriate the bull by means of banderillas. These are gaily coloured and ornamented barbed darts, about 2 ft long, sometimes having fire-crackers attached to them which the men stick into the animal's neck. Finally a matador, bearing a naked sword and a *muleta*, or vermilion flag, enters and salutes the mayor. He lures the bull by means of the red cloth, and as it blindly rushes at him, steps aside and attempts to kill it by delivering the sword through the back of the neck and downward into the heart. This requires great skill and dexterity, the killing of the bull often involving repeated thrusts. As soon as the bull is dead the performance recommences with a fresh animal, and should the matador, as occasionally happens, be fatally gored by the bull, another matador takes his place. Eight or ten bulls are often killed in one day, and the slaughter of horses is very large and involves revolting cruelty. Successful matadors achieve immense popularity and are able to retire with large fortunes. The 2 most famous have been Rafael Guerra, or Guerrita, and Manuel Esparto. B.s. in the milder form of bull-baiting, have in recent years been introduced into S. France, but the worst abuses are avoided. See T. Lea, *The Brave Bulls*, 1950.

Bull Mastiff, see Mastiff.

Bull Moose, name of a third party founded in 1912 by the friends of former president. Theodore Roosevelt, which gave occasion to one of the most famous presidential campaigns in the hist. of the U.S.A. In 1908, when the presidential term of Roosevelt was expiring, he brought about the nomination of W. H. Taft (q.v.) by the Republican convention. But shortly after Taft entered the White House a notable coolness sprang up between the 2 men, because Roosevelt thought Taft had gone back on progressive principles. When the Republican convention of 1912 met in Chicago, Roosevelt entered the lists against Taft for renomination, his friends putting him forward for a third term. But Taft and the old-line politicians had a firm grip on the convention. As soon as this became apparent, the Roosevelt followers left the convention and set up a 'rump' convention of their own. Roosevelt was promptly nominated for the presidency. One day while attending the Republican convention Roosevelt was asked how he felt. He replied, 'Like a bull moose.' The metaphor was at once seized upon by newspaper cartoonists and political orators, and the new party was promptly christened the 'Bull Moose' party. The nominees of the party were placed on the ballot under the emblem of the bull moose, just as in most states the Democratic candidates are listed under the rooster and the Republicans under the Amer. eagle. The net result of the Bull Moose ticket was to split the Republican party

completely. Woodrow Wilson won by the greatest majority known in modern times. Taft was likewise the most heavily defeated man. The Bull Moosers, as they were popularly known, had declared their intention of forming a permanent progressive third party, and expectation was keen as to what would happen in 1916. But the political genius of the Amer. people is against more than 2 major parties, and Roosevelt himself destroyed the chances of his new party when he declined to stand again.

Bull-roarer, Whizzer, Whizzing Stick, or Lightning Stick, instrument employed by savage people usually for the purpose of causing rain. It consists of a rectangular slat of wood from about 6 in. to 2 ft long, and $\frac{1}{2}$ in. to 2 in. wide, suspended by one end to a cord, the latter often being provided with a wooden handle. It is whirled rapidly about the head, and the noise of the air against the slat produces a roaring or whizzing sound. Among some Australian tribes it is thought to be employed for the purpose of frightening the women away from tribal councils or religious orgies, the females being told that it is the voice of the presiding god or demon. But in N. America it is, or was, used as an instrument of sympathetic magic, its noise being supposed to represent that of the wind which accompanies rain, and it is employed to induce by mimicry the actual wind itself.

Bull Run River, small riv. in Virginia, which has given its name to 2 battles fought in the neighbourhood during the Civil war: (1) 21 July 1861, when the N. troops, under McDowell, were utterly defeated by the Confederates under Beauregard. (2) 29-30 Aug. 1862, when the Union forces under Pope, who was attempting to guard the Potomac line, were crushed by the Confederate forces under Lee, reinforced by Jackson.

Bull-terrier, cross-breed of bulldog and terrier. The B. is a very strong, plucky dog, and a fearless fighter, with infinite determination. It is somewhat ferocious as a house-dog, but is gentle and affectionate to its owner. It has short, smooth hair, which should preferably be white in a good breed, but may be reddish, brown, or fawn. It weighs from 20 to 50 lb., but some toy varieties have been produced which weigh as little as 7 lb. The tail is left uncropped, and should be carried in a straight line with the back; the front legs firm and straight, and the jaw strong. White B.s. are permitted black markings on the nose, ear, and eye.

Bull Trout is a term applied to various species of *Salmo*, which are natives of N. Europe, and belong to the Salmonidae, or family of trout salmon, and char. The name is frequently applied to *S. eriox* and *S. cambricus*, also known as the grey trout. *S. trutta* possesses this name as well as those of sea trout, salmon trout, sewin, and pinok.

Bulla (Lat. 'bubble': hence an ornamental stud or boss), term used particularly of a heart-shaped case containing an amulet, and worn round the neck by free-born Rom. children. Boys ceased to

wear it on attaining manhood, girls on marriage. The custom, of Etruscan origin, became general after about 200 B.C. The term B. was later applied to the leaden seal attached to a papal document, which was thence called a Bull (q.v.).

BULL-TERRIER

Bulla, or **Bubble-shell**, is a genus of gastropod molluscs of the order Euthyneura. The species inhabit muddy and sandy sea-water and feed on animal matter. The shell is external, has no projecting spire, and is so thin that it resembles a bubble. *B. solitaria* is an Amer. species.

Bullace, or *Prunus insititia*, family Rosaceae, is nearly related to the sloe and plum. The fruit is globose, and the plant is a native of Britain.

Bullae, collections of serum raising the outer skin from the true skin. They may be due to injury or friction as in rowing, or be symptomatic of skin affections, as pemphigus and hydroa.

Bullant, Jean (c. 1515-78), Fr. architect and sculptor, b. Écouen, studied the classical monuments in Italy, as may be gathered from his treatise entitled *Regle générale d'architecture des cinq manières de colonnes*, 1568. For the Duc de Montmorency, who lived at Écouen, he made additions to the château there, designed the Châtelet at Chantilly, and sundry other work. As royal architect, he added a pavilion to the Tuilleries palace in Paris, 1570-2. He may also have designed the chapel at Anet; and the Musée Carnavalet in Paris, in partnership with P. Lescot (q.v.).

Bullard, Robert Lee (1861-1947), distinguished Amer. general, b. Youngstown, Alabama. Trained for the army at W. Point Academy, he served in the Sp.-Amer. war and the campaign in the Philippines. He had risen to the rank of colonel when America entered the First World War. He landed in France as the commander of a brigade in the 1st Div. of the Amer. expeditionary force in 1917. Later in this year and in 1918 he commanded in turn the First and Second Amer. Armies, taking a prominent part in the second battle of the Marne in July 1918. He retired in 1925 from the army. *Pub. Personalities and Reminiscences of the World War*, 1925.

Bulldog, or **Bull-dog**, refractory material composed of ferric oxide and silica, made by roasting ferrous silicate (tap cinder) in air. It is used for lining the hearths of puddling furnaces.

Bulldog, breed of dog, employed for the baiting of bulls (abolished by law in 1835). It is probably a sub-variety of the mastiff, crossed with lesser breeds, and the tales concerning its descent from the hyaena may be dismissed as so much fiction. In Elizabethan times these dogs were perhaps the most sought-after Eng. breed, because of the prevalence of the sports of bull- and bear-baiting. Their ability to seize and cling to the muzzles of the animals they baited became proverbial, and was only due in part to their innate courage, as popularly conceived, the nature of the 'underbite' or locked jaw peculiar to the breed making it difficult for the animal to loose its hold when once securely fixed. There is some evidence that the B. was known in Rom. Britain. During the 18th and early 19th cents. the breed was in high favour because of its fighting propensities. But the modern B. evinces anything but a pugilistic character, and, as every breeder knows, is notorious for its good nature, especially

T. Fall

BRITISH BULLDOG

with children, who are much safer with it than with the more 'snappy' breeds. The breed is not long-lived, a B. of 6 years being considered advanced in years, and few live much beyond that age. As a watchdog the B. is useless. The points

of the modern B. are as follow: colour, white (the standard colour), brindle, fawn, brown, *not* black, which is disallowed; skull of massive proportions, deep 'stop' between the eyes, which should be placed well apart; nose black (if spotted with pink it is known as a 'dudley nose,' and tends towards disqualification); ears 'rose' or 'tulip,' neatly set and light; neck thick and short; chest well developed, legs massive, showing plenty of bone, and short, so set as to give the dog the appearance of being 'cloddy' or set near the ground; body short, tapering near the short ribs, and neatly proportional; back shaped like that of a roach; tail very short, and never carried high. The dog must be 'short-faced,' and the nose well set back—the further the better—between the eyes, and the teeth, upper and under, should be well displayed. Weight from 20 to 65 lb.

Toy Bulldogs have of recent years achieved considerable popularity as a breed, especially in France. They possess few of the characteristics of the heavier breed, with faces less 'set back,' and heavy bat-ears.

T. Fall

FRENCH BULLDOG

The *Dogue de Bordeaux* is a species of B. employed as a bull-baiter in the bull rings in the S. of France. It has the appearance of a cross between a B. and a mastiff, and is steadily growing in popularity among breeders in this country. When crossed with other breeds, especially with the mastiff, the B. tends to become vicious and even dangerous, and this cross is much in demand as a watch-dog.

Bulldog, German, *see* BOXER.

Bullen, Anne, *see* BOLEYN, ANNE.

Bullen, Frank Thomas (1857–1915), writer of sea stories, b. London. At the age of 12 he was cabin-boy on his uncle's ship *Arabella*. At 18 he signed on in the *Cachalot*, which became the scene of his best book, *The Cruise of the 'Cachalot'*, 1898, which told of the whale-fishing. At

27 he became a clerk in the London Meteorological Office, and after that produced 36 books in 17 years. Among his best are *Idylls of the Sea*, 1899, *Our Heritage of the Sea*, 1906, and *From Wheel and Outlook*, 1913. *The Log of a Sea Waif*, 1899, is autobiographical.

Buller, Sir Redvers Henry (1839–1908), general, b. near Crediton, Devonshire. In 1860 he served in China; in 1870 in the Red R. expedition; in 1874 in the Ashanti war; and in 1878–9 in the Kaffir and Zulu campaigns. In these last he specially distinguished himself, and won the V.C. for the rescue of 3 comrades. In 1881 he served in the Boer War as chief of staff to Sir Evelyn Wood; in 1882 in the Egyptian campaign as head of the intelligence dept., and in 1884–5 as chief of staff in the Sudan war, receiving the K.C.B. in 1885. He was made quartermaster-general in 1887, and in 1890 he was promoted adjutant-general, in 1891 lieutenant-general, and in 1894 received the G.C.B. In 1898 he obtained the command of the First Army Corps and the Aldershot garrison, and in 1899 became commanding general of the Brit. forces in S. Africa, and later general officer commanding in Natal. Owing to severe reverses round Ladysmith he was superseded by Lord Roberts, and after engaging in the expulsion of the Boers from Natal, returned to England in 1900. He was again commander of the First Army Corps at Aldershot, but was retired in Oct. 1901 in consequence of an imprudent speech. He left the army in 1906. He was regarded with the greatest affection by the other ranks of the army, for whose welfare he had always shown consideration. *See* C. M. Melville, *The Life of Sir Redvers Buller*, 1924.

Buller, Sir Walter Lawry (1838–1906), New Zealand ornithologist and jurist, b. New Zealand, and educ. at Wesley College, Auckland. He took a prominent place in the affairs of the Maoris and was appointed gov. interpreter at Wellington in 1855. Created magistrate in 1862; called to the Bar in 1874; received titles of F.R.S., K.C.M.G., and Sc.D. of Cambridge.

Bullet, solid projectile discharged from small-arms of all kinds, in contra-distinction to the larger missiles used by the artillery. In the old smooth-bore muskets accuracy of aim was spoiled by various difficulties, such as the pressure of the gas generated by the discharge, and the fact that the projectile must always be smaller in diameter than the bore of the gun. The smooth-bore musket fired a heavy spherical lead shot. Breech-loading B.s are slightly larger than the bore of the rifle, and cylindrical in shape. Hardened lead is suitable for velocities up to 1200 ft per sec. Modern rifles have velocities exceeding 2000 ft per sec., so projectiles are jacketed with a steel, cupro-nickel, or gilding metal envelope surrounding a core of lead. Armour-piercing B.s contain a hard steel core in a lead tube inside the envelope. Tracer B.s have hollow iron cores full of a pyrotechnic composition, then lead

tubing inside the nickel envelope. (See BALLISTICS.) Most modern B.s are of composite form, consisting of a cupronickel or coated steel envelope containing various types of filling. Filling usually consists of lead, but frequently an aluminium or a fibre tip is placed inside the nose of the B. to improve its ballistic properties. Armour-piercing B.s contain a lead sleeve and a pointed high carbon, or tungsten carbide, steel centre giving much greater penetrating power than ordinary B.s. In tracer B.s the rear portion of the filling consists of a burning composition which is ignited by the flash of the charge and leaves a visible wake for the greater part of its flight. Incendiary B.s were developed for use against aircraft. For military purposes B. calibres range from 0.256 in. up to 1 in., beyond which size the term B. ceases to be applicable. During recent years attempts have been made to increase the ranging properties of B.s by streamlining the bases. Ranges up to 5700 yds have been thus obtained. B.s for revolvers are in some cases of the solid lead type, but for the higher-velocity automatic arms it is necessary to use the harder enveloped type. See also FIREARMS.

Bulletin, Fr. word which has been imported into the Eng. language, signifying a short authentic account of some passing event, intended for the information of the public. B. is derived from Lat. *bulia*, a seal. When royalty and other persons of high rank are dangerously ill, B.s on the state of the patient are issued by the physicians. The B. des Lois is the Fr. statute book.

'**Bulletin**, The,' Australian national weekly newspaper, estab. 1880, pub. in Sydney. It has had a profound influence on Australian politics, economics, literature, and black-and-white art. Cartoonists have included Phil May, David Low, Norman Lindsay, and Ted Scofield. It pub. only original matter, and is a forthright, outspoken, independent paper. Associated is the *Australian Woman's Mirror*.

Bullett, Gerald William (1893-1958), novelist and poet, b. London. At 21 he wrote his first novel, *The Progress of Kay*, 1916. After the First World War, during which he served in the Royal Flying Corps, he studied English at Cambridge Univ., afterwards working as a reviewer. His poetical works include *Dreams o' Mine*, 1915, and *The Bubble*, 1934; he also ed. 2 poetry anthologies, *The English Galaxy*, 1933, and *Silver Poets of the Sixteenth Century*, 1947. His novels include *The History of Egg Panderville*, 1928, *Nicky Son of Egg*, 1929, *Marden Fee*, 1931, *The Quick and the Dead*, 1933, *Eden River*, 1934, *The Jury*, 1935, *The Snare of the Fowler*, 1936, *The Bending Sickle*, 1938, *A Man of Forty*, 1939, *When the Cat's Away*, 1940, *Judgment in Suspense*, 1946, *Cricket in Heaven*, 1949, *The Trouble at Number Seven*, 1952, *The Daughters of Mrs Peacock*, 1957, and *The Peacock Brides*, 1958. He also pub. sev. vols. of short stories.

Bullfinch, *Pyrrhula pyrrhula*, is a passer-

iform bird of the family Fringillidae, and differs from other finches in the thickness of its head and neck. It is small, bluish-grey or black, red or chocolate-breasted according to sex, and is a native of woods. It is a favourite cage bird, and in captivity it can be taught in the moulting season to whistle tunes (the ordinary species known as the piping finch).

Bullfrog, *Rana catesbiana*, species of Ranidae, is a N. Amer. frog which utters a bellowing noise, and thus obtains its name. It is aquatic, green in colour, and reaches a length of at least 8 in.

Bullhead, or **Miller's Thumb**, is the popular name of *Cottus gobio*, a species of the Cottidae. It is found in European waters and occurs in England, Wales, and S. Scotland. B.s are ugly, spinous fishes, with broad, depressed heads, and are of no value as food. *C. scorpius* and *C. bubalis* are common marine species in Europe and are numerous in rock pools. In America the name B. is given to members of the catfish family, or Siluridae.

Bulli, tn of New S. Wales, Australia, 45 m. by rail S. of Sydney. Centre of a colliery dist. On the B. Pass is Weber's Lookout, a holiday resort. Pop. 4000.

Bullinger, Heinrich (1504-75), Swiss reformer and theologian, b. Bremgarten, the son of a priest, who himself later embraced the reformed faith. During his studies at Cologne he studied the Bible and Luther's works, and was for a time under Zwingle, whom in 1528 he accompanied to the Bern Conference. In 1529 he married an ex-nun, and was made pastor at Bremgarten, which city he gained to the Reformers. On the death of Zwingle at Cappel in 1531, he took refuge at Zürich, where he became chief pastor and champion of the Protestants.

Bullion, the precious metals of gold and silver in their refined condition, before they are coined or otherwise manufactured. The word is often extended, in speaking of exportation, to include the coined metal also. The values of B. as a means of exchange are too numerous to mention, as barter is a process which must necessarily die out at the beginning of civilisation. Gold and silver are the same in quality throughout the world; they do not deteriorate greatly with age or use; they are not so rare that the coins have to be made inconveniently small; they easily receive and retain an impress. Since gold and silver are so universally used as a medium of commerce, it has been necessary to arrange that in all civilised nations the B. should be made with a standard quantity of precious metal in proportion to its alloy. In earlier times this was not so, and in the Middle Ages commerce was frequently injured by debasement of the coinage. Though even now equal quantities of the B. of various countries are not exactly equal in value, the difference is inconsiderable.

Bullock, Alan Louis Charles (1914-), historian, educ. at Bradford Grammar School and Wadham College, Oxford. From 1945-52 he was fellow and tutor in modern hist. at New College, Oxford, and then became censor of St Catherine's. He

is well known for his broadcasts on current affairs, and his pubs. include a life of Hitler, 1952.

Bullock, Shan F. (1865-1935), novelist, b. Crom, Fermanagh. His first success was *Robert Thorne*, a mirror of the life of the average London clerk, which was pub. 1907. Other novels were *The Awkward Squads*, 1893, *The Squireen*, 1903, and *Hetty*, 1911. He also wrote a biography of Thomas Andrews, designer of the *Titanic*, and a vol. of poems, *Mors et Vita*, which appeared in 1912 and 1923 respectively.

Bullock's Heart, see CUSTARD-APPLE.

Bulls and Bears. In the slang of the Stock Exchange 'Bulls' are men who have nominally bought stock, but with no intention of paying, hoping to sell again at a profit before long. 'Bears,' on the contrary, are men who have sold stock they do not possess, hoping that a fall in prices will enable them to buy at a profit.

Bull's Eye (star), see ALDEBARAN.

Bully Tree, name given to certain trees, especially those possessing a milky juice, such as the balata and chickie gum trees. They belong to the genera *Mimusops*, *Lucuma*, *Bimelia*, etc., all of which furnish trees of considerable utility. See BALATA, GUM, etc.

Bulmer, William (1757-1830), printer of the 18th cent., celebrated for his production of the *Boydell Shakespeare*, which consists of 9 vols. folio, with a vol. of engravings called *The Shakespeare Gallery*, 1791-1805. Bewick, an intimate friend of B., engraved some of the illustrations for the vols. B. also printed other costly eds., such as *Milton* (1794-7, 3 vols. folio), and *Goldsmith* (1796, 4to), for which latter ed. Bewick also provided illustrations.

Bülrow, Bernhard Heinrich Martin Karl, Prince von (1849-1929). Ger. statesman, b. Klein-Flottbeck, Holstein, and educ. at the univs. of Lausanne, Leipzig, and Berlin. He joined the army and served in the Franco-Prussian war. He then entered the diplomatic service and served in St. Petersburg, Vienna, Paris, and Bucharest (1873-88); ambas. at Rome, 1893. He was then appointed Prussian minister of state, and became Ger. imperial chancellor in 1900. He was made prince in 1905. The Reichstag having rejected his budget, he resigned in 1909. In Dec. 1914 he was sent as ambas. to Rome. When Italy joined the Allies in May 1915, B. finally retired. His memoirs, pub. in 1930-1, contain an embittered narrative of Ger. diplomacy, political corruption, and personal jealousies, but are fundamentally a lengthy justification of his own autocratic policy.

Bülrow, Friedrich Wilhelm (1755-1816), Count of Dennewitz and Prussian general, was b. Falkenberg, and entered the army in 1768. He had already had fair experience of war when in 1813 he took up arms against France. He earned great distinction at Grossbeeren, a victory gained almost entirely by his generalship, and at Dennewitz, where Napoleon's advance on Berlin was checked. In 1815

he arrived too late to share in the battle at Ligny, but he played his part in the victory at Waterloo.

Bülrow, Hans von (1830-94), Ger. pianist and conductor, b. Dresden. He studied under Wieck and Liszt, and soon decided to make music his life-study. For a time he visited Wagner to study conducting, but he soon came back to Liszt, whose daughter Cosima he married in 1857. In 1864 he became chief conductor at the Royal Opera in Munich and in 1865 director of the Conservatorium. Here he organised and produced, with exceptional talent, the works of Wagner. In 1869 his wife left him for Wagner, but this did not dim his enthusiasm for that composer's work. He d. at Cairo. B. was a pianist of the very first class, and a highly gifted conductor, and his taste and critical ability were remarkable.

Bulow, Karl von (1846-1921), Ger. field marshal, son of a Ger. military officer. He joined 2nd Guards regiment infantry, 1864; distinguished himself at Koniggratz in Austro-Prussian war, 1866; served throughout Franco-Prussian war, 1870; major-general, 1897. He began the invasion of Belgium, 1914, leading a brigade of the Second Army which occupied Liège, 7 Aug.; then marched towards the Marne, where he was driven back. During the retreat following this disastrous reverse, he was placed in command of the First and Ninth Armies—apparently to saddle him with responsibility for the failure. In 1916, at his own request, he was retired.

Bulrush is the name given to sev. plants which grow in marshy ground and bogs. The commonest of these are of the genus *Typha* (q.v.). Another B., *Scirpus lacustris*, belongs to the Cyperaceae; its stems are used for making mats, baskets, and the seats of chairs. *Pennisetum typhoides*, an Indian species of gramineae, is the pearl millet, or B.

Bulthaupt, Heinrich (1849-1905), Ger. author, b. Bremen, where he was appointed librarian of the city library in 1878. He wrote dramas, poems, and other works. His dramas include *Die Arbeiter*, 1876, *Eine neue Welt*, 1886, and *Der verlorene Sohn*, 1889. He also pub. a vol. of poems called *Durch Frost und Glut*, 1900. Other works which brought him into prominence are *Dramaturgie des Schauspiels*, 1884, which ran through sev. eds., *Dramaturgie der Oper*, and *Shakespeare und der Naturalismus*, 1893.

Bulti, see BALTISTAN.

Bulwer, Edward George Earle Lytton, and Edward Robert, see LYTTON.

Bulwer, John (fl. 1854), physician, was the first Englishman to write on the methods of imparting knowledge to the deaf and dumb. Except that he was himself a teacher of the deaf and dumb, nothing is known of his private life. *Chirologia, or the Natural Language of the Hand*, 1644, *Philoprophus, or the Deaf and Dumb Man's Friend*, 1648, and *Pachymyotomia, - Dissection of the Significant Muscles or Affections of the Mind*, 1649, are his chief works.

Bulwer, William Henry Lytton Earle, Baron Dalling and Bulwer (1801-72), Eng.

diplomat and author, elder brother of Lord Lytton, educ. at Harrow and Trinity and Downing Colleges, Cambridge. He was employed on diplomatic service at The Hague, Brussels, and Vienna, and in 1830 elected to Parliament as a Liberal. In 1837 he became attached to the Brit. embassy at Constantinople, and his success here was such that in 1843 he was made minister plenipotentiary to the court at Madrid. In 1849 he was sent to Washington, where he represented Britain in the negotiation of the Clayton-Bulwer treaty (q.v.), and in 1858 to Constantinople. In 1871 he became Baron Dalling.

Bumble-bee, see HUMBLE-BEE.

Bumboat, broad, clumsy boat employed to carry provisions, etc., from land to vessels lying in port or near the shore. They were formerly managed by women. A scavenger's boat for removing ships' refuse is sometimes called a B.

Bunbury, Sir Henry Edward (1778-1800), Brit. soldier, educ. at Westminster School. He served in the army from 1795 (when he obtained a lieutenancy) to 1829. He was under secretary of state from 1809 to 1816. He conducted an important secret mission to Wellington, and, later, was given the task of informing Napoleon that he was to be sent to St Helena. In 1830 he became member of Parliament for Suffolk. He was the author of sev. works, of which the chief is the *Narrative of Certain Passages in the Late War with France*, 1852, dealing with the Peninsular war and the period which preceded it.

Bunbury, Henry William (1750-1811), caricaturist, b. Mildenhall, Suffolk, the son of Sir Wm B. He was educ. at Westminster and Cambridge, and his faculty for caricature early showed itself. He never attempted political subjects, thus keeping himself on good terms with all parties, but his humorous drawings became so famous as to link him with his greater contemporaries Rowlandson and Gillray. He was never forced to trust to his talent for his livelihood. Examples of his work are 'The Country Club' and 'The Barber's Shop.'

Bunbury, in W. Australia, seaport and tn in the co. of Wellington; its famous harbour Koombanah has a breakwater constructed on a coral reef. Chief exports are coal, tin, timber, and agric. produce. Pop. 9870.

Bunelody, tn of co. Wexford, Rep. of Ireland, 26 m. N. of Wexford, on the R. Slaney. It is the centre for the Blackstairs Mts. Pop. 750.

Bunorana, seaside resort of co. Donegal, Rep. of Ireland, on Lough Swilly. Industries are fishing and agric. produce. Pop. 3050.

Bund (dyke), see BAND.

Bundaberg, port of Queensland, Australia, near the mouth of the R. Burnett, 270 m. N. of Brisbane by rail. It is the centre of the largest sugar-cane growing dist. in S. Queensland. Other industries include dairying, pastoral (cattle), rum, and timber. Pop. 20,400.

Bundelkhand, name formerly given to an area comprising 9 states in central

India. The prin. tn was Jhansi (q.v.). The area was the scene of much revolt and fighting in the 17th and 18 cents.

Bundesrat. This council, together with the Reichstag, formed the Federal gov. in Germany from 1871 to 1919. Its place was taken, under the Weimar Constitution, by a similar body called the Reichsrat. The B. consisted of delegates chosen by the govts. of the different states for each session, whilst the Reichstag, or popular assembly—which before the Second World War became a puppet body—contained members chosen by the people. The King of Prussia presided over both chambers under the title of Ger. emperor. The B. was the superior governing body, and could withhold measures passed by the Reichstag. Under the Nazi regime the Weimar Constitution was abolished and gov. was concentrated solely in the hands of Hitler. See CONSTITUTION, Germany.

Bundestag, federal diet (lower chamber) of the Ger. Federal Rep. since 1949, elected for 4-yearly terms by universal, direct election. It is the more powerful branch of the legislature in the rep., the upper house (Bundesrat, or Federal Council), consisting of members of the govts. of the various *Länder*, having only limited powers of veto.

Bundi, former princely state of Rajputana, now merged in Rajasthan. The Rajah of B. is now vice-president of Rajasthan.

Bundoran, tn and chief watering-place of co. Donegal, Rep. of Ireland, on Donegal Bay, 4 m. SW. of Ballyshannon. Pop. 1900.

Bundy, Edgar (1862-1922), painter. Elected an associate of the Royal Academy in 1915. His subjects are mainly historical, his pictures illustrative of Brit. sea-power being highly popular and widely reproduced.

Bungalow (Anglo-Indian word from native *Banglā*, Bengalese), a one-storeyed house with a veranda and a pyramidal roof, generally thatched. It is the kind of house in general use by Europeans in India. Dāk B.s are gov. erections for the use of travellers in the interior of India. The name is now given in England and America to light erections for seaside and holiday use, and, loosely, indeed to any dwelling-place of one storey only but with one or more rooms in the roof-space.

Bungay, mkt tn of Suffolk on the R. Waveney. It has 2 par. churches of interest architecturally, and large printing works and malt trade. Pop. 3530.

Bungener, Louis Félix (1814-74), Fr. Protestant theologian, b. Marseilles, of Ger. parents, and studied and taught theology at Geneva. He pub. sev. novels, each intended to defend some principle of Protestantism, among them: *Un Sermon sous Louis XIV* (7th ed.), 1881; *Histoire du Concile de Trente* (2nd ed.), 1854; *Trois Sermons sous Louis XV* (6th ed.), 1902; *Christ et le siècle*, 1856; *Rome et la Bible* (6th ed.), 1860; *Calvin, sa vie, son œuvre, et ses écrits* (2nd ed.), 1863.

Bunhill Fields, public gardens and cemetery in Finsbury, London. It was

originally part of a prebendal estate belonging to St Paul's Cathedral, and in the 17th cent. became a burial-ground for dissenters. Bunyan and Defoe (qq.v.) are buried here. Opened as a public garden in 1869.

Bunin, Ivan Alekseyevich (1870-1954), Russian writer, following the Realistic tradition of the Russian 19th-cent. classics. In his youth he belonged to M. Gor'kiy's literary circle; he emigrated in 1920 and lived in Paris. His stories and novels (*The Life of Arsen'yev*, 1927; Eng. trans. *The Well of Days*, London, 1946) describe love, death, and things past with great formal brilliance. In 1933 B. was awarded the Nobel prize for literature, the only Russian writer ever to receive it. See his *Memories and Portraits*, London, 1951, and R. Poggioli, *The Art of Ivan Bunin*, 1953.

Bunion, inflamed swelling of the bursae mucosae, or synovial sacs, occurring most commonly over the metatarsophalangeal joint of the first or fifth toe. This may be accompanied by corns or suppuration, and generally causes deformity of the joint. The most common cause of B.s is pressure produced by badly fitting footgear, but the tendency may be hereditary. In bad cases a surgical operation may be necessary.

Bunium, family Umbelliferae, genus of perennial herbs, of which *B. bulbocastanum* is native to Britain and W. Europe, with edible tuberous roots, good for pigs.

Bunker Hill, small hill in Boston, Massachusetts, which gave its name to one of the earliest engagements of the War of Independence. The actual fighting took place on Breed's Hill, adjacent to B. H. The English, under Howe, only succeeded in carrying the position at the third assault, and at enormous loss. The Americans, mostly hastily levied volunteers, were under Col. Prescott. A granite column indicates the site.

Bunkering Stations. Wide commercial interests of Great Britain have long made it essential that ample stocks of fuel should be stored at convenient ports along the chief routes to the Far East and Australia, for the service of the R.N. and Mercantile Marine. As long ago as 1878 a royal commission was appointed to deal with the whole subject, and on the basis of this commission's report in 1881 adequate arrangements were made for the provision of suitable stations, especially for the service of ships travelling to and returning from the Far East. In 1889 the widening of the Suez Canal was completed, and in consequence additional ports had to be provided which involved new arrangements at Port Said, Suez, and Aden. As a great deal of anxiety was expressed concerning the unprotected nature of these B. S. in time of war, a Naval Defence Act was passed in 1889, under which powers were granted for the provision of protection from attack by sea. Further uneasiness arose on the development of aircraft during the First World War, and efforts were concentrated on giving protection to these stations against aerial attack. In the old days B. S. were

practically coal stores, estab. at convenient points, but of recent years the substitution of oil for coal as a fuel has proceeded at a great rate, so that these ports have become chiefly oil depots. This in turn has had its effect upon the Mercantile Marine, in which tankers have taken the place of colliers to a remarkable extent. Nowadays the provision of B. S. has become an international business. See OIL TANKERS.

Bunkum, mere speaking to obtain pub. in the press, or any humbug. Phrase arose in 1820, when, in the U.S. Congress, the member for Buncombe, N. Carolina, rose to speak. He had apparently nothing to say, and members began to leave. He continued, telling the others they could go also, but his electors expected a speech from him and he was only 'speaking for Buncombe.'

Bunner, Henry Cuyler (1855-96), Amer. poet, b. Oswego, New York State. On leaving school he took up journalism, and found his vocation on the staff of *Puck*, America's first comic weekly, with which he remained all his life, writing jokes, poems, stories, and editorials. His first pub. vol., *Airs from Arcady and Elsewhere*, 1884, was followed by *Rowen*, 1892, his best-known poem being 'The Way to Arcady.' He also wrote 2 novels, *The Midge*, 1886, and *The Story of a New York House*, 1887; and *Short Sixes*, 1890, a collection of short stories.

Bunsen, Christian Karl Josias, Baron von (1791-1860), Ger. scholar and diplomatist, b. Korbach, in the principality of Waldeck. His studies at Marburg were chiefly on theology, but in 1809 he went to Göttingen Univ., where he gave much attention to philology. In 1813 he won the univ. prize essay with the treatise *De jure Aethiopsium hereditario*. Came to Berlin in 1815, where he became acquainted with the historian Niebuhr, by whose recommendation he was, in 1818, made secretary to the Prussian embassy at Rome. Before this, he had studied Persian and Arabic under Silvestre de Sacy, and had, in 1817, married Frances Waddington, by whom his *Memoirs* were later pub. In 1824, on the retirement of Niebuhr, B. succeeded him as resident minister. During his stay at Rome, B.'s researches led him in many directions, but chiefly towards Egyptology. After leaving Rome (1838) he was for 2 years ambas. in Bern. In 1842 he was transferred to the London embassy, where he passed the remainder of his diplomatic life. He resigned because he disagreed with Prussia's attitude towards the Crimean War, and retired to Heidelberg, being made baron in 1857. Among his numerous works may be named *Die Basiliken des christlichen Roms*, 1843, *Aegyptens Stelle in der Weltgeschichte*, 1844-57. See F. von Bunsen, *A Memoir of Baron Bunsen*, 1868.

Bunsen, Robert Wilhelm (1811-99), Ger. chemist and physicist, b. Göttingen, where he pursued his early studies, afterwards completing them at Paris, Berlin, and Vienna. In 1836 he became prof. of chem. at the Polytechnic Institute of

Kassel, whence 3 years later he passed to Marburg. In 1852 he was made prof. at Heidelberg Univ., and here he spent the rest of his life. He was one of the greatest teachers of chem., but rigidly abstained from theoretical discussion. Hence no school rose under his name, in spite of the great number of his pupils who made their name as chemists. His pubs. were extremely numerous, and his discoveries very valuable. The burner which bears his name is known to all. His researches on cacodyl, begun in 1837, cost him the use of one eye, and almost proved fatal. Even before this he had discovered the use of hydrated ferric oxide as an antidote to arsenic. He was also the first to obtain magnesium in a metallic state. But the greatest of his achievements was the discovery, in company with his friend Kirchhoff, of spectrum analysis, a discovery which has proved of incalculable value to both chemists and astronomers. Among his works are *Enumeratio ac Descriptio Hygrometrorum*, 1830, *Gasometrische Methoden*, 1857, and numerous pamphlets.

Bunsen Burner, burner invented by the famous chemist Robert Wilhelm Bunsen (q.v.) of Heidelberg, c. 1855, for use in the univ. laboratories so that coal gas could be burned without leaving a sooty deposit upon the articles heated.

BUNSEN BURNER

Air, about 3 vols. to every vol. of gas, is drawn into the burner tube through which the gas issues by a fine jet at the bottom. The mixture burns with a non-luminous flame and the combustion is complete. The Bunsen flame has an 'oxidising' zone, or outer envelope where oxygen is in excess, and a 'reducer' zone in the centre where unburnt gases are to be found. Such everyday apparatus as incandescent burners, gas cookers, and gas fires depend for their operation upon the use of the B. B. There are various modifications, e.g. the Moker burner in which the burner head is fitted with a nickel grid $\frac{1}{2}$ in. deep, thus giving a large number of narrow Bunsen flames. This burner allows the injection of a larger amount of air giving a very hot 'solid' flame. When supplied with compressed air at 10 lb. pressure it is very useful for furnaces,

the temp. attainable being about 1830° C. (3326° F.).

Bunsen Cell, voltaic cell which contains a plate of zinc surrounded by sulphuric acid and a carbon plate surrounded by nitric acid, the 2 plates being separated by a porous partition of unglazed earthenware. It was invented in 1841 by R. W. von Bunsen, the Ger. chemist, who employed it to produce the electric arc. It is now obsolete.

Bunt, see SMUT.

Bunter (Ger. *bunter Sandstein*, variegated sandstone), in geology, a series of rocks forming the lowest div. of the Triassic system. It consists of variegated red sandstones and conglomerates. Their prin. exposure is in Germany. They may be subdivided as follows: (1) Lower B., consisting of fine red sandstone, with a thickness of as much as 700 ft; (2) Middle B., of coarse sandstone, with a thickness of 1000 ft; (3) Upper B., of red and green marls, varying in thickness. In England it occurs chiefly in the midlands. Few fossils have been found in Eng. and Ger. beds, but plant life is represented by ferns and conifers.

Bunting, Jabez (1779-1858), Eng. Wesleyan minister, was b. Manchester, where he entered the ministry at the age of 19. He was 4 times president of the conference, and in 1835 was made president of the first Wesleyan theological college. For 20 years he was secretary to the missionary society. He may almost be considered the founder of the Wesleyan polity.

Bunting, or *Emberiza*, is a genus of the family Fringillidae or Finches. *E. citrinella*, the yellow B. or yellowhammer, is the commonest Brit. species. The next commonest species is the Corn B. (*E. miliaria*); another species, reed-B. (*E. schoeniclus*) is common on the Norfolk broads. The Lapland B. and Snow B. (*Plectrophanes nivalis*) belong to other genera.

Buntingford, mrkt tn of Hertfordshire, England, 7 m. S. of Royston, the terminus of a branch line of the railway. It has almshouses and a school for mentally defective boys. Pop. 1700.

Bunyan, John (1628-88), author, b. Elstow, near Bedford. Members of his family, under the name Buingnon, lived in Beds as far back as 1199, whilst the grandfather of his own grandfather was a certain Thomas Bonyon (fl. 1542), a 'common brewer of beer' and 'common baker of human bread.' His mother d. in 1642, and soon after this he was drafted by a local levy into the parl. army. The war at an end, he returned to his native place. He thus describes his marriage in 1649 with a religious wife: 'This woman and I came together as poor as poor might be, not having so much household stuff as a dish or spoon betwixt us both.' She brought with her a book of her father's, entitled *Plain Man's Pathway to Heaven*, which exerted a powerful influence over her husband, as may be seen in his *Life and Death of Mr Badman*, 1680. It was about this time that he underwent, like Blake and Cowper (qq.v.), strange

religious experiences. He had been very fond of ringing the bells of Elstow church, but was induced to forgo this harmless pleasure, as he believed the steeple would fall on his head did he persist in this crime. One time he was arrested in a game of tipcat by a voice which threatened him with hell if he did not repent him of his wickedness. Many long hours he spent in prayer, but it was a hard battle before he could finally renounce his pet vice of dancing on the village green. In his *Grace Abounding* he vividly describes the agony of his sufferings at this period. Dreadful hallucinations banished sleep from him at nights. He began to think, for instance, that he could have no faith unless he performed miracles, and that he

JOHN BUNYAN

would not be saved because he was not a child of Israel. But the clouds vanished and an active life healed his morbid imaginings. In 1653 he joined a dissenting community, and 2 years later began to preach in neighbouring vills. His first book, *Some Gospel Truths Opened*, 1656, is a truly remarkable production, considering that its author was the son of a tinker and unlearned in syntax and spelling. It was one of a series of controversial writings against the followers of George Fox, the Quaker. In 1660 B. was confined to Bedford co. jail as 'a common upholder of sev. unlawful meetings,' and here he remained for 12 years. He spent his time writing, and began his immortal *Pilgrim's Progress*. After the Declaration of Indulgence he was released, and was chosen pastor to his old church, but when the declaration was repealed, he was sent to the tn jail for 6 months, because he was a Nonconformist preacher. On regaining his freedom he took up his pastoral work once more, and continued it till his death on Snow Hill, Holborn. He was buried in the gloomy graveyard of

Bunhill Fields. Whilst his *Holy War*, 1682, is only inferior to *Pilgrim's Progress* as an allegory, the latter is, of course, his masterpiece. (B. actually wrote some 60 books, but only these two and *Grace Abounding* continue to be read.) Pub. in 1688 (the second part in 1684), it was at once appreciated by the common people, though it was some time before men of letters recognised the homely beauty of its biblical language, its spirited dialogue and vivid characterisation, its imaginative descriptions, as for example of the Delectable Mts and Vanity Fair, and above all the passion of its religious fervour. Christian's pilgrimage from the City of Destruction to the Celestial City has brought comfort and joy to men all the world over. That there is a peculiar fascination about the pilgrim is not to be denied, even by those who may be averse to B.'s religious opinions. Of this latter we have a striking instance in Dean Swift, who once wrote: 'I have been better entertained, and more informed, by a few pages in the *Pilgrim's Progress*, than by a long discourse upon the will, and the intellect, and simple and complex ideas.' See also Cowper's moving lines on the pilgrim, beginning, 'O thou, whom, borne on fancy's eager wing.' There are eds. of B.'s works by C. Doe, 1692, G. Offer, 1853, 1862, and H. Stebbing, 1859; lives by R. Southey, 1830, Lord Macaulay, 1850, J. A. Froude, 1880, John Brown, 1885, C. H. Firth, 1911, and H. Talon, 1951. See also G. B. Harrison, *John Bunyan: a Study in Personality*, 1928; J. Lindsay, *John Bunyan: Maker of Myths*, 1937; M. P. Willcocks, *Bunyan Calling: a Voice from the Seventeenth Century*, 1943.

Bunyoro, dist. in W. prov. of Uganda. Part of B. forms a national park. Its area is about 5600 sq. m. and the native pop. about 100,000. Masindi is the chief tn.

Bunzlau, see BOLESŁAWIEC.

Buonarroti, Michael Angelo, see MICHEL-ANGELO.

Buonarroti, Michelangelo the Younger (1568-1646), It. playwright, nephew of the great Michelangelo, b. Florence. He studied mathematics and natural philosophy under Galileo, and became a member of the Accademia della Crusca and of the Florentine Academy. He is chiefly famous for *La Tancia*, 1612, rustic comedy, and *La Fiera*, 1618, comedy written in free verse.

Buonfede, Appiano (1716-93), It. philosopher, was appointed to a professorship of theology at Naples in 1740. Later he joined the Order of Celestines, and became, in course of time, general of that order. His *Della Restaurazione di ogni Filosofia ne' Secoli*, 1789, one of many works, gives a good account of 16th-cent. It. philosophy.

Buoninsegna, see DUCCIO.

Buononoini, Giovanni, and **Giovanni Maria**, see BONONCINI.

Buoy, anchored floating body used as a guide to navigation or for the purpose of mooring ships. Mooring-B.s are made of wood or iron, and are used in places

where anchorage is impossible or inconvenient. The more important use of B.s, however, is to mark the limits of a navigating channel, or to indicate the existence of dangerous obstructions, e.g. rocks, shoals, sunken wrecks, etc. B.s may be differentiated by colour, shape, or the attachment of a signalling apparatus, as whistles, bells, fixed or flashing lights, etc. The following general principles are adopted in the use of B.s in the U.K.: B.s showing a conical top above water are called conical B.s, and should be kept on the starboard-hand; B.s showing a flat top above water are called can B.s, and should be kept on the port-hand; B.s showing a domed top are called spherical B.s, and mark the ends of middle-grounds. In the above definition, starboard-hand means the right side of the vessel in ascending a riv. or estuary, or in going with the main stream of the flood of the tide on the coast. In Scotland it is established that conical B.s should be painted red and can B.s black; spherical B.s are painted with horizontal white stripes throughout the U.K. B.s bearing bells, lights, whistles, or distinguishing structures other than the foregoing are used for special positions. Boll-B.s are actuated by the undulating of the waves; lights are provided by compressed oil gas, though acetylene and electricity are sometimes used; whistling is effected by the provision of a hollow cylinder extending some 30 ft downwards; the up and down motion of the B. produces an inhalation and expulsion of air from this chamber, and the whistle is blown in a fitful manner corresponding to the motion of the waves. Wreck B.s are painted green, and bear the word 'wreck'.

Buoyancy, that property by which a body tends to float in a fluid. The force upwards on a floating body is equal to the weight of the body, and that weight is equal to the weight of the water displaced by the immersed part (Archimedes' principle). Apparent loss in weight of an immersed body is shown by Archimedes' principle to equal weight of liquid displaced. If a ship has a certain draught line to which it may safely be loaded, the measure of its B. may be taken as the additional weight required to bring the draught line on a level with the water. To ascertain the true weight of a body, a correction must be applied to the weight in air, to allow for the B. of the air. This correction is zero if the body has the same density as the weights, but may be as much as 6 milligrams per gram weight of a body of sp. gr. 0.2 (using brass weights).

Bupalus (fl. 540 BC), Gk sculptor, with whom his brother, Athenis, is always associated, belongs to the school of sculpture in Chios at a time when its hist. just ceases to be legendary. The brothers never advanced to the representation of the nude: all their figures (carved in marble) were draped. B. did a figure of Tyche (Fortune) and also the Graces for the temple of Nemesis in Smyrna.

Bupalus, genus of lepidopterous insects of the family Geometridae, in which the wings are erect in repose and the larvae

have 10 legs. *B. piniarius*, the bordered white moth, is a beautiful species found in the vicinity of fir-trees.

Buphaga is the type genus of birds of the family Buphagidae. *B. africana*, the ox-pecker, is generally seen in companies of 7 or 8, attending a herd of buffaloes or antelopes.

Bupleurum, family Umbelliferae, a genus of herbs or shrubs, found in Europe, Asia, Africa, and N. America. *B. rotundifolium*, Hare's Ear or Thorow-wax, an ann., with perfoliate upper leaves; *B. tenuissimum*, Smallest Hare's Ear, ann.; and *B. falcatum*, perennial, are native to Britain. *B. fruticosum* is an evergreen shrub, from the Mediterranean region, now naturalised in a few localities.

Suprestidae is the name of a family of coleopterous insects of about 5000 species, which have short antennae and are very brightly coloured. Green is the most common colour, but blue, red, gold, and copper are also frequent, and have a burnished appearance. They live on the trunks of trees, crawl slowly, but when on the wing fly rapidly.

Bur, or **Burr**, slight ridge of metal raised on edges of a line engraved by the burin, rocker, or dry point. It is usually removed by a scraper, as it retains too much ink in printing the plate, producing the effect of a smear. Sometimes it is left to produce a peculiar effect of its own (see ENGRAVING, *Drypoint*). Seymour Haden and other etchers often keep it; so does Rembrandt. In mezzotint engravings (see MEZZOTINT) the whole effect comes from the bur.

Bur, or **Burr**, is the name given to a fruit which has developed a process like a hooked spine to aid it in its distribution. *Arctium lappa*, the burdock, is a common example, as is also the horse chestnut. In Scotland the word is applied to the thistlehead and to the fireweed.

Bur-reed is the name applied in England to *Sparganium*, a genus of plants of the family Sparganiaceae, common to Europe, Asia, and America. Four species occur in Britain: the Branched (*S. ramosum*), Unbranched Upright (*S. simplex*), the Floating (*S. angustifolium*), and Small B. (*S. minimum*). They occur in ditches and shallow ponds of Britain.

Buran, very violent sandstorm or snowstorm occurring in central Asia, in the Caucasus, and on the outskirts of Siberia. The storm heralds itself in a peculiar manner, and comes on quite suddenly. The sky becomes inkly black, and the atmosphere is choking, on account of the clouds of fine sand blown along by the wind, which tears along at a remarkable velocity. Sometimes the wind brings along in its train fine particles of partially frozen snow and is then called *poorga*. There are 2 kinds of B., the kara-B. or black storm, and the sarik-B. or yellow storm.

Burano, It. tn. in Veneto (q.v.), 5 m. NE. of Venice (q.v.). It is built on 4 small is., and is famous for its lace. Pop. 5000.

Burbage, James (d. 1597), one of the most famous actors of Elizabethan times.

He was the builder of The Theatre in Shoreditch, and the Blackfriars Theatre in 1596.

Burbage, Richard (1567-1619), great Elizabethan actor, son of the above; in spite of his short and stout figure, he played with immediate success the leading parts in most of Ben Jonson's dramas, and was famous for his impersonations of Hamlet, Lear, Othello, and, above all, Richard III. He also built, with Shakespeare's financial help, the Globe Theatre, using materials from the structure of The Theatre which he pulled down for that purpose.

Burbank, Luther (1849-1926), Amer. plant-breeder, b. on a farm at Lancaster, Massachusetts. Began market gardening as a youth. In 1875 estab. a plant nursery at Santa Rosa, California. He gave up business in 1893 to devote himself to plant-breeding experiments, by which he gained world-wide celebrity. B. introduced many famous varieties, especially the B. potato. See BREEDING.

Burbot, or Eel-pout, common name of *Lota lota*, a species of the Gadidae, or cod family, related to the whiting, haddock, and ling, and remarkable as being the only fresh-water fish of its family. It is common in European and Amer. streams, and is found in Great Britain chiefly in the Ouse and Cam.

Burchiello (real name **Domenico di Giovanni**), It. comic poet, b. Florence c. 1404, d. Rome in 1449. By trade a barber, his shop became the meeting place of the literary wits in Florence. B. is a satirist, and his poems are sonnets of the comic burlesque type, often licentious. Like many humorous poets, his life was spent in poverty, although his sonnets were very popular at the time.

Burckhardt, Jakob (1818-97), Swiss historian and art critic, b. Basel. He was educ. at Berlin and Bonn, and was a prof. of hist. at Basel Univ. for nearly 50 years. His first important work was pub. in 1842, and dealt with the works of art in Flemish cities. His masterpiece is his *Die Kultur der Renaissance in Italien*, 1860, a brilliant survey of the period, in spite of some serious omissions. It remains one of the standard authorities on the subject. It was the compilation of his *Cicerone* or art guide to painting in Italy, first pub. in 1855, that led to his further study of the Renaissance and to the writing of *Die Kultur* and also of his *Geschichte der Renaissance in Italien*, 1867. See K. Jöel, *Jakob Burckhardt als Geschichtsphilosoph*, 1918, and W. Behm, *Jakob Burckhardt*, 1930.

Burckhardt, John Lewis (1784-1817). Anglo-Swiss traveller. He had a good educ. and as one of the sons of an eminent Basel family, a choice of many careers was open to him. He accepted the offer of Sir Joseph Banks, a member of the African Association, to explore the hinterland of Africa. Disguising himself as a Muslim, he spent 2 years in Asia, during which he acquired so complete a mastery over Arabic and over the contents of the Koran that he passed among the natives themselves as a learned doctor of their

law. After visiting Palmyra, Damascus, and Lebanon he went to Cairo. In 1812 he went up the Nile as far as Mahass, and after traversing the Nubian desert, succeeded, under the guise of a Syrian merchant, in making the pilgrimage to Mecca, by way of Jeddah. He also journeyed to Mt Sinai, but was prevented by death from joining the caravan which travelled towards Fezzan, whence he had intended to explore the sources of the Niger. He was a man of genuine greatness of mind and high principles of honour, qualities which, allied to his capacity for learning and power of observation, enabled him to overcome difficulties which would have baffled lesser men. The results of his travels were pub. in 1819 in *Travels in Nubia* by the Association for Promoting the Discovery of the Interior Parts of Africa; *Travels in Syria and the Holy Land*, 1822, *Travels in Arabia*, 1829, and *Notes on the Bedouins and Wahabys*, 1830.

Burdekin, riv. of Queensland, Australia, rises not far from the coast, to which it runs almost parallel till it empties itself in Upstart Bay.

Burden, law term in Scotland signifying any encumbrance or restriction on property of any kind. The most important B.s are those which affect land, such as stipend, land tax, and feu-duty (q.v.).

Burdett, Sir Francis (1770-1844), Eng. politician, educ. at Westminster and Oxford. The Fr. Revolution probably did much to mould his political opinions. He entered Parliament in 1796, having 3 years earlier married the heiress of the banker Coutts, and became well known for his radical opinions. He was arrested by order of the House for breach of privilege, having had one of his speeches pub., and taken to the Tower, where he was kept a prisoner until the prorogation of Parliament. His prin. political ideals were the passing of a reform bill and the relief of Catholic disabilities. In 1820 he was again imprisoned for his denunciation of the Manchester massacres, and was fined £1000 and imprisoned for 3 months. He saw the Catholic Relief Bill passed in 1829, after he had made vain attempts to pass a similar measure in 1825, 1827, and 1828. See life by M. W. Patterson, 1931.

Burdett, Sir Henry Charles (1847-1920), author and statistic; son of Rev. Halford B., M.A., of Gilmorton, Leicester co.; made K.C.B., 1897, and K.C.V.O., 1900. At one time superintendent of the Queen's Hospital, Birmingham, and of the Seaman's Hospital, Greenwich. Many pub. on financial topics, including *Burdett's Official Intelligence of British, American, and Foreign Securities* (17 vols.), *The National Debt, Local Taxation in England and Wales, National Debts of the World, Municipal, County, and Indian Finance, and Seventeen Years of Securities*.

Burdett - Coutts, Angela Georgina, Baroness (1814-1906), daughter of Sir Francis Burdett, b. London. In 1837 she inherited almost all the great wealth of her grandfather, Sir Thomas Coutts, left by the will of his widow, the Duchess of St Albans, once Henrietta Mellon, the actress. Many offers of marriage were

made her, but she resolved to remain single, and to devote her vast wealth to the cause of philanthropy. In 1881, however, she married Wm Ashmead-Bartlett (1851-1921), who assumed her name, and was sev. times elected as member of Parliament for Westminster. In 1871 she was created a peeress, and in 1872 she was presented with the freedom of the City of London, being the first woman to receive this privilege. She d. on 30 Dec. 1906, and was buried at Westminster Abbey. Her philanthropic exertions were on such a vast scale that it is difficult to find any dept. of life they did not touch. She endowed the 3 bishoprics of Cape Town, Adelaide, and Brit. Columbia. Her love for her own sex caused her to do much for reformatories, and to secure great improvements in the education of girls at the national schools. Her interest in emigration was great, and she did much to aid in this work. See C. Dickens, *Letters to Baroness Burdett-Coutts, with biographical introduction*, 1931.

Burdigala, see BORDEAUX.

Burdock, or *Arctium lappa*, is a common Brit. species of Compositae which is often found growing by roadsides. It occurs also in Asia and on the Continent. *A. minus* is the Lesser B., and *A. vulgare*, the Wood B. All are tall biennial herbs, with large, spirally arranged ovate leaves, reddish-purple flower heads, ripening into fruits with achenes hook-tipped for animal dispersal. See BUN.

Burdon-Sanderson, Sir John Scott (1828-1905), physiologist, b. Jesmond, Newcastle upon Tyne. Second son of Richard Burdon, who took the additional name of Sanderson on his marriage with Elizabeth, only daughter of Sir James Sanderson, 1st baronet, M.P. He went to the univ. of Edinburgh in 1847, came to London as practising physician in 1853, and was appointed medical registrar, then lecturer, at St Mary's Hospital, London. In 1867 elected fellow of the Royal Society and Croonian lecturer. In 1870 devoted himself to scientific research. Initiator of new Eng. school of experimental physiology. In 1882 he was appointed first Waynflete professor of physiology at Oxford, and was Regius professor of medicine there, 1895-1903. He was especially interested in the study of the functions of living tissues; he investigated the electrical currents produced by the heart; and he measured the speed of the nervous impulse. Created baronet, 1895. See memoir by Lady Burdon-Sanderson and others, 1911.

Burdwan, tn in W. Bengal, India, 67 m. from Calcutta. It is principally known as the residence of the Maharajah of B., one of the great landlords of Bengal. The dist. of the same name includes the great coalfields of Bengal and Bihar, one centre being at Raniganj, and a big steel work at Asansol.

Burdy, Samuel (c. 1760-1820), Brit. author. Curate first at Ardglass, co. Down, 1783, he was promoted to Kilclief c. 1800. His *Life of the Rev. Philip Skelton*, 1792, is one of Ireland's literary treasures. Amongst other poems, he

wrote *Ardglass, or the Ruined Castles*, 1802.

Bure, riv. in Norfolk, England, flowing SE. through the Broads (q.v.) to Breydon Water at Yarmouth. Length 50 m.

Bureaucracy, term signifying gov. by depts, each ruled over by its separate chief, as opposed to gov. by ministers, owing a collective or associated responsibility to the people, and hence the word is often loosely used to mean officialism, red-tapeism.

Burette, apparatus used in practical chem. for delivering measured quantities of a liquid. It consists of a graduated cylindrical tube fitted with a stop-cock. A small glass float with a fine horizontal line engraved upon it may be used at the surface of the liquid to indicate the extent of movement of the top of the column with greater accuracy.

Burford, tn on the Windrush, in the Woodstock div. of Oxon., England. Historical interest attaches itself to B. Priory, and also to the place itself, as the scene of the overthrow of Ethelbald of Mercia by Cuthred of Wessex (AD 752). B. was obliged to send a member to Parliament in 1306, but petitioned to be excused henceforth and was so. The anct. corporation was dissolved in 1861. The seal dates from about 1250. The church of St John the Baptist possesses a fine Norman tower. B. has many interesting examples of medieval domestic architecture. Pop. 1000.

Burg, Ger. tn in the dist. of Magdeburg, on the Ille canal, 13 m. N.E. of Magdeburg (q.v.). It has a 12th-cent. church, and has textile and chemical manufs. Pop. 30,000.

Burgage Holding and Tenure. *B. tenure* denotes the particular feudal service or tenure of houses or tenements in anct. cities or bors. The incidents of this tenure, which prevailed in Normandy as well as in England, vary according to the particular customs of each bor. (q.v. and **BURGESS**). It is generally considered to be a species of socage tenure, as it was usually held either at a pecuniary rent or for services having no relation to military service. The later importance of the tenure was mainly in regard to the bor. franchise. *B. holding* is one of the forms of feudal tenure in Scotland, and is that by which burghs-royal (see **BURGHS**) hold of the Crown the lands contained in their charters of erection. Property held on this tenure is at the present day practically all allodial.

Burgas, tn of E. Bulgaria, cap. of B. prov. (area 5258 sq. m.), on the Gulf of B., an inlet of the Black Sea, 228 m. E. of Sofia (q.v.). It is in a copper-mining dist., has manufs. of textiles, agric. machinery, and metal goods, and is a busy fishing and commercial port. Pop. 44,000.

Burgdorf (Fr. Berthoud), tn in the canton of Bern, Switzerland, on the R. Emme, 14 m. N.E. of Bern. It has silk and cloth-making industries. It is a picturesque tn, and its castle was the seat in which Pestalozzi (q.v.) set up his school, 1798-1804. Pop. 12,800.

Burgee, small pennant used by yachts and pointed or swallow-tailed according to the owner's status. B.s of clubs are invariably pointed, that of a commodore or vice-commodore swallow-tailed. Only the royal yacht squadron may fly the white ensign, but other royal clubs may have a crown on the B.

Burgenland, prov. of E. Austria. In the N. it is generally flat, but in the S. are spurs of the Alps, with the valleys of the R. Raab and its tribs. The ownership of this area was in dispute after the First World War, Czechoslovakia and Yugoslavia desiring it as a connecting link, Hungary claiming it on historical and Austria on ethnographical grounds. It was allotted to Austria by the treaties of St-Germain-en-Laye and Trianon (q.q.v.). After the Second World War it was included in the Russian zone of occupation of Austria. The prov. is mainly agric., but some coal is mined. Eisenstadt (q.v.) is the cap. Area 1532 sq. m. Pop. 276,150. *See also* SOPRON.

Bürger, Gottfried August (1747-94), Ger. poet. He began to study theology at Halle, but later studied jurisprudence at Göttingen. Only his friendship with poets from the *Göttinger Dichterbund* saved him from a life of dissipation, and he pub. his first poems in the *Musenalmannach*, of which he himself became editor in 1778. As a ballad writer his popularity spread far and wide; he may be said to have introduced the ballad into Ger. literature. Such ballads as *Lenore*, *Der wilde Jäger*, and *Das Lied vom braven Manne* are almost unequalled for dramatic intensity, virility of style, and atmospheric suggestiveness. His *Sämmtliche Schriften* were ed. by W. von Wurzbach (4 vols.), 1796-1802.

Burgers, Thomas François (1834-81), president of the Transvaal, a native of Cape Colony, and minister of the Dutch Reformed Church. Elected president by the Boers, 1872, in a most critical period of the hist. of the Transvaal. Kruger systematically opposed B.'s policy, with the result that the Boers refused to pay taxes, and entered into warfare with Secocoeni, a native chief. Transvaal was also menaced by the Zulus. At this crisis England appointed Sir Theophilus Shepstone to inquire into matters: B. was compelled to resign, and the annexation of the Transvaal was formally declared in 1877.

Burges, William, A.R.A. (1827-81), architect, b. London, travelled abroad, and started practice in London, c. 1856. He became a prominent figure in the 'Gothic Revival', and carried his medieval tastes into the eccentric house that he built for himself in Melbury Road, Kensington, 1875-80. His prin. building were the (Protestant) cathedral of St Finbar at Cork, Ireland, 1863-70; the picturesque restoration of Cardiff Castle, 1865; the mansion of Castle Coch, Wales, c. 1875; the Speech Room at Harrow School, 1877; small churches at Skelton and Studley, both in Yorks, 1871, etc.

Burgess, Frank Gelett (1866-), Amer. humorist, b. Boston. He was educ. at the Institute of Technology and worked

for a time as a draughtsman and as a drawing instructor. From 1894 to 1897 he ed. the *Lark*, a magazine in which appeared his famous quatrain about the Purple Cow. A collection of poems for children, *Goops and How to Be Them*, 1900, was followed by *More Goops*, 1903, and *New Goops*, 1940. *Are You a Bromide?*, 1897, is a satire on platitudes, and *Burgess Unabridged*, 1914, introduced a number of new words, one which has become accepted being 'blurb,' which he interpreted as 'self-praise; to make a noise like a publisher.'

Burgess, Guy Francis de Monoy, *see* BURGESS and MACLEAN CASE.

Burgess, John Bagnold (1829-97), painter, b. London. He studied in the Royal Academy, and later lived for some years in Spain, whence he chose the greater part of his subjects. A.R.A., 1877, R.A. 1889. Among his best-known pictures are 'Bravo Toro,' 1865, 'Stolen by Gypsies,' 1868, 'Visit to the Nursery,' 1870, and 'Licensing Beggars in Spain,' 1877.

Burgess, John William (1844-1931), Amer. historian, b. Giles co., Tennessee. Educ. at Amherst College and at Göttingen, Leipzig, and Berlin. Appointed in 1873 prof. of hist. and political science at Amherst. Later, prof. of political science and constitutional law at Columbia College. Works include *Political Science and Comparative Constitutional Law*, 1890, *The Middle Period*, 1817-58, *The Civil War and the Constitution*, 1859-65, *Reconstruction and the Constitution*, 1866-1876, trilogy, 1897-1902, *Recent Changes in American Constitutional Theory*, 1923, and *The Sanctity of Law—Wherein Does It Consist?*, 1929.

Burgess, (Low Lat. *burgensis*, citizen; old high Ger. *burg*, tn) formerly meant simply an inhab. of a bor. or a leading craftsman in a guild belonging to a bor. Gradually the term B. came to be applied to a freeman of a bor. possessing a tenement in a bor. The early importance of B.s lies in the fact of their inclusion as one constituent part of the Third Estate of the Realm or Commons in Parliament. In 1264 Simon de Montfort, in issuing writs for a parliament in London, summoned for the first time 2 citizens from each city and 2 B.s from each bor. to sit with the knights of the shire, thus eliminating the barrier which had hitherto kept them apart. From this union springs the bulk of our national liberties. The B.s or representatives of bors. attended parliament regularly from the time of the Model Parliament, 1295. The creation in 1835 of the 'municipal corporation' as a unit of self-gov. included that of a uniform qualification for the municipal franchise. That qualification is known as the old B. qualification, and is now practically the same as, but not necessarily co-extensive with, the parl. franchise. The qualification of a B. is enrolment on the Register of Electors as a resident on 10 Oct. in any year. Women may be B.s, and are now also eligible for corporate office. Where the bor. is a city, the B.s are called citizens. *See also* BURGH and LOCAL GOVERNMENT.

Burgess and Maclean Case. On 25 May 1951, 2 Brit. foreign office officials, Donald Maclean (b. 1913) and Guy Burgess (b. 1911) left the country in mysterious circumstances, later information suggesting they had fled to the Soviet Union. On 11 Sept. 1953, Maclean's Amer. wife, with her children, disappeared from her Swiss home in equally mysterious circumstances, presumably to join her husband. Maclean had had access to secret information and was the son of a former Cabinet Minister. The affair caused a good deal of scandal, and in Sept. 1955 Petrov, a former Soviet diplomat, pub. an article in a Brit. newspaper stating that Burgess and Maclean had been Soviet spies since their undergraduate days at Cambridge. The gov. then issued a White Paper, disclosing that Maclean had been under suspicion when he disappeared, but this was generally considered evasive in character. In 1956 the two 'missing' men gave a news conference in Moscow.

Burgess Hill, tn in Sussex, England, 10 m. N. of Brighton. Pop. 9000.

Burgh, Hubert de (d. 1243), Eng. administrator. He was a loyal servant of Richard I and John, urging the latter to sign the Magna Carta. In 1215 he became justiciar, and during the war with France he defeated the Fr. fleet off Dover, 1217. During Henry III's minority B. was the virtual ruler of England, but his rigorous gov. made him many enemies and in 1232 the king imprisoned him. Though he was later pardoned and his titles restored, he never recovered his old position of favour at court.

Burgh, Scottish tn possessing incorporation (corresponding to the Eng. 'borough') and a local (generally petty) jurisdiction. Formerly only royal B.s could send representatives to Parliament, but since 1832 there have been parl. B.s or tns not being royal B.s but sending representatives to Parliament, e.g. Falkirk, Leith, Hamilton. The General Police Act for Scotland extends the meaning of B. and defines it to mean all B.s and populous places whose boundaries have been fixed. The Act further provides that the sheriff may, on the representation of 7 or more householders, fix the boundaries, and thereby constitute a B. for purposes of local gov. The jurisdiction of B. magistrates is practically restricted to police offences, payment of B. dues, and summary ejections. See W. M. Mackenzie, *The Scottish Burghs*, 1948.

Burghhead, burgh and fishing port of Morayshire, Scotland, on the Moray Firth some 8 m. from Elgin. Pop. 1367.

Burghley, William Cecil, see BURLEIGH, 1ST BARON.

Burgin, George Brown (1856-1945), Brit. author. He was secretary of Authors' Club, 1905-8, and wrote many books, amongst which may be mentioned *The Judge of Four Corners*, 1896, *The Belle of Santiago*, 1911, *Dickie Dilever*, 1912, *The Duke's Stratagem*, 1931, and *A Pious Fraud*, 1938.

Burgkmaier, Hans (1473-1531), Ger.

painter and wood-engraver, b. Augsburg, was a friend of Albrecht Dürer, and father-in-law to Holbein the elder. His renown rests on his woodcuts—nearly 700 in all—which are truly remarkable for their faithful presentation of contemporary life, and for their dramatic strength. Especially noteworthy are his engravings for *The Triumph of Maximilian*, and for a Ger. trans. of Petrarch's Lat. treatise *De Remediis utriusque Fortunae*. A portrait of himself and wife may be seen in Vienna, whilst the galleries of Munich, Berlin, and Augsburg, his native place, possess examples of his work in fresco painting.

Burglary (etymology uncertain). In O.E. law B. was known as *hamsoeca*, in Eng. common law is defined as the breaking and entering a dwelling-house by night, with intent to commit a felony. *Breaking* may be either by forcing open a closed window, door, etc., by some necessary aperture such as a chimney, or by collusion with a servant or inmate of the house. It may be before the felony, to secure entrance, or after it, to secure escape. For *entry* it is sufficient that the hand or arm should be inserted. A *dwelling-house* is any permanent building in which the owner or some tenant sleeps. Any building or outhouse forms part of the dwelling-house only if it be connected with the same either directly or by an enclosed passage. *Night* is defined as the period between 9 p.m. and 6 a.m. The maximum punishment for B. is imprisonment for life. If the offence be committed by day, or in some place other than a dwelling-house, it is not B., but housebreaking. In Scotland all cases fall under the law of housebreaking, and the name 'B.' is not used. In the U.S.A., on the contrary, B. is made to cover many cases of housebreaking, and is never punished by penal servitude for life.

Burgomaster, title of chief magistrate of a Dutch, Flemish, or Ger. tn. It corresponds to the Eng. 'mayor' and Scottish 'provost.'

Burgon, John William (1813-88), Eng. clergyman, b. Smyrna. His father, a merchant, moved to London in 1814. Burgon went in 1841 to Oxford, where he won the Newdigate with a poem on *Petra*, and became a fellow of Oriel. In 1863 he became vicar of St Mary's, the univ. church, in 1867 Gresham prof. of divinity, and in 1876 dean of Chichester. *Lives of Twelve Good Men*, 1888, was his best-known work.

Burgos: 1. Sp. prov., in Castilla la Vieja (q.v.). It is a tableland crossed by ranges of high mts, with a severe climate and a barren soil, and is watered by the Ebro and the Duero (qq.v.). The inhab. are mainly occupied in stock-raising and agriculture. Area 5180 sq. m.; pop. 401,804.

2. Sp. tn, cap. of the prov. of B., on the Arlanzón. Founded in the 9th cent., it became the cap. of the countyship, later the kingdom, of Castile (q.v.). It gradually gave way in importance to Valladolid and then to Madrid. It was taken in 1808 by the French, who retained it until

1813 despite 4 sieges by Wellington. It was in B., in July 1936, that Gen. Franco set up his insurgent gov. (see SPAIN, *History*).

B. is the city of the Cid (q.v.), who is said to have been married in the castle the remains of which stand above the tn. Edward I (q.v.) of England also was married in this castle. The magnificent Gothic cathedral, rich in fine sculpture, with 2 spires and 15 chapels, was begun in 1221. There are numerous other beautiful old buildings, including churches, convents, and mansions. Textiles, paper, pottery, and leather are manuf., and the tn has a large trade in agric. produce. Pop. 77,950.

Burgoyne, John (1722-92), general. He entered the army at an early age, and was also at an early age compelled to sell out in order to pay his debts. His youth was further distinguished by his runaway marriage with the daughter of the Earl of Derby. He spent the years following the sale of his commission abroad, but was, by the influence of his father-in-law, restored to his rank in the army in 1758. He became the first commander of light infantry in the Brit. Army in 1759. He became an M.P. in 1761, and was made a brigadier-general in the following year. At the close of the Seven Years War he devoted his time to politics and the drama, his first play being produced in 1775. In that year, on the outbreak of hostilities with the Amer. colonists, he was appointed to the command of a div., and made a fatal attempt to attack the colonists from Canada. He was surrounded at Saratoga by Gen. Gates and the Amer. Army, and forced to surrender with 3500 men. He was deprived of his appointments, but these were restored to him in 1782. He retired, however, into private life, and occupied his time with dramatic work. His most popular work, *The Heiress*, appeared in 1786. In 1808 his poetical and dramatic works were pub. See W. L. Stone, *Campaign of Lieut.-Gen. J. Burgoyne*, 1877, and F. J. Hudleston, *Gentleman Johnny Burgoyne*, 1927.

Burgoyne, Sir John Fox (1782-1871), field marshal, a natural son of John B. (q.v.) and Susan Canfield, an opera singer. Educ. at Eton and Woolwich. He obtained his commission in 1798, and 2 years later served in Abercromby's expedition to the Mediterranean. He joined Wellesley in Portugal in Feb. 1809, was present at the passage of the R. Douro and the taking of Oporto, being promoted captain. His military skill at the sieges of Badajoz and Ciudad Rodrigo won him the rank of lieutenant-colonel in 1812. Chairman of the Irish Board of Public Works, 1831-45. Later he served with distinction at the Crimea, and was promoted to general in 1855, and created a baronet in 1856. Field marshal, 1868. See life by Lt.-Col. G. Wrottesley, 1873.

Burgstädt, Ger. tn in the dist. of Karl-Marx-Stadt, 8 m. NW. of Karl-Marx-Stadt (q.v.). It has an anct textile industry, and has manufs. of sewing-machines. Pop. 20,000.

Burgsteinfurth, Ger. tn in the *Land of*

North-Rhine-Westphalia (q.v.), near the Dutch border, 68 m. N. by E. of Düsseldorf (q.v.). It has a fine castle and textile manufs. Pop. 7000.

Burgundil, The, Ger. tribe originally inhabiting an area between the Vistula and the Oder. They settled around the source of the Main about 400. Although they took part in the great barbaric invasion of Rome in 406, they were often loyal allies of the Romans against the Huns and Franks. In 475 they occupied the Rhône valley. They had already adopted Christianity before Clotaire, the Frankish king, finally put an end to their kingdom in 534.

Burgundy, Duke of, see PHILIP THE BOLD and PHILIP THE GOOD.

Burgundy, formerly an independent monarchy, and later a prov. of France. Its earliest inhab. were a Ger. tribe, the Burgundil (q.v.), who had extended their settlement from the banks of the Oder and Vistula to the Rhine and Neckar. A defeat by the Huns, followed by the chaos resulting from the decay of the Rom. Empire, saw them holding sway over the whole of the Rhône valley. They accepted Christianity later, and in 534 were conquered by the Franks. In 832 B. regained its independence and gradually attained great power; but a later absorption of the prov. by the Germans saw its gradual decomposition into a number of small states, all of which were finally taken over by France. It now comprises the depts of Ain, Côte-d'Or, Saône-et-Loire, with parts of Yonne, Aube, and Haute-Marne, and is world-famous for its wines. Its prin. tns are Dijon, Mâcon, Autun, Châlon-sur-Saône, and Bourg, and it is watered by the Rhône, Seine, and Loire Rs.

Burgundy Pitch (a misnomer, as it comes from Finland and the Black Forest), yellowish-white resin prepared from common frankincense, the exudation of the Norway spruce-fir (*Abies excelsa*), by melting it in hot water and separating it from the greater part of the oil which it contains. B. P. is hard and brittle, and can be distinguished from its many imitations by its pleasant smell and lack of bitterness. It is used in medicine for plasters, and acts as a mild irritant.

Burgundy Wine, sometimes called the king of wines (claret being the queen), grown within the boundaries of the anct prov., the finest, both red and white, coming from the Côte d'Or dept (q.v.). The chief vineyards cover the slopes of the Côte de Nuits on the N., where the very finest wines are grown, and the Côte de Beaune on the S., where cheaper though excellent growths such as Pommard and Volnay are found. The great Burgundy grape is the *pinot* which is also responsible for champagne. Among the greatest wines from the Côte de Nuits are Romanée Conti, Clos de Vougeot, Tâche Romanée, Chambertin, Musigny, Clos de Tart, Corton, and St Georges. The finest white Burgundies are found in much smaller quantities than the red in the communes of Montrachet and Meursault on the Côte de Beaune. More plentiful

and therefore better known in England are the white wines of Chablis outside the Côte d'Or in the Yonne dept. They are lighter than Montrachet and Meursault, and the best vineyards are Clos, Valmur, Vaudésir, Greuouilles, and Blanchot. The white Burgundies are dry wines. The Hospices de Beaune, alms-houses founded in 1443, depend for their revenue mainly on the sale of wines from the vineyards which have been bequeathed to them and the auction sale of their wines in Nov. may be said to fix the price of the Burgundy vintage. See S. Gwynn, *Burgundy*, 1934; M. R. Danguy, *Les Grands Vins de Bourgogne*, n.d.; H. Warner Allen, *Natural Red Wines*, 1951.

Burhanpur, tn in Madhya Pradesh, India, on the Tapti, close to the border of Bombay state. It was the cap. of the Deccan Prov. of the Mughal Empire from about AD 1596 to 1635.

Burhou, long, low is. lying W. of Alderney (q.v.), remarkable for its seabird life. There are two recently estab. gannetries.

Burial Acts. Burial is the ordinary mode of disposing of the body of a deceased person, but the Eng. law contains no prohibition of other methods, so that cremation was lawful even before the Cremation Act, 1902, was passed to regulate it. Nor does the law require burial in any particular place; nor, if elsewhere than in consecrated ground, is any particular ceremony prescribed; and burial in private ground is allowable provided such burial does not amount to a nuisance or infringe any statutory prohibition against burial in any particular locality. But all burials must be effected in a decent and orderly manner whether with or without a religious service; and disregard of this provision of the Burial Laws Amendment Act, 1880, is a misdemeanour. Under the Act of 1880 wilful obstruction of a burial or burial service, or the delivery of an address which is not part of the religious service permitted by the Act or by any lawful authority, is a misdemeanour. No one can by will or in any other way legally dispose of his body after death, and any such testamentary disposition may be ignored by his personal representatives; but he may effectively give directions regarding the anatomical examination of his body. In most pars. there is a burial-ground recognised as the par. churchyard, and this place constitutes the ordinary place of burial unless closed for burials by Order in Council, contravention of such order involving penalties under the Burial Act of 1855. There is no certainty as to what conditions constitute a par. churchyard, but consecration, whether actual or presumed, seems to be essential, and length of time during which use as a par. churchyard has prevailed is really the only conclusive evidence of a presumption apart from actual consecration. Every parishioner and inhab. of a par., and every person dying in the par., has the right to be buried in the par. churchyard or burial-ground, a right enforceable at common law as well as by

the eccles. court. The churchwardens and incumbent can, however, permit non-parishioners to be buried in their par. churchyards, subject to a possible injunction by the chancery div. if such interment amounts to actual inconvenience to the parishioners. The right of burial does not carry with it a right to have a monument erected nor a vault. Generally burial in an iron coffin will be regarded by the eccles. court as proper. Parishioners have no right to burial within the church. Burial in a church depends on the issue of a faculty in that behalf. Erecting a monument to the dead in a churchyard or church otherwise than under the authority of a faculty therefor is an offence cognisable by the eccles. court. Also, in the absence of a faculty, there is no exclusive right to the use of a particular part of the churchyard for burial purposes. By the eccles. canons it is the duty of every minister of the Church of England to perform the burial service over the body of any person not excluded from Christian burial, and otherwise entitled to burial in a churchyard; and refusal or failure to do so may entail suspension from his ministry and possibly an action for damages. Suicides, where a verdict of *felo de se* has been found, must be interred in the ordinary manner as if no such verdict had been returned; but the rites of Christian burial are not to be performed on interment, so that such burial may be without any religious service or with such ordinary Christian service other than that of the Church as the person having charge of the burial thinks fit. The common law allows no fee in respect of burial, but such fees may be due by immemorial custom or by statute. Fees alleged to be due by custom are commonly paid, and generally to the incumbent. Additional fees are paid for the erection of monuments or vaults. The Church Commissioners have power to fix tables of burial fees, and such tables must be registered in the diocesan registry. Burial-grounds are provided and maintained by burial boards and other authorities under the B. A., 1852 to 1906. The power of adopting these Acts for a poor law par. in an urb. dist. rests with the vestry, subject to the consent of the urb. authority, and the vestry can elect and control the burial board. Consent of urb. authorities is indispensable to the adoption of the B. A., and in some cases the sanction of the Ministry of Health is necessary. The burial board may also in some cases contract with cemetery owners, and the board has all necessary legal powers to acquire the requisite land. Urb. authorities, that is bor. councils and non-municipal urb. dist. councils, may exercise the functions of a burial board. In a rural par. the par. has exclusively the power to adopt the B. A. for the whole of the par. subject, if the par. is divided for eccles. purposes, to the consent of the Ministry of Health. In London, outside the City, the B. A. were declared by the London (Adoptive Acts) Scheme, 1900, to be in force in

certain metropolitan bors., while in the remaining bors. the Acts may be brought into force by Order in Council. The burial authorities for London are the metropolitan bor. councils, and in most cases they are not subject to the control of any vestry or similar body. The corporation of the City of London have the functions of a burial board for the city. Under the Public Health (Interments) Act, 1879, any urb. or rural dist. council may provide a cemetery and must if so required by the Ministry of Health. There are also statutory provisions for regularising the provision and maintenance of private cemeteries. These are usually owned by companies, who must provide for due registration of burials in the cemeteries owned by them. The powers of a burial authority to provide and maintain burial-grounds or cemeteries extend to and include the provision and maintenance of crematoria. *See also* CREMATION.

Burial Customs. From the earliest times customs and institutions have crystallised around the act of human sepulture, and in numerous instances these bear a striking similarity to one another, although widely separated by circumstances of time and geography. Many primitive peoples, for example, both prehistoric and modern, bury their dead in the foetal posture—that is, with knees drawn up to the chin, and placed upright in the grave dug to receive the body. Early burials in many countries bear traces of fire, and show that cremation after inhumation was resorted to. Later a rude effort at preservation of the corpse was attempted, as in prehistoric Egypt, where bitumen was smeared over the remains—the first attempt at mummification. In the evolution of B. C. we can distinctly trace various steps: eating of dead kindred, in order to partake of their virtues, pounded bones or ashes eaten by kinsmen, water in which the body was placed drunk by kinsmen, foetal burial, attempts at cremation, rude embalment, urn burial, aerial burial, inhumation in cists or stone coffins, modern sepulture. It is not advanced that these methods came into use one after another in any one sphere, but that this is an ideal course of their evolution culled from the mortuary customs of many lands and ages.

Europe. Palaeolithic burials are seldom encountered in Europe, and consisted chiefly in placing the remains in caves or similar retreats. It is very unlikely that any fixed custom attached to the disposal of remains until at least later Palaeolithic times. In Neolithic times foetal inhumation was probably customary, but in some centres cremation and burial in stone cists and urns prevailed. In later Neolithic times burial was in barrows or mounds. The long-skulled aborigines who preceded the Celts in Europe placing their dead in long barrows, whilst the Celts buried theirs in round barrows. Many of these barrows are honeycombed with graves, and yield rich results to the archaeologist, who usually discovers therein tools and weapons of the Bronze period. It was

customary for the early races of Europe, and indeed for primitive races all over the globe, to inter with their dead such articles as they considered would be necessary for their comfort in the world of shadows, and it is fortunate for modern archaeology that primitive graves have yielded these in abundance. Graves of the Bronze Age all over Europe bear a great resemblance to one another. In Greece and Rome cremation was resorted to. Burials of the early Christian period were usually made in catacombs, such as those at Rome, where the bodies were placed in niches in the walls, and their resting-places decorated with paintings and sculpture. Outside of the Roman sphere of influence burial in Europe retained its primitive character, the offering of objects to the *manes* of the deceased being almost universal. With the introduction of Christianity, however, sepulture in consecrated ground became and continues to be the rule among Christian people. (*See* BURIAL ACTS.) Propitiation of the *manes* of the deceased is seen in Europe in the custom which until comparatively recently obtained in Northumberland of sacrificing domestic animals prior to the burial of the dead, and even a trace of human sacrifice may be preserved in the custom at highland funerals of the friends of the dead person fighting until blood was drawn—an example of the substitution of the part for the whole. Even the practice of the eating of dead kindred is typified in parts of Britain by the custom of 'sin-eating,' in which a paid person devours a piece of bread and cheese or a cake and drinks a mug of ale over the coffined body of the dead. Until the beginning of the 19th cent. the burial of a gipsy chief was often accompanied by the sacrifice of his horse, either as a propitiation to his spirit, or because it was regarded as essential to his comfort in the next world.

Asia. Burial in early Palestine appears to have been effected in caves and similar places, where the corpse would not be readily got at by beasts of prey. In Muslim countries inhumation in cemeteries is common, and the turban cut in stone, the symbol of the Muslim faith, is usually found upon the graves. In India the Parsees expose the dead on the summits of towers, where they are devoured by birds of prey. The splendid tombs of Hindustan are eloquent witnesses of the manner of disposing of the dead which obtained among those of the Brahman religion. In China, where ancestor worship is the national religion, a paper house is constructed for the soul of the departed about 10 ft high by 12 ft deep. This contains various apartments, and a paper image of the dead is placed inside it, with paper models of food and all necessities. The deceased is afterwards worshipped by his children. In China mourning materials are white. Throughout Asia customs of sepulture differ but in minor details, and in Japan, Burma, Korea, and the Mongolian peninsulas consist of burial according to the rites of ceremonial Buddhism.

America. In America many of the customs alluded to as prevalent in prehistoric times are found. Thus interment in mounds and stone cists or caves is frequent, but tribal custom often dictates methods of sepulture which are strictly adhered to. Thus the Mohawks formerly made a large round hole in which the body was placed in a squatting posture, after which it was covered with timber and earth. Some Carolina tribes placed the corpse on a cane hurdle and deposited it in an outhouse for a day. It was then wrapped in cane matting or rushes and deposited in a grave, logs or stone slabs being placed over it so that the earth might not fall on the body. The Creeks and Seminoles of Florida generally buried their dead in a circular pit about 4 ft deep, the corpse with a blanket or cloth wrapped about it being placed in a sitting posture, the legs bent under and tied together. Wooden vaults are also sometimes found, as are dome-shaped stone vaults. Sometimes clay was spread over the corpse and fire applied before burial. Sometimes even mummification was practised. Aerial sepulture in trees and upon raised platforms, burial in lodges, in canoes and urns, are other Amer. modes of disposing of the dead. In S. America very similar methods are in vogue, the habit of scraping the bones and hanging them up in baskets in trees or at the doors of lodges being very common. Mummification was practised in anct. Peru.

Africa. The funerary customs of Egypt are too well known to require lengthy description. (See EMBALMING.) There were 3 modes of mummification, undertaken by a special caste who were abhorrent to the rest of the pop., namely: entire embalmment; partial embalmment; and a mere smearing over of the corpse with bitumen. The mummy was placed in a rock-cut tomb, surrounded with paintings representing objects supposed to be useful to it, and *ushobtiu* figurines which represented servants to attend to its requirements in Amenti or Hades. Most tribes of Africa, if cannibals, often devour the corpse or a portion of it, and if non-cannibal bury it. Some tribes, however, merely take the body into the bush or forest and leave it to be devoured by wild animals.

In Polynesia until recently it was customary to devour a dead relative in order that his virtues might enter the bodies of his descendants. Among the Eskimos burial by canoe is often practised: and in Australia the nomad tribes either leave the body to rot, or bury it in the ordinary manner. See Sir T. Browne, *Hydrotophia, Urne Buriall*, 1658; V. Schulze, *De christianorum veterum rebus sepulchralibus*, 1879; J. Ferguson, *History of Indian and Eastern Architecture*, 1910; G. Quell, *Die Auffassung des Todes in Israel*, 1925; B. S. Puckle, *Funerary Customs*, 1928; E. Bendaun, *Death Customs: an Analytical Study of Burial Rites*, 1930; Sir J. G. Fraser, *Garnered Sheaves*, 1931; L. V. Grinsell, *Ancient Burial Mounds of England*, 1936.

Buridan, Jean (c. 1297–after 1368), Fr.

philosopher. A native of Artois, he studied under Wm of Occam in Paris, where he later became prof. of philosophy, and, in 1327, rector. Under an ordinance of Louis XI the reading of his works was prohibited. His philosophy is based upon the doctrines of his teacher Occam. His ideas in connection with free will, contained in his comments on Aristotle's *Ethics*, bear a resemblance to Locke's.

Burigny, Jean L'Évesque de (1692–1785), Fr. philosophical writer remarkable for his extraordinary versatility and the volume of his pub., as well as for his erudition. Among his works are *Histoire de la philosophie païenne*, 1724, biographies of Grotius and Erasmus, 1750 and 1757, a treatise on papal authority, 1720, and a *Histoire des révolutions de l'empire de Constantinople*, 1749. He was made member of the *Académie des inscriptions et belles-lettres* in 1750.

Burins, see CHISELS.

Buriti Palm, or *Mauritia vinifera*, is a handsome species of Palmaceae found in S. America, especially in Brazil. It is one of the loftiest of palms, growing to a height of 100 to 120 ft, and it yields many useful products. Among these are a pulp from the fruits which is converted into a sweetmeat, a juice which makes a delicious beverage, and leaf-fibre used for making mats.

Burkburnett, city in Wichita co., Texas, U.S.A., the centre of a large oilfield. Pop. 4600.

Burke, Edmund (1729–97), statesman, b. in Dublin, where his father was at this time practising as an attorney. His father was a Protestant, a faith in which Edmund himself was brought up; but his mother belonged to the Rom. Catholic faith, and this, together with the fact that his earliest schoolmaster belonged to the Society of Friends, possibly gave him the foundations of the toleration which he later applied to religious questions. In 1748 he graduated from Trinity College, Dublin, and 2 years later came to London to study law. In 1755 his attitude towards law and his desultory career so displeased his father that he stopped his allowance. B. therefore set himself to work to gain a living for himself. In 1756 his first pub. works appeared: *A Vindication of Natural Society*, a satire on the views of Bolingbroke, and *Philosophical Inquiry into the Origin of our Ideas on the Sublime and the Beautiful*. In the same year B. married Jane Nugent. They had 2 sons: Richard, b. in 1758, and Christopher, who d. in infancy. B.'s mind was now turning from abstract speculation to the solution of the political and economic problems of the time. His *Abridgment of the History of England* was partially printed during 1757, but was not pub. in full until after his death. In 1758, when the events of the Seven Years War were just beginning to turn in England's favour, B. put forward the idea of the *Annual Register*, a pub. which was to give a review of the chief events and movements of the year. The first vol. of this work appeared in 1759, and B.'s active

connection with the pub. continued until 1788, and probably even after that date he had much to do with it. He gradually came to be well known in society, and in 1765 he was appointed private secretary to the Marquess of Rockingham, who had just been made Prime Minister. In 1765 he was returned to Parliament for Wendover, and in Jan. of the following year, 1766, he took his seat and began his career as an active politician. He spoke on the Amer. question and against his party when he made his maiden speech about a fortnight later. He speedily gained for himself a reputation as a parl. speaker, and although his voice was harsh and his actions awkward, he became one of the

EDMUND BURKE

An engraving after a painting by
Sir Joshua Reynolds.

most eloquent and powerful speakers in the House. In 1766 the Rockingham ministry was overthrown, and B. spent a short time in Ireland. On his return he was offered a post in the administration which the Earl of Chatham was forming, but declined to leave his old leader, and became during the session one of the leading members of the opposition. In 1769 he pub. *Observations on a late Publication on the Present State of the Nation*, and made a brilliant criticism of the policy of Grenville. He was much absorbed during the year with questions which touched the constitution, and was against the policy which the House adopted towards the Wilkes v. Luttrell election. In 1770 appeared his famous *Thoughts on the Present Discontents*, in which he attacked the existing system of gov., with its basis in court patronage. He criticised the policy of the House towards the printing of reports of the proceedings, and was himself bitterly attacked, being without the slightest foundation charged with the authorship of the *Letters of Junius*. In 1774 began the famous

alliance between B. and Charles James Fox (q.v.), who, a youth of 25 at this time, had been won over by the influence of B. and always regarded him as his political master. From 1774 until the outbreak of war in 1775 he was continually striving for conciliation with the Amer. colonies. He was elected member for Bristol in this year, and introduced his famous resolutions for conciliation. The next few years were occupied with plans for economic reform and with pleadings for Catholic relief. His known advocacy of Catholic relief measures roused the anger of the people of London: nevertheless in 1781 he was re-elected to the Commons as M.P. for Malton. On the formation of the next Rockingham ministry he was not given Cabinet rank, but he became paymaster of the forces, an office which he tried to reform. In 1782 he lost his friend and leader Rockingham. The Shelburne administration was overthrown by the unnatural coalition of North and Fox, a coalition which B. approved. He accepted again the office of paymaster of the forces under the Portland ministry and gave his attention to the question of India, he being to a great extent responsible for the drawing up of Fox's India Bill. The accession of Pitt to power threw great obstacles in his way, but he determined to bring Hastings to justice for his alleged misdeeds. At first his chance of success seemed small, but the opposition took the question up, and ultimately the impeachment moved by Fox was accepted by Pitt. In 1788 he began his famous speech on the impeachment, a speech which he concluded with a brilliant peroration; and his efforts only ended with Hastings's acquittal in 1795. In 1789, on the outbreak of the Fr. Revolution, B. was asked his ideas on the subject. His answer was practically the *Reflections on the Revolution*, a book which saw nothing but evil in the outbreak of a disordered mob against the rule of law and order. The attack of the 'swinish multitude' could not be reconciled with his love of order, in which alone he saw liberty. His book created a great stir; it gave rise to at least 2 famous replies: *The Rights of Man* (Paine) and *Vindiciae Gallicae* (Mackintosh). It called forth the congratulations of the kingdom, of the king, and of many of the sovereigns of Europe. But the Fr. Revolution put an end to B.'s love of toleration; henceforth in projected reform he saw only revolution, and he even opposed the repeal of the Test and Corporation Acts. His opinions on the revolution, so widely different from those of his friend Fox, led to the withdrawal of B. from the party he had so long supported, and to a breach of his friendship with Fox. After his retirement from his party he set himself to lead Whig thought back to the principles of 1688, and pub. his *Appeal from the New to the Old Whigs*. He took little part in parl. life during the next session, and when he did, opposed toleration. During the remaining years he continued to criticise what he conceived to be the principles of the revolution. In 1795 the impeachment of

Hastings ended, and in July of that year B. retired from Parliament. His retirement was made easier for him by the grant of a pension, but the death of his only surviving son just after his election to Parliament in succession to his father broke his heart, and he retired to Beaconsfield, a shattered man. In 1796 he began the pub. of the *Letters on a Regicide Peace*, but they were greatly delayed owing to his frequent and increasing illness, and he d. the following year. Though his political influence was enormous in his own day, B. is perhaps best remembered for his fine prose-writing, which has rarely been equalled. See Viscount Morley, *Edmund Burke, an Historical Study*, 1893; J. McCunn, *Political Philosophy of Burke*, 1913; Sir H. J. C. Grierson, 'Edmund Burke,' in *Cambridge History of English Literature*, vol. xi, 1914; B. Newman, *Edmund Burke*, 1927; D. C. Bryant, *Edmund Burke and his Literary Friends*, 1939; E. E. Reynolds, *Edmund Burke: Christian Statesman*, 1948.

Burke, Sir John Bernard (1814-92), Brit. genealogist; b. in London, he received his education there and in France. His father, John B. (1787-1818), instituted the work which has since been pub. at intervals, called *Burke's Peerage*, besides compiling an *Encyclopaedia of Heraldry*. B. himself was appointed Ulster king-of-arms in 1853, and was knighted in the following year. He ed. *Burke's Peerage* till his death, besides producing, among other works, *Anecdotes of the Aristocracy*, 1849, *Vicissitudes of Families*, 1859-63, and *The Book of Precedence*, 1881.

Burke, Kenneth (1897-), Amer. literary critic, b. Pittsburgh. Educ. at Ohio State Univ. and Columbia, he was music critic of the *Dial* from 1927 to 1929, and of the *Nation* from 1934 to 1936. In 1928 he won the *Dial* award of \$2000 for distinguished service to Amer. literature, and in 1950 he was visiting prof. of English at Chicago. His works on the psychology of literary criticism are of such an advanced type that he has been called 'the critics' critic.' Among his books are *Permanence and Change*, 1935, *Attitudes Towards History*, 1937, *The Philosophy of Literary Form*, 1941, *A Grammar of Motives*, 1945, and *A Rhetoric of Motives*, 1950.

Burke, Robert O'Hara (1820-61), explorer of Australia. A native of Ireland, he was educ. in Belgium, and became at the age of 20 a captain in the Austrian Army. He joined the Royal Irish Constabulary in 1848, and in 1853 he sailed to Melbourne, where he became a member of the police. He led an expedition into the interior of Australia in 1860, which ended tragically. Dissensions caused fatal delays to an expected relief party, and B., with Wills and Gray, 2 of his companions, perished miserably, only one man, King, surviving to tell the tale.

Burke, Thomas (1886-1945), novelist and descriptive writer, b. London. Left an orphan at an early age, he worked in an office, then in a second-hand bookshop, and after that for a literary agent. He first appeared in print when he was 16, and

eventually became known as the supreme interpreter of London's East End and Chinatown. His descriptive works include *Nights in Town*, 1915, *Out and About*, 1919, *The Outer Circle*, 1921, *The London Spy*, 1922, *The Real East End*, 1932, and *London in My Times*, 1934. He was equally successful as a writer of short stories, collections of which are *Limehouse Nights*, 1916, *Whispering Windows*, 1920, and *The Pleasantries of Old Quong*, 1931. He also pub. sev. books of verse, including *Pavements and Pastures*, 1912, and *London Lamps*, 1917. Among his novels are *Murder at Elstree*, 1936, *Abduction*, 1939, and the autobiographical *Wind and the Rain*, 1924.

Burke, William (1792-1829), Irish criminal. Failure in a variety of trades led to his adoption of body-snatching as a livelihood. In co-operation with a man Hare, a lodging-house keeper, he sold the body of a fellow loafer to Dr Robert Knox of Edinburgh for £7 10s. This was his first attempt. Later the 2 men perpetrated a series of murders by means of suffocation, afterwards disposing of the bodies to anatomists, chief among them being Dr Knox. By the time the sixteenth murder had been committed suspicion culminated in their arrest, and on queen's evidence from Hare, B. was hanged in 1829. The slang term 'to burke' signifies the process of suffocation skillfully arranged to leave no signs of violence, and hence to suppress quietly. See W. Roughead, *Burke and Hare*, 1948, and Dylan Thomas, *The Doctor and the Devils*, 1953.

Burke's Peerage, see under BURKE, SIR JOHN BERNARD AND PRECEDENCE.

Burkhan-Budda Mountains, range of the Kuen-lun system, Tibet, which is largely composed of schists and Archaean crystalline rocks, with Palaeozoic sediments. It runs in a WNW. to ESE. direction, keeping between 96° and 98° E. The average elevation is over 16,000 ft, whilst Prychevalski has an altitude of 17,000 ft.

Burkhard, Willy (1900-55), Swiss composer, studied at Bern, Munich, and Paris. From 1928 he taught at the Conservatoire of Bern and from 1942, after sev. years' retirement for his health, at that of Zürich. His numerous works include the opera *Die schwarze Spinne* (after Gottlieb); choral music, including the oratorios *Das Gesicht Jesajas* and *Das Jahr*; 2 symphonies and other orchestral works; sev. concertos; chamber, pianoforte, and organ music; songs, etc.

Burkitt, William (1650-1703), parson and commentator, b. Suffolk; educ. at Stowmarket and Cambridge grammar schools and at Pembroke Hall. After leaving the univ. he became chaplain of Bilton Hall; later (c. 1672), rector at Milden; in 1692 vicar of Dedham, Essex; preached against Baptists, 1691; helped Fr. Protestant exiles, 1687-92, and showed great zeal for foreign missions. Among his works are *Argumentative and Practical Discourse on Infant Baptism* (reprinted 1722), *Poor Man's Help and Young Man's Guide* (32nd ed. *Help and Guide to*

Chris an Families, 1764), *Explanatory Notes on the Four Evangelists, Expository Notes on New Testament*. His works were frequently reprinted and abridged. See Parkhurst's life, 1704; Calamy, *Account*, 1713; Palmer, *Nonconformist Memorial*, 1803.

Burlamaqui, Jean Jacques (1694–1748), Swiss writer on natural law. After travelling in France and England, he became prof. of law, and later, when his health gave way, member of the council of state at Geneva. His belief in a rational utilitarianism is expressed in the lucid, unaffected writing of his *Principes du droit naturel*, 1747, and his *Principes du droit politique*, 1751.

Burleigh, Bennet (c. 1840–1914), Brit. war correspondent, was on the staff of the *Daily Telegraph* from 1882. His early years are wrapped in mystery. He was probably b. in Scotland, for he said he left school in Glasgow during the Amer. Civil War, in which he fought for the Confederates and was twice sentenced to death. Throughout the Egyptian war he was at the front, at first as the *Central News* correspondent, and then as the representative of the *Daily Telegraph*. Besides accompanying the desert column in 1884, he went on the Ashanti and Atbara expeditions. Finally he was at the front during the S. African, Somali, Russo-Jap., and Balkan wars. Thus in his various pubs. he was able to draw on a wide experience, the best of these being *On the Road to Omdurman*, 1898.

Burleigh, or Burghley, William Cecil, 1st Baron (1520–98), statesman, b. Bourne, in Lincs, the eldest son of Richard Cecil, a rich squire of Burghley, Northants. He was educ. at St John's College, Cambridge, where he met Roger Ascham and John Cheke. At the age of 21 he married Cheke's sister, by whom he had Thomas, an only child, the future Earl of Exeter. In 1544 Mary Cheke d., and he married in 1545 a daughter of Sir Anthony Cooke. About 1548 B. became private secretary to Somerset, and was sent to the Tower in 1549 by order of Somerset's opponents, but in Jan. of the following year was released upon oath. He subsequently won his way back to favour and in 1551 he was knighted. During Mary's reign B. outwardly conformed to Catholicism, but even before Mary's death he had estab. an intimate understanding with the Princess Elizabeth, and had gained her complete confidence. On her accession, Elizabeth made him her secretary of state; from 1572 he was lord high treasurer. He was created baron B. in 1571.

B.'s influence on Elizabethan policy was enormous, but was probably never greater than during the first 10 years of Elizabeth's reign. He worked in the queen's service, loyally attempting to maintain financial stability at home, and to strengthen England's external position by supporting Protestant movements in Scotland, France, and the Low Countries, a policy in which he did not always have Elizabeth's full support. B. is notable as the superb administrator of Elizabethan England; but it seems clear that though

he had the queen's absolute confidence, he never dominated her, though his influence probably persuaded her to take a more positively Protestant line on occasion—purely on grounds of political expediency—than she might otherwise have done. See F. P. Barnard, *William Cecil, Lord Burghley*, 1904, and C. Read, *Mr Secretary Cecil and Queen Elizabeth*, 1955.

Burlesque (from It. *burla*, a jest) is applied to writing, acting, speaking, and to drawing, where it is more often called 'caricature.' It consists in distorting or exaggerating a work of art, the object being to excite ridicule. Thus it throws into strong relief peculiarities and affectations and lays stress on all incongruities and oddities, and since it is not malicious, as satire often is, it is used to expose bombast and insincere rhetoric, sham virtues, and all hypocrisies. Above all, it loves to rouse laughter by discord between subject and style, to make 'gods speak like common men, and common men like gods.' Thus all mock-heroic poetry, such as Butler's inimitable *Hudibras*, Pope's *Rape of the Lock*, and many of the smaller poems of Gray and Cowper, where rabbits and birds and cats are endowed with the sense—and folly—of human beings, are also B.s. What may be styled 'animal' B.s. have been popular from the time of Chaucer; indeed his *Nun's Priest's Tale*, where Chauntecleer, the cock, and Pertelote, his wife, discuss the value of ominous dreams after the manner of Gk sages, has never been surpassed. Most people would agree in giving to Aristophanes the highest place among B. writers. Even to-day the splendid fun of his representations of Socrates up in a balloon studying the heavens, or of the demagogue Cleon as a sausage-seller, can be appreciated by every classical student, and how much more monstrous must the B. have appeared to the actual contemporaries of Socrates and Cleon, who could enjoy at once the piquancy of many an allusion lost to-day. The It. word originates in the *Opere burlesche* of Berni, 1497–1535. In France Scarron made a clever mock imitation in his *Virgile travesti*, 1648–53, and throughout Louis XIV's reign travesties of the epics of antiquity were fashionable. In *Don Quixote* the ideals of chivalry are ludicrously misrepresented through the adventures of Don Quixote, the enthusiast, and Sancho Panza, the apostle of common sense, whilst Chaucer, in his *Rime of Sir Thopas*, gently scoffs at the interminable and tiresome romances of his day, and Racine, in his one comedy, *Les Plaideurs*, burlesques judicial ineptitude. Buckingham's *Rehearsal*, Gay's *Beggar's Opera*, Fielding's *Joseph Andrews*, G. B. Shaw's *Androcles and the Lion*, and the operas of Gilbert and Sullivan, may also be cited as illustrations of B.

Burlingame, Anson (1820–70), Amer. diplomat. He was a native of New Berlin, New York. He graduated at the Harvard Law School in 1846, and subsequently practised successfully at Boston. His speeches in support of the Free Soil

party (q.v.) attracted considerable attention. He was a member of the Massachusetts Senate, 1853-4, and of the U.S. House of Representatives, 1855-61. His advocacy of Hungary's independence evoked a hostile Austrian attitude to his appointment as minister at Vienna. He was transferred to China by Lincoln as a result. His activities produced the 'B.' treaty, in which China's right of dominion over all her ter. was acknowledged.

Burlington, Earls of, see BOYLE, RICHARD.

Burlington (Yorks), see BRIDLINGTON.

Burlington: 1. City of New Jersey, U.S.A. It is situated on the Delaware R., 18 m. N.E. of Philadelphia. Its pop. is 12,050. It manufs. silk, textiles, shoes, metal products, canned goods, and type-writer ribbons, and is the shipping centre for an agric. region. It has St Mary's Church (1703); the first colonial money was printed here by Benjamin Franklin (1726); the first New Jersey newspaper was printed here (1777). James Fenimore Cooper was b. here. The B. Society library, estab. 1757, is one of the oldest in America, and the town owes its settlement to Eng. Quakers, in 1677.

2. City of Chittenden co., Vermont, U.S.A. It is placed on the E. coast of Lake Champlain, and is the largest town in the state. Its pop. is 33,155. Its situation gives it popularity as a summer resort. Its manufs. include maple sugar and other food products, textiles, wood and metal products, tools, electrical machinery, and brush fibres; it also has printing and granite and talc quarries, and it is a shipping centre and port of entry. B. is the seat of the univ. of Vermont and Trinity College. There is a Rom. Catholic cathedral, and the grave of Ethan Allen is here.

3. City and riv. port, cap. of Des Moines co., Iowa, U.S.A., on Mississippi R. (bridged), 150 m. ESE. of Des Moines, with railway shops and ironworks. Varied manufs. include baskets, desks, caskets, harvest combines, fertilisers, and soap. The ann. Tri-State Fair is held here. Pop. 30,600.

4. City in Alamance co., N. Carolina, U.S.A. It has important manufs. of hosiery and textiles, and is a weaving, dyeing, and finishing centre. It also manufs. radio parts, foundry products, coffins, and paper boxes, and there are lumber mills and tobacco warehouses. Pop. 24,560.

Burlington House was built on the N. side of Piccadilly, 1665-8. In 1854 the Gov. paid £140,000 for the old house, which Richard Boyle, Earl of Burlington, had built. The Royal Academy acquired a lease of it and of a garden behind in 1867, and 2 years later opened exhibition galleries and schools over the garden site. The new building in the It. Renaissance style, erected 1869-72, now provides accommodation for the examining body of London Univ., and for the following societies: Royal, Astronomical, Antiquarian, Linnean, Geological, and Chemical. The Gibson statuary and diploma works are stored in the upper

storey, whilst the Royal Academy holds its ann. exhibition and banquet here in premises consisting of 13 halls, a theatre, and a central octagon, the total cost of which was £150,000.

Burlus Lake, shallow lagoon, 38 m. long, in the N. of the delta of the Nile, Egypt, with which it is connected by canals. One channel also connects it with the Mediterranean.

Burma, Union of, independent rep. in SE. Asia, made up of the 5 constituent states of Kachin, Shan, Kayah, Karen, the Special Div. of the Chins, and B. proper, comprising the 7 divs. of Mandalay, Sagaing, Magwo, Arakan, Tenasserim, Pegu, and Irawadi. Roughly 1200 m. from N. to S. and 575 m. at its broadest from E. to W., B. is bounded on the N. by Tibet, on the E. by China, Laos, and Thailand, on the S. by Thailand and the Andaman Sea, and on the W. by the Bay of Bengal, E. Pakistan, and India (Assam). The coastline of B. is 1200 m., from the Naaf estuary near the borders of E. Pakistan to Victoria Point in the S.

Topography. Physically, the area comprises ranges of hills which are in the form of a horseshoe running from the Arakan Yomas and the W. Hills N. to the mts bordering Tibet and Yunnan, and S. to the Shan Plateau and the hills of the Tenasserim. The valleys of the rivs. Irawadi and Sittang nestle within it, separated by the hills called the Pegu Yomas. The Arakan and Tenasserim regions are maritime coastal strips. Most of the area is therefore hilly and rugged with mts in places rising to 12,000-15,000 ft, especially in the Patkoi Range (in the W. Hills region), and in the N. Kachin State area close to the borders of Tibet and China. The chief riv. is the Irawadi, whose source is formed by the Mekha and Malekha Rs which flow down from the mts of Tibet. The Irawadi flows for over 1000 m. down to the Bay of Bengal. It is navigable for the whole year as far as Bhamo, 900 m. from the sea. Its main trib., the Chindwin, is navigable up to Homalin, about 300 m. from the confluence of the 2 rivs. The Irawadi flows through the most fertile parts of B. and is the country's main highway. The 2 other main rivs., the Salween and the Sittang, are navigable only for short distances from their estuaries, but locally by small riv. craft. The rivs. and streams of B. are important communication routes, and numerous craft, large and small, motor and other, ply on every navigable stretch of water. The unnavigable rivs. and streams, notably the Sittang and Salween Rs, are also put to good use as timber chutes, the logs from the valuable forests further upstream being floated down to be collected at the important milling centres. Hydro-electric schemes have also been planned, and some of them are in process of execution. The waters of the rivs. rise during the rainy season, the banks being flooded to a distance of sev. m. on the Irawadi. Most of the houses in the vils. along the riv. are therefore built on stilts, and for sev.

months in the year some of these vils. are completely isolated except from access by riv. craft.

Climate. The climate and rainfall vary considerably in different parts of the country, the rainfall ranging from over 200 in. mean yearly rainfall in N. Arakan and N. Tenasserim to less than 30 in. in the 'Dry Zone' of Central B. Most of the rain falls during the rainy season (from mid May to mid Oct.), when the SW. monsoon blows, bringing the rain clouds. There are 3 seasons, the rainy, the hot, and the cool. During the hot season (Feb.-May), the temp. rises to about 100° F. in the delta, of the Irawadi, and temps. of 104-105° F. have been recorded in the Mandalay area, which is in the centre of the 'Dry Zone.' During the cool season (from Nov. to the end of Jan.) the temp. in the plains of S. B. falls to within 60° and 70°, and in Central B. to less than 60°. It is cooler throughout the years in the hilly regions.

Agriculture and forestry. B. is essentially an agric. country, and the main single commodity exported is rice. One of the largest producers and exporters of rice in the world, B. exported in 1955-6 about 1.9 million tons of rice, the total acreage under rice being 10,400,000 ac. The main rice-producing area is the Irawadi delta with 6,500,000 ac. under rice, the climate, rainfall, and soil being very favourable for this crop. The main source of income of the country, the storage and export of rice, is controlled and operated by the gov. The second most important commodity exported is timber, mainly teak, 57,000 tons being exported in 1956. 145,000 sq. m. of Burma's total land area of 261,760 sq. m., (or 57 per cent) are covered by forests which produce valuable timber and other products. Of the various types of forests the most important is the mixed deciduous forest, which is at its best along the Pegu Yoma and in the Mu valley of Upper B. These forests contain the timbers of primary importance—teak (*Tectona grandis*), the world's finest general utility timber, pyinkado (*Xylia dolabriformis*), padauk (*Pterocarpus macrocarpus*), which are the source of much the greater part of the forest revenue of the country. Teak trees here are seen sometimes with a girth of 25 ft and a height of 120 ft from the ground to the lowest branch. In all the qualities that distinguish a good timber—resistance to shock, strength as a beam, weight, freedom from movement—it compares favourably with any of the generally accepted best timbers of the world, though in one particular quality, resistance to shock, it has to give way to ash and hickory and to one Burmese timber, yom (*Anogeissus*) (see also TEAK). Next to teak, pyinkado is probably of the next importance in the royalty it pays to the gov. and is of great value as being an extremely heavy and strong timber for railway sleepers and other heavy construction. It is a beautiful tree with a reddish flaky bark and shiny leaves rather like large pea leaves and a flower like an acacia. The tree flowers in the hot

weather and emits an agreeable smell. Padauk is a tree whose wood is used for gun-carriages. It has very sweet-scented little orange flowers. Kanyin, one of the big dipterocarps (*Dipterocarpus datus*), is a very fine tree, with a good timber known as gurjan. Thitya (*Shorea obtusa*), ingyin (*Pentacme suavis*), tankkyan (*Terminalia tomentosa*), pyinma (*Lagerstroemia flos-reginae*) are all timbers of importance not only to the country but to the world. There is in certain places a potentially most important type of forest not mentioned above—the practically pure bamboo forest of the Arakan Yoma. The importance of the bamboo (*Melocanna bambusoides*), called by the Burmese *wa*, arises from the fact that its non-clumping habit of growth has prevented the successful estab. of any tree species over many hundreds of sq. m. in Arakan and thereby formed very large areas of pure bamboo forest, potentially a source of great quantities of paper pulp. There are also many sq. m. of *Dipterocarpus tuberculatus* forest, corresponding closely to the sal forests of India. The timber is called *in* in Burmese, and is usually conjoined with that of another dipterocarp, kanyin. This latter species is extremely resistant to the teredo or marine borer, and is therefore of great use when treated for the purpose of wharf piling. Another type of forest peculiar to B. is the indaing or deciduous dipterocarp forest, normally found in lateritic and sandy soils and seen at its best in the country N. of Mandalay and E. of the Irawadi around the mouth of the Shweli R. (see address by D. J. Atkinson, 'Forests and Forestry in Burma,' *Journal of the Royal Society of Arts*, 2 July 1948). The different forest products also include oils, varnish, tannin, gums, and rubber. The teak of the forests is controlled by the State, which pays much attention to the scientific culture of this valuable tree. The area of reserved forestry is over 34,687 sq. m.

Fauna. The wild animals of B. include the elephant, rhinoceros, tapir, buffalo, bison, deer, hog, cattle, tiger, leopard, and bear. Pythons and cobras are found in great numbers, while that deadliest of B. reptiles, the hamadryad, is occasionally encountered. An extraordinary profusion of beautiful and varied birds forms a striking feature of the country, and an equal richness marks the fish supply. In the caves of the Mergui Archipelago are procured the edible birds' nests which form one of the delicacies of Chinese diet, while turtle eggs are also collected.

Minerals. The mineral deposits of B. comprise gold in riv. sand in small quantities (silver is found in the Shan States, but production is at present curtailed); tungsten ore; iron, copper, and lead, tin in the Mergui dist. in S. Tenasserim; petroleum by the Irawadi. Jade and amber are also worked, though the former is the more successful; good white marble is quarried at Mandalay, where it is used in the ornaments of Buddhist temples; coal is mined at places in Upper B., especially at Lalewa on the R. Chindwin,

limestone is procurable, and is burned in large quantities. At Mogok the finest rubies in the world are found.

Communications. There are 13,000 m. of motorable road and 2700 m. of railway; new constructions are being carried out. The Union of B. Airways also maintain regular internal service to over 30 tns in various parts of B. in addition to external services.

Population. There are many different races in B., but the main races are the Burmese (including the Arakanese), the Chins, Karens, Kachins, Kayahs, Mons, and Shans; of these the Burmese are the most numerous, numbering about 14 million. The people are of Mongoloid stock and are allied to the other races of E. Asia. The pop. of B. was about 19 million in 1953. Out of these, it is estimated that 75 per cent are engaged in agriculture, the crops grown, besides rice, being tobacco, millet, cotton, sesame, and ground-nuts. The cap. is Rangoon, a city of 737,000 souls (1953), and the second city is Mandalay with 201,000, (1953).

Religion. The majority of the people of B. are Buddhists of the Theravada or Hinaya School, the form of religion also shared by the people of Ceylon, Thailand, Cambodia, and Laos. Buddhism (*see* BUDDHA AND BUDDHISM) has a very great influence on the everyday life of the people, and B. can be said to be one of the main seats of Buddhist studies and learning in the world. There are also many Muslims, Christians, and Hindus among the citizens of B. In May 1954 the sixth Buddhist Council or Synod was convened near Rangoon. (The fifth Council was also held in B. at Mandalay in 1870, by King Mindon.) Leading Buddhists from many countries attended it.

Education. In education, B. compares favourably with the other countries of the E. The rate of literacy is about 60 per cent and there were 10,861 state schools with a total number of 1.8 million pupils in 1956, besides the numerous private schools and the monastic schools which had formerly been the mainstays of education in the old days, and which are still an important factor. For higher education there are the following institutions: the Univ. of Rangoon with an ann. enrolment of over 7000 students a year; the Univ. College, Mandalay, a degree college with about 2000 students, the Intermediate colleges of Moulmein, Kyaukpadaung, Magwe, Yankin, and Hteedon, the last two being in Rangoon; the Engineering College, Rangoon; the State Technical Institute, Insein; State Technical Institute, Mandalay; State Teachers' Training Colleges and Institutes at Rangoon, Mandalay, Moulmein, Meiktila, and Kyaukpadaung; and the Univ. for Adult Education at Rangoon. There is also the Mass Education Scheme. Besides these, there are the Forest School at Maymye, the Veterinary School, Insein, the Agriculture College, Mandalay, and other vocational training schools. There are medical faculties at the Univ. of Rangoon and the Univ. College, Mandalay. In the cultural

sphere, there are the State schools of Music and Drama, Rangoon, Fine Arts, Rangoon, and the Fine Arts, Music, and Drama, Mandalay.

Position of women. Burmese women have a unique position among the women of the E., and indeed of the world. Totally emancipated by ancient tradition, they have enjoyed equal rights under customary law and suffrage is universal. Women participate in public affairs, and can be found in all the professions and the armed forces.

History. The original inhab. of B. are believed to have been of Austro-Asiatic stock, displaced by successive migrations from Central Asia. The Pyus, of Tibeto-Burman stock, early occupied the country with centres at Sriksetra (Old Prome) and Halingyi. Some of their writings date from the 7th cent. AD. The Mons, who are believed to have come down from Central Asia, founded the kingdom of Dvarvati in the Menam valley. In the 7th cent. AD the Mons of the Irawadi valley and Tenasserim came under the sway of that kingdom. There was also the Mon kingdom of Thulun in Lower B. The Burmans came to B. probably from the Kansu area. They entered B. through the N'mai-Kha and the Salween about the 9th cent. AD and settled in the Kyaukse area. The Chins, Kachins, and Karens probably entered B. at about the same time as the Burmans. The Shans, who belonged to the Tai family, arrived between the 11th and 13th cents. They came from the Tai kingdom of Nanchao in modern Yunnan. The movement of S. was accelerated by the conquest of Nanchao by Kublai Khan in 1253.

At first B. was parcelled out into a number of small principalities. Anawrahta (1044?-1077?) unified B. politically by conquering the Mon kingdom of Thulun. His cap. was at Pagan. The Mon language and culture was adopted and was gradually replaced by Burmese, starting from the last quarter of the 12th cent. Hinayana Buddhism was introduced and Pagan became a religious centre with its numerous beautiful and imposing shrines, many of which are still in perfect condition to-day. The kingdom of Pagan lasted until 1287, when the cap. was sacked by the Mongols. The country once again broke up into small states with the N. ones owing some sort of allegiance to the Mongols.

The whole of N. and Central B. was parcelled out into small principalities ruled by the great Shan chiefs who were frequently at war with one another. In the S., B. was broken up into small Mon kingdoms also at war with one another and with the Shans in the N. This confused state of affairs ended in the latter part of the 14th cent. with the coming into power of 2 main states, one in N. B. with the cap. at Ava, and the other in S. B. with the cap. at Pegu. Razadarit, King of Pegu, who ascended the throne in 1385, tried to unify the country again but without success, and a series of civil wars broke out lasting for a cent. or so. This troubled period is notable for the

great upsurge of Burmese literature. The end of the 13th cent. saw the birth of Burmese literature, in both prose and poetry, and from that time onwards literature developed continuously. Meanwhile, events leading up to the reunification of the country were developing in the small vassal state of Toungoo, which owed allegiance to Ava. The position of Toungoo had been strengthened by the influx of refugees due to the civil wars, and the Lord of Toungoo, Min-Gyi-Nyo, who reigned from 1485 to 1530? conceived the ambition of once again reuniting the whole of B. As he died before accomplishing anything, his task fell to his son Tabinshwehti and later Bayinnaung. B. was united for 200 years under the Toungoo dynasty with the cap. at Pegu and later Ava, until 1740. During this period the kings fought wars with Siam, and sent an expeditionary force into Laos. The period produced many historic characters such as Tabinshwehti, Bayinnaung, whose career has been described as 'the greatest explosion of human energy ever seen in Burma,' Anaukpetlun, Thahun, and Natshinnaung, one of the greatest poets in the hist. of Burmese literature, etc. In the 16th cent. there were a number of Portuguese adventurers in B. One of them was Philip de Briton y Nocete, who attempted to gain control of Syriam and hold it as a Portuguese colony. He failed. His followers were sent up country and settled in vils. between the Chindwin and the Mu rivs. These descendants of de Brito's followers still form a devout Catholic community and live peaceful, quiet lives. The Toungoo dynasty came to an end in 1752, the country having been in turmoil since 1740 due to the degeneration of the last few kings of the dynasty. Alaungpaya, who restored order in the country, was an unimportant official administering a few vils. in the Shwebo area. He was the founder of the Konbaung dynasty which ruled B. from 1752 to 1885, when the British occupied the whole of B., Burmese power rose to its zenith under this dynasty, this being demonstrated by the defeat of the Chinese armies which invaded B. between the years 1765 and 1769. The outbreak of the Sino-Burmese war was due to sev. border incidents and resulted in the imperial armies taking the field on 4 main expeditions. Greatly outnumbered, the Burmese armies resorted to well planned and co-ordinated outflanking tactics, cutting and harassing the Chinese lines of communication while confronting the Chinese vanguard with thoroughly prepared defensive positions. This resulted in the complete rout of all 4 Chinese forces. Many thousands of the Chinese were killed or taken prisoner. A treaty of peace was signed in 1770 at Kaungton, providing for the resumption of trade between the 2 countries and the exchange of decennial missions between the 2 caps. The friendly relations between the 2 countries have never been seriously broken since that time. The Konbaung period also saw the invasion of Siam by the kings of B. on 4 occasions,

once successfully and thrice unsuccessfully, the last being in 1785 by Bodawpaya. This king was also responsible for casting the biggest bell in the world, which stands at Mingun, near Mandalay, and also for what is described as 'the biggest pile of bricks in the world' in the shape of the Mingun Pagoda, which, though unfinished (a third of its height only), is of gigantic proportions.

The English and Dutch had traded with B. since the 17th cent. The French came into the field in the 18th cent. With the power of the British growing in India and the expansion of Burmese frontiers under the Konbaung dynasty, conflict between the two was inevitable. War broke out in 1824 in the reign of Bagyidaw. Sev. border incidents led to the declaration of war by the Gov. of India on 5 Mar. 1824, and while Bandula, the famous Burmese general, was occupied on the B.-Bengal frontier, the British invaded Lower B. by sea, occupying Rangoon on 11 May 1824. Bandula was hastily recalled to the Rangoon front, but the Burmese troops, not even half of whom were armed with muskets, and who were supported by ancient field pieces, were no match against the superior Brit. arms, and in Dec. 1824 the Burmese had to retreat to Danubyu on the I. Irawadi, where new defensive positions were prepared. The initial advance of the British was repulsed. On 1 April 1825 Bandula was killed when the British began to bombard the Burmese positions. The war ended, with the treaty of Yandabo, which was ratified on 24 Feb. 1826. Arakan and Tenasserim were ceded to the British and B. had to pay an indemnity equivalent to a million sterling. From 1837 onwards, when Tharrawaddy seized the throne, the gov. of B. deteriorated and local officers could do as they pleased. Lord Dalhousie, the Governor-General of India, had embarked on a career of conquest and he held that a war with B. was 'inevitable.' The extortions of the Governor of Rangoon finally gave the British a pretext for war with B. War broke out in 1852. During the war there was a revolution in Ava, and Mindon, one of the best of B.'s kings, came to power. At the end of the war in May 1853 Lower B. was added to the Brit. Empire. Then there was a long period of peace. With the accession of Thibaw in 1875 the situation in B. deteriorated gradually, until in 1885 it was annexed and added to the Brit. Empire. But it was some years before Upper B. could be pacified.

During the First World War there were instances of unrest, and even rebellion, but disaffection never became general and was comparatively easily suppressed. B. contributed generously towards war expenses, on the other hand, and a large number of men enlisted for service in the army and labour corps. A revolt, nationalistic and economic in origin, broke out in 1930 in Lower B. and spread the following year to Upper B., but was suppressed by some 9000 Brit. and Indian troops and police. In 1923 B. had been constituted a governor's prov. of Brit. India, but

in 1937 it became a separate dependency from India, the executive authority being vested in a governor, acting on behalf of the Crown and an advisory council of ministers. Prior to the invasion of B. by the Japanese in 1941 there was a bicameral legislature, the Upper House or Senate of 36 members being partly elected (from the Lower) and partly nominated by the governor, and a Lower Chamber or House of Representatives of 132 members wholly elected. B. was divided into 7 administrative divs. under commissioners, 4 being in Lower and 3 in Upper B. The Shan States in the E. of Upper B., the Arakan Hills, and some other divs. were under special administration. In Dec. 1942 the governor, by a proclamation under the Government of Burma Act, assumed full executive and legislative powers. Military administration of the areas liberated before the Jap. surrender ceased in Oct. 1945, when full civil gov. was restored. In May 1945 the Brit. Gov. reiterated their considered policy of promoting full self-gov. in B. and their pledge to assist her political gov. until she reached a status equal to that of the Brit. Dominions and of the U.K. (Cmd. 6635). In the meantime, pending a general election and the restoration of normal conditions, Parliament approved the continuance, until Dec. 1948, of the proclamation issued in 1942 whereby the administration is carried on by the governor, who is directly responsible to the Brit. Gov. The Shan States, until recently, formed a minor administration distinct from that of B., though under the same executive gov. and not subject to the jurisdiction of the Burmese legislature. The Karenni States of Kantarawaddy, Bawlake, and Kyet-bogyi lying to the S. of the Shan States (4200 sq. m., pop. 59,000) were feudatory states, but not part of B. Under the Constitution of the Union of B. (1948) the former federated Shan States and the Wa States are combined as the Shan State; while the former 3 Karenni States are to be known as the Kayah State. Each of these 2 states, as well as the Karen State and the Chins, is represented in the Union Gov. by a minister chosen from its own members of Parliament, and enjoys a considerable measure of administrative autonomy. In Britain some held that the pledge given to B. in 1931, that her prospects of constitutional advance would not be prejudiced by her separation from India, was amply fulfilled by the large measure of self-gov. conferred by the Act of 1935. But the Burmese themselves interpreted it to mean that their country had the right to advance *pari passu* with India. They resented the discretionary rule of the governor during the preparatory period, the provision that defence and external affairs should remain in his hands, the absence of any admission of B.'s right to leave or to remain within the Brit. Commonwealth, and the plan for an indefinite separation of the frontier regions from the rest of the country. Nationalism, now the driving force of Burmese opinion, was among the consequences of the Jap. invasion, while the

creation of a nominally 'independent' B. was the outcome of a resistance movement, a 'patriot army,' and the Anti-Fascist People's Freedom League. The Brit. Gov., however, justifiably proceeded with caution following the expulsion of the Japanese. For until the rudiments of an administrative structure could be restored, political advance would have been useless. But unfortunately the impression prevailed that Britain had no real intention of conferring autonomy on the country; and by the time Sir Hubert Rance became governor in the autumn of 1946 there was a dangerous gulf between the administration and the more progressive groups in the country. It was in these circumstances that Mr Attlee in Dec. 1946 announced Britain's determination to extend to B. the policy adopted for India. B. (he said) was to be free to choose whether or not to remain inside the Brit. Commonwealth; the executive council in B., as in India, was to carry on day-to-day administration without interference; and the approaching elections were to do duty, as in India, for the constituent assembly as well as for the legislature. In Jan. 1947 a delegation from the Burmese executive council came to London and concluded an agreement with the Cabinet under which the council became the interim gov. of B. It was also agreed that the common objective of the Brit. Gov. and the Burmese executive council was a free and independent B., whether within or without the Brit. Commonwealth of Nations. The elections for a constituent assembly were held in April, the result being an overwhelming majority for the Anti-Fascist People's Freedom League. The assembly in June resolved that B.'s constitution should be that of an independent sovereign rep., and in the same month a Burmese goodwill mission, under Thakin Nu, president of the assembly, came to London to discuss the question of transfer of power. By a statement made in Parliament by the secretary of state for B. on 24 July the Brit. Gov. agreed to recognise the interim gov. of B. as a full provisional gov. until legislation for the transfer of gov. was completed. Thus Thakin Nu, the senior member of the interim gov., became by convention the first Prime Minister of B., and his colleagues in the council or Cabinet were henceforth to enjoy the status and powers of ministers. B.'s smooth approach to independence, however, was marred by the assassination a few days previously of no fewer than 7 members of the Burmese executive council while in session at Rangoon, the assassins with Sten guns forcing their way into the council chamber and acting evidently at the instigation of the defeated U Saw, chief minister of B. in 1941, who was hanged for the murders in May 1948. The council, however, was at once reconstituted by the governor, Sir Hubert Rance. Among those murdered was U Aung San, only 33 years of age, who was one of 'Thirty Crusaders' who underwent military training in Japan. When B. was invaded by the Japanese, these comrades were promised, in return

for assistance, the reins of civil administration as various districts came into occupation. But they were tricked by the Japanese, and Aung San then opened negotiations with the British, the upshot of these negotiations being that the Burmese Defence Army rose against the invaders (April 1945). A treaty making B. an independent state outside the Brit. Commonwealth was concluded on 17 Oct. 1947, and its terms were implemented in the Burma Independence Act which was passed by the Brit. Parliament on 10 Dec. The Union of B. came formally into existence on 4 Jan. 1948, and on that day Sir Hubert Rance, the last Brit. governor, handed over authority to Sao Shwe Thaik, the first President of B. The Act brought an end to the suzerainty of the king over the Karen States, and under the Constitution of B. (passed on 24 Sept. 1947) all the frontier areas came within the federal framework of the union. See also SHAN STATES. Soon after gaining independence the Gov. of B. had to cope with rebellions by dissident groups—the Communists, the Karen National Defence Organisation, etc. A certain degree of peace was regained by 1951. In that year there was a general election in which the Anti-Fascist People's Freedom League gained a majority of votes. The next year the gov. embarked on the Pyidawtha scheme (Welfare State). In Mar. 1952 B. joined the Colombo Plan and was a member of the Afro-Asian Conference held at Bandung in April 1955.

Burma, or Burma-Yunnan, Road runs between Lashio, N. end of the Burmese railway from Rangoon, and Chungking, Chiang Kai-shek's cap. in 1939-40. It was constructed between 1936 and 1938, after the Sino-Jap. war had been in progress for some time, with the object of providing the Chinese armies with an alternative route for supplies to that from the sea, which had been cut off by the Jap. advance southward. The chief use made of the road was as a means of transport for Russian munitions to China, and in July 1940 the Brit. Gov., in view of its difficult position from the collapse of France, felt compelled to agree to suspend temporarily the transit of war material and certain other goods via Burma. The closing of the road for even 3 months was

criticised in Britain as involving an example of the much derided policy of appeasement, and it was reopened after the expiry of the 3 months on 17 Oct.

Burma, Second World War, Campaigns in. The Jap. tide of invasion in 1941-2 soon overwhelmed B. The early surrender of Thailand gave Jap. forces a preponderating advantage over the Brit. defences. Very soon the Japanese had cut the B. Road (q.v.) and thereby isolated China. Moulmein was evacuated in Jan. (1942). In Feb. Martaban, on the Salween R., was taken, and this was followed by heavy fighting on the Billin and Sittang Rs. The Brit. forces, consisting chiefly of Indian troops, together with their Chinese allies, then took up defences on the Irawadi and Sittang fronts. But Rangoon had to be evacuated in Mar. Mandalay fell in the early days of May. A considerable part of B. was thus soon in Jap. hands.

The battle for Burma. When Japan attacked the Brit. Commonwealth and the U.S.A. B. was neither mentally nor materially prepared for war. Her premier, U Saw, was a traitor to the Brit. connection. But it was hoped that Malaya could successfully resist the invader and thereby render B. immune. Most available troops, aircraft, and equipment were concentrated in Malaya and Singapore. In the whole of B., with a frontier bordering on potentially hostile ter. of 1600 m., there was but one diluted Burman div. guarding the long border of the Shan States, while the best part of another div. was spread along the 800 m. of the Tenneserim from Moulmein to Victoria Point. The Japanese had sev. alternative approaches into B. on which to concentrate their main drive; the defending forces had to disperse their scanty strength to guard against surprise at each of the approaches. The first serious contact was made E. of Tavoy (Dec.), after which the enemy attacked with a div. through Thailand on the Kawkaireik Pass, which was guarded by an Indian brigade and the 7th Gurkhas. It was obvious from the start that the Japanese were receiving much assistance from Burmese fifth columnists.

In Jan. 1942 a heavy Jap. attack was launched against Moulmein. The outnumbered garrison fought its way to the jetties and, after inflicting heavy casualties on the enemy, successfully embarked. The problem now was to defend the direct approaches to Rangoon and the rail and road head at Martaban, together with the main crossings over the Salween R. and the long communications back to the Sittang bridge. The defending troops were now getting more effective air support; but although they had inflicted serious casualties on the enemy, they were not sufficiently numerous to thwart a flanking movement, and further withdrawal to Kyaikto was unavoidable. Another Jap. div. was rapidly approaching the Sittang bridge with the object of getting in between the 17th Div. and Rangoon. The bridge was lost and retaken sev. times before being blown up by the retreating British, and the Japanese

suffered 2000 casualties. The loss of the bridgehead, however, was disastrous and a large part of the 17th Div. was cut off and trapped between 2 Jap. divs. Most of them fought their way back through the jungle, abandoning all their heavy equipment. Thus the troops had to be re-equipped and reorganized at the very moment when Singapore had fallen and thereby released large Jap. reinforcements. Two Brit. battalions and some units of the Royal Armoured Corps had now reached B., and the imperial forces were concentrated in new positions in more open country near Pegu in the hope of covering Rangoon. Already, however, the Japanese had won control on the side E. of the Bay of Bengal and the cap. had to be abandoned. The tired and harassed imperial forces now retired towards the semi-isolation of Upper B., but, in anticipation of the situation that had now arisen, the Chinese Gov., to whom the link with India through B. was of vital importance, had dispatched some of their best troops to take over the left flank. But a serious threat developed late in April with the fall of Lashio at the E. end of the B. Road, and with this loss came a direct threat to Mandalay. By the end of the first week of May the Japanese took Mandalay and were able to continue their advance towards the N.E., the N., and the N.W. The Chinese were pushed back along the B. Road as far as the frontier of their own country by a Jap. armoured force; while another Jap. column pushed into the highlands of the N., towards Myitkyina, with the object of cutting off all communications between China and India through B. Brit. and Indian forces, with some Chinese, then withdrew towards the Indian frontier along the Chindwin R. Immediately afterwards the enemy took Akyab, only 50 m. distant from the frontier of India.

The loss of B. was a grave misfortune, apart from the danger to India, owing to the possible reactions of the defeat upon Chinese sentiment and the Chinese war effort. For B. was not only one of the richest countries in the world; it had valuable communications, land frontiers with countries in Jap. occupation, a series of magnificent aerodromes with hard runways, and it was a first-class point of re-entry into E. Asia for the Allies against the time when they would be able to concentrate armies and supplies for their counter-offensive. The fall of Rangoon fatally affected the ability of the Commander-in-Chief, India, to reinforce the defenders of B., and this inability cost the British the Burmese campaign. Earlier circumstances contributed to the defeat. Pre-war preparation for the defence of the country was inadequate for the immensity of the task, and the last-minute transfer of the B. Command to the India Command left no time for adequate preparations to be made. Moreover, the Brit. forces were insufficiently trained and organised for the kind of fighting they had to undertake; while the Japanese, lightly equipped, were well trained for jungle warfare. But the mixed Brit.,

Indian, and Chinese forces held out for 2 months, and their delaying rearguard actions proved invaluable to the Allies in the preparations for the defence of Bengal and India generally.

Renewal of the fighting in Burma during and after the winter 1942-3. No further operations of any note took place before the winter of 1942-3, when Brit. and Indian troops fought their way along the length of the Arakan peninsula, and Wingate (q.v.) raided hostile ter. with his long-range penetration columns. The Arakan campaign was a failure, partly owing to the lack of landing-craft for amphibious operations in support of the troops, and eventually the troops had to retire before Jap. counter-attacks. The 'penetration column' sorties or raids behind the Jap. lines were well conceived and executed. Wingate's presence in B. and the nature of his operations were kept secret until, in May 1942, it transpired that his long-range jungle force, which received its supplies entirely by air, had arrived in India from N. B. after spending 3 months as wreckers in the midst of Jap.-controlled country. His brigade, consisting of Brit. and Gurkha columns, with reconnaissance and intelligence detachments from the B. Rifles, penetrated hundreds of miles across jungle ranges and valleys. The R.s Chindwin and Irwadi were crossed and the Myitkyina railway was cut in a hundred places. Skillfully infiltrating through the chain of enemy outposts and garrisons, the force penetrated enemy ter. as far as the Shan States. Much destruction was done, but Wingate's casualties were disproportionately heavy. Probably his force's greatest importance lay in the effect it had on the morale both of the Jap. and of the Brit. soldiers and general public.

The first offensive, attempted after Wavell (q.v.) became Commander-in-Chief, was directed towards Akyab. It failed, and a renewed attempt in 1944 under the supreme command of Mountbatten, who had been made Commander-in-Chief in S.E. Asia, soon came near to disaster; for in Feb. every Jap. soldier in the Arakan that could be spared was mustered for a violent counter-attack. This came in the form of a fierce punch, which drove straight through the front-line positions of the 7th Indian Div. in the Kalapanzin valley, and encircled about 10,000 Brit. and Indian administration troops of 15th Corps and 7th Div. H.Q. Mountbatten ordered the 26th Indian Div., who were in the Chittagong area, to the rescue immediately, and after 20 days' bitter fighting the enemy encirclement was broken. The allied offensive was soon renewed, and the main operation of the campaign fought before the monsoon of 1944 was that which was conducted under the Amer. general, Stilwell, with the object of helping China by building a road through N. B. to link Assam with the B. road to Chungking. Opposing Stilwell's line of advance, the chief objective of which was the enemy base of Myitkyina, was the Jap. 18th Div.; but the deep penetration of Wingate's 'Chindits' enabled them to cut the enemy's

communications and so rule out the 18th Div. as an offensive factor against Stilwell. By way of further aid to Stilwell 2 diversions were conducted, one in Arakan and the other in the Manipur Hills. A force of Amer.-trained Chinese troops under Brig.-Gen. Merrill was also advancing, some 200 m. to the NE., on a S. course, parallel to that of Stilwell's forces. The

SUPPLIES BY AIR TO WEST AFRICAN
TROOPS IN BURMA

enemy, however, countered these moves by an advance on the Arakan front with the intention of invading India through Chittagong; and when his forces were utterly defeated by the Brit. Fourteenth Army of seasoned jungle fighters, he attempted to force a passage through Manipur state to Assam, and here he came within measurable distance of success by attacking Kohima and so threatening the vital Brit. road and rail communications through Assam.

Stilwell actually began his N. offensive from Ledo late in Oct. (1943) and, in the

ensuing 6 months, he led his very fine Amer.-trained Chinese div., together with U.S. commandos, across the Patkoi Hills and through the Hukawng valley, over 200 m. of most difficult country, to push the Jap. 18th Div. to within 70 m. of Myitkyina, their main base and airfield in N. B. Wingate's Chindits co-operated by cutting the supply lines of these Japanese to the S., while a force of Gurkhas and Kachins was advancing on Myitkyina from the N. All these forces, including the Chinese, were supplied by air. Meanwhile columns of the Fourteenth Army crossed the Chindwin R. in support of Stilwell's forces, but were driven back on Imphal, main allied base in the NE. uplands of India and cap. of Manipur state, and Kohima, the important Brit. base in Assam, where the Japanese attacked strongly, and for some weeks there were fierce attacks and counter-attacks at both places.

At one time early in 1944 the Jap. military occupation of N. B. seemed to be precarious, but their advance between the Fourteenth Army's forward positions and their base at Imphal relieved their position. The Jap. command decided that the proper riposte to Stilwell's thrust was a counter-thrust through Imphal at the allied railway communications rather than direct opposition. The enemy now launched a counter-offensive across the Chindwin R., and a struggle began for the Imphal plain, and for the military roads, constructed since the withdrawal from B., that converged upon it. Slim's Fourteenth Army troops were concentrated to deal with enemy attacks on Kohima. By early April the Brit. and allied forces were in possession of the whole Imphal plain. But the enemy invaded Assam early in April and the Allies, unable to guard the Manipur road, running parallel to and behind the B. mt frontier, for all its course of 200 m., instituted the 'box' system of defence, under which strong points were organised for use later as bases of attack—the same system which had been successfully adopted in Arakan. A week after the initial Jap. entry into Assam, a Jap. column thrust behind the Brit. positions guarding the NE. approaches to Imphal; while another enemy force threatened Imphal from the S. The Japanese at this point had a great advantage in communications, for they held the Burmese waterways, railways, and roads, the Bangkok-Rangoon railway, and supply lines into Thailand and Indo-China. Against these, the Allies had their troop-carrier command—which had shown its value in relieving the Indians in Arakan and in carrying commando troops behind the enemy lines further N. combined with the air supremacy maintained by tactical, strategical, and reconnaissance air forces.

The position in mid May (1944) was that Slim's (q.v.) Fourteenth Army held a line in the W. of Manipur state, before Imphal, with the Jap. line extending in an arc from near Kohima, round the E. part of Manipur state, to Tiddim. Far to the NE. was Stilwell's Chinese army advancing on Myitkyina, with a Jap. div.

near Mogaung between Stilwell and the Brit. airborne troops located on the Bhamo-Myitkyina road S. of this enemy div. and in rear of the Japanese defending or counter-attacking near Imphal. The enemy, however, in attacking Slim's positions in Manipur, suffered disproportionately heavy losses and were now generally on the defensive. A 40-day pitched battle for Kohima ridge ended in the middle of May when the position fell to the Brit. forces, the enemy losing over 3000 dead, while Brit. casualties were also heavy. The main aerodrome at Myitkyina was captured by Merrill's force as the successful outcome of a daring march through rough and tortuous terrain in the mt. jungles of N. B. to the Mogaung valley. The whole of the Jap. communications in N. B. were now in jeopardy. Soon afterwards Merrill's forces, with reinforcements of airborne troops from Stilwell, penetrated the outskirts of the town of Myitkyina (18 May).

The land fighting over the scattered Indo-Burmese fronts did not cease with the monsoon, though the rains made new campaigns impossible. Stilwell had made valuable gains in N. B. and allied air supremacy was further emphasised; but, on the whole, the pre-monsoon campaigns had been rather disappointing, especially on the Arakan front, which had now become a purely holding campaign to prevent Jap. incursions into Bengal. But at least the dangers to Imphal and Kohima, so acute in Mar.-April, had passed, though all fighting remained on the Indian soil of Manipur state, and it was a question how far back towards their Chindwin R. bases the Japanese could be pushed with weather conditions steadily growing worse. Other appreciable gains were the freeing of the Imphal-Kohima road, which resulted in the reopening to the Allies of the vital Dimapur-Imphal road; and the capture of Mogaung by Chinese troops and units of Gen. Lentaigne's force (25 June).

The road to Mandalay. Chinese and Amer. troops had entered Myitkyina on 18 May, but so fierce was Jap. resistance that not until 3 Aug. was the garrison destroyed. The capture of Myitkyina increased the protection of the air routes to Chungking—the remarkable ferry service 'over the hump' of the Himalayas which was now transporting a great tonnage of supplies.

The victory won in B., notably by the magnificent defensive battle of Manipur, to which battle-ground the Japanese were skillfully enticed with consequently enormously increased difficulties of communications, was scarcely realised at this time by the world which was preoccupied with the encounters in Europe. By the beginning of 1945 more than a quarter of B. had been liberated and the spearhead of the Fourteenth Army was only some 20 m. from Mandalay.

The Japanese broke off the battle for Manipur in July, retiring in disorder and dying of starvation and disease. It was vital that they should be given no chance to reorganise and make a stand on the

Chindwin R. The enemy were retiring by 2 main routes—the Tiddim road and the Kabaw valley, both running N. and S. Down the Tiddim Slim sent the 5th Indian Div. with orders to destroy the remains of the Jap. 31st Div. and get through to Kalemmyo. Down the Kabaw valley went the 11th E. African Div. (see KING'S AFRICAN RIFLES), which was new to campaigning outside Africa. Plunging through the jungle over roads a foot deep in mud, they never lost touch with the Japanese, and finally joined up with the 5th Indian Div. at Kalemmyo, forced their way through the gorge to Kalewa, took it, and were on the Chindwin. Thus by superb fighting Slim's forces had reached the riv., the enemy had no time to re-form, and there were fully 5 months to elapse before the monsoon would start once more.

While this was happening, Sultan—who had succeeded Stilwell—was pushing down from N. B. His 36th Brit. Div., having left Mogaung, was held up for some time short of the railway junction at Naba but had now resumed its southward march, relying solely on the air for its supplies. Further E. the Chinese 38th Div. had moved S. from Myitkyina, surrounded Bhamo, and pushed on, also in the direction of Mandalay. Bhamo fell on 15 Dec. after a month's siege.

Capture of Katha on the Irrawadi: fall of Akyab. It was at the end of Nov. that the campaign had taken a sudden change. The Fourteenth Army crossed the Chindwin and was committed to the daring manoeuvre of taking Mandalay from the N. The crossing of the Chindwin had an immediate result. Resistance crumbled before the 36th Div., which then captured Katha, the chief enemy base on the R. Irrawadi. The speed of the advance increased on all fronts. The Indian corps swept over the mts on the E. bank of the Chindwin, reached the railway, and joined up with the 36th Div. The advancing forces now stood but 20 m. from Mandalay.

During these events in N. B. Akyab in the far S., the chief Jap. base in Arakan, fell without a battle. Almost simultaneously Christison's amphibious forces landed at Myebon to get in the rear of the Japanese trying to escape southwards.

Fresh advances on Mandalay and Sagaing, 2 of the main enemy bases on the B. front, began in mid Jan., following a terrific concentration of bombs dropped by the R.A.F. on military installations and troop formations in Mandalay. Indian troops from Nepal had struggled

opened.

standing event of Jan. was the opening of the Ledo road to China. The Japanese cut the old B. road, on which China was wholly dependent for war material, early in 1942. Towards the end of that year the Allies began the construction of a new road from Ledo, the railhead on the mountainous E. frontier of Assam. It was a vast undertaking, involving road construction over 300 m. of the most difficult country in the world, between Ledo and Myitkyina

on the Irawadi; but it was accomplished by Brit., Amer., and Indian engineers with the help of African, Indian, and Chinese troops and labourers, and the new road was now open right through. Meanwhile the 26th Indian Div. of the 15th Corps were engaged in successful amphibious operations against Ramree Is (21 Jan.). This was followed shortly after by a landing on Cheduba Is. by Royal Marines. Operations in the Arakan had been looking up 4 allied divs.; Sir Oliver Leese, Commander-in-Chief allied land forces, saw a way of amending this by staging a series of landings in the enemy's rear along the Arakan coast while exerting pressure from the N. Further landings at Myebon, Kangaw, Ru-Ywa, and Letpan followed, in which commandos, infantrymen, tank crews, gunners, and naval and air forces all played a gallant part, and started a full-scale Jap. retreat southwards. Thus was achieved the second of Leese's aims—the release of the Arakan forces for other operations. The bloodiest battle of the whole war in B. was now being fought at Gangaw (or Kangaw) in Arakan, where for 3 weeks thousands of Japanese had been trying to break southwards—their only road to safety—through the road block formed by the 15th Indian Corps. On 22 Jan. (1944) Brit. and Indian troops entered the large tn of Monywa on the Chindwin R., 60 m. W. of Mandalay. But the crucial point of the approach battles for Mandalay was 60 m. N. of the city, where Brit. and Indian troops held strong bridge-heads on the Irawadi in face of fanatically directed counter-attacks. Mid Feb. still saw the enemy fighting hard round Mandalay, but they were being steadily pressed back.

Battle for the Burma oilfields; Mandalay battle opens. Fourteenth Army troops, on 14 Feb. (1945) crossed the Irawadi near the anct city of Pagan (q.v.), which they seized. Here the riv. is more than a mile wide, being swollen by the waters of the Chindwin, and near the far bank the Brit. troops came under murderous fire from machine-gun nests in the caves and tunnels of the cliffs. This crossing gave the Allies a new bridge-head 4 m. deep, N. of Chauk, the second biggest oil-producing tn of B. The battle for the great B. oilfields was now beginning. The crossing of the formidable riv. barrier, and the forcing of the enemy to conform to the allied plan, had been achieved and the real battle for Mandalay was on the point of opening. But the line of the Pagan force was fantastically bad and most of the supplies had to be carried by air. In a surprise armoured thrust of 85 m., supported by airborne forces, the Fourteenth Army, striking E. from the Pagan bridge-head, virtually cut off the Jap. army of 40,000 defending the Mandalay area. In this thrust, after a 5-day struggle, they captured Meiktila, the second largest tn of central B., with 8 airfields. Driving still further E. they took Thazi, and thereby captured the road and railway junction from Mandalay to Rangoon, leaving the enemy only an

escape route over the difficult Shan hill country. An armoured column of the 19th Indian (Dagger) Div. swept through the city limits of Mandalay on 8 Mar. and were soon only a mile from Fort Dufferin, the centre of the city. The walls of the city were pierced by men of the 15th Punjab, while other Punjabs stormed Mandalay Hill, the pagoda-covered landmark in the N. section of the city. Other forces of the div. were now fighting below Madaya, 13 m. N. of Mandalay, on the southward route from the Singu bridge-head E. of Shwebo. To the N.E. of Mandalay Lashio and its main airfield were captured by the Chinese First Army. Thus the whole B. road from Lashio to Kunming had now been cleared, for Sultan's forces had advanced sufficiently far S. to protect the new overland supply route—the Stilwell road—opened 6 weeks earlier.

Fall of Fort Dufferin; triumph of aerial transport. The occupation of Mawmyi, on the main road and railway between Mandalay and Lashio, by Indian troops was another blow to the Japanese in central B. Its capture sealed off Jap. routes from central B. into the Shan States and Siam. Other troops of the 19th Indian Div., fighting through the anct city of Mandalay, were now meeting stronger opposition, chiefly because the Japanese were trying to get their supplies out of Mandalay, and so fought hard to preserve the entrance to Fort Dufferin. On 19 Mar. Eng. and Scottish troops occupied Ava, the old cap. of B., opposite Sagaing on the Irawadi. Brit. troops also took Amarapura, another of the anct caps. of B., lying 6 m. S. of Mandalay. Fort Dufferin fell at last on 20 Mar. to the 19th Indian Div. Thus fell Mandalay, second city of B., and its fall was an indication of the great progress made by the Allies in the liberation of the country. The campaign leading to this victory had involved great feats of military engineering and marching over what were, perhaps, the most difficult lines of communication in any theatre of war. The crossing of the Irawadi alone, at points where it is 6 times as wide as the Thames at Waterloo Bridge, was an epic achievement. All these great land advances were only made possible by the untiring efforts of the Brit. and Amer. airmen. In 1 year the 33rd Indian Corps under Sir Montagu Stopford, from the time of the relief of Kohima and Imphal, cleared the enemy from 32,000 sq. m. of India and B., killed 20,000 Japanese, and captured 251 guns. A vital factor in the success of the Allies in the Burmese campaign was the use of air transport, especially from the time when the campaign reopened in the autumn of 1943. Great experience had been gained in aerial transport, and the arrival of more transport squadrons allowed of much extended operations. The large-scale use of air supply in the Arakan operations was the turning-point in the war in B. So long as the allied forces stood their ground instead of trying to fight their way back past the road-blocks erected by the Japanese to cut

them off, the supply problem of the enemy remained insoluble. Although the Japanese fought tenaciously, without reinforcements of munitions their fate was sealed. When the second Wingate expedition set out, its operations depended entirely on the weapon which had only recently thwarted the Japanese in the Arakan battle, namely air supply; and not merely did the allied troops establish themselves in the middle of enemy-occupied territory but they built improvised landing-grounds for the reception of supplies, and it was during that campaign that gliders were so successfully used to carry equipment. The climax of the campaign was the assault on Myitkyina, in which transport aircraft were used in a series of permanent advances in which forward landing-grounds were rapidly built to forestall all enemy counter-attacks.

With the occupation of Chauk (18 April), Magwe (18 April), and Yenangyaung (22 April) the capture of the B. oilfields was complete. Yenangyaung was the main centre of production, and until this time that place had had the heaviest concentration of Jap. anti-aircraft guns in all B.

British capture Rangoon; battle of Burma ended. Toungoo, 165 m. N. of Rangoon, and its 3 airfields were captured on 22 April by the Fourteenth Army, which had advanced 50 m. in a week. Four days later the advancing columns had reached Pegu, junction of the railway to Thailand, and were therefore through the last natural defensive position held by the Japanese before Rangoon, a defile through which runs the trunk road and railway. The powerful armoured columns were unable to deploy here and the defile was forced by the infantry. For some days past the enemy had been evacuating Rangoon. They fought well on the whole, and many suicide attacks were made on the tanks by men running up with magnetic mines. The Jap-sponsored army of B. was now co-operating actively with the Fourteenth Army. Pegu was attacked on 1 May. A heavy barrage was laid down on the vil. by nearly 100 guns. Men of the W. Yorks and Border Regiments, with Punjabis, then mopped up the enemy holding force, which in fact consisted of the remnants of the evacuated Rangoon garrison. The last road usable by motor transport and the last railway by which the enemy in Lower B. could escape to the E. were now denied them. The next task was to bridge the broad Pegu R. This accomplished, the armoured columns were soon thundering down towards Rangoon in a race as much against the approaching monsoon as against the Japanese. After bomber raids on the Jap. defences, Brit. paratroops landed on 1 May S. of Rangoon, followed the next day by forces landed from Brit. ships on both banks of the Rangoon R. S. of the city. Any Jap. troops in the Rangoon area were thus trapped between 2 allied forces who were now carrying out a pincer movement, while other troops of the Fourteenth Army were fast moving on the cap. from

the N. Troops of the allied land forces entered Rangoon on 2 May. The fate of the Japanese still resisting in W. B. was sealed with this entry and with the capture of Proma on the Irawadi, 180 m. N. of Rangoon, which latter capture cut the escape route of the enemy into the Arakan area. In a series of battles of great intensity over the previous 15 months the Jap. armies in B. had been so decisively defeated that they were unable effectively to defend Rangoon. Ninety-seven thousand of their dead were counted over that period, and their total casualties were 250,000. Allied total casualties, including Chinese, were not half this total. The fall of Rangoon, 10 days before the monsoon broke, brought to an end the battle of B., for although pockets of enemy resistance remained their doom was certain. The occupation of the cap. by a combined operation was the culmination of a long series of concerted operations carried out by the Fourteenth Army, which crossed the Chindwin and Irawadi R.s. to break into central B.; by the Amer. and Chinese forces of the N. area command, which advanced from the N. to Lashio; and by the 15th Indian Corps, which carried out a series of amphibious hooks down the B. coast. All these operations were supported and supplied by air.

Jap. forces E. of the Mandalay-Rangoon railway were now hastening their retreat over the Shan Hills to Siam, but were being constantly pounded by Brit. aircraft. Other Jap. remnants were being driven southward along the banks of the Irawadi by 2 Brit. columns, which were seeking to trap them in SW. B. before the monsoon broke. Although from the strategical point of view the issue of the Burmese campaign had been settled, a large area of the country still remained to be cleared of the enemy. This area included the Shan Hills and the Salween R. basin, the S. part of the Arakan coast, and the area of the Pegu Hills between the old B. road and the lower Irawadi valley. 'Mopping-up' operations, which had been intensified daily since the reoccupation of Rangoon, almost constituted a campaign in themselves, for there remained some 60,000 Jap. troops to be driven out of the country.

Japanese forces marooned. Gradually these forces were reduced, but in a country of such great distances, such difficult terrain, and during the monsoon it was not possible to drive the Japanese into restricted areas and annihilate them. To the N.E. of Mandalay they had been driven well back into the hills where they had next to no guns and but little equipment. In the S. the situation was different. Here the obvious land route of advance was from Pegu across the Sittang, Billin, and Salween R.s. to Moulmein. Holding the line of the Sittang were the remnants of the Jap. armies from central B., very short of transport and with only a few mt guns, but nevertheless a considerable obstacle. The Brit. Twelfth Army held the line of the road and railway from Rangoon to Mandalay. W. of this line was a force of about 10,000 Japanese cut off in

the Pegu Yomas and made up of the remnants of the Jap. Twenty-eighth Army, with elements of the 54th and 56th Divs. But by 27 July the Japanese, penned in the foothills of the Pegu Mts, had lost more than 5000 men in their desperate effort to break through the allied lines and across the Sittang into Siam.

Japanese surrender in Burma. The war with Japan, however, ended abruptly in mid Aug., following the dropping of atomic bombs on the Jap. homeland (see PACIFIC CAMPAIGNS IN SECOND WORLD WAR). It only remained for envoys to reach the various allied H.Q. to sign instruments of surrender, a process delayed by distances, especially in B., where fighting went on in the Karen Hills despite the general surrender of 14 Aug. But, acting on Mountbatten's orders, Jap. representatives signed a preliminary agreement at Rangoon on 27 Aug. in order to enable relief to reach prisoners of war quickly, and to facilitate the reoccupation of SE. Asia when the general instrument of surrender was signed in Tokyo on 2 Sept. The final instrument for the surrender of B. to the Brit. Twelfth Army was signed at Gey. House, Rangoon, on 13 Sept. by Jap. envoys acting in the name of F.-M. Count Terauchi, supreme Jap. commander of the S. armies. See *The Campaign in Burma* (H.M.S.O.), 1946; M. Collis, *Last and First in Burma*, 1956; Str W. Slim, *Defeat into Victory*, 1956.

Burma-Siam Railway, line from Tana Besar, 30 m. S. of Monimeln, to Banpong, 55 m. W. of Bangkok, thus linking the Burma and Siam railway system. Work on a projected route was first begun in 1912, but was soon abandoned owing to the exceptionally unhealthy climate. In Oct. 1942 the Jap. conquerors of Burma decided to build the line for military reasons, using the manual labour of Dutch and Brit. war prisoners, and conscript coolie labour. The prisoners worked in appalling conditions, were treated with great brutality, and lacked adequate food and medical attention. The railway (over 280 m. long) was completed in Nov. 1943, at the cost of over 63,000 lives—those of over 13,000 allied prisoners and about 50,000 coolies—out of a total labour force of about 150,000 (over 50,000 whites and 100,000 coolies).

Burma Star, decoration instituted in 1945 for service in the Burmese campaign beginning 11 Dec. 1941, until the end of the campaign. The ribbon is dark blue, with a central red stripe and in addition 2 orange stripes.

Burmman, Pieter (1668–1741), Dutch classical scholar, usually known as the elder to distinguish him from his equally famous nephew. He was b. at Utrecht, and commenced his studies at the univ. there. He was intended for the legal profession, but later became prof. of hist. and eloquence at the univ. of Utrecht. Next he became prof. of Gk language and eloquence at Leyden, and finally prof. of hist. for the United Provs. and chief librarian. Amongst his more important pub. may be mentioned odes, of Phædrus, 1698, Horace, 1699, Justin,

1722, Ovid, 1727, Suetonius, 1735, and Lucan, 1740.

Burmman, Pieter (1714–78), nephew of the above, b. Amsterdam. He studied under his uncle at Leyden, and made a special study of law and philology. He became prof. of hist. and philology at the univ. of Amsterdam. He pub. many eds. of classics, together with an anthology of the Lat. epigrammatists, 1759–73. Authors ed. by him include Virgil, 1746, Claudian, 1760, Propertius, 1780, and Aristophanes, 1780.

Burmmaniaceae is a small family of monocotyledonous plants found in tropical forests. The flowers are bright blue, and the plant is a saprophyte. The chief genus is *Burmmania*, of which there are some 30 species.

Burn, Richard (1709–85), legal writer, b. Westmorland and educ. at Queen's College, Oxford. He took holy orders and became vicar of Orton. He devoted his life to the study of law. His two most famous works were *The Justice of the Peace and Parish Officer*, and *Ecclesiastical Law*, which was regarded as the standard authority on that subject for a great many years.

Burnaby, Frederik Gustavus (1842–85), traveller and soldier. The son of a clergyman, he was educ. at Harrow, and entered the Royal Horse Guards in 1859. He acted as Carlist correspondent of *The Times* in 1874, and later went to Khar-toum to investigate and report upon Gordon's expedition. He achieved fame through the travelling feat of crossing Russian Asia on horseback, which is described in his *A Ride to Khiva*. His love of excitement found vent in a series of balloon ascents, in one of which he crossed the Channel. Later he was wounded in action at El Teb in 1884. He d. fighting at Abu Klea.

Burnand, Sir Francis Cowley (1836–1917), humorist, b. London. His mother, Emma Cowley, was descended from the author, Hannah Cowley. Educ. at Eton and Cambridge, he adopted law as a profession, though he had formerly studied first for the Anglican, afterwards for the Catholic Church. He founded the Amateur Dramatic Club at Cambridge and made dramatic writing his work. *Black-eyed Susan*, 1860, a burlesque, made a great hit. He succeeded Tom Taylor as editor of *Punch*, from 1880 to 1906. He pub. *Happy Thoughts*, 1868, many other popular books, and an autobiography, *Records and Reminiscences*, 1904.

Burns, Sir Owen Tudor (1837–1909), Eng. soldier, was drafted in 1856 to India with his regiment, the Lancashire Fusiliers, the mutiny having broken out. Owing to his knowledge of Hindustani, he was soon appointed brigade-major. At the assault of Kalsar Bagh he led the attacking column. Sir Hugh Rose, impressed with his work as adjutant, appointed him private secretary in 1862, and he held a similar position under Lord Mayo in 1868, and under the viceroy, Lord Lytton, 1876–8. B. was with the former when he was murdered in the Andaman Is.

Burne-Jones, Sir Edward Coley, Bart. (1833-98), painter, b. Birmingham. He was an only son, and of Welsh extraction, and the idealism of his character and his art has been attributed to this Celtic strain. He was educ. at King Edward's School, Birmingham, and intended for the Church. In 1853 he entered Exeter College, Oxford. Here he met Wm Morris (q.v.), and the couple became fast friends, the two agreeing to devote themselves to art. Both came under the influence of Rossetti, and as a result of their meeting in 1856, B. left college, settled in London with Rossetti's encouragement, and acquired the latter's enthusiasm for Arthurian romance and medieval art and literature. B.'s early water-colours, notably 'Sidonius von Bork' show the force of Rossetti's example. He assisted (1857) in the famous scheme to decorate the walls of the Oxford Union; later he was Morris's right-hand man in his idealistic efforts to revive and improve craftsmanship and design on Pre-Raphaelite lines. He married Miss Georgiana Macdonald in 1860, and in 1862 the couple accompanied Ruskin on his tour to Milan and Venice. In 1864 he was elected an associate of the Society of Painters in Water Colours. He became A.R.A. in 1886, but later resigned, and in 1894 he was made a baronet. A wistful nostalgia characterises his paintings, such as 'King Cophetua and the Beggar Maid,' 'The Golden Stairs,' 'Pan and Psyche,' and 'Chant d'Amour.' B.'s influence has shown itself far less in painting than in the sphere of decorative design. Here it has been very marked indeed, particularly in designs for stained glass. Specimens of these executed from his cartoons are to be found all over the country. See M. Bell, *Sir Edward Burne-Jones*, 1892; A. Vallance, *The Decorative Art of Burne-Jones*, 1900; Lady Burne-Jones, *Memorials of E. Burne-Jones*, 1904.

Burnell, Arthur Coke (1840-82), Sanskritist. Entered the Indian Civil Service in 1857, and, after a course of Sanskrit and Telugu, went out to Madras in 1860. There and in other important centres he copied and acquired Sanskrit MSS. Thus, in the course of time, he formed a splendid collection, which he later presented to the India Office Library. He pub. treatises on Hindu law, trans. of and commentaries on Sanskrit works; studies on S. Indian dialects; and historical tracts. Apart from his profound knowledge of Sanskrit and S. Indian languages, he knew Arabic, Tibetan, Kawi, Javanese, and Coptic. His *Handbook of S. Indian Palaeography*, 1874, and *Classified Index to the Sanskrit MSS. in the Palace of Tanjore*, 1880, are standard works.

Burnes, Sir Alexander (1805-41), soldier, traveller, and explorer, b. Montrose. At an early age he entered the service of the E. India Co. He proposed the exploration of the NW. Provs., which at that time were practically unknown, and in 1831 went to Lahore on a special mission. In the following year he started on the tour which took him across the Hindu Kush, to Bokhara and Persia. The book which he

pub. on his return to England obtained for him the recognition of the Brit. and Fr. geographical societies. On his return to India he went on a special mission to Kabul, and was later political agent there. He was assassinated by the Afghan mob in 1841, meeting his death bravely. His pub. were *Travels into Bokhara*, 1834, and *Cabool*, 1842.

Burnet, Gilbert (1643-1715), historian and bishop, was b. Edinburgh, and educ. at Marischal College, Aberdeen, and first studied law; but in 1661 he took orders in the Episcopal Church, which had just been restored in Scotland on the Restoration. He accepted the living of Saltoun in Haddingtonshire. In 1669 he was appointed prof. of divinity in the univ. of Glasgow. In 1673 he pub. his *Vindication of the Church and State of Scotland*, and in 1676 *Memoirs of the Dukes of Hamilton*, an account of the civil wars in Scotland. In 1674 B., not being able to accept Lauderdale's solution of the Scottish Church question, came to London, where he was given the chaplaincy of the Rolls Chapel, and later he became lecturer at St. Clements. Between the years 1679 and 1681 appeared his *History of the Reformation of the Church of England*, for the first 2 vols. of which he received the thanks of Parliament. B. was a convinced Whig, and a Broad Churchman, with ideas of religious toleration which were advanced for his age. His moderate views tended to alienate him from both political camps; but he refused the offer of sev. bishoprics from Charles II and on the accession of James II. he left the country and travelled in Europe, but finally settled in Holland, and gained considerable influence over William of Orange. He returned to England with him, and was appointed bishop of Salisbury (1689). B. preached the coronation sermon and had charge of the succession bill, 1701. He suggested the scheme which was afterwards adopted in the provision known as Queen Anne's Bounty (1704), but his influence declined a good deal under Anne. His greatest work, the *History of my own Time* (pub. 1723-34), is a valuable, if prejudiced, account of contemporary events. See T. E. S. Clarke and H. C. Foxcroft, *A Life of Bishop Burnet*, 1907.

Burnet, John (1748-1868), painter and author, b. Fishrow, near Edinburgh. His first-class engravings of the works of Wilkie first brought him renown. 'The Greenwich Pensioners' is the best and most popular of his own works, and was painted in 1837. He also wrote with authority upon art, his most important productions being *A Practical Treatise upon Painting*, 1827, the editing of *The Discourses of Sir Joshua Reynolds*, 1842, *Rembrandt and his Works*, 1849, and *Turner and his Works*, 1852.

Burnet, John (1863-1928), Hellenist regarded as the foremost Gk scholar of his day in Great Britain, b. Edinburgh, and educ. at Edinburgh and Oxford Univs. He was a master at Harrow (1888), and a fellow of Merton College, Oxford (1890). In 1892 he was appointed

prof. of Greek at St Andrew's Univ., and remained there until his retirement as emeritus prof. in 1926. In the previous year he visited the U.S.A. as Sather prof. of Greek at the univ. of California. His pubs. include *Early Greek Philosophy*, 1892, based on Zeller's *Philosophy of the Greeks*, *Greek Rudiments*, 1897, *The Nichomachean Ethics of Aristotle*, 1899, *Platonis Opera*, 1899-1907, *Aristotle on Education*, 1903, *Plato's Phaedo*, 1911, *Euthyphro, Apology and Crito*, 1914, *Greek Philosophy: Part I, Thales to Plato*, 1914, and *Higher Education and the War*, 1917.

Burnet, Sir John James (1857-1938), architect, R.A., son of the architect, John B. Studied at École des Beaux Arts, Paris. Entered his father's office in Glasgow and, later, founded his own firm in London. His most outstanding work is the King Edward VII Memorial Galleries in the Brit. Museum, 1905-14. Other buildings which he designed were, in Glasgow, extensions to the univ., the Royal Institute of Fine Arts and the Athenaeum; in London, the Kodak building, Kingsway, the General Accident, Fire, and Life Assurance Co.'s offices, Aldwych, Adelaide House (London Bridge), and the Institute of Chem. His war memorials include the Cavalry Memorial, Hyde Park; the Jerusalem War Cemetery; and the Indian War Memorial in Port Tewfik, Egypt.

Burnet, Thomas (1635-1715), divine, b. Yorks, and educ. at Clare College, Cambridge. He became a fellow of Christ's, and later senior proctor of the univ. Later he became master of Charterhouse, and in this position he did his best to prevent the Catholic appointments of James II. He became clerk of the closet to William III, in succession to Tillotson, but by reason of the outcry raised by the pub. of his *Archaeologiae Philosophicae*, was forced to retire. He retired to Charterhouse, where he d. His two most famous pubs. were *Telluris theoria sacra*, 1681, a work in which he put forward a fanciful idea of the structure of the earth, and which he afterwards trans. under the title of *The Theory of the Earth*, 1684; and the book already referred to, *Archaeologiae Philosophicae*, which he afterwards rendered into English. In this latter work he treated the Mosaic account of the creation as an allegory, with the result above mentioned.

Burnet. *Sanguisorba* (synonym *Poterium officinale*) is the Great B., a perennial herb with hermaphrodite flowers, found in Britain and Europe; and *Poterium sanguisorba* the Salad B., with lower flowers male, middle hermaphrodite, and upper female, in globose heads, native to Britain and parts of Europe.

Burnet Saxifrage, see PIMPINELLA.

Burnett, Frances Eliza Hodgson (1840-1924), Anglo-Amer. novelist, b. Chestham Hill, Manchester, daughter of Edwin Hodgson, house furnisher and decorator, who settled in Tennessee at the conclusion of the Amer. Civil war. In 1873 she married Dr Swan B. and toured Europe. She obtained a divorce from Dr B. in 1898, and married Stephen

Townsend in 1900. Her first successful production was *That Lass o' Lourie's*, which appeared in *Scribner's Magazine* in 1877. *Haworth's*, her next novel, was pub. in 1879. Her chief works following these two were *A Fair Barbarian*, 1881 and *Through one Administration*, 1883, and (by far her most famous book), *Little Lord Fauntleroy*, 1886, a saccharine picture of childhood. See her own reminiscences, *The One I Knew Best Of All*, 1893.

Burnett, George (1822-90), Scottish writer on heraldry, was called to the Bar in 1845. He early interested himself in Scottish genealogy, and wrote the greater part of a *Treatise on Heraldry*, 1892. His most valuable work is his *Exchequer Rolls, 1264-1507*, at which he worked from 1881 to 1890. Its 12 vols. contain much that is indispensable to the true appreciation of his country's hist. In 1866 he held the office of Lyon king of arms.

Burnett, James, see MONBODDO, LORD. Burnett's Fluid, deodorant introduced by Sir Wm Burnett (1779-1861). It consists of a solution of zinc chloride which decomposes the strongly smelling ammonium sulphide, forming zinc sulphide and ammonium chloride, both of which substances are practically without odour. To burnettise wood or fabrics means to saturate the material with zinc chloride solution; this process prevents decay.

Burney, Sir Ceall (1858-1929), Brit. admiral, son of Capt. Charles B., superintendent of Greenwich School. Lieutenant of the *Carysfort* in Egyptian and Sudanese campaigns, 1882 and 1884. Rear-admiral, 1909; blockaded Montenegro and Albania, 1913. Vice-admiral, 1913. In Jutland battle on board the *Marlborough*. Second Sea Lord, 1917. Admiral, 1919. Admiral of the Fleet, Nov. 1920. Baronet, Jan. 1921.

Burney, Charles (1726-1814), Eng. doctor of music and writer, b. Shrewsbury. Educ. at the free school of that city and at Ochester; for 3 years he was a pupil of Dr Thomas Arne (q.v.) in London. He was an organist, a very minor musical composer, but a first-rate historian of music. Being threatened with tuberculosis, he accepted the position of organist at King's Lynn, Norfolk, and here he conceived the plan of his *History of Music*, which did not, however, begin to appear until 1776, or some 6 years after his travels (1770-2), to many of the prin. cities of the Continent to collect materials. Before the appearance of his *History* he pub. the results of his observations on contemporary music in 3 vols.—one in 1771 on the state of music in France and Italy, which was praised by Johnson, and the other on the state of music in Germany and the Low Countries (2 vols.), 1773, the matter of both works being later incorporated in his *History*. The first vol. of the *History* is a dissertation on the music of the ancients, and owes something to Padre Martini's similarly entitled *Storia della Musica* (Bologna, 1757-70). The great merits, however, of B.'s work have always

been acknowledged, though the work did not escape some severe criticisms. Apart, however, from errors and omissions to be expected in a large-scale and difficult work, the only really substantial faults are B.'s treatment of earlier music as merely preparatory to that of his contemporaries and his quite inadequate treatment of Bach in the fourth vol., a lack of appreciation which was shared by B.'s contemporaries. When, later, B. made the acquaintance of the '48' and other works, his enthusiasm for Bach was as great as his previous indifference. Dr Johnson was among his many admirers, whilst he owed to Edmund Burke his position as organist at Chelsea Hospital, 1783-1814. His life, written by his more famous daughter, Fanny, Mme d'Arblay (see BURNEY, FRANCES) appeared in 1832. See also P. Scholes, *The Great Doctor Burney*, 1948.

Burney, Charles (1757-1817), classical critic. His father was Charles B. (1726-1814); b. at King's Lynn in Norfolk, he was educ. at Charterhouse and Calus College, Cambridge. B. d. at Deptford. His works include *Remarks on the Greek Verses of Milton*, 1790, *Tentamen de Metris Aeschyl*, 1809. His valuable library was acquired by Parliament and deposited in the Brit. Museum as 'the Burney Library.'

Burney, Frances (Fanny) (1752-1840), novelist, b. King's Lynn, Norfolk, daughter of Charles B. (q.v.). In 1761, a year after the family's removal to London, Mrs B. d. Fanny was never 'placed in any seminary'; nevertheless, at the age of ten, she had already taught herself to read and write, and at once showed a delight in putting both the arts into constant practice. Her precocity as an authoress was probably due to the fact that, at her father's house, she was continually being introduced to the leading men of the day both in music and literature. Still, at the age of fifteen, she was induced to burn her MSS., as her stepmother considered the practice of scribbling unladylike. Her first and best novel, *Evelina*, was actually pub. in 1778, but the story had been planned whilst Fanny was still in her teens. It was brought out in utmost secrecy, but the father was very proud of Fanny when she was admitted into the fellowship of the most distinguished literary people of the day. Johnson, who was her friend and admirer until death, declared that some passages in *Evelina* would do honour to Richardson. She received £20 in all for this novel. Burke, so the story goes, sat up all night to read it, and Reynolds would not touch his food until he had reached the end. For 5 years, 1786-91, Miss B. earned £200 a year as second mistress of the robes to Queen Charlotte. She resigned this post when her health failed and accepted a pension of £100 a year, 'a munificence I had little expected or thought of' (*Diary*, 4 June 1791). She married a Fr. officer, M. d'Arblay (d. 1818) in 1793, and lived with him in France from 1802 to 1812. Their son was b. in 1794. Her other stories were *Cecilia*, 1782, *Camilla*, 1796, and *The*

Wanderer, 1814. Her famous *Diary and Letters*, which extended over 72 years, appeared posthumously between 1842 and 1846. The property known as Camilla Lacey, in Surrey, destroyed by fire in 1919, was built out of the subscriptions (£3000) for the novel *Camilla*. It was always her ambition to write, as Sheridan suggested, for the stage, and in 1795 she wrote a tragedy, *Edwy and Elvira*, in the hope of increasing her then slender income, but the play was a failure. Much earlier in life she wrote a comedy, *The Wivings*, but, by the advice of her father, it was not put

FRANCES BURNEY

upon the stage. Her only remaining work was a life of her father (1832), written in an extraordinarily grandiloquent style. She d. in London. She was by nature somewhat prudish and self-effacing, quite unlike the *bas bleus* of the day, yet authorities agree that her amazing egoism detracts from the charm of her autobiography. Some of her characteristics were family affection, loyalty to friends, a vein of snobbishness, and a curious insensitiveness. In the *Early Diary and Letters* and the remarkably fresh *Evelina* there is strong evidence of a great natural talent that promises a rich harvest. Yet her later novels, *Cecilia*, *Camilla*, *The Wanderer*, and even the *Memoirs of her father*, are all disappointments. She may have been intimidated by the praise and friendship of Johnson, Walpole, Burke, and Reynolds that resulted from so unstudied a novel as *Evelina* or spoiled beyond recovery by 5 deadening years at a dull court. She is too anxiously part of her life at court and too impressed by the idea of royalty, to use her experiences there as she used those of her youth. She becomes less interested and less interesting

—an amateur writer who never grows up. During her lifetime she was overestimated, but her work is still regarded as an invaluable link in the early hist. of fiction. The standard ed. of her *Diary and Letters* is by A. Dobson (6 vols.), 1904. See also A. Dobson, *Fanny Burney*, 1903; M. Masfield, *The Story of Fanny Burney*, 1927; C. Lloyd, *Fanny Burney*, 1936; Averyl Edwards, *Fanny Burney*, 1948.

Burnham, Edward Levy-Lawson, 1st Baron (1833-1916), b. London, son of Joseph Moses Levy, printer. Educ. at Univ. College School, he became dramatic critic to the *Sunday Times*, owned by his father, who in 1855 bought the newly estab. *Daily Telegraph and Courier*, dropped the last half of its title, and reorganised it. With Cobden and Bright B. agitated for removal of the newspaper duty, and on its abolition in 1861 the *Daily Telegraph* became extremely successful. Levy, who in 1862 had married a daughter of Benjamin Webster the actor, assumed by royal licence in 1875 the additional surname of Lawson under the will of his uncle Lionel Lawson. The direction of the *Daily Telegraph* came into his hands in 1885. On the appearance of Irish Home Rule on the Liberal programme in 1885 he and his paper adhered to the Unionist cause. He continued the paper's policy of helping exploring expeditions, was made a baronet in 1892, and was raised to the peerage and retired from control of the paper in favour of his son, the 1st Viscount B. (q.v.).

Burnham, Frederick Russell (1861-1944), Amer. scout, b. Tivoli, in the wilds of Minnesota; son of Rev. Edwin Russell. In 1893 he first visited S. Africa, and at once entered the service of the Brit. S. African Co., which was at war with the Matabele. In the second rebellion of the same tribe, he gained distinction by killing M'limo, the Kaffir high priest, who was the instigator of the revolt. In 1899 he served in the Boer war. In 1900 he was captured at Sanna's Post, where Broadwood's convoy was surrounded, but made good his escape. At one time he destroyed the railroad between Pretoria and Johannesburg, and his last achievement in that region was the destruction of the line E. of Pretoria, his object being to prevent the Brit. prisoners from being taken away. He was made chief of the scouts of the Brit. Army in the field, and received various decorations. He made surveys of the Volta R., W. Africa, 1902, and explored Congo basin, 1903-4. Made discoveries of Maya civilisation in Mexico, 1908.

Burnham, Harry Lawson Webster Levy-Lawson, 1st Viscount and 2nd Baron (1862-1933), b. London, son of the 1st Baron (q.v.). He was educ. at Eton and at Balliol College, Oxford. As a Liberal he represented W. St Pancras in Parliament, 1885-92; he was called to the Bar at the Inner Temple, 1891; and he was on the London Co. Council, 1889-92 and 1897-1904. He was in Parliament again, as member for Milo End (Tower Hamlets), 1905-6; and again for same constituency,

but as a Unionist, 1910-16. He was mayor of Stepney, 1908-9. In 1916 he succeeded to the barony, and was made a viscount in 1919. He presided at the International Labour Conferences at Geneva, 1921, 1922, and 1926. He was appointed a member of the Indian Statutory Commission, 1927. The 'Burnham award' as to schoolteachers' salaries is the work of a standing committee of which he was chairman. The *Daily Telegraph*, of which he had the management since 1903, and the proprietorship since 1916, he sold in 1927.

Burnham Beeches, wooded region of 515 ac. near Slough in Bucks, England. It is the remains of an ant. forest, and consists of a number of beeches of tremendous girth. Gray, in a letter to Walpole dated Sept. 1737, remarked on their picturesque beauty (*Gosse's Life of Gray*, 1882; Wm Mason's *Life of Gray*, 1774). In 1879 the City of London Corporation acquired them for public use. Burnham itself is a township of 5900 inhab.

Burnham-on-Sea, tn and urb. dist. in Somerset, England, on an estuary of the R. Parrot, with extensive sands, a light-house, hotels, and facilities for golf and tennis. Highbridge was amalgamated with B. in 1933. Pop. of dist. 9526.

Burnie, post tn and port of entry and clearance of Wellington co., Tasmania, on Emu Bay. It is 67 m. WNW. of Launceston, and the terminus of the railway to Waratah. Pop. 14,240.

Burning, see COMBUSTION.

Burning Bush, name given to *Dictamnus albus*, a perennial herb with glandular stem giving off a very volatile, fragrant oil which can be ignited on a hot, still day; to *Euonymus atropurpureus*, a deciduous shrub with pale yellow foliage colour and crimson fruits in autumn; and *Kochia scoparia* var. *trichophylla*, a half-hardy ann. turning purple-red in autumn.

Burning Glasses and Mirrors. A lens may be used to bring the heat-rays of the sun to a focus in the same manner, though not quite at the same point, as the rays of light are focused. The heat thus brought to bear on a small area is sometimes used for fusing metals, etc. The focusing may be produced by reflection from concave mirrors or a concave system of plane mirrors. In the 'solar engine' the heat reflected from sev. thousand plane mirrors arranged on a huge concave frame is focused upon a small boiler and utilised to drive an engine for pumping operations, etc. A special instrument, known as a heliostat, is provided to keep the apparatus facing the sun. Archimedes is said to have burnt the Rom. fleet of Marcellus before Syracuse by focusing the heat of the sun with sev. large burning mirrors. See LENS and REFLECTION.

Burnley, mrkt tn, municipal co. and parl. bor. of Lanes. It stands at the confluence of the Brun and Calder. Charles Towneley, whose collection of antique marbles and bronzes reposes in the Brit. Museum, was b. here. Besides

the staple trade, cotton spinning and weaving, there are sev. large machine and light engineering works, iron foundries, paper-mills, and a hardware factory. Towneley Hall is now a museum and art gallery. The Paulinus Cross is said to have been erected to commemorate the preaching of St. Paulinus in this dist. about AD 600. Pop. 83,290.

Burnouf, Eugène (1801-52), Fr. Sanskritist and Iranist. He gave up the legal profession to devote himself to oriental studies. In 1832 he was appointed prof. of Sanskrit at the Collège de France, Paris. He collaborated with Lassen and with Bopp. Main works: *Essai sur le Pâli* (with Lassen), 1826; *Vendidad Sade* (folio parts), 1829-43; *Commentary on Yasna*, 1833-45; *Observations sur la grammaire de M. Bopp*, 1834; *Études sur la langue et les textes Zendes*, 'Journal Asiatique,' 1840-50; *Introduction à l'histoire du Bouddhisme Indien* (I, 1844; 2nd ed., 1876; II, 1852). He ed. and trans. *Bhāgavadapūrāṇa* (2 vols.), 1844. His works, though partly out of date, are still valuable.

Burnous (Arabic *burnus*), loose full cloak worn by Arabs, generally white, and with a hood resembling that of a Capuchin friar.

Burns, Eedson Louis Millard (1897-), Canadian general, b. Westminster, Quebec. He attended the Royal Military College, Kingston, Ontario, and after graduation was commissioned in the Royal Canadian Engineers (1915). By the end of the First World War he had reached the rank of captain. B. attended the Imperial Defence College in England at the commencement of the Second World War. He stayed in London to assist with the reception of the Canadian troops arriving in Britain. In 1943 he was promoted major-general, in command of the 2nd Canadian Infantry Div. In 1944, as acting lieutenant-general, he commanded the 1st Canadian Corps in Italy. After the war he held sev. administrative appointments in Canada, but in 1954 he was appointed to take charge of the U.N. Truce Supervision Organisation in Palestine. In 1956 he was given command of the U.N. Emergency Force sent to take over from the Anglo-Fr. forces which had been engaged in the military operations in the Suez Canal zone and the Israeli forces which occupied Sinai and Gaza. B. is an authority on cartography and allied technical subjects.

Burns, Jabez (1805-76), nonconformist divine, educ. at Chester and Oldham Grammar School. While a boy he joined Methodist New Connexion; 1826 came to London; compiled *Christian's Sketch-Book*, 1828 (second series issued 1835); *Spiritual Cabinet*, 1829. B. did much mission work on behalf of Scottish Baptists, becoming pastor of a Perth congregation, 1830-5; 1835, pastor to Baptist congregation at Marylebone. He was said to have been the first clergyman to preach teetotalism from the pulpit. He delivered 35 ann. temperance sermons, beginning Dec. 1839. Member of the Evangelical Alliance, formed 1845; after

1847 travelled in America, Egypt, and Palestine. Among his works are *Notes of a Tour in U.S.A. and Canada in 1847*, 1848, *Helpbook for Travellers to the East*, 1870, *The Golden Pot*, 1848, *Manna, or Christian's Portion*, 1848, *Preacher's Magazine and Pastor's Monthly Journal*, 1839-44, and *Sermons*, 1842.

Burns, James (1808-71), Brit. publisher, founder of Burns & Oates, publishers to the Holy See in Great Britain. He was the second son of the Reverend Wm Hamilton Burns, D.D., and was descended on both sides from a long line of Presbyterian ministers. Educ. in Glasgow for the same career, in 1832 he went S. and found work with a London publisher, setting up on his own 3 years later. He had by this time become a follower of the High Church movement, which, in the late forties, led him to Rome. Conversion was followed by a lean period, selling music and church furniture as well as books, which ended in 1848, when Newman gave him *Loss and Gain*. Other works by Newman followed—including *The Dream of Gerontius*—and B. rapidly attracted other leading Catholic authors to his list. In this way the firm he founded became one of the best-known Rom. Catholic imprints in the Eng.-speaking world.

Burns, John (1858-1943), politician, b. Vauxhall, London. He received his educ. to the age of ten at a national school; then he was sent to work, but continued study at night schools. He worked at first in a candle factory, and was later apprenticed to an engineer, and became a Socialist. He worked at his trade on land and on board ship, and went for a year to W. Africa. He had in the meantime become known as a labour agitator. In 1886 he cleared himself of the charge of instigating the mob to violence on the occasion when the clubs of the W. End had their windows broken. In the following year, however, he suffered 6 weeks' imprisonment for his share in the Trafalgar Square riots. In 1885 he had been unsuccessful as the candidate of the Social Democratic Federation at W. Nottingham. He sat on London's first co. council as a Progressive member for Battersea, and in 1892 as the candidate put forward by a local 'Labour League,' he became member of Parliament for the same constituency, a seat he retained until 1918. He was active in securing good conditions of employment both in the L.C.C. service itself and in the undertakings of its contractors. The 'fair wages clause,' which became general in local gov., owes much to B. In 1889 he had, together with Ben Tillett, been the chief organiser of the London dock strike. He was made president of the Local Gov. Board in Campbell-Bannerman's administration, 1906, being the first working-man to attain Cabinet rank, and became a Privy Councillor. By that time he had lost much of his popularity with the Socialist rank and file—partly on account of his having taken office with the Liberals, partly on account of the Puritan bluntness with which he rebuked the

failings of his own class. He took an active share in social legislation during his period of office, introducing the House and Town Planning Bill in 1909. On the declaration of war, Aug. 1914, he was one of the 3 ministers who immediately resigned. He never joined the rising Labour party, and retired into private life towards the end of the First World War, rather than stand for the general election of Dec. 1918. A vigorous rather than a polished orator, he had command of apt citation and of epigram, if at times bordering on magniloquence.

Burns, Robert (1759-96), poet, *b.* Alloway, near Ayr, in a cottage built by his father, a farmer who had migrated from Kincardineshire and who originally spelt his name Burnes. The careful instruction that B. got from him and from John Murdoch, the village schoolmaster, disposes of the theory that he was inspired but illiterate. From his mother Agnes Brown he learned a wealth of traditional ballads and folk-tales. But he was put early to work. His father, who was constantly trying to better his position but seemed fated to be unfortunate, took a farm in 1768 at Mount Oliphant, and in 1777 moved to Lochlea in the par. of Tarbolton. At 15 B. was a skilled ploughman. Meanwhile he had some additional though intermittent schooling, and when Murdoch was estab. in Ayr made shift to learn from him the rudiments of French. His first song, 'Handsome Nell,' was written when he was 16, inspired by a young partner at the harvesting. About this time he attended a country dancing school, against his father's wishes, and soon after began the succession of love affairs which has made him notorious. In a brief visit to a school at Kirkoswald he learned surveying and also to take his glass, and in 1781, despairing of farming, he went to Irvine to learn the trade of flax-dressing, but that project fell through when the shop was burned down during a Hogmanay carousal. Finally, in 1784, when his father d. of consumption, Robert and his brother Gilbert invested what little capital could be saved in the farm of Mossiel near Mauchline.

Mossiel proved no more successful than their other ventures, and meanwhile B. had formed a union with Jean Armour, daughter of a master mason, but owing to separation following a quarrel with her family considered himself free again and purposed, as a desperate bid for fortune, to emigrate to Jamaica as book-keeper on a plantation. To this time belongs the romance of 'Highland Mary' mentioned in his poems, whose statue stands at Dunoon; B. intended that Mary Campbell should accompany him to Jamaica as his wife, but meanwhile she d. of fever, and his fortunes took a turn which entirely changed his plans. It was to get money for his passage that he pub. his *Poems Chiefly in the Scottish Dialect*, 1786 (the famous 'Kilmarnock Burns'), which was an immediate success. It contained much of his best work, including 'The Twa Dogs,' 'Hallowe'en,' 'The Jolly Beggars,' 'To a Mouse,' 'To a Mountain

Daisy,' and that idyll of a Scottish fireside, 'The Cotter's Saturday Night.' On seeing the collection Dr Thomas Blacklock (q.v.) dissuaded B. from going abroad, and arrangements were made for an Edinburgh ed. of the poems, which eventually brought him some £500. In Edinburgh B. was received as an equal by Dugald Stewart the philosopher, Wm Robertson the historian, and Hugh Blair the poet, as well as by aristocrats like the Earl of Glencairn. Always a good conversationalist, he made a favourable impression by his frankness and modesty, forming friendships with, among others,

ROBERT BURNS

Mrs McLehose, the 'Clarinda' of his letters, and Mrs Dunlop of Dunlop, with whom also he corresponded for a time. Walter Scott, then a boy of 15, saw him and described him later as 'of manners rustic, not clownish' . . . 'the eye alone indicated the poetical character and temperament. It was large and of a dark cast, and literally glowed when he spoke with feeling or interest.' Back in Ayrshire in 1788 B. acknowledged Jean Armour as his lawful wife, used his capital to try a new farm, Ellisland, on the banks of the Nith near Dumfries, and took lessons in the duties of exciseman as a line to fall back upon if farming should again prove unsuccessful.

At Ellisland he was cultivated by the local gentry, and it was suggested that he should be a candidate for the newly founded Chair of Agriculture at Edinburgh Univ., but he declined. The farm proving a poor bargain, like the others, in 1791 he removed to Dumfries and became a gauger or exciseman pure and

simple. Unhappily the advantages of a steady income were partly offset by the opportunities for hard drinking, which had long been his weakness. Meanwhile he was engaged in one of his most important literary tasks, the provision of songs for the *Scots Musical Museum* compiled by James Johnson, and also for George Thomson's *Select Collection of Original Scottish Airs*. B.'s contribution of over 200 songs, many of his own composition, many based on older verses which he refurbished and revitalised by his genius, is perhaps his supreme achievement. It was entirely a labour of love, for he received no payment whatever. At this time also he wrote in one day what is reckoned the greatest of his longer poems, the rollicking 'Tam o' Shanter.' His work in the *Excise* was satisfactory, and he could look forward confidently to a superintendence. His prospects had never been brighter when in 1796 he paid the final penalty of his intemperate habits, an attack of rheumatism bringing on endocarditis, to which he succumbed. Ever since his death B. has suffered from well-meaning but illogical critics who think it necessary to deplore or explain away his frailties before pointing out the greatness of his genius. As the critic Gregory Smith observes sarcastically, 'the comment on intrigue and whisky rolls on, involving us all in irrelevance.' The simple facts, from a literary point of view, are that B. was not only the finest Scottish poet but one of the greatest of all writers of love songs. Whether composing original pieces or, as in the case of 'Auld Lang Syne,' revitalising a song which had already passed through more than one version, he had the sure touch of lyric genius. To this he added a power of vitriolic satire shown in such poems as 'Holy Willie's Prayer,' and a command of vivid description that appears at its best in 'Tam o' Shanter' and 'The Jolly Beggars.' His poetry owed much to Allan Ramsay and to ill-starred Robert Ferguson, who stands in much the same relation to B. as Marlowe does to Shakespeare, but he far surpassed both his Scottish forerunners, and the example of his work was one of the vital influences in the coming Romantic Movement.

The first ed. of his collected works was that of J. Currie, 1800, others are by A. Cunningham, 1834, W. S. Douglas, 1877-9, and R. Chalmers and W. Wallace, 1896; his poems were ed. by W. E. Henley and T. F. Henderson, 1896-7, A. Lang and W. A. Craigie, 1896; his letters by J. de L. Ferguson, 1931. *See* lives by J. G. Lockhart, 1828, J. C. Sharp, 1897, A. Baker, 1923, C. Carswell, 1930, F. B. Snyder, 1932, D. Daiches, 1952; essays by T. Carlyle, 1839, and R. L. Stevenson, 1882.

Burns and Scalds, destruction of tissue by dry heat in the former case, by moist heat in the latter; the general symptoms and treatment are the same in both cases. B. are usually classified according to the depth to which the tissues are affected. Dupuytren suggested the following degrees: (1) Where the skin is reddened. A slight

swelling is apparent which usually disappears quickly; there is considerable pain at first, but the condition is rapidly cured. (2) Where the outer skin is destroyed, more or less extensive blisters containing serum raising it from the true skin. A fair amount of pain is felt; the outer skin is cast off after the blister has been pierced, and a new skin forms without any scar remaining. (3) Where the true skin is partly destroyed. The pain is considerable, black or brownish sloughs occur, and there is danger of septic poisoning. When the wound has healed, a slight scar or puckering of the skin is observable. (4) Where the true skin is wholly destroyed. The condition is serious, but is not accompanied by much pain, as the nerve-endings have been destroyed. After healing, a deep scar can be noticed. (5) Where the soft parts, muscles, etc., have been destroyed. (6) Where the bones have been charred, a very serious condition, which can usually only be met by amputation. The dangers from B. include shock, septic poisoning, inflammation of internal organs, and general exhaustion. The danger from shock depends upon the extent of the burnt area; it is estimated that cases in which over one-third of the total body-surface is seriously affected end fatally. The whole nervous system has reacted very rapidly and with great intensity, and cannot undergo repair sufficiently to keep the organism alive. The result is coma, leading to death. The danger of sepsis arises from the fact that the tissues beneath the skin have been laid open to the action of micro-organisms in the atmosphere. The extent to which the tissues have been laid bare determines the extent of the danger. Complications with respect to underlying or other organs may arise through the loss of the skin's functions, the disturbance of the blood supply, and the possible introduction of germs peculiarly harmful to those organs. Exhaustion of the system is a natural result of the strain occasioned by the healing process and interference with the nutritive functions, as in cases of scalds of the throat and stomach. The symptom demanding most immediate treatment is shock. Vitality should be preserved by wrapping the patient in blankets, placing hot-water-bottles at the extremities, and administering stimulants. The condition of shock lasts from thirty-six to forty-eight hours. Local treatment of B. aims at preventing infection, relieving pain, and promoting healing with a minimum of deformity or scarring. If the burn be slight, the blisters may be pierced their contents drained off, the outer skin cut off and the surface treated with a weak solution of picric acid. In dealing with severe B., care must be taken not to tear affected tissues by rough handling of clothing. The clothes should be carefully cut off, the whole surface should be treated with an antiseptic, and then the more permanent dressing adjusted. This usually consists of gauze soaked in picric acid solution and covered by antiseptic wool, the whole being lightly bandaged, so as

to exclude all air, but without undue pressure upon the injured part. Two affected surfaces must not be left in contact, as the result might be a union of the two surfaces. In cases where the destruction of the true skin has been extensive, skin-grafting has been adopted with satisfactory results. An aqueous solution of tannic acid (10 per cent) has been used for the treatment of B. with the object of forming a protective surface; moreover, by promoting coagulation it helps to prevent the absorption of toxic materials produced by burnt tissues. It may, however, conceal the onset of sepsis; it is also liable to cause contraction and loss of function. Gentian violet (1 per cent aqueous solution) has also been used with success. Irrigation of the affected part with warm saline in the Bunyan-Stannard envelope is another method giving good results. Absorbed toxins cause damage to the cortex of the suprarenal bodies, which can be counteracted by injections of cortical extract, or preferably of synthetic corticosterone; the liver lobules are also affected adversely, calling for administration of glucose. Blood transfusions are often given to counteract shock and toxæmia. Sulphonamides and penicillin are useful in cases of severe infection.

Burnside, Ambrose Everett (1824-81), Amer. soldier, a native of Liberty, Indiana. He became a member of the Military Academy but resigned his commission in 1853 and adopted the manufacture of firearms. Three years later he invented a breech-loading rifle. He took a prominent part in the first battle of Bull Run, and was appointed brigadier-general of volunteers in 1861. He sailed in the following year for the N. Carolina coast, and in the ensuing campaign won the victories of Roanoke, Newbern, and Fort Macon. Shortly afterwards he was made major-general, U.S.V. President Lincoln appointed him to succeed Maclellan to the army of the Potomac. He was thoroughly defeated at Fredericksburg in 1862, and aroused much criticism by his suppression of press opinion. The failure of the 'Burnside mine' at Petersburg (q.v.) caused his resignation in 1864. In 1866 he became governor of Rhode Is. He was a Republican member of the Congress till his death. He d. at Bristol, Rhode Is. See B. P. Poore, *Life*, 1882.

Burnside, Helen Marion (1844-1923), artist and poet, exhibited at the Royal Academy in 1863. From 1880 to 1889 she was designer at the Royal School of Art Needlework. For the next 5 years she was editor to Messrs Raphael Tuck. She also wrote many songs and magazine stories, but she is known more especially as the writer of children's books.

Burnside, suburb of Adelaide (q.v.), S. Australia. Pop. 28,000.

Burnt-ear, common name for a disease of corn caused by minute fungi. The seed-coat of the grain attacked is covered with a black dust, while the interior seems to be untouched, but is found to be abortive. See SMUT.

Burnt Sienna, see SIENNA.

Burnt Stones, old cornelians possessing a glowing red colour when held to the light. They are found in ruins and have a dull appearance externally.

Burntisland, burgh, seaport and holiday resort on the Firth of Forth, Fifeshire, Scotland. Rosend Castle is here, built 1119. The influence of the close intercourse which once existed between B. and Holland is expressed in the par. church, which resembles the N. Church, Amsterdam. It was here that James I pressed his proposals for a new trans. of the Scriptures into English. There are ship-building and aluminium processing industries. Pop. 5670 (burgh; pop. of par. 5883).

Burr, Aaron (1756-1836), Amer. legislator and native of New Jersey. At the College of New Jersey, now Princeton Univ., where his father and grandfather had occupied the presidency, he graduated. He joined the patriot army in 1775, and two years later was rewarded for his valour and abilities by promotion to lieutenant-colonel. He resigned in 1779, and was called to the Bar, where he quickly assumed a prominent position. From 1789 to 1790 he was state attorney-general; senator (1791-7); and vice-president (1801-5). He fought a duel with Alexander Hamilton, who was responsible for his defeat in obtaining the governorship of New York, and killed him. Flight to the S. was necessary till the excitement lessened, when he returned. An attempt to raise revolution in Texas in order to establish a rep. there resulted in his arrest. He was acquitted of charges of treason, but was socially ostracised. After spending some time abroad, he returned to the practice of law in New York, made an unhappy second marriage, and suffered from financial difficulties. He d. on Staten Is.

Burr, William Hubert (1851-1934), Amer. engineer, b. Watertown, Connecticut. He became prof. of engineering at Harvard Univ. in 1892, and at Columbia Univ. in 1893. In 1899 he was appointed a member of the Isthmian Canal Commission to report upon a route for the Panama Canal; in 1904 of the commission to construct the canal; in 1905 of the international board of consulting engineers to determine the plan of the canal; and in 1919 of the board of consulting engineers for constructing a vehicular tunnel under the Hudson R. at New York city. Pubs.: *The Stresses in Bridge and Roof Trusses*, 1881; *Elasticity and Resistance of the Materials of Engineering*, 1883; *Ancient and Modern Engineering and the Isthmian Canal*, 1902; *Suspension Bridges, Arch Ribs, and Cantilevers*, 1913.

Burra, see KOORINGA.

Burra-Burra, celebrated copper mine in S. Australia, 101 m. N. by E. of Adelaide. Ore to the value of £4,000,000 has been mined, but the mine is now closed.

Burrard Inlet, narrow inlet of Brit. Columbia, situated at the SW. extremity. It forms a magnificent harbour, and is the inlet on which stands Vancouver,

the W. terminus of the Canadian Pacific Railway.

Burren, see CLARE.

Burriana, Sp. tn in the prov. of Castellón de la Plana, on the Mediterranean coast. It has a trade in oranges, oil, and wine. Pop. 16,000.

Burritt, Elihu (1810-79), Amer. philanthropist, commonly called 'the learned blacksmith.' He was a native of New Britain, Connecticut. His grandfather and father had served in the revolutionary army. His education was self-obtained from whatever books were available at home. He became apprenticed to a smith at the age of 16, and adopted smith work as his trade. He was able to indulge a passion for literature in any form in his spare moments at the forge, while for a short time he attended a school kept by his brother Elijah. In this desultory fashion he conquered Latin, Greek, French, Spanish, and German, and by the time he was 30 years of age could read nearly 50 languages. He gradually acquired fame with his increasing store of knowledge, and soon embarked upon a lecture tour to various places in U.S.A. and Europe on behalf of peace. He organised in 1846, while in England, the League of Universal Brotherhood. He organised the Brussels Peace Conference (1848), and similar conclaves held at Paris, Frankfurt on the Main, and other cities, and pub. innumerable pamphlets. He founded the *Christian Citizen* at Worcester to advance his views. He returned to America and d. at New Britain.

Burroughs, Edgar Rice (1875-1950), Amer. novelist, b. Chicago. He was educ. at Michigan Military Academy, enlisted but was discharged as under age, and for 15 years followed various occupations—drover, gold dredger, railway detective—till, in 1912, he wrote *Tarzan of the Apes*, the story of a boy who was brought up by monkeys. Its success was tremendous, over 25 million copies of it and its sequels being sold. There are about a dozen volumes in the series, including *The Return of Tarzan*, 1915, *The Beasts of Tarzan*, 1917, *Tarzan the Terrible*, 1921, *Tarzan the Invincible*, 1931, and *Tarzan the Magnificent*, 1939. B. also wrote a series of romances about other planets, including *A Princess of Mars*, 1917, *The Warlord of Mars*, 1919, *Lost on Venus*, 1935, and *Synthetic Men of Mars*, 1940.

Burroughs, John (1837-1921), Amer. nature-writer, b. Roxbury, New York state. Among his early callings were teaching, journalism, and farming. In the treasury dept. of Washington he served as a clerk for 9 years. His early productions included *Wake-Robin*, 1871, *Birds and Poets*, 1877, *Locusts and Wild Honey*, 1879, and *Fresh Fields* (on a visit to England), 1885, in prose; while in verse he pub. a vol. called *Bird and Bough*, 1905. Other works include *Whitman: a Study*, 1902, *Ways of Nature*, 1905, *The Summit of the Years*, 1913, *The Breath of Life*, 1915, *Under the Apple Trees*, 1916, *Field and Study*, 1919,

and *Birds and Bees*, 1926. See CLARE Barrus, *Life and Letters of John Burroughs*, 1925, and C. H. Osborne, *The Religion of John Burroughs*, 1930.

Burrows, S., see BOROUGH STEPHEN.

Burrowing Owl, or *Speotyto cunicularia*, is a native of America. It is about 9 in. long, has no ear-tufts, and its legs are long and poorly feathered. It inhabits burrows and holes of caves, lizards, foxes, squirrels, and other animals, and there it makes its nest.

Burrows, Ronald Montagu (1867-1920), archaeologist, b. Rugby, and educ. at the Charterhouse and Christ Church, Oxford. While assistant to Prof. Gilbert Murray in the Gk dept. of Glasgow Univ., 1891-1897, he excavated at Pylos at the SW. extremity of the mainland of Greece, and in the adjoining is. of Sphakteria, 1895-1896; and the results, described in *Hellenic Studies*, cleared the credit of Thucydides as a historian. In 1907 he pub. *The Discoveries in Crete and their Bearing on Ancient Civilisation*. In 1908 he became prof. of Greek at Manchester Univ. He was appointed principal of King's College, London, in 1913.

Burrstone, see BURSTONE.

Burrus, Sextus Afranius, native of Gaul, appointed praetorian prefect by Claudius in AD 52. With Seneca he was joint tutor to Nero, whose succession he helped to secure. To B.'s influence was due the brilliance of Nero's early reign, but he quarrelled with the emperor and d. in AD 63. Most historians allege that he was poisoned by Nero, though Tacitus entertained some doubt.

Burry Port, urb. dist. and seaport on B. estuary, Carmarthenshire, Wales, 4 m. W. of Llanelli. Pop. 8000.

Bursa, il of Asiatic Turkey and tn of same name. The tn is situated close to the base of Mt. Oly

l-wooded fertile valley. sulphur springs in the neighbourhood. In 1855 a terrible earthquake occurred which disfigured the tn very greatly. B. is especially noted for the manuf. of carpets, tapestry, silk fabrics, gauze, and satins, and the demand for these is considerable in E. countries, though the people of Switzerland make many imitations in cotton. Wine is another production. Pop. (il) 613,363; (tn) 131,336.

Bursa, synovial sac or closed space containing liquid between two moving surfaces of the body. Its function is to lessen the effects of friction, and bursae may either be permanently situated for that end, or developed in a part where friction has caused a certain amount of irritation of the tissues. Bursae may be classified as (1) bursae between the covering skin and bony projections, as at the point of the elbow and at the knee-cap; (2) bursae between tendons and the surfaces they cross; (3) bursae between tendons and the walls of osteofascial tunnels.

Bursar, term used at Oxford and Cambridge colleges for the official who keeps the college accounts. It is also used in the same sense in public schools, and in 1932 an association of these

officials was founded. His office is called the bursary. This latter word is used in Scotland to denote a grant of money to be made to a student, the equivalent of a scholarship or exhibition in England.

Bursaria is a genus of ciliate Protozoa of large size, in which the body appears to be convex above and concave below. Lammack described 5 species of these freshwater creatures, of which *B. truncatella* was one.

Burschenschaft, name of an association of students of the univ. of Germany, founded in Jena in 1815. It owed its inspiration to the national sentiment aroused in Germany by the war of Liberation and its object was to encourage and engender patriotism and a Christian bearing. Its chief patron was the Grand-Duke of Saxe-Weimar. It took a prominent part in the revolutions of 1830 despite the provisions of the Carlsbad decrees, which, however, in 1833 secured its suppression. It was resuscitated in 1848, but gradually lost its political character. The B. is now extinct. See G. Heer, *Geschichte der Burschenschaft*, 1927-9.

Burseraeae, family of dicotyledonous plants which are found in the tropics, and yield balsam, resin, and gum. The flowers are small and regular, with the disk usually annular, in parts of 4 or 5, with a syncarpous gynoeceum consisting of 3 to 5 carpels, with 2 ovules in each loculus. The fruit is a drupe or a capsule, and the bast contains resin passages. Genera include *Amyris*, *Boswellia*, *Bursera*, *Commiphora*, *Garuga*, and *Protium*.

Bursitis, inflammation of a bursa (q.v.). Usually chronic and caused by the irritation from constant pressure or friction—as in 'housemaid's knee'—B. may be acute and purulent. In B. an excess of serous fluid is secreted by the walls of the bursa, which becomes distended and tense. B. may follow a blow to the bursa, in which case the swelling is haemorrhagic instead of serous. B. is not serious and usually responds to aspiration of the fluid and avoidance of the kind of usage of the joint to which it was formerly subjected. For example, those with B. of the knee should either avoid kneeling or wear a kneeling pad. In purulent B. the abscess must be drained. B. which become infected do not as a rule recur as the cavity of the bursa becomes obliterated by fibrous adhesions.

Buralem, former bor. and mrkt tn of Staffs, England, since 1910 included in the co. bor. of Stoke-on-Trent (q.v.), of which it forms 5 wards. In the 17th cent. it was the chief Eng. centre for the manuf. of earthenware and is still called the 'mother of the potteries.' Josiah Wedgwood was b. here (1730); the Wedgwood Memorial Institute was opened by the Marquess of Ripon in 1869. The B. and Tunstall War Memorial Hospital (the Hayward) commemorates the victims of the First World War.

Burton, Decimus, F.R.S. (1800-81), architect, was the son of a builder by whom he was trained. He then entered

the R.A. schools to study architecture, started practice at an early age, was befriended by John Nash (q.v.), and ultimately became a leading figure in the Classical Revival, although he had not studied in Italy or Greece. His enormous London practice included the Athenaeum Club, his masterpiece, 1827; the screen at Hyde Park Corner, and the arch now on Constitution Hill; Charing Cross Hospital, 1831-4; and, in Regent's Park, the Holme, c. 1818; Grove House, 1822-4; St Dunstan's Lodge, 1825; Holford House, 1832-1833. Outside London, besides a very long list of country mansions, he laid out the Calverley Estate at Tunbridge Wells, 1828 onwards; other suburban estates at Liverpool, Fleetwood, Glasgow, Folkestone, etc.; and Adelaide Crescent at Brighton, 1830-4.

Burton, Sir Frederick William (1816-1900), painter, b. co. Clare. Elected associate of Royal Hibernian Academy when only 21 years of age. In 1842 he began to exhibit at the Royal Academy. He travelled widely in Europe, where he gained an intimate knowledge of the works of the old masters. In 1874 he was appointed director of the Brit. National Gallery.

Burton, John Hill (1809-81), historian, b. Aberdeen. He graduated at Aberdeen Univ., and was called to the Bar. His practice was not large, and he had to devote himself to literature, contributing to sev. periodicals and encyclopaedias. In 1846 he achieved great distinction with his biography of David Hume, and in 1847 produced biographies of Simon Lord Lovat and Duncan Forbes. In 1854 he was appointed secretary to the prison board of Scotland, and became a prison commissioner. He held office as historiographer royal for Scotland. His other works include *History of Scotland from Agricola's Invasion to 1688*, 1867-70 and 1873.

Burton, Sir Richard Francis (1821-90), explorer, b. Barham House, Herts. He spent most of his childhood in Italy and France. He was educ. at Trinity College, Oxford, and entered the Indian Army in 1842. During his stay in India he studied assiduously the various oriental languages, and rapidly reached proficiency. He was appointed assistant in the Sind survey, which enabled him to mix with the people. He frequently passed as a native in the bazaars, and thus gained an excellent knowledge of E. life and customs. On his return home he pub. an important work on Sind, together with 3 other books. In 1853 he made a pilgrimage to Mecca, which was to make him famous. He went disguised as an Indian Pathan. The book he wrote, called *Pilgrimage to El-Medinah and Meccah*, 1855-6, contains a most interesting account of his journey and exploits. His next journey was into the Somali country in E. Africa. He went to Harrar, the Somali cap., which had hitherto never been entered by a white man, and stayed there 4 days. Afterwards he vanished into the desert, and nothing was heard of him for 4 months. He next served on Gen. Beaton's staff in

the Crimea. In 1856 he went with Speke to Africa, and explored the lake regions of equatorial Africa. They discovered Lake Tanganyika in 1858, and Speke, during B.'s illness, discovered Victoria Nyanza. In 1861 B. was made consul of Fernando Po, whence he was shifted successively to Santos in Brazil, Damascus, and Trieste, which post he held till his death. B. married Isabel Arundell in 1861, and she accompanied him henceforth on all his journeys. He received the gold medal of both Fr. and Eng. geographical societies. He was master of 35 languages and dialects. He was knighted in 1868.

SIR RICHARD BURTON

He wrote numerous books, chief of which are *First Footsteps in East Africa: Harar*, 1856, *Abeokuta and the Cameroon Mountains*, 1863, *Wanderings in West Africa*, 1863, *Explorations of the Highlands of Brazil*, 1869, and *Gold Mines of Midian and the Ruined Midianite Cities*, 1878. His chief work is his trans., with copious notes, of the *Arabian Nights*, 1885-8. He also trans. *The Lusiads* of Camoens, 1881. His wife built an Arab tent of stone and marble to his memory at Mortlake. See lives by Lady Burton, 1893; T. Wright, 1906; W. P. Dodge, 1907.

Burton, Robert (1577-1640), Eng. humanist and writer, famous for *The Anatomy of Melancholy*, b. Lindley Hall in Leics, the fourth of a family of 9. He received his education at the free school at Sutton Coldfield and at Nuneaton Grammar School, and in 1593 entered Brasenose College, Oxford. In 1599 he was elected a student at Christ Church, where he spent the remainder of his life. In 1616 he became vicar of St Thomas's and in 1630 rector of Seagrave in Leics, through the patronage of George, Lord Berkeley. He held both livings until his death. Some years previous to his death he predicted its occurrence in his sixty-second year by

a calculation of his nativity. In appearance he was a thick-set, plumpish man, with dark brown beard of formal cut, a satiric glint in his large eyes, and a monumental forehead revealing intelligence and memory. In 1606 he wrote a Lat. comedy called *Philosophaster*, and rewrote it in 1615. It was acted by students in 1617; it was then for some considerable time lost, but was rediscovered in 1862. His book, *The Anatomy of Melancholy*, appeared in 1621, and the author signed himself Democritus Junior. In his very extensive preface he refers to the influence of Democritus and Hippocrates upon his proposed work, and also gives his reasons for writing it. In the book itself he first defines melancholy, and divides it up into its various kinds. He proceeds then to examine the causes of melancholy, and then goes on to give the methods by which it may be cured. The concluding section of the work deals with religious melancholy. B. had no intention of compiling a doleful work. He was a good-humoured pessimist. He is indeed somewhat of a paradox and not quite consistent. It is the most sententious book ever written, yet it reads trippingly as a novel. It is packed with common sense and uncommon nonsense. He mixes facetiae with theology, is most frivolous when most earnest, and, when colloquial, is most profound. He was first and last a bookman and his treatise is the legitimate offspring of a bookish mind, and although it is largely a distillation of authors it is an original work' (Holbrook Jackson). Sir Wm Osler described the *Anatomy* as 'the greatest medical treatise written by a layman,' but apart from the main theme there are sections which, although organically related to it, are complete essays in themselves. The curious learning found in *Tristram Shandy* had been pilfered from this book, and it was Perrier's ed. of *Tristram Shandy*, in which he pointed out Sterne's unacknowledged obligation to Burton, which drew attention once more to this almost forgotten book. There were sev. revised eds. of the *Anatomy* in the author's lifetime. Later eds. are those of A. H. Shilleto, 1893, 1925, F. Dell and P. Jordan-Smith, 1927, 1930, and H. Jackson, 1932. An Eng. trans. of *Philosophaster*, including B.'s minor writings in prose and verse, was pub. by P. Jordan-Smith in 1931.

Burton-in-Kendal, tn and par. of Westmorland, England, at the extreme S. of the co., near the estuary of the R. Kent and Bela. In mediæval times it was an important corn market for Yorks and the Fylde dist.; formerly iron ore was mined, but was worked out some 40 years ago. Pop. 700.

Burton upon Trent, co. bor. in E. Staffs, England, situated on the R. Trent and Trent-Mersey Canal, WSW. of Derby. Area 4222 ac. It is a town rich in historical associations and was formerly the seat of a Saxon abbey. In 1801 the pop. was 3679; fifty years later it was 6374, and to-day it has grown to nearly 50,000. The opening of the Midland

Railway in 1839 played a great part in the town's development. B.'s staple industry, brewing, can be traced back to the monks of B. Abbey, which was founded in 1002. The earliest known reference to B. ale was in 1295, and it was known in London in 1630. Although brewing and its allied trades stand unchallenged as the leading local industry, many important manufacturing concerns have been estab. in the town, including sev. nationally known firms. The tn hall was presented to the tn by Lord Burton, K.C.V.O., in 1894, a modern extension being opened in 1939. The corporation owns baths, omnibuses, markets, a library, over 2335 dwellings, extensive riverside walks, recreation grounds, tennis courts, allotments, a cemetery, a sewage farm, and 2 motor parks. B. is a quarter-sessions bor., and for parl. purposes is in the B. div. of Stafford. Pop. 49,170.

Buru, or Boeroe, Island, Is. of Indonesia, between the Ceram Sea (N.) and the Banda Sea (S.). Area 3700 sq. m. The surface is mountainous and the seaboard marshy. Most of the land surface is covered with forests and prairies. Exports are cajeput oil and timber. The inhab. are chiefly Malays on the coast, and Chinese and other races in the interior. Chief tn, Namlea. Conquered by Dutch in 1658. B. I. became part of Indonesia in 1950. Pop. about 19,000.

Buruird, see BORUJERD.

Burwood, suburban municipality of Sydney (q.v.), New S. Wales, Australia. Pop. 31,040.

Bury, John Bagnall (1861-1927), historian, b. in co. Monaghan and educ. at Trinity College, Dublin; became prof. of modern hist. at Dublin in 1893, regius prof. of Greek in 1898, and regius prof. of modern hist. at Cambridge in 1902. His works included an ed. of Gibbon's *Decline and Fall* (1896-1900), which has become the standard ed.; eds. of Pindar's *Nemean and Isthmian Odes*, 1890 and 1892; *History of Greece*, 1900; and sev. works dealing with the later Rom. Empire—bringing the hist. to Justinian.

Bury, Richard de, see AUNGERVILLE.

Bury, co. and parl. bor., is situated 9 m. N. of Manchester in the co. of Lancs, England. It is 195 m. NW. of London. Area 7434 ac.; pop. 58,829. The tn is situated on an eminence between the R.s Irwell and Roch, and has a mean elevation of about 300 ft above sea level. The coat of arms depicts 4 industries: cotton, woollen, engineering, and paper-making. In addition, there is a large variety of industry in the tn, including bleaching, calico-printing, dyeing, iron and brass founding, felt manufacturing, hatting, boot- and shoe-making, and manufacturing of clothing. There are 4 large and sev. small recreation grounds. It has a new tn hall. There are 2 direct grant grammar schools, a secondary grammar school, junior technical school, technical college, and school of arts and crafts. The depot of the Lancashire Fusiliers is in B. Two natives of B., Sir Robert Peel, 3 times Prime Minister of England, and John Kay, the

inventor of the fly-shuttle, are honoured by statues.

Bury St Edmunds. Municipal bor. and mrkt tn of Suffolk, England, 27 m. E. of Cambridge. It owes its early importance to its famous abbey, which was built to contain the shrine of St Edmund, King of E. Anglia, who was martyred in 870. Of the monastery there are some remains of the abbey church, 510 ft long, the chapter-house, 2 gatehouses, and a bridge. The grammar school was re-founded in 1550 by Edward VI. Within the abbey precincts are the 2 great 15th-cent. churches of St Mary, one of the largest in England, and St James, nearly as large as St Mary's, which was constituted the cathedral of the diocese of St Edmundsbury and Ipswich, founded in 1914. Here were born Bishop Gardiner (c. 1483-1555), and Bishop Blomfield of London (1786-1857), and also Sir Nicholas Bacon, the eminent lawyer. Culford School, 5 m. N., is a public school for boys founded in 1881 and transferred there in 1935. The prin. industries are brewing and the manuf. of agric. implements. It is the depot of the Suffolk Regiment. Pop. 20,200 (estimated).

Buryat Mongolia, autonomous Soviet Socialist rep. of R.S.F.S.R., situated S. of the Yakutsk rep., in E. Siberia. It occupies a stretch of country along the frontier between the Soviet Union and the Mongolian People's Rep. to the W. of the S. end of Lake Baykal and extends northward between the E. shores of the lake and the Yablonovyy Mts, and also along the W. shores (excepting the area round Yakutsk). The coniferous forests which are so universal a feature of E. Siberia are in B. M. confined to the N. part of that country. In the S. they are interrupted by plateau and steppe vegetation, the home previously of Buryats and Mongols who were almost exclusively nomadic stock-breeders and fishers. Under the Soviet regime a more settled life has replaced the nomadic. Large numbers of the people have joined the *kolkhozy* or collective farms and now dwell in vil. settlements of wooden houses. Even the nomadic herdsmen are organised in 'collective' farms, each of which has great numbers of cows, sheep, horses, and goats. Some of the Buryats and Mongols are fox and squirrel trappers. A state farm has been estab. for sable breeding. Lumbering is also carried on in the forests.

The Buryats early came under the influence of Mongol culture and language and, together with the Mongols, offered a strong resistance to the Russian penetration of their lands in the 17th and 18th cents.; but the Buryats were gradually forced out of their tribal pasture lands by peasant colonists from Russia. Between the close of the 19th cent. and 1917 the Buryats had lost nearly 5000 sq. m. of land and the pop. declined rapidly. In E. B. M. there was a great influx of lamas from Mongolia, who possessed themselves of large areas of good land. At this time the people of B. M. were entirely illiterate, disease-ridden, and superstitious. But in 1921 2 Buryat autonomous regions were

formed, and in 1923 these were joined together, and, with the Baykal dist., formed into 1 autonomous rep., with its cap. at Verkhne-Udinsk (now called Ulan Ude). The pop. were, however, very backward, but were much helped in the arts of self-gov. by their Russian neighbours. By 1928 most of the people still remained nomad or semi-nomad. But an improvement began with the development of agriculture and the fisheries, literacy increased and the pop. grew. During the Five-Year Plans from 1928 onwards the economy of B. M. developed still more rapidly, and by 1937 most rural households were included within collective farms. Industry too expanded, and the nomadic Buryats began to enter the factories. In the second Five-Year Plan the Verkhne-Udinsk railway and locomotive works were estab., with a large electric power station. A new modern town was built above the Selenga R., with public utility services, hospitals, and schools. There are now in B. M. nearly 500 schools, with about 90,000 pupils and a score of technical colleges and higher educational institutions. Near Lake Baykal there are saw-mills, fish-canning factories, and tin-mines. Coal, gold, and manganese are also mined. Tungsten and molybdenum mines and refineries are in operation at Djidinsk (W. of Kyatkh). Lying between the Kuznetsk industrial region to the W., the new industrial centres of the Far E. and the gold-mining region of the middle Lena to the N., B. M. is an important food-producing region for the urb. pop. of these areas, as well as being a source for the supply of leather, glass, and other commodities manuf. from local raw materials. In 1938 a new railway was built between Ulan-Ude (the pop. of which is now 150,000) and Kiatkha, on the Mongolian frontier. Pop. 600,000.

Buryats, race of Mongolians inhabiting the neighbourhood of Lake Baykal. They resemble the Chinese in their small slanting eyes and their pigtails. Their religion is Buddhism, though there are Shamanists and Christians among them. Contact with the Russians took place first in the 16th cent., from which people they learned farming and irrigation, occupations in which they excel the Russians themselves. Their country has been formed by the Soviet Gov. into the Buryat-Mongol autonomous S.S.R. with an area of 135,700 sq. m. and a pop. of 600,000. Its cap. is Ulan-Ude. Pop. 150,000.

Burying Beetles, or *Necrophorus*, constitute a genus of the family of Silphidae. They are known also as carrion and sexton beetles, from their habit of burying small vertebrates by digging the ground from beneath the carcasses until it sinks; the female then lays her eggs in the decaying matter. They make a curious chirping sound by rubbing the abdomen against their wing-cases.

Busaco, see BUACO.

Busbars, short for omnibus-bars, main conductors in a power station (q.v.) from which the outgoing transmission or distribution lines are supplied. Sometimes

the B. are 'sectionalised,' each section feeding one or more lines in a group, the sections being linked through reactors which limit the current that might be fed into a faulty group from healthy ones. B. carry a heavy group current and are made of cylindrical or rectangular cross-section, usually hollow on account of skin-effect (q.v.), and supported on large insulators. **Busbecq**, Agier Ghislain de (1522-82), Flemish diplomat and traveller, b. Commines, and received a varied education at the univs. of Louvain, Paris, Venice, and Padua. Though he held various offices at the court of Emperor Ferdinand I, and was employed in a series of important negotiations, he is now chiefly remembered for his 2 visits to the court of Soliman II, Sultan of Turkey, at Constantinople. His invaluable letters dealing with these embassies, 1556-62, serve to illuminate the Turkish politics of the time. It seems likely that he intrigued further to embroil the sultan with the Shah of Persia in order to stop the former from pursuing his aggressive operations near Constantinople. 'Tis only the Persian stands between us and ruin,' he said; 'the Turk would fain be upon us, but he keeps him back.' In his journeys eastward he was accompanied by an artist who made drawings of rare animals and plants, and he came back to Europe with a fine botanical collection, besides many MSS. and coins. On his return to Vienna in 1562 he became tutor to the children of Emperor Maximilian II. His *Legationis turcicae epistolae IV*, and his accounts of his travels in Turkey, contain material that is of the utmost value to the historian of E. Europe.

Busby, Richard (1606-95). Eng. schoolmaster, educ. at Westminster and Oxford; from 1638 to 1695 he was headmaster of Westminster School; he is said to have educ. more distinguished men than any other teacher; among his pupils were Dryden, Locke, Robert South, Atterbury, Henry, and George Hooper. A severe disciplinarian, his name has become a byword for harshness, and the unfavourable impression of public schools given by Locke in his *Thoughts upon Education* may have arisen from experiences under B. He was, however, kind-hearted and charitable to the poor. At the Restoration he was made prebendary of Westminster. His works were mostly school eds. of the classics.

Busby, vil. in Lanarkshire, Scotland, on the White Cart Water, 5 m. from Glasgow, with a cotton mill and print works. Pop. 750.

Busby, ceremonial head-dress of the hussars and Royal Horse Artillery of the Brit. Army. It consists of a fur cap with an upright plume in front and a short bag of the same colours as the facings of the regiment hanging from the top down the right side. Not to be confused with the bearskin caps of the footguards and fusiliers. It is conjectured that the name may be of Hungarian origin, and the bag a survival of the Hungarian long padded bag which hung over the right shoulder to ward off sword-outs; but according to

a better opinion the origin of the word is unknown.

Busch, Julius Hermann Moritz (1821-1899), Ger. author and journalist, b. Dresden and educ. at Leipzig Univ. He became Bismarck's confidant and private secretary, and pub. sev. books about him. In 1878 he pub. *Graf Bismarck und seine Leute während des Krieges mit Frankreich*, which, as the title indicates, gave an account of Bismarck's doings during the war of 1870-1. This and other writings were incorporated in his *Life of Bismarck*, first pub. in 1898. In 1899 appeared his *Bismarck: some Secret Pages of his History*. His *Unser Reichskansler*, 1885, dealt mainly with the administration of foreign affairs. His writings have considerable historical value, in spite of their uncritical attitude.

Busch, Wilhelm (1832-1908), Ger. comic artist and caricaturist, b. Wiesental, Hanover; he studied at academies at Düsseldorf, Antwerp, and Munich. In 1859 he joined the staff of *Fliegende Blätter*, the leading Ger. comic paper. With Oberländer he was the founder of modern Ger. caricature. In 1865 he pub. the first of a series of humorous illustrated poems—*Max und Moritz*—followed by *Der heilige Antonius von Padua*, 1870, *Die fromme Helene*, 1872, *Hans Hucklebein* 1872, and others. His humorous drawings and caricatures are very clever, and are notable for their simplicity. The types created by him are familiar in every Ger. household. He enjoys the same reputation for nonsense rhymes as Edward Lear in our own country.

Büsching, Anton Friedrich (1724-93), Ger. geographer and theologian. Prof. of philosophy at Göttingen, 1759; minister of Protestant congregation in St Petersburg, 1761; went to Berlin, 1766, as a director of a *Gymnasium*. One of the creators of modern geography, his *Description of the Earth*, 1754-92, was the most complete and scientific work of the kind, and was trans. into many languages. Wrote also *Magazine of History and Geography*, 1767-92, *Biographies of Celebrated Persons*, 1783-9, and *History of Lutheran Churches in Poland and Russia*, 1784-7. See his *Lebensgeschichte*, 1789.

Buschmann, Johann Karl Eduard (1805-80), Ger. linguist and librarian. He travelled throughout Mexico and studied the native languages. On his return he collaborated with the brothers Humboldt. Appointed by the Berlin Academy for the purpose, he completed Wilhelm von Humboldt's work *Die Kantsprache auf der Insel Java* (3 vols., 1836-9). He assisted Alexander von Humboldt in the editing of *Kosmos*, of which he pub. the 5th vol., 1862. Of his numerous pubs. on Malay-Polynesian languages and on native languages of America, the following are outstanding: *Aperçu de la langue des îles Marquises et de la langue tahitienne*, 1843; *Der athenasische Sprachstamm*, 1856; *Die Spuren der aztekischen Sprache im nördlichen Mexiko*, 1859; *Das Apache* (3 vols.), 1860-1863; *Grammatik der sonorisichen Sprachen*, 1864-9.

Busenbaum, Hermann (1600-68), Ger. Jesuit, b. Westphalia. Taught theology at Cologne; rector of Jesuit colleges in Hildesheim and Münster. He wrote *Medulla Theologiae Moralis*, a manual of cases of conscience, which went through 45 eds., 1645-70. It roused no real opposition till it appeared in Lyons and Cologne, 1716-33; condemned to be burnt by parliaments of Paris and Toulouse, 1757, for countenancing regicide. New eds. appeared later, notwithstanding.

Buses and Coaches. The close network of bus services through the length and breadth of Great Britain, from the southernmost point of England at the Lizard to the N. of Scotland, and indeed further on to remote places in the Shetland Isles, is unequalled anywhere else in the world. There are more public service vehicles in the 89,000 sq. m. ter. in England, Wales, and Scotland than in all the cities of the U.S.A. In 1956 there were in the U.K. 74,389 B. and C., 4042 electric trolleybuses, and 1917 tramcars—the last-mentioned a rapidly diminishing number—serving a pop. of 49 million people. By comparison France has only 30,000, W. Germany 25,000, Italy 17,000, and Spain 10,000 B. and C.

Under the Road Traffic Act, 1930, bus and coach services and excursions and tours open to the public are licensed by area traffic commissioners, who, except for London Transport in its monopoly area, determine routes, times, and fares. Vehicles are examined by Ministry of Transport examiners and certifying officers to ensure that they comply with the construction and use regulations and are maintained in good order.

There are altogether just over 5000 bus and coach operators, of whom 1333 in 1955 possessed 1 vehicle only. Operators of fleets of 10 or more totalled 741. But only 62 undertakings possessed more than 200 vehicles. The largest independent companies outside the major financial groups were Lances United Transport with 350 buses, plus 70 trolleybuses, operated by its S. Lances subsidiary, and the W. Riding Automobile Co. Ltd, with 442 vehicles. The largest company fleet is that of Birmingham and Midland Motor Omnibus Co. Ltd (B.M.M.O.) (1876 vehicles, of which 853 are double-deck.); the largest municipal bus fleet is Birmingham Corporation (1822, of which 35 are single-deck.), but Glasgow has 1916 road vehicles, if 988 trams and 95 trolleybuses are included.

Outside the metropolis there are 96 municipalities owning fleets of buses and trolleybuses; the Brit. Transport Commission (q.v.) owns 14,388 vehicles which are operated by some 40 bus companies of the wholly owned Tilling and Scottish Omnibus groups; in addition it has shareholding interests in 33 of the 41 operating companies of the Brit. Electric Traction group, which operates in all 12,074 B. and C. The Tilling group also operates 11 trolleybuses on the overhead equipment of Brighton Corporation, through its company, Brighton, Hove

and Dist. Omnibus Co. Ltd. to fulfil a mileage agreement; the Brit. Electric Traction (B.E.T.) group possesses 78 trolleybuses, 45 belonging to the Hastings Tramways Co. and 33 to the Mexborough and Swinton Traction Co. No tramways are now owned, but the Swansea and Mumbles Railway (the first passenger-carrying railway in the world) is operated by 13 100-seat electric trams. There are, besides the foregoing, 8 companies in which the Tilling and B.E.T. groups have joint interests, mainly concerned with coach operation or the working of bus and coach stations.

The area agreement was introduced from 1915 onwards to reduce competition between the large companies which were then free to develop their own territories to best advantage. With trunk routes secure from competition many services in rural areas can be operated at a loss. The proportion of unremunerative routes is over 50 per cent in some areas.

In London the development of the bus after its introduction by Shillibeer in 1829 was rapid; it was rationalised to some degree in 1856 when the London General Omnibus Co. (L.G.O.C.), French in its original conception) merged about 75 per cent of the existing fleet. It continued to work in harmony with others through the associations of proprietors which organised the services and defended them against newcomers. This system broke down after the introduction of motor buses, which began seriously in 1904 when Thomas Tilling Ltd., a concern dating from 1847, decided to motorise an existing horse service. In 1908 the L.G.O.C. merged with 2 prin. motor-owning rivals (London Road Car and Vanguard fleets); in 1909 it began to design its own standardised silent lightweight motor buses, and in 1911 it gave up horse operation.

In the following year it was acquired by the Underground railway group, which also controlled 3 suburban tramway companies, and by 1914 had absorbed or made agreements with practically all other operators on the London streets. Competition again broke out in 1922; to control the influx of new buses, and to protect the tramways, the London Traffic Act, 1924, introduced restrictions and the L.G.O.C. purchased large numbers of independent buses between 1926 and 1929.

By that time Parliament had become persuaded that complete unification was necessary, and an Act of 1933 set up the London Passenger Transport Board (L.P.T.B.) to acquire the Metropolitan Railway and those of the Underground group, the L.G.O.C. and 55 large bus undertakings, many smaller concerns in the country area and parts of the large prov. companies fringing the monopoly area allotted to the board; the total ter. is nearly 2000 sq. m. in extent and is about 66 m. from Horsham to Baldock, and 43 m. from Windsor to Gravesend. There are certain out-workings of B. and C. to traffic points such as Tunbridge Wells. The L.P.T.B. also took over 14

municipal and 3 company-owned tramways.

Under the Transport Act, 1947, the L.P.T.B. as a public board type of entity was nationalised, and the undertaking is now the property of the Brit. Transport Commission, by which the management is delegated to the London Transport Executive (q.v.). A fleet of 7680 buses, 303 coaches, and 1764 trolleybuses was operated by it in 1955, constituting the largest public service vehicle fleet (8747) in the world under one management. As the trolleybus fleet is to be abandoned as the vehicles wear out, the Aldenham overhaul works (officially opened in 1956) has a capacity for dealing with more than 10,000 vehicles at the rate of up to 56 a week for major accident damage, and complete overhauls at intervals of 3½ years. Buses and trolleybuses are operated from 113 garages. The coaches provide limited stop service under the fleet name 'Green Line' from central London to points on the fringe of the London Transport area, and on some peripheral services such as Windsor to Gravesend via Kingston, Croydon, and Bromley.

Although municipalities were given the power to acquire tramway systems after 21 years of operation under the Tramways Act, 1870, it was not envisaged that they should be operators, until in 1882 Huddersfield was forced to operate a system for which it had failed to secure an operating company. Sev. municipalities were operating horse buses along with horse or electric tramways by 1900; the first to enter upon motor bus operation was Eastbourne (which had never had trams) in 1903; Todmorden (another tramless town) followed in 1907. In general municipal bus operation on an extensive scale developed after 1920. To-day fleets vary from the 7 buses of Bedwas and Machen Urban Dist. Councils to the 1822 of Birmingham or the 833 (with 988 trams and 95 trolleybuses) of Glasgow; among big fleets, Manchester had in 1955 1279 buses and 154 trolleybuses; Liverpool 1041 buses and 164 trams (trams due to be withdrawn 1957); Sheffield 677 buses and 295 trams; Edinburgh 464 buses and 126 trams (the latter were withdrawn during 1956); and Belfast 381 buses and 245 trolleybuses.

A number of municipalities have joint working or managerial arrangements, such as those between Burnley, Colne, and Nelson in Lancs; in Mon., the W. Mon. Omnibus Board is the property of the Bedwellty and Mynyddysalwyn Urb. Dist. Councils. At Halifax, Huddersfield, Sheffield, and Todmorden the municipalities share in joint committees, originally estab. with the former railway companies, but now operated with the Brit. Transport Commission. At Brighton the local bus company and the municipality have a pooling arrangement of 72½ to 27½ per cent of mileage worked, and similar schemes apply at Plymouth, Exeter, Portsmouth, and elsewhere. Bristol owns the tram transport system, but it is entirely operated by vehicles of

Bristol Tramways and Carriage Co. Ltd, a member of the B.T.C. Tilling group. The W. Yorks Road Car Co. Ltd, also a member of the Tilling group, has a joint company with Keighley Corporation, Keighley-W. Yorks Services Ltd, which administers 54 buses operating about that town, and has a joint committee with York Corporation for operation of 65 vehicles on city services there. The municipal transport of Dover, Worcester, Kilmarnock, Perth, and other towns is similarly operated by a conveniently placed large company.

The origin of the Tilling group, as mentioned, dates back to 1847. Its growth began in 1914 with the establishment of a business at Folkestone; Ipswich followed soon afterwards. A considerable amount of expansion took place in association with the Brit. Automobile Traction Co. Ltd (B.A.T.) (originally a Brit. Electric Traction (B.E.T.) subsidiary), the two coming together first in 1916 with the merging of mutual interests in that area as the E. Kent Road Car Co. Ltd. In 1928 the B.A.T. was renamed Tilling and Brit. Automobile Traction; the Tilling group further expanded by obtaining control of the National Omnibus and Transport Co. Ltd in 1931. This company originated with the Clarkson steam bus and began operating a London fleet in 1909 and at Chelmsford (ex-Great E. Railway services) in 1913. In 1919 London operations were exchanged for a business owned by the L.G.O.C. at Bedford and a wide development in Essex, Beds, and from Cheltenham to Land's End followed. After the railways obtained road powers in 1928 the business was hived off as E. National (joint with L.N.E.R. and L.M.S.R.), W. National (G.W.R.), and S. National (S.R.) Omnibus Cos. At this period the Tilling Co. also invested in United Counties Omnibus (Northampton, founded 1913) and Bristol Tramways and Carriage Co. Ltd (B.T.C.), which originated with horse trams in 1875, and is also a bus chassis manufacturer. In 1942 the Tilling and Brit. partnership was split between the Tilling and B.E.T. groups. The B.T.C. took over the omnibus interests of Thomas Tilling Ltd in 1948, and added to it those of the Red and White group in S. Wales, Mon, and around Stroud, Newbury, and Basingstoke. The other B.T.C. group is Scottish Omnibuses Ltd, acquired in 1948 from the Scottish Motor Traction Co. (S.M.T.) Ltd. Founded in 1905 and operating between Edinburgh and the border, and from 1920 around Dundee, this company, jointly with the L.M.S.R. and L.N.E.R., took control of W. Alexander and Son (founded 1924), based on Falkirk and serving N.E. Scotland, and other companies remodelled as Western S.M.T. and Central S.M.T. Since the B.T.C. purchase, Highland Omnibuses, working N. of Inverness, has been absorbed and the Tilling operating company, Caledonian Omnibus Co. Ltd, based on Dumfries, transferred to

Western S.M.T., so that most of Scotland is covered by some 4600 vehicles owned by the B.T.C. David MacBrayne Ltd, the well-known shipping undertaking, operates from Glasgow to Campbeltown, up the W. coast to Fort William and Inverness, and on some of the inner isles, with 109 buses.

The Brit. Electric Traction Co. Ltd was founded in 1896 to provide electric tramways, but with the object of improving motor-bus design had by 1905 formed the Brit. Automobile Development Co. Ltd, known from 1912 as the Brit. Automobile Traction Co. Ltd, when it became first an operating and then a shareholding undertaking. This company took over Birmingham and Midland Motor Omnibus Co. Ltd, vehicles which had in 1907 proved unsatisfactory in Birmingham; they were operated in E. Kent, and began a successful business at Deal. It invested in existing companies to form the nucleus of such concerns as Maidstone and Dist., Hants and Dorset, Ribbles and Cumberland, and started operations which expanded into the Thames Valley and NW. Road Car and other concerns. Some of these undertakings went to Tilling after the 1942 div.

Some of the B.E.T. bus undertakings were developed by its tramway companies—N. General was in 1913 a bus subsidiary of the Gateshead Tramways Co. To-day the bus operating success of the latter is a subsidiary of N. General. S. Wales Transport and Potteries Motor Traction were built round the Swansea and Stoke tramway systems respectively, Yorks Traction and Yorks Woollen Dist. on the tramways at Barnsley and Dewsbury.

The B.M.M.O. (Midland Red) has become the successor to the B.E.T. tramways in the black country. As a result of an agreement with Birmingham Corporation in 1914 (2 years after motor-bus operation was resumed) the company gives a protective fare to the municipal activities in the city, and its own operations extend beyond Shrewsbury to the NW., Leicester eastward, to Hereford in the SW., and to Banbury south-eastward. This company has made the majority of its own chassis since 1922, and has introduced lightweight integral construction, underfloor engines, rubber suspension, independent front suspension, and use of plastic panels and pressings in bodywork. The last of the B.E.T. area agreement bus companies to be formed *de novo* was E. Yorks Motor Services Ltd in 1926.

Throughout Ireland bus operation is almost a monopoly. In N. Ireland Belfast Corporation operates in the city area (with 381 buses and 245 trolley-buses), and all other bus operation is entrusted to the Ulster Transport Authority (U.T.A.), which also runs the railways and the road haulage undertaking for the 6 counties. These monopoly conditions have applied since the N. Ireland Road Transport Board was set up in 1935. The U.T.A. in 1955 owned 962 buses, of which 137 were

double-deckers. It operates the municipal routes in Londonderry. Its monopoly is so complete that coaches of Eng. companies on tour are not allowed to operate in their own livery, and this has tended to restrict the number of such tours provided.

In the Rep. the major bus undertaking were merged in 1945 as Coras Iompa Eireann (q.v.), or Irish Transport Undertaking, which also runs the major part of the railway system. There are 1333 B. and C. serving most parts of the 26 counties, of which 661 are double-deckers, used mainly on city services in Dublin, Cork, and Limerick; there is a large degree of standardisation. Apart from a score of small local undertakings, the major remaining concerns are the Great N. Railway Board, running in the area served by that railway from Dublin northward to the border (159 buses, of which 34 are double-deck, and 10 trams on the Hill of Howth line, abandonment of which has been agreed on), and the Londonderry and Lough Swilly Railway, a company which long ago gave up railway working in favour of buses (50 in stock, including 6 double-deckers).

The Amer. picture differs from that in Europe because of the very high proportion of motor-cars per thousand of the pop. There are large city fleets, but none approaches the size of the largest in Britain. New York City Transit Authority, for example, has about 2000 buses. The inter-urban network on the Eng. pattern is almost non-existent, although from Boston to Chicago and in other wide sweeps of country there were formerly vast mileages of linked-up interurb. tramways which developed continuously up to about 1920. The prin. cities are linked by high-speed coach services (called bus services in the U.S.A., where the Eng. trolleybus is called a 'trolley-coach'), of which the Greyhound group of companies is the best known, with a total of some 7000 vehicles. Scheduled speeds are often at up to 50 m.p.h.—only 2 hr 50 min. is allowed for 1 journey of 125 miles through a densely populated area, an average of 44 m.p.h. Another feature of the U.S. scene is the centralisation of schools and the extent to which special school buses are employed to take children from and to their homes. Vehicles in distinctive livery are used because it is thought that this makes operation safer; they number about 90,000. The total of ordinary buses of some 1400 urb. operators rose from 32,000 in 1939 to a peak of 58,000 in 1949, since when a decline has set in. Over the same period the trolley-coach total rose from 2184 to 6338.

Bush, Alan (1900–), Eng. composer, b. London, where he studied at the Royal Academy of Music, at which he became a prof. of composition in 1925. The words of many of his vocal works, chosen as expressions of his belief in communism, have militated against his success, and his operas *Wat Tyler* and *Man of Blackmoor* were produced in E. Germany because they show similar tendencies. But his work

is worth serious attention for its purely artistic qualities. It includes incidental and choral music, 2 symphonies, piano and violin concertos, chamber and piano music, songs, etc.

Bush, name, in Australia and S. Africa, for tracts of land covered with brushwood and shrubby vegetation.

Bush-buck, or **Bush-antelope** (*Tragelaphus scriptus*), the smallest species of B. from 2½ to 3 ft high and found over much of Africa S. of the Sahara. Numerous local races are distinguished, the most striking being the harnessed antelope, which is reddish with white stripes.

Bush-shrike is the name given to species of Formicariidae, a family of birds found in S. and Central America. The B. resembles the butcher-bird in its method of filling its larder by impaling victims on thorns.

Bushel, see METROLOGY.

Bushey (including **Bushey Heath**), urb. dist. near Watford, in Herts, England. The Royal Masonic Institution has 2 schools here with 700 boys in residence, and the Royal Caledonian School was enlarged by 2 wings in 1927. The Clergy Orphan Corporation have a school here with accommodation for 280 girls. Sir Hubert von Herkomer, the Victorian portrait-painter, who estab. an art school in B. in 1882, was buried here in 1914. B. Heath is an eccles. par. formed in 1889. Pop. 16,520.

Bushi, see SAMURAI.

Bushido (Samurai morality), traditional code of honour of the Jap. military class. It corresponds to European chivalry, and had a similarly feudal origin in the 12th cent. AD. Its governing principles are simplicity, probity, fortitude, justice, and allied virtues. During the 13th and 14th cents. B. was profoundly influenced by Zen Buddhism; and by the beginning of the 20th cent. it formed the basic character of the Jap. upper classes, notwithstanding the impact of W. civilisation.

Bushings, electrical insulators, usually of ceramic material, protecting ingoing and outgoing cables on switch-gear, transformers, distribution boxes, etc. They are conspicuous on open-air substations as cylindrical or slightly tapering bodies with circular ribs. Small porcelain tubes lining holes in iron or wooden boards through which wires are drawn are also called B.

Bushire, also written **Bushehr**, **Abushehr**, is a prin. seaport of Persia (Iran), situated on the N. shore of the Persian Gulf. Owing to the shallowness of the water ships have to anchor at a considerable distance from the shore. B. occupies the N. end of a peninsula, and is encircled on all sides except the S. by the sea. The climate is very hot in the summer months. The city is deficient in water, and that required for drinking has to be brought from wells 2 or 3 m. distant. In 1763 an agreement was entered into with Shaikh Sadun of B. for the estab. of an Eng. factory at B., the agreement being confirmed by Karim Khan, the Persian ruler, but in 1769 the

English withdrew from B. to Basra. In 1778 B. became the Eng. H.Q. on the Persian Gulf.

Bushmen, nomadic people of S. Africa. The most primitive aboriginal race of S. Africa, they were once the only human inhab. of that vast dist., but, driven westward by more advanced later arrivals, they are now found mainly in the barren dists. extending from the inner ranges of the mts. of Cape Province, through the Kalahari desert, and thence to the dists. about the Orambo R., N. of Damaraland. Their language approaches that of the Hottentots, who are indeed thought to be a cross between B. and some Bantu-speaking peoples, and is monosyllabic.

E.N.A.

A BUSHMAN WOMAN

Its chief peculiarity is the use of 'clicks' as certain consonants. They are of very small stature, with a long and low skull, and large and prominent cheekbones. In complexion they are of a dirty yellow colour. Their only clothing consists of a piece of skin in a triangular form, which is passed between the legs and tied round the waist. The women wear long skin wraps. The dwelling-places of these people consist of low huts made of reed mats, or holes in the earth. Their household utensils are few and roughly made. The ostrich eggshell is used for carrying water. The people live chiefly by hunting, using for weapons the primitive bow and poisoned arrows. They eat practically anything, roots, game, insects, snakes, frogs, lizards, and honey being some of their delicacies; also ants' pupae, or 'bushman's rice,' which the women obtain by means of digging sticks. B. are intelligent, musical, fond of dancing, and great mimics. Tribal organisation is simple. Each band, consisting of a few families, living independently in a large ter. within which it alone has hunting rights; trespass is met by fighting. They

have no concrete idea of God, though their legends indicate a vague belief in an 'All-Father.' Northward the B. appear to improve both in stature and in general condition. There are said to be about 14,500 B. in S. Africa, but it is impossible to gauge their numbers with any certainty. The B. appear to have been the bringers of Palaeolithic culture to S. Africa from N. Africa or perhaps Europe. Their art, examples of which are found engraved in colours on rocks or cave walls in various parts of S. Africa, strikingly resembles the cave paintings perpetuated in E. Spain by Stone Age artists of the Aurignac culture. The art of the B. does not seem to have been practised within the last cent. See M. C. Burkitt, *South Africa's Past in Stone and Paint*, 1928, and I. Schapera, *The Khoisan Peoples of South Africa*, 1930. Bushmills, mkt tn of co. Antrim, N. Ireland, near the Giant's Causeway (q.v.). Pop. 970.

Bushnell, Horace (1802-76), eminent Amer. theologian, was b. at Bantam, Connecticut. He graduated at Yale in 1827, and in 1833 was ordained pastor of the N. Congregational Church at Hartford, where he soon became famous on account of his remarkable power as a preacher and for the depth of his theological writings. He took an active interest in the organisation of a college in California (afterwards univ. of California). Some of his chief works are *Christian Nurture*, 1847, *God in Christ*, 1849, *Nature and the Supernatural*, 1858, and *The Vicarious Sacrifice*, 1866. For *God in Christ* he was charged with heresy, and unsuccessful attempts were made to bring him to trial. See M. B. Cheney, *Life and Letters of Horace Bushnell*, 1880.

Bushrangers, in Australia, a class of armed robbers, originally consisting of runaway convicts. They were a great scourge in the outlying dists., especially in Tasmania, during the first part of the 19th cent. In 1815 martial law was proclaimed in this dist., and a determined effort was made to stamp them out. The desperadoes, however, banded together in large gangs, sometimes to the number of fifty, and fought pitched engagements with the police. The drastic Bushranging Act of 1830, renewed in 1834, at last succeeded in rooting them out. The most famous B. were the Kelly gang of 4 men. In 1879 they held up the vil. of Yerilderie, New S. Wales, but when repeating the exploit in the following year at Glenrowan, in N. Victoria, they were besieged in the hotel and 3 shot. All wore heavy armour. Ned Kelly, the sole survivor, was hanged at Melbourne.

Bushy Park, see HAMPTON COURT.

Busiris, Gk name of prin. shrine of Osiris in the E. Delta, the modern Abu Sir on Damietta branch of the Nile. Later in Gk legend a mythical King of Egypt and founder of Thebes, who was slain by Heracles.

Busk, Hans (1815-82), one of the chief originators of the volunteer movement. He was educ. at King's College, London, and Trinity College, Cambridge; called

to the Bar in 1841; made high sheriff of Radnorshire in 1847. He founded a rifle club at the univ. and lectured on the volunteer movement. He helped to revive the Victoria Rifles. He was also familiar with naval construction, and was the first to advocate the estab. of life-ship stations. He helped to found the School of Cookery at Kensington.

Buskin, half-boot or high shoe lacing tight to the leg; in particular the thick-soled *cothurnus* used by auct tragic actors in order to increase their height, in which sense it is opposed to *soccus* (sock), the light shoe worn by actors of comedy.

Busoga, dist. in E. Uganda occupied by the Ba Soga, a Bantu people akin to the Baganda (q.v.). To-day much economic development is taking place in B., based on the dam built across the Nile at the Owen Falls, Jinja. See L. A. Fallers, *Bantu Bureaucracy*, 1956.

Busoni, Ferruccio (1866-1924), It. composer and pianist; his father was a clarinet player and his mother a Ger. pianist. He first appeared in public at the age of 7, at Vienna. He studied there, and when he was 17 a gold medal in his honour was struck at Florence, and the Accademia Filarmonica of Bologna elected him a member. At the age of 20 he removed to Leipzig to devote himself to composition; in 1889 he accepted a post as teacher at Helsingfors; and in 1890, after winning the Rubinstein prize, he was prof. at the Moscow Conservatoire for a year. In 1891-3 he taught in the New England Conservatory at Boston. He then took up residence in Berlin, but made extensive concert tours. As a pianist B. was considered to have the most powerful individuality and greatest technical mastery since Liszt and Rubinstein. As a composer the art of his earlier years is summed up in the monumental piano concerto, op. 34. His style is neo-classical in the best sense of both words. Specimens of his style at its best are to be found in his later sonatas, *Sarabande* and *Cortège* from the *Faust* music and the monumental *Fantasia contrappuntistica* for piano. In dramatic art, he selected for treatment supernatural subjects, myths, or fantasies. *Die Brautwahl* (first performed 1912) takes its plot from a fantastic tale by E. T. A. Hoffmann; *Turandot* is from Gozzi's drama, and this and his *Arlecchino*, 1918, belong to the old It. *commedia dell' arte* (q.v.). His third opera, *Doktor Faust*, was left unfinished and completed by Philipp Jarnach. B. also wrote much orchestral and chamber music. Some rate his compositions very high and think that the rest of the world underestimates them. See life by E. J. Dent, 1925.

Buss, Frances Mary (1827-84), pioneer of higher education for girls. Founded the N. London Collegiate School.

Bussaco, see BUCCO.

Bussanga, see BORGU.

Bussora, see BASRA.

Bussy, Roger de Rabutin, Comte de (1618-93), Fr. writer, b. Epir; entered the army and fought in sev. campaigns, and became notorious for his affairs of

gallantry. In 1659 he was banished from the court; he then wrote for the amusement of his mistress the *Histoire amoureuse des Gaules*. This gave offence to the king and B. was sent to the Bastille, from which he was only liberated on condition that he retired to his estates. Here he wrote his *Mémoires* and *Correspondance*.

Bust (from Fr. *buste*; It. *busto*, origin unknown) is a head and shoulders representation of a person carved in the round. The Greeks used to carve ideal Homers and Sapphos, but the B. of Pericles is almost the earliest authenticated portrait. Life-like B.s of the Rom. emperors, most of them set on a pedestal, may be seen at the Brit. Museum. A B., of course, may be carried out in any material: marble, bronze, etc.

Bustamante, Alexander (c. 1890-), Jamaican labour leader and Caribbean statesman, of Irish and Jamaican parentage. He has been leader of the House of Representatives, and stands for moderately progressive politics.

Bustamite, variety of the mineral rhodinite (MnO_3SiO_2). B., in addition to the silica and manganese, contains also from 9 to 15 per cent of lime. It is greyish-red in colour and crystallises in the triclinic system.

BUSTARD

Bustard is a word derived from the Lat. *avis*, bird, *tarda*, slow, and is applied to the family Otidiidae. *Otis tarda*, the great B., is now found only in S. Europe, Morocco, and as far E. as Persia, but was formerly the largest land-fowl of Britain. The male bird measures about 8 ft across the wings and 4 ft from its bill to its tail. In England it was found on Salisbury Plain and in E. Anglia, but was exterminated by about 1838. However, there is a record from Burwell Fen, Cambs, in Feb. 1856.

Busto Arsizio, It. tn, in Lombardy (q.v.), 14 m. S. of Varese (q.v.). It has two fine 16th-cent. churches. Cotton is manuf. Pop. (tn) 41,300; (com.) 52,900.

Butadiene, in chem. a di-olefinic hydrocarbon, which occurs in cracked petroleum and in the gases therefrom. Formula, $\text{CH}_2 = \text{CH} - \text{CH} = \text{CH}_2$. It can be obtained synthetically, but is made in the laboratory by the thermal decomposition of fusel oil. It has been used for making synthetic rubber.

Butane. There are 2 hydrocarbons having the formula C_4H_{10} . B., $\text{CH}_3\text{CH}_2\text{CH}_2\text{CH}_3$, is an inflammable gas with boiling point 0.5°C ., and isobutane, $(\text{CH}_3)_2\text{CHCH}_3$, is a gas of similar properties with boiling point about -12.1°C . They are liquefied under compression and supplied in cylinders as domestic illuminants and heating fuels. Propane (C_3H_8) has a boiling point of -42.2°C ., and is supplied similarly, chiefly for industrial use. These are sometimes referred to as liquefied petroleum gases (L.P.G.).

Butcher, Samuel Henry (1850-1910), classical scholar, b. Dublin, a son of Samuel B., bishop of Neath. He was educ. at Marlborough and Cambridge, and in 1882 succeeded Blackie as prof. of Gk at Edinburgh, resigning in 1903. He was a Unionist M.P. for Cambridge Univ. from 1906 till his death. He collaborated with Andrew Lang in a trans. into Eng. prose of Homer's *Odyssey*, 1887. His works include *Some Aspects of the Greek Genius*, 1891, and *Aristotle's Theory of Poetry and Fine Art*, 1895.

Butcher-birds, see *SINKERS*.

Butcher's Broom, or *Ruscus aculeatus*, is a European species of Liliaceae which grows as a shrub in Britain. It is noted for its curious branches, which are phylloclades arising in the axil of a small scaly leaf. The phylloclade resembles a flattened leaf in the middle of which the flowers are borne in the axils of minute scaly leaves. The flowers are dioecious, and the fruit is a berry.

Bute, John Stuart, 3rd Earl of (1713-1792), courtier and statesman, son of the second earl, b. in Edinburgh, educ. at Eton, and succeeded to the title in 1723. His introduction into a prominent part in Eng. court life was practically accidental. He was called upon to perform some trivial service for the Prince of Wales in a moment of emergency, and immediately became a great friend of the prince and princess. After this date, 1747, he was constantly in attendance on the Prince of Wales, and had great influence with him. On the death of Frederick his influence over the young Prince George was very great, and it was he who instructed the prince on the lines of Bolingbroke's patriot king and gave him his extravagant ideas of the powers and duties of the kingship. Between the years 1756 and 1760 he took a very active part in political negotiations, but was practically a political nonentity when the death of George II raised him to a position of immense importance as the confidant of the new king in 1760. He immediately began to carry out the policy in which he had already instructed George III, of making the king of overwhelming importance, of lessening the authority of Parliament, and of breaking the Whig oligarchy. Pitt

resigned, B. was given a place as secretary of state, and in 1762 he became Prime Minister. He was violently unpopular, and was scurrilously attacked in the press and by cartoons. In 1763 peace was made with France and Spain at Paris. Bribery and corruption had by this time obtained for him a majority in the House of Commons, but he still aroused the bitterest hostility by his policy, and B. was eventually forced to resign. After 1765 he had no longer any power over the king, resigning his positions and having his influence taken from him. His administration, though one of the worst that have ever been known in Eng. politics, dependent for its support entirely upon the confidence of the king and the corruption of Parliament, was in fact less of a political innovation than has sometimes been supposed. See L. B. Namier, *The Structure of Politics at the Accession of George III*, 1929.

Bute, or **Buteshire**, co. of Scotland, comprising the is. of Bute, Arran, Great and Little Cumbrae, Holy Isle, Pladda, and Inchmarnock, lying in the Firth of Clyde. Bute is separated from Argyll by the Kyles of Bute, and Kilbrannan Sound separates Arran from the same co. The is. were taken from the Norwegians by Alexander III, King of Scotland. Agriculture is the prin. industry, oats being the chief crop. Cattle and sheep are reared, dairying being important, and there is some fishing. The 3 main is. are much favoured as holiday resorts. Area 220 sq. m.; pop. 18,000.

Bute Island, in Bute co., Scotland, in the Firth of Clyde, separated from Argyllshire by the Kyles of Bute, a narrow channel less than 1 m. wide. The is. is 5 m. distant from the Ayrshire coast, and 6 m. from Arran. It is 16 m. long and 3 to 5 broad. The coast is rocky, and in the interior are sev. small lochs, the prin. of which are Lochs Fad, Ascog, and Quhen. The soil is light and gravelly, but produces excellent crops. Soft red sandstone, slate, whinstone, and grey granite are found. The is. is celebrated for its salubrious climate, which makes it a favourite resort of invalids. Rothesay, a popular seaside resort, is the chief tn. Mt Stuart, 4 m. S. of Rothesay, is a seat of the Marquess of Bute. Pop. 13,500.

Butea is a genus of leguminous plants named after John, Earl of Bute; the 4 species are natives of India and China. *B. frondosa*, the dhak, pulas-tree, or bastard teak, is a native of mountainous dists. of Hindustan, and is noted for its great beauty. It yields lac and a bright red astringent juice known commercially as E. Indian kino, while the flowers yield a bright yellow dye. *B. superba* grows on the mts of Coromandel.

Butera, tn in Sicily (q.v.), 22 m. SSE. of Caltanissetta (q.v.). Pop. 9000.

Butler, Alban (1711-73), the hagiographer, was b. Northants, and at an early age was sent to college at Douai, where he became prof. successively of philosophy and divinity. He was sent subsequently on the Eng. mission, and was some time chaplain to the Duke of

Norfolk. At length he became president of the college of St Omer. His chief work is *Lives of the Fathers, Martyrs, and other Principal Saints*. It cost him the labour of 30 years, and first appeared in 5 vols. in 1756-9. On account of B.'s strong eccles. bias and defect of scholarship and critical sagacity, his works cannot be regarded as authoritative.

Butler, Benjamin Franklin (1818-93), lawyer and soldier, was at one time one of the most execrated men in the S. commonwealths of the U.S.A., owing to his conduct during the Civil war. He was b. Doerfield, New Hampshire. On the death of his father, he removed to Lowell, Massachusetts. He was admitted to the Bar in 1840, and became noted as a criminal lawyer. He served in the Lower House of the State Legislature in 1853 and in the State Senate in 1859, being at that time a Democrat. When the Civil war broke out, he became a volunteer officer in the Union forces, and in 1862 led an expedition against the great S. seaport of New Orleans, which he captured on 1 May. As commander in charge of this big city, his rule was marked by the utmost severity. For neglecting orders given him by Gen. Grant in the attack on Fort Fisher, near Wilmington, he was removed, and that ended his military career. He returned to Massachusetts, and was sent as Republican Congressman to Washington from 1867 to 1879, except in 1875-7. He was elected governor of the state in 1882.

Butler, Charles (d. 1647), miscellaneous writer, b. Bucks. Educ. at Magdalen College, Oxford, he spent most of his life at Basingstoke, first as a schoolmaster and afterwards, for nearly 50 years, as vicar of Wootton St Lawrence, 3 m. from the tn. He wrote a work on bees, 1609, a treatise on affinity as a bar to marriage, 1625, a Lat. treatise on rhetoric, 1629, a work on Eng. orthography, 1633, and *The Principles of Musick in Singing and Setting*, 1636.

Butler, Charles (1750-1832), lawyer and writer. He was educ. at Douai, and in 1775 entered Lincoln's Inn. In 1791 he was the first to be called to the Bar under the terms of the Catholic Relief Act. Amongst the books, about 50 in number, which he pub. may be mentioned *Coke upon Littleton's Laws of England*, 1775, *Reminiscences*, 1821-7, and *Book of the Roman Catholic Church*, 1825.

Butler, Lady Eleanor (c. 1745-1829), Irish recluse. She lived in seclusion with Miss Sarah Ponsonby (1755-1831), at Plasnewydd in the vale of Llangollen for over 50 years. They were known as 'The Maids of Llangollen,' or 'The Ladies of the Vale,' and were visited by many distinguished people. Lady Eleanor belonged to the Irish house of Ormonde, and her brother succeeded to the earldom in 1791.

Butler, Elizabeth Southerden, Lady (1844-1933), painter, daughter of T. J. Thompson, was b. Lausanne, Switzerland. In 1877 she married Lt.-Gen. Sir Wm Francis B. She studied in Florence, exhibited 'Missing' at the Royal Academy

in 1873, and this was followed by a succession of successful pictures, dealing chiefly with military subjects. Among them were 'The Roll Call,' 1874, '28th Regiment at Quatre Bras,' 1875, 'Balaclava,' 1876, 'Inkerman,' 1877, 'Scotland for Ever,' 1881, 'Floreat, Etona,' 1882, 'Tel-el-Kebir,' 1885, 'Evicted,' 1890, 'A Cistercian Shepherd,' 1908. She pub. *Letters from the Holy Land*, 1903, *From Sketchbook and Diary*, 1909, and *An Autobiography*, 1923.

Butler, Frances Anne, see KEMBLE.

Butler, George (1774-1853), headmaster of Harrow and dean of Peterborough, b. Pimlico, London. He was educ. at Cheyne Walk School, Chelsea, and Sidney Sussex College, Cambridge. Elected a fellow of the college, he acted for some time as mathematical tutor. In 1805 he became headmaster of Harrow School, retaining this position until 1829. He then retired to his living at Gayton, Northants, and was appointed dean of Peterborough in 1842. He was a great mathematician, a distinguished classical scholar, and spoke sev. languages fluently. Chief works are *Extracts from the Communion Service of the Church*, 1839, and *Statutes of Peterborough Cathedral*, 1849.

Butler, Henry Montagu (1833-1918), clergyman and schoolmaster, b. Gayton, Northants. He studied at Trinity College, Cambridge, and was headmaster of Harrow School, 1859-85. In 1885 he was made dean of Gloucester, and in 1897 appointed honorary canon of Ely. In 1886 he became master of Trinity College, Cambridge, being vice-chancellor in 1889 and 1890. Among his pub. works are various sermons reprinted from 1866 onward, including *Belief in Christ*, and other *Sermons preached in the Chapel of Trinity College, Cambridge*, 1898, and *Public School Sermons*, 1899; also the Romanes lecture for 1912, *Lord Chatham as an Orator*, and *Some Leisure Hours of a Long Life*, 1914.

Butler, James, see ORMONDE, DUKES OF.

Butler, Joseph (1692-1752), prelate, b. Wantage, being the son of a linen draper of that tn. His father was a Presbyterian and Joseph was educ. (with the object of entering the Presbyterian ministry) at Gloucester and Tewkesbury. Whilst at the latter academy B. joined the Church of England. He entered Oriel College, Oxford, 1715. He took his degree in 1718, and was immediately appointed preacher at the Rolls Chapel, and was given the living of Stanhope by Talbot, Bishop of Durham. He resigned the preacher'ship of the Rolls Chapel in 1726, but while there he preached his famous 15 sermons. For some years, from 1726, he lived in practical retirement at Stanhope. In 1733 he was made chaplain to the lord chancellor, and in 1736 prebendary of Rochester, whilst in the same year he was attached to the service of the queen. In 1737 Queen Caroline d., and B. was appointed Bishop of Bristol; in 1740 he was made dean of St Paul's (one of the richest deaneries in England), in 1746 clerk of the closet to the king.

There is some evidence for the statement that in 1747 he was offered the primacy, which he declined. In 1750 he accepted the bishopric of Durham. He was buried at Bristol, where so much of his life had been spent. In 1736 had appeared his great work, *The Analogy of Religion*. See works, ed. J. H. Bernard, 1900.

Butler, Josephine Elizabeth (1828-1906), moral and social reformer, daughter of John Grey of Dilston, Northumberland; married in 1852 George B. (q.v.). From an early age she was interested in higher education and political and economic freedom for women, and led a nationwide campaign against Contagious Diseases Acts (see PROSTITUTION) which degraded women, repealed 1886. Continental campaigns revealed State brothels which were regulated hotbeds of disease and the main market for white slave traffic (confirmed by League of Nations Report, 1927). The revelations stirred Wm Coote, W. T. Stead, and others to work against this traffic. She believed in a free, confidential, and voluntary system for the treatment of venereal disease, confirmed by the estab. of such a system in Britain (after the Report of a Royal Commission, 1916). Her spiritual power, courage, and oratory brought thousands of supporters; amongst them John Stuart Mill, Victor Hugo, Cardinal Manning, and Harriet Martineau. She founded the Association for Moral and Social Hygiene (q.v.) and the International Abolitionist Federation. See life by M. G. Fawcett and E. M. Turner, 1928, and A. S. G. Butler, *Portrait of Josephine Butler*, 1954.

Butler, Nicholas Murray (1862-1947), Amer. authority on education, was b. Elizabeth, New Jersey, son of Henry L. B. He was at Columbia College, 1878-1882; was fellow in philosophy there 1882-4, visiting Berlin, Paris, and Oxford, and returning to Columbia College as instructor in philosophy. He became prof. and first dean of the faculty of philosophy, ethics, and psychology in 1890, when the college was made a univ., of which he became president in 1901. He was the founder and first president of the college for the training of teachers at New York. He founded the *Educational Review* in 1889, and ed. it until 1920. He pub. various works on education, upon which subject he held the cultural as opposed to the vocational view. By his conduct of the affairs of Columbia Univ. for 40 years he raised that institution and himself to a high position of independence and authority. He became a member of the Institut de France in 1923, and was chancellor of the Amer. Academy of Arts and Letters, 1924-8. He was awarded the Nobel peace prize in 1931. He received the honorary doctorate of at least 26 univs., including Oxford, Cambridge, and Manchester. His pubs. include *The Meaning of Education*, 1898, 1910, *True and False Democracy*, 1907, *Philosophy*, 1911, *The International Mind*, 1913, *Building the American Nation*, 1923, *The Family of Nations*, 1938, and an autobiography, *Across the Busy Years*, 1939.

Butler, Richard Austen (1902-), politician, b. Attock Seral, India, and educ. at Marlborough and Pembroke College, Cambridge. He had a brilliant academic career and in 1929 became Conservative M.P. for Saffron Walden. He was under-secretary at the India Office, 1932-7; parl. secretary to the ministry of labour, 1937-8; under-secretary at the Foreign Office, 1938-41, and Minister of Education, 1941-5, in which capacity he carried through the Education Act of 1944 which became known by his name. In 1945 he was Minister of Labour.

When the Conservatives returned to power in 1951 B. became chancellor of the exchequer. He held this post until Dec. 1955; during his term of office as chancellor the country's economic situation improved considerably and taxation, especially direct taxation, was much reduced until the last 12 months, when the inflationary tendencies and unsteady dollar position caused financial restrictions and an increase in indirect taxes such as purchase tax. In Dec. 1955 B. became lord privy seal and leader of the House of Commons. After Eden's resignation, Jan. 1957, many expected that he would become prime minister. Eden was succeeded by Harold Macmillan, however, and B. retained his existing offices and also accepted that of home secretary. See life by F. Boyd, 1956.

Butler, Samuel (1612-80), satirist, was a Worces farmer's son. After being for some years page in the household of Elizabeth, Countess of Kent, he became clerk to sev. Puritan justices of the peace, some of whom are believed to have suggested characters in *Hudibras*. Sir Samuel Luke, one of these justices, is supposed to be the original of Hudibras himself. In 1662 B. was steward of Ludlow Castle. Aubrey describes him as 'strong-set, high-coloured, a head of sorrel hair, a severe and sound judgment; a good fellow.' His *Hudibras* (pub. in 3 parts, 1663, 1664, and 1688) is a satire on the Puritans, and while it ridicules the extravagances into which many of the party ran, it entirely fails to do justice to their virtues and their services to liberty, civil and religious. Charles II is said to have enjoyed the pungency of its wit and the resistless power of its ralleries, but, notwithstanding the contemporary popularity of the work, B. was neglected by the court and d. in poverty. Like Pope, B. is now more quoted than read. No doubt the story is but a bare framework, yet his mastery over rhyme and epigram, and his genius for making his characters depict themselves in the most contemptible light, form a splendid embroidery. B.'s poetical works were ed. by R. B. Johnson, 1893; collected works by A. R. Waller and R. Lamar, 1905-28. See lives by J. Aubrey, in his *Brief Lives*, ed. 1898, and J. Veldkamp 1923.

Butler, Samuel (1774-1839), cleric and classical scholar, b. Kenilworth; was educ. at Rugby and St John's College, Cambridge. Headmaster of Shrewsbury from 1798 until 1836, B. was appointed Bishop

of Lichfield in the latter year and held office until his death. His ed. of Aeschylus was pub. in 4 vols. 1809-16. See W. E. Heitland, *Dr Butler of Shrewsbury School*, 1897.

Butler, Samuel (1835-1902), author, b. Langer Rectory, near Bingham, Nottingham, son of the Rev. Thomas B., and grandson of Dr Samuel B., headmaster of Shrewsbury and later Bishop of Lichfield. B. was educ. at Shrewsbury and St John's College, Cambridge; he prepared for ordination but doubts led him to give up the idea, and in 1859 he went to New Zealand and became a sheep-farmer. *A First Year in Canterbury Settlement*, 1863, composed of letters home, was his first pub. but he himself regarded *Erewhon*, 1872, as his début in authorship. A few passages in *Erewhon* are taken from *A First Year*, a few of its ideas from articles and letters by B. in the New Zealand press, and the Erewhonian scenery is drawn from that of New Zealand. *Erewhon* ('Nowhere' backwards) is a Utopian satire, depicting a people with customs and practices often the opposite of ours; thus machines have been abandoned out of fear that they may become masters of men, and crime is treated as illness, illness as crime. *Erewhon* shows a remarkable insight into the development of some phases of 20th-cent. society, and its qualities of invention, wit, and grace, as well as its original ideas, have estab. its place among great satirical romances, together with its sequel *Erewhon Revisited*, 1901. The latter work is a more polished story than *Erewhon*, and its dominating theme, the origins of a religious myth, gives it more cohesion; but it has not quite the spontaneity of the first work. Between these 2 books B. pub. at his own expense (for he was a commercially unsuccessful author) sev. works on a variety of subjects, but his posthumously pub. novel *The Way of All Flesh*, 1903, overshadows all these. This autobiographical novel embodies some of his favourite notions, notably those on the causes and effects of the clash between generations; the painful relations between Ernest of the novel and his father, the Rev. Theobald Pontifex, are modelled on those of B. and his father, and sev. characters had their prototypes in real people in B.'s life. He began writing the novel in 1873, more or less at the instigation of Miss E. M. A. Savage, who read it in MS. as it progressed until 1885, when she d. and B. ceased work on it. Two sonnets on Miss Savage, whose opinion he took on his writings throughout their friendship, were printed in H. F. Jones's *Memoir*. It was following the pub. of *The Way of All Flesh* that B.'s work found an appreciative public, Bernard Shaw's note in the preface to *Major Barbara* having no doubt something to do with this: 'When I produce plays in which Butler's extraordinarily fresh, free, and future-piercing suggestions have an obvious share, I am met with nothing but vague cacklings about Ibsen and Nietzsche. . . . Really the English do not deserve to have great men.' Shaw has acknowledged his

indebtedness to B.'s theory of creative evolution as opposed to fortuitous natural selection, a theory expounded by B. in 4 straightforward books which followed *Erewhon*: *Life and Habit*, 1878, *Evolution, Old and New*, 1879, *Unconscious Memory*, 1880, and *Luck or Cunning?*, 1887, all concerned in controversy with Darwinism and the middle two involving a personal quarrel with Charles Darwin. These books have never been widely read, yet they have much of B.'s courage and humour, as indeed have his other writings, which include *The Fair Haven*, 1873 ('a work in defence of the miraculous element in our Lord's ministry upon earth, both as against rationalistic impugners and certain orthodox defenders'—an ironical 'defence' issued as by the late John Pickard Owen, with a delightful imaginary memoir of the author), *Alps and Sanctuaries of Piedmont and the Canton Ticino*, 1881, *Ex Voto, an Account of the Sacro Monte at Varallo-Sesia*, 1888, *The Life and Letters of Dr Samuel Butler* (his grandfather), 1896, *The Authoress of the Odyssey*, 1897, *Shakespeare's Sonnets reconsidered and in part rearranged*, 1899, and *The Iliad and The Odyssey rendered into English Prose*, 1898 and 1900 respectively. To the wide range of B.'s interests, painting and music should be added. When he first returned from New Zealand he took up painting seriously, studying at Heatherley's art school and exhibiting at the Royal Academy, where his painting, 'Mr Heatherley's Holiday' (now in the National Gallery), was shown in 1874. He was an unsuccessful candidate for the Slade professorship of fine art in 1886. Ten years after B.'s death was pub. *The Note-books of Samuel Butler*, 1912, now, after *Erewhon* and *The Way of All Flesh*, his best-known book. Ed. by his friend, Henry Festing Jones, the pub. *Note-books* give a classified selection of B.'s carefully kept personal memoranda in which he recorded everything he wanted to remember of experiences, conversations, ideas and opinions, quips and jests. The *Note-books* also include his hitherto privately printed *Seven Sonnets and a Psalm of Montreal*. B. never married. From 1864 until the end of his life he lived in rooms at 15 Clifford's Inn, London, attended by his servant-secretary Alfred Cathie, and spending a part of almost every day in the Brit. Museum reading-room. He d. on 18 June 1902. Collected ed. of B.'s works, ed. by H. F. Jones and A. T. Bartholomew (20 vols.), 1923-1926. See G. Cannan, *Samuel Butler, a Critical Study*, 1915; H. F. Jones, *Samuel Butler, a Memoir*, 1920; C. E. M. Joad, *Samuel Butler*, 1924; A. J. Hoppe, *A Bibliography of Samuel Butler*, 1925; Mrs R. S. Garnett, *Samuel Butler and his Family Relations*, 1926; G. D. H. Cole, *Samuel Butler*, 1947; P. N. Furbank, *Samuel Butler*, 1948; P. Henderson, *Samuel Butler, the Incarnate Bachelor*, 1953.

Butler, Sir Spencer Harcourt (1869-1938). Brit. administrator, educ. at Harrow and Oxford Univ. He entered the Indian civil service in 1888. As

deputy-commissioner of Lucknow he inaugurated many in-planning improvements and much reconstruction in the anct cap. of Oudh. In 1915 he became lieutenant-governor of Burma and, later, lieutenant-governor of the United Provs. In 1923 he returned, as governor, to Burma.

Butler, or Buttler, Walter, Count (c. 1600-34), Irish adventurer, was descended from the third Earl of Ormonde. He was present at the battle of Prague (1620), and accompanied James B., a kinsman, on his march to Frankfurt-on-Oder (1631), at the siege of which he greatly distinguished himself. He then served under Wallenstein (q.v.) and he was an accomplice in the murder of Wallenstein at Eger in 1634. For his share in this affair he was ennobled by the emperor.

Butler, William Archer (c. 1814-48), prof. of moral philosophy in the univ. of Dublin, was b. Annerville near Clonmel. He was brought up as a Rom. Catholic, but became a Protestant. Educ. at Clonmel School and Trinity College, Dublin, he joined the College Historical Society, and was appointed first prof. of moral philosophy at Dublin Univ. During the horrors of famine and pestilence in 1846-7 he laid aside all higher pursuits and toiled nobly among the poor as relieving officer. His chief works are *Sermons Doctrinal and Practical*, 1855-1856, *Lectures on the History of Ancient Philosophy*, 1856, and *Letters on Romanism*, 1858.

Butler, Sir William Francis (1838-1910). Brit. general, b. Suirville, Tipperary. Educ. at Dublin, he entered military service in 1858. Served in the Ashanti expedition in 1873, in Natal, 1879, and in the Sudan campaign of 1884-5. He was brigadier-general in Egypt until 1892, when he was promoted to the rank of major-general and stationed at Aldershot. He succeeded Gen. Goodenough as Commander-in-Chief in S. Africa in 1898. He acted as high commissioner during Sir A. Milner's absence in England. Before the outbreak of the Boer War B. was recalled because he expressed views on the military and political situation which were not in accordance with those of the home gov. He married, in 1877, Miss Elizabeth Thompson (see BUTLER, ELIZABETH). He pub. *The Great Lone Land*, 1872, and other works, and was the biographer (1890) of Sir George Colley. His autobiography was pub. in 1911.

Butler, city of Pennsylvania, N. of Pittsburgh, U.S.A., with coal- and oil-fields. Pop. 23,482.

Butlerage was an anct right of the Crown to buy up provisions and other necessities for the royal household at a valuation, even without consent of the owner. From this probably originates the custom of taking ducs in return for protection of ports and harbours. B. ceased to be levied in 1809.

Buto, in NW. Delta, home of Wadjet or Uto, the cobra goddess, guardian of the prehistoric kingdom of Lower Egypt. Wadjet retained this role after the union of Egypt along with the vulture goddess

of Upper Egypt. The uraeus emblem which distinguished royalty personified her.

Autobarbitone, see BARBITURATES.

Butomaceae, family of monocotyledonous plants found in marshes of tropical and temperate lands. The flowers, in umbels, are regular, hermaphrodite, with 2 whorls of 3 in the perianth, 9 to numerous stamens, 6 to numerous carpels, with numerous ovules, and the fruit a group of follicles. Chief genus is *Butomus*.

Butomus, *Butomus umbellatus*, flowering rush, is the single species of its genus in the family Butomaceae. It grows in Europe and Asia, and is accounted the handsomest herbaceous plant of the Brit. flora. The flowers are rose-coloured and the leaves are sword-shaped.

Buton (Dutch Boston) Island, ls. of the Malay Archipelago, separated from the SE. ray of the Celebes and the is. of Muna by a narrow strait. It is high and wooded, and produces timber, rice, sago, etc. The pop. are Malays, mostly Bugis (q.v.); the area is 1700 sq. m. Pop. 18,000.

Bütow, see BYTOW.

Butrinto, small fort. tn, opposite Corfu, on the coast of Albania. Lake Vivari lies to its N. It has a little harbour, and is the seat of a Gk bishop. The Venetians held the tn till 1797, when it was occupied by the French, who in their turn gave it up to the Turks in 1799. The ruins of Butrintum, a Rom. colony mentioned by Strabo, lie near at hand. They include a mile of old Rom. wall. Pop. about 2000.

Butt, Dame Clara (1873-1936), contralto singer, b. Southwick, Sussex. She was trained in the Royal College of Music, and made her début in Dec. 1892. One of the most conspicuous of her many successes was in Elgar's *Sea Pictures*, 1899, specially written for her. In 1900 she married Kennerley Rumford, baritone vocalist, with whom she appeared on many concert platforms throughout the country. In 1917 she was made D.B.E.

Butt, Isaac (1813-79), leader of the Home Rule party in Ireland, was b. Donegal; educ. at Trinity College, and took his degree with high distinction in 1835. In 1836 he was appointed prof. of political economy and was called to the Bar in 1838. He was a Conservative in politics, and in 1852-65 was M.P. for Youghal. He changed his political opinions, and on his election for Limerick in 1871 he became leader of the Home Rule (q.v.) party. A Home Rule League was formed, but lasted only a short time. He lost hold on his associates, and was called a Tory in disguise and a traitor. His constitutional policy was abandoned by his successor, Parnell.

Butt, see METROLOGY.

Butt-joint, joint (often in ironwork) in which the edges or ends of the pieces united come squarely together without overlapping.

Butte, city and co. seat of Silverbow co., Montana, U.S.A., on the W. slope of a range of the Rocky Mts. Near it is the famous Anaconda copper-mine, and B.

produces about one-third of the entire copper output of the U.S.A., besides producing large quantities of gold and silver, zinc and manganese. It manufs. conduits, bricks, mining equipment, chemicals, and optical and electrical apparatus. Montana State School of Mines is here. Pop. 33,251.

Butter, article of food consisting of the fatty substances present in milk, together with some of the other constituents and a small proportion of salt. The general process by which B. is made involves separating the cream or fatty matter from the milk and churning the cream until the fat globules are burst and the fat particles adhere together in a fairly solid mass. The variations in particular methods consist in the employment of more or less elaborate machinery in the different details of the process, and the extent to which bacterial action is artificially aided. Cow's milk contains, on the average, about 3.7 per cent of fat, but the amount varies with the breed and individual, with the season of the year, and even with the day of the week—Monday's milk being usually deficient in fat as compared with the rest of the week, while the fat in Tuesday's milk is usually above the average. The fat is present in the form of globules varying in diameter from .0001 mm. to .01 mm. At temps. above 32° C. the fat is in a liquid condition, and slowly solidifies as the temp. is lowered. The gradual nature of the solidification is shown by the slow increase in the sp. gr. of the milk due to that solidification. As milk is cooled, therefore, the fat tends to rise to the surface, because the density of the serum or liquid portion of the milk increases practically in proportion to the decrease in temp., while the fat, being for the most part still in the liquid condition, has not increased in density in the same proportion. The most widespread manner of separating cream from milk is therefore to allow the liquid to stand in shallow pans in a cool room for about a day, when the particles of fat slowly ascend to the surface as the effect of the differing densities. This method is not only slow, but is also not economical, because a fair proportion of fat still remains in the skim milk. Various types of mechanical cream-separators are now widely used. The general principle underlying the action of all these machines is the same. The milk is swirled round a central feeding tube, so that the heavier constituents are projected by centrifugal force to the outer portion of the chamber, while the lighter fat may be collected at a point near the centre of the rotating piece. Milk placed in a separator at or above boiling-heat is resolved into cream and skim milk in a few minutes. The next operation is known as 'ripening,' and consists essentially in allowing the multiplication of lactic bacilli in the cream. The object of this process is to produce a more palatable article, and to shorten the operation of churning, as it is found that B. more readily forms in the churn when ripened cream is used. The popular and primitive method of ripening is to allow

the cream to stand in a cool room, with occasional stirring, until the practised taste of the dairyman indicates that the process has sufficiently advanced. The work is expedited, however, by using a 'starter.' This consists of a pure culture of the lactic acid bacillus, and is stirred into milk which has been sterilised and brought to a temp. of 80° F. This temp. is maintained until the milk has become sour, when a portion is added to cream that needs ripening. In either method care must be taken to prevent other bacteria from having access to the cream. To this end all vessels and utensils are scalded before use, moistened muslin curtains are used to entrap dust, and the utmost cleanliness is enforced in all branches of the dairy work. When the cream has sufficiently ripened, it is placed in a churn and agitated until the B. forms. Many varieties of churns exist, both of the kind in which a number of blades are dashed or revolved in the contained cream, and of the kind where the vessel itself is turned end over end, the churning consisting in the liquid dashing against the sides of the vessel. The forming of the B. can easily be recognised by the different sound of the 'splash,' or by the different effort required if the churn is actuated by hand. After churning the buttermilk has to be washed from the butter with cool water, and the solid product then presents an attractive granular appearance. To rid it of the excess of water, and incorporate the desired amount of salt, it is necessary that the B. should be 'worked.' This may either be done by hand, which should be quite cool and clean, or by one of the mechanical workers upon the market. The operation in any case consists in pressing the B. in as many different directions as possible, at the same time continually changing the relative positions of the different parts of the bulk. B., when ready for sale, contains on the average 15 per cent of moisture, about 1 per cent of salt, and over 80 per cent of fat. Other solids (protein and sugar) total 1½ per cent. The fat consists of a mixture of glycerides, the glycerol base being united with oleic, palmitic, myristic, lauric, butyric, caproic, capric, steric, and caprylic acids in proportions roughly indicated by the order of the names. B. may be adulterated by the addition of other animal fats, and by the introduction of preservatives, as borax, formalin, etc. There are many methods of detecting B. adulteration, one of the most reliable being the determination of the refractive index of a layer of B. by a Zeiss refractometer. World production of B. was estimated in 1954 to be about 54,200,000 cwt.; imports into Great Britain and N. Ireland for the same year were 5,646,000 cwt. Home production was 456,000 cwt. compared with 893,000 in 1938. Production in exporting countries has not fallen to any great extent and in some has increased. In 1954 exports were: New Zealand, 2,658,000 cwt.; Australia, 955,000 cwt.; Rep. of Ireland, 87,000 cwt.; Denmark, 2,777,000 cwt.; Netherlands,

1,024,000 cwt. Imports from Commonwealth countries were duty free; those from other countries were subjected to a tariff of 15s. per cwt. The problem of controlling imports to protect home producers which existed in the 1930's ended with the Second World War and the consequent reduction in supplies and rationing. The rationing of fats ended in May 1954, and at the same time price control and subsidies were also abandoned. It is early yet to judge the effect of this legislation on home production of B. and the import trade. *See also* CHEESE; CREAMERY; DAIRIES; DAIRY FARMING; FAT; MARGARINE.

Butter-bur, or *Petasites hybridus*, is a species of Compositae often found in damp fields. The plant is dioecious, and only the male florets yield nectar. There are about 30 florets in the male inflorescence, and 5 times as many in the female. The leaves are large, about the size and shape of rhubarb.

Butter-tree, or *Pentadesma butyracea*, is the single species of its genus in the family Guttiferaceae, found in W. Africa. It yields a fatty substance, which is used as tallow and as a substitute for butter. *Madhuca butyracea*, a species of Sapotaceae, is the Indian B., from the seeds of which a fatty juice is obtained and used in soap-making.

Buttercup, *see* RANUNCULUS.

Butterfield, William (1814-1900), architect, b. London. Became a leader of the 'Gothic Revival.' He held quite original views as to colour in architecture, his view being that any combination of natural colours of the materials was permissible. His first important building was St Augustine's, Canterbury. His reputation was made by All Saints', Margaret Street, London, and he also built St Alban's, Holborn, Keble College, Oxford, the chapel of Balliol College, and extensions to Merton College, Oxford. He carried out many restorations of old buildings.

Butterfish, name given to various kinds of fish on account of their slippery nature: *Coriodon pullax*, a species of Labridae or wrasse, known in New Zealand as kelp-fish or B.; *Centronotus gunnelus*, a species of blenny-fish, known in Britain as the gunnel or rock-fish; and *Poronotus triacanthus*, or dollar-fish, found in the W. coast of the U.S.A.

Butterfly is the name given to the Lepidoptera which were included in the series Rhopalocera, the order being completed by the other series, Heterocera, or moths. There is no definite div. between moths and B.s, but they are generally distinguished from one another by their wings and antennae. All the B.s have clubbed antennae and no frenulum, a coupling apparatus which projects from the hind wing and unites it with the fore wing, while the moths have antennae of various shapes, and when clubbed a frenulum is present; the former also are day-flying insects, while the latter are usually nocturnal in habit. Nearly all B.s remain with their wings in an upright position when at rest, so that only the under surface is seen, but moths keep their wings

expanded during repose. The species of B.s are nearly altogether vegetarian, living on nectar, but a few feed on animal matter, such as decayed fish, and the larvae of others prey on vegetarian insects. In coloration B.s may be dingy white or yellow, or may be any brilliant colour, such as red, orange, blue, purple; and it is noteworthy that the males are usually brighter than the females. Mimicry in colouring is frequently observed in different species, which resemble leaves in their greenness or bark in their brownness, and thus save themselves from being victimised by birds.

BRITISH BUTTERFLIES

A, cabbage white; B, pale clouded yellow
C, red admiral; D, swallow-tail.

The colours are caused partly by pigments, but partly also by interference phenomena on the scales, like those to be seen on a soap bubble. The distribution of B.s is world wide, but though they are found in almost the very coldest regions, they occur in greatest abundance in warm climates. In Britain there are about 70 native species, and the total number described throughout the world amounts to sev. thousands. In structure B.s greatly resemble many other insects, but they are noted for the slenderness of their body, the length of their proboscis, their hairy legs, large eyes, and the breadth of their scale-covered wings. The mouth is a sucking organ, mandibles are rudimentary or absent, and the proboscis is formed by the maxillae, and in some species is 10 in. long. The legs are always weak, merely supplying supports during rest, and in some cases the front pair is rudimentary. The metamorphosis

of the insect is complete, but the life of the adult is usually very short, and seldom survives a single season, though sev. Brit. species, including the peacock and the small tortoise-shell, are able to hibernate in the adult form. The Nymphalidae is the largest of the B. families, and none of the species included in it are capable of walking on the front legs owing to their reduced state. To it belong 7 sub-families, and these include such well-known B.s as the grayling, Scotch argus, dead-leaf, fritillaries, admirals, purple emperor, and the genus *Vanessa*. The family Erycinidae has 2 subfamilies, and in Britain is represented by the Duke of Burgundy fritillary. The 'Blues' are small and slender B.s comprised in the Lycaenidae, the species of which are usually blue on the upper surface, but many are also copper, white, and yellow. The Pieridae is a family which has sev. Brit. genera, and among the best-known members are brimstones, orange-tips, clouded yellows, and garden whites or cabbage butterflies (q.v.). The difference in form and colour of the sexes in Papilionidae has led to a good deal of confusion among entomologists; the family has many members in S. America, and some of these are the most beautiful B.s in existence. The Hesperidae, or skipper family, is characterised by having perfect legs; like the Papilionidae it is world wide in distribution, but unlike that family its species have largish bodies of very dull colour; many have a jerky flight, but some are extremely rapid when on the wing. In habit they resemble moths, and many of them fly at twilight. Extensive migrations of B.s belonging to many species are known to take place. The large cabbage white (*Pieris brassicae*) and the small white (*P. rapae*), for instance, have been observed over the Channel and reaching the S. coasts of England from the European mainland, sometimes in such numbers as to resemble a huge cloud obscuring the sun. See also CABBAGE BUTTERFLY; CATERPILLAR; CHRYSALIS; COCOON; MOTHS. See F. W. Frohawk, *Natural History of British Butterflies*, 1924, and *The Complete Book of British Butterflies*, 1934; O. B. Williams, *The Migration of Butterflies*, 1930; E. Sanders, *A Butterfly Book for the Pocket*, 1939; R. South, *The Butterflies of the British Isles*, 1941; E. B. Ford, *Butterflies*, 1945 (where the literature is more fully quoted); Vere Temple, *Butterflies and Moths of Britain*, 1948; L. H. Newman, *Transformations of Butterflies and Moths*, 1953, and *Butterfly Farmer*, 1953.

Butterfly Flower, see *SCILLANTHUS*.

Butterfly Orchis, or *Platanthera bifolia*, and *P. chlorantha*, are beautiful species of Orchidaceae; they are found in Britain.

Butterfly Weed, or *Pleurisy Root*, is the *Asclepias tuberosa*, a herbaceous plant of the family Asclepiadaceae. It is a native of the U.S.A., and was formerly used in cases of pulmonary affections and rheumatism.

Butterine, food product prepared by mixing purified animal fats with milk. By the Margarine Act of 1887 all such

substances are to be termed margarine (q.v.), and must be so labelled.

Buttermere, Cumberland, England, once one lake with Crummock Water, is $1\frac{1}{2}$ m. in length by $\frac{1}{2}$ m. in breadth, and drains NW. It is $7\frac{1}{2}$ m. SW. of Keswick, amidst superb scenery.

Buttermilk, the fluid residue after butter has been taken from cream. It is generally given to pigs as food, but makes an easily digested and nourishing drink. Some inferior kinds of cheese contain B.

Butternut is the name given to the fruit of the various species of *Caryocar*. It is a large drupe containing 4 seeds, and comes from tropical America. The term is also applied to the *Juglans cinerea*, the white walnut of N. America, the seeds of which are rich in oil.

Butters, Vegetable, substances having the consistency of butter, being vegetable fatty oils which are nearly solid at ordinary temps. Examples are cocoa butter and butter of almonds.

Butterwort is the name applied to sev. species of *Pinguicula*, a genus of Lentibulariaceae. Three of these plants grow in damp places in Britain, and are noted for their carnivorous habits. The rhizome has a rosette of greenish-yellow leaves which grow close to the ground and are covered with numerous small hairs secreting a sticky fluid. Insects adhere to the leaves, and the acid secreted by the hairs decomposes the bodies and gives the plants the nitrogen they require. *P. vulgaris*, *P. alpina*, *P. lusitanica*, and *P. grandiflora* are the species which are found in Britain.

Butterworth, George (1885-1916), Eng. composer, b. London; killed at Pozieres in Somme battle. His first serious composition was *Barcarolle*, orchestral piece, written while still at Eton. He studied music at Royal College of Music and also privately, and took a leading part in the folk-song and dance movement. His *Shropshire Lad*, an orchestral rhapsody based on one of his Housman songs, raised high hopes which were frustrated by the war. His songs, *A Shropshire Lad* (6) and *Bredon Hill* (5), are regarded as among the finest in Eng. music. Compositions include *Two Folk-song Idylls*, 1912, *The Banks of Green Willow*, 1913, *Love Blows as the Wind Blows* (cycle of 4 songs), 1912, *Folk-songs from Sussex: Country Dance Tunes*, 1906-16, *The Morris Book*, 1907-13, and *We get up in the Morn.*, a part song.

Butterworth, firm of legal and scientific publishers, which can point to its foundation in the reign of Henry VII, when, under the sign of *The Hand and Starre* at No. 7 Fleet Street, it was known as a 'Law Book Shop and Printery.' In 1553 the then owner, Richard Totell, was granted a patent to publish 'all authorised books on common Law,' and he was succeeded by his apprentice, John Jaggard, who held the copyright of Sir Francis Bacon's *Essays*, printed by his brother Wm Jaggard between 1603 and 1613. Wm made all arrangements for printing the First Folio of Shakespeare's

plays, completed by his son Isaac in 1623. The Jaggards were also responsible for printing such works as Sir Walter Raleigh's *History of the World*, and a trans. of *The Decameron*. The firm was acquired by Henry Butterworth in 1818, and by the end of the cent. when the move to Bell Yard took place, was already renowned for many of the legal titles which are familiar to-day. Under the ownership of Stanley Bond, such monumental works as Halsbury's *Laws of England* and the *Encyclopaedia of Forms and Precedents* were launched, and subsequently the publishing scope was enlarged to include the medical and scientific, as well as the legal field.

Buttevant, anct mrkt tn in co. Cork, Rep. of Ireland, half way between Cork and Limerick. It has the remains of 13th-cent. Ballybeg (Augustinian) and B. abbey, and B. (Boutez on Avant) Castle. The word 'steplechase' originated in the race, O'Callaghan v. Blake, between B. and Doneraile church steeples in 1752. There are lime-works, and the anct and world-famous horse fair of Cahirmee is held here. Pop. 1100.

Buttler, Walter, see BUTLER.

Buttmann, Philipp Karl (1764-1829), Ger. philologist, b. Frankfurt-on-the-Main. His fame rests on his *Griechische Grammatik*, 1792 (of which the 22nd ed. appeared in 1869), and his *Lexilogus*, 1818-25, which is a scholarly discussion of certain difficult words in Homer and Hesiod. Both these works have been trans. into English.

Button, Sir Thomas (d. 1634), entered the navy in 1589, but did not rise to renown until in 1612 he was given the command of an expedition whose objective was the search for the NW. passage. Accompanied by the pinace *Discovery*, and himself captain of the *Resolution*, he explored the coasts, especially the W. coast, of Hudson Bay for the first time, and proved conclusively that the hoped-for passage did not exist. It was he who named the Nelson R., New Wales, and Button's Bay. Deficiency in equipment caused a high mortality among the crew. Later B. was admiral of the king's ships off Ireland, and did yeoman's service in suppressing piracy. Various disputes with the Admiralty, in which he was supported by the Duke of Buckingham, embittered his closing years.

Buttons (Fr. *bouton*, from same root as Fr. *bouter*, to push). The practice of passing a loop of material over a button dates certainly from the Dark Ages, and is probably of much greater antiquity: early Dan. mantles have been discovered that have fastenings of this kind. The practice of attaching rows of B. to one side of a piece of material and of making corresponding 'button-holes,' through which they can be passed, on the opposite side, is, however, much more recent, and dates probably from the late 12th cent. By the middle of the 14th cent. long rows of B. had become so popular in Italy that in at least 2 cities, Lucca and Florence, sumptuary laws were passed forbidding servant girls to wear sleeves

buttoned above the elbow on pain of being whipped naked through the streets.

From the middle of the 16th cent. onwards ornamental B. have been made in various ways: sometimes a hard core has been covered with fabric, and often embroidered; other kinds of B. have been made in hard materials such as bone, metal, mother-of-pearl, vegetable ivory (q.v.), and various chemical compositions. A fashion for wearing enormous cut-steel or paste-set gilt B. down the front of the coat was adopted by men in the late 18th cent., and on its first introduction was much lampooned in contemporary engravings.

Other methods of fastening clothes, such as hooks-and-eyes, 'patent' fasteners, and zip fasteners, have been introduced from time to time and continue to be used, but the fact that B. can be decorative, are easy to fasten, and hold securely has meant that since their first popularity they have never disappeared from the fashion. The chief centre of the button-making industry in England is Birmingham.

Buttress (O.F. *boutrez*, from *bouter*, to thrust), in architecture, a vertical mass of masonry projecting from the outer face of a wall at intervals, to resist the outward thrust of a vault, roof-truss, or girder. B.s were seldom used in classical architecture; and in Romanesque architecture were of slight bulk and projection; but in the Gothic period they were progressively increased in size, thus enabling the intervening wall to be reduced in thickness and to be pierced with large windows.

Butantium, see BITONTO.

Butyl Alcohol, one of the isomeric alcohols of the general formula C_4H_9OH . There are 2 primary, 1 secondary, and 1 tertiary forms. Normal B. A., $CH_3(CH_2)_3OH$, is a colourless liquid prepared by reducing normal butyl aldehyde with hydrogen and reduced nickel. Iso-butyl alcohol, $(CH_3)_2CH\cdot CH_2OH$, is a disagreeably smelling liquid occurring in fusel oil. The secondary alcohol, methyl ethyl carbinol, $CH_3(OH)_2CHOH$, is a strongly smelling liquid boiling at 99° C. The tertiary alcohol, trimethyl carbinol, $(CH_3)_3COH$, is a crystalline solid prepared by the action of zinc methyl on acetyl chloride.

Butyl Chloral, $CH_3CHCl.CCl_2CHO$, oily liquid prepared by the action of chlorine on acetaldehyde. It readily unites with water to form B. C. hydrate, $C_4H_9Cl_2O\cdot H_2O$, a crystalline solid used in medicine as an anæsthetic. It has similar properties to chloral hydrate, in the manuf. of which it occurs as a by-product.

Butyric Acid, $CH_3CH_2CH_2CO_2H$, volatile fatty acid occurring in butter fat, in parsnip and other vegetable oils, and in the perspiration of animals. It is an oily colourless liquid with an unpleasant smell, solidifies at -19° C., boils at 162.3°, and has a sp. gr. of .974. It is miscible with water and alcohol, and forms salts and esters called butyrates. It may be prepared by adding putrid cheese to sugar or starch mixed with

water, the cheese introducing the bacillus by whose agency the acid is formed. Chalk is usually added to bring off the acid in the form of the calcium salt.

Isobutyric acid $(CH_3)_2CH \cdot CO_2H$, isomeric form found in some vegetable oils. It has an unpleasant smell, boils at $155^\circ C.$, and has a sp. gr. of .968.

Butyric Ester, or **Ethyl Butyrate**, liquid obtained by distilling butyric acid, alcohol, and sulphuric acid. Unlike butyric acid it has a pleasant smell resembling that of pineapple. It is commercially known as pineapple oil, and is much used as a flavouring agent for sweets, etc.

Butyrin, $C_8H_{16}(C_4H_7O_2)_3$, yellowish liquid with a bitter taste which forms about 3.8 per cent of butter fat. It is the glyceryl ester of butyric acid.

Butzer, Martin, see BUCKER.

Bützow, Ger. tn in the dist. of Schwerin, on the Warnow, 27 m. N.E. of Schwerin (q.v.). It is a mkt tn, and has chemical and paper manufs. Pop. 9000.

Buxar, tn situated on the S. bank of the Ganges in Bihar state, India. Here Mir Kasim was defeated by Sir Hector Munro, 1764. It is of literary interest as the residence of writers of Vedic hymns, and is the centre of pilgrimage as the site of one of Rama's exploits as told in the *Ramayana*.

Buxbaumia, *Buxbaumia* or *B. aphylla*, is a moss of the family Buxbaumiaceae. It was named in honour of Buxbaum, the Ger. botanist, and is a rare plant occasionally found in Britain.

Buxina, alkaloid occurring in the common box-tree (*Buxus sempervirens*).

Buxtehude, Diderik (1637-1707), Dan. composer and organist, b. Helsingør, organist of the Marienkirche, Lübeck, from 1668. As organ composer and player he had a great influence on J. S. Bach (q.v.), who made a 200-m. journey on foot to hear him play. He composed many works for the organ, trio sonatas for violin, gamba, and continuo, and a number of church cantatas. He d. at Lübeck. See lives by Niels Friis, A. Pirro, and H. J. Moser, and W. Stani, *Franz Trunder und Dietrich Buxtehude*, 1926.

Buxton, Jedediah (1704-74), calculator, b. Elmton, Derbyshire, who could work out the most elaborate problems in number, although he never mastered any arithmetical rules. By striding over the estate of Elmton, he gave its area accurately in ac., roods, etc., and even sq. in. At a performance of *Richard III.*, his one amusement was to count the words Garrick uttered. Another time he expressed in pounds, after mental reckoning only, the product of a farthing doubled 139 times. His result of 39 figures is correct, as verified by logarithms.

Buxton, Sydney Charles, 1st Earl, of Newtimber, Sussex (1853-1934), statesman and author. He was educ. at Clifton and Trinity College, Cambridge. He first entered Parliament as a Liberal in 1883. He was a member of the Royal Commission on Education, 1886-9, and a member of the Income Tax Committee in 1904. From 1892 till 1895 he was under-secretary for the colonies. From 1905 to 1910

he was postmaster-general, and instituted the Canadian magazine post, 1907, and the penny post to the U.S.A., 1908, and acquired the first wireless telegraph station for the post office, 1909. In 1910 he became president of the Board of Trade, and was the author of the 'fair wages' resolution of the House of Commons: a resolution requiring a clause to be inserted in all gov. contracts to secure better payment for workers engaged in such work. In 1914 he was made a viscount, and he was high commissioner and Governor-General of S. Africa, 1914-20. He received his earldom in 1920. His pubns. include *Political Manual*, 1886, and *The Fiscal Question: Handbook of Political Questions*, 1904.

Buxton, Sir Thomas Fowell (1789-1845), philanthropist, b. Earl's Colne, Essex. He was a brilliant student at Trinity College, Dublin, in spite of his very meagre grounding in academic work. In 1808 he entered Messrs. Truman & Hanbury's brewery. So wholehearted was his devotion to business that he became a partner in 1811. His wife, Harriet Gurney, was a sister of Elizabeth Fry (q.v.). People first recognised his talent as a speaker and his disinterested enthusiasm in his speech for the Spitalfields weavers, 1816. From 1818 to 1837 he represented Weymouth in Parliament, his sturdy opposition to bribery being responsible for the loss of his seat. Though he sacrificed many hours to the question of prison reform, and tried to carry a scheme for bettering the condition of the African Negroes, his life work was to promote emancipation of slaves throughout Brit. dominions. In this cause his activities were never relaxed, and he proved himself a worthy successor to Wilberforce as leader of the anti-slavery party, 1824. See R. H. Mottram, *Buxton the Liberator*, 1946.

Buxton, holiday resort and spa treatment centre in Derbyshire, England, 34 m. NW. of Derby, and 163 m. NW. of London by rail. It is the highest tn in England, 1000 ft above sea level, the centre of the Peak dist. national park, and is remarkable for its very bracing climate. It is well known as a holiday centre. It has long been famous for its mineral waters, which were found and used by the Romans. The springs supply over a quarter of a million gallons of water daily at a constant temp. of $82^\circ F.$ The physical treatment centres situated in the Crescent are the property of the corporation, and the Devonshire Royal Hospital is the regional rheumatism and rehabilitation centre for the Manchester area. There are excellent hotels and entertainment facilities. Pop. 19,600.

Buxtorf, Johann (1564-1629), Ger. Heb. scholar, prof. of Hebrew at Basel in 1591. In his devotion to rabbinical literature he has hardly been surpassed. His reputation depends chiefly on his *Lexicon Chaldaicum, Talmudicum, et Rabbinicum*, and his *Concordantiae Bibliorum Hebraeorum*, both of which were pub. by his son, but his greatest work perhaps was his folio Heb. Bible, to which were added the

Aramaic paraphrases, or Targums, and the commentaries of Ibn Ezra, Rashī, and others, 1618. His son Johann B. (1599-1664), also a great Hebraist, succeeded him as prof. at Basel.

Buxus, genus of dicotyledonous plants of the family Buxaceae, of which the common name is box (q.v.).

Buxwiller, see **BOUXWILLER**.

Buya-Ballot, Christoph (1817-90), Dutch meteorologist, b. Kloetigen in Zealand; studied at Utrecht, where he became prof. of mathematics, 1847, and of experimental physics, 1870, and in 1854 director of the Royal Meteorological Institute. He invented the aeroklinoscope and a system of weather signals which were a great aid to international uniformity in meteorological observations. His observations have been formulated in a general law of storms which may be put thus for the N. hemisphere, 'Stand with your back to the wind; the low-pressure area will be on your left hand. For the S. hemisphere the reverse will obtain.' This is known as B.'s law. His works include *Changements périodiques de la température*, Utrecht, 1847, and in English, *Suggestions on a Uniform System of Meteorological Observations* (1872-3).

Buzançais, Fr. tn in the dept of Indre, on the Indre. It manufs. textiles. Pop. 4500.

Buzău, in the prov. of Ploesti in Rumania, 42 m. NE. of Ploesti; the seat of a bishop, and a market for grain, timber, and petroleum. Pop. (1948) 43,000.

Buzzard is the name given to sev. genera of birds of prey of the falcon family, Falconidae, to which belong also the kites. The species usually live on such small animals as mice, but they are known to carry off domestic fowls. They are cosmopolitan but for Australia. *Buteo vulgaris*, the brown or common B., and *Buteo lagopus*, the rough-legged B., are the only natives of Britain. *B. lineatus*, the red-shouldered hawk, and *B. borealis*, red-tailed hawk, occur in N. America. *Fernis aptivorus*, the honey B., belongs to a different sub-family from *Buteo*, while *Cartharus aura*, the turkey B., is an Amer. vulture.

Buzzard Clook, see **DOR-BEETLE**.

Buzzard's Bay, large inlet (30 m. long, 5-10 m. wide) of the Atlantic Ocean on the SE. coast of Massachusetts, U.S.A. New Bedford, the cap. of Bristol co., stands on the estuary at the mouth of Acushnet R., which falls, with other small streams, into this bay. The vil. of B. B. (pop. 1460) is a business centre and the seat of Cape Cod Canal administration.

Buzzer, device resembling the electric trembler bell with the gong removed. It is used to produce the excitation of an oscillatory circuit at its natural frequency. If the circuit has been calibrated in frequency the attachment of a B. transforms it into a B. wave-meter, convenient for calibrating the tuning circuits of a receiver.

By, John (1781-1836), engineer and founder of Bytown, now Ottawa. He was a lieutenant-colonel in the Royal Engineers, and served in the Peninsular

war. He constructed the Rideau Canal, 1827-32, in Canada, joining Lake Ontario with the Ottawa R., a defensive measure against Amer. invasion. It is still used for pleasure boats.

Byblos, or **Byblus**, anct city of Phoenicia, the traditional bp. of Adonis. See **JEBAL**.

Bydgoszcz: 1. Prov. (*województwo*) of central Poland, in the Vistula (q.v.) basin. Until 1949 it was called Pomorze (q.v.). Area 8100 sq. m.; pop. 1,500,000.

2. (Ger. *Bromberg*), tn of Poland, cap. of B. prov., on the Brda, a trib. of the Vistula (q.v.), 140 m. WNW. of Warsaw (q.v.). A canal and the R. Noteć connect it with the Odra (q.v.). There are engineering, textile, chemical, and paper industries. Pop. 200,000.

Byelorod, see **BEŁGOROD**.

Byelostok, see **BIELYSTOK**.

Byfleet, par. and vil. in NW. Surrey, England, 22 m. from London. Pop. 4500.

Byland Abbey, Cistercian abbey in Yorks, 6 m. from Easingwold, transferred from Old Byland (5 m. N.) in 1177. The ruins were given to the nation in 1920 by Lady Julia Wombwell.

By-law, or **Bye-law**, is 'an ordinance affecting the public or some portion of the public, imposed by some authority clothed with statutory powers, ordering something to be done or not to be done, and accompanied by some sanction or penalty for its non-observance. It involves this consequence that, if validly made, it has the force of law within the sphere of its legitimate operation' (Lord Russell, C.J., in *Kruse v. Johnson*, 1898). B.s are generally made by councils, corporations, and companies for the control of order and good gov. within some jurisdiction. B.s are binding, unless contrary to the laws of the land, or to the act of any corporation, or unless they are obviously unreasonable. The power of B.s extends to taxing, licensing, and the regulation of amusements. Fines and forfeitures may also be enforced by B.s. Corporate bodies also are empowered by their charters to make B.s which are binding on their members. Every corporation can of necessity repeal or alter any B. made by itself. By various statutes powers are given to bor. and co. councils to make B.s for the good gov. of their area. Dist. councils can only make sanitary B.s. Such B.s are not enforced until after the expiration of 40 days, or till a copy has been sent to a secretary of state, who has power to disallow or alter the B.s. B.s must generally be submitted to some confirming authority for sanction and approval. For example, the Ministry of Transport regulates traffic on railways and tramways, the Ministry of Education makes B.s compelling attendance at school, the Ministry of Housing and Local Gov. regulates, by means of B.s, the use of public baths and washhouses, lodging-houses, and slaughter-houses. Local authorities are apt to encroach on the powers of the central depts of state by arbitrary use of B.s. This tendency can be checked to a certain extent by the confirming authority of the appropriate gov. dept, e.g. the B.s of co. councils must

obtain the assent of the Ministry of Housing and Local Gov., and those of a bor. corporation may be opposed by the Privy Council, while the courts also have power to pronounce on the reasonableness or otherwise of B.s. B.s may also be made by societies, guilds, and companies. See LOCAL GOVERNMENT.

Byng, George, Viscount Torrington (1663-1733), admiral, *b.* Wrotham, Kent; went to sea at 15; was made captain by the Prince of Orange in 1688, and in 1703 became rear-admiral of the Red. In 1704 he served under Sir Cloudesley Shovell, and distinguished himself at Gibraltar, and was knighted by Queen Anne for gallantry at Malaga. In 1708 he was made admiral of the Blue and defeated the Fr. Fleet of the Old Pretender; in 1715 served against the French in the Downs and was made a baronet; in 1718 dispersed the Sp. Fleet off Messina, and was appointed treasurer of the navy and rear-admiral of Great Britain. In 1721 he became a Privy Councillor, Baron Southhill and Viscount Torrington; in 1725 a Knight of the Bath, and in 1727 First Lord of the Admiralty.

Byng, John (1704-57), admiral, son of Lord Torrington. His father used his influence to further the interests of his son. The result was that B. received rapid and not altogether merited promotion. He entered the navy in 1718, became a captain in 1727, a rear-admiral in 1745, a vice-admiral in 1747, and an admiral in 1755. In 1756 he sailed from Gibraltar to relieve a garrison that was besieged in St Philip in Minorca. He fought an ineffective naval battle with the French, hung round Minorca for a few days, and then returned without having done anything. The fort surrendered, and B. was brought home, tried by court-martial, and executed for not having done his utmost.

Byng of Vimy, Julian Hedworth George, 1st Viscount (1862-1935), Brit. soldier, seventh son of the 2nd Earl of Strarford. He began army life as a subaltern in the 10th Hussars, 1883, reaching the rank of lieutenant-general, 1916, and full general 1917. He served in the Sudan expedition, 1884, and in the S. African war, 1899-1902, being mentioned in dispatches. During the greater part of the First World War B. commanded the Canadian Corps, and his outstanding successes were the capture of Vimy Ridge on 9 April 1917 by his Canadian troops; the execution of a brilliant piece of work in Nov. 1917 near Cambrai; and his resistance to the Germans in their spring attack of 1918. Later, when the allied armies began the final advance to victory, B.'s army broke the Hindenburg line (*q.v.*). Created Baron B. of Vimy of Thorpe-le-Soken, 1919. Governor-General of Canada, 1921-6. During his period of office he came into conflict with Mackenzie King, leader of the Liberal party. His action in dissolving the Canadian Parliament in 1926 was severely criticised. He was created a viscount, 1926. Commissioner of the Metropolitan Police, 1928-32, in which latter year he was made a field marshal.

Bynkershoek, Cornelius van (1673-1743), Dutch jurist, *b.* Middelburg, Zeeland; studied at the univ. of Franeker, and took a doctor's degree in 1694, settling down to an advocate's practice at The Hague. In 1703 he became a member of the Supreme Council of Holland, Zeeland, and W. Friesland, and in 1742 became its president. Author of numerous works on international law.

By-pass Condenser, capacitor used to separate alternating currents from direct currents. The capacitor (*q.v.*) has infinite resistance to direct currents, as there is no conducting connection between the plates, and thus bars passage of direct currents. On alternating currents the plates are continuously charged up in alternating directions; the resistance is zero.

By-pass Valve (engineering), valve by which the flow of a fluid in a system is carried past some particular plant in operation. It is fitted in a pipe connecting the pipes leading to and from the plant and is normally closed. Where a fluid is passed through a number of filters, a B. V. is usually provided at each filter, so that any filter may be opened up for cleaning without interfering with the flow in the system.

By-products, goods of commercial value which occur in the manuf. or preparation for the market of some other commodity which is looked upon as the main product. B. have always been considered in the economic adjustment of agric. and pastoral enterprises, but it is only within recent years that their great importance in various forms of manufs. has been recognised. B. not only mean additional profit in the ordinary course of a particular business, but they also represent a means of insurance, or of levelling up the various risks; for it often happens that the markets supplied by the different products are independent, so that the dangers of a movement disastrously affecting the value of one product may be counteracted, or at any rate mitigated, by a profitable treatment of another. It may thus happen that what was considered the main product at the beginning of an enterprise may become secondary, and a former by-product may become the prin. article dealt with. Where B. have gained enhanced importance in this way it is more convenient to speak of all the marketable goods as joint products. At the present time, when chemical science enables us to treat profitably what were formerly called waste products, and when businesses design to keep many stages in the production of an article under one control, the treatment of B. makes the question of estimating costs and values an important one. The matter is fairly simple when the various products occur in a fixed and invariable ratio of quantity and quality, because the total income will be the sum of the amounts realised by each of the joint products, and an increased outlay should bring profits in roughly the same proportion. It occurs much more often, however, that certain products may be developed at the expense of others, either as regards quantity or quality. A

farmer, for instance, may rear sheep principally for meat or principally for wool, but also with a view to profiting by both. His methods will vary according to which he regards as the main product, and it may be a matter of somewhat nice adjustment to arrive at the more profitable of the 2 courses. The farmer would no doubt decide from experience, and might even experiment with different breeds and in different seasons. The case of the big manufacturing concern is often much more complex. Where the B. are numerous and valuable, it may be that the correct adjustment of the proportions of the cost allotted to the various products may make the difference between success and failure. That is to say, the particular advantage which enables a business to operate as a profit-making concern, and to keep its place among its competitors, may be the development of a by-product in a particular way. Sometimes the retention or disposal of a waste product is more expensive than its conversion into something marketable, or may constitute such a nuisance that the legislature insists upon a new method of disposal. An instance of the latter is supplied in the Leblanc process of alkali manu.: the hydrochloric acid generated was formerly allowed to escape into the atmosphere with some danger to public health, and the manufacturers were consequently compelled to dissolve it in water in the acid towers. An interesting feature of the compulsory change was that the old Leblanc process could compete with more modern processes only in virtue of the profit gained by the sale of what was formerly a noxious waste product. However, as a process for the manu. of soda, the Leblanc process has now been superseded by the ammonia-soda process.

Some important by-products. In the alkali process already referred to, another former waste product, 'alkali waste,' composed mainly of calcium sulphide, was treated for the recovery of the sulphur. In most chemical works an effort is made to utilise or render marketable all the products of the chemical action; the pyrites burnt in sulphuric acid manu. is treated to recover the copper and iron. Soap works produce glycerine, which is often purified for sale by the soap manufacturers themselves. Brewing yields an excess of yeast which is sold to bakers and others, and the spent malt is prepared as a cattle food. In the great canning industries of the U.S.A. all the animal products—hide, hair, bones, horns, hoofs—are dealt with as near the factory as possible. Molasses and syrup are B. of the sugar industry. The oil-cake produced from the pressed seeds in linseed-oil factories is used as a cattle food. In gas-works the most notable of all illustrations of the utilisation of B. occurs. Not only is the coke sold for fuel, but the liquid or coal-tar produced during the dry distillation of coal yields a variety of useful products. When subjected to fractional distillation, benzene derivatives are separated which are the basis of many different dyes, drugs used medicinally, flavouring

agents and volatile benzols which are used as solvents and motor fuels. The ammoniacal liquor is worked up into ammonium sulphate for use as a fertiliser and formerly represented a considerable revenue. Its value as a by-product has practically disappeared owing to the extensive production of synthetic ammonia by nitrogen fixation processes. Thus some apparently waste products become valuable B., while others, once valuable, become of little account. One example may be given: as mentioned above, in the early days of the Leblanc process, it was helped considerably by the value of the by-product hydrochloric acid, while in the early days of the electrolytic process for soda compounds chlorine was a great nuisance. To-day the situation is reversed. Hydrogen and chlorine are important B. from the electrolysis of brine by the Castner-Kellner process for the manu. of caustic soda. The B. are used for making hydrochloric acid and bleaching powder. Both germanium and selenium are extracted from the flue gases of certain industries and radium and uranium are B. from the extraction of vanadium from carnotite. Precious metals such as silver, platinum, and gold are recovered profitably from the refining of copper and lead. Calcium chloride is a by-product from the Solvay process for the manu. of sodium carbonate, and being hygroscopic is used on roads to keep the dust down. Calcium silicate, a slag formed in many industrial processes, is often used for bedding in roads. The fermentation of sugars gives alcohols as the main product with carbon dioxide as the by-product which is used for refrigeration, etc. A more recent example is the production of sulphur from the bacterial reduction of sulphates in sewage.

Byrd, Richard Evelyn (1888-1957). Amer. explorer, b. Winchester, Virginia, second son of Richard Evelyn B., lawyer, member of an old Virginian family. It appears that when he was 12 he visited the Philippines, and there learned to rough it. He was educ. at Shenandoah Valley Military Institute, Virginia Military Academy, and univ. of Virginia. As a result of 2 accidents—one at football, the other in a gymnasium—he became lame in his right leg; yet he graduated at U.S. Naval Academy, 1912, and became an ensign in the U.S. Navy. He was employed on suitable duties, rose through various grades to lieutenant-commander, and, on account of his leg, was retired on three-quarter pay, 1916. He began aviation at Pensacola in 1917, and joined the U.S. Air Force, and was given command of 2 U.S. bases in Canada. He next entered the aviation unit of the MacMillan polar expedition of June to Oct. 1925; and then, in a Fokker 3-engine monoplane with 200-h.p. Wright air-cooled motors, accompanied by Floyd Bennett, he flew to the N. Pole and back to his starting place, King's Bay, Spitsbergen, on 9 May 1926, covering 1360 m. in 15½ hrs. He was then raised to the rank of commander. He also flew from New York to France in 42 hrs. 29 June to 1 July 1927. Flew over S.

Pole, 1929. Explored Antarctic (q.v.), 1935. In 1939 he was made commander of U.S. Antarctic service, an expedition by the gov. to the Antarctic. Patron's medal, Royal Geographical Society, 1931, congressional and 2 special congressional medals, and many other awards. In 1946-7 he led an Antarctic expedition, 'Operation Highjump,' consisting of 13 vessels, including the flagship *Mount Olympus*, an ice-breaker, a seaplane tender, and a destroyer. The expedition carried out an extensive programme of air reconnaissance over much of the continent and photographic flights over part of it. B. flew over the S. Pole for the second time. The central group was based on 'Little America.' He was made head of U.S. Antarctic Programs (Washington) in 1955 in order to organise, though not to lead, the very large U.S. Antarctic expedition for the International Geophysical Year (1957-8), known as 'Operation Deepfreeze,' which estab. bases at points on the coast and continent and at the S. Pole. Pub. *Little America: Aerial Exploration in the Antarctic*, 1931, *Discovery*, 1935, *Exploring with Byrd*, 1937, and *Alone*, 1938. See also ANTARCTIC EXPLORATION.

Byrd, William (1543-1623). Eng. musical composer, b. probably in Lincs and d. probably on his estate at Stondon, Essex, describing himself in his will as being 'in his eightieth year.' According to Anthony Wood, B. was 'bred up to music' under Thomas Tallis, a gentleman of the Chapel Royal. About 1563 he was appointed organist of Lincoln Cathedral. In Elizabeth I's Chapel Royal he shared the post of organist with Tallis, and in 1575 the 2 composers secured a licence giving them the sole right to print and sell music. In that year they pub. a collection of Lat. motets for 5 and 6 voices; but the monopoly would not appear to have been very remunerative. About 1581 B.'s name figures in lists of recusants, and though he remained at the Chapel Royal he was all his life a Catholic. In 1588 he pub. *Psalmes, Sonets, and Songs of Sadnes and Pietie* and in 1589 *Songs of Sundrie Natures*—of which a second ed. was pub. in 1610—and *Liber Primum Sacrarum Canticorum* in 2 series. B. was the earliest Eng. composer of madrigals and most of them were pub. in his lifetime. Two of them were included in Thomas Watson's *First Set of Italian Madrigalls Englished* in 1590. At about this time he became involved in a long law-suit over the lease of the property of Stondon Place, which had been the estate of one Wm Shelley from whom it had been sequestrated on conviction for treason. B. was upheld in possession by James I, even though it had been confiscated by a recusant and even though B. himself had been excommunicated. In 1607-14 he pub. *Psalmes, Songs and Sonnets: some solemn, others joyfull; Parthenia*, a collection of virginal music (in collaboration with John Bull (q.v.) and Orlando Gibbons (q.v.)); and 2 books *Gradualia* in 1607, of which a second ed. was issued in 1610. In addition to the above works B. also composed 3 masses, for 3, 4, and 5

voices respectively, pub. about 1588. All of them have appeared in modern eds. and enhance B.'s claim to rank as one of the great composers of all time. He composed sacred music and secular choral music of the highest quality, in some instances reaching the sublime. He was one of the founders of the Eng. madrigal school and was a madrigalist of charm and individuality, though opinions differ on whether he was in this respect the equal of Gibbons, Thomas Morley, or John Wilbye. He wrote with equal inspiration Lat. motets for the Rom. and Eng. anthems for the Anglican Church. See lives by Frank Howes, 1933, and E. H. Fellowes, 1948.

Byrd, William (1674-1744). Amer. statesman and historian, b. Virginia. He went to England and studied law at the Middle Temple, but in 1692 returned to Virginia, where he was immediately elected to the House of Burgesses. In 1709 he became a member of the Council of State, and had a long struggle with Alexander Spotswood, the lieutenant-governor, who endeavoured to reduce the power of the council. In 1728 he was one of the commissioners appointed to make out the dividing line between Virginia and N. Carolina, and wrote an account of the operation in 'The History of the Dividing Line.' This work, together with his other writings 'A Journey to the Land of Eden' and 'Progress to the Mines,' was pub. in 1841 as *The Westover Manuscripts*. B. also kept a private diary, which was ed. in 1941. See R. C. Beatty, *William Byrd of Westover*, 1932.

Byrgius, Justus (1552-1633), inventor of various astronomical instruments, was b. Lichtenstolz, canton St. Gall, Switzerland. He served under William IV of Hesse and Emperor Rudolf II. His first work was a celestial globe on which the stars were placed according to his own observations.

Byrlaw, name given to a sort of popular jurisprudence formerly in use in Scotland, in vils., and among husbandmen. As the B. was formed by common consent of the villagers or neighbours, so it was administered by judges chosen from among and by themselves. These judges were called 'B. men,' a phrase later in use in parts of Scotland to denote a judge or umpire.

Byrne, Donn (Brian Oswald Donn-Byrne) (1889-1928), novelist, b. New York. He wrote 3 vols. of short stories and 11 novels, the best of which are about Ireland. He estab. his reputation with *Messer Marco Polo*, 1922. Others of his novels are *The Wind Blows*, 1922, *Blind Raftery*, 1924, *Hangman's House*, 1926, *Brother Saul*, 1927, and *Destiny Bay*, 1928. B. was killed in a motor accident. There is a biography by Thurston Macaulay, 1930.

Byrne, shirt of mail (A.-S. *byrne*), reaching first to the knees, later only to the hips, with wide, short sleeves. Worn by auct. Eng. and Scandinavian warriors.

Byrom, John (1692-1763), poet and stenographer, b. Manchester. He was educ. at Merchant Taylors' and Trinity College, Cambridge, of which he became

a fellow in 1714. In the same year he contributed to the *Spectator*, as 'John Shadow,' 2 papers on dreams, and also his first poem, a pastoral entitled *Colin and Phoebe*. He resigned his preferment in 1716 and went to Montpellier to study medicine, returning in 1718. In 1721 he married his cousin, Elizabeth B., and under pressure of necessity began to teach an improved system of shorthand in Manchester and afterwards in London. In 1740 he came into possession of the family estate at Kersall, gave up teaching, and employed his time in versifying a genial satire on topics of the day. He was a friend of John Wesley, but in 1729 he

LORD BYRON

became a disciple of John Law and an ardent High Churchman. His epigram, 'God bless the King, I mean the Faith's Defender,' shows that he was a Jacobite in his political sympathies. The Chetham Society pub. his remarkable *Diary and Remains*, 1854-7, and his poems, 1894-5.

Byron, George Gordon, 6th Baron (1788-1824), b. London, son of Capt. John B. of the Guards, grandson of Adm. John B. (q.v.), and great-nephew of the 5th Lord B., who was usually designated the 'wicked lord.' The future poet was descended from a stock who had for generations past been noted for the looseness of their living and their lack of morals. Especially were these traits emphasised in the character of the father of the poet. B. was the son of the second marriage of Capt. B., his mother being Catherine Gordon, of Gight in Aberdeenshire, an heiress whose fortune her husband squandered. B.'s early life was passed in Aberdeen, where he also received the first part of his education, and where he

imbibed his love for the grandeur of mt scenery, and also his knowledge of the Scriptures, a knowledge which he tells us he received at the hands of his nurse, May Gray, to whom he was devotedly attached. The future poet, who was 6, with a malformation of his feet that rendered walking distinctly arduous, could not roam about the country as he would have wished, but still seems to have spent a good deal of his time in the open. He was sent for sev. seasons to the neighbourhood of Ballater. In May 1798 his great-uncle d., and B. succeeded to the title and the estates. He and his mother immediately came S. from Aberdeen and took up their residence at Newstead. From this place B. was sent to a preparatory school at Dulwich, and later, in April 1801, he entered Harrow. There he stayed for 4 years, his greatest contemporary being Sir Robert Peel; his school work showed no signs of brilliance and his reading was desultory, but his strongest point was his declamation. His friendships at school, he tells us, were passions, and altogether he was a very unusual kind of boy. He was known throughout the school as the ringleader of any possible mischief, and yet he was at other times serious and thoughtful beyond his years. His lameness prevented his giving full vent to his passion for active games, yet he made a reputation as a swimmer, and he also played cricket. During his schooldays he had his first *grande passion*, the object of it being Mary Chaworth, a distant relative and his senior in age. His first love, he tells us, was an abiding attachment on his part, and certainly a number of his early poems have his object of adoration as their theme. In Oct. 1805 he entered Trinity College, Cambridge, but his residence there is simply one long record of high living, though he formed friendships and attachments there which were worthy of his future greatness. During the year 1806 appeared the first of his juvenile poems. *Hours of Idleness* appeared in 1807 and *Poems Original and Translated* in 1808. The adverse criticism which the *Edinburgh Review* gave to his *Hours of Idleness* provoked the pub. in Mar. 1809 of *English Bards and Scotch Reviewers*, which satirised the editor (Jeffrey) and the patron (Lord Holland) of the *Edinburgh Review*, but is chiefly concerned with the bards, both those he admires and those he despises. Coming of age in 1809, he immediately decided to fulfil the project which he had long had in mind of taking a prolonged tour in the E. He had already taken possession of his inheritance, and had also taken his seat in the House of Lords. Now, together with Hobhouse, his closest friend, he set out for a prolonged tour which lasted for about 2 years. He left England in July 1809, and returned in July 1811. *Childe Harold's Pilgrimage* describes more or less accurately the events of the first year of his travels. He visited Spain and Portugal, from thence he proceeded via Malta to tour Albania and Greece. In the next year he visited Asia Minor and later Constantinople.

The second year of travel is not so well known as the first, but during it the first 2 cantos of the *Childe Harold* were written, as were also the *Hints from Horace* and *The Curse of Minerva*. These poems were pub. on his return to England in July 1811. In the meantime his mother had d., and although he did not entertain whilst she lived a high affection for her, his grief on her death was very real. The pub. of his new poems on his return to England, and his general prominence, for on his return he took an active part in political work in the House of Lords, made him the hero of the country. He could go everywhere, he was received rapturously wherever he went, his fame sprang into existence apparently in a single night—or, as he himself says, he 'awoke one morning and found himself famous.' He was known as a rising statesman too. His output of poetry still continued to be great; in the year 1813 he pub. *The Giaour* and *The Bride of Abydos*, and wrote *The Corsair*, which was pub. at the beginning of the next year. The poems increased an already great reputation. In 1813 he again met his half-sister, Mrs Leigh, and if the stories which were currently believed are true, the new influence was not altogether for good; it is in any case well known that he always had a greater affection for his half-sister than for any other person. He was now at the height of his fame, he was the lion of society, and he had permanently estab. his reputation as a poet. He still continued to write, and in 1814 appeared the stanzas on the abdication of Napoleon, and the sequel to *The Corsair*, *Lara*. In the same year he engaged himself to Anne Isabella Milbanke, the heiress to a peerage in her own right, and his marriage to her took place in the Jan. of the following year. Husband and wife finally settled down in Piccadilly Terrace, London. From his correspondence, the early days of his marriage seem to have been spent quite happily, but there is no doubt that his conduct was often eccentric, even to the verge of madness. He wrote but little poetry. *Hebrew Melodies* appeared in April 1815. Almost immediately after the birth of their child, Lady B. fled from her husband's house and claimed the protection of her father, and the couple separated. The exact reason for the separation is unknown. The work *Astoria*, pub. in 1805, attempted to prove the charge of incestuous intercourse with Mrs Leigh, whilst *Byron, the Last Phase*, 1909, by Robert Edgecombe, defended the poet on that charge. The separation was the talk of London for a considerable time, and B. came rapidly down from his high position. He was now the most unpopular man in tn. He fled from social ostracism, and immediately the articles of separation were signed he started on a European tour. He spent the early part of his tour with Shelley, and his poetry pub. at this time shows obviously the influence of Wordsworth, which had affected him through Shelley. Among the poems written in 1816-17 were *Siege of Corinth*, *Parisina*, *Prisoner of Chillon*

(and other poems), the third canto of *Childe Harold's Pilgrimage*, *Monoth on the Death of Sheridan*, *Manfred*, and *Lament of Tasso*. From 1816 to 1819 B., who was accompanied by Hobhouse, lived near Venice. His life at Venice was one long deliberate attempt to forget the past in an orgy of profligacy, but during the whole of the time his active mind was at work, and he was continually busy with his poetry. The fourth canto of *Childe Harold* was worked up at this time, and pub. in 1818, and in the Sept. of the same year he started *Don Juan*. The process of his composition and of the pub. was slow. Cantos i and ii appeared in 1819, iii, iv, and v in 1821, and cantos vi-xiv in the years 1823-4. *Don Juan* was intended to be his great poem with a plan setting forth the ideas, morals, and principles of his school of poesy. In 1819 also had appeared *Mazeppa* and an ode on Venice. In 1819 B. met an It. countess, Teresa Guiccioli, who for the next 4 years remained B.'s mistress, and was rewarded with his fidelity and constancy. He was politically the friend of freedom, the champion of liberty on the Continent, and on the Continent he earned both influence and power. In 1819 B. left Venice and went to Ravenna. Here in 1821 appeared *Sardanapalus*, *The Two Foscari*, and *Cain* (pub. together). *The Prophecy of Dante*, cantos iii-v of *Don Juan*, and *Marino Faliero* were also pub. in 1821. In 1822 appeared the *Vision of Judgment*. In the following year appeared *Heaven and Earth, a Mystery*, and the same year was pub. *The Island, or Christian and his Comrades* (a poem suggested by the mutiny of the *Bounty*), *Age of Bronze*, and *Werner*. In 1823, hearing that he was elected a member of the Gk Committee, he hastened to the help of Greece and of Grecian independence with money, advice, and finally his presence. Arriving at Missolonghi in Jan. 1824, he was accorded the welcome of a king, and took an active part in the councils of the Greeks. He does not seem to have realised that his health was breaking down, but by the beginning of April it was obvious to all that his days were numbered, and on the 19th of that month he d., in his thirty-sixth year. His poetry has been described as the poetry of glory and passion. His love of liberty characterised his poems also, and certainly in the desire to see the fettered nations of Europe free he was in the forefront of his times. Works, ed. by G. R. Prothero (Letters and Journals), and E. H. Coleridge (Poetry), 13 vols., 1898-1904; W. M. Rossetti and T. Secombe, 1911. See also L. Hunt, *Lord Byron and some of his Contemporaries*, 1828; T. Moore, *The Life, Letters, and Journals of Lord Byron*, 1830; E. J. Trelawney, *Recollections of the Last Days of Shelley and Byron*, 1858; J. Nichol, *Byron*, 1880; A. Brecknock, *The Pilgrim Poet*, 1911; E. O. Mayne, *Byron* (2 vols.), 1912; H. Nicolson, *Byron: the Last Journey*, 1823-24, 1924; A. Maurois, *Byron*, 1930; I. C. Clarke, *Shelley and Byron*, 1934; P. Quennell, *Byron, the Years of Fame*, 1935, and *Byron in Italy*, 1941; C. E. Vulliamy, *Byron*, 1948.

Byron, Henry James (1834-84), dramatist, b. Manchester. He entered the Middle Temple in 1858. He was the first editor of *Fun*, and for many years was a popular writer of burlesques and comedies. He leased sev. theatres, and appeared on the stage of them himself sometimes. For instance, in 1869 he appeared in his own drama entitled *Not such a Fool as he Looks*. His best-known work is *Our Boys*, which appeared in 1875. His other works include *An American Lady*, 1874, *Old Sailors*, 1876, *A Fool and his Money*, 1880, *Cyril's Success*, 1888, his best piece from a dramatic point of view, *War to the Death*, 1866, and *£100,000 Sterling*, 1867. See *W. Archer, Dramatists of To-day*, 1882.

Byron, John (1723-86), Eng. vice-admiral, grandfather of the poet. As a midshipman he was shipwrecked on the W. coast of Patagonia, and was a prisoner for 3 years, returning to England in 1745. Having distinguished himself in the wars against France, he was put in command of an expedition of discovery to the S. seas. In the course of this voyage he explored the coasts of Patagonia, the Falkland Is., and the Strait of Magellan, discovered sev. new lands, and sailed round the world. B.'s Isle, named after him, he discovered in the track from King George's Is. to Tinian. He was made a vice-admiral in 1776. Commanded the Brit. squadron in the W. Indies during the Amer. war. His *Voyage round the World in the Years 1738-48*, 1767, was trans. into French in 1769 and ed. by Hawkesworth (q.v.) in his *Voyages*, 1773. Dr Johnson's successor on the *Gentleman's Magazine* in 1773.

Byron, Robert (1905-41), Brit. traveller, was educ. at Eton and Oxford. He had a passion for Greece and Gk art, and wrote a number of travel books, including *Europe in the Looking Glass*, 1927, which tells of a journey in Germany, Italy, and Greece; *The Station*, 1928, describing Mt Athos; *First Russia, then Tibet*, 1933; and *The Road to Ozianna*, 1937, record of a visit to Persia, India, and Afghanistan. *The Byzantine Achievement*, 1929, and *The Birth of Western Painting*, 1930, deal with Byzantine art. B. was on his way to Egypt as a special correspondent in the Second World War when his ship was torpedoed.

Byrsnima, genus of evergreen, W. Indian shrubs, family Malpighiaceae. The bark of all the species yields a brilliant red dye, and is used for tanning. Its fruit is edible.

Bysmalith, body of igneous rock which has the shape of a cone underground. Vertical displacement accompanied by faulting characterises this method of intrusion of a molten mass. Mt Holmes, in the Yellowstone Park, U.S.A., is a good example of B.

Byssus, group of silky fibres secreted by the foot of the mussels and molluscs, as a means of attachment to rocks. The B. of some rock creatures can be woven into fabrics. A delicate silk called B. is made from the B. of mussels found in the Mediterranean.

Byström, Johan Niklas (1783-1848),

Swedish sculptor, b. Philipstad. He went to Stockholm, studied for 3 years under Sergel, and visited Rome, 1810. His 'Reclining Bacchante' (half-size), sent home from there, won him recognition as one of the foremost Swedish sculptors. In 1816, on returning home, he brought with him a portrait statue of Bernadotte as Mars. He was prof. of sculpture at the academy, Stockholm. His best works are his female figures: 'Hebe', 'Pandora', 'Juno suckling Hercules', 'Girl entering the Bath'. His huge statues of Swedish kings (Gustavus Adolphus, Charles X, XI, XII) won great admiration. B. also did the altar decorations in Linköping Cathedral, and 'Linnaeus' at Uppsala.

Bytom (Ger. Beuthen), tn of Poland, in Stallinogród prov., on the Upper Silesian plateau, 8 m. NW. of Stallinogród (q.v.). It remained German after the plebiscite of 1921 (see SILESIA), but was incorporated with Poland in 1945, after the Second World War. It is an important mining dist. (coal, lead, zinc), known since medieval times, and has engineering industries. Pop. 121,000.

Bytów (Ger. Bütow), tn of Poland, in Koszalin prov., 50 m. E. of Koszalin (q.v.). Before the Second World War it was in Ger. Pomerania (q.v.). Pop. 2000.

Bytown, former name of the city of Ottawa (q.v.), Canada, under which it was founded in 1829. It became Ottawa on its incorporation in 1834. See BY, JOHN.

Bytownite, rare felspar containing 14 to 18 per cent CaO and intermediate between labradorite and anorthite. Seldom occurs in crystals, but usually found in greenish-white massive, as from the original locality, Bytown (q.v.). A component of basic igneous rocks and sometimes the chief constituent of anorthosite.

Byzantine (coin), see BEZANT.

Byzantine Architecture, see ARCHITECTURE, 4. *Early Christian and Byzantine*.

Byzantine Art. By B. A. is meant the characteristic art of the Byzantine Empire (q.v.). We can affix no absolutely definite date for its commencement, but we can practically take the period which saw the separation of the E. and W. empires as the period of the beginning of this art, i.e. c. AD. 330. It had enormous influence both upon the E. and the W., being itself also influenced by E. and W. Up to the period of the separation of the empires we may regard art as that of the classical period, and B. A. may to a very great extent be regarded as Rom. art under the influence of the E. It reached its highest point in or just after the reign of Justinian, after which it sank slowly into decadence, to rise again for a short time into prominence during the 11th and 12th cents., though it was not extinct when the Turks took Constantinople in 1453. The dominant Byzantine form is architecture (q.v.). This was a development of the Rom. art influenced largely by Persian architecture and by Gk culture, both of which found a common meeting-ground in Constantinople. The 2 chief types are the basilican type and

the circular or central type. Of the latter type the chief examples are SS. Sergius and Bacchus (Constantinople) and San Vitale (Ravenna), whilst the outstanding example of the magnificence of Byzantine architecture is to be found in the church of Holy Wisdom (St Sophia) at Constantinople. Byzantine decoration differs from that of the W., especially from that of Gothic art, since it is always flat and incised and contrasts with the bold, outstanding decoration of the Gothic type. That B. A. had a great influence upon the W. cannot be doubted, since the influence of St Mark's (Venice), which is essentially Byzantine, has been very great; and in painting the Byzantine tradition was powerful in Italy, Greece, the Balkans (spreading to Russia), and Asia Minor. Byzantine MSS. seem to have had their influence on the Irish (e.g. the Book of Kells, q.v.), and even in the 18th cent. El Greco (*see* THEOTOCOPI) was trained in Crete in the Byzantine style of painting. The Byzantine mosaics and paintings have been condemned because of the lack of expression of the faces and the rigidity and fixity of the figures, but this is in keeping with the solemn and ceremonial effect aimed at, and has been revalued in the present cent. by those who recognise other values in art besides realism. Byzantine metalwork and carving also hold a unique place in the hist. of the art of the world. This came under very great influence from the E., and in time came to be regarded almost as a barbaric art. Ivory carving and silk pattern weaving also were developed under Byzantine influence, and reached a great pitch during the period of Byzantine greatness. *See* C. Stewart, *Byzantine Legacy*, 1947, and D. T. Rice, *Byzantine Art*, 1954, and *Beginnings of Christian Art*, 1957.

Byzantine Empire. This empire is often called the Gk Empire, Later Empire, E. Empire, or E. Rom. Empire, and may be said to have come into existence with the founding of the city of Constantinople by the great Constantine. It should be remembered that the B. E. was basically Roman, and carried on many of the fundamental ideas and ideals of the Rom. Empire for a thousand years after the empire in the W. perished. The adoption of Christianity by Constantine, and the founding of the great city of Constantinople, made the B. E. essentially Christian and Roman; it gave the new ideals of the empire a permanent abode, and for cents., even when the B. E. seemed at its weakest and most decayed, it formed the bulwark of Christian resistance to the attacks of paganism. The div. of the Rom. Empire into 2 halves, one based on Constantinople and one on Rome, occurred after the death of Theodosius the Great (395). His son Honorius ruled from Rome, his son Arcadius from Constantinople. Quarrels between the 2 divs. soon arose; and in addition, both suffered from the attacks of barbarians, and often it seemed that both would succumb to the onslaughts of the barbarian races which were threatening them from all sides. The last ruler in the W., the usurper Romulus Augustulus, was

deposed by the Teutonic general Odoacer (476), and from this time onwards the B. E. alone carried on the Rom. traditions, which, as the cents. passed, became increasingly permeated by non-Rom. influences.

It seemed that the B. E. itself might not survive very long. For a time the Ostrogoths threatened Constantinople itself, but the danger passed. The Ostrogoths migrated under their great leader Theodoric to Italy; the fields of Italy were their share of the spoil; the Ger. kingdom was replaced by the rule of Theodoric and his Ostrogoths. Theodoric, although nominally the subject of the emperor, was essentially independent. On his death his kingdom fell swiftly before the attacks of the E. Empire and the Lombards. The emperors at Constantinople were once again able to assert their jurisdiction over Italy, and indeed to rule part of it effectively. The B. E. is seen at its most vigorous under Justinian I (q.v.), who succeeded in 527 and ruled until 565. He had to the full the ideas and ideals of the old Rom. Empire. He tried to restore some of her original boundaries, to make her great in war and peace, in art and commerce, in extent and religion. During his reign the kingdom of the Vandals fell before the vigorous onslaught of Belisarius (q.v.), the resistance of the Ostrogoths was overcome and a large part of Italy restored by the feats of Belisarius and Narses, part of Spain was reconquered, and it seemed that the greatness of the Rom. Empire would be restored. In the field of law Justinian was equally famous, and his Code is in itself enough to perpetuate his name. But during his reign factional fights came to a climax and were waged more fiercely than ever. The great work of the rebuilding of the empire begun by Justinian was soon undone by his successors, and it must be conceded that the weakness of the empire immediately after the death of Justinian was due in part, at least, to the policy of Justinian himself. His schemes were magnificent, his ideals mostly good, but the empire could not bear the expense of continual war and conquest. The period which falls between the death of Justinian (565) and the succession of Heraclius (610) is one of the darkest in the hist. of the empire.

In this interval the Lombards conquered part of Italy, continual war took place with the Avars, war was almost continuous with Persia, and the empire was about to be threatened by a worse foe than the Persians—the Saracens. By the beginning of the 7th cent. the Asiatic provs. were slowly but surely falling into the hands of the Saracens. The strain of gov. broke Heraclius, and then followed a period of almost complete anarchy. The empire was beset with enemies, the Saracens conquered Syria, Egypt, and N. Africa. The power of Islam seemed irresistible, but on 2 occasions, when the danger seemed the greatest, the empire was saved by her cap. Twice Constantinople was besieged by the Muslims, and twice the attacks were beaten off; on both occasions Gk fire helped largely in

the saving of the city. The Heraclian dynasty came to an end in blood and anarchy, and in 717 the Syrian Leo III became emperor (Leo the Isaurian). By this time the B. E. had become essentially Greek in character. The institutions were still Roman, but the prevailing spirit was Greek, and had been so almost from the time of the end of the reign of Justinian.

With the beginning of the Isaurian dynasty a more prosperous era opened. The iconoclastic policy of the emperor, however, has overshadowed his greatness. The army and the finances were reorganised, and the Saracens were repulsed, though the exarchate of Ravenna was lost. But during Leo's reign the controversy on image worship, which for 100 years was to shake the empire and severely weaken it internally, began. The hist. of the Isaurian dynasty is a hist. of constant struggle with Bulgar, Saracen, and Russian, and also of continual religious dispute. Under Constantine VI, the great-grandson of Leo III, the power passed from the emperor to his mother Irene. She caused her son to be blinded and usurped the power. She d. in 803, after she had vainly attempted to negotiate with Charlemagne, who by his restoration of the W. Empire in 800 had finally and irrevocably separated the 2 empires. The war with the Bulgars and with the Saracens continued. Constantinople was again besieged in 815, and Crete and Sicily were conquered by the Saracens. Under Theodora, the widow of Theophilus, the iconoclastic controversy was brought to an end by the Council of Nicaea in 842; image worship was recognised and restored. In 867 Basil I, the Macedonian, founded the Macedonian dynasty, which lasted until almost the end of the 11th cent. The rule of the Macedonian emperors was noted for its vigour and ability, and during this period the Greeks more than held their own with Saracen, Bulgar, and Russian. At the beginning of the 11th cent. (1028) the power of the empire passed into the hands of the Empress Zoe, the wife of Romanus III, who caused her husband to be assassinated, and raised in rapid succession to the imperial throne Michael IV, Michael V, and Constantine IX. In 1055 Theodora, the sister of Zoe, was made empress. Michael VI was chosen by Theodora as her successor shortly before her death in 1056. He was forced to abdicate by Isaac I (Comnenus), who had defeated his army in Phrygia (Aug. 1057), and spent the rest of his life in a monastery. New enemies now began to appear. The It. possessions of the empire were being attacked by the Normans, whilst on her E. frontiers a more formidable enemy than the Saracen had arisen. The Saracens had been driven out in turn by a fierce, warlike tribe from the interior of Asia—the Seljukian Turks. The emperor appealed to Europe for help against the Seljukian Turks; but though after the resulting first crusade conquests unexpected and unwelcome—the first made in Asia Minor—were restored to the emperor, the foundation of the Lat. kingdom of

Jerusalem was a crushing blow to the empire of the E. A Lat. kingdom in the E. meant that the chief routes to that kingdom lay in imperial ter. or over imperial seas, and that it would be necessary now to protect the empire from the W. as well as the E. The hostility thus engendered between the E. and the W. was made much worse by the continual quarrels between the Rom. and the Orthodox churches, which had raged intermittently since 484. By c. 1200 the B. E. again seemed on the verge of collapse. Internal disorders and corruption had seriously weakened it; the Bulgars were strong enough to reassert their independence, and with the beginning of the 13th cent. came the temporary overthrow of the empire. Isaac Angelus and his son, who had been driven from Constantinople, came westward and joined the forces who were preparing for the fourth crusade. They persuaded the leaders, in spite of the opposition of the papacy, to turn aside to Constantinople and to restore them to the throne of the empire. Isaac Angelus was restored, but the newly restored emperor was unable to fulfil his promises to reconcile the Gk and Rom. churches and to aid the crusaders. The partition of the empire was agreed to by the crusaders and a Lat. Empire was set up (1204), an empire founded on purely feudal lines, which probably did more than anything else to disintegrate the E. Empire and to prepare it for its ultimate fate at the hands of the Turks. But within 10 years of its inception the Lat. Empire had begun to decline, and in 1261 Constantinople was captured by the Gk emperor, Michael Palaeologus, and the B. E. revived. But it was surrounded by enemies on all sides. The next cent. and a half marked the increase in power of the Turk and the Serb. The Serbs, after crushing the Bulgars, were themselves finally crushed towards the end of the 14th cent. by the Turks. The Turks gradually won possession after possession of the E. Empire in Asia Minor, and then, about 1360, crossed over to the mainland of Europe, and gradually conquered the whole of the Balkan Peninsula and threatened Hungary. At the beginning of the 15th cent. the Mongol defeat of the Turks checked their career, but by 1420 they had recovered, and Constantinople was again attacked. In 1443 the Christians, who had rallied to the help of the empire, won a victory which, however, was fully avenged in 1444 at Varna. In April 1453 began the final siege of Constantinople, and in May the walls were breached and the city taken, the Emperor Constantine XI falling in the final assault. The city was captured on 29 May 1453. This was the end of the B. E. By 1460 the whole of the Balkan Peninsula was in the hands of the Turks—the sequel to the Norman expansion eastward and the Turkish westward.

See J. B. Bury, *History of the Later Roman Empire from the Death of Theodosius I to the Death of Justinian*, AD 345 to AD 565 (2 vols.), 1889; N. H. Baynes, *The Byzantine Empire*, 1925; S.

Runciman, *Byzantine Civilization*, 1933, *A History of the Crusades*, 1951-4, and *The Eastern Schism*, 1955; G. Ostrogorsky, *History of the Byzantine State*, 1956.

Byzantine Literature. Gk literature written between the dedication of Constantinople (AD 330) and its capture by the Turks (1453). The theological disputes which marked the first half of this period, together with liturgical developments and the flourishing condition of monastic life in the oriental church, produced a vast body of religious literature. Outstanding among writers in this field were SS. Athanasius, Basil, Gregory of Nazianzus, Gregory of Nyssa, John Chrysostom, and Cyril of Alexandria. All these belong to the 4th and first half of the 5th cent.; their writings consist for the most part of dogmatic treatises, homilies, letters, as well as exegetical and ascetical works. The mystical treatises of pseudo-Dionys (late 5th cent.) exercised a lasting influence upon the spirituality of both E. and W. Monophysitism in the 6th cent. was attacked by Leontius of Byzantium, who was the first to introduce Aristotelian definitions into theology, and by Anastasius of Antioch. Anastasius of Sinai was among the leading enemies of Monothelitism in the 7th cent. St John Damascene (c. 675-749) wrote a number of speeches against the Iconoclasts, but is more famous for his *Fountain of Knowledge*, the first comprehensive exposition of Christian dogma. Symeon the New Theologian (994-1022) was the author of sev. works dealing with monastic reform and the ascetical life. His pupil and biographer, Nicetas Stethatus (11th cent.), also wrote on asceticism and the religious life, as well as taking an important part against the Lat. Church at the time of the schism, while Theophylact of Bulgaria (d. 1118), besides his poems and theological commentaries, left a series of letters which are a valuable source for Bulgarian hist. The prin. hagiographical productions of the Byzantine period are Symeon Metaphrastes' *Acts of the Martyrs* and the celebrated hist. of *Babylonia and Josephat*. Religious poetry, after an early period of experiment, reached its greatest heights with Romanus (6th cent.), Andreas of Crete (c. 650-725), St John Damascene, and Cosmas of Jerusalem. But the greatest and most sustained achievement of B. L. is that of historiography. Zosimus, Procopius, and Agathias cover the 6th cent. From the 7th to the 10th cent. we have to rely mainly upon Joseph Genesius and the unliterary but valuable chronicle of Theophanes. This was a continuation of a world chronicle written by George Syncellus, and extends from 284 to 813; it was itself continued by sev. anonymous hands and brought down to 961. Leo the Deacon's *History* (959-75) was continued by Michael Psellus and Michael Attaliates down to 1079, while the period of the Crusades is dealt with by Nicephorus Bryennius, Anna Comnena, John Cinnamus, and Nicetas Choniates as far as 1206. The chronicles of Constantine Manasses, John Zonaras, and Michael

Glycas cover much of world hist. to 1118. Sev. outstanding historians deal with events between 1203 and 1477. These include George Acrophites, George Pachymeres, Nicephorus Gregoras, John VI Cantacuzenus, Laonicus Chalcocondylas, Ducas, and George Phrantzes. Also worthy of note are some treatises on imperial administration and court ceremonial, e.g. the *De Magistratibus* of John the Lydian (6th cent.) and the *De Ceremoniis* of Constantine VII Porphyrogenitus (10th cent.), under whose supervision were also produced the *De Ceremoniis* and *De Administrando Imperio*. The efforts of Michael Psellus in the 11th cent. revived interest in Plato and Aristotle. Rhetoric, however, was more popular, the most intelligent exponents of which were Nicephorus Phocas and Michael Choniates. The outstanding monuments of Byzantine philology are the *Library* of Photius and the lexicon known as *Suidas*. Profane poetry was an arid field: the *Dionysiaca* of Nonnus (5th cent.) and the *Expedition*, etc., of George Pisides (7th cent.) are examples of Byzantine epic. Throughout the whole period in question subjective poetry took the form of epigram, which ranged from mere trifles to narrative or elegiac poems of considerable length, and attained its full flower in the 10th and 11th cents. with Johannes Geometres, Christophorus of Mytilene, and John Mauropus. See also separate articles. See J. A. Wright, *A History of Later Greek Literature*, 1932, and N. H. Baynes and H. St L. B. Moss, *Byzantium*, 1948.

Byzantium, anct Gk city on the shores of the Bosphorus, occupying the most easterly of the seven hills of modern Istanbul (Constantinople). It was founded by a body of Megarians about the year 657 BC, and quickly, owing to its position, became a settlement of considerable importance. The settlement was destroyed by the satrap Otanes in the reign of Darius Hystaspes, but was recolonized by Pausanias the Spartan, who took it from the Medes after the battle of Plataea (479 BC). A few years after this second settlement, Cleon (son of Miltiades) seized it from the Spartans, but in 440 BC the city revolted and returned to its former allegiance under the Athenians. When Pausanias founded the second settlement there flocked to the city a mixed pop. of Athenians and Spartans—whence the subsequent conflicts. During the Peloponnesian war (431-404 BC) the city was a constant source of contention between the Athenians and the Spartans, falling into the hands of each party in turn, and continuing to change hands even after that war and until it achieved its independence of both, only to fall into the hands of the Macedonians. Before this, however, it passed through many vicissitudes. Clearchus (q.v.), a Spartan general of the 5th cent. BC, became harsher of B., but in his absence the city was surrendered to the Athenians. Subsequently Clearchus was sent into Thrace to protect the Gk colonies, but was recalled by the ephors. He refused to obey and made himself master

of B., ruling as a despot and thereby alienated the sympathies of the Athenians. Alcibiades, after a close blockade, won the city through the treachery of the Athenian party, and thereafter B. remained the ally of Athens until it was recaptured by Lysander (405 BC). Under the Spartans it was in danger of pillage by the Ten Thousand (*see* TEN THOUSAND, EXPEDITION OF THE), who were, however, repressed by Xenophon. In 390 BC Thrasybulus, the Athenian, succeeded in wresting the city from the Spartan oligarchy and in restoring democracy and the Athenian influence there. After resisting an attempt by Epaminondas to restore it to the Spartans, the city co-operated with Rhodes, Chios, and other Aegean islands in securing their independence of Athenian suzerainty; but, on the advance of Philip of Macedon against B., the city quickly sought the help of Athens. By Phocion, the Athenian statesman and general, Philip was forced to raise the siege. The deliverance of the city through the 'miraculous' flash of light, which

revealed the advancing Macedonian host, so appealed to the imagination of the Byzantines that they erected an altar to torch-bearing Hecate and impressed a crescent on their coinage as a symbol of the portent. B. struggled against and repelled threatened invasions of the Gauls, and for some time enjoyed a certain amount of independence. It became an allied city of Rome, but was later reduced to the position of an ordinary Rom. colony. Severus attacked and captured it, levelling it to the ground, and afterwards rebuilding a considerable portion of it. Constantine, seeing the advantages of the natural position of the city, made it his new cap., and built a magnificent city there. The new cap. of the Rom. Empire was inaugurated in AD 330. The emblem of the crescent was adopted by the inhab. of B., and was afterwards adopted by the Turks during their possession of the city. The city received the name of Constantinople when it was rebuilt and occupied by Constantine. *See* ISTANBUL.

C: 1. Third letter of the Rom. alphabet; it had originally (in the Semitic, Gk, and Etruscan alphabets) the shape of *1* (Semitic), *1* or *Γ* (Greek), and *>* or *<* (Etruscan), becoming rounded in the Etruscan and Rom. alphabets, *ɔ* or *C*. Its sound was originally (in the Semitic and Gk alphabets) that of *g*. The Etruscans, knowing no distinction between *k* and *g*, employed the letter *C* both for *g* and *k*. When the Romans adopted this letter they continued to employ it for *g* and *k* (hence the abbreviations *C* for *Galus* and *CN* for *Gnaeus*), but in 312 BC they created a new letter for the sound *g*, retaining the letter *C* for the sound *k*. Consequently, when the letter *C* was introduced into Britain, it was used only to represent the hard sound of *k* (cf. O.E. *cyn*, *brēcan*, *rōc*, with Mod. E. *kin*, *break*, *rock*). In Italian, French, and English, *C* retained the sound *k* when followed by *a*, *o*, *u*, or a consonant other than *h* (cf. O.E. *catt*, *corn*, *cuman* (come), *clēaw*, with their modern equivalents); but before *e*, *i*, *y*, it tended to become palatalised to a sound resembling *tsh*, *tch*, and finally *ch* (cf. Lat. *castra*, a camp, with O.E. *ceastre*, Mod. E. *Chester*). When, in English, *C* retained the *k*-sound before *e*, *i*, and *y*, it was written *k* to avoid confusion. The palatalised *C* before *e* and *y* was written *ch*, as in French. Thus, O.E. *rice*, *cild*, has developed into Mod. E. *rich*, *child*. O.E. *cw* was abandoned, and the French *qu* or *qu* adopted (cf. O.E. *cwen*, M.E. *quene*, and Mod. E. *queen*; O.E. *cweðan*, Mod. E. *quoth*). See ALPHABET.

2. In music, is the tonic of the scales of *C*. That of *C* major is sometimes called the natural scale, because it has neither sharps nor flats. The scale of *C* minor has 3 flats, *B*, *E*, and *A*. *C* is also used as a symbolic time-signature to represent common time, i.e. 4 crotchets in a bar, but this is actually a broken circle rather than the letter *C*, a survival from old notation.

Ca ira (*It will go on*), popular song of the Fr. Revolution, so named from its refrain:

Ah! *ca ira*, *ca ira*, *ca ira!*
Les aristocrates à la lanterne.

The words, traditionally by Ladré, a street singer, were put to an older air, *Le Carillon national*. The song was prohibited by the Directory in 1797.

Casba, see KAABA.

Casling Whale, see CA'ING.

Cab, originally a form of horsed vehicle, with 2 or 4 wheels, for carrying passengers. At the beginning of the 19th cent. the *cabriolet de place*, invented about 1660 by Nicholas Sauvage, was introduced into London from Paris. The first 8 licensed cabs—this shortening was adopted as early as 1825—appeared on London streets in 1823. Besides the

driver they could carry 2 passengers inside and were run for fares which were one-third less than those of the hackney coach. A contemporary newspaper refers to the fact that 'cabriolets were in honour of his majesty's birthday introduced to the public this morning' (23 April 1832). These *C.s* stood for hire in Portland St., were painted yellow, and were limited in number to 12. But the limit to their number was soon removed in spite of vested interests, as their popularity increased so fast. The cabriolet, which had superseded the old hackney coach (Pepys's 'hacquenée'), was in its turn supplanted by a new kind of *C*. invented by

HANSON CAB

E.N.A.

M. Boulnois. In this vehicle the occupants faced one another and the driver sat on top. Finally in 1836 a larger *C*, a cheaper imitation of the brougham, came into use. The Clarence four-wheeler was only an improvement of this design. As a rival to the 'growler' the 'hansom' (invented by Joseph Hansom) was patented in 1834. This consisted originally of a square framework on 2 wheels with a 7½-ft diameter. Its good speed, due largely to its lightness, and its spruce appearance and pleasant bounding motion, made it a matter of regret to many when this means of street locomotion was superseded in the metropolis by the motor taxi-*C*. In 1886 there were 3997 4-wheelers and 7020 hansoms in London. The advent of the petrol-driven vehicle discouraged manufacturers from patenting further improvements such as indiarubber tyres, etc., for horse-drawn *C.s*. Cabmen's shelters, first estab. in 1875, by providing accommodation for drivers on the stands did much to encourage sobriety. The Acts which regulate taxi-*C.s* in London are the Hackney Carriage Acts, 1831-53; the Metropolitan Public Carriages Act, 1869; the London Cab Act, 1896; and the London Cab and Stage Carriage Act, 1907. These Acts, together

with the London Cab Order, 1934 (as amended), made by the Home Secretary by virtue of certain of the Acts, provide for the licensing of the vehicles and drivers, regulate the construction of the vehicles, the places at which they may stand to ply for hire, the rules governing hirings, and the fares which may be charged. They also protect drivers against fraudulent passengers. Licences, which are only granted to men of approved character who have a good knowledge of London, are issued by an assistant commissioner of police who is authorised to do this by the home secretary. See also HACKNEY CARRIAGE and TAXIMETER.

Cabal (Fr. *cabale*; Heb. *kabbalah*, something received with an idea of secrecy). The word 'cabal' with the meaning of 'club' or 'association of intriguers', had been popularly applied to the secret councillors of the king under James I; and the accidental coincidence that, in 1671, the effective power was in the hands of the 5 unprincipled ministers of Charles II, Clifford, Ashley, Buckingham, Arlington, and Lauderdale, the initials of whose names made up the word C., caused the latter designation to be used for some years afterwards as synonymous with cabinet. The word C. is now applied to any intriguing faction that works in secret for private or political ends.

Caballero, Fernan, see FABER, CECILIA.

Caballero, Francisco Largo, see SPAIN, History.

Cabanatuan, cap. of the prov. of Nueva Ecija, Luzon, Philippine Is., and one of its chief commercial centres. Pop. 54,668.

Cabanel, Alexandre (1823-89), Fr. painter, b. Montpellier and studied under Picot. Attention was first called to him by his 'Death of Moses,' 1852, and he made a reputation as an accomplished academic painter, and even more as a teacher. His 'Birth of Venus' acquired by the Luxembourg was a charming nude study.

Cabanis, Pierre Jean Georges (1757-1808), Fr. physician and writer, b. Cosnac, Corrèze. During the revolution he acted as physician and friend to Mirabeau; in 1797 he was made clinical prof. in the medical school at Paris; he was elected to the Five Hundred, and, under Napoleon, became a member of the Senate. C. wrote extensively on medicine and on metaphysics. See Dubois, *Examen des doctrines de Cabanis*, 1842, and Labrousse, *Quelques notes sur Cabanis*, 1903.

Cabaret, Fr. word which in its original signification meant simply a booth or wooden shelter. Its use to-day is restricted to that of a small tavern or wine-shop. In a more popular sense it denotes the entertainment—singing and dancing—in hotels and restaurants after theatre hours.

Cabatuan, municipality in the Philippine Is., 13 m. NW. of Iloilo. It grows rice. Pop. 24,743.

Cabbage (*Brassica oleracea*). The wild C. is a biennial or perennial herb, indigenous as a coastal rock plant in S. and SW. England and Wales and on the

Atlantic coasts of Europe. The cultivated races are many and may be classified as follows: (1) All the leaf-buds active and open, as in the wild C. and kale. (2) All the leaf-buds active, but forming heads, as in Brussels sprouts. (3) Only the terminal leaf-bud active, forming a head, as in common C. (4) The terminal leaf-bud alone active and open, with flowers abortive and succulent, as in cauliflower and broccoli. (5) All leaf-buds active and open, with the flowers abortive and succulent, as in sprouting broccoli. A very interesting variety of C. is grown in the Channel Is., known as

Left: Wild cabbage. Right, upper: Garden cabbage. Right, lower: Savoy.

the Jersey C. Its usual height is about 8 ft., but it has been known to reach a height of 16 ft. The central stem is so woody that it is used for the making of walking-sticks. Some varieties are even cultivated as ornamental plants on account of the beauty of their leaves in form and colour. Brussels sprouts resemble miniature C.s. Nothing seems to be known as to the origin of the plant, but according to Van Mons (1765-1842) it was heard of in 1213 by the name of *spruyten*. It is most hardy. The Savoy is a hardy green variety, with the characteristic of producing very crinkled leaves. The cauliflower is said to have been brought from Cyprus, where it appears to have been cultivated for ages. It grows well in a rich soil, with a sheltered position, and is a vegetable with a most delicate flavour. Broccoli is a variety of cauliflower. The earliest sowing of C. should be made early in Mar., to be ready for use in July and Aug., and another sowing should take place at the end of Mar. to ensure a supply from Aug. to Nov. The most important of all is the autumn sowing, which should be made the last week in Aug. Kohl-rabi cabbage (*B. oleracea caulorapa*), with a turnip-shaped stem, is used in England as food for cattle. The C. is a biennial, and to obtain seed for

future use plants should be left until the second year. See BRASSICA.

Cabbage-bark Tree (*Andira inermis*), evergreen tree of the family Leguminosae, indigenous to the W. Indies. It has leaves about 12 in. long, with purple flowers. Its bark is useful as an antidote to intestinal worms.

Cabbage Butterfly is a name common to sev. species, the larvae (caterpillars) of which feed on the leaves of cruciferous plants, especially of cabbages. The large white (*Pieris brassicae*) is a very common species in Great Britain. The expanded wings measure 3 in. across, and are white with black edgings. The female, which is the prettier, having black spots on the upper surfaces of the wings, lays her yellow eggs in clusters on the leaves of caterpillar food. The fully grown caterpillar sometimes measures 1½ in., and will eat twice its own weight of leaf in 24 hours. After it has hung for some time by its tail from a ledge, it is changed into a shining pale green chrysalis. The butterfly, which, in the case of the autumn brood, waits till winter is past before coming out, lives daintily on nectar. The small white, or turnip butterfly (*P. rapae*), has a wing expansion of about 2 in., lays its eggs singly on the under side of vegetable leaves, and produces a velvety caterpillar which devours the hearts, instead of merely the leaves, of cabbages. It is often, therefore, a still more dangerous pest than the large white. The chrysalis is brownish-yellow with black spots. The third species, the green-veined white butterfly (*P. napi*), which is similar to the small white, cannot multiply so fast, because both the butterfly and its caterpillar are a favourite food of small birds. A watch should be kept for eggs of cabbage whites, and when found they must be destroyed. Cabbages should be dusted with Derris or other insecticide, prevention of an attack being easier than a cure. Ichneumon-flies parasitise the caterpillars and help to control them.

Cabbage Palm, or Cabbage Tree. There are many different species, the prin. being the *Roystonea oleracea*. It is a native of the W. Indies, and may grow to 100 ft, but it is often cut down when young for the edible, tender central leaves and bud, resembling a cabbage.

Cabbage Wood. See PARTRIDGE WOOD.

Cabbala (Heb. *kabbalah*, something received, hence tradition), the designation of a mystic system of philosophy, theology, and magic, once prevalent among the Jews. Its popularity began in the 12th cent. and continued till the 16th. It has now few adherents—these for the most part in E. Europe. The Cabbalists taught a pantheistic doctrine that there was one Being and that nothing existed but this one Being and its manifestations. God, therefore, was an Absolute Being, and from Him emanated 10 attributes—wisdom, understanding, mercy, and the like—that as this Being became conscious of its existence, it poured itself through 'channels' into the world of pure spirits and angels, and into the lower world,

which thereupon came into existence; that the soul of man passed from body to body, till it finally returned to and became absorbed in God. Their teaching was obviously influenced by the idealistic philosophy of Plato, combined with the degenerate philosophies of the Neoplatonists. The Cabbalists attached much significance to numbers. The fact that every letter in Hebrew stands for a number enabled them to read into the Scriptures many strange doctrines. Every passage was regarded as symbolic. It was claimed that their doctrine had been revealed, according to some, to Abraham, and, according to others, to Adam; the tradition was passed on by word of mouth until it was felt necessary to put the mystic lore into written form. The authoritative documents of C. are (1) the *Sefer Jezirah*, 'Book of Creation,' supposed to have been written by Rabbi Akiba (d. AD 135); (2) the *Sefer Hazzohar*, 'Book of Light,' commonly called Zohar. It is written in a form of Aramaic which shows it to have been composed in the 12th or 13th cent., and some have suggested that the author might have been Moses de Leon of Spain. Other Cabbalistic writers were R. Moses ben Nachman, better known as Ramban (1195–1270), and Pico della Mirandola (*Conclusiones Cabbalisticæ*, 1517). See S. A. Hirsch, *The Cabbalists*, 1922; G. Scholen, *Bibliographica Cabbalistica*, 1927; and articles in the *Jewish Encyclopedia*.

Cabell, James Branch (1879–), Amer. novelist and genealogist, b. Richmond, Virginia. While still a student he was instructor in French and Greek at William and Mary College, 1896–7, graduating in 1898. He worked for a time as a journalist, and in 1913 was appointed genealogist of the Virginia chapter of the Sons of the Revolution. He first came into prominence as an author with his novel *Jurgen*, 1919, which was attacked for immorality and temporarily suspended. The background of sev. of his stories is the fanciful country of Poictesmo, and a series styled the 'Biography of Manuel' purports to trace the lineage of its nobility from Dom Manuel, Count of Poictesmo, to his Virginian descendants. C. has been criticised for 'the opulent monotony of his decorative manner.' Among his works are *Galleantry*, 1907, *Chivalry*, 1909, *The Rinel in Grandfather's Neck*, 1915, *The Silver Stallion*, 1926, *Something About Eve*, 1927, *Townsend of Lichfield*, 1930, *These Restless Heads*, 1932, *Preface to the Past*, 1936, *The King was in his Counting House*, 1938, *The First Gentleman of America*, 1942, *Let me Lie*, 1947, and *Quid*, 1952. See C. van Doren, *James Branch Cabell*, 1925, and a bibliography by G. Holt, 1924.

Caber, Tossing the, is especially a Scottish sport—a conspicuous event in throwing a slim tree-trunk, often 20 ft long, in such a way that, after turning over in the air, it will fall in a straight line with the 'tower,' the smaller end being furthest from the thrower. The C., the

diameter of whose thin end should not be more than 3 in., must be hurled as far as possible from the thrower.

Cabas, or **Gabes**, oasis of date palms in Tunisia with 22,152 inhab., including 1548 Europeans. It exports dates.

Cabet, Etienne (1788-1856), Fr. politician and a leader of the Carbonari, was the son of a cooper of Dijon. He studied law, and under Louis-Philippe became procureur-général of Corsica. Bitter attacks on the gov., made in the Chamber of Deputies of which he was a member, led to his exile in England (1834). On his return to France in 1839, after the declaration of a general amnesty, he pub. a very prejudiced hist. of the Fr. Revolution in 4 vols. (1840), and later, his *Voyage en Icarie*, a romance in which he expressed his communistic views. Determined to put some of them into practice, he sent out in 1848, with the approval of Robert Owen, a colony of 1500 'Icarians' to a tract of land in Texas. But the community of property, which was to have been the special feature of the settlement, proved an utter failure. In 1849 C. himself sailed to America and transferred the settlers to Nauvoo in Illinois. For a time he ruled his little band like an autocrat, but the colonists finally banished him in 1856, and he d. at St Louis.

Cabezón, Antonio de (1510-66), Sp. organist and composer. He was blind from early childhood, but became very famous, being appointed to the service of the Empress Isabel, and after her death in 1539 to that of Prince Philip, with whom he went to Italy, Germany, the Netherlands, and England. He wrote especially for the organ, the clavichord, and the *vihuela*, a Sp. type of lute.

Cabildo, or **Ayuntamiento**, corporation of old Spain which has been likened by some writers erroneously to the municipal councils of England, but which in no way resembled them. They may have had their real origin in Rom. times, but in their medieval form C.s probably owed their creation in the 11th and 12th cents. to the desire of the Sp. monarchs to curb the power of the nobles. The 'illustrious Cabildo' existed throughout the Sp. Empire, and under Sp. rule Trinidad too had its C., which played a prominent part in its hist. The term *cabildo* signifies a 'congress of assembly,' composed of the chief magistrates, aldermen, and others, charged with the administration and internal gov. of a tn. The Sp. kings confided to the C.s, or councils of the people, civil and criminal jurisdiction, as well as all matters of municipal gov., but reserved to themselves the right of hearing appeals and complaints from persons dissatisfied with the decision of these tribunals. The *alcaldes* or magistrates for the year, as also the other officers of civil and criminal justice, and all the functionaries charged with the internal administration of the tn., were also elected from, or appointed by, the C. C.s existed in all the Sp. colonies, but of course had to undergo certain modifications, rendered necessary by circumstances. S. America,

for instance, was governed by viceroys having under them provs. ruled by captains-general, whilst colonies like Trinidad were placed under governors, supreme in military matters, but who, for purposes of civil gov., were only corregidores of their C.s.

Cabillonum, see CHALON-SUR-SAONE.

Cabin (It. *capanna*, Sp. *cabaña*); 1. Small room in a ship used as a sleeping apartment. A swinging hammock or cot is sometimes called a hanging C.

2. Rude shelter or hut, small house or cottage. Also a temporary shelter for stores.

Cabinet, term recognised by the conventions of the Brit. Constitution, but not by the law, applied to the body of men who are chosen from the political party in power to fill the highest executive offices in the state, and who, by their apparently or really unanimous policy, direct the gov., and are collectively responsible to Parliament for every act of the Crown.

History of the Cabinet. There were indications of an inner council of state before the Tudor period, but they are of an indefinite nature. Even before the Conquest there always existed a body of advisers of the Crown distinct from the General Assembly. After the Conquest that body was known as the Continual Council or Concilium Ordinarium, and was in effect a permanent committee of the National or Common Council which became merged in the larger assembly whenever it was convened. Nominally this committee was the instrument of the royal prerogative. Under the weaker monarchs it was virtually independent. Then the Common Council gradually evolved itself into the national Parliament, and the Concilium Ordinarium became a strictly official body distinct from it and wielding enormous executive powers, its members being bound by a special oath of fidelity and secrecy. During the reign of Henry VI a nucleus formed within the Concilium Ordinarium called the Concilium Privatum, or Privy Council (q.v.), constituting the king's constitutional body of advisers, while the Concilium Ordinarium, no longer consulted on executive matters, lapsed into a body of legal advisers or figures in the Star Chamber. The Privy Council continued to be the king's advisers down to the reign of Charles II. That monarch found its numbers too large and the restraints it imposed on his actions irksome. He therefore resorted to the practice of confiding in a 'cabal' or clique of confidants. Sir Wm Temple eventually persuaded him to agree to the alternative plan of forming a select committee of the Privy Council, called the C. Council. This distinction between the C. and the Privy Council has existed ever since that time, although the C. Council, or C., in its present form dates rather from the revolution of 1688 or shortly after. The Privy Council has at the present day no executive or deliberative functions. The C.s of William III and Anne were chosen from both Whigs and Tories for the most part. William

III was strongly opposed to gov. by party, but from force of circumstances began after 1693 to entrust the chief administrative offices to the Whigs. The resulting body was popularly known as the Junto. When the Whigs went out of power the ministry did not feel compelled to resign. Queen Anne was especially averse from party gov., and it was only after the accession of George I that party gov., or parl. gov. by means of a ministry composed nominally of king's servants, but actually of an executive committee representing the will of the majority in the House of Commons, became finally and firmly estab., a result due rather to the fortuitous circumstance that both that monarch and George II acquiesced in the domination of their ministers, and absented themselves from the deliberations of the C., partly because they could not understand English and Eng. affairs, and partly because they preferred to devote their energies to Hanover. Finally, on the advent of Pitt's ministry of 1783, the idea of a C. consisting of men willing to serve under a Prime Minister, and to adhere to a definite programme, became an estab. necessity.

Characteristics and nature of the modern Cabinet. The C. of the day is thus a group of ministers of the Crown who are also leading members of the 2 Houses of Parliament, and whose opinions on the most important questions of the time agree in the main with the opinions of the majority of the House of Commons.

The result of the estab. of our system of gov. upon a representative basis is that the C. is collectively responsible to Parliament for the policy it pursues, and, in theory, the members of the C. are obliged to stand or fall together, and to act as one man on all questions relating to the executive gov., so that if one of them dissents from the rest on a question too important to admit of compromise, it is his duty to resign. When the policy of the C. no longer commands the approval of the majority of the House of Commons, the ministers are in duty bound to resign *en bloc*. Differences of opinion when publicly manifested would lead to the break up of a C., because by the conventions of the constitution all the members of the C. are jointly and severally responsible for all its measures.

The C. is not exactly synonymous with the ministry of the day. The growth in the number of depts in modern times has made it impossible to include all ministers in the C. itself. But ministers who are not members of the C. receive C. minutes and are entitled to submit papers to the C., and those in charge of depts attend C. meetings at which matters affecting their dept are discussed. They thus partake of the C.'s collective responsibility.

The C. now invariably includes the first lord of the treasury, the lord president of the council, the lord privy seal, the chancellor of the exchequer, the lord chancellor, and the secretaries of state for foreign affairs, the home dept, commonwealth relations and the colonies. In recent years the secretary of state for

Scotland, the president of the board of trade, the ministers of defence, agriculture, housing, and local gov., education, and labour have been members. A novel feature was the inclusion in 1912 of the attorney-general, Sir Rufus Isaacs. Nearly all the members of the C. are chiefs of depts. Frequently one or two experienced ministers are included for the sake of their advice, and to those are assigned such offices as lord privy seal or chancellor of the duchy of Lancaster.

The C. is presided over by a chief who is conventionally known as the Prime Minister or Premier, but is unknown to the law except in his capacity of first lord of the treasury, or as holder of some other executive office, and as a member of the Privy Council, which later body by a legal fiction is the constitutional advisory council of the sovereign. The Premier now has, however, a definite precedence allotted to him. The ministry is called into existence by the sovereign, who generally takes the advice of the outgoing Premier as to who shall be sent for and asked to form the new ministry. In practice the sovereign's choice is really limited to some 2 or 3 names at the most, for political usage has estab. the claim of the leader of the dominating party or coalition of parties to be sent for by the monarch. According to Bagehot, if any one else were sent for it would be his duty to press the claims of the true leader, and he cites the case of Lord Granville being invited in the first place to form a new ministry instead of Mr Gladstone. The new premier then chooses his fellow ministers, but, till recently, custom did not permit him to exclude ex-ministers belonging to his party.

The relations of the sovereign and the C. are such that the sovereign is constitutionally obliged to take the C.'s advice and lend it his moral and social support. The C. is bound, as is each individual member, to inform the sovereign on all important measures of the executive, but the Premier has the exclusive right to approach the sovereign personally on all important matters of state. Other ministers, however, have a right to discuss with the sovereign matters merely departmental. The result of the evolution of the powers of the C. Council is that that body is *de facto* the gov. of Great Britain. Whatever in legal theory the Brit. polity may be, this in reality is the form of the active governing machinery of the Brit. constitution.

The phrase 'ministerial responsibility,' which is intimately bound up in treaties on the constitution with the nature and functions of the C., and which, in its strict sense, denotes the legal responsibility of every minister for every act of the Crown in which he takes part, is a convention resulting from the theory that 'the king can do no wrong,' and from the refusal of the courts to recognise any act as done by the Crown which is not done in a particular form—a form in general involving the affixing of a particular seal or the counter-signature of a minister (Dicey). Ministerial responsibility in the

sense that ministers are liable to lose office if they are unable to retain the confidence of the House of Commons is a theory depending on the conventions of the constitution, with which the law has no direct concern.

While the foregoing is the generally accepted view of the position and functions of the C., it is to be observed that Bagehot, in *The English Constitution*, acutely defines the C. as a combining committee—a hyphen which fastens the legislative part to the executive part of the State; that while in its origin it belongs to the one, in its functions it belongs to the other; and that though it is a committee of the legislative assembly, it is a committee which can actually dissolve the Parliament which appointed it, and appeal if it chooses to the next Parliament. His theory is a refutation of the dogma that in our polity the legislative and executive powers are entrusted to separate sets of persons, each independent of the other, and asserts that the peculiar excellence of the Eng. Constitution is the practical fusion of the executive and legislative powers through the C. In comparing the C. with the presidential system of the U.S.A., in which latter system the legislative and executive powers are independent of each other, Bagehot comes to the conclusion that the C. system is superior in that it facilitates administration, obviates the disadvantage of making the people the real executive-choosing body, eliminates corruption, and gets rid of the antagonism between the legislature and the executive which, springing from the fact that the House of Representatives is elected by one process and the president by another, ends in the impairment of each. The delicate relations of the C. to the Crown on the one hand and to the Houses of Parliament and the people on the other, as well as the internal relations of its members to each other and to the Premier, are clearly expressed by Gladstone in *Gleanings of Past Years* thus: 'The association of the Ministers with the Parliament and through the House of Commons with the people is the counterpart of their association with the Crown and the prerogative. The decisions they take are taken under the competing pressure of a bias this way and a bias that way, and strictly represent what is termed in mechanics the composition of forces.' Such a description could not be applied to a presidential system like that of the U.S.A., where the president is elected for a fixed term. Dicey, however, justly doubts whether the Eng. Constitution may not be undergoing an insensible change due to the increasing authority of the electorate. He believes a general election may in effect be a popular election of a particular statesman to the premiership, and that the time may come when, though all the forms of the constitution remain unchanged, an Eng. Prime Minister will be as truly elected to office by a popular vote as is the Amer. president.

In substance the C. is the directing body of the national policy, or at least

until very recent times it has been generally so regarded. On the other hand it might appear to-day that a party caucus is the real directing power behind the C., a position that might be difficult to sustain. The main functions of the C. were set out in the report of the Machinery of Gov. Committee (C. 9230 of 1918) as: (a) the final determination of the policy to be submitted to Parliament; (b) the supreme control of the national executive in accordance with the policy prescribed by Parliament; and (c) the continuous co-ordination and delimitation of the authorities of the sev. depts of State. Rightly this statement draws no distinction between legislation and administration. In the modern State most legislation indeed is directed towards the creation or modification of administrative powers. The C. is a general controlling body. Many of its members are departmental ministers. It neither desires nor is it able to deal with the multiple details of gov. It expects a minister to take all decisions which are not of real political importance. Certain matters are conventionally regarded as being outside the C.'s competence. Lord Oxford and Asquith said that, speaking generally, the exercise of the prerogative of mercy, the personnel of the C., and the making of appointments, are not discussed in the C. But the question of the reprieve of Sir Roger Casement in 1916 was brought before the C., though normally the prerogative is left to the home secretary. Again, the personnel of the C. has often been discussed by the C. in the past, though usually in exceptional circumstances. Another matter which is seldom discussed in C. is the conferment of honours. Yet another is the exercise of the prerogative of dissolving Parliament. This is, however, a recent development, and if the Prime Minister wants the advice of the C. there is nothing to prevent him from raising the question. In the past some C.s appear to have decided by vote questions on which an agreed solution could not be reached. The decision to arrest Dillon in 1881 was carried by Gladstone's casting vote. The question of the removal of the Duke of Wellington's statue from Hyde Park Corner in 1883 was decided by a show of hands. In any case, the taking of votes is exceptional. It is said that on the Education Bill in 1901 the C. divided sev. times, a practice which, according to Fitzroy (*Memoirs*), large C.s have rendered unavoidable. The C. itself is a committee, and it reaches its conclusions in much the same way as other committees—discusses a subject from various aspects until some compromise emerges.

The C. is a wholly secret body. Its meetings are in theory and in reality secret. Disclosures of C. decisions are made only with the permission of the sovereign. A minister who resigns from the C. usually desires to make an explanation in Parliament, and since this involves an explanation of C. discussions he must get the sovereign's consent. For this purpose he asks permission through the

Prime Minister. But this rule is not always obeyed, and generally speaking it is difficult to prevent revelations of C. discussions when they are matters of political controversy, nor is the press left entirely without guidance through the usual 'understood' formula. As to C. solidarity or collective responsibility, the precedents are inconclusive. 'It may be said, first, that the Prime Minister is frequently in a position to pledge his colleagues' support, because the only alternative is his own resignation. Secondly, a minister should not announce a new policy without C. consent; but if he does the C. must either support him or accept his resignation. Thirdly, a minister ought to be chary about expressing personal opinions about future policy except after consultation; and if the circumstances are such as to pledge the gov., the Prime Minister has a real cause of complaint. Any statement in advance of a C. decision is dangerous to the stability of the gov.' (W. Ivor Jennings, *Cabinet Government*, 1936).

Until 1916 there was no C. office and no secretary, and there were therefore no formal agenda. This unbusinesslike system broke down completely under the stress of war. One of the first acts of Lloyd George on the formation of the War C. in 1916 was to set up a C. secretariat to organise the business of the War C. The taking of notes by any minister other than the Prime Minister was for long forbidden, but since 1916 there have been formal C. minutes. Unless the C. directs otherwise, the secretary to the C. or his deputy is present at every C. meeting. He takes no part in the discussion unless his opinion is asked on a particular point (such as a point of procedure) but merely makes a note of the C.'s decisions. This note is known officially as the C. 'conclusions,' though more popularly as the C. 'minutes.' The C. secretariat is not an advisory body. It does not make recommendations, nor does it interfere with departmental responsibility.

One of the most notable changes produced by the First World War was the creation of the Imperial War C., which first met in 1917, under the presidency of Lloyd George, the Brit. Prime Minister. It consisted of the members of the Brit. War C. sitting with the representatives of the dominions and India who were attending the Imperial Conference of 1917. While the Imperial War C. was in session the overseas members had access to all the information at the disposal of the home gov. and had a status of absolute equality with the members of the War C. of Great Britain. The Imperial War C. sat during the whole period of the Imperial Conference of 1917, and in 1918 it was in session from June to Aug. At the conclusion of this session it was announced that, in view of the success of the experiment, the Prime Ministers of the dominions should, in future, have the right, whenever they deemed fit, to communicate on matters of C. importance direct with the Prime Minister of the U.K. Although the

dominions were fully consulted by the home gov. in all the peace negotiations, the termination of hostilities saw an end to the Imperial War C. as such.

The War C. of the U.K. had, of course, no formal existence. In the early days of the First World War it was felt strongly that the normal C. of 21 or 22 members was ill adapted to the requirements of war, when speedy decisions are often necessary. When under the stress of war the Coalition Gov. came into being, it naturally followed that the leaders of the constituent parties were stronger than others of the ministers, and were more frequently consulted by the Premier. As these others were content to leave matters in safe hands, the War C. was evolved. As in the case of the Imperial War C., this war creation died a natural death on the cessation of hostilities. On the outbreak of the Second World War in 1939 a War C. of 9 members was formed, consisting of the Prime Minister, chancellor of the exchequer, secretary of state for foreign affairs, minister for co-ordination of defence, first lord of the admiralty, secretary of state for war, secretary of state for air, lord privy seal, and minister without portfolio. The C. secretariat previously referred to, also a product of the war days, still survives. See also succeeding article.

The Cabinet in the United States. The development of the C. in the U.S.A. took quite a different turn from that of Great Britain which has served as the model for most of the European countries. In Great Britain the Prime Minister is the chosen leader of the political party which has the largest representation in the House of Commons, and his colleagues in the C. usually belong to the same political faith, and have to be members either of the Commons or of the Lords. In the U.S.A. the C. is named by the President. It consists of the heads of the great governmental depts who advise him. It meets with him every week and discusses questions of policy, the President's being the final word. C. ministers are not members of the Amer. Congress. In fact, if a congressman or senator is named to a C. post, he resigns his position in the Congress. It is the usual thing for the President, when he is sworn into office on inauguration day, to transmit to the U.S. Senate his list of C. officers. These have to be confirmed by a majority vote of the Senate, and this is usually done as a matter of course.

Again, in the Brit. Gov. C. ministers, being M.P.s, sit in the sessions of the House to which they belong, submit to questions by members, and take an active part in the debates, particularly in matters affecting their respective depts. No Amer. C. minister has the right to take part in Congressional debates. He can be asked for information by a congressman or senator by letter, or personal interview, or he can be summoned before a Congressional committee and asked questions. But even then he can refuse if the answer is deemed 'incompatible with the public interest.'

The Amer. C., as to size, is a matter of gradual growth corresponding to the increase in power, wealth, and business of the country. Under George Washington, the first President, it consisted of the secretary of state (corresponding to the minister of foreign affairs in Great Britain), secretary of the treasury, secretary of war, attorney-general, and postmaster-general. Under President John Adams, the second chief executive, the C. was increased by a secretary of the navy in 1798. Under President Taylor in 1849 there was added a secretary of the interior. In 1889 under President Grover Cleveland the farming interests of the country were considered so important that a secretary of agriculture was named. Under President Theodore Roosevelt in 1903 the new post of secretary of commerce and labour was created; but under President Woodrow Wilson in 1913 their duties were separated, and he named a secretary of commerce and a secretary of labour. In 1947 under President Truman the offices of secretary of war and secretary of the navy were combined into one, that of secretary of defence. Each new C. post is authorised by an Act of Congress (*see* ACT). The position of secretary of state is considered the greatest post within the President's gift, although the salary is the same as that of the other C. ministers. He not only handles foreign affairs, but is also the medium of correspondence between the President and the governors of the various states in the Union; has the custody of the great seal of the U.S.A. and countersigns and affixes such seal to all executive proclamations; and is the custodian of the treaties made with foreign nations and of the laws of the U.S.A.

There is also this notable difference from the Brit. C. system; in Great Britain, Premier and C. ministers only hold their posts so long as they have command of the House of Commons. In the U.S.A., just as the President is immovable for the 4-year term for which he is elected (unless impeached and removed), so are his C. ministers unless he asks them to resign. Thus it has often happened in the hist. of the U.S.A. that the majority in one or both houses of Congress belonged to one political party, while the President and his C. belonged to another.

British Cabinet System, 1830-1938, 1939. See also CABINET, IMPERIAL WAR.

Cabinet, Imperial War. The I. W. C. was instituted in 1916 for the purpose of giving dominion statesmen a direct, continuous, and effective share in the decisions taken by the Brit. Gov. on questions relating to the foreign policy of the empire as a whole. The premiers and other leading ministers of the dominions were convened with Brit. ministers on a footing of absolute equality, in a Cabinet which not only discussed but decided the main questions of the conduct of the war, both military and diplomatic. In 1918 it was decided, with a view to the War Cabinet meeting continuously, that dominion ministers should be appointed to reside permanently in London as members of the Cabinet. Meantime the dominion premiers were to continue to be *ex officio* members of the Cabinet and, when unable to attend personally, communicated directly with the Brit. premier on Cabinet matters. But the system, if better than the old arrangement of conferences, was faulty in that the Imperial Gov. was not a gov. in the constitutional sense; it did not possess the unity and coherence of a gov. answerable to a single Parliament and electorate; its members were responsible to 6 different parliaments and electorates and might, obviously, be individually removed and replaced at different times and for different reasons as a consequence of political changes either in the U.K. or in the dominions which might conceivably have no sort of bearing on the imperial questions falling within the purview of the Imperial Cabinet. On the outbreak of the Second World War, in Sept. 1939, no arrangements were made for including dominion ministers in the War Cabinet, although there were frequent consultations on all-important matters of policy between the U.K. and the dominion govts. Indeed, the development in the dominions in the last 30-40 years of more independent outlook on foreign affairs has probably precluded the likelihood of the experiment of 1916-18 ever being repeated. It should, however, be noted that Casey of Australia was minister of state resident in the Middle E. and a member of the U.K. War Cabinet, 1942-3.

Cabinet-making, see FURNITURE.

Cabinet Noir, special secret dept. of the Fr. postal service, in which letters were opened and read, then resealed and sent on. This system was first organised in France under Louis XIV. and was destroyed with all systems of the same nature at the revolution. It was again estab. under Napoleon, but was given up on the formation of the third rep.

Cabiri (Cabeiri), fertility gods of Phrygian origin, called by the Greeks 'the Great Gods.' Their number varied and they were later identified with the Corybantes and Curetes (qq.v.). As early as the 5th cent. BC they were considered as the protecting deities of sailors, which may account for their subsequent identification with Castor

and Pollux (q.v.). The prin. centre of their worship was in Samothrace, and their mysteries were second only to the Eleusinian in reputation.

Cable, George Washington (1844-1925), Amer. author, b. New Orleans, his father being of an old Virginian family, and his mother a New Englander. He became a clerk at the age of 14, entered the 4th Mississippi Cavalry of the Confederate Army in 1863, and at the close of the war (in which he narrowly escaped death) began his journalistic career in his native city. His *Old Creole Days*, 1879, is a series of sketches of the old Fr.-Amer. life of New Orleans. His first novel, *The Grandisettes*, 1880, gives an accurate picture of Creole life in Louisiana a cent. ago. *The Creoles of Louisiana*, 1884, was a hist. of the people, and roused considerable indignation among the Creoles themselves. In his *Dr Sevier*, 1883, which is probably his finest work of fiction, he reproduced with remarkable success the gentle Fr.-Eng. dialect of Louisiana. Life in the marshy lowlands at the mouth of the Mississippi is faithfully depicted in his short stories, *Belles Demoiselles Plantation*. Other books are *Bonaventure*, 1888, *The Cavalier*, 1901, and *Kincaid's Battery*, 1908. For some time also he ed. *Current Literature*, a New York monthly. He d. at St Petersburg, Florida.

Cable, large rope or iron chain used on ships to hold the anchor. C.s are made of hemp or jute, of galvanised or zinc wire, and of chain. Rope C.s vary from 3 to 25 in. in circumference. Hemp and wire ropes are used for towing and mooring purposes, whereas chain ropes are used on steamships, where they can be moved and manipulated by steam engines. Steam C.s are made in links in 124-fathom lengths. In the Merchant Navy the chains are made to 15-fathom lengths.

Cable Ways, in civil engineering, overhead cables, used for the transport of goods, though also used in some mt dists. for passenger traffic. Also called aerial ropeways. The cable and hauling gear are carried on trestles, which may be erected on irregular ground or carried over streams and ravines. The C. W. system has been developed in recent years owing to the increased use of electrical power for industrial purposes. Thus at the Penmaenmawr quarries, in Wales, where quarrying is carried on at heights up to 1500 ft above sea level, this system of transport of materials is of the greatest use.

Cables, Electric, insulated conductors, mainly for laying underground. C. must have sufficient conductor cross-section to carry the current without undue heating, sufficient insulation to withstand the voltage to earth and between the cores, and protection against penetration of moisture, and be flexible enough for rolling up on drums for transport. Cores are always of copper, which has the highest conductivity for a given cross-section area. **Power C.**, carrying a heavy current, have stranded cores to give flexibility, of 7, 19, 37, 61, 91, or 127 strands. These are the so-called 'circular

numbers.' Such numbers of equal strands will give a compact cross-section of near circular outline. The core is slightly twisted to prevent the strands coming apart when the cable is bent. The size of cable is specified by the number of strands and the diameter of each, 37/0.064 being a cable of 37 strands of diameter 0.064 in. each. In 3-phase C. the 3 cores are included in 1 cable, the cores sometimes being of sector-shaped cross-section. Concentric C. have a central core and one or more rings of strands round it, but insulated from the core. The insulation is built up by winding paper strips impregnated with oil round the core until the required thickness is reached. The paper-insulated cable is protected by a lead sheath, covered with a layer of jute or hessian tape, and the whole is then 'armoured' with steel wire or tape, covered with a further layer of jute saturated with tar, as protection against corrosion. In oil-filled C. the cores are arranged round a central spiral of metal tape forming a tube kept filled with oil from a pressure tank. The gas-pressure cable has no steel armouring but is enclosed in steel tubing kept filled with nitrogen at high pressure. The insulation resistance of a cable is given in megohms per m., being the resistance from the surface of the core through the insulation to the outer surface. A usual test consists in keeping a length of the finished cable under a voltage higher than the nominal working voltage, submitting it daily to alternate heating (by a current through it) and cooling and measuring the power factor (q.v.) of the leakage current periodically. The lower the power factor, the more perfect is the insulation. A constant, low power factor throughout the test period indicates reliability in service. **Power C.**, being armoured, are sometimes laid on a bed of sand and covered with tiles as a warning when the ground is being dug; sometimes in a wooden trough, on insulating bridges to keep the C. apart and off the bottom, the trough being filled with bitumin. In urb. dists. the C. are drawn through channels in ceramic blocks set on a concrete base. Manholes are provided for access to joint boxes and for testing. **Telephone C.** usually carry a large number of fine copper wires covered with dry paper. A lead sheath protects the conductors against moisture. Long-distance C. carry 4 wires—2 pairs, 1 pair for transmission each way. Coaxial C. are used in multi-channel carrier-wave telephony (q.v.). The outer conductor is a copper tube, the inner a bare copper wire placed in axial position by insulator spacers. The 2 form the pair of a circuit and 2 such tubes are needed for a 4-wire circuit. **Submarine C.** have a stranded core covered by layers of gutta-percha, para-gutta, or polythene. Submarine coaxial C. are filled with insulation to withstand the high pressure. The deep-sea portion of a submarine cable is armoured with tempered steel wire. See C. Bright, *Submarine Telegraphy*, 1898, *Story of the Atlantic Cable*, 1903, and

Life of Sir Charles Tilston Bright, 1908; P. Dunsheath, *High Voltage Cables*, 1932; C. Baines, *Submarine Cables, Testing and Working*, 1932; S. Garnham and R. Hadfield, *Submarine Cable*, 1934; 'Proton,' *Cables and Wires*, 1945.

Cabot, John (Caboto, Giovanni) (1450-1498), discoverer of N. America, was a Genoese who became a naturalised Venetian and finally settled as a merchant in Bristol. News having reached England that Columbus had discovered a vast new ter., C., in 1497, set out in the *Mathew*,

the fine merchandise of the E. To C. must be credited the discovery of Newfoundland and other fisheries.

Cabot, Sebastian (c. 1474-1557), navigator and cartographer, son of John C.; probably b. at Venice, but the place and date of his birth are alike uncertain. He has often been confused with his father; it appears more likely that it was John who undertook the voyage to the NW. Passage about 1496-8, although his son may have accompanied him. In 1512 Sebastian won a reputation in

Postmaster-General

REPAIR WORK BY A BRITISH POST OFFICE CABLE SHIP

The cable has been hooked up from the sea-bed by the grapple.

and after 52 days' sail landed on Cape Breton Is., where he planted the royal flag. His name is associated with the earliest attempts to reach India by the NW. Passage; in 1498 Henry VII granted letters patent to C. and his sons to fit out ships for the exploration of that route. C. and his sons failed, but they discovered Newfoundland and sailed along the coast of Labrador to Virginia. He had heard from João Fernandes about Greenland, and thinking it part of the Asiatic continent made his way in that direction. But once more, though he explored E. and W. the coasts of Greenland, reached Baffin Land and landed on Newfoundland and Nova Scotia, he was obliged at length to return home, baffled in his search for Cipangu, or Japan, which was to have been the open door through which England passed to reach spices and

England as a cartographer. He appears to have prepared maps of Gascony and Guienne for Henry VIII, and later in the same year to have been commissioned by Ferdinand V of Spain for a similar purpose. On the death of Ferdinand in 1516, C. abandoned his projected voyage to the NW, and returned to England in the following year. He again entered the service of Henry, and on his behalf set sail from Bristol on a voyage of discovery to Hudson Bay and Hudson Strait. (Doubts have been raised as to whether this voyage ever took place.) In 1519 C. was appointed pilot-major by the Sp. king, Charles V. In 1526, after a dispute between Spain and Portugal regarding their respective trading rights with the Moluccas, C. was sent out by Charles V to explore the coastline of Brazil. He entered the R. La Plata and

sailed up its trib., the Paraguay, but his attempt to make colonies was a failure. Consequently, on his return in 1530, he was imprisoned for a year and exiled to Oran in Africa for 2 years. He was subsequently restored to his former post of pilot-major, but in 1547 resigned, and soon after was welcomed in England by Edward VI. C. was chiefly instrumental in promoting and directing the Company of Merchant Adventurers (1553), which opened up Brit. trade with Russia. He was appointed governor to this company and inspector of the Eng. Navy (1547). C.'s map, showing the discoveries of himself and his father, can be seen in the Bibliothèque Nationale. See C. R. Hoazley, *John and Sebastian Cabot*, 1898; H. P. Biggar, *The Voyages of the Cabots and Corte-Reals to North America*, 1903.

Cabourg, popular Fr. watering-place in the dept of Calvados, 11 m. from Trouville. It is on the R. Dives, and has a good beach and a casino. Pop. 3200.

Cabra, Sp. tn in the prov. of Córdoba. It has an anct castle and other Moorish remains, and has a trade in agric. produce. Pop. 14,000.

Cabral, Pedro Alvarez (c. 1460-c. 1526), Portuguese navigator, who was sent in 1499 by the King of Portugal to estab. a factory on the Malabar coast in India, and to win the friendship of the rajah of Calicut. C. took a westerly course, landed on the coast of Brazil, and took possession of part of the neighbouring country. He sent one of his ships back to Portugal to announce his discovery, and with his other ships he set sail for India. During the voyage 4 of his vessels were lost, and among those who perished was Diaz. C. reached Calicut, and after sev. encounters with the natives estab. a factory there. He continued to explore the Malabar coast, and returned to Portugal in 1501 with rich cargoes.

Cabrera, Ramón (1806-77), Sp. soldier, b. Tortosa. In 1833 he became a staunch ally of the pretender Don Carlos, who was supported by the absolutist party. During the war which followed he distinguished himself as much by his cruelty as by his unquestioned bravery. In 1839 Don Carlos rewarded him with the governor-generalship of Valencia, Murcia, and Aragon, and made him Count of Morella. Driven across the frontier to France in 1840, he was indignant when in 1848 his leader abdicated his rights. After attempting to revive the Carlist war, without success, he settled in England.

Cabrera (anct *Capraria*), small is. of the Balearic Isles (q.v.), lying just S. of Majorca. It is now inhabited by a few hundred farmers and fishermen, but was deserted for nearly a cent. as it was reputed to be haunted by the ghosts of many Fr. soldiers who d. here after being captured at Ballén (q.v.) in 1808.

Cabriole, word applied to the legs of tables, chairs, or other pieces of furniture, shaped as the legs of a goat, with knee and cloven foot, or merely having a double curve. The fashion was introduced in

France in the 17th cent.; and it was prevalent in England from the close of that cent. until the reign of George II. The term is also applied to chairs with stuffed shield or oval backs by Heppelwhite.

Cabul, see **KABUL**.

Cabuyao (formerly *Tabuco*), tn on the is. of Luzón, in the Philippines, situated near Laguna de Bay. The cultivation of coco-nuts, rice, and sugar is carried on. Pop. 15,206.

Cacao, see **COCOA**.

Caccamo, tn in Sicily (q.v.), 22 m. SE. by E. of Palermo (q.v.). It has a medieval castle and fine churches. There is a trade in almonds and wine. Pop. 10,100.

Caccia, Guglielmo (1568-1625), Piedmontese fresco painter, nicknamed 'Il Moncalvo' from his long residence there. Probably a pupil of Soleri. He painted in fresco and oil; his manner partakes more of the Rom. than the Bolognese school, but he has something of the energy of the Carracci. The church of Sant' Antonio Abbate, Milan, has frescoes of his; another work in fresco is the cupola of San Paolo at Novara. The Chiesa de' Conventuali at Moncalvo has a regular gallery of his pictures. Two of his daughters were painters.

Caccini, Giulio (c. 1545-1618), It. singer and composer, b. Rome (hence called Giulio Romano), studied under Scipione de' Vecchi (della Palla) and in 1564 went to Florence, where he remained as a singer at the Tuscan court of the Medici family till his death. He is one of the group to whom are due those first attempts at dramatic music that led to opera, and he was also among the first to use monody (i.e. accompanied melody) instead of polyphony (i.e. interwoven melodic parts). He and Peri both set Rinuccini's librettos of *Euridice* and *Dafne* to music, but it is difficult to say which is the earlier setting of the former, Peri's being performed first but C.'s pub. earlier. C.'s *Dafne*, however, is certainly later. He also pub. 2 collections of *Nuove musiche* (1602 and 1614) containing examples of the monodic style. His daughter Francesca (1588-f) was also a singer and composer.

Cáceres: 1. Sp. prov. in Estremadura (q.v.), bordered on the W. by Portugal. It lies largely in the basin of the Tagus (q.v.), and produces hams, wool, oil, and renowned red sausages (*embutidos*). Area 7707 sq. m.; pop. 558,950.

2. (Rom. *Norba Caesania*), Sp. tn., cap. of the prov. of C. It is built on a hill, and the old part of the tn. surrounded by Rom. and Moorish walls, is preserved as a national monument. C. is a picturesque tn, with many anct churches and towers and fine medieval and Renaissance mansions. The High Court for Estremadura sits here. Textiles, soap, and leather goods are manuf., and there is an agric. trade. Pop. 47,100.

Cachalot, or **Sperm Whale** (*Physeter catodon*), the only representative of its genus, is a huge toothed whale, measuring as much as 60 ft in length. It is found in all tropical and subtropical

seas, being usually met with in a herd or 'school,' consisting often of some hundreds. The bulk of head, which takes up a third of its body, is made up of tough fat or 'junk,' round which is a great 'case.' The refined oil from this case yields spermaceti. This substance is still used in ointments, and 12 barrelfuls can be obtained from 1 animal. Verging to the left, at the anterior extremity of the head, is the blow-hole, whilst the mouth, which is some way behind the end of the snout, is ventral. Excellent ivory in small quantities may be obtained from the teeth (about 22 in number), which line each side of the lower jaw. This jaw, which

CACHALOTS

is very narrow, may be let down so as to make an enormous gape. The throat is said to be wide enough to allow the whale to swallow a man, and it is thought to be this species which swallowed Jonah. The head is very massive, high and truncated in front; the flipper is short and broad, and the dorsal fin merely a low protuberance. In colour it is black above and grey beneath. Sperm whales feed chiefly on squid and cuttlefish and are rarely seen in European waters. Ambergris, which is used in perfumes, is an intestinal secretion of this species; it is often found on the sea. There is also a pygmy sperm whale (*Kogia breviceps*) which reaches a length of 9 to 13 ft.

Cachet, Lettres de, see LETTRES.

Cachexia (Gk. for an evil condition), term used in medicine to express a thoroughly unhealthy condition of the body, such as that occasioned by insufficient feeding and above all by chronic maladies. Disseminated secondary cancerous growths typically cause C.

Cachoeira (waterfall), port of Baía, Brazil, 40 m. NW. of Baía, on the R. Paraguacu. It has a considerable export trade in sugar, and tobacco. Pop. about 11,000.

Cachoeira de Itapemirim, rail junction on Itapemirim R., state of Espírito

Santo Brazil. Industrial and agric. centre. Pop. 24,600 (many Germans).

Cacholong, beautiful mineral, looked upon as a variety of semi-opal. Usually it is milk-white in colour, but it sometimes has pale red and yellow tints. It is porous, and has a lustre rather like that of mother-of-pearl, whence it is often called pearl opal. The word is likely to be of Tatar origin, but it is popularly supposed to have been named after the R. Cakh in Bokhara.

Cachucha, Sp. dance of Andalusia of pronounced national character, written in 3-4 time. The dancer holds castanets, and the dance, which is graceful and voluptuous, gradually increases in speed. The head and shoulders play an important part.

Cacique, title equivalent to lord or prince, borne by native chiefs of Mexico, Peru, central America, Haiti, Cuba, and the W. of S. America at the time of Sp. exploration. More recently the title has been given to chiefs of independent Indian tribes. It is the title given to Arawak chiefs in the W. Indies in the accounts of the journeys of Columbus by Bernaldez and Peter Martyr.

Cacodaemon, see DEMONOLGY.

Cacodyl ($As_2(CH_3)_4$), or tetramethyl diarsine, is a colourless liquid boiling at $170^\circ C$. It is very poisonous, and its smell is so offensive that it was named by Berzelius from a Gk word meaning stinking, a trace of the vapour in a room being sufficient to render it intolerable. It is derived from a product known as 'Cadet's fuming liquid,' first formed by Cadet in 1760 by distilling white arsenic and potassium acetate. This liquid is fuming and spontaneously inflammable, consisting among other things of C. oxide and a little C., the latter causing the spontaneous combustion. This liquid is distilled with hydrochloric acid and corrosive sublimate and C. chloride is produced, whence C. is obtained by heating with zinc. The true nature of C. and its derivatives was discovered by Bunsen in a prolonged research about 1840. In chemical action it acts like an electrically positive element, forming an oxide, chloride, iodide, and cyanide. An acid called cacodylic acid is formed when the oxide is acted upon by mercuric oxide, and the salts are sometimes used for skin diseases. C. cyanide is a colourless liquid obtained by distilling the oxide with mercury cyanide. The operation must be performed with extraordinary care in the open air, since the volatile vapour is among the most poisonous substances known.

Cactus (plural Cacti), common name now given to plants of the family Cactaceae, though also to one genus of the family. They are characterised by very succulent stems, with absent or reduced leaves, bearing spines on a special organ, known as the areole, often together with bristles, hair, felt, or wool. The plants vary in size and shape, and stems may be flat, spherical, ribbed, triangular, columnar, or tuberculate. Their flowers are stemless, but varied in size and colouring, with numerous stamens, a slender divided

style, and berry fruits, often edible, containing many seeds. Most C. are terrestrial, a few epiphytic in warm, moist parts of central America. Almost all C. occur naturally only in America, particularly in Texas, Mexico, Lower California, Argentina, Chile, and Peru, but have naturalised in Mediterranean countries, S. Africa, and Australia. They are specially adapted in structure to live in hot dry regions and deserts, with stems that hold much water, and thickish skins of low surface area that reduce transpiration and evaporation to a minimum. They are often a source of water and subsistence in man and beast in deserts where no other vegetation will grow. The species number about 3000, now grouped into 3 tribes: *Pereskieae*, represented by 1 genus, *Pereskia*, with woody stems and broad fleshy leaves; *Opuntiae*, with succulent stems, small, soon falling leaves, sessile flowers (e.g. *Opuntia*, *Pterocactus*, *Grisonia*, etc.); and *Cerecae*, with succulent leafless stems, single, sessile flowers with a tube. The last is the largest tribe, having 8 sub-tribes: *Cereanae*, terrestrial (e.g. *Binghamia*, *Cereus*, *Heliocereus*, *Nyctocereus*, etc.); *Hylocereanae*, epiphytic (e.g. *Aporocactus*, *Hylocereus*, *Selenicereus*, etc.); *Echinocereanae*, low terrestrial plants (e.g. *Chamaecereus*, *Echinocereus*, *Echinopsis*, *Lobivia*, *Rebutia*); *Echinocactanae* (e.g. *Echinocactus*, *Ferocactus*, *Mila*, etc.); *Cactanae* (e.g. *Cactus*, *Melocactus*, *Discocactus*); *Coryphanthanae* (e.g. *Mammillaria*, *Thelocactus*, etc.); *Epiphyllanae*, epiphytes (e.g. *Disocactus*, *Epiphyllum*, *Zygocactus*, etc.); and *Rhipsalidanae* (e.g. *Leptemium*, *Rhipsalis*, etc.). The cultivation of C. is highly popular, and not difficult if it is remembered that they are naturally accustomed to a long, dormant period of drought, and a short growing one of rain. They need a porous soil of sifted loam, mortar rubble, broken brick, and coarse sand. Epiphytes need peat added. Potting is usually done in early spring; watering increased as the days lengthen and grow warmer, and reduced as they shorten, with little or no water in the cold weather months. See G. Gilbert Green, *Cacti and Succulents*, 1953.

Cacus, son of Vulcan (q.v.), notorious robber and giant. He lived in a cave on Mt Aventine, where he stored the proceeds of his raids. Having stolen and dragged into his cave some of the cattle Hercules had brought from Spain, he was killed by that hero. The cattle within the cave lowed in response to the lowing of the remainder of the herd as they were passing the entrance of the cave.

Cadamo, or **Ca' da Mosto**, Alvise (Luigi) da (1432-77), explorer, was b. at Venice. In 1456 he undertook a voyage to the Canaries, and as far as the mouth of the Gambia. In 1486 he made a voyage to Senegambia, discovering Cape Verde Is. His account of his discoveries was pub. in 1507.

Cadastral, see MAPS.

Cadaverine, or pentamethylenediamine; formula $C_5H_{14}N_2$, a colourless liquid of

ammoniacal odour, which occurs as a product of putrefaction in rotten meat and other foods which contain the amino-acid lysine. Also occurs to some extent in cheese. It is isolated by extracting the putrefaction mixture with alcohol and by precipitation with alcoholic mercuric chloride solution.

Cadbury, George (1839-1922), Quaker cocoa manufacturer and philanthropist, b. Edgbaston, Birmingham, son of John C., tea and coffee merchant and cocoa maker in a small way. In the 1860's George and his elder brother Richard took over their father's cocoa and chocolate factory. They introduced into England the modern method of producing cocoa powder by extracting part of the natural oil of the raw bean, greatly extended the range and variety of confectionery chocolate, and introduced the first Brit.-made decorated boxes. In 1879 they moved to Bournville, then outside the city, where George carried out his experiments in housing and in planning. In 1900 the estate was made over to a trust under the Charity Commission. In 1901 George became part-owner of the *Daily News* (now the *News Chronicle*); later he was its chief proprietor. George C. was much interested in social questions, particularly housing, old age pensions, and the adult-school movement. See A. G. Gardiner, *The Life of George Cadbury*, 1923.

Caddis Flies, order of insects (Trichoptera) allied to certain of the simpler Lepidoptera. The grub or larva is aquatic, feeding on water plants, and living enclosed in a sheath of stick and gravel, held together by silk. This protection is necessary, as the body is long and soft and much sought after by fish. The adult is a 4-winged, air-breathing insect not unlike a dull-coloured dragonfly with a sucking proboscis instead of jaws. It feeds on the juices of plants. Its chief characteristic features are a small head, compound eyes, hemispherical in shape, 3 eye-spots, and few or no transversal veins; the wings are covered with hairs. Adults are particularly active at night. Eggs are laid in gelatinous masses on plants, stones, or in water. The larvae build cases or tubes in which they live, composed of minute fragments of wood, grass, leaves, or shell. Within these sheaths the larvae are both sheltered and protected. When the time for pupation arrives, the C. worm closes the ends of the tube with silk, or by attracting small stones. The pupa metamorphosis then begins, and at an advanced stage the pupae burst their prisons and swim or creep about for a while before undergoing the change into aerial life. Some float on the top in their cases and then take flight. They occur chiefly in Europe, and a large percentage of species may be found in Great Britain. Some of the most noted genera in Britain are *Phryganea*, *Limnophila*, *Brachycentrus*, *Apalania*, *Mollamia*, and *Selodes*. The larvae are common in ponds and streams in spring, and are used as bait by anglers.

Cade, John (d. 1450), Eng. rebel, leader of the Kentish rising of 1450, called Jack C.'s Rebellion. The early facts of C.'s life are obscure. He seems to have been a man of some substance in Kent, and, according to some sources, claimed to be Mortimer, the Duke of York's cousin (for a different view on this see Gairdner). He headed a march of rebel Kent and Sussex yeomen on London. C.'s *Complaint of the Commons of Kent* objected to the king's favourites, excessive taxation, and general mis-gov. Another paper, *Requests by the Captain of the*

conventional progression). C.s are like punctuation marks in the language of music. They may give an effect of finality, of mere pausing, or of questioning. The varieties are known as perfect, imperfect, and interrupted. A *perfect C.* must have its final chord on the tonic. If the penultimate chord is on the sub-dominant, the C. is called plagal; if on the dominant, authentic. The harmony of the *imperfect C.* is often that of the perfect reversed, ending on a dominant chord preceded by the tonic (half close, incomplete like a semicolon). If any

Miss M. Wight

CADER IDRIS FROM THE NORTH-EAST

Great Assembly in Kent, demanded the dismissal of certain ministers of Henry VI. The king's troops were defeated in a skirmish at Sevenoaks, the rebels pressing on to London. C. had Baron Saye and Sele and Crowmer, sheriff of Kent, beheaded, but was repulsed at London Bridge. Terms of peace were arranged, but C. refused to admit defeat, though most of his supporters returned home. He went into hiding and was finally killed at Heathfield. See J. Gairdner (editor), *Three Fifteenth-Century Chronicles*, 1880, and J. Clayton, *The True Story of Jack Cade*, 1909.

Cadenabbia, It. health resort in Lombardy (q.v.), on the W. shore of Lake Como (q.v.). The 18th-cent. Villa Carlotta near by has famous gardens and many art treasures. Pop. 3000.

Cadence (Lat. *cadere*), the 'fall' or close of a musical phrase or period (often applied to the last few chords of a

except the tonic follows the chord of the dominant, the effect is that of avoiding or postponing. This is known as *avoided*, *deceptive*, or *interrupted C.* The chord substituted for the expected tonic gives an effect of surprise.

Cadency, see **HERALDRY**, *Differencing*.

Cadenza, in music signifies an ornamental flourish introduced by a soloist near the close of a piece or section of a piece. The word is Italian for cadence, and indeed the C. is simply an elaboration of a full close by the interpolation of florid matter between its chords. C.s were formerly improvised, but now the C. is nearly always written by the composer or some other musician, and affords the executant an opportunity of showing his ability.

Cader Idris (Chair of Idris), picturesque mt (2927 ft) in Merioneth, Wales. It is composed of basalt and porphyry, with beds of slag and pumice. It can be

ascended from Minfordd on the Tal-y-Llyn side, or from Dolgelly. The area is particularly interesting to botanists and geologists, and part of it was recently declared a nature reserve by the Nature Conservancy.

Cadet (military) (Fr. from O.F. Lat. *caput*, with dimin. -et) *si*..... youth studying for the army at the Royal Military Academy, Sandhurst, and serving in a pre-military training unit. In France any officer junior to another is a C. in respect to him.

Naval cadet signifies the lowest rank of officer in the R.N. Entrance is by competition. Nomination is in the hands of the Board of Admiralty. Naval C.s enter the R.N. College, Dartmouth, at the age of 18 and are promoted midshipman after 1 year (3 terms). See MIDSHIPMEN and NAVAL EDUCATION.

Cadet Force. The cadet movement in Great Britain was inaugurated in 1859, when a few units were formed, but a great impetus was given to it in the following year when a wave of patriotism spread over the country and brought into being the Volunteer Force. These 2 forces grew up side by side, the C. F. for boys and Volunteer Force for adults. The public schools were largely responsible for fathering the C. F., but the social advantages inherent in physical training, discipline, etc., soon appealed to those interested in the welfare of boys in tns, and units sprang up everywhere. The movement made an appeal to religious workers, and before the end of the cent. such excellent bodies as the Church Lads' Brigade made their appearance. Although most units were modelled on the infantry arm a cadet battery with 9-pounder guns was formed at the Royal Naval School, Eltham, whilst the cadet units at Reading and Tonbridge schools specialised in field engineering. At a later date the movement spread to the dominions. In 1908 the public schools unit became the junior div. of the Officers Training Corps, and a monetary grant was made from public funds, and the units were affiliated to units of the Territorial Force. In 1914 the strength of the force was over 40,000. During the First World War the cadets performed a variety of duties at home, and the strength rose to over 120,000. On 1 Nov. 1930, when a Labour Gov. was in office, the grant from public funds was withdrawn and the force entirely separated from the army. The grant was restored in 1937 and the C. F. eventually numbered 180,000. Units formed on a purely local basis and those in secondary modern schools now form part of the Army C. F. Those in schools where education is normally continued until the age of 17 are part of the Combined C. F. This latter force, which came into being in 1949, absorbed the school Junior Training Corps unit (previously junior div. of the O.T.C.). It comprises an army, naval, and air force section. See also TRAINING CORPS, OFFICERS. See Army C. F. Association, *The Army Cadet Force*, 1949.

Cadi, or Kadi (Arabic, 'judge'), title of an inferior judge among Muslim nations; possesses civil and criminal jurisdiction, his powers including infliction of the capital penalty; originally also a theologian, as all Muslim law is based on the Koran. A court of appeal, originally presided over by the caliph, revises the judgments of the C.'s court. In Turkey he is appointed by the head of the Muslim Church and known as 'Naib,' receiving a fixed salary. In Persia (Iran) and the Middle E. the office is of a more private nature.

Cadillac, Fr. tn in the dept of Gironde, on the Garonne. It produces white wine. Pop. 2800.

Cádiz: 1. Sp. prov., in Andalucía (q.v.), washed by both the Atlantic and the Mediterranean, and separated from Morocco by the Strait of Gibraltar (q.v.). It is very fertile, and is famous for its sherry (see JEREZ DE LA FRONTERA). There are rich mineral deposits. Area 2828 sq. m.; pop. 727,900.

2. (Anct Gaddir), Sp. city, cap. of the prov. of C. It is on the Atlantic coast, and is built on a small peninsula on the S. side of the Bay of C. It is said to have been founded in the 11th cent. bc by the Phoenicians (q.v.). In 206 bc it fell to the Romans, under whom it became very prosperous. It was taken by the Visigoths (see GOTHs) in the 5th cent., by the Moors in 711, and it was sacked by the Normans in 813. In 1262 Alfonso X joined it to Castile (q.v.). After the discovery of America it became a port of great importance. In 1587 Drake burned ships in the harbour, in 1596 the tn was sacked by the Earl of Essex, and in 1625 an Eng. attack was repulsed with heavy losses. The celebrated constitution of 1812 (see SPAIN, *History*) was promulgated here. C. is considered to be one of the most beautiful of Sp. tns, with its fine streets and squares and its white, balconied houses. Parts of the old fortifications remain, but the tn has comparatively few anct buildings. The neo-classic cathedral dates from the 18th cent.; the old cathedral was burnt by the English in the attack of 1596. The church of Santa Catalina contains a notable collection of works by Murillo (q.v.) with the painting on which he was working when he was fatally injured. C. has a medical and scientific faculty in connection with Seville Univ., and has a naval harbour and shipbuilding yards at La Carraca. The prin. exports are wines, salt, fish, fruits, cork, and oil. Pop. 103,650.

Cadman, Charles Wakefield (1831-1946), Amer. composer, b. Johnstown, Pennsylvania. He studied music in Pittsburgh, where he afterwards served as music critic on the local papers and organist in various big churches. Later he went to Denver and finally settled at Los Angeles, where he d. He became an authority on the music of the Amer. Indians. In 1909 he visited the Omaha Indian reservation and secured gramophone records of their songs and flute pieces. Among his better-known compositions are *Four Indian Songs* and an

Indian song-cycle, *From Wigwam and Teepee*, and a cantata for male voices, *The Vision of Sir Launfal*. His *Shanewis*, produced at the Metropolitan Opera House, New York, in 1918 and 1919, is the first strictly Amer. opera to have lived beyond one season. His opera, *A Witch of Salem*, was produced in 1926 by the Chicago Civic Opera Co. His *Thunder-Bird* suite for orchestra is based on melodies of the Blackfeet Indians.

Cadmium, metallic chemical element (symbol Cd, atomic weight 112.41, atomic number 48), discovered in 1817 by Strohmeyer in a sample of zinc oxide. It occurs as a constituent of most zinc ores and in the form of the sulphide in the mineral greenockite, found near Greenock in Scotland and in Bohemia and Pennsylvania. In the smelting of zinc ores the vapours of C. come off at an early stage, so that the metal can be extracted from the first portion of the condensed dust. C. is a tin-white metal and takes a good polish. When sublimed in a current of hydrogen it forms octohedral crystals, and when formed by electrolysis the sulphate and subliming the vapour in a vacuum it crystallises as flat needles. It melts at 231.7°, has a boiling point of 767° C., and a sp. gr. of 8.6. Wood's metal, which has a melting point of about 68° C., contains C. in alloy with lead, tin, and bismuth. C. is also used in electro-plating. Recently C. has been used in the atomic pile to retard the reaction by which U^{235} is converted to U^{238} . A coating of C. is very resistant to sea-water. *C. oxide*, CdO , is the 'brown blaze' of zinc smelters, and is also found as a mineral. *C. hydroxide*, $Cd(OH)_2$, is formed as a white precipitate on adding an alkali hydroxide to the solution of a salt of C. *C. chloride* is prepared by evaporating a solution of the metal or oxide in hydrochloric acid. *C. iodide* is obtained by dissolving the metal in hydriodic acid. *C. sulphide* is the mineral greenockite, and can also be produced as a yellow precipitate by passing H_2S into a cadmic solution. It is used as a pigment. *C. sulphate* is used medicinally in eye diseases. C. is bivalent, and the so-called cadmous salts are probably mixtures of bivalent C. compounds and the finely divided metal.

Cadmus, son of Agenor of Phoenicia and Europa's brother. When Zeus carried Europa off C. was sent to bring her back, but failed. The Delphic oracle bade him give up his quest, follow a cow he was to meet, and build a city where she lay down. He followed her from Phocis to Boeotia, and founded Thebes, the acropolis being called the Cadmeia. C. then slew a dragon, at Athene's command sowing the teeth, from which sprang armed men, Sparti ('sown'), who fought together till only 5 remained, from whom the Thebans claimed descent. C. married Harmonia, daughter of Aphrodite and Ares, and finally retired to Illyria as king. Probably C. was originally a Boeotian hero. The introduction into Greece from Phoenicia or Egypt of an alphabet of 16 letters is ascribed to him, and he was

considered the inventor of useful arts and of civilisation generally.

Cadmus of Miletus, legendary Gk logographer and reputed author of a hist. of Attica. Suidas mentions 3 writers so called; but the first 2 are no doubt identical with the Phoenician Cadmus.

Cadoc the Wise, St (d. c. 570), Welsh martyr, who founded the abbey and school of Llancarvan, in Glamorganshire. According to the most trustworthy accounts, he later migrated to Brittany. Having returned to Britain he was martyred by the pagan Saxon invaders near Weedon. His feast is on 24 Jan. Certain old proverbs and fables, *Doethineb Cathwg Ddoeth* (*Wisdom of Cadoc the Wise*) and *Damnegion Cathwg Ddoeth* (*Fables of Cadoc the Wise*) have been ascribed to him.

Cadogan, William, 1st Earl (1675-1726), general. It is thought that he took part as a boy cornet at the battle of the Boyne in 1690. He fought under Marlborough as a quartermaster-general in all his great battles from 1701 to 1711, and was colonel of 'Cadogan's Horse,' 1703-12. C. was sent on a diplomatic mission to the Netherlands (1707-10); appointed Lieutenant of the Tower, 1709-1715, and Governor of the Isle of Wight, 1716. M.P. for Woodstock, 1705 and 1714. He rose to the rank of general in 1717, and was created a baron in 1716 and earl in 1718.

Cadore, see PIERRE DI CADORE.

Cadorna, Marshal Count Luigi (1850-1928), It. soldier, b. Pallanza, son of Gen. Count Raffaele C., a famous soldier who fought beside Brit. and Fr. troops in the Crimean War. He early showed such high military talent that he was appointed to the general staff even before passing out of the Military Academy. He was a profound student, not merely of military subjects, but of science and topography. Promoted captain in 1875; then commanded the 10th Bersaglieri; and in 1898 became major-general, with so good a reputation as a director of military training and as a leader in the field that in 1907 he was marked out as future chief of the staff. But it was not until 1914 that he reached this post, the appointment being of good augury for the allied cause in the First World War, because his whole upbringing made C. an admirer of England and opposed to a policy of military co-operation with the Central Empires. In the conduct of the operations on the It. frontier he displayed his undoubted powers of leadership and sound strategical judgment; and if his tenure of the command was clouded by the disaster of Caporetto (q.v.) there is much evidence that he was the victim of circumstances, and that had the Allies followed his advice he might have been able to resist the Ger.-Austrian offensive. The fact that he was created a Marshal of Italy simultaneously with his successor, Marshal Diaz, is some indication of the esteem in which he was held by his countrymen. It is probable that C. risked too much in advancing eastward while ignoring the importance of the Trentino front.

Indeed the Austrian offensive in the ensuing year (1910) might have had the effect of compelling him to withdraw his E. armies but for Brusilov's (q.v.) remarkable attack on the Austrian rear (see RUSSIAN FRONT, FIGHTING ON THE). Italy was quite unprepared for war in 1914-15, her armies being ill-disciplined and anti-militaristic. It has been suggested that the allied leaders, at a conference at Rome in 1917, showed an inability to appreciate the importance of the It. front, and that they declined to help C. with reinforcements. C. felt impelled to make the best of the situation by launching a series of forlorn assaults on the Isonzo, which, while weakening the Austrian armies most appreciably, so undermined the morale of the It. troops by the protracted nature of the operations that Caporetto was the result. The Allies then made all possible sacrifices to strengthen and reorganise the It. front. C.'s command, however, came to an end, but at Versailles, where he had been transferred to the Allied Military Council, his military insight greatly impressed his colleagues. As the consequence, however, of the Caporetto inquiry, he was removed from the council and retired (Aug. 1918). All the points in his campaign and its results are brought out in his book *La Guerra alla Fronte Italiana*, which he pub. in 1921.

Cadoudal, Georges (1771-1804), Fr. rebel leader, b. near Auray, Brittany. He was among the first to take up arms against the rep., was captured in 1794, escaped, and organised a peasant army, which was never subdued. Bonaparte recognised his ability, activity, and character, and tried unsuccessfully to win him over. C. crossed to England, was made lieutenant-general by the Comte d'Artois, and in 1803 returned to France with the intention of overthrowing Bonaparte. He was captured and guillotined. His family was ennobled after the restoration.

Cadouxon, see BARRY (2).

Cadre (Fr., 'frame'), military term denoting the nucleus of a unit or regiment, consisting of the permanent estab. of officers and N.C.O.s around whom a complete unit or regiment can be built.

Caduceus, name originally for an enchanter's wand, but later also a herald's staff. Hermes, or Mercury, always carried such a staff. It had 3 shoots, 1 of which made the handle, the other 2 being intertwined at the top.

Caduceus' Wand, see DIVINING ROD.

Caduroi, see QUERCY.

Cadwallo, spelt also **Caedwalla** (d. 633), King of Gwynedd, S. Wales. He allied with Penda of Mercia and in 632 defeated and killed Edwin of Northumbria at Hatfield Chase. The following year he was himself defeated and killed near Hexham by Edwin's nephew, Oswald. He is the only known Brit. king in historic times who crushed an Eng. dynasty.

Cadzand, or **Kadzand**, vil. situated in the prov. of Zeeland, Netherlands, 14 m. NNE. of Bruges, near the mouth of the R. Scheldt. Sir Walter Manny and the

Earl of Derby defeated the Count of Flanders here in 1337.

Caeclia (Lat. *caecus*, blind), snake-like amphibian, of the order Apoda, about which little is known. It has a worm-like body, without tail or limbs and marked with ring-like grooves. These amphibians inhabit warm countries and damp places, and burrow like earthworms. They are 20 in. long, with the thickness of a large worm, and are found in America, India, and Africa. Some species lay eggs while in others the female gives birth to living young.

Caecilius Statius, Quintus (d. 168 BC), popular Rom. comic poet and dramatist, b. Milan; a slave when young, he became a friend of Ennius. He is mentioned by Cicero (*De Optimo Genere Oratorum*, i.; *Ad Atticum*, vii.; *De Finibus*, ii. 7) and Horace (*Epistulae*, ii. 1). Only short fragments of his works remain, chiefly in Aulus Gellius. See E. H. Warmington, *Remains of Old Latin*, I (Loeb Library), 1935, and G. E. Duckworth, *The Nature of Roman Comedy*, 1951.

Caecum (Lat. *intestinum caecum*, the blind gut), sac open at one end only, situated at the point of junction of the small with the large intestine. It is not connected in man with any process, but in herbivorous animals it is probably an aid to digestion, secreting a gastric fluid. The vermiform appendix enters the C. at its posterior and inner surface about 1 in. below the ileo-caecal valve. See **under** **INTESTINE**.

Caedmon (d. c. AD 680), earliest Eng. Christian poet, 'father of Eng. song'. The only trustworthy information about him is in Bede's *Ecclesiastical History*, i. r. He was a servant at Whitby monastery, where one night he had a vision, and a voice bade him sing 'the origin of created things'. 'Thus sang he of the creation of the world, and the beginning of the race of men, and all the hist. of Genesis . . . also of the terrors of the future judgment and the horrors of hell-punishment, and the sweetness of the heavenly kingdom' (Bede). C.'s *Paraphrase*, as described by Bede, was thought to be embodied in a MS. of sacred epics, now in the Bodleian Library, Oxford (titles of poems being *Genesis*, *Exodus*, *Daniel*, *Christ*, and *Salan*), but the best critics reject them, though they are possibly by later disciples. The theme anticipates that of Milton's great epics. The hymn which C. was supposed to have composed in his dream is in Northumbrian dialect, and is preserved in a MS. of Bede's *History* now at Cambridge. A memorial cross was erected at Whitby in 1898. See A. E. Smith, *Three Northumbrian Poems*, 1933.

Caeiro, Alberto, see PESSOA, FERNANDO.
Caelius Antipater, Lucius, see COELIUS.
Caelius Aurelianus, eminent Lat. physician and medical writer, b. Sicca in Africa (fl. end of the 4th cent. AD). He was an exponent of the 'methodic' school of medicine. He has left 2 valuable Lat. texts, taken mainly from the work of Soranus of Ephesus, *De Morbis Chronicis* and *De Morbis Acutis*. The text of these, with new Eng. trans. by I. E.

Drabkin, was pub. in 1950. There are also fragments of his *Medicinales Responsiones*, a general treatise on medicine, in which his *Gynaecia* is abridged from Soranus's *Peri gynaikion pathôn* (eds. Amman, 1709; Haller, 1774; Rose, *Anecdota Graeca et Latina*, II, 1870). His writings were considered more practical than those of any other medical authority of antiquity. See Kuehn, *Programma de Caelio Aureliano*, 1816.

Caelum, small constellation W. of Columba and S. of Eridanus, containing no bright stars. It is too far S. to be seen in the Brit. Isles.

Caen (Lat. Cadomum), Fr. tn, cap of the dept of Calvados, on the Orne, 7 m. from the Eng. Channel and 124 m. by rail from Paris. It is in a fertile plain, the 'Campagne de Caen' which is a prosperous agric. and horse-breeding dist. The tn has a busy port, connected to the sea by the Orne canal. Near by is the 'Prairie' with its raccourse, and also the celebrated subterranean stone quarries, from which comes the C. stone widely used in England and elsewhere from the 11th cent. onwards; Cologne, Winchester, and Canterbury cathedrals are built of it, also Henry VII's Chapel at Westminster, and it is still used. C. has long been an intellectual centre, the 'Athens of Normandy,' and has a univ. founded in 1432 by the Eng. regent, the Duke of Bedford. The tn is very old, dating from at least the 9th cent. It was taken by Edward III in 1346, and again taken by the English in 1417 and retained by them until 1450. In the 17th cent. C. was a Huguenot stronghold, and lost many of its leading citizens after the revocation of the Edict of Nantes in 1685. In 1793 many Girondists (q.v.) took refuge in C. after the fall of the Gironde, and it became the centre of the federalist attempts against the Convention. It was from C. that Charlotte Corday set out to kill Marat. C. is a tn of splendid churches. The Church of St-Etienne (also called the Abbaye-aux-Hommes) was founded by William the Conqueror. A monument there set up to him by Wm Rufus was destroyed in 1562 by the Huguenots, the church also being much damaged. It was restored early in the 17th cent., a marble slab marking William's former resting-place, with the inscription: 'Here lies the unconquerable William the Conqueror, Duke of Normandy, King of England.' The Church of the Trinity (also called the Abbaye-aux-Dames) was founded by William's wife, Matilda, who was buried in the choir. The Church of St-Pierre, known for its magnificent tower, lost its spire during a bombing raid in 1944. The tn suffered very severely during the campaign in Normandy in 1944 (see WESTERN FRONT IN SECOND WORLD WAR, INVASION OF NORMANDY), over half the tn, including the univ., being demolished in the tremendous aerial bombardments of June and July. There has been extensive rebuilding. The restored univ. was inaugurated in 1957. C. has iron, silk, and leather manufs., engineering works, and a considerable trade in agric. produce. Coal is

imported, and iron and steel are exported. Malherbe, Huet, and Auber (q.v.) were natives of C.; Beau Brummell was consul at C. and died in a lunatic asylum there. Pop. 62,000. See L'Abbé de la Rue, *Essais historiques sur la Ville de Caen*, 1820-42; E. de R. de Beaufort, *Caen illustré*, 1896.

Caerdydd, see CARDIFF.

Caere, see CERVETERI.

Caerlaverock, rural par. in Dumfriesshire, Scotland, on the Solway Firth about 6 m. from Dumfries. It is famous for its ruined castle, the seat of the Maxwells. Pop. 710.

Caerleon-on-Usk (Rom. Isca Silurum), tn in Monmouthshire, England, 3 m. N.E. of Newport; pop. about 5000. Isca Silurum, planned by Sextus Julius Frontinus, governor of Britain AD 74-8, was the H.Q. of the Second Legion, which arrived there about the year 75 and remained for cents. The place was a focal point from which a network of roads spread W. and N. into Wales; it was therefore one of the most important points in Rom. Britain. The military quarters and amphitheatre had already been excavated when, in 1954, there was discovered on an adjacent site a large tn, distinct from, but once dependent on, the fortress; it was occupied, as were similar tns at York and Chester, by the wives and families of the legionaries.

Caernarvon, co. tn of Caernarvonshire, N. Wales, situated on the Menai Straits, 68 m. W. of Chester by rail. It was once the Rom. station Segontium (Caer Seint), the cap. of the Segontiaci. The castle, one of the finest examples of medieval fortification in the Brit. Is., lies to the W. of the tn. It was built by Edward I in 1284, and is in excellent preservation. It is an irregularly shaped building with 13 polygonal towers; the famous Eagle Tower was built by Edward II. The castle was besieged by Owen Glendower in 1402. The investiture as Prince of Wales of Prince Edward took place at the castle on 13 July 1911. The par. church lies outside the tn at Llanbeblig. C. is a municipal bor. and market, and the chief industries are agriculture, printing, coarsery, leather cloth, shipbuilding, fishing, and tanning; slate is also exported. Pop. 9300. C. Bay, to the S., is a favourite summer resort.

Caernarvonshire (Welsh, *Caer-narfon*, *Caer-yn-Arfon*), co. of N. Wales, bounded N. by the Irish Sea, E. by Denbigh and Merioneth, S. by Cardigan and Tremadoc Bays, W. by Caernarvon Bay and the Menai Straits, dividing it from Anglesey. In ant. times C. was inhabited by the Segontiaci; from here Agricola effected the conquest of Anglesey; many remains of Brit. earthworks, etc., are to be found in various parts of the co. The area of the co. is 569 sq. m., and a large part of it is occupied by the Lleyn Peninsula jutting out into the Irish Sea and forming Caernarvon and Cardigan Bays. C. contains some of the finest scenery in Wales, with splendid mts and beautiful valleys. The mts include Snowdon (Y Wyddfa or Eryri), 3560 ft, the highest point in

England and Wales, at the foot of which lie the well-known valleys of Boddgelort and Llanberis, Carnedd Llewelyn (3484 ft.) and Carnedd Dafydd (3426 ft.). The tidal R. Conway is navigable for about 12 m. and divides Caernarvon from Denbigh; the Nant Ffroncon runs through the Betws-y-Coed valley to Beaumaris Bay; the co. also boasts of many lovely lakes, including Llyn Ogwen, a m. long and 984 ft. above sea level, and resorts such as Criccieth with its castle, Llandudno, Conway, Penmaenmawr, Llanfairfechan, etc. Lead and copper are found, and the slate quarries, especially those at Ponrhyll and Dinorwic are most productive. Sheep farming is carried on in the valleys and Welsh ponies are bred here. C. is in the diocese of Bangor, with a small portion in St Asaph. It returns 2 members to the House of Commons. Pop. 124 100.

Caerphilly (fort of the trench), urb. dist., par. and mkt. tn of Glamorgan, Wales, 7½ m. from Cardiff, with ruins of a castle, once one of the largest strongholds in the kingdom. There are large collieries, by-product plants, factories, and locomotive works near by. C. gives its name to a variety of cheese. Pop. 36,000.

Caerwent, vil. of Monmouthshire, Wales, 6 m. W. of Chepstow, formerly *Venta Silurum*, the only Rom. tn estab. in Wales, covering some 44 ac. and made while the fortress at Isca Silurum (see CAERLEON-ON-USK) was being built. The church, dating from the 13th cent., incorporates much Rom. material. Pop. 2000.

Caesalpinia, tropical genus of Leguminosae consisting of trees and shrubs, many of which are hook-climbers, and sev. being of commercial value. *C. pulcherrima*, Barbados Pride, is cultivated for its beautiful flowers, as are *C. sepiaria*, Mysore thorn, which bears yellow flowers, and *C. japonica* and *C. gilliesii*, which will flourish out of doors. *C. brasiliensis* yields Pernambuco or Brazil wood, valuable for its red dye, while *C. sappan* yields sappan-wood or bukkum wood. *C. coriaria* is known as the Divi-divi tree and *C. bonducella* yields bonduce seeds.

Caesalpinus, Andreas (Latinised form of Andrea Cesalpino) (1519-1603), lt. botanist and physiologist, b. Arezzo in Tuscany. He studied at Pisa and afterwards became a prof. there, where he had charge of the botanical museum. His chief work was pub. in Florence in 1583 under the title of *De Plantis Libri XVI*.

Caesar, originally the name of a patrician family of the gens Julia in anc. Rome. Adopted by Augustus as heir of Julius Caesar, it continued to be borne, not as a name but as a second title by the emperors even after the direct line of the Julian family had become extinct. From the time of Hadrian it was also used as the title of the heir-apparent to the imperial throne. Derivations of this title were used until modern times by the rulers of Germany, Imperial Russia, and Bulgaria, and also by the Brit. monarch as Emperor of India (Kaisar-i-Hind).

Caesar, Sir Charles (1590-1642), judge, third son of Sir Julius C. (q.v.), was

educ. at Magdalen College, Oxford; fellow of All Souls, 1605; entered the Inner Temple in 1611. He paid James I. £15,000 for the mastership of the rolls in 1639.

Caesar, Gaius Julius (102-44 bc), Rom. statesman and one of the world's greatest military commanders. He was descended from a patrician family which had long been attached to the senatorial clique; but from the earliest years of his public life he sided with the popular party. This was due to the influence of G. Marius (q.v.), who was his uncle by marriage and had created him priest of Jupiter in 86.

British Museum

GAIVS JULIVS CAESAR

In 83 C. incurred the wrath of Sulla (q.v.) by his own marriage with Cornelia, daughter of L. Cornelius Cinna (q.v.), and he was proscribed. His aristocratic relatives and the college of vestal virgins persuaded the dictator to spare his life; but he deemed it prudent to leave Italy for the time being. In 81, therefore, he left for Asia, and for the next 3 years served with distinction in the Rom. army. Following Sulla's death in 78 C. returned to Rome and showed his democratic sympathies by prosecuting Gn. Dolabella for extortion in the prov. of Macedonia. The prosecution failed, and C. once more withdrew from Italy. He studied rhetoric under Molon at Rhodes and played a useful part in the opening stages of the third Mithradatic war. Returning to Rome in 74 or 73, he found that he had been elected to a place in the college of pontiffs. His ambition had no doubt already been awakened; but the time was not yet ripe for political advancement, and he embarked on a brief career of gaiety out of all proportion with his private means. In 68 he was quaestor in

Hither Spain; aedile in 65, when he added still further to his enormous debts by lavish expenditure on public entertainments and buildings; and in 63 he was chosen *pontifex maximus*. Meanwhile Cornelia had *d.*, and C. had married Pompeia, daughter of Q. Pompeius Rufus (67). He had also exhibited his goodwill towards Pompey (q.v.) by supporting the Gabinian and Manilian laws. After serving as praetor in 62 he went in the following year as pro-praetor to farther Spain, thereby enabling himself to reduce his debts, and to win a considerable military reputation by victories over the Lusitanians. In 59 he was consul and formed the first triumvirate with Pompey and Crassus. As consul C. put through an agrarian law, won the favour of the equites by certain financial measures, and secured the ratification of Pompey's E. settlement. In return, the people voted him the gov. of Illyricum and Cisalpine Gaul for a period of 5 years, to which the Senate were obliged by popular opinion to add Transalpine Gaul. It was about this time also that C. divorced Pompeia on account of a supposed liaison with Clodius (q.v.), and married his third wife, Calpurnia, who survived him. The years 58-50 were spent mostly in Transalpine Gaul, which he subdued by a series of brilliant campaigns. A new arrangement with Pompey and Crassus (55) gave C. an extension of his command for another 5 years to 30 Dec. 49. But Pompey's jealousy had been aroused; the death of his wife Julia (C.'s daughter) in 54 dissolved one of the few remaining bonds between the 2 leaders, and the death of Crassus at Carrhae in 53 left them without a mediator. Towards the end of 52 Pompey, after being sole consul for that year, was granted the governorship of Spain for 5 years, which he proceeded, against all constitutional practice, to exercise by deputy since he dared not leave Rome. C. asked for election to the consulate for 49 notwithstanding his absence from the capital; the Senate refused, the quarrel with Pompey had reached its limit, and C. crossed the Rubicon early in the new year, thereby precipitating civil war. He drove the Pompeian forces from Italy to Greece; hurried to Spain, where he defeated Afranius and Petreus in a bitterly fought campaign. Returning to Rome, where he had been appointed dictator, C. was elected consul for 48, and then crossed to Greece. After being worsted by Pompey before Dyrrhachium, he routed him at the great battle of Pharsalus (9 Aug. 48). Pompey fled to Egypt, but was murdered before C.'s arrival there.

No sooner had C. reached Alexandria than he became embroiled in a war with the ministers of Ptolemy XIII. This was terminated in Mar. 47; whereupon C. marched through Syria and Asia Minor, defeating Pompey's ally Pharnaces at Zela. He returned to Rome in Sept., but before the end of that month he was called to meet a new threat in Africa. There, on 6 April 46 he defeated the senatorial commanders Scipio and Cato

at Thapsus. Back again in Rome, as undisputed master of the Rom. world, C. was appointed dictator for 10 years. The crowning victory, however, had yet to be achieved. Pompey's 2 sons, Gnaeus and Sextus, determined to make a last stand in Spain. C. annihilated their forces at Munda on 17 Mar. 45. But jealousy reared its head in the hour of triumph. On 15 Feb. 44, at the festival of Lupercalia, Mark Antony (q.v.) offered C. a crown. It was refused; but on the Ides of March following Cassius (q.v.) and his fellow conspirators struck, and C. lay dead at the foot of Pompey's statue in the senate house.

C. has been bitterly attacked as a man of overweening ambition. It should, however, be borne in mind that since the beginning of his political career, and long before, the republican gov. had been hopelessly inadequate and utterly corrupt. The legislative measures proposed by C. in the short time at his disposal may not conform to our picture of an ideal state, but they do not suggest inhuman tyranny. No political reputation could have come unsullied through the bog that was republican Rome in the 1st cent. bc. No doubt whatsoever attaches to C.'s transcendent genius as a soldier.

In private life C. manifested those gifts which belong to a cultured gentleman. The aspersions cast by Catullus and others against his moral character would not to-day bear the scrutiny of the most servile bench of magistrates.

As an author C. was ranked by his contemporaries in the highest class. We possess no example of his celebrated eloquence; but the purity of his style, no less than his military genius are enshrined in the Commentaries, *De Bello Gallico* and *De Bello Civili*, of which there is a complete trans. (J. Warrington) in Everyman's Library. See J. A. Froude, *Caesar*, 1879, and T. Rice Holmes, *The Roman Republic and the Founder of this Empire*, 1923.

Caesar, Sir Julius (1558-1636), lawyer, noted for his great generosity, was the son of Cesare Adelmare, physician to Queen Mary, and a descendant of the It. dukes de' Cesarini. C.'s father migrated to England, about 1550, and began practice in London as a physician. He obtained letters of naturalisation from Queen Mary with immunity from taxation in 1558. On one occasion he received the magnificent fee of £100 from her for a single attendance. Queen Elizabeth also consulted him and rewarded him with leases of eccles. lands at low rents. The son, who was b. Tottenham, was educ. at Magdalen Hall, Oxford, and took degrees both there and in Paris. He was called to the Bar in 1580; became judge of the admiralty court, 1584; chancellor of the exchequer, 1606; master of the rolls, 1614. He was a friend of Whitgift and of Bacon, and had a high reputation for integrity. He wrote a treatise on the Privy Council, and with Lord Keeper Coventry drew up ordinances of procedure intended to correct abuses which had grown up in the court of chancery.

Caesar-Augusta, see ZARAGOZA.

Caesarea: 1. Anct name of Kalsarieh, a coast vil. and fishing port of Isernel, 28 m. from Tel Aviv. Founded by Herod the Great, a very important city often mentioned in the Bible. After AD 70 it was the cap. of Rom. Palestine and residence of the procurators, and the eccles. cap. until AD 451. St Paul was a prisoner in C. for 2 years. The tn was taken by the crusaders under Baldwin I in 1101, when the booty included the green crystal vase supposed to have been used at the Last Supper and, later, celebrated in medieval legend as the Holy Grail. C. was destroyed by Bibars in 1265. Very little remains to-day of the anct city. The ruins are surrounded by a low, grey stone wall. Coasting vessels often put in, as water is good and abundant.

2. C. Philippi, now Baniás (Panaas), vil. of Syria, near R. Jordan below Mt Hermon, 45 m. from Damascus. Founded by Philip the Tetrarch, 3 BC, it was prominent in time of the Crusades.

3. Anct name of Cherchel, a seaport tn of Algeria, 55 m. from Algiers. Ruins are still left. The port is shallow and exposed to N. winds. Near by are large marble quarries, and mines of silver, iron, and lignite. Pop. about 4000 (com. 8000).

Caesarean Section, operative delivery of the foetus from the uterus by incision through the abdomen and uterus. Modern practice is to make the incision through the lower segment of the uterus (q.v.) and this avoids to a large extent the danger of the uterus rupturing at the site of the scar in any subsequent pregnancy. Sepsis used to be a feared complication of C. S., but with the aid of chemotherapy this is now rare. The availability of blood transfusion has also added to the safety of the operation. Julius Caesar is believed to have been delivered by this method, hence the name. See OBSTETRICS.

Caesarion (47-30 BC), son of Cleopatra, who declared that Julius Caesar was his father. Though this has been denied, it is said that Antony once told the senate that Caesar had acknowledged the relationship. In 34 BC he received from Antony the title of king of kings, but 4 years later he was put to death by order of Augustus.

Caesena, see CEFENA.

Caesium, metallic chemical element usually associated with rubidium. It was the first metal discovered by spectrum analysis, in the mineral spring at Dürkheim and, later, in those of Frankhausen and Wheal. It occurs in the rare mineral pollucite, a hydrated C. aluminium silicate; in minute amount in a number of continental mineral springs; and in carnallite (hydrated chloride of potassium and magnesium). It is a silvery white metal, inflames in air when heated, melts at 26°, boils at 670°, has a sp. gr. of 1.85, and is poisonous to vegetable life. Chemical symbol Cs; atomic weight 132.8; atomic number 55.

Caesura (Lat., 'cutting'), point at which a line of verse divides naturally into 2

parts, involving a metrical rest or stop. It comes between 2 words and commonly about the middle of the line, but need not coincide with any pause in grammar or sense. The term is taken from the classics: in Gk and Lat. hexameters there is a C. usually either in the 3rd foot (penthemimeral C.) or in the 4th (hephthemimeral C.). In Eng. heroic verse it occurs most commonly after the 4th or 6th syllable. A line may have more than 1 C., and lines shorter than the deca-syllable may have none. The C. is especially noticeable in long lines such as Tennyson's 'All the charm of all the Muses / often flowering in a lonely word.' See W. R. Hardie, *Res Metrica*, 1920.

Cafaggiolo, see BARBERINO DI MUGELLO.

Café, see COFFEE HOUSES.

Caffa, see KAFFA.

Caffeine (C₈H₁₀N₄O₂) is a vegetable alkaloid of the xanthine group. Its chemical name is 1 : 3 : 7 trimethylxanthine, and it has been synthesised in the laboratory. Its occurrence in beverages in common use makes its study important. Thus it is the same as theine, which exists in tea-leaves to the extent of 3.2 per cent, in coffee 1.5 per cent, in Paraguay tea or maté, and beverages concocted from the kola nut. It may be procured from a strong infusion of tea in the following manner: The tannin is precipitated by means of lead acetate, the excess of which is precipitated by passing through it hydrogen sulphide. On filtration the liquid is evaporated down and neutralised with caustic potash, when on cooling the C. will crystallise out. The crystals are colourless, long, and silky, with one molecule of water of crystallisation. They are only slightly soluble in cold water, but easily soluble in hot water or alcohol and in chloroform. The salts are decomposed by water, but the citrate, produced by adding C. to a hot solution of citric acid and evaporating, is widely used, having the same properties as C. C. is a product of xanthine, and they are both products in the breaking down of the nucleo-proteins of the plants, the final product being uric acid. In the human body uric acid is not produced by C., so that there is no danger to be feared from it by people with gouty dispositions. C. is primarily a stimulant. It stimulates the reasoning powers as well as others and prevents sleep. Unlike alcohol, its action is not followed by a sedative effect, and hence it may be termed a true stimulant. In medicine it is used as a heart stimulant, also as a diuretic. **Caffeic acid** is obtained by boiling with caustic potash caffeoyllic acid, which occurs to the extent of 4 per cent in coffee berries. It crystallises in yellow monoclinic crystals, and has the formula C₈H₆(OH)₂CH = CH·COOH.

Caffraria, **Caffres**, see KAFFIRS and KAFFRARIA.

Caffristan, see KAFFRISTAN.

Caffyn, Matthew (1628-1714), Arminian Baptist minister. He was expelled from Oxford Univ. for his beliefs, and became minister at his native place, Horsham, in Sussex, where he was 5 times imprisoned for unlicensed preaching. His *Arian*

doctrines led to a split in the Baptist Church (1701). But the 2 dissident parties came together again in 1704. There was the first deliberate endorsement of latitudinarian opinions in the article of the Trinity by the collective authority of any tolerated section of Eng. dissent. C.'s works are very rare. They include *Envy's Bitterness corrected* (c. 1674), *A Raging Wave foaming out of its Own Shame*, 1675, *The Great Error and Mistake of the Quakers* (no date), *Baptist's Lamentation* (no date), and numerous polemical tracts. See T. Crosby, *History of English Baptists*, 1740.

Cafila, or **Cafila**, term used for a company of travellers or a caravan in Arabia, Persia, and N. Africa.

Caftan (Turkish *qafan*), national dress of the Turks. It is usually made of woollen or silk material, and is white in colour, with a yellow flowering design. C.s were frequently used as gifts, by the Turkish court, to Christian ambas, who in the 18th cent. were required to wear them on ceremonial occasions in the presence of the Sultan or the Grand Vizir.

Caayan, large prov. at the extreme N. of the is. of Luzon, in the Malay Archipelago. It is extremely fertile, and rice (the staple food) and tobacco are the chief crops. C. is also the name of the largest riv. of the is. Area 3470 sq. m.; pop. 311,088. C. is also the name of a tn in Mindanao is. Pop. 46,266.

Cage-birds. From earliest times birds that are notable for their plumage, their song, or their interesting ways have been kept in confinement as pets. The favourites among the songsters are the nightingale, blackcap, thrush, blackbird, skylark, woodlark, and starling; while the linnet, goldfinch, bullfinch, siskin, and canary are also popular. The last-named is one of the commonest C. in this country, and, though really a foreign bird, has become thoroughly acclimatised. Siskins and redpolls, and also linnets and goldfinches, have been made to draw their water and food in miniature buckets from wells beneath their bucket-board. It is, unfortunately, also the case that birds have had their eyes 'bleared' with a hot iron to make them sing better. Of other Brit. birds, the common jay and the jackdaw are often kept as C. for the sake of their entertaining ways and their powers of mimicry. Foreign C. are more sought after for their plumage than for their song, though the canary, shama, Amer. mockingbird, Virginian nightingale, Peking nightingale, bulbul, and bluebird are all good songsters. The Australian budgerigar (q.v.) is also popular. Parrots are much in request as C., and parakeets and cockatoos are also kept, though the latter are somewhat noisy for the house. Of the parrots, the yellow-faced Amazon is the best talker. The greys from S. and W. Africa are not acclimatised at all easily; of the 2 species, that from W. Africa is the harder. Care has to be taken in the feeding of C. The soft-billed songsters, such as the thrush and the lark, should be fed on crushed hemp, bread-crumbs, and

insects, and a spider is one of the best of tonics for them. The nightingale requires special attention, being difficult to feed and rear properly. Some birds, such as the finches, linnets, and canaries, eat mostly grain, while others, such as starlings, redbreasts, and wrens, feed mostly on insects or berries. Canary seed and rape seed are chiefly used for the grain-eating birds, and canary seed is the best food for all species of parrots. The ailments of C. are mostly due to excessive or otherwise improper feeding, combined with their lack of exercise in confinement. The most universal remedy is a drop of castor oil, administered with a quill or a camel-hair brush. Birds are more sensitive to draughts than human beings, and should never be placed in a window for that reason. Nor should they be kept in conservatories, or other places where the temp. is variable. Birds kept under bad conditions in this respect are always in bad health, and pulmonary troubles sometimes result. Epilepsy, due to overfeeding, constipation, and diarrhoea may occur when the birds are moulting. A rusty nail in the drinking water is a good thing at such times, and stimulating food should be given. See W. A. Blakston, W. Swainsland, and A. F. Wiener, *Illustrated Book of Canaries and Cage-birds, British and Foreign*; C. Rogers, *Budgerigars and How to Keep Them*, 1936; L. P. Luke and A. Silver, *Aviaries, Bird-Rooms, and Cages*, 1939; C. St John, *Canary Breeding for Beginners*, 1947.

Cages have frequently been used in the past for the imprisonment of human victims. The philosopher Callisthenes was kept in an iron cage for 7 months by Alexander the Great for refusing to pay him divine honours. Catherine II of Russia imprisoned her wig-dresser for 3 years in an iron cage lest people should know that she wore a wig. Edward I confined the Countess of Buchan and a sister of Robert Bruce in a similar way. The former, whose offence was placing the crown of Scotland on the head of Bruce, was placed in an iron cage on one of the towers of Berwick Castle. Similarly, Tamerlane made a public show of the Ottoman sultan, Bayazid I. Louis XI confined Cardinal Balue, grand-almoner of France, in an iron cage in the castle of Loches for 11 years. The bodies of the Anabaptist leaders, John of Leyden, Knipperdolling, and Krockting, were exposed in iron C.s at Münster, Westphalia, in 1536.

Cagliari, or **Callari**, Paolo, see VERONESE. **Cagliari**: 1. Prov. of Italy, in S. Sardinia (q.v.). It has coastlines on the W., S., and E., and is generally mountainous. The prov. is crossed NW.-SE. by a broad plain, watered by the Mannu and its tribs. and the Tirso and its tribs. At the NW. end of the plain there are sev. lakes. Area 3585 sq. m.; pop. 710,000.

2. (Anot Carales), it. city, cap. of the prov. of C., and chief tn of Sardinia. It is on the S. coast of the is., at the head of a broad inlet of the Mediterranean called the Gulf of C. The city is built at the

base and on the slopes of a hill, and has salt lagoons on either side. By origin probably a tn of the Phoenicians (see PHOENICIA), C. became prosperous under Carthage and Rome (qq.v.). It was taken successively by the Vandals (AD 485), the Byzantines (533), the Saracens (12th cent.), Pisa, Aragon (1326-1714), and Austria (qq.v.), and eventually went to the House of Savoy (q.v.). There was severe damage in air-raids during the Second World War; in a daylight raid on the It. base at C. by 100 Flying Fortresses on 31 Mar. 1943, more than 25 ships in the harbour and many planes at 3 adjacent airfields were destroyed or damaged. C. has an archiepiscopal cathedral (13th-17th cents.), a univ. (1606), a botanical garden, and an archaeological museum. There are remains of medieval fortifications, and Rom. remains, including a Punico-Rom. necropolis. There is a fine and busy harbour; the chief exports are zinc, lead, and salt. There is also a fishing industry. Pop. 171,600.

Cagliostro, Alexander, Count (1743-1795). It. impostor, b. Palermo. His real name was Giuseppe Balsamo. He was educ. at the monastery of Caltagirone, where he acquired a smattering of chem. and medicine. His conduct led to his expulsion, and later he travelled considerably, visiting, it is believed, Greece, Egypt, Arabia, Persia, Rhodes, and Rome. In Rome he met and married a beautiful girl, Lorenza Feliciani, who proved a willing confederate in her husband's trickeries. In Rhodes C. had studied alchemy under the Gk Althotas. Later he travelled through Italy and Germany, posing alternately as necromancer, physician, and freemason. At Strasbourg he grew rich with the profits of his 'elixir of immortal youth.' The count would solemnly declare he was a cent. and a half old, and his wife, who was only 20, would refer to an imaginary son who was a veteran Dutch naval officer. They made a fortune from the gullibility of the fashionable society of the day; but C.'s quackeries were one by one exposed. The Scottish physician to Catherine, at St Petersburg, pronounced his celebrated 'spaginic food' unfit for dogs: in Paris he was deeply involved in the affair of the diamond necklace (1785) and thrown into the Bastille; on his liberation he went to England, where lawyers succeeded in confining him in the Fleet. Finally, after further degradations and compulsory wanderings, this 'bull-necked forger' underwent a sentence of perpetual imprisonment at Rome for freemasonry. He d. in the fortress prison of San Leone, whilst his wife found refuge in a convent. An excellent account of this prince of charlatans will be found in Carlyle's *Miscellanies*. See also W. R. H. Trowbridge, *Cagliostro: the Splendour and Misery of a Master of Magic*, 1910.

Cagots, name of a distinct and formerly outcast people living in the Basque provs. of the W. Pyrenees. The name is also applied to similar peoples in Béarn, Gascony, and Brittany. The origin of the C. is uncertain. Various traditions claim

that they are descended from the heretic Visigoths, who remained in France after their defeat by Clovis in the 5th cent. Another tradition gives them descent from the Saracens conquered by Charles Martel. It is now more generally considered that they were originally ostracised on account of their leprosy, which they have long since thrown off. There is no evidence to show that they ever used a separate language. At the time of the Fr. Revolution they were given equal rights as citizens, and they have since become more or less merged in the general peasantry.

Cahan, Charles Hazlitt (1861-1944). Canadian statesman, journalist, and lawyer, b. Nova Scotia, and graduated at Dalhousie Univ. He was elected in 1890 as a member of the Nova Scotia Legislature, and was soon made leader of the Conservative party. Moving to Montreal, he became one of the leading lawyers in the dominion. When R. B. Bennett (q.v.) became Prime Minister in 1930, he made C. secretary of state in his Cabinet.

Cahir, tn with trade in corn and flour, co. Tipperary, Rep. of Ireland. 11 m. W. of Clonmel, beautifully situated on the R. Suir, at the foot of the Galtee Mts. C. Castle (15th cent) is the largest of its kind in Ireland, and stands on a rocky is. in the riv. Pop. 1900.

Cahiriveen, tn in co. Kerry, Rep. of Ireland, of great scenic and antiquarian interest. Ballycarberry Castle and Leacanabuaile Fort (excavated 1940) are near by. Carhan near C. was the bp. of the 'liberator' Daniel O'Connell (q.v.). Pop. 1687.

Cahors (anc. Divona), Fr. tn, cap. of the dept. of Lot, on the Lot. It is the seat of a bishopric, and was the cap. of Quercy (q.v.). There are Rom. remains, and many remarkable buildings, including a 12th-cent. cathedral, a 14th-cent. 3-towered, fortified bridge, and the 14th-cent. castle of the seneschal of Quercy. Pope John XXII and Gambetta (q.v.) were b. in C. It manufs. leather and pottery, and has a trade in wine, wool, and nuts. Pop. 15,300.

Caiazzo, It. tn, in Campania (q.v.). 7 m. N. of Caserta (q.v.). It has Rom. remains. Pop. 6000.

Calbarien, or Puerto de Calbarien, tn and seaport situated on the N. coast of Cuba, Las Villas prov., 5 m. from Remedios. It possesses a good harbour, and railway communication with Espiritu Santo and Remedios. It processes and exports products of the surrounding agric. dist. Sponge-fishing is done. Pop. 21,380. dist. Sponge-fishing is done. Pop. 21,380. dist. Sponge-fishing is done. Pop. 21,380.

Calcos Islands, see TURKS and CAICOS. Calco, see GAETA.

Caillaux, Joseph Pierre Marie Auguste (1863-1944). Fr. politician, b. Le Mans, was educ. for the law; became inspector of finances in 1888, and in 1892 prof. in the Ecole des Sciences Politiques. He was elected deputy for Sarthe in 1898, in 1902, and in 1906—when he became vice-president of the Chamber. C. was minister of finance under Waldeck-Rousseau, 1899-1902; Clemenceau, 1906-8; Monis, 1911. He was Prime Minister, 1911-12. In 1913

he again became finance minister, in the Doumergue Cabinet. When his wife murdered the editor of *Figaro*, Gaston Calmette (q.v.), C. resigned, and defended her. She was acquitted. During the First World War he was at first paymaster-general of the forces. Suspected of defeatism, he was arrested, Jan. 1918, but not put on trial until Feb. 1920. Although the case against him collapsed, he was condemned to 3 years' imprisonment and to 10 years' loss of civic rights and other disabilities, but he was released next day, and in 1924 received the benefit of the general amnesty. He was for a little while minister of finance under Poincaré in 1925; and again in 1926 he held that office for a few weeks. Two years later he brought about the fall of the Poincaré Gov. President of finance committee of Senate, 1932. He last held office as minister of finance in 1935, in Bouisson's short-lived gov. He remained chairman of the finance committee of the Senate until the collapse of France in 1940. C. was a politician of continental repute, but his arrogance made him many enemies. He was an expert in taxation, and effected reforms in many spheres of Fr. financial administration. His pub. include his *Mémoires*, 1942-7.

Caillé, or Caillié, René Auguste (1799-1839), Fr. traveller, b. Mauzé in Poitou, the son of a baker. Having gone to Senegal while still a youth, he learned in 1826 that the Paris Geographical Society had offered 10,000 francs to the first traveller who should reach Timbuktu. Attired in Moorish dress, he set out from Kakondy in Sierra Leone on 18 April 1827, and reached Timbuktu on 20 April 1828, proceeding thence across the Sahara to Tangier, which he reached only after great privations. He received the 10,000 francs, and also the order of the Legion of Honour and a pension. He pub. an account of the journey, ed. by E. F. Jomard. He d. at Badere of a disease contracted during his travels. See also F. Dubois, *Tombouctou la mystérieuse*, 1887.

Cailliaud, Frédéric (1787-1869), Fr. explorer in Egypt and Nubia, b. Nantes. A goldsmith by trade, he was led to examine the mineral resources of Egypt, and, in so doing, located the site of the ant. emerald mines of Jebel Zabara. He made important discoveries in Siwah, his report thereon leading to its annexation by Egypt in 1820, and he also made a notable journey of discovery to the White Nile, in company with Ibrahim Pasha's expedition, and pub. the results in his *Voyage à Meroé au fleuve Blanc*, 1826.

Caiman, or Cayman, name given to sev. species of alligator found in Central and S. America. The C. differs in some points from the alligator of China and also of N. America, but only in minor details. Except for one Chinese species, the alligator is peculiar to America.

Cain, first-born of Adam and Eve, and first murderer. He slew his brother Abel because Abel's sacrifice was accepted and his was not. Banished for this deed, he

went to live in the land of Nod. A protective mark was, however, put on him and a curse was pronounced on anyone who should kill him. Tradition says he was slain accidentally. The Ophite Gnostics (AD 130) were called Cainites, as they held peculiar views of the significance of C. and Abel (Gen. iv).

Caine, Sir Thomas Henry Hall (1853-1931), novelist, b. Runcorn, Cheshire, of Manx and Cumberland parentage. He was educ. in the Isle of Man and at Liverpool. After studying as an architect, he became leader writer on the *Liverpool Mercury*, and gradually took up literary work. He went to London on the invitation of D. G. Rossetti, and wrote for the *Athenæum*, the *Academy*, and other periodicals. After publishing *Recollections of Rossetti*, 1882, *Sonnets of Three Centuries*, 1882, and *Cobwebs of Criticism*, 1883, he began a successful career as a novelist with *The Shadow of a Crime*, 1885. His subsequent novels included *A Son of Hagar*, 1887, *The Deemster*, 1887, *The Bondman*, 1890, *The Scapegoat*, 1891, *Captain Davy's Honeymoon*, 1892, *The Manxman*, 1894, *The Christian*, 1897, *The Eternal City*, 1901, *The Prodigal Son*, 1904, *The White Prophet*, 1909, *The Woman Thou Gavest Me*, 1913, *The Master of Man*, 1921, and *The Woman of Knockaloe*, 1923. He ed. *King Albert's Book*, 1914-1915; in 1928 issued an enlarged version of his *Recollections of Rossetti*. His *Life of Christ* was pub. after his death, in 1938. *The Deemster* was made into a play as *Ben-my-Chree* in 1889, and sev. others of his novels were dramatised. In 1895 he went to Canada for the Society of Authors and the Colonial Office to negotiate terms of copyright. He was elected to the Manx House of Keys in 1901, and was made a K.B.E. in 1918 and a C.H. in 1922. He d. at Greeba Castle, Isle of Man, leaving a fortune of £250,000. See C. F. Koryon, *Hall Caine: the Man and the Novelist*, 1903, and S. Norris, *Two Men of Manxland*, 1947.

Ca'ing Whale (*Globiocephala melaena*), cetacean of the dolphin family, is variously known as the Pilot-whale, the Black Fish, or the Social Whale. It grows to about 28 ft. The name 'ca'ing' is derived from a Scottish word, *ca*, to drive. These whales, which feed chiefly on cuttle-fish, are mild in disposition, and are not only very gregarious, but are also more often stranded than any other species. Except for a white streak on the lower parts from behind the chin to the middle of the belly the C. W.s are black; their skin is quite smooth. The fore limbs, which are about 5 ft long, join the body very low down. The front of the skull is nose-shaped, and above and below the blow-hole are some dozen small conical teeth. In front of the blow-hole is a lump of fat. Generally speaking, the head is flat and broad. This genus of whale is found in almost every sea.

Cainozoic Period, see TERTIARY.

Caird, Edward (1835-1908), theologian and philosopher, brother of John C., b. Greenock, and educ. at Glasgow Univ.

and Balliol College, Oxford. After a brilliant record at the latter univ., he was, from 1864 to 1866, fellow and tutor of Merton College. In 1866 he returned to Glasgow and became prof. of moral philosophy, and in 1893, he became master of Balliol. In 1892 he had received the honorary degree of D.C.L. Through his pupils he has exercised a great influence on Eng. philosophy, and may be considered to have founded a school of neo-Hegelianism. His works include *A Critical Account of the Philosophy of Kant*, 1877, *The Social Philosophy and Religion of Comte*, 1885, *Essays on Literature and Philosophy*, 1892, *The*

C., however, is only part of the monument, its outward appearance above ground, and the use of the term without proper qualification is misleading.

Cairn Terrier, small, short-legged breed of dog, sandy-grey or brindled in colour, some being almost black. The C. T. has a foxy head and small pointed ears. It is a good sporting as well as a good house dog. The name is due to the fact that these dogs were employed for driving foxes out of cairns.

Cairnes, John Elliot (1823-75), Irish political economist, began life in his father's brewery, but proceeded to Trinity College, Dublin, and graduated in 1848.

E.N.A.

THE STONE AGE CAIRN OF MAES HOWE, ORKNEY

This huge mound with its dry-stone masonry chambers, once the tomb of a prehistoric chieftain, was looted by Vikings.

Evolution of Religion, 1893, *The Evolution of Theology in the Greek Philosophers*, 1904.

Caird, John (1820-98), brother of Edward C., b. Greenock, minister of the Church of Scotland, 1845. He preached a notable sermon before the queen at Crathie in 1855, afterwards pub. under the title *The Religion of Common Life*. In 1862 he was appointed prof. of theology at Glasgow Univ., becoming vice-chancellor and principal in 1873. He delivered the Gifford lectures in 1892-3 and 1895-6, ed. and pub. in 1900 as *The Fundamental Ideas of Christianity*. His other works include *Sermons*, 1858, *Introduction to the Philosophy of Religion*, 1880, and *Spinoza*, 1888.

Cairn, or Carn, Celtic word meaning a heap of stones, and in archaeology describing a burial mound (see BARROW). It made entirely or partly of stones. It follows that C.s are found only in country with a stony sub-soil. Long C.s are of the Neolithic, while round C.s belong to the Bronze Age. In Yorks, C. cemeteries were a feature of the Early Iron Age.

He was called to the Irish Bar, but turned his attention to social and economic questions, and in 1856 became Whately prof. of political economy at Dublin. Three years later he became prof. of political economy and jurisprudence at Queen's College, Galway, and in 1866 he succeeded to the chair of political economy at Univ. College, London. He belonged to the same school of thought as John Stuart Mill. His works include *The Slave Power*, 1862, *Political Essays*, 1873, and *Some Leading Principles of Political Economy newly Expounded*, 1874.

Cairngorm Stone (Cairngorum) (Gaelic *carn*, heap; *gorm*, blue), name of yellow and brown varieties of quartz, called after the Cairngorm mts (Granitians) in Banffshire, where it was found originally. This mineral occurs in crystals lining the cavities in highly inclined veins of a fine-grained granite running through the coarser granite of the main mass. The stone is a special favourite in Scotland (sometimes called Scotch topaz), and is used for various ornamental purposes, e.g. set in the lids of snuff-mills, in the

* 2 A

handles of dirks, in brooches for Highland costume, in pins and bracelets. Its value depends on transparency and colour.

Cairngorms, group of granite mts in Scotland, forming a N. branch of the Grampians. They occupy an area some 20 m. from E. to W. by 15 m. from S. to N. in Banffshire, Inverness-shire, and Aberdeenshire, between the upper Spey and the Dee. It is the biggest group of high hills in Britain. The 6 main summits are Ben Macdui, 4296 ft (the second highest summit in the country), Braeriach, 4248 ft, Cairn Toul, 4241 ft, Cairngorm (the blue mt), 4084 ft, which has given its name both to the group and to the brown, blue, and yellow quartz crystals which are found throughout the range, Ben Avon, 3843 ft, and Beinn a' Bhuid, 3924 ft. The C.s embrace a wealth of hill, river, forest, and loch scenery unsurpassed in Scotland. Great herds of red deer roam the hills. The winter snowfall is heavy, and winds higher than those normally encountered on the world's great ranges. Rock-climbing, snow-climbing and skiing, deer-stalking, grouse-shooting, and angling are the sports most widely practised. In 1954 the Nature Conservancy declared the central C. a nature reserve, but access for walkers and mountaineers and proprietors' normal sporting rights are not affected.

Cairns, Hugh MacCalmont, 1st Earl (1819-85), Brit. statesman, educ. Belfast and at Trinity College, Dublin, and called to the Eng. Bar, 1844. C. became M.P. for Belfast, 1852; solicitor-general under Lord Derby, 1858; attorney-general, 1866. He was created Viscount Garmoyne and Earl C., 1878. C. was lord chancellor in the Disraeli ministry, 1868. One of the finest parl. orators of his time, his best-remembered speech being the 'Peace with Dishonour,' after Majuba.

Cairns, John (1818-92), Presbyterian minister, b. Ayrton, Berwickshire. He studied at Edinburgh (1834-41) and Berlin Univs. (1843-4), and at the Presbyterian Secession Hall from 1840. Minister of the United Presbyterian church, Berwick-on-Tweed, 1845-76; prof. of apologetics in the United Presbyterian Theological Hall, Edinburgh, 1867; principal of the Theological College, Edinburgh, 1879. C. was an excellent linguist, and travelled widely on the continent at different times. Among his works are *Liberty of the Christian Church* and *Oxford Rationalism*, 1861, *Faith and Christ* and *The True* (criticism of Strauss and Renan), 1864, *Outlines of Apologetical Theology*, 1867, *The Doctrine of the Presbyterian Church*, 1876, and *Christ the Morning Star, and other Sermons*, 1893. See D. Maasson, *Recent British Philosophy*, 1875, and A. R. MacEwen, *The Life and Letters of John Cairns*, 1895.

Cairns, municipality and seaport of Queensland, Australia, on Trinity Bay, 1043 m. N. of Brisbane. It is the port for the sugar produced on the coast as well as for the exported wealth of the Atherton Tableland. Pop. 21,400.

Cairo is the cap. of modern Egypt and the most populous of African cities. Situated on the Nile, 12 m. S. of the head of the delta, and 80 m. W. of Suez by rail, it extends over an area of some 10 sq. m. Whilst the SE. portion, including the citadel, rises on the rocks of the Mokattam Hills, the greater part of the city is built over the alluvial plain in the riv. valley. C., the fourth Muslim cap., was founded in AD 968 by Jauhar el-Kaid, who called it El-Kahira ('the victorious'), a name which was gradually corrupted into C. The ruins of the first cap., Masr, estab. in AD 641, together with some towers of the Rom. fortress at Babylon, a colony founded in 525 bc, may still be seen at Masr-el-Atika, or old C., which lies a mile to the S. of the modern tn. Shortly after AD 1176 Saladin erected the citadel and a portion of the city walls. Under the dynasty of the Mameluke sultans the cap. prospered, and the tn of Bulak was founded, which is now the flourishing port (and suburb) of C., and which lies at its NE. extremity. Sultan Selim overthrew their sovereignty in 1517, and from this date until 1798, when the city passed by conquest into the hands of the French, C. was the conservative metropolis of Turkish Egypt. Three years later it was wrested from these conquerors by the English and Turkish forces combined, and once more was obliged to submit to Ottoman rule. In 1811 Mehemet Ali, the Turkish viceroy, by his massacre of the Mamelukes, acquired a mastery over the city, which became the cap. of an independent kingdom. During his reign, and still more under Ismail Pasha, who ruled from 1863, rapid changes took place; fresh quarters were designed and new thoroughfares opened out, and following the Brit. occupation in 1882 improvements multiplied. It is to this occupation that C. owes its excellent water supply and drainage system. Formerly the death-rate was abnormally high owing to the prevalent insanitary conditions. During the First World War, C. became the administrative H.Q. of the allied campaigns in Egypt and Palestine. In 1919 serious anti-Brit. outbreaks occurred in the city, and the military was forced to intervene to restore order. Serious outbreaks occurred again in 1930. During the Second World War C. was the Middle E. G.H.Q. In the 6 months prior to the Brit. evacuation of the Citadel (July 1948) 20,000 Brit. troops were moved from C. to Alexandria (see below). A N. wind and the Nile floods help to moderate the summer heat: the mean temp. for the year is 68°. After the ann. inundation has subsided, damp exhalations from the riv. keep the surrounding country moist during the late autumn months, even though hardly any rain falls. Speaking generally, the only commercial importance of C. is as a depot for the transit of goods of every variety from the Sudan, Upper Egypt, India, Persia, Asiatic Turkey, and also for many European manufactures. It has become a manufacturing centre since the Second World War. The modern city is the fourth founded in succession on the

same site, and remains of the former cities are included in it: old walls and gateways, narrow streets and latticed houses, together with many mosques. Place Atabet, to the S.E. of the Esbekiya gardens, is the central point for the electric tramways. The fine boulevard Mohammed Ali runs S.E. as far as the citadel, whilst on the S.W. the *sharia* Kasr-en-Nil leads down to the Great Nile bridge, which connects the is. Gezira Bulak with the mainland. To the N. of the bridge are the large Kasr-en-Nil barracks and the splendid museum of Egyptian antiquities, erected in 1902. Originally founded at Bulak by Mariette, it contains the finest collection in the world of Pharaonic relics. The

estab. in 971, is the great centre of Muslim intellectual life. C. is a city of many churches, Coptic, Greek, Maronite, Armenian, Syrian, and Rom. Catholic, besides some 400 mosques, many of which are of magnificent architecture. Among the most beautiful are the mosques of Tulun, Kalaun, Barbuk, Kâit-Bey, and especially that of Sultan Hasan (1358). The 3 gates of the city, Bab-en-Naar, Bab-el-Futuh, and Bab-Zuweyleh, are splendid examples of the massive yet simple effects which the Mohammedan architects knew so well how to produce with the fine ashlar masonry. Beyond the E. wall of the city lie the so-called tombs of the caliphs. They are really the mausoleums of the Mamchukes,

Canadian Pacific

CAIRO: THE CITADEL

national library and Arab museum, opened in 1903, lie off the boulevard Mohammed Ali. The former contains some 100,000 vols., the majority being of E. literature, and is quite unique, whilst the latter encourages the preservation of the monuments of Arabic art, which were for cents. neglected. C.'s earliest Arab building is the mosque of 'Amr, dating from AD 643. From Place Atabet the Muski runs straight into the oriental city, which lies to the E., whilst the W. quarters are occupied by gov. offices, public buildings, luxurious hotels, and the residential flats and villas. In this E. portion, besides the Arab city, there are the quarters of the Copts or Christians, of the Jews, and of the Franks. Wealthy Cairenes live in Garden City, a residential plot on the banks of the riv.; in Gezireh, a long, thin is. in the Nile; or in the suburbs of Heliopolis, Maadi, and Helwan. The poor live around and among them, in dirty and tenements and mud-brick houses. The bazaars are always interesting, especially the Khan-el-Khalili, the Hamzâwi, and the Brass Bazaar, though the Muski, which leads to them, is gradually losing its oriental character. Azhar Univ.,

whom Mehemet Ali slew. It was the latter who built the alabaster mosque in the citadel, whose dome and slender minarets are one of the picturesque landmarks of C., and in the centre of which is the celebrated Joseph's well. The airport lies just outside C. to the N.E. and is used by international airlines. The most N. part of the city consists of broad boulevards, with European-built villas, hotels, etc. The first experimental flight from C. to the Cape was made in 1920 by Lt.-Col. Pierre van Ryneveld and Capt. Brand, but it was not until April 1932 that the Brit. air route between C. and the Cape became available to passengers, the first experimental air mail being operated at Christmas 1931. The total pop. in 1907 was 654,476, of which some 40,000 only were Europeans. In 1947 the pop. was 2,100,486. The first visible step in the Brit. evacuation of Egypt was taken in C. on 4 July 1946, when the citadel was handed over to Egypt in a simple ceremony lasting half an hour. Egyptian troops took over the barracks in the historic fortress, built in the 12th cent., which had been occupied by the British for 65 years. See S. Lane-Poole, *The*

Story of Cairo, 1906; R. C. Devonshire, *Some Cairo Mosques and their Founders*, 1921, and *Rambles in Cairo*, 1939.

Cairo, city and co. seat of Alexander co., Illinois, U.S.A., riv. port and railway centre at the junction of the Mississippi and Ohio Rs. (both bridged), 125 m. SE. of St. Louis and 360 m. SSW. of Chicago. Since the disastrous flood of 1858 it has been protected by earth levees (now averaging 21 ft high and reached to the Gulf of Mexico). It is the shipping centre of the agriculturally rich, delta-like 'Little Egypt.' It was an important military base in the Civil war, and is understood to have been the original of Dickens's 'Eden' in *Martin Chuzzlewit*. Pop. 12,100.

Cairo Declaration, made on 1 Dec. 1943, committing the U.S.A., China, and Great Britain to definite terms which fixed new boundaries for Japan on the assumption of her defeat. Japan was to be compelled to return to China all Chinese ter., including Manchuria. She was to be ousted from Korea, which 'in due course' was to become free and independent. China was to recover Formosa, conquered by Japan in 1895, and the Pescadores. These provisions achieved the objective of Amer. policy in the Orient, set 50 years previously, to re-establish the territorial integrity of China as it was before the First World War waged against her by Japan. Japan was also to be 'stripped of all the is. in the Pacific' which she occupied during the First World War. These were the Carolines, Marshalls, and Marianas, which Japan had been allowed to retain by the Versailles settlement of 1919, nominally under mandate from the League of Nations. Japan was also to be ousted from all the ter. she had dominated or occupied since the summer of 1940. In short, Japan was to be expelled from the Asiatic mainland and to lose her sea power in the Pacific. She was to revert once more to the condition of an is. nation as she was before her first conquests of Chinese ter.

Cairo Montenotte. It. vil., in Liguria (q.v.), 13 m. NW. of Savona (q.v.). It was the scene of the first victory of Napoleon (q.v.) over the Austrians in 1796.

Cairolì, Benedetto (1825-89), lt. statesman and soldier, b. Pavia. He accompanied Garibaldi to Sicily in 1859, where he fought at Calatafimi and at Palermo; and to the Tirol in 1866, where he fought at Mentana. In 1870 he conducted the negotiations with Bismarck. In 1878 C. formed a cabinet with a Francophile and Irredentist policy. General indignation was caused by his policy at the Berlin Congress, where Italy secured nothing, and his term of office only lasted 9 months. In 1879 the Cairolì-Depretis ministry was formed, C. holding the office of premier and foreign minister, but his failure to foresee and intervene in the Fr. occupation of Tunis led to his political eclipse, 1881.

Caisson, in engineering work, is a chamber of sheet iron, or sometimes wood, used in laying the underwater foundations of piers of bridges, quay walls, or dams. They are an integral part of, and permanent shell for, such foundations, and in

this way they differ from coffer dams. One type consists of a strong timber platform, to which sides are attached. One or two of the lower courses of masonry are built on to this, whilst it stands near the shore, and it is then floated out and sunk over the site of the pier, already levelled by dredging or otherwise. Previous to this, however, the detachable sides are removed. The C. of another type is bottomless, but provided with a cutting edge which digs into the earth on the application of weight. When enough earth has been excavated to allow the C. to sink to the required depth, concrete is shot into it to make the foundation solid. If the soil is hard and stony a different structure is used. The lower part of the C. is turned into a water-tight compartment, whose basis is the riv.-bed, which may be duly levelled by hand excavation. This air chamber communicates with the outer atmosphere by an air-lock, which serves as the means of entry and exit of both workmen and materials. Air is pumped down the metal column at a pressure corresponding to the depth below the surface of the water. When the men want to come out, the air of the lock is lowered to atmospheric pressure; it is raised to the pressure of the compartment when they want to return to work. When the men have excavated down to a reliable stratum—the foundations of the piers of Forth Bridge reach down to the rock 75 ft below high water—their working chamber is filled with concrete through the shafts, and the bottomless C. is thus left embedded in the work. Before such a C. is floated out, plate-iron walls are fastened round the strong roof of the working compartment, to form an upper, open box, in which the pier or quay wall is built up as the C. sinks. In more recent times the process has been made cheaper by the use of screw-jacks to raise the C., once the solid rock or bed has been reached. The lifting continues till the pier rises above the water level, when the C. is ready for use elsewhere. Graving docks are often closed by means of closed iron or 'slip' C.s. These rise when the water level inside is the same as that without, and can then easily be floated to recesses at the side. Pneumatic C.s can be used in depths up to over 100 ft of water, but for depths over about 110 ft, the dredging well system is used. In shipping a C. is a hollow structure, provided with an air chamber, for lifting a vessel out of the water for repairs. It is sunk by being filled with water, hauled underneath the ship, and then raised by being pumped dry again. In military language a C. is an ammunition wagon. See D. H. Lee, *Sheet Piling, Coffor Dams, and Caissons*, 1945.

Caisson disease is the name given to the group of morbid changes suffered by C. workers and divers. The symptoms include obstructed respiration, vomiting, pains in the joints or muscles, deafness, and paralysis, and even death may supervene. These symptoms do not appear while the pressure is being increased nor during its continuance, but

only after it has been removed; and they are due to effervescence of gases absorbed during exposure to pressure. The disease is best circumvented by preparing for the immersion gradually, and leaving it gradually.

Caistor, small mkt tn in N. Lincs, England, formerly the site of Brit., and later of Rom., settlements. It has an interesting church, dating from the 13th cent. It is the centre of an extensive rural dist. Pop. 1910.

Caithness, co. in the extreme NE. of Scotland, whose boundaries are Pentland Firth on the N., which separates the mainland from the Orkneys, the N. Sea on the E., and Sutherland to the W. and S. The chief promontories of the bleak rugged coast are Ord, Noss, Duncansby, Dunnet (346 ft), the most northerly headland of Great Britain, and Holburn. The Rs. Forss and Wick Water drain Lochs Shurrery and Watton respectively. and the Thurso empties itself into Thurso Bay. The highest mt is Morven in the S. (2313 ft). The is. Stroma and the Pentland Skerries belong to this co. Wick and Thurso are the chief tns. C. shares a sheriff with Orkney and Shetland, and a member of Parliament with Sutherland. In spite of the severity of the winter storms and the prevalence of northerly gales, the great belt of the Atlantic prevents excessive or continuous cold. The soil is poor and the moorland barren, yet good crops of barley, oats, potatoes, etc., are grown. The wool of the native sheep is in high demand, but the inhab. live chiefly by the cod, lobster, and especially the herring, fisheries. The salmon fishing of the Thurso and the shooting preserves are excellent. Flagstones are quarried at Thurso and Ilalkirk. Though there are rocks of quartz-schists, the chief strata belong to the Old Red Sandstone age. The 'stacks' or detached sandstone pillars by the cliffs are impressive. Area 438,833 ac.; pop. 26,000.

Caius, see **GAIUS**.

Caius, John (1510-73) (also known as John Kaye—C. being the Latinized form of his surname), the second founder of C. College, Cambridge. *b.* Norwich. He entered what was then Gonville Hall in 1529, and 4 years later was elected fellow. After gaining his M.D. at Padua in 1541 and travelling in Europe, he returned to England, where he gave anatomy lectures in London and became a favourite physician of Philip and Mary. Made fellow of the College of Physicians in 1547, he was, during his membership, 9 times president. In 1557 he built a new court to his old college, endowed it with sev. estates, and in 1559 became master, and as a staunch Catholic put his Protestant fellows in stocks for burning his vestments. He obtained permission for C. College to have the bodies of 2 malefactors each year for dissection, and may therefore be regarded as a pioneer in the cause of anatomy. Edward VI, Queen Mary, and Queen Elizabeth all employed his services as physician.

Caius, or **Gonville and Caius College**, Cambridge, founded in 1348 as Hall of the

Annunciation by Edmund Gonville, rector of Terrington in Norfolk, who *d.* in 1351, leaving his foundation to be completed by his executor Wm Bateman, Bishop of Norwich. The college was removed to its present site in 1353. It was refounded as Gonville and C. College by Dr John C. (q.v.) in 1557, who later built C. Court and the 3 Gates—of Humility, of Virtue, and of Honour. The original Gate of Humility, the entrance to the college from Trinity Street, was removed when Tree Court was built in 1868, but the others are still preserved. The chapel, completed about 1380, contains monuments to John C. and other masters and fellows.

Caivano, It. tn. in Campania (q.v.). 7 m. N.E. of Naples (q.v.). Pop. 15,000.

Cajabamba: 1. City, cap. of C. prov., in the Cajamarca dept, Peru, in the Andes, 40 m. from Cajamarca tn. Pop. 3480.

2. Tn of Chimborazo prov., Ecuador, on the railway between Quita and Guayaquil; an agric. centre. Pop. 1850.

Cajamarca: 1. N. dept of Peru, bordering on Ecuador, crossed by the Andes. It is an important wheat-growing area; and silver, copper, and coal are mined. Area 12,541 sq. m.; pop. 538,120 (plus some 30,000 Indians).

2. City, cap. of above dept and of C. prov. Ruins of anct Peruvian architecture remain; the 'house of Atahualpa', the last Inca leader, who was captured here by the Spaniards in 1532, and the 'seat of the Inca' of Santa Apolonia Hill above the tn. At Jesús (10 m. SE.) are the warm, sulphuric, mineral baths, 'Baños del Inca', which are still frequented. C. is an important seat of agric. trade and manufs. There are gold- and silver-mines near by. Pop. 15,550.

Cajanello, Duchess of, see **EDGREN**, ANNA CARLOTTA.

Cajeput-tree is the name given to *Melaleuca leucodendron*, a species of Myrtaceae, and occasionally to *Litsea californica*, a species of Lauraceae. *M. leucodendron*, a native of Asia and Australia, is a small evergreen tree, with spikes of white flowers, which is often cultivated in hothouses. An aromatic oil, known as oil of cajeput, is distilled from the leaves of var. *minor*.

Cajetan, Jacopo (Tommaso de Vio) (1469-1534). It. theologian, surnamed C. from his see of Gaeta (Caieta). He entered the order of St Dominic, 1484, studying at Naples, Padua, and Ferrara. Prof. of theology and philosophy at Brescia, Pavia, and Rome; general of his order, 1508. Leo X made him a cardinal in 1517, sending him soon after as legate to Germany, to urge the emperor and Scandinavian kings to form a league against the Turks, and to bring Luther back into communion with the Church. Appointed legate to Hungary in 1523, he was recalled by Clement VIII; in 1527 he was made prisoner at the sack of Rome. His works were collected in 1639. They include trans. of the Bible; *Commentary on the 'Summa' of Thomas Aquinas*; and *On the Authority of the Pope*, a work censured by the Sorbonne. See Ekerman, *Dissertatio de Cardinali Cajetano*, 1761; Schilback, *De*

Vita ac Scriptis de Vio Cafetani, 1881; Cossio, *Il cardinale Gaetano e la Riforma*, 1902.

Cakile is the generic name of 4 cruciferous plants found in Europe and America. The tap-root is very long, the shoots are prostrate, the leaves fleshy, and the fruit is a 2-jointed silicula in which only 1 seed comes to maturity. *C. maritima* is the common sea-rocket, *C. americana* the Amer. sea-rocket.

Calabanga, tn on the ls. of Luzon in the Philippines, situated on a small riv. which runs into the Bay of San Miguel. The weaving of hempen material and the manuf. of hats are the prin. industries. Pop. 21,791.

Calabar: 1. Dist. in SE. of the Federation of Nigeria (q.v.), in which much palm oil is produced.

2. Old C., seaport on the C. R. above C. estuary. The pure Negroes, the Efiks, who migrated to C. about 1725, live in Duke Town in the valley, whilst the prin. buildings are on the hills. The vegetation is luxuriant, and palm oil and kernels are the chief export. Pop. about 15,000.

3. New C., name of a port and riv. 100 m. to the E.

History of Calabar. C.'s prosperity was based on the slave trade. With the abolition of the overseas trade in slaves the dominant tribe, the Efiks, were secure in their strategic position near the coast, and as the oil traffic grew they consolidated their power and wealth. But they were a degraded people. Any purity of race which may at one time have been theirs had been obliterated by concubinage with slaves of other tribes. But they were important to the European traders, for whom they acted as middlemen in getting oil from inland. Much good was effected by the Scottish mission which went out to C. in 1846, but the fight against cruelty and superstition has been slow and bitter. Magic is the keynote to which native life is attuned. The savagery of this heathenism was never more apparent than at the death of a chief. Countless victims were slain to keep him company, or give him consequence on his arrival in the ghost-land.

In 1884 a Brit. consul estab. himself at C., and in 1889 a protectorate was proposed with consular jurisdiction for Brit. subjects, its H.Q. to be at Duke Town. The most remarkable of all the women missionaries in C. was Mary Mitchell Slessor, after whom is named the Slessor Memorial Home at Ikot Obong. The story of this quiet, fearless woman of indomitable character has been told by W. P. Livingstone in his classic of missionary biographies, *Mary Slessor of Calabar*. One of the most important events in the hist. of W. Africa from the religious and political point of view was the destruction of the Long Juju at Arochuku, for this freed the country for ever from the evils of slave raids and slave-dealing on an organised scale. To break the unholy influence of the Aros, a military expedition converged on the Aro strongholds in 1901. Its work was completed by Mar. 1902, and thereby an important

new area was opened up to mission work. With the coming of the gov. and the development of trade, C. had now become a prosperous port. See D. M. McFarlan, *Calabar: the Church of Scotland Mission, 1846-1946*, 1946.

Calabar Bean, or the ordeal bean of Calabar, is a species of Leguminosae, *Physostigma venenosum*, found in tropical Africa. It is a perennial climbing plant with a slender stem which attains a height of 50 ft; the flowers are peculiarly formed and have a spurred keel. The dried seed was used formerly by the natives of Africa to test people accused of witchcraft, and it possesses very dangerous poisonous properties; guilty persons were supposed to succumb to its action, and innocent ones to escape. It is of great value in ophthalmic surgery, as its application to the eye contracts the pupil, and frequently relieves pain, e.g. in glaucoma; in tetanus and other nervous diseases it is also of value. The bean owes its importance to the presence of eserine, an alkaloid which it contains.

CALABASH PLANT AND FRUIT

Calabash, the hard shell or woody epicarp of the fruit of the C.-tree, *Crescentia cujeta* (Bignoniaceae), which is gourd-shaped and used as a vessel after scraping out the pulp in tropical America. The C. cucumber or Bottle-gourd is the fruit of *Lagenaria vulgaris* (Cucurbitaceae), an ann. climber of Asia and tropical Africa; the empty gourds being made into cups, basins, etc., sometimes polished and carved, in most tropical countries. The C. nutmeg is *Monodora myristica* (Annonaceae), a tropical African evergreen tree, bearing a small globose fruit packed with oily seeds of nutmeg flavour. The perennial climber, *Passiflora maliformis*, of tropical America, also bears a small yellowish globose fruit with very hard shell and grape-like juice, known as Sweet C.

Calaber, Gk poet, see **QUINTUS CALABER**. **Calabozo**, tn of Guárico state, Venezuela, a trading centre in the midst of a cattle-raising country. Until 1934 it was the state cap. Pop. 3720.

Calabria: 1. In Rom. hist. is the name of the modern prov. Lence in the heel or S.E. extremity of Italy. The peninsula is flanked W. and E. by the Gulf of Tarentum and the Adriatic Sea. In spite of the lack of rvs., its soil was fertile, and in anct writers there is constant mention of its pastures, olives, vines, and fruit trees. Although C. once boasted 13 populous cities, only Tarentum and Brundisium (qq.v.) retained their importance at the end of the 1st cent. BC. The name C. was transferred to the ter. of the Brutii after its subjugation by the Lombards, AD 668.

2. Modern region (*compartimento*) of S. Italy, comprising the provs. of Catanzaro, Cosenza, and Reggio di Calabria (qq.v.). It is the 'toe' of Italy, and is bounded N. by Basilicata, W. by the Tyrrhenian Sea, and E. by the Gulf of Taranto and the Ionian Sea (qq.v.). It contains 2 groups of the S. Apennines (q.v.); in the S. group is the peak of Aspromonte (q.v.). It is subject to earthquakes and flooding. There are some mineral deposits (molybdenum), and there are hydro-electric plants, and chemical and zinc industries (Crotona, q.v.). Stock is raised on the hills, and fruit, olives, vines, cereals, and tobacco are produced. The chief tn is Reggio. Area 5805 sq. m.; pop. 2,104,000. During the Second World War the Eighth Army (q.v.), including Canadian troops, crossed the strait of Messina (q.v.) to invade the It. mainland on 3rd Sept. 1943. They were covered by air and naval bombardment, and by a barrage from hundreds of guns massed along the strait, but it was apparent that no serious effort was being made to defend either S. C. or Apulia (q.v.). See ITALIAN FRONT, SECOND WORLD WAR, CAMPAIGNS ON. See also E. Lear, *Journal of a Landscape Painter in Southern Calabria*, 1852; C. T. Ramage, *The Nooks and Byways of Italy*, 1868; N. Douglas, *Old Calabria*, 1915.

Caladium, family Araceae, genus of 16 tropical Amer. rhizomatous herbs, of which *C. bicolor*, *C. picturatum*, and *C. schomburgkii*, and varieties, are cultivated in moist stove conditions for the beauty of their crimson, white, and yellow marked and spotted leaves. *C. bicolor* and others have edible roots known as Cocoa Roots in the tropics.

Calafat, or **Kalafat**, tn of Rumania, situated on the l. b. of the Danube, almost opposite the Bulgarian fortress of Vidin. It is connected with Craiova by rail, and has a large grain trade. It is of historical interest, having figured in many wars. Pop. (1930) 7600.

Calagurris Nassica, see CALAHORRA.

Calahonda, see MOTRIL.

Calahorra (anct Calagurris Nassica), Sp. tn in the prov. of Logroño, on the Cidacos. It is famous because of its defence by Sertorius (q.v.) against Pompey (see POMPEIUS) in 76-72 BC. There is a cathedral, and the tn is the centre of a pilgrimage. C. trades in wine, oil, and cattle, and it has a pepper industry. Quintilian (q.v.) was b. there. Pop. 13,100.

Calais, seaport of France, in the dept of

Pas de Calais, 148 m. N. of Paris. It is on the strait of Dover, 21 m. ESE. of Dover (q.v.), and owes its prosperity to the fact that it lies on the shortest crossing to England. It rose to importance after the end of the 10th cent., and was, in the 13th cent., a busy mercantile port. In 1346 it was besieged by the English, under Edward III (q.v.), and fell after a siege which lasted almost a year. At its capitulation is said to have occurred the incident of the 'Burghers of C.' when 6 notable citizens, led by Eustache de St Pierre, appeared in penitential garb before Edward and offered themselves for execution, these being the terms upon which the king had agreed to spare the tn from vengeance; the 6 burghers were set free at the entreaty of Queen Philippa, and the happening is commemorated in a fine statue by Rodin. C. remained in Eng. hands until it was retaken by the Duc de Guise in 1558 (see MARY I). For a large part of the Middle Ages it was an important staple tn—after 1347, in wool, leather, tin, and lead (see STAPLE).

The old part of the tn, C.-Nord, which was Flemish in appearance, was laid in ruins during the Second World War, and its anct buildings, including the 16th-cent. citadel, were lost. The modern tn, called St-Pierre, lies to the S. and SE.; it has a notable tn hall (1910-22) in Flemish Renaissance style with a belfry 240 ft high. The harbour is to the N. of the tn, and its basins, from which seawaterways extend inland, surround the old tn. To the N., also, are bathing beaches and a casino. C. has herring and mackerel fisheries, and has a very large production of tulle and machine lace; there are also embroidery, silk, flour, and metallurgical industries. The tn is a centre of mail and passenger traffic between England and the Continent, and has a large import and export trade. C. was a target for bombardment in both world wars. During the First World War it was a Brit. base, and in the course of the war the port equipment was much improved to cope with military needs. In the Second World War the tn was the scene of an epic defence, when 3000 Brit. and 800 Fr. troops, assisted by 2 patrolling Brit. destroyers, held out from 22 May to 27 May 1940, against 2 Ger. panzer divs., supported by waves of dive-bombers. The first purpose of the defence was to support the withdrawal of the main body of the B.E.F. on Dunkirk (q.v.); that the famous evacuation from the Dunkirk beaches became possible was due in no small measure to the time gained by the fortitude and sacrifice of the defenders of C. The besieged force was short of all supplies, had little protection against the Ger. bombers, and was fighting in very hot weather in the middle of a burning tn; its task was further complicated by streams of refugees and by Fifth Column (q.v.) snipers. Only 30 survivors of the defence were taken off by the navy before the tn fell. Pop. 60,400. See WESTERN FRONT IN SECOND WORLD WAR.

Calais, **Pas de**, see PAS-DE-CALAIS.

Calaisis, name of Calais and the

adjoining dist., occupied by the English from 1347 to 1558, and then reconquered by the French, who called it the *Pays reconquis*. It now forms part of the arron. of Boulogne and of St Omer.

CALAMINTHA

Calamander Wood (probably from Coromandel Coast), very valuable cabinet wood, like rosewood, only more beautiful and durable. Produced from the *Diospyros hirsuta* or *quaesita* of the family Ebenaceae, of the same genus as the ebony and persimmon trees. A native of SE. India and Ceylon, it is becoming very rare. It yields veneers of exceptional beauty, and takes an exquisite polish. The colouring is largely chocolate and fawn. One cub. ft weighs about 60 lb.

Calamary, *Loligo vulgaris*. A variant name for the squid.

Calamata, or **Calamæ**, cap. of the dept of Messenia, in Greece. It is the anc. Pharae. There is a mediaeval castle. C. was sacked by Ibrahim Pasha in 1825. The dist. is very fertile. Pop. 38,000.

Calamba, municipality in the Philippine Is., 30 m. from Manila, a centre of the sugar industry. Pop. 36,586.

Calambao, see **ALOE WOOD**.

Calame, Alexandre (1810-64), Swiss painter and engraver, was b. at Vevey, where his father was a stone-cutter. He studied painting at Geneva and travelled for some time in England, Holland, Germany, and Italy, but is remembered for paintings and etchings of his native Swiss scenery. A Calame prize for landscape was instituted in 1874, one winner being Ferdinand Hodler.

Calamianes, group of is. belonging to the Philippines, situated midway between Mindoro and Palawan. They have an estimated area of 615 sq. m. The prin. is. is Busuanga, about 35 m. long. The chief product is rice. There are also fishing and the mining of manganese. Pop. 16,445.

Calamine, term applied to 2 ores of zinc and an alloy: 1. Zinc carbonate,

occurring in rhomboid crystals, white, yellow, brown, green, or grey in colour, sometimes translucent. It is found at Matlock, Mendip, Alston Moor, Leadhills, and at Wanlockhead in Dumfriesshire.

2. The native hydrous silicate of zinc, occurring in white, green, blue, or yellow crystals, and usually found associated with carbonate. It is also called smithsonite and hemimorphite. C. is used as a pigment in the painting of pottery, producing a fine green colour.

3. An alloy of zinc, lead, and tin formerly used as a protective coating for iron utensils.

Calamintha, or **Calamint**, family Labiatae, genus of herbs and shrubs of N. temperate regions. *C. ascendens*, Common C., *C. nepeta*, Lessor C., and *C. intermedia*, Wood C., are native to Britain, on calcareous soils. *C. alpina*, of Hercegovina, and *C. glabella*, N. America, are good rock garden plants, and *C. grandiflora* is herbaceous.

Calamis (fl. 440 BC), Athenian sculptor who made statues of Apollo, Aphrodite, and Hermes, as well as part of a chariot group, commissioned by Hiero, King of Syracuse. Archaeologists cannot point to any work as incontestably his, but the bronze Delphic charioteer expresses so well what are considered his qualities, that there is some justification for the attribution of this masterpiece to C. Pliny speaks of his grace and delicacy, and these qualities at once impress the student as he observes the refined, almost feminine, expression of the charioteer's face and the charming simplicity of the straight folds of his long and flowing chiton. Certain conventionalities in the treatment of head and drapery further convince the student that the statue must be the work of a predecessor of Myron, Polyclitus, and Phedias.

Calamus, generic name of 200 species of tropical palms native to Asia, Africa, and Australia. Most of these plants are leaf-climbers with long thin stems, and many have hooks growing from the under side which become attached to passing objects and prove very troublesome. The stem of *C. scipionum* supplies Malacca cane, of *C. rotang*, *C. rudentum*, *C. tenuis*, and *C. verus* rattan-cane, while *C. draco* yields the 'dragon's blood' of commerce, used in the preparation of printers' blocks and for red lacquers. See also **FLAG**.

Calamy, Benjamin (1642-86), Prebendary of St Paul's; son of Edmund C. the elder (q.v.), the Presbyterian divine. Educ. at St Paul's and at Cambridge, he became chaplain-in-ordinary to the king (c. 1677). His *Discourse about a Doubting (scrupulous) Conscience* appeared in 1683. It was dedicated to Jeffreys. The Non-conformists accepted it as a challenge, replying to it by Dr Laune's *A Plea for the Nonconformists*, which cost its author his life, in spite of C.'s intercession. The execution of his parishioner and friend Henry Cornish (d. 1685) broke C.'s health. See *Biographia Britannica*, iii, 1784; T. Birch, *The Life of Dr John Tillotson*, 1753; E. Calamy (ed. J. T. Rutt), *An Historical Account of My own Life*, 1829.

Calamy, Edmund, called the elder (1600-1666), clergyman, b. Walbrook, London. Educ. at Cambridge, where he joined the Calvinists, he became chaplain to the Bishop of Ely. From 1626 to 1636 he was a lecturer at Bury St Edmunds, but later left the Anglican Church for the Presbyterian, becoming in 1639 minister of St Mary, Aldermanbury, London. Here he officiated for 20 years, being throughout a supporter of the Royalist cause, and becoming chaplain-in-ordinary to Charles II. He was one of the Presbyterian representatives at the Savoy conference in 1661, but was ejected from his living in the next year under the Act of Uniformity. He was one of the 5 compilers of *Smectymnus* (q.v.), 1641, a polemical work written in reply to Bishop Hall's *Episcopacy by Divine Right*, 1640.

Calañas, Sp. tn in the prov. of Huelva, in a copper-producing dist. Pop. 12,000.

Calandra, genus of insects belonging to the Curculionidae, or weevils. *C. granaria*, the corn-weevil of our granaries, is a little beetle which bores a hole in the grain and there deposits its eggs, which hatch into a destructive grub. *C. orizae* infests rice, and *C. palmarum* lives during its larva state in the pith of palms of S. America.

Calantas, Philippine cedar, *Cedrela toona*, a lasting wood, red in colour and much used in making cigar boxes, and lining ceilings and walls; also for building canoes. See TIMBER.

Calanus, an anc. Hindu philosopher, belonged to that sect known to the Greeks as Gymnosophists. According to Plutarch, his real name was Sphines. He came into close contact with Alexander the Great, and spent some time at his camp in India. At Pasargardae he became sick, and, at his own request, was burned alive on a funeral pyre. Just before his death he is reported to have said to Alexander: 'I shall soon see you again in Babylon,' a speech which is regarded as a prophecy in the light of Alexander's death at Babylon a few months later. See the *Anabasis* of Arrian.

Calappa, typical genus of the Calappidae, is a brachyurous decapod crustacean with a rounded and crab-like cephalothorax. The species have crested claws, and the abdomen is hidden under the thorax. Their geographical distribution is wide, and they are found in the warm seas. *C. granulata* is a crab which occurs in the Mediterranean.

Călărași, tn of Rumania, 60 m. ESE. of Bucharest. It is situated on the Borcea, a branch of the Danube, and has a good export trade in timber, wheat, hemp, and linseed. Pop. (1930) 18,000.

Calas, Jean (1698-1762), Fr. Protestant merchant, accused, with his wife and family, of having strangled his son, Marc Antoine (who had almost certainly committed suicide), to prevent his turning Rom. Catholic. They were sent to the rack in order to extort confession, and C. was condemned by 8 judges of Toulouse to be broken on the wheel. This judicial murder caused an agitation in which Voltaire played a leading part. His efforts

eventually got the sentence against the victim annulled, compensation being awarded to his family, and they also resulted in the amelioration of the legal position of Fr. Protestants. In 1765 the stigma was removed from C.'s name. See R. Allier, *Voltaire et Calas*, 1898, and M. Chassaigne, *L'Affaire Calas*, 1929.

Calascibetta, tn in Sicily (q.v.), in the mts. 3 m. N. of Enna (q.v.). It has a trade in wine, olive oil, and silk. Pop. 9000.

Calasião, municipality of Luzon, Philippine Is. Pop. 23,269.

Calasparra, Sp. tn in the prov. of Murcia, with a busy agric. market. Pop. 5000.

Calatañimi, tn in Sicily (q.v.), standing on a hill 21 m. SE. of Trapani (q.v.). Garibaldi (q.v.) defeated the Neapolitans near here in 1860. Four miles NW. are the ruins of the anc. *Segesta* (q.v.). Pop. 10,000.

Calatayud (Arabic *Kalut Ayub*, 'Ayub's castle'), Sp. tn in the prov. of Zaragoza, on the Jalón, founded by the Moors in the vicinity of Bilbilis (q.v.). It has a collegiate church, originally a mosque, and a 12th-cent. church of the Knights of Jerusalem. The tn is picturesque, has rock dwellings, some of which are inhabited, and is a busy market tn. Pop. 19,800.

Calathea, genus of Marantaceae consisting of perennial herbaceous plants which are natives of tropical America. The leaves are very beautiful, and most species have a petaloid staminate. In the W. Indies the tubers of *C. allouia* are used as a substitute for potatoes.

Calathus, genus of coleopterous insects of the family Carabidae, or ground-beetles. The species are generally black or brown, and *C. cistelloides*, a black beetle with black antennae, red at the basal joint, and either red or black legs, is commonly found on Eng. pavements.

Calatrava la Vieja, Sp. fortress in the prov. of Ciudad Real. It is on the Guadiana in the dist. called Campos de C., and in the Middle Ages was looked upon as the key to the Sierra Morena (q.v.). It was taken from the Moors in 1147, and the military order of C. was founded here in 1158.

Calaveras, co. of central California, U.S.A., called after R. C., which runs through it to join R. San Joaquin, about 12 m. below Stockton. Bounded NW. by Mokelumne R., SE. by Stanislaus R. Dams (Pardee, Calaveras, Melones) store water for power and irrigation. On the E. is the Sierra Nevada. C. has rich gold- and copper-mines, and contains one of the most famous groves of *Sequoia gigantea*. Cap., San Andreas. Area 1028 sq. m.; pop. 9902.

Calaverite, telluride of gold; contains about 44 per cent of gold and 2 to 3 per cent of silver. It is a compact mineral and massive, and resembles pale pyrites but is of greater density. It occurs in volcanic rocks in Colorado and in W. Australia. The name comes from Calaveras, Colorado, where it was first found.

Calbayog, municipality in Samar Is., one of the group of Philippine Is. Corn

and rice are grown, and there is fishing. Pop. 79,503.

Calcaire Grossier, name of a number of limestones and marls very rich in fossils. They developed in the Paris basin, and date back to the middle of the Eocene period.

Calcareous Rocks, Soils, Tufa, etc. (from Lat. *calc.*, limestone): 1. Rocks that contain much lime, especially in the form of carbonate (CaCO_3), whether calcite or aragonite. Usually such rocks are aqueous, and those formed in the sea are largely composed of the fossilised remains of marine animals (brachiopods, corals, crinoids, echinoderms, molluscs, and the like). Many Palaeozoic limestones are composed of shells, corals, etc., some younger limestones are made of foraminifera. These rocks are mostly of organic origin, the lime salts of sea-water being extracted by the living tissues of these animals and deposited in the form of carbonate of lime by shell-secreting membranes. Others are formed as precipitates by the evaporation of C. solutions, e.g. stalactite and calc-sinter (C. tufa), and probably oolite (all chemically formed). A crystalline structure, varying from partially crystallised limestones to granular statuary marble, is produced by metamorphic action. Marbles are usually associated with the crystalline schists and the contact rocks developed by the action of heat given out by great masses of cooling granite to surrounding rocks. The existence of the carbonate in rocks can be discovered by applying dilute nitric or hydrochloric acid. Effervescence is thus caused through liberation of carbonic acid. Quicklime is obtained by calcining these rocks. 2. C. soils are produced by disintegration of C. rocks. When these rocks are pure they yield rather barren soils of little agric. value, as is the case in many chalk and limestone dists. of Britain. They are thin and sometimes full of hard flint nodules, more adapted for pasture than agriculture. If the rocks contain lime mixed with clay so as to form marl, with a little vegetable matter added, they form a good, friable, rather light soil. It is rather difficult of drainage, as soft lime retains water so readily, but yields it up by evaporation. After rain it soon dries on the surface, but rarely suffers from severe drought. C. soils, being light in colour, absorb heat slowly. They are often rich in phosphates, but lack potash. Most soils are improved by a certain amount of C. matter. Peaty soils are often dressed with chalk. See *Fream, Soils and their Properties*, 1890; F. H. King, *The Soil*, 1900; R. G. McConnell, *Agricultural Geology*, 1902; A. D. Hall, *The Soil*, 1904. 3. C. tufa, or calc-sinter (calc-tuff), also travertine, stalactite, onyx, are porous deposits of carbonate of lime, formed by the waters of C. springs. Water charged with carbonic acid can dissolve carbonate of lime out of the rocks, and, when it emerges into the air, deposit part of it again as an incrustation. Such springs are sometimes called petrifying springs, as objects placed in the water are covered with the

deposit. There are noted examples of these at Matlock, and at Tivoli, near Rome. The formation there is hard and compact, and much 'travertine' is used as a building stone at Rome. Other well-known springs are at Carlsbad, Bohemia; at Clermont in Auvergne; and in the Yellowstone region, N. America. C. incrustation, often seen in caverns in limestone rocks, are varieties of C. tufa, and are called stalactites and stalagmites. When free from impurity the deposit is white or translucent, but often it is stained with other substances, and is yellow, brown, or grey in colour, and sometimes variegated. It is a spongy, cellular, or concretionary structure, often banded, and showing rings of growth. It is found in a variety of forms, massive, tubular, botryoidal, or encrusting animal and vegetable remains, such as leaves, twigs, moss, nuts, or insects. It is often quarried for building purposes, being soft at first, but becoming hard and solid through exposure to the atmosphere. The temples of Paestum, Italy, were constructed of massive C. tufa. Calc-spar is carbonate of lime, rhombohedral in crystallisation. C. waters are called hard, contain much carbonate and sulphate of lime, and form a deposit when heated.

Calcedony, see CHALCEDONY.

Calceolaria (Lat. *calceolus*, a slipper, from the shape of the flower), genus of plants originally from S. America, Mexico, and the W. Indies, family Scrophulariaceae. There are 2 kinds of C., the herbaceous and the shrubby. The herbaceous varieties are generally grown from seeds, sown in July in a light soil, composed of sand, leaf-mould, and loam. A cool greenhouse suits their growth at all stages, and they flower from May to July. The shrubby kinds are generally produced by means of cuttings that should be taken in Sept. These cuttings should be put in a cool greenhouse after planting them in a soil composed of fine fibrous loam and silver sand. When the roots have struck, the plants should be put in pots and placed in a frame with the sun's direct rays falling on them. At the end of Feb. the plants ought to be nipped off and then transplanted into bigger pots. This transplanting should go on until the 7-in.-size pot is attained, or at all events until they can be planted out, in the month of May. If the shrubby C. is kept growing in pots, it does best in a soil similar to that adopted for the herbaceous variety.

Calchedon, see CHALCEDON.

Calciferol, crystalline substance, formula $\text{C}_{27}\text{H}_{46}\text{O}_2$. It is obtained by simple irradiations of ergosterol (q.v.). It is a pure vitamin D and is present in egg yolk, cod-liver oil, and other fish-liver oils.

Calcareous, geological term for calcium-bearing rocks, usually sandstones (q.v.), the grains of which are cemented together by calcium carbonate.

The C. Sandstone series is the name of the lower part of the Lower Carboniferous rocks of Scotland. The series was deposited in fresh water for the most part, and consists of cementstones overlain by volcanic rocks and oil-shales, together with

sandstones, marls, freshwater limestones, and poor coals. The oil production of Scotland comes from these rocks.

Calcination, metallurgical name for burning or roasting an ore. It can either be performed in an air blast to obtain the oxide, or without air to drive off any volatile constituent such as sulphur.

Calcite, or **Calcspar**, natural carbonate of calcium used, on account of its property of strong double refraction, in making optical instruments. Usually occurs in veins associated with sulphide lead ores or haematite. See ICELAND SPAR.

Calcium, atomic number 20 (symbol Ca, atomic weight 40.1), metal belonging, together with strontium, barium, and radium, to the class known as alkaline-earth metals, on account of the alkalinity of their oxides. It does not occur free in nature, but in combination it is widespread and abundant. The carbonate occurs as limestone, coral, marble, and calcspar (calcite); with magnesium carbonate as dolomite; the sulphate as gypsum and celestine, while the fluoride is fluorspar. Many other rocks contain it, as also do organic bodies, bones being formed chiefly of the phosphate. C. is a silver-white metal forming hexagonal crystals. It is fairly hard and can be hammered out. If left in damp air it tarnishes with formation of hydroxide, but if the air is dry it remains bright for some time. It decomposes water liberating hydrogen, and ignites if heated in air, burning fiercely with a reddish light (hence its use in C. 'flares'). Davy was the first to isolate C. in 1808 in his electrolytic researches. It may be obtained by electrolysis of the fused chloride, and Moissan obtained its crystals by the action of sodium on C. iodide. The excess of sodium is extracted by absolute alcohol. C. is used as a drying agent, as a deoxidiser in hardening lead, desulphurising petroleum, as an alloy with aluminium, and for many other industrial and technical purposes. Compounds of C. are widely used and very important substances. The oxide CaO , or quicklime, is obtained by burning limestone and coal in kilns, the carbon dioxide being driven off from the carbonate. It is white, amorphous, very infusible, and becomes incandescent when strongly heated, and was formerly used with the oxy-hydrogen flame in the old 'limelight.' Mixed with water it forms C. hydroxide or slaked lime, the combination being accompanied by evolution of heat. Slaked lime when mixed with sand forms mortar. C. chloride occurs naturally and as a by-product from many manufacturing processes. It is extremely deliquescent when anhydrous, and is used for drying gases (except ammonia, with which it combines). Bleaching powder, conveniently though inaccurately represented as chloride of lime, is $\text{Ca}(\text{OCl})\text{Cl}$, and is obtained by the action of chlorine on slaked lime. Plaster of Paris is C. sulphate deprived of some of its water of hydration by heat. On adding water rehydration occurs, and selenite is formed and sets in a hard mass. C. carbide, used for production of acetylene, is

produced by heating chalk with carbon in an electric furnace. C. sulphide is a phosphorescent substance used for luminous paint. It is prepared by passing hydrogen sulphide over heated lime. The property of luminosity is probably due to an impurity, for it is found that pure C. sulphide is not luminous. The hardness of water may be classed as permanent or temporary. The first is due to C. and magnesium sulphates and chlorides and the second to C. and magnesium bicarbonates. The latter may be removed by boiling the water or adding lime, so that the insoluble carbonate is formed and by filtration can be removed. Hardness in water is explained by the fact that the sodium stearate in the soap is converted by the C. salts in the water into insoluble C. stearate, which does not lather. C. bisulphite, $\text{Ca}(\text{HSO}_3)_2$, is made by passing sulphur dioxide into milk of lime until no further absorption of the gas occurs. It is used in making lower-grade paper from wood. Wood consists mainly of 2 substances, lignin and cellulose, the second of which is required for paper-making. By steeping wood chips in hot C. bisulphite solution under pressure, the lignin is dissolved, but the cellulose is left unattacked. C. salts when volatilised in the flame of a Bunsen burner produce a brick-red coloration.

Calcreose, drug composed of creosote and lime, and used internally instead of pure creosote. It is a dark brown powder.

Calc-sinter, see TRAVERTINE.

Calculating Machines. From the earliest times the need for mechanical aid in performing long calculations, which require no skill, but merely accuracy, has been felt, and various simple contrivances, such as the abacus, have been invented to meet this want. More complicated machines, providing for various kinds of calculation and degrees of accuracy, have been produced in this country since the 17th cent., one of the earliest being 'Napier's Bones' (q.v.). This appliance, which consisted of 10 rectangular slips of wood, having the digits and their multiples on each of the 4 sides, was intended for use in multiplication and div. Its use was described by the inventor, Napier or Merchiston, in his *Rhabdologia*, 1617, and was received with considerable enthusiasm by the mathematicians of the day. Shortly afterwards Edmund Gunter, prof. of astronomy at Gresham College, produced his surveying chain, scale, logarithmic line, and line of numbers, the principles of which are still in use in the slide rule, much employed by engineers. The calculating machines invented by Pascal in 1642, Sir S. Moreland in 1666, and Leibnitz in 1671 were of little practical use. In the 2 former the addition of each place of figures had to be made separately, while the last, a model of which still exists at Göttingen, was intended for use in astronomical calculation. In 1775 a machine consisting of 12 ten-sided prisms, each face of which had a rack engaging with a toothed wheel, was put on the market by Viscount

Mahon. The prisms were pushed in one direction for addition and in the other for subtraction, and these operations were repeated for multiplication and division. Circular machines were invented in 1779 by Hahn and in 1784 by Müller, but the first invention of the kind of real importance was that made by Charles Babbage about 1822. His machine, which was intended to calculate numerical tables by method of 'differences,' was left uncompleted at his death. The invention of the arithmometer, by M. Thomas de Colmar, about 1850, marked a great stride forward. This machine, which will add, subtract, multiply, divide, and extract square roots, is easily operated by turning a handle, and is accurate and rapid in its results. The mechanical principle is that of toothed-wheel gearing, the wheels being engaged by setting stops to the figures. Several improvements on this machine have since appeared. Another advance was made by the production of adding machines capable of dealing with money columns. One of the first of these was the Burroughs (1888); other Amer. and Brit. inventors have produced variants of this type. The cash registers so largely in use at the present day are a development along the same lines. Some of the most recent of these automatically dispense the correct change. The electric tabulating machine and the planimeter, for use in geometrical calculations, are examples of other kinds of C. M. Other types are the tide-predicting machine invented in 1910 by Lord Kelvin; the area tabulating machine, used chiefly in measuring leather and hides; and the curvometer or kartometer for measuring the length of curves on, for instance, a map of a road.

Mechanical book-keeping provides a method of speedy and accurate posting to ledgers with the advantages that all accounts are kept in a legible and uniform style. Each account shows a balance which is the total of all the items posted to it and is progressive, being increased or reduced according to the nature of the postings, whether debit or credit. The arithmetical accuracy of the postings to the ledger can be checked daily or at any date by extracting a list of the balances. By the use of carbon paper a copy of each item posted to the ledger accounts is recorded line by line so that a complete summary and proof of the work posted for the day is obtained. Where customers' statements are required these can also be provided, being built up gradually as the posting is done during the month or quarter. The statement is usually the original posting, the ledger account and summary sheets being carbon copies.

Mechanical book-keeping, while used principally for sales and purchases ledgers to which large numbers of invoices on cash items are posted daily, is also used for posting the complete set of books. And machines which have typewriters incorporated are particularly useful in as much that accounts in the impersonal and private ledgers which require details and information recorded upon them can be typed on during posting. Such machines

are also used for varied counting-house work such as the entering of the receipts cash book, providing at the same time the customer's receipt, credit posting slip, loose cash book sheet, and bank paying-in slip. There are many different types of machines, each offering methods and systems suited to different business and trades, and machines are designed to customers' varied requirements. *See also* AUTOMATION and ELECTRONIC COMPUTATION.

Calculus, branch of mathematics dealing with continuously varying functions. The subject falls into 2 branches, the differential and the integral C. The central problem of the differential C. is the investigation of the rate of change of a function (q.v.) with respect to changes in the variables on which it depends. The 2 main classes of problems of the integral C. are, firstly, finding such quantities as the length of a curve, the area enclosed by a curve, or the vol. enclosed by a surface, and, secondly, the problem of determining a variable quantity given its rate of change. This second type of problem clearly indicates the close relation between the processes of integration and differentiation, the one being considered as the inverse of the other.

Credit for the introduction of the methods of the C. into mathematics is generally divided between Newton and Leibnitz. Newton's approach to the subject, the method of fluxions (q.v.), was actually used by him many years before it appeared in print, by which time Leibnitz had pub. MSS. on the subject. This situation gave rise to a bitter controversy as to the historical priority of authorship. The modern notation follows that introduced by Leibnitz. *See* DIFFERENTIAL CALCULUS and INTEGRAL CALCULUS.

Calculus, in medicine, a concretion forming in any part of the body by the accumulation of matter round a central core. Calculi are variously classified according to their structure, size, composition, and location. *Alternating* or *laminated* calculi are composed of layers of different materials superposed on one another. As regards position, calculi may be *salivary*, formed in the salivary ducts; *arthritic*, or gouty calculi, formed at the joints; *biliary*, or gall-stones, in the gall-bladder; *renal*, in the kidneys; *vesical* in the bladder; and *prostatic*, in the prostate. The method of their formation may vary also. *Organic* calculi are those which have a nucleus of epithellum, blood, etc.; *fatty*, those which have a nucleus of fat; *blood* calculi, consisting of fibrinous matter and blood corpuscles; and *chalky* calculi, consisting of calcium carbonate and calcium phosphate usually with some foreign body as a nucleus. *Urinary* calculi are those formed in the bladder and urinary tract. They consist of concentric layers of substances crystallised out of solution and cemented together by mucus, etc. The substances may be uric acid and urates, or phosphates of calcium and magnesium, or mixed calculi of both urates and phosphates, or calcium carbonate, or organic substances found in

the urine, as cystine, xanthine, and fibrin. The calculi are commonly called gravel, or stones, according to their size. *Secondary* calculi are those formed as a result of the diseased condition of the urinary tract, and are, therefore, often met with in *cystitis* or inflammation of the bladder. Calculi may cause little trouble, and if symptomless are often left alone. On the other hand they may cause inflammation or obstruction of a passage. A gallstone may obstruct the bile ducts and a renal stone may become impacted in and obstruct the ureter or the urethra. The C. in its attempt to pass through a

Court of Judicature was estab. at C. In 1854 Bengal became a lieutenant-governor's prov., but the Governor-General of India retained his H.Q. in C. In 1911 Bengal became again a presidency under a governor, and in 1912 the H.Q. of the viceroy and governor-general were moved to Delhi. Although communication with the sea down the R. Hughl is hazardous, owing to constantly shifting shoals and sand-banks, the port of C. has become, and continues to be, one of the great ports of Asia. Great experience has been acquired of the riv., and the Bengal Pilot Service, which warns every ship using the riv., is

The High Commissioner for India
THE HOWRAH BRIDGE, CALCUTTA

passage, may cause acute colicky pain—e.g. renal colic, biliary colic (see COLIC).

Calculus of Variation, see VARIATION.

Calcutta, cap. city of W. Bengal state, India, one of the great cities of India and of Asia. Situated on the E. bank of the R. Hughl, some 80 m. from the Bay of Bengal, C. was founded in 1687 by Job Charnock, an E. India merchant, on the site of 3 vils., one of which was named Kalikata. A fort was built in 1696, and on account of its position at the mouth of the main water communication for N. India, the settlement flourished and expanded rapidly. Between 1756 and 1758 C. was the scene of much fighting between Brit. troops, under Clive, and Surajah Dowlah, Nawab of Murshidabad. The latter was finally defeated at Plassey (June 1757). The foundations of the present Fort William were laid in 1758, and the whole completed in 1781. In 1774 Warren Hastings became the first governor-general, his authority covering Bengal, Bombay, and Madras. The Supreme

one of the most skilled navigational services in the world. The docks in the port are very extensive and can handle the largest ships which can negotiate the riv. They are well provided with railway facilities. The city has a fine centre, the outstanding feature being the Maidan, an open grassed area or park, originally kept free of buildings as a security measure for Fort William, and now crossed by good roads and largely used for recreation purposes. It leads to the race-course and is itself 2 m. long by about 1 m. wide. In the humid climate of C. it is invaluable as a source of fresh air. During the Second World War one of the main roads across it was used as a landing strip for fighter aircraft. Around the centre C. is a closely packed city and some of the outer suburbs remain severely overcrowded with streets too narrow for modern conditions. Plans for the great improvement of C. have been prepared but must take much time and money to complete. C. continues to share with Bombay the main commercial

interests of the whole of India. Until 1947 C. had a virtual monopoly of the very valuable jute industry, and is also the port for Bengal and Assam tea and a large proportion of Indian coal. It is the H.Q. of many large Brit. commercial and banking concerns with interests in India and the R. There are 2 main railway stations, one of which is across the R. Hugli at Howrah, the riv. now being spanned by a fine, new cantilever bridge of a single span. The bishopric of C. in the Anglican Church was created in 1813, and the bishop is now Metropolitan of all India. The pop. of C. proper is about 2,600,000, and of Greater C. 4,600,000 (1951).

Calcutta Cup, trophy competed for annually by England and Scotland at rugby football, presented by the Calcutta Club in 1879. *See also FOOTBALL, Rugby Union Football.*

Calcutta Sweepstake, promoted annually by the Royal Calcutta Turf Club. The prizes are given on the result of the Derby horse-race run at Epsom usually on the first Wednesday of June every year, but occasionally on the last Wednesday of May. The 'sweep' was nominally private, being limited to the members of the club, each drawing a number for which he paid about 10 rupees, but experience showed that tickets were freely transferred through members to the general public in all parts of the world. The drawing took place in Calcutta, generally on the Saturday before the Derby was run, and ingenious precautions were taken to ensure perfect fairness. The stakes were very high, and in 1929 3 prizes totalled £135,000; in 1930 it was decided not to publish any figures in relation to the sweepstake.

Caldara, *see* CARAVAGGIO and ITALIAN ART.

Caldas da Rainha, tn. of Portugal, in Leiria dist., 50 m. N. of Leiria (q.v.). It is known for its sulphurous and saline springs; the bathing estab. was founded in 1485 by the queen of John II. Pottery is manuf. Pop. 8200.

Caldas de Reyes (Rom. *Aguas Calones*), Sp. tn. in the prov. of Pontevedra, known as a spa since Rom. times. Pop. 9500.

Caldecott, Randolph (1846-86), artist, b. Chester, worked in a bank, 1861-72, but always showed a taste for art. His first sketches appeared in local papers, *Will o' the Wisp*, 1868, and the *Sphinx*, 1869. In 1872 he became a student at the Slade School. He became famous as illustrator of Washington Irving's works. 'Old Christmas' (selections from the *Sketch-book*) appeared 1875, 'Bracebridge Hall,' 1876. In 1882 he became a member of the Institute of Painters in Water Colours, exhibiting there, at Grosvenor Gallery, and at the Royal Academy. He has an enduring place as illustrator, notably of coloured books for children, starting in 1878 with *John Gilpin* and *The House that Jack Built*, ending in 1885 with *Elegy on Madame Blaise* and *The Great Panjandrum Himself*. *See* R. Blackburn. **Randolph Caldecott: Personal Memoir of his Early Art Career**, 1886.

Calder, Sir Robert (1745-1818), Brit. admiral. He entered the navy in 1759, and was present at the battle of St Vincent (1797), on which occasion he was knighted for bringing home dispatches. In 1804 he was promoted to the rank of rear-admiral; in the following year he was stationed off Cape Finisterre to intercept the Fr. and Sp. fleets fleeing before Nelson from the W. Indies. C. succeeded in capturing 2 Sp. ships, but was outnumbered, and retired to Brest. He was tried by court-martial, and censured for an error of judgment. He retired from active service, but rose to the rank of admiral in 1810.

Calder, name of 4 rivs. in England: 1. In W. Riding, Yorks, rising near Burnley and joining the R. Aire at Castleford; length 45 m.

2. In Lancs, joining the Ribble near Whalley.

3. In Cumberland, flowing into the Irish Sea, 10 m. SE. of Whitehaven.

4. In Lancs, joining the R. Wyre at Garstang Church.

Caldera, broad volcanic crater, usually circular in outline and characteristically very much wider than it is deep. C. result from explosive eruptions during which lava is thrown out so rapidly from a volcano that its upper part founders into the emptied space below from whence the lava has come. C. are thus essentially the result of the collapse of the superstructure of a volcanic cone, and only to a small extent the product of fragmentation of the top of the volcano through explosion as was formerly thought to be the case.

Crater Lake, Oregon, occupies the site of a C. 6 m. across which formed during Pleistocene times by the collapse of a lofty volcanic cone following violent eruptions of volcanic ash and pumice. Lake Toba in Sumatra lies in part of a C. which extended for 700 sq. m. and which formed in the Pleistocene when extensive deposits of volcanic ash were laid down in the vicinity.

Calderbridge, vil. of Cumberland, England, in the Ennerdale (q.v.), rural dist. About a mile away are the ruins of Calder Abbey, founded 1134 for Cistercian monks. At Sellafield (2 m.) near by the construction of the first Brit. atomic energy plant was commenced in 1949; in Oct. 1956 it was formally opened by the queen.

Calderon, Philip Hermogenes (1833-98), Anglo-Fr. artist, b. Poitiers, of Sp. descent. He studied in Paris under Picot, and in London. He exhibited at the Royal Academy from 1853, and at the Paris exhibitions of 1867 and 1878. He was elected A.R.A. in 1864, full Academician in 1867, and Keeper in 1887. His subjects were chiefly historical, his most important works being 'The Renunciation of St Elizabeth of Hungary,' 1891, a Chantry Purchase now in the Tate Gallery.

Calderón, Rodrigo (d. 1621), Sp. adventurer, b. Antwerp. He was patronised by the Duke of Lerma, chief minister of Philip III, and eventually became a

secretary of state, in which capacity he roused the jealousy and hatred of the court. On the fall of his patron C. was accused of murder, and, after languishing in prison for 2 years, was tried by order of the Duke of Olivarez, who had become chief minister under Philip IV. He was found guilty and executed.

Calderón, Serafín Estébanez (1801-67), Sp. writer, celebrated for his brilliant sketches of Andalusian scenes and manners, which he contributed to the *Cartas Españolas*, a weekly Madrid magazine. Canovas del Castillo, C.'s nephew, wrote his biography, called *El Solitario y su Tiempo*, 1883.

Calderón de la Barca, Don Pedro (1600-1681), Sp. poet and dramatist, b. Madrid, of a noble family; educ. at the univ. of Salamanca. He showed great precocity, writing a play, *El Carro del Cielo* (The Wagon of Heaven), at the age of 13. He seems to have served with honour as a private soldier in sev. campaigns in Italy and the Low Countries during 1623-9, and, having already become famous as a dramatist, was invited to the court of Philip IV, and made a knight of the order of St James about 1636. He produced an enormous number of plays of all kinds, mostly realistic plays, dealing with the love intrigue of 2 pairs of lovers, or tragedies of jealousy and honour, till about 1651, when he entered the church, and in 1653 became a canon of Toledo, thereafter confining himself mainly to works on sacred subjects. He gained great preferments in the church, becoming a chaplain to the king in 1663, and later superior of the congregation of San Pedro. As a dramatist C. ranks second to Lope de Vega, whom he excelled in moral depth and purity and grace of expression. He fell far below Lope in invention and ingenuity, and his work suffers from his disregard of conventional dramatic rules, his brilliant imagination leading him into extravagances. The lofty moral standard of his plays and their refined clearness of language made them a valuable influence in an age when the drama was beginning to suffer from the lasciviousness and floridness of Lope and his school. His plots are always managed with great skill and written with simplicity and precision. His best plays are *El Mágico Prodigioso*, a religious drama somewhat reminiscent of *Faust*, and probably the best known in this country, part of which has been trans. into English by Shelley; *La Vida es Sueño*, a philosophical play; *Príncipe Constante*, a historical drama on the subject of Prince Ferdinand of Portugal, which, together with the former, has been trans. into German by Schlegel; *El Alcalde de Zalamea*; *El Divino Orfeo*; *El Purgatorio de San Patricio*, another religious play; *La Dama Duende*, a perfect example of the 'cloak and sword' play; *El Médico de su Honra*; and *El Mayor Monstruo los Celos*, tragedies of passion. But in the opinion of many critics his sacred plays, *Autos Sacramentales* (6 vols.), contain his best work. His collected plays were first pub. at Madrid in 1682-91, and later eds. have been issued there in

1848-50 and 1882. The best ed. of the *Autos* is that issued at Madrid in 1759-60. There is a Ger. trans. by Lorinser (1882) and E. trans. of different plays by Denis Ma...-hy (1853-73), Edward Fitzgerald (1853 et seq.), Archbishop Trench (1856), and N. Maccoll (1888). See E. Cotarelo y Mori, *Ensayo sobre la vida y obras de D. Pedro Calderón*, 1924; A. Valbuena Prat, *Calderón: su personalidad, su arte dramático, su estilo y sus obras*, 1941; A. A. Parker, *The Allegorical Drama of Calderón*, 1943; E. Frutos Cortés, *Calderón de la Barca*, 1949.

Calderwood, David (1575-1650), Presbyterian minister and historian, b. Dalkeith, Midlothian. He was educ. at Edinburgh Univ., and became minister of Crailing, Roxburghshire (1604). He opposed the designs of James VI to introduce Episcopacy into Scotland, and was tried before the Scottish Parliament and banished. He lived in Holland from 1619 to 1625, where he wrote extensively on controversial subjects, and on his return to Scotland he collected material for his *History of the Kirk of Scotland*, 1678. He also wrote *Allare Damascenum*, 1621, and took part in drawing up the *Directory for Public Worship in Scotland*. See life by T. Thomson prefixed to the *History*, printed by the Woodrow Society, 1842-5.

Calderwood, Henry (1829-97), minister and philosopher, educ. at Edinburgh Univ. and Theological Hall of the United Presbyterian Church. He was appointed examiner in philosophy, Glasgow, 1861: prof. of moral philosophy, Edinburgh, 1868, and chairman of the first school board of that city, 1873-7; author of *The Philosophy of the Infinite*, 1854, *The Revelations of Mind and Brain*, 1877, and *Evolution and Man's Place in Nature*, 1893. See life by his son, W. Calderwood, and D. Woodside, 1900.

Caldes, is. (area 449 ac.) of Pembrokeshire, S. Wales, 2½ m. S. of Tenby, in Carnarthen Bay, property of a Cistercian priory which came here in 1929 from Belgium. There is a lighthouse on the S. cliffs.

Caldicot, tn. of Monmouthshire, Wales, 6 m. SW. of Chepstow. The ruined castle, largely 12th cent. and originally moated, is particularly impressive. C. is a development area for Chepstow, and a country college is planned here. Pop. 3000.

Caldwell, Anne, see MARSH, Mrs.

Caldwell, Erskine Preston (1903-), Amer. novelist, b. Coweta co., Georgia. After a year at the univ. of Virginia he became a reporter on the *Atlanta Journal*. He first became famous with his novel *Tobacco Road*, 1932, which was made into a play which had the longest run in the hist. of the Amer. theatre. Others of his novels are *God's Little Acre*, 1933, *Journeymen*, 1935, *Trouble in July*, 1940, *Tragic Ground*, 1944, *House in the Up-lands*, 1946, *This Very Earth*, 1948, *A Lamp for Nightfall*, 1952, and *Love and Money*, 1954.

Caldwell, Robert (1814-91), Anglican coadjutor Bishop of Madras, b. near

Antrim. He was sent out to India by the London Missionary Society, but joined the Church of England. Ordained in 1841, he went to Tinnevely where he laboured for 50 years being consecrated Bishop of Tinnevely as coadjutor to the Bishop of Madras in 1877. He wrote a *Comparative Grammar of the Dravidian or S. Indian Family of Languages*, 1856, and assisted in a Tamil trans. of the Prayer Book, 1842-72, and the Bible, 1858-69. See his *Reminiscences*, 1894.

Caleb, son of Jephunnah, of the tribe of Judah, one of the spies sent by Moses

the Orange Free State and Basutoland. Length 220 m.

Caledonia, Rom. name for that part of Scotland lying N. of the firths of Clyde and Forth, still used in poetry for the whole of Scotland.

Caledonian Canal, chain of lochs, united by artificial canals, which stretch NE. and NW. across Scotland, connecting the N. with the Irish Sea. It traverses the Great Glen of Albin, through the counties of Inverness and Argyll, from Moray Firth to Loch Eil. The lochs are Ness, Oich, Lochy, Eil, and Linnhe. The total

A VALLEY IN THE MALUTI MOUNTAINS ALONG THE CALEDON RIVER, SOUTH AFRICA

to explore Canaan. Ten of the spies acknowledged that the land 'flowed with milk and honey,' but declared that the cities were well protected and that the people were of giant-like proportions. But two of them, C. and Joshua, were anxious to fight their way to Canaan. As a reward they were spared to enter the promised land. C. received Hebron and its dist. as his portion.

Caledon: 1. Tn in Cape Province, S. Africa, 72 m. by road SE. of Cape Town. It is on the Zwartberg, and has 7 thermal springs, strongly radio-active, whose content of ferrous carbonate held in solution is declared to be 4 times as great as that of any other springs known. Pop.: Whites, 2164; Coloureds, 1535; Bantu, 141.

2. Riv. of S. Africa rising in Mont-aux Sources in the Drakensberg and flowing into the Orange R., forming for the greater part of its course the boundary between

length of the canal is nearly 62 m., the canals being 23 m. long. The work of cutting these channels was begun in 1803, under the supervision of Telford. The canal was opened for navigation in 1823, but the work was not completed till 1847. The average depth of the artificial channels is 17 ft, the breadth at the surface being 120 ft, and at the bottom 50 ft. The total cost of construction was £1,311,270. The canal enables vessels to avoid the dangerous route via Pentland Firth and the Hebrides, and is chiefly used by fishing craft.

Caledonian Market (officially the Metropolitan Cattle Market, the successor of the Islington Cattle Market), former market in the bor. of Islington, London. It was inaugurated, together with a general market, in 1855, and situated on the famous Copenhagen Fields (q.v.). The cattle market was closed in 1929.

and the general market, a popular resort of 'bargain hunters,' in 1939.

Caledonian Orogeny, the period of mt-building which affected parts of what is now NW. Europe, E. America, Greenland, and Arctic during early Palaeozoic (q.v.) times. Named after the anct name for Scotland, Caledonia, to commemorate the Scottish mts formed at this time. These include the Grampians, the N. Highlands, and the S. Uplands, the geological structure of which largely dates from the C. O., though later earth movements have repeatedly affected the ground and determined the shape of the present-day relief. The prevailing NE. to SW. grain of much of the country in Scotland, Wales, and N. and W. Ireland dates from this period of mt-building. The Caledonian chain can be traced northwards through the Shetlands into W. and N. Norway and into the Arctic Is. of Spitsbergen and Bear Is. Its effects can be detected in E. Greenland where a mt chain running parallel to the coast can be recognised, though in a deeply dissected condition. In N. America Caledonian structures run from Newfoundland towards the St Lawrence, where they are again recognised and may be followed to the state of New York. In all these countries the Caledonian chain consists of folded and often metamorphosed sediments, originally deposited in late pre-Cambrian or early Palaeozoic times, together with igneous rocks intruded before or during the earth movements which occurred at intervals from the Ordovician to the Devonian. The Caledonian mt system of Europe gave rise to the anct continent known geologically as the Old Red Northland, which occupied most of NW. Europe of the present day and which came into being during the Devonian. Parts of that continent in Scotland and in Scandinavia have remained above sea level as dry land continuously until the present. *See also* ALPINE OROGENY; GEOLOGY; HERCYNIAN OROGENY; MOUNTAIN-BUILDING PERIOD.

Caledonian Railway. The company was formed in 1845, amalgamated and absorbed the Scottish Central and Scottish NE. railways, together with a number of small lines which served tns N. of Perth in 1865-6, and obtained possession of the Forth and Clyde Canal and the Monkland Canal in 1867. The total length of line was 1080½ m. The main lines ran from Carlisle to Aberdeen via Stirling and Perth, Edinburgh to Glasgow, Greenock, and Gourock, and to Oban and Ballachulish. The railway was amalgamated in 1923, together with numerous other national and local lines, with the L.M.S. Since 1 Jan. 1948, the Scottish railways so amalgamated have been organised as the Scottish region of the Brit. Railways system.

Calembour, or **Calembourg**, play upon words, based upon the difference in meaning of words pronounced alike, in great favour among the Fr. wits of the 18th cent. The name is said to be derived from an abbot of Kahlenberg, an amusing personage, or a teller of amusing anecdotes,

in old Ger. tales, or possibly from a count of Kahlenberg, who was notorious for the amusing blunders in speaking French at the court of Louis XV.

Calenberg, or **Kalenberg**, former Ger. principality. In the Middle Ages it belonged to Lüneburg, and after descending from one branch of the House of Brunswick to another, it came in 1705 into the possession of the elector of Hanover (q.v.). The principality was traversed by the Rs. Weser and Leine. Area 1050 sq. m.

Calendar. The C. now in general use is the Julian, with the Gregorian correction (*see* METROLOGY). The Romans developed a C. of alternate 29- and 30-day months with an arbitrary intercalated period to keep the civil and solar years in step, but abuse by the pontiffs responsible for the correct operation of this system led to an accumulated discrepancy of about 2 months by the time Julius Caesar became dictator and determined on reform. Sosigenes (of whom little is known beyond Pliny's reference) gave technical advice, and the year 46 BC was extended to 445 days in order to restore the vernal equinox to 25 Mar. The first Julian year began on 1 Jan. 45 BC (700 AUC). (*See* CHRONOLOGY.) Originally this system provided leap year with alternate 31- and 30-day months, Feb. being reduced to 29 days in the intervening years, but the Emperor Augustus transferred one of these to his own month (Aug.) in order to make it equal to Julius Caesar's July. Then the last 4 months had their days re-allocated in order to avoid 3 31-day months in succession. The Julian correction was not exact and the cumulative error became measurable in days as the cents. passed: in order to eliminate this discrepancy Pope Gregory XIII ruled that 5 Oct. should be called 15 Oct. in the year 1582. This change took effect immediately in Italy, France, Spain, and Portugal; sev. other Rom. Catholic countries came into line on the new 1 Jan. 1583, but the Protestant states of Germany, the Netherlands, and Denmark did not change until 1700. In the Brit. Isles, dominions, and N. Amer. colonies the new style C. was not in use until 3 Sept. became 15 Sept. in accordance with the provisions of the Calendar Act (24 Geo II c. 23) passed in the previous year (*see* A. E. Berriman, *Historical Metrology*, 1953). In France an attempt was made by the revolution to establish 22 Sept 1792 as the beginning of a new official era (*see* CHRONOLOGY), and this was accompanied by a complete reconstruction of the C. on the basis of 12 30-day months with 5 named holidays to complete the year, and a sixth (to be called Revolution Day) every fourth year. All this was cancelled by Napoleon's decree in 1806. There is a modern attempt to arouse interest in a rationalised J. based on 4 equal quarters of 13 weeks with 'Worldsday' between the end of one year and the beginning of the next, plus a leap-year holiday between June and July. Under this scheme there would be 31 days in the first months of

each quarter. Relevant literature can be obtained from World Calendar, 20 Buckingham St, London S.W.1.

Hebrew Calendar. The Jewish day begins nominally with the sunset but actually at 6 p.m.; its length is 24 hrs, but each hr is divided into 1080 *halagim*, the duration of the *helaq* being 3.3 sec. New Year's Day is 1 Tishri (which falls between 5 Sept. and 5 Oct.), and the ordinary year contains 12 months of alternate 30- and 29-day periods making a total of 354 days, but 7 times in each cycle of 19 years there is an intercalated month Veadar of 30 days between the sixth month Adar and the seventh month Nisan; this makes the embolismic year of 384 days required to readjust the Jewish to the solar year.

Muslim calendar. The year is composed of 12 lunar months containing 30 and 29 days alternately (total 354), but in a cycle of 30 years there are 11 in which the last month of the year has an extra day. The year begins in the month called Muharram; the ninth month, Ramadan, is observed as the month of abstinence. See also CHRONOLOGY and HOROLOGY.

Calendering, process of producing a glazed or polished surface upon paper, linen, and cotton. The term is a corruption of 'cylindering,' having reference to the usual method of passing the material between revolving cylinders, usually of steel or hydraulically compressed paper, under high pressure. The principles are illustrated by the domestic iron and mangle.

Calends, or **Kalends**, the first day of any month in the Rom. calendar. See CALENDAR.

Calendula, genus of plants of the family Compositae, common to the Mediterranean. *C. officinalis* is well known in England as the pot-marigold, Mary-bud, or golds, and is a very hardy garden plant. *C. arvensis*, the field marigold, grows profusely in vineyards of the Rhine.

Calenius, Walter (d. 1151), archdeacon of Oxford from 1115 to 1138. The name C. was given to him by John Bale, it being an adjective formed from *Calena*, a supposed name for Oxford (really a mis-reading for Caleva, the name of a Rom. station at Silchester). According to Geoffrey of Monmouth, this Walter brought from Brittany the Breton or Welsh original which Geoffrey professed to translate in his *History of the Kings of Britain*.

Calepino, Ambrogio (c. 1440-1510), It. humanistic scholar. His original name was Ambrogio of the Counts of Caleppio (Bergamo, N. Italy). He compiled a Lat.-It. dictionary, which appeared in Reggio Emilia in 1502; later he revised and amplified it to include also English, French, German, and other languages. This work became the prototype of similar compilations, later known as *calepini*. The latest revised ed. of Calepino's work was by Iacopo Faucioliati (q.v.); it appeared in 1772.

Calif, see CATTLE.

Calgary, city founded in 1883, in the prov. of Alberta, Canada, the centre of a

ranchoing and agric. dist. It is an important junction on the main line of the Canadian Pacific Railway, 40 m. from the Rocky Mts whence it obtains a supply of coal; the railway here rises to 3437 ft above sea level. C. is the home of the famous C. Stampede held annually in July. It has an institute of technology and art; there is a branch of the univ. of Alberta, giving courses leading to a degree of Bachelor of Education, and a public library of approximately 132,000 vols. C. has 2 daily newspapers and 3 radio stations. Industries are meat packing, malting, saw-mills, petroleum products, and dairy products; there is an active stock exchange. Pop. 168,840.

Calhoun, John Caldwell (1782-1850), Amer. statesman, b. Abbeville co., S. Carolina, of Scotch-Irish parentage. He graduated at Yale in 1804, and then entered the legal profession. In 1811 he represented his native state in Congress, and strongly supported measures which led to the declaration of war with England (1812-15). He was secretary of war in Monroe's Cabinet (1817), and twice became vice-president of the U.S.A., in 1825-9 and 1829-32. In 1829 he showed that his political views were undergoing a change, and in 1831, in his *Address to the People of South Carolina*, he definitely severed his connection with President Jackson, by setting forth his theory of state rights as opposed to federal rule. He retired from the vice-presidency and sat in the Senate from 1832 till 1844, when he became secretary of state under Tyler. C. strongly opposed war with Mexico (1846-7) and championed the slave-holding states (1848), honestly believing slavery to be a blessing to master and slave alike. He d. at Washington. For his life consult R. S. Jenkins, 1861, and R. K. Crallé, in the collected ed. of his works (1851-5); for his political and social views, and for the hist. of his time, consult the life by Von Holst, 1882. His *Correspondence* was pub. by J. F. Jameson in 1900.

Call, city, cap. of Valle del Cauca dept., Colombia, the fourth largest city of Colombia, situated on the Rio Cauca, near its junction with the Rio Cauca, at an elevation of 3140 ft. It is a prosperous and important commercial centre, and contains the fine Ionic church of San Francisco. The city centre and barracks were severely damaged by explosions of unknown origin on 7 Aug 1956. Pop. 88,370, largely Negro and mulatto.

Calibration, originally the accurate measurement of the bore ('calibre') of a cannon, but now applied to testing of the accuracy of any instrument. Laboratory and workshop instruments are compared with a sub-standard, e.g. a voltmeter is connected in parallel with the sub-standard on a variable voltage supply, the voltage being increased step by step from 0 to maximum and then decreased to 0 to account for sluggishness in action. The deviations in readings of the ordinary voltmeter from the sub-standard are tabulated as 'corrections' to be applied in use. A sub-standard is calibrated

against a standard which is usually kept in a separate room screened from interference of any kind from outside. The standard itself is calibrated independently of any instrument of the same kind, by reference to the fundamental definition of the unit of the quantity measured, e.g. an ammeter may be checked against a volt-ammeter measurement of amperes (q.v.) or by the Kelvin balance (q.v.).

Calibre, *see* GUN.

Caliche, impure sodium nitrate, or Chile saltpetre. Formula NaNO_3 . It is from C. that the world's supply of sodium nitrate is obtained. The deposits occur only in N. Chile, notably in the prov. of Tarapaca.

Calico-printing, process of impressing on cotton or other textiles certain designs in colours. The art was known to the Egyptians, even as far as the effect of certain substances called mordants in making the colours permanent in the fabric. It was also known in quite ancient times in India, whence, through the agency of the Dutch E. India Co., the trade was brought into Holland. It was introduced into London in 1676, Glasgow in 1738, and into Liverpool in 1764. The essential principles of the methods have remained the same, but the development of the use of machinery and the extension of chemical knowledge have made the operations less tedious and more varied in their colour effects. There are 2 main processes of printing: block-printing and machine-printing. In the former a wooden block is engraved with the design by hand, exceptionally fine work sometimes being done on copper plates let into the wood. The design for machine-printing is first of all engraved upon a soft steel roller, which is hardened and made to impress the design in relief on a second steel cylinder. This cylinder is hardened in its turn and finally transfers the original design to a copper roller. Each colour to be printed demands a separate roller, so that machines carrying as many as 20 copper cylinders may be employed. Each printing cylinder is mounted so as to press against a large central roller, around which the cloth to be printed passes. The colour is supplied to each copper cylinder by a colour-box in which a small roller revolves up to its axis, at the same time pressing against the copper cylinder. The 'colour doctor,' a thin steel blade fitting against the surface of the copper cylinder before contact with the cloth, removes excess of colouring matter; while another steel blade, called the 'lint doctor,' is similarly fitted after the printing cylinder leaves the cloth to remove all impurities communicated by the cloth. There are many 'styles,' or methods, of colour printing. In the 'madder style,' for example, a cloth may be printed with 4 or more different mordants in the printing machine. Mordants may be defined as substances which have an affinity for the fabric on the one hand and an affinity for the colouring material on the other; they thus serve to hold the colouring matter in place. After being dried in a drying chamber, the pieces are put through a process called

aging. This consists of subjecting them to the influence of heat and moisture, by which certain necessary physical and chemical changes in the printed mordants are brought about. The next process, called *dunging*, consists of passing the cloth through a hot solution which removes any uncombined mordant or thickening agent. A solution of cows' dung was formerly used for this process, but many effective substitutes have been discovered. The material after being thoroughly washed is ready for dyeing, a process usually occupying 1 or 2 hrs. The material then has to be 'cleared,' that is, the colour has to be taken out of those portions not mordanted. This is done by means of a hot soap solution and a chlorine solution, all colours not 'fixed' being thus removed. In colouring with indigo or aniline black, it is customary to print a 'resist,' that is, a substance which prevents the incorporation of the colour material with the fabric; the coloured portion will then ultimately be that portion not treated with the resist. Steam is used with some colouring substances either to fix them in the fabric by mere mechanical blowing through, or to effect a desired chemical change, or, when albumen is used as a fixing agent, to bring about the required coagulation. *See* C. O'Brien, *Calico Printing*, 1892, and W. Watson, *Textile Design and Colour*, 1937.

Callout, *see* KOZHIKODE.

Callif, *see* CALIPH.

California, Pacific state of the U.S.A., bounded N. by Oregon, E. by Nevada, S.E. by Arizona, S. by Lower C. (Mexico), and W. by the Pacific Ocean. It lies between parallels $32^\circ 28'$ and 42° N. lat. It is popularly known as the Golden State, and in the W. it is often spoken of as the Coast. The vast mt system of C., with the variation it gives of peak and canyon, valley and hill, is one of its most conspicuous features. Two great mt ranges exist. The Sierra Nevada runs almost parallel with the coast along the E. boundary of the state. Its average breadth is about 80 m., and it includes about a dozen peaks over 10,000 ft high. Chief of these is Mt Whitney (14,495 ft), the highest in the U.S.A. (excluding Alaska). Among the Sierra Nevada ranges are the rifts of the Yosemite, Kings, and Tuolumne, canyons famous throughout the world for their magnificent scenery. Along the coast lies the series of disconnected ranges grouped as the coast range, longer but lower than the Sierra Nevada. Between these 2 ranges lies the great Central Valley of the Sacramento and the San Joaquin, which 2 rvs. unite and run into San Francisco Bay. The former, with its trib. the Feather, drains the N. part of the state, the latter drains most of the S. part. Other rvs. are the Eel, Trinity, and Klamath, all in the N. Since C. extends over 770 m. from N. to S., the climatic conditions are varied. The N. dist. is very rainy, particularly in the winter, and the NW. is damp and foggy. The S., however, is warm and semi-tropical, and has

thus become a favourite winter resort. The rainfall is generally low, and the nights are generally cool throughout. On the whole, the climate is one of the best in the world. The flora of C. is very distinct from that of the more easterly states. Among its characteristic products may be named the mammoth *Sequoia gigantea* and the *S. sempervirens*, a species of redwood which flourishes particularly in the NW. These 2 species are the only survivors of the genus *Sequoia*, once widely spread over the N. hemisphere, and efforts are being made to preserve them. Timber production is valued at some 30 million dollars (2,000,000,000 board ft—chiefly pine). There are 18 national forests, which cover over 25 million ac. Of animals, the most characteristic are the grizzly and black bears, the puma, the bighorn sheep, and various varieties of deer. The N. rvs. supply good stores of salmon, and coast fishing is generally important. The geology of the state is fairly simple. The general basis is fairly recent, the Sierra Nevada being chiefly composed of Triassic and Jurassic beds; the coast ranges are chiefly Cretaceous and Tertiary. The axis of the Sierra Nevada is probably Archean, and the elevation of the coast range occurred towards the end of the Miocene period. The mineral resources are great, and since the discovery of gold in 1848 the output has been enormous. C. produces, commercially, about 60 kinds of minerals: gold, silver, copper, lead, zinc, quick-silver, stone, borates, soda, potash, salt, pumice, clay, gypsum, chromite, silica, iron ore, manganese, platinum, molybdenum, tungsten, and magnesium. Mineral output annually ranges as high as 1 billion dollars. The gradual increase in the number of small owners had given an impetus to C.'s agric. progress. Thirty-six million ac. are under cultivation; C.'s fruit crop ranks first nationally, and C.'s wineries make 90 per cent of domestic wines and brandies. In 1951 C. produced the second largest barley crop, 42,360,000 bushels, and 1,770,000 bales of cotton lint. On 1 Jan. 1952 the state had 3,160,000 head of cattle, including 849,000 milch cows valued at an average of \$300 per head. Manufacturing is the state's major industry, with the value in 1951 of \$6,145,000,000. Transportation equipment ranks first, and includes aeroplanes, autos, and ships, followed by food products, fabricated metal products, lumber and petroleum products, primary metals, and electrical equipment. C.'s output of crude petroleum products in 1951 was 354,467,000 barrels of 42 gals. each. The cash income from crops annually is 2 billion dollars. Abundant irrigation is provided by numerous streams and unnavigable rvs. The great Central Valley project (including Shasta and Friant dams), the All-American Canal, Imperial and Parker dams in the Colorado, the Los Angeles Aqueduct (233 m. long), tapping Owens R., and Colorado R. Aqueduct (242 m. long) are among the major projects. Six million ac. of land are under irrigation. The largest cities

and chief seaports (q.v.) are Los Angeles, San Francisco, Stockton, Oakland, Long Beach, Sacramento, and San Diego. In 1950 the total of commerce in the San Francisco Bay area alone amounted to 37,081,559 tons. About 40 per cent of U.S. commercial fish catch is landed in C. ports. S. C. continues its world leadership in motion pictures. Communications by road, railway, and air have been tremendously accelerated in the last decade, more than 100 million dollars having been spent on highways alone. The state administration is in the hands of a governor elected every 4 years. The Senate consists of 40 members elected every 4 years and the assembly of 80 members elected for 2 years. C. is represented in Congress by 2 senators and 30 representatives. It was first discovered by Juan Cabrillo in 1542, and remained under Sp. rule until 1822, when it declared its independence and its allegiance to Mexico. It was taken over by the U.S.A. in 1847, and became a state of the Union in 1850. Its area includes 156,803 sq. m. of land and 158,693 sq. m. of inland waters; its 1950 pop. was 10,586,223. Sacramento is the state cap. See A. Drury, *California: an Intimate Guide*, 1939; J. W. Caughey, *California*, 1940; J. A. B. Scherer, *Thirty-First Star*, 1942; R. E. Cowan, *A Bibliography of the History of California, 1520-1930* (3 vols.), 1943; R. G. Cleland, *From Wilderness to Empire*, 1944.

California, Gulf of, arm of the Pacific which separates the Lower California peninsula from the rest of Mexico. Length is about 700 m., and breadth varies from 50 to 150 m.; area 62,500 sq. m. It was originally known as the Sea of Cortés, after its first explorer. Both shores are bordered by high mts, and the coastline is very varied. At its N. extremity it receives the Colorado R., and various other rvs. also run into it from the mainland of Mexico. The chief ports are La Paz, Guaymas, and Mazatlán. It is noted for deep-sea fishing.

California, Lower, narrow and drought-stricken peninsula of Mexico, separating the Gulf of California from the Pacific Ocean; area 55,634 sq. m. It is nearly destitute of streams and exceedingly arid. It is divided into 2 parts: N. Ter. (pop. 226,870) and S. Ter. (pop. 60,500). The Boleo copper-mines in the N. have rich resources. Deposits of gold have been discovered and a solid int of iron and various other minerals. The chief tn is La Paz (q.v.).

California, University of, opened in 1869, has been at Berkeley since 1873. The architecture of the campus is Fr. Renaissance, designed by Emile Benard. In 1956 it had expanded to 7 other campuses at Davis, Goleta (Santa Barbara College), La Jolla (Scripps Institution of Oceanography), Los Angeles, Mt Hamilton (Lick Observatory), Riverside, and San Francisco. It has colleges of letters and science, agriculture, applied arts, architecture, engineering, and pharmacy, and schools of business administration, criminology, education, forestry, law,

librarianship, medicine, nursing, optometry, public health, social welfare, and veterinary medicine. At Berkeley is a radiation laboratory, with a bevatron activated in 1954. The univ. of C. operates the Los Alamos Scientific Laboratory, in New Mexico. Each campus has its library. At Los Angeles were 1,000,000 vols. in 1954; at Berkeley 1,900,000, including the Bancroft Library (100,000 items of W. Americana and colonial Lat. Americana) and many other special collections. Teaching staff in 1955 (all campi), 5300; students, 40,300.

Californian Poppy, *Eschscholtzia californica*, ann. species, family Papaveraceae, with many varieties, native to NW. America, and grown as an ornamental plant for its many brilliant colour forms.

Caligula (AD 12-41), Rom. emperor, *b. Actium*, son of Germanicus and Agrippina. His real name was Gaius Caesar; but as a child he spent much time among the legions on the Rhine, wearing a diminutive pair of soldier's boots (*caligae*), and was therefore nicknamed C. ('bootkins') by the troops. He succeeded Tiberius in 37, and, thanks to his liberality and the illustrious reputation of his father, was at first immensely popular. Eight months after his accession, however, he was stricken with an illness that undoubtedly affected his mind; for thereafter he behaved as a sanguinary and licentious madman. His extravagance exhausted Rome, and indeed the whole of Italy; he built a temple to himself as Jupiter Latialis, and even threatened to erect his own statue in the Holy of Holies at Jerusalem. In 39 BC he led what was no better than a plundering expedition into Gaul; but 4 months after his return he was assassinated, together with his wife and daughter. See J. P. V. D. Balsdon, *The Emperor Gaius*, 1934.

Calipers, instrument resembling a compass with bent legs, and used for measuring the diameters of various objects. It is used for finding the correct measurement of bores and shafts.

Caliph, **Calif** (from the Arabian *kalifa* or *khalifah*, meaning successor), title given to head of Mohammedanism (see ISLAM). The name caliphate denotes the rank, dominion, or office of a C. Each C. was supposed to be a direct lineal descendant of Mohammed. After Mohammed *d.* this title was first borne by Abu-Bekr, who was elected Mohammed's 'representative.' The hist. of these rulers can be divided into 3 divs.: (a) The first 4 C.s who immediately succeeded Mohammed; (b) the Ommayyad C.s; and (c) the Abbasid C.s. Abu-Bekr was the friend and father-in-law of Mohammed, and he proved himself capable and vigorous, considerably extending the limits of Islam. In the war that he carried on against the Persians, the Muslims were unsuccessful at first, but at last, at the battle of Qadisiya, the Persians were defeated and had to give up part of their land and limit themselves to Iraq proper. The Muslims under Abu-Bekr had soon annexed all the lands

bordering on Arabia, and to these they added Egypt. Abu-Bekr *d.* in 634, and was succeeded by Umar, during whose reign there were further tremendous conquests. Othman succeeded Umar (644) in the caliphate; he was a weak ruler, and the gov. of Islam fell into the hands of the Korish nobility. Othman was murdered in 656, and after much controversy Ali was elected as successor to Othman. His caliphate was disturbed by continual feuds, and in the end Ali was murdered also, in Jan. 661. Moawiya (661-80) was the first ruler under the new Ommayyad dynasty, which derived its name from one of Moawiya's ancestors. Their seat was Damascus. Many fights and battles took place during his rule. He was essentially a statesman, but he was deeply religious as well, as he followed closely the precepts of Islam.

CALIPERS

None of his successors, however, had his virtues. Moawiya's son, Yazid I (680-3), succeeded. During his reign he committed three actions for which Muslims never pardoned his memory: the murder of Hosain (grandson of the prophet), who had refused to take the oath of allegiance to Yazid, and who had led a revolt of the people of Iraq and sustained defeat and capture at the battle in the plain of Kerbela opposite Kufa (AD 680); the pillage of Medina, whose people had espoused the cause of Abdullah ibn Zobair, a rival for the caliphate, who had himself proclaimed C. at Mecca (AD 682-3); and the taking of the Kaaba (Ka'aba) (q.v.). Yazid was followed by his eldest son, Moawiya II (683-4), a young man of weak character, who *d.* of the plague or through being poisoned. The choice of a successor then fell on Merwan bin al-Hakam, at Damascus, a descendant of Ommayyad, who ruled as Merwan I (684-5). After a brief reign spent in unceasing warfare with the Shi'ites, he was suffocated by his wife and succeeded by his son, Abd al-Melik, whose turbulent reign lasted till 705. He gave the caliphate a coinage of its own, and also gave his patronage to scholars, and urged them to translate Persian works into Arabic. In the year 692 he levied a capitation tax on all Christian men. This was a means of getting money with which to support his wars. The next C.

was Walid I (705-15), under whom the caliphate was greatly extended, stretching to Spain on the one side and to the mouth of the Indus on the other. Suleiman, who d. in 717, was followed by a good ruler, Omar II, but he was poisoned in 720. Yazid II next succeeded, and d. in 724. Hisham d. in 743. Walid II was slain in a rebellion in 744. Yazid III d. also in 744. Ibrahim was dethroned (744) by Merwan II, then governor of Armenia. He was the last of the Ommayyads. They were not popular, and at last 3 brothers, descendants of Abbas, an uncle of the prophet, rose in rebellion. Merwan was pursued into Egypt, and killed in battle in 750. Abdullah, an uncle of the claimants, sent an invitation for a feast to 80 Ommayyads in Damascus, and when they were assembled killed them all. Abul Abbas (750-4) was the first C. under the Abbasids' regime. He was called also Saffah, meaning shedder of his enemies' blood. He was followed by Abu Ja'far Almansur, his brother (754-75), who made Bagdad the seat of empire. He left behind him vast riches, but his son, Almahdi (775-85), and his grandson, Alhadi (785-8), spent most of it extravagantly. Alhadi's brother, Haroun al-Raschid (the Just) came next (786-809). He is best known from his patronage of literary men. He persecuted the Christians, and made 8 separate attacks on the Gk empire in Asia Minor. His 3 sons fought for supremacy instead of accepting their father's div. of the empire. Amin was defeated and slain in 813, and his brother Almamun succeeded him (813-33). Motassim followed his brother (833-42), but with him departed the glory of the caliphate under the Abbasids. He was afraid of his own subjects, so he left Bagdad and went to Samarrah, and gathered under his nominal leadership about 50,000 Turks, who soon had all the power in their hands. Ever after the C.s held power and life by the sanction of the Turks. The Bagdad caliphate was finally overthrown in 1258. A puppet caliphate continued in Egypt, however, under Mameluke domination until its conquest by the Turks, 1516-17. In 1520 the last puppet C. surrendered his office to Solyman I (q.v.) and the title was then borne by Turkish sultans until 1922, when it was made elective in the Turkish imperial family. But in March 1924 the Turkish parliament decided to abolish the Turkish caliphate completely, and the members of the house of Osman were then expelled from Turkey, while Kemal (see ATATURK) was re-elected president of the Turkish Rep. See W. Muir, *Annals of the Early Caliphate*, 1883; T. W. Arnold, *The Caliphate*, 1924.

Calippus, Gk astronomer, fl. at the beginning of the 4th cent. bc. He observed that the Metonic Cycle contained an error of the fourth of a day, and introduced a 940 lunations period which is equal to 27,758.75 days. See GOLDEN NUMBER and METON.

Calixtus, or **Callistus**, name of 3 Popes: **Calixtus I** (217-22), successor of Zephyrinus. His life is known chiefly from

the accounts of Hippolytus a schismatical adversary of his. This writer says that C. was a slave, denounced as a Christian by the Jews, and later associate of Pope Zephyrinus. Hippolytus accused him of favouring the Patristic views and of lax discipline. The cemetery on the Via Appia bears his name.

Calixtus II (1119-24), prior to becoming Pope was Archbishop of Vienne in France. He ruled during the struggles over the investiture question and the schism of the anti-Pope, Gregory VIII. He commenced negotiations on the former question with the Emperor Henry V, and after some trouble matters were settled by the Concordat of Worms, 1122.

Calixtus III (1455-8), Alfonso de Borgia, a Spaniard. He preached a crusade against the Turks, who had just taken Constantinople (1453). His chief work was the vindication of the memory of Joan of Arc. The same title, C. III, was also borne by one of the anti-Popes, whom Frederick Barbarossa, the emperor, set up in 1168 in opposition to Alexander III.

Calixtus, Georg, properly **Callisen** (1586-1656), Ger. Protestant theologian. b. Medelbye in Schleswig. From 1613 as prof. of theology at Helmstedt, he was engaged in keen controversy with the Catholics. His study of the first cents. inclined him to advocate toleration, and this brought him into some suspicion. His chief work is *Epitome theologiae moralis*, 1634.

Calla, genus of Araceae with the single species, *C. palustris*, Bog Arum, found in marshes of N. Europe. The leaves are cordate, and the hermaphrodite flowers, borne every 2 years, are enveloped in a beautiful white spathe. C. Lilies are now classed under *Zantedeschia* (q.v.).

Callaghan, Sir **George Astley** (1852-1920), Brit. admiral. Entered the navy, 1865, and by 1894 had reached the position of naval adviser to the inspector-general of fortifications. In 1900 he commanded the *Endymion* in Chinese waters, taking part in the suppression of the Boxer rebellion. Also fought at Taku and later commanded the naval brigade which co-operated in the relief of the Peking legations. Promoted rear-admiral in the Channel Fleet when the 'Dreadnought' type was introduced and in 1911 became Commander-in-Chief, which post he held till the outbreak of the First World War, when he was succeeded by Adm. Jellicoe. It was due largely to his recognised skill in training organisation that the home fleet was in so high a state of efficiency when he retired.

Callahan, **James Morton** (1864-), prof. of hist. and political science at W. Virginia Univ. Head of the dept of hist. and political science, W. Virginia Univ., 1902; dean, College of Arts and Sciences, same univ., 1916. Among his works are *Neutrality of the American Lakes*, 1898, *Confederate Diplomacy*, 1901, *American Relations in the Pacific and the Far East*, 1901, *The American Expansion Policy*, 1903, *Semi-centennial History of West Virginia*, 1914, and *History of West Virginia, Old and New*, 1933.

Callaite, see **TURQUOISE**.

Callan, tn of Kilkenny, Rep. of Ireland, 10 m. SW. of Kilkenny; pop. about 1600 (1954).

Callander, police burgh in Perthshire, Scotland, on the R. Teith, 16 m. NW. of Stirling. It is the recognised H.Q. for visiting the Trossachs (q.v.), and a popular and picturesque holiday resort. Pop. 1800.

Callanish, or **Callernish**, dist. and vil. on Lewis Is., Ross and Cromarty, Scotland, on the E. shore of Loch Roag, 16 m. W. of Stornoway. The standing stones

Calcott, Sir Augustus Wall (1779-1844), landscape painter, b. Kensington. He early studied music and was for sev. years a chorister at Westminster Abbey. In 1799 he turned to painting and in 1810 was elected R.A. In 1837 he received knighthood. His best works are landscapes, though he attempted large figure compositions such as his 'Raphael and the Fornarina.'

Callendar, Hugh Longbourne (1863-1930), physicist, b. Hatherop, Glos. Educ. at Marlborough and Cambridge Univ. Prof. of physics at McGill Univ.,

Violet Banks

MAIN CIRCLE OF THE STANDING STONES OF CALLANISH
(Stones are in the form of a cross.)

of C., comprising an avenue or alignment of parallel stones culminating at the one end in a circle intersected by a cross (the alignment forming one arm of the cross), are among the finest in Britain, and date from the Neolithic period. Pop. 162.

Callao (Sp. El Callao), city, naval arsenal, and chief seaport of Peru, 6 m. SW. of Lima. It is situated on C. Bay, where it is sheltered from storms by the Is. of San Lorenzo. It has a floating dock, fine harbour walls, and narrow streets of shabby appearance. It has gasworks, sugar refineries, iron-works, etc., and its chief exports are minerals, sugar, hides, wool, etc. The present tn dates only from 1746, when the old city was destroyed by a great earthquake. It suffered considerably from bombardment in the war of the Pacific, 1879. Pop. (dept) 114,000; (city, 1950 estimate), 84,000.

Canada, 1893-8, at Univ. Colloge, London, 1898-1902; and later at the Imperial College of Science. He carried out much research work in thermodynamics, notably in calorimetry. He devised a constant pressure air thermometer which could measure up to 450° C. with an accuracy of 0.1° C. In 1894 he was elected F.R.S., and received the Rumford medal in 1906. His *Callendar Steam Tables*, 1915, and *Properties of Steam and Thermodynamic Theory*, 1921, give the results of his researches on steam.

Callernish, see **CALLANISH**.

Calles, Plutarco Elías (1887-), Mexican military leader and statesman, b. Guaymas, Sonora, Mexico. Joined in the rebellion against the rule of the tyrant-president, Porfirio Díaz. He was on the side of Carranza (q.v.) in the latter's fight with Huerta (q.v.), reaching the rank of a general. In 1915 he campaigned with Gen. Obregón (q.v.) against Pancho

Villa. In 1917 he was made governor of his native state of Sonora. After holding Cabinet posts under Carranza and Obregón he was elected president of the Mexican rep. for a 4-year term, beginning in 1924. His administration was marked by very stormy times. The oil-land laws brought a conflict with the big Amer. petroleum companies, and the laws for separation of Church and State resulted in a conflict with the Rom. Catholic Church.

Callianassa, genus of decapod crustaceans, and is the type of the family Callinassidae. They are noted for the inequality in size and form of the chelae, or claws. *C. subterranea*, the commonest species, is found at Naples and on Fr. and Eng. shores.

Callias, member of a wealthy Athenian family who were hereditary torchbearers at the Eleusinia mysteries. C. fought at Marathon (490), and after the accession of Artaxerxes I (464) he went on an embassy to the Persian court. This mission was supposed by some anc. authors to have resulted in a so-called 'Peace of Callias'; but the evidence, to say the least, is inconclusive. On his return C. was accused of treason and fined 50 talents. His grandson of the same name was the real negotiator of another 'Peace of Callias' in 371 B.C.

Callicarpa, genus of deciduous and evergreen shrubs, family Verbenaceae, about 40 species, some of which are grown in gardens for their autumn foliage colour and fruits.

Callicera, generic name of certain dipterous insects of the family Syrphidae. They are stoutish flies with large heads and eyes, the body is silky, and the antennae form elongated and slightly curved clubs.

Callischema, genus of Coleoptera of the family Cerambycidae, or longicorns. It differs from allied beetles in having the maxillary palpi smaller than the labial, and shorter than the terminal lobe of the maxillae. It emits a very agreeable odour.

Callichthys, genus of fishes belonging to the Siluroidea, or catfish suborder. The body and head are protected by large, hard, scaly plates, only the snout and under surface being naked, and barbels depend from the mouth. The species frequent rivers and streams in hot climates, and when the water dries up they perform journeys overland in quest of new ponds.

Calliocrates, Gk architect who, with Ictinus, designed the Parthenon (q.v.). He also designed the small temple of Niké Apteros at Athens.

Calliocrates, Spartan general, was sent in the year 406 B.C. to take Lysander's place as commandant of the fleet, towards the end of the Peloponnesian war. He pursued Conon, and defeated him in the harbour of Mitylene. Conon took refuge here, and held out till the Athenians sent a large force to his relief. C. was then defeated and slain in the naval battle of Arginusae. C. was greatly hampered in his efforts for efficiency by the incapacity of his predecessors.

Callidium, genus of coleopterous insects

of the Cerambycidae, or longicorns. *C. vagulus* is a Brit. species, about three-quarters of an inch long, of dull black colour, and is very destructive to fir-trees.

Calligonum, genus of Polygonaceae which consists of about 100 species from Africa and Asia. *C. aphyllum* yields a nutritious gum, which is obtained from the root, and a beverage is made from the fruit; and it is grown as a botanical curiosity.

Calligraphy, see WRITING.

Callimachus, Athenian sculptor, who fl. in the 5th cent. B.C. He was possibly a disciple of Calamis (q.v.); over-refinement has been ascribed to his work. He is supposed to have invented the Corinthian capital, and also to have been the first to employ the running borer for drilling marble. Among other decorations furnished by him for the Erechtheum (q.v.) was a famous golden lamp.

Callimachus (c. 305-c. 240 B.C.), Gk grammarian, critic, and poet, b. Cyrene. He founded a school at Alexandria, where Eratosthenes, Aristophanes of Byzantium, and Apollonius Rhodius (qq.v.) were among his pupils. From about 260 until his death C. was employed as a cataloguer in the museum library. Chief among his prose writings (now lost) was *Pétreas*, a catalogue of authors and their works with short critical notices. Of his poetry, only 6 hymns and 64 epigrams remain entire. These have been ed., with trans., by A. W. Mair, 1929.

Callimorpha, genus of Lepidoptera of the family Arctiidae; it includes sev. beautiful night-flying moths. The body is small and the wings large, somewhat triangular, and the hinder margins are rounded. *C. jacobaeae*, the pink underwing, is a common example.

Callin-hare, see FIKA.

Callington, murr. in of Cornwall, England, 10 m. from Launceston. It has extensive quarries, granite from which was used for the construction of the Thames Embankment, and Blackfriars and Battersea bridges, London. Pop. 2300.

Callionymus, technical name of the percormorph fishes known popularly as dragonets. The gill openings are reduced to a single small hole near the nape of the neck, the ventral fins are under the throat, the fin-rays of mature males are produced into filaments, and the body is smooth and without scales. *C. draco*, the sculpin, is about 10 in. long, and is brown and white in colour; *C. lyra*, the gemmeous dragonet, is another Brit. species, and is yellow, sapphire, and violet in hue.

Calliope, mother of Orpheus and the goddess of epic poetry. See MUSES.

Callirrhoe, famous fountain of Athens, one of the chief water supplies. In Gk legend C. was the daughter of Achelous, the riv. god.

Callisen, Georg., see CALIXTUS, GEORG.

Callistemon, genus of Australian shrubs or small trees, family Myrtaceae, 12 species; esteemed in gardens for their long brushes of many-stemmed flowers.

Callistephus, monotypic genus of *C. chinensis*, the China Aster (q.v.).

Callisthenes (c. 360–328 BC), of Olynthus, Gk philosopher and historian, kinsman and pupil of Aristotle, accompanied Alexander the Great into Asia. He was put to death on account of his remonstrances against Alexander's oriental luxury and assumption of divine origin. He is credited with an account of Alexander's expedition and a hist. of the Phocian war, but the life of Alexander, once ascribed to him, is certainly spurious. The romance of Alexander in its different versions is derived directly or indirectly from the Gk original which went under the false name of C., and this original was the foundation of the legends of Alexander circulated in the Middle Ages. This romantic life seems to date from the era of the Ptolemies, and its author, called the pseudo-Callisthenes, otherwise Aisopos, has been variously identified—but without much evidence—with Aristotle, Antisthenes, and others.

Callisthenes, light gymnastic exercises for health and the development of the body. See GYMNASICS.

Callistratus: 1. Rom. jurist, who lived in the reign of Septimius Severus and Caracalla. None of his complete works is extant, but some extracts occur in the *Digest* of Justinian.

2. (4th cent. BC), Athenian orator and general, whose eloquence impelled Demosthenes to study oratory. In 361 BC he was condemned to death for having advised the Thebans to occupy Oropus. Whereupon he fled to Methone in Macedonia, but was executed on his return to Athens in 335 BC.

3. Gk grammarian of the 2nd cent. BC, author of commentaries on the chief Gk poets. He is said to have been the first to introduce the 24-letter alphabet to the Samians.

4. Gk rhetorician of the 3rd cent. BC, author of descriptions of 14 statues by famous artists.

Callitricheaceae, family of dicotyledonous plants, of about 25 species, of the single genus *Callitriche*. They are nearly all floating plants, and are cosmopolitan but for S. Africa; in Britain they are known as water starwort. The flowers are unisexual and devoid of all floral covering, the male flower being simply a single stamen and the female a bilocular, spuriously quadricellular, ovary with 2 styles. In *C. verna* pollination takes place in the air, in *C. autumnalis* under water.

Callosity, thickening of the epidermis into a horny layer in parts exposed to pressure or friction. Most commonly found on soles of feet and palms of hands of manual workers. C.s may be distinguished from corns (q.v.) by the absence of the central stem or core present in the latter. C.s are usually painless.

Callot, Jacques (1593–1635), Fr. painter and engraver, was b. Nancy, Lorraine. At the age of 12 he ran away from home, intending to seek Rome and devote himself to art. He joined a band of gipsies, and later the suite of a nobleman. He worked in Florence (1612–21), but quitted

this to serve with the Duke of Lorraine. He visited the Low Countries to gather the material for his 'Siege of Breda,' and later Louis XIII of France engaged him to engrave other war pictures, among which is the 'Siege of La Rochelle.' C., the great student of manners, has left a vast number of etchings and drawings. He was rapid and impatient in his work, and all his prints are marked by vigour and animation. His 'Gipsy Halt' and 'Miseries of War' are particularly remarkable in this respect. See Lieure, *Jacques Callot*, 1927, and R. A. Weigert, *Jacques Callot*, 1935.

Calluna vulgaris constitutes in itself a genus of Ericaceae, and is known as ling heather; it flourishes on every heath of Britain, and is common in N. America and Europe. The plant is a low-tufted shrub, with small, sessile, closely imbricated leaves, flowers varying in colour from deep red to white, and fruit a septidial capsule.

Callus, substance given off round the fractured ends of a bone forming new bone which unites the breakage. A similar process takes place in plants when a cutting is taken or a branch pruned. When a plant is damaged a succulent tissue exudes and covers up the cut surface. In cuttings this C. produces the roots of the young plants.

Calmar, see KALMAR.

Calmet, Augustin (1672–1757), learned Fr. Benedictine monk, b. Meunil-la-Horgne, near Commercy (Moselle). He entered the Benedictine order in 1689. In 1713 he was appointed abbot of St Léopold at Nancy, and 10 years later was transferred to the abbey of Senones. In 1728 he produced the *Histoire ecclésiastique et civile de la Lorraine*, characterised by great learning and research. His *Dictionnaire historique, géographique, chronologique et littéraire de la Bible* (4 vols.), 1722–8, is one of the first works of its kind. Another important production is the *Commentaire sur tous les livres de l'Ancien et du Nouveau Testament*, (23 vols.), 1707–16. See the life by Dom Fange, 1763.

Calmette, Gaston (1858–1914), Fr. journalist, b. Montpellier. Educ. at lycées of Brast, Bordeaux, Clermont-Ferrand, and Mâcon, he joined the staff of the *Figaro* in 1880, was secretary of the editorial board, 1894–1903, and thenceforward editor-in-chief. A chevalier of the Legion of Honour, he acquired riches and strong enmity through the *Figaro*, for Chauchard, who had been prin. shareholder, left him a large part of his wealth; and he was unhesitating in his attacks on personal character. When attacks of the *Figaro*, he published letters which compromised Mme Caillaux (see CAILLAUX). His murder by Mme Caillaux at his office on 16 Mar. was the social sensation of the year 1914. Mme Caillaux was arrested but, after a trial at which she was defended by her husband, was acquitted.

Calmette, Léon Charles Albert (1863–1933), Fr. bacteriologist, b. Nice, brother

of Gaston C. (q.v.). Became a director of the Pasteur Institute and one of the leaders of medical research in France. Spent most of his life in the study of tuberculosis, his researches resulting in the introduction of the Bacille Calmette-Guérin (B.C.G.), which has proved successful in the prophylaxis of young children against tuberculosis. See life by N. Bernard and L. Nègre, 1939.

Calms, the, see CALDORMS.

Calmuks, see KALMYKS.

Calne, bor. and mkt. tn. of Wilts, England, 5 m. ESE. of Chippenham. It has a large bacon-curing industry, and manufs. of flour and paper. In the 10th cent. C. was the site of a palace of the W. Saxon kings, and in 978, at a synod held here, the floor gave way, precipitating all but St Dunstan to the ground. Pop. 4000.

Calochortus, Mariposa Lily, or Star Tulip, Amer. genus of Liliaceae, nearly allied to the fritillary and tulip; the fruit is a septicidal capsule. The plants are abundant in California, but do not grow well in England unless their roots are carefully protected from frost and excessive water, and can be exposed freely to light and air when growing. *C. albus* is a white, and *C. lilacinus* a lilac-coloured, species.

Calomel, popular and medical name for mercurous chloride, Hg₂Cl₂. This substance is found in nature as horn mercury or horn quicksilver, a sectile tetragonal mineral of hardness 1 to 2 and sp. gr. 6.48. C. is prepared in the laboratory by adding mercury to sulphate of mercury and triturating the whole in a mortar, afterwards adding common salt and subliming the mixture. Any corrosive sublimate which passes over is removed by washing with hot water. A more convenient method is adding mercury to corrosive sublimate (mercuric chloride) and subliming. C. is a dense, white, odourless powder, insoluble in water; it turns black when treated with lime-water, potash, soda, or ammonia. When heated it vaporizes without charring and sublimes again unaltered. It is the most widely used preparation of mercury in medicine, producing its effects without much local inflammation. In small doses it is used to relieve congestion of any part of the alimentary system, as it gently stimulates secretion, and thus helps to 'clear the system' in cases where increased functional activity is required to counteract the effects of overfeeding, unaccustomed lack of exercise, etc. In larger doses it is used by adults as a purgative. C. is not so poisonous as the more soluble mercuric salts, but if retained in the intestinal tract for any length of time, or given continuously, it may give rise to mercury poisoning, characterised in severe cases by a coppery taste in the mouth, loosening of the teeth, and in the severer cases by emaciation, necrosis of the jaws, and neuritis. It has been suggested that calomel, given in the form of teething powders, may be the cause of pink disease in infants.

Calonne, Charles Alexandre de (1734-1802), Fr. statesman, b. Douai. He

became a lawyer, and in 1783, after Necker's dismissal, became comptroller-general of the Treasury. He found the deficit enormous, and in an effort to remedy affairs, he persuaded Louis XVI to call an assembly of the 'notables,' to whom he proposed that their privileges of exemption from taxation should be abolished. This was so badly received, that he was compelled to resign. He spent some years in England, but returned to die in France.

Calophyllum, genus of evergreen trees, family Guttiferaceae, is noted for the beautiful colour of its young leaves. The species grow in tropical countries, chiefly of the Old World. *C. inophyllum*, a native of the E. Indies, has large leaves like those of a water-lily, snow-white fragrant flowers, and a nut which yields an oil useful for burning in lamps. *C. tacamahaca* yields the resin which is known as tacamahac. *C. calaba*, the calabab-tree, grows in the Caribbee Is. and is noted for its white, sweet-scented flowers, green fruit with an oily seed, and timber which is used in making staves and cask-headings.

Calore, see VOLTURNO.

Calorescence, name given by Tyndall to the production of light from the invisible rays beyond the red end of the spectrum (q.v.). These rays are heat-rays, and magnesium can be burned and platinum brought to white heat by them. The action of the platinum renders the rays visible, whence the description 'calorescent.' See INFRA-RED RAYS.

Caloric Theory, now discarded theory of heat, which postulated a fluid 'caloric' of no weight, the presence of which rendered a body hot. It was believed that 'caloric' flowed from a hot to a cold body when they were placed in contact. The theory was replaced by the kinetic theory, following the researches of Count Rumford (see THOMPSON, SIR BENJAMIN) in 1798. See THERMODYNAMICS.

Calorie, unit quantity of heat. The 'small C.' is the amount of heat required to raise the temp. of 1 gm. of water 1° C. As the specific heat of water varies slightly with its temp., the temp. is usually specified, as from 0° to 1°, or from 15° to 16° C. The latter temp. has the advantage that the C. so measured is almost equal to the 'mean C.' obtained by dividing the amount of heat required to raise 1 gm. of water from 0° to 100° C. by 100. The 'great C.' is the amount of heat required to raise 1 kg. of water 1° C. It is therefore equal to 1000 small C.s, and is approximately equivalent to 3.968 Brit. thermal units. For the use of the term in reference to human energy see DIET and FOODS AND FEEDING. See also METROLOGY.

Calorimeter, apparatus used to measure quantities of heat developed or absorbed in different chemical and physical changes, e.g. heat developed by friction, combustion, etc.; or absorbed as by melting ice. C.s vary in form according to the purposes they serve. The simplest variety, a plain metal vessel, is that used to determine the specific heat of metals. In the

ice-C, the heat is measured by the amount of ice which it melts. More complex forms are used to determine the specific heats of gases. In these experiments many contrivances, such as vacuum jackets, non-conducting air jackets, are used to prevent loss of heat, which is the greatest difficulty to overcome. See SPECIFIC HEAT and THERMOCHEMISTRY.

Calosoma, genus of coleopterous insects, is included in the family Carabidae. They greatly resemble the genus *Carabus*, and *C. mycophanta* is one of the largest and most beautiful species of its family.

Calotropis, genus of Asclepiadaceae common to the tropics of Asia and Africa. *C. gigantea*, the madar, mudar, wara, or bow-string hemp, grows in sandy places in many parts of India, and is noted for its milky juice, which is used medicinally in the E.; for the fibre made from the bark and the floss obtained from the seeds, *C. procera* is known as Fr. cotton or Fr. jasmine.

Calotistes, satirical society founded by Aymon and Torsac, two of Louis XIV's bodyguard, in 1702. It derived its name from *calotte*, the small cap that the priests wore to hide their tonsure. Various attempts were made to suppress it. In the middle of the 18th cent. it was converted into a military institution, but it was finally abolished at the time of the revolution.

Calotype, process of photography invented by Fox Talbot in 1841, in which paper sensitised with silver iodide and silver gallo-nitrate was exposed wet in the camera and then developed in silver gallo-nitrate in excess gallic acid; the resulting image was negative, i.e. reversed as regards light and shade.

Calovius, Abraham (1612-86), Ger. Lutheran divine, b. on 16 April, at Mohrungen, Prussia; studied at Königsberg, and in 1650 became prof. of theology at Wittenberg, and later on general superintendent and primarius. He was the most ardent upholder of Lutheranism in the 17th cent. He strenuously resisted Catholics, Calvinists, and Socinians, and was particularly opposed to the reconciliation policy, or 'syncretism,' of Georg Calixtus. As a polemical writer he had few rivals. He wrote his *Systema locorum theologicorum* between 1655 and 1677 in 12 vols. His *Historia Syncretistica*, written in 1682, was suppressed.

Calpe, ancient name of Gibraltar (q.v.). See HERCULES, PILLARS OF.

Calprenède, Gautier de Costes de La, see LA CALPRENÈDE.

Calpurnia, third wife of Julius Caesar. She was daughter of L. Calpurnius Piso (consul 58 BC), and was married in c. 59. C. tried to dissuade Caesar from going to the senate house on the Ides of March; after his murder she transferred his money and papers to Mark Antony's house.

Calpurnius Siculus, Titus (1st cent. AD), Lat. poet, author of 7 *Eclogues* which, though lacking in originality and sometimes marred by extravagance, are the work of a skilled literary craftsman. Four of these eclogues have been attributed by some critics to Nemesianus

(q.v.); but the latter, whilst indebted to C. S., shows a higher degree of poetic genius. See J. W. and A. M. Duff, *Minor Latin Poets* (with trans.), Loeb Library, 1934.

Calshot, headland of Hants, England, at the W. extremity of Southampton Water, now an important seaplane base.

Calstock, par. and mining tn, E. Cornwall, England, on the Tamar. Pop. 4400.

Caltafellotta, tn in Sicily (q.v.), 27 m. NW. of Agrigento (q.v.). It was originally a Saracen (q.v.) fortress. The site of the ancient *Tricala* is near by. Pop. 9000.

Caltagirone, tn in Sicily (q.v.), 37 m. SW. of Catania (q.v.). It is built on hills, 2000 ft above sea level, near the source of the C. riv. In 1693 it was devastated in an earthquake. The tn has a cathedral, many fine villas, and is famous for its majolica and terra-cotta work. There is a school of ceramics. Pop. 43,900.

Caltanissetta: 1. Prov. of Italy, in central Sicily (q.v.). It rises to a height of 3000 ft in the N., and has many high valleys of the Salso, Platani, and other small rivs. The chief products are sulphur, cereals, wine, salt, olives, and other fruits. The prin. tns include C. and San Cataldo (qq.v.). Area 812 sq. m.; pop. 308,000.

2. (ancient Nissa) Tn in Sicily, cap. of the prov. of C., 58 m. SE. of Palermo (q.v.). It stands on a high plateau, almost in the centre of the is., and was severely damaged during the Second World War. It has a ruined castle and a baroque cathedral (16th-17th cents.). The tn is the centre of the Sicilian sulphur-mining industry, and has mining schools and an agric. market. Pop. 60,500.

Caltha, genus of perennial herbs, about 16 species, family Ranunculaceae, natives of temperate and cold parts of the N. hemisphere. *C. palustris* and *minor* are native in Britain. Flowers are regular, petal-less, with all parts spirally arranged; calyx of 5 or more yellow or white sepals; stamens many; and the fruit a group of follicles.

Calton Hill, hill overlooking Edinburgh (q.v.) from the E., 355 ft high. On the summit is the National Monument.

Caltrop (A.-S. *calca-traeppe*), a small obstacle made of 3 or more sharp iron spikes joined together. They were much used in the warfare of the Middle Ages. When an enemy was expected, the ground over which it was to travel was thickly strewn with them. The result was disastrous to the horses as well as to the barefooted infantry. The word is also applied to plants that catch the feet, the 'water C.'s' being the name of the *Potamogeton* because it entangles swimmers.

Calumba Root, or Radix Calumba, is obtained from the climbing herbaceous plant, *Jalcoorhiza calumba*, family Menispermaceae, occurring in Mozambique. The odour is faintly aromatic, the taste bitter and slightly acrid, and the bitter active principle is known as calumbine. It is used medicinally as a tonic and stomachic.

Calumet tobacco pipe known among Amer. Indians as the peace pipe. This

was always handed round at an assembly of warriors at the conclusion of peace negotiations or other important ceremonies. In these days it is offered to strangers as a mark of hospitality. Dire offence would be taken should they decline to smoke it. The pipe has a long stem of wood, usually with a stone bowl, and is ornamented with women's hair or eagles' feathers.

Calumet City, residential city in NE. Illinois, U.S.A., manufacturing chemicals, packed meat, and pickles; incorporated 1911. Pop. 15,800.

Calvados, in Normandy, a maritime dept in the N. of France, and called by that name after one of the vessels of the Sp. Armada, which was shipwrecked off a dangerous ledge of rocks in 1588. The coast is dangerous on account of the rocks, and lighthouses are placed at the mouths of the R.s. Touques, Dives, Orne, and Vire. The region is mountainous with extensive fertile valleys. The pasturage is good, and there is an abundant supply of wheat and agric. produce. Cider is produced in great quantities from the orchards in the Auge dist.; a spirituous distillation of cider is made also and bears the name of the dept. There are 6 arrons., named respectively after the chief tns, Caen, Vire, Bayeux, Lisieux, Falaise, and Pont l'Évêque. The prin. ports are Caen, Trouville, and Honfleur, and there is an excellent fishing industry. Textile manufs. are important, and there are iron industries. Area 2198 sq. m.; pop. 405,000. For the battles in C. in 1944 see under WESTERN FRONT IN SECOND WORLD WAR, INVASION OF NORMANDY.

Calvaert, Denis (1540-1619), Flem. painter, b. Antwerp; went as a young man to Bologna and Rome; after studying Raphael's works, and assisting Lorenzo Sabbatini with paintings for the ducal palace, he returned to Bologna, where he founded a school which Domenichino and Guido both attended.

Calvary. The word C. is a Lat. trans. of the Gk for the Aramaic word *Golgotha*, or rather *Golgoltha*, a skull; the name *ras* (head) is still given to rocky eminences by the Arabs. The sites of C. and the Holy Sepulchre were providentially preserved by the erection of temples of Jupiter, Juno, and Venus, when Hadrian made Jerusalem a Rom. colony in AD 135; and for some 10 years from AD 325 Constantine levelled and embellished these sites and built the Church of the Holy Sepulchre to enclose them. This now lies inside the city walls, but excavations have proved that the site was originally outside, though later enclosed within it.

Calvary Clover, name given to the ann. *Medicago echinus* of S. France.

Calvatia, genus of fungi of the order Lycoperdales, rounded or pear-shaped, with tough peridium. *C. gigantea* is the Giant Puff-ball, found in woods, gardens, etc., growing up to 4 ft across, and edible. *C. caelata* and *C. saccata* are other Brit. species.

Calvé, Emma (Rosa Emma Calvet)

(1858-1942), Fr. opera singer, b. Décazeville, Aveyron. She studied music under Jules Puget in Paris and, after she had made her first important appearance, which was at Brussels, 1882, as Marguerite in *Faust*, she became a pupil of Mathilde Marchesi. She had a great range and could sing both contralto and soprano. She appeared at Covent Garden in 1892 as Santuzza in *Cavalleria Rusticana*, her success, both in that part and as Carmen in Bizet's opera, being immediate. It is generally agreed that she was the greatest of all Carnemens. Strictly her voice was a mezzo-soprano, and through all the registers there was a timbre of remarkable beauty and individuality. She purchased the château of Cabrières, which became the home of her retirement, and there she founded and maintained a sanatorium for young girls.

Calveley, Sir Hugh (d. 1393), soldier. He fought in Brittany in the war of 1341-64, during which he was imprisoned at Josselin. He took part in the battle of Auray (1364), which ended the war. C. was a freelance and fought for whichever leader pleased him. In 1367 he left Henry of Trastamare and served the Black Prince, and fought under Sir John Chandos at the battle of Navarrete (1367). He became deputy-governor of Calais (1377-9) and of Brest (1380). He is said to have been one of the founders of a college in Rome (1380), and in 1385 founded one at Bunbury in Cheshire.

Calverley, Charles Stuart (1831-1884), poet and parodist, b. Martley in Worcs, son of a clergyman named Blayds, who changed his name to Calverley in 1852. Famous all his life for his ready repartees and improvisations and his pranks, young C. was educ. at Marlborough, Harrow, Balliol College, Oxford, and Christ's College, Cambridge. From Oxford he was sent down because of his escapades, but at Cambridge he was more staid and became a fellow. Having studied law, he was called to the Bar in 1865, but in the following year contracted concussion of the brain as the result of a skating accident, and was a semi-invalid till his death in middle age. He trans. the Idylls of Theocritus into Eng. verse, but is best remembered for the parodies, perhaps the cleverest in Eng. literature, contained in *Fly Leaves*, 1872.

Calvert, Mrs Charles (1836-1921), distinguished actress, daughter of James Biddles, an actor. She played as a child actress at the age of 7 with Charles Kean and wife, and became leading lady at the Theatre Royal, Southampton, in her teens; also acted at the Boston Theatre, U.S.A. During her husband's tenure of the Prince's Theatre, Manchester, she built up a reputation in Shakespearian parts such as Cleopatra, Hermione, Miranda, Catherine of Aragon—with Phelps as the cardinal. She was also successful in modern comedy, notably as Catherine Petkoff in Shaw's *Arms and the Man*, and as Mrs Hardcastle.

Calvert, Edward (c. 1803-83), painter and draughtsman, b. Cornwall, son of a naval officer. Was a midshipman, but

left the service to study the arts. Attended the Royal Academy schools and studied painting under Johns, a W. country artist. He was associated with Samuel Palmer (q.v.) as one of the admirers of Wm Blake; he stayed with Palmer at Shoreham in Kent, and the surviving works of this period, engraved and in water-colour, are of great beauty and interest. They include 'Christian Ploughing the last Furrow of Life,' the 'Cyder Feast,' and 'The Primitive City.' In later life he visited Greece and pursued to loss advantage an ideal of classic beauty. Paintings exhibited at the Academy were 'A Shepherdess,' 1827, 'Morning,' 1829, and Milton's 'Eve,' 1836. See memoir by Samuel Calvert, 1893.

Calvert, Frederick Grace (1819-73), chemist, b. London. He received his scientific education in France. His celebrity was gained from his researches into the industrial side of chem., tanning, calico-printing, and iron-puddling. He was the first person to manuf. pure carboic acid, and founded extensive works in Manchester for its production as a disinfectant. Author of *Dyeing and Calico-printing* (2nd ed.), 1876.

Calvert, George, see BALTIMORE, 1st BARON.

Calvert, Louis (1859-1923), actor, son of an actor. Well known in Shakespearian parts, particularly as Falstaff in *Henry IV*. He was equally successful in many Shavian parts, his technique and flair for character being remarkable. Pub. *Problem of the Actor*, 1919.

Calvert, Thomas (1775-1840), theologian, b. Preston. He became tutor of St John's, Cambridge, 1814; Norrisian prof. of divinity, 1815-24; Lady Margaret's preacher, 1819-24. He was appointed king's preacher at Whitehall, and in 1822 was given the wardenship of the collegiate church at Manchester. See Raines, *Lives of the Wardens of Manchester*, 1885.

Calvi, seaport of NW. Corsica, on a peninsula in the Bay of C., 45 m. N. of Ajaccio (q.v.). It was founded in 1268, and was an important Genoese stronghold. During an Eng. bombardment of C. in 1794, Nelson (q.v.) lost his right eye. There are tourist and fishing industries, and a trade in fruit, oil, and cork. Pop. 2000.

Calvin, John (1509-64), b. Noyon, Picardy. Calvinus is the Latin form of Chauvin or Cauvin. His father, Gérard Chauvin, was notary apostolic and procurator fiscal of the co. of Noyon, and intended his son for the Church. In 1521 C. received the emoluments of cathedral chaplain at Noyon and later those of curé at Marteville. During this time he was studying at Paris in the colleges of Marche and Montaigu. It was then that he resolved not to take orders, and went to Orleans to study law. Here he found Pierre Olivétan, a kinsman of his, who was then busy translating some of the Scriptures, and induced C. to study them with him. Thence C. went to Bourges, where he met the famous Gk scholar, Melchior Wolmar (or Volmar) who further

influenced him in the direction of the reformed faith, though his conversion does not yet seem to have been definite. His residence at Bourges was cut short by the sudden death of his father. After a hurried visit to Paris he returned to Noyon, where he lived for 2 years. From 1529 to 1532 he apparently resided in Paris, lodging with a tradesman, Étienne de la Forge, an early victim of zeal for the Reformation whom C. accounted as a 'holy martyr blessed among believers.' In Paris he began to speak freely against the Church and its faith. Forewarned of an attempt to arrest him, C. retired first to a castle near Mantes, then to Saintonge and afterwards to Nerac, the residence of the queen of Navarre. Persecution was now so hot that C., giving up all his preferments, left the country and settled in Basel, where in 1535-6 he issued his epoch-making work, the *Christianae Religionis Institutio*, with its famous preface addressed to François I of France, in which the exile exhorts him to support the Reformation. It was written in Latin, and, 4 years later, trans. by C. himself into French. It is the first logical and complete definition and vindication of Protestantism. C. then made a short visit to Italy, where the new faith had made some headway, and he was well received by Renée, Duchess of Ferrara. He now paid a last visit to France, sold the paternal estates, and set out to settle in Switzerland. In 1536 he passed through Geneva, where Farel was striving hard to establish the reformed faith. This friend entreated him to remain and help in the work, but he was unwilling till Farel threatened him with the curse of God if he should neglect this clear duty. Then C. threw himself into the work with tremendous energy. A Confession of Faith was drawn up and approved by the people, and strict morality was enforced. But a reaction soon came against the strict rule of Farel and C., and the party known as the Libertines gained the upper hand. C. left the city and settled at Strasburg in 1539, where he married Idelette de Bure, a widow, but their 1 son d. in childhood. Meanwhile Geneva was finding that even C.'s strict rule was better than no rule, and in 1540 he was summoned to return. He was at first unwilling, for his life in Strasburg was an easy one. However, he considered that in Geneva duty lay, and in Sept. 1541 he re-entered the city. Here he devoted himself for the rest of his life to the task of ordering Geneva and the Protestant theology. He estab. the College of Pastors, and did his best to enforce a rigid morality. He also aided the reformed churches in all countries, corresponding with England, France, the Netherlands, Poland, etc. In 1559 he founded the academy of Geneva. His activity was prodigious till his death in 1564. During the first 14 years of his pastorate he was engaged in conflict with the Libertines, who were again his enemies. To the same period belong his 3 great controversies, with Sébastien Castellio, with Jérôme Bolsec, and, most memorably, with Michael Servetus (q.v.).

Servetus, a heretic whose views are fully explained in his *Restitutio Christianismi*, was arrested in France, and C. did his best to secure his condemnation. Servetus escaped and came to Geneva, whence C. had promised that he should not escape alive. After a scurrilous verbal conflict, the unfortunate man was tried and sentenced to be burnt. Though the great reformer did his utmost to get the manner of death altered, the sentence was carried out. That C. hated the doctrines which he found in his book is certain, but there is no evidence that he was actuated by personal spite and animosity against Servetus himself, though he took the initiative in bringing him to trial. The heresy of Servetus did not die with him, and the trials of sev. of his followers, with the conferences and controversies connected with them, occupied much of C.'s time for sev. years. In such controversies on points of faith, as, for example, with the Lutherans respecting the Lord's Supper, C. was for many years much troubled, and sometimes even endangered, by the opposition of the Libertine party in Geneva to his eccles. discipline there. But amidst these many cares and consultations on matters great and small, C. found time to write a number of works besides those provoked by the various controversies in which he was engaged; the most numerous were exegetical, though of course it is chiefly as a theologian and the head of a theological school that C. is now known. His incessant and exhausting labours told on so fragile a constitution racked by fever, asthma, gout, and stone. In 1564 his sufferings became so aggravated, that it was evident his life was rapidly drawing to a close. On 6 Feb. of that year he preached his last sermon, having with difficulty found breath enough to complete it. He expired in the arms of his faithful friend Beza on the evening of 27 May, in the 55th year of his age. See T. MacCrie, *The Early Years of Calvin*, 1880; H. F. Henderson, *Calvin in his Letters*, 1809; A. Monzies, *A Study of Calvin*, 1918; E. Doumergue, *Jean Calvin*, 1926-7; R. N. C. Hunt, *Calvin*, 1933; J. MacKinnon, *Calvin and the Reformation*, 1936.

Calvinism is distinguished chiefly by its dogma of Predestination. This says that God has destined certain souls to salvation, others to damnation, and that these decrees are unalterable. To the elect efficacious grace is sure to be given, and also the gift of perseverance. The Westminster Confession is the most complete exposition of C. It is estab. in the Reformed churches, in opposition to the Lutheran, of France, Scotland, Holland, etc. In England it inspired the Puritans and the numerous dissenting bodies. Thence it reached America. Dr Jowett thought Calvin 'the greatest commentator of the Scriptures that Europe had ever known.' Calvinists claim that it is a system of courageous consistency, and that 'the men who held it felt that they had their feet upon the last and highest reality.' It certainly inspired the Huguenots in France, the soldiers and citizens who, in

the swamps of Holland, resisted the tyranny of Catholic Spain, and the Eng. Puritans. For a modern statement of C. see H. Tyndeman Chivers, *Is there a Future for Calvinism?*; also bibliography for preceding article.

Calvinistic Methodist Church of Wales, the only Church of purely Welsh origin, is Calvinistic in doctrine and Presbyterian in organisation. Its adherents comprise a very large part of the Welsh-speaking pop., the number of communicants being 150,000. It owes its beginnings chiefly to the preaching of Howell Harris and others from 1735 onwards; later George Whitfield helped these men in their work. Connections between Eng. and Welsh Methodists ceased before 1750. The church is in federation with the Presbyterian Church of England, the United Free Church of Scotland, and the Presbyterian Church of Ireland; it is also a constituent of the Pan-Presbyterian Alliance. There are foreign missions in India, Assam, and elsewhere. It has about 1440 churches, and about 1610 chapels and buildings for Sunday schools and other purposes. In 1933 the Calvinistic Methodist or Presbyterian Church of Wales Act secured the autonomy of the Church in matters spiritual and the estab. of a properties board.

Calvinistic Methodists, see **METHODISM**. Calw, Ger. tn in the Land of Baden-Württemberg (q.v.), 22 m. W. by S. of Stuttgart (q.v.). It has a fine church (1400) and many ancient houses. Hermann Hesse (q.v.) was b. here. Pop. 7500.

Calycanthaceae, small family of dicotyledonous plants, containing 2 genera in China and N. America. The species are shrubs, which are usually aromatic and have square stems; the flowers have numerous sepaloid and petaloid perianth leaves, 5 to numerous stamens, numerous carpels, and an etaerio of achenes as fruit. The genus *Calycanthus*, or Carolina allspice, is represented by 4 species; *C. floridus*, common Carolina allspice, is a fragrant plant with chocolate-coloured flowers, and its bark is used as a substitute for cinnamon. The genus *Chimonanthus*, or Japanese allspice, has 2 species; *C. praecox* has lemon-coloured flowers which appear at a different season from the leaves.

Calycephallum, small genus of Rubiaceae which contains 3 or 4 species, natives of the W. Indies and S. America. They are small, smooth trees with corymbs of flowers; in some cases the sepals are pink, and give the tree the colour of a rose.

Calydon, anct tn in Aetolia which, according to Pliny, was situated 7½ m. from the sea on the R. Evenus. It was supposed to have been founded by C., the son of Aetolus. The famous Calydonian boar, sent by Artemis to lay waste the fields, is said to have been hunted here by Meleager and other heroes. The walls of C. are sometimes said to be those of the Kastro of Kurtaga. They have a circuit of over 2 m., with 1 large gate and 6 little ones. Ruins of terrace walls outside the tn are thought to indicate the site where the temple of Artemis Laphria stood.

Calydonian Hunt, *see* MELEAGER.

Calymma, genus of coelenterate ctenophores of the order Tentaculata and family Calymmidae. The species, some of which are found near the equator in the S. Seas, have strongly compressed and little elevated bodies, and are furnished with tentacles. The term C. is also applied to the outer, vacuolated protoplasm of Radiolarians.

Calypso: 1. Daughter of Atlas, inhabited the is. of Ogygia. Homer tells how Odysseus being wrecked on her isle, she treated him hospitably and promised him immortality if he would marry her. She held him for 7 years and bore him 2 sons, but finally his longing for home prevailed, and she d. of grief at his departure.

2. Name given to a form of folk music native to the W. Indies, the lyric being most usually concerned with political or social topicalities or with love. It is often sung extempore for the purpose of celebrating an event on the spot. It has been adopted into Amer. and W. dance music.

Calyptra (Gk *kaluptein*, to conceal), botanical name for the hood-like covering of plant organs of fructification, applied chiefly to mosses (*Musci*), in which it forms a membranous cap or lid to the upper part of the enlarged and ruptured spore-case or archegonium.

Calyptraea, cup-and-saucer limpet, is a genus of gastropod mollusc described by Lamarck. The species are numerous and widely diffused, and fossil species occur in the tertiary strata.

Calystegia, genus of temperate and sub-tropical Convolvulaceae, consisting of lactescent, glabrous, twining, or prostrate herbs, with solitary one-flowered peduncles. *C. sepium*, the larger bindweed, which grows in Brit. hedges, has 2 large bracteoles which invest the calyx, and is fertilised by a hawk-moth called *Sphinx convolvuli*. *C. soldanella*, the sea bindweed, is a native of European sea-coasts and some parts of Asia. The young stalks are sometimes pickled and the juice of the plant is cathartic.

Calyx, in botany, the outer whorl of floral leaves, each of which is called a *sepal* and is usually green, but may be coloured, or *petaloid*, e.g. monkshood. The sepals serve as a protective structure to the more important parts of the flower, and when coloured they attract insects. When they are separate from one another, the C. is *polysepalous*, e.g. in buttercup; when united, it is *gamosepalous*, e.g. in primrose. When the C. is below the gynoecium, it is said to be *inferior*; when above, it is *superior*. If the sepals fall off before the flower opens, the C. is *caducous*, e.g. poppy; if they fall off after the flower has opened, it is *deciduous*; if they remain until the fruit is ripe, it is *persistent*, e.g. violet. The C. is frequently quite inconspicuous and rudimentary, and in other cases it is represented by a pappus of hairs, e.g. dandelion; in the apple and pear it helps to form the fruit. In describing it fully, attention must be paid to the number of whorls, number of free sepals, or lobes of sepals, and to their

shape, of which the terminology is the same as that of leaves. The terms used for the general form of the C. are the same as those for the corolla, e.g. *spurred*, in 'naasturtium' (*Tropaeolum*), *paleate* in monkshood, *saccate* in wallflower. In some flowers, for instance, strawberry and geum, extra segments are present between the true sepals and constitute an epicalyx.

Cam (Cáo), Diogo, Portuguese navigator of the 15th cent., who continued the explorations of the African coast, begun by Prince Henry of Portugal. In 1482 he discovered the Congo, and afterwards explored the W. African coast to 22° S. lat.

Cam, riv, which rises in Ashwell, Herts, England, and flows 40 m. NW. and NE. through Cambs, and then into the Ouse, 3½ m. S. of Ely. It is joined at Grantchester by the Granta, which rises in Essex. It is navigable to the tn of Cambridge.

Cam-pha, coal-mining tn in the prov. of Quang-yen (q.v.), Tonking. There is a large open-cast coal-mine and docks, accessible to ships drawing up to 24 ft. at which coal is loaded. Antimony is also mined.

Camagney, or Puerto Principe: 1. Prov. of E. Cuba, bounded on the W. by Santa Clara. It has an area of 10,172 sq. m. Its surface affords excellent pasturage and the chief industry is cattle-raising. Copper-mining is carried on. Pop. 618,376.

2. City of Cuba, cap. of the prov. of the same name. It is the third city of the is., and is situated 340 m. SE. of Havana, about 550 ft. above sea level. It has many ant. buildings, including the churches of La Merced and La Soledad. The first-named was built in the early 17th-cent. by missionaries of Our Lady of Mercy. Its high altar of silver was made from 40,000 Sp. dollars. La Soledad was a 17th-cent. hermitage. Camagney is the centre of a cattle-raising dist. and exports (from Nuevitas, with which it is connected by rail) cattle, hides, and sugar. Airport. Pop. (city) 80,500; (urb. dist.) 204,254.

Camaleu, *see* CAMELO.

Camaldolenses, **Camaldolese**, also called **Camaldulians**, strict religious order whose founder was St Romuald, a Benedictine monk (c. 950-1027). The monks were divided into 2 classes, Coenobites and Eremites, and wore white garments. Their huts were built in the plain of Camaldoli, near Arezzo in the Apennines. As the order grew, so in time the collection of separate huts became grouped into a hamlet of cells with an abbot presiding; one common place of worship was instituted. Both Guido Grandi and Pope Gregory XIII belonged to this order. Camaldoli still flourishes.

Camalodunum, or **Camulodunum**, *see* COLCHESTER.

Camaraeum, *see* CAMBRAI.

Camargue, La, is. in France, in the delta of the Rhône (q.v.), enclosed by the 2 prin. arms of the riv. About one-third of its area is lake or marshland, and the whole region would probably be inundated but for the dikes which have been constructed. Bulls and horses are reared on

the plains, and vines and rice are produced. Wildfowl are abundant. The mistral (q.v.) blows over the ls. Area 150 sq. m.

Camarina, anct tn situated on the S. coast of Sicily. It was founded as a colony from Syracuse in 599 BC, and twice the people of Gela (q.v.) recolonised it, namely, in 492 or 495 BC and in 461 BC. It was destroyed 4 times: by the Syracusans in 552 BC (because it had thrown off its allegiance to the mother city), by the Carthaginians in 405 BC, by the Romans in 238 BC, and finally by the Saracens in AD 853.

Camassia, or **Quamash**, family Liliaceae, genus of N. Amer. bulbous plants, handsome long racemes of flowers. *C. quamash*, Camass, has edible roots, once roasted by N. Amer. Indians; *C. leichlinii* is the finest species for gardens.

Cambacères, Jean Jacques Régis de (1753-1824), Fr. legislator who lived in the time of the Fr. Revolution. He was appointed member of National Convention in 1792, but was strongly opposed to bringing the king to trial. After the fall of Robespierre, he was made president of the Convention and president of the Committee of Public Safety (1794). C. was suspect on more than one occasion on account of his moderate views, and lost office for a time; appointed second consul under Napoleon, and subsequently created high chancellor of the empire, and Duke of Parma. He was partly instrumental in the compilation of the *Code Napoléon*. Upon the restoration of Louis XVIII he went into exile, but was recalled in 1818.

Cambay, tn of Bombay state, India, some 280 m. N. of Bombay, a former port for Ahmedabad (q.v.). About AD 1600 C. was a flourishing centre, and reference is made in *Hudibras*, 1674, to the 'Prince of Cambay,' one of the then ruling houses of Muslims. The port is of great antiquity and is described by an Arab traveller who visited it in AD 913. The harbour is now silted up and unimportant.

Camber, in engineering, an upward curve or convexity applied for a specific purpose. In roads it denotes the rise from the channel to the crown. Generally speaking, the rougher the surface the steeper the C., the purpose being to allow wet to run off into the channel. The rise is anything from 1 in 30 to 1 in 50—the latter for asphalt surfaces. In aeronautics C. is the degree of curvature of a wing or controlling surface. C. is also given to the decks of ships.

Camberley, dist. of Surrey, England, 7 m. from Ascot. The Army Staff College was built here in 1858.

Cambert, Robert (c. 1628-77), Fr. musical composer, b. Paris. He was musical director at the court of Anne of Austria, mother of Louis XIV. Associated with the Abbé Perrin, who had obtained a grant of monopoly for the performance of musical stage works in the Fr. language. C. composed the music for Perrin's *Pastorale*—claimed, though probably erroneously, to be the earliest Fr. comedy in music, or opera—performed at the Château d'Issy in 1659. Through the

performed in 1671 C.'s own opera *Pomone*, also unjustly claimed to be the first Fr. opera. With Perrin as librettist C.'s *Ariane* was rehearsed in Paris in 1669 but not performed. Lully's intrigues transferred Perrin's monopoly into his own hands, and C. was forced to go to England, where *Ariane* was at last performed in 1674, but possibly with new music by Grabu. *Pomone* was also given the same year. See also A. Pougin, *Les Vrais Créateurs de l'opéra français*, 1881.

Camberwell, parl. and metropolitan bor. of London, situated immediately S. of the hors. of Southwark and Bermondsey. It includes the old vils. of C., Dulwich, and Peckham (qq.v.), much developed from c. 1820 onwards. George, Prince of Denmark, consort of Queen Anne, lived on C. Green (Denmark Hill is named after him), and so did Mendelssohn; Ruskin lived on Denmark Hill. Browning was b. in C. The industries include body building for cars, engineering, building, and book-binding. C. returns 2 members to Parliament. Area 4480 ac.; pop. 179,500.

Camberwell Beauty (*Vanessa antiopa*), large and beautiful butterfly, rare in Britain but common in central and S. Europe and N. America. The wings are a deep purplish-brown, with outer band of black and greyish-white or yellow border. The black band contains a row of large blue spots. In addition the two small wings have two small white spots. Formerly found occasionally at Camberwell, when that was a rural place.

Cambiasi, Luca (1527-85), Genoese painter, b. Moniglia in the Genoese state. At 15 he helped his father to paint subjects from Ovid's *Metamorphoses* on the front of a house in Genoa. He became a great friend of the artist Giambattista Castello, whose work closely resembled his own in character. In 1583 Philip II commissioned him to finish a series of frescoes begun by Castello in the Escorial. C. was very dexterous with his brush, and sometimes painted with one in each hand. His best works are at Genoa.

Cambium, strictly a single layer of cells among sev., known as the C. region, between the wood (xylem) and the bast (phloem) in stems and roots of Dicotyledons. It consists of flattened, prismatic cells, with thin cellulose walls, 4-sided and elongated, with the ability to divide repeatedly, each div. giving rise to an inner and outer cell, thus forming secondary wood and secondary bast, and also medullary rays, and so increasing the size of the plant. A special C., the phellogen (q.v.), is concerned in the formation of cork.

Cambodia, independent kingdom of SE. Asia. The name C. is European, being derived from the Hindu Kambuja, a name by which the Khmer ancestors of the present Cambodians were known.

Geography. The area of C. is 67,550 sq. m. and it is bounded on the N. and W. by Thailand, on the N. by Laos, on the E. by Viet Nam, and on the SW. by the Gulf of Siam. There are 2 marked features

in C. which largely determine the agriculture of the country and the activities of its people. These are the R. Mekong and the large lake Tonlé-Sap. The lake serves as a reservoir for receiving the overflow waters of the Mekong, which becomes greatly swollen by the rains and melted snow from the Tibetan range in the month of June. At this period the lake, which is fed by an arm of the R. Mekong called the Bras du Lac, attains to a depth of from 45 to 48 ft., overflows its banks, and inundates the country round over an area of 770 sq. m. Conversely, during the dry season, when there is a shrinkage

weaving of silk and cotton, pottery, and the making of rush mats. The exports are rice, salted pepper, maize, cotton, tobacco, kapok, resin, hides, and cattle. The chief towns are Phnom-Penh, the cap. (pop. 104,000), situated at the crossing of Tonlé-Sap and Mekong R.; Battambang, 180 m. further NW.; Kampot (92 m. from the cap.); and Kompong-Cham. There are 2 small sea harbours, Kep and Ream, both on the Gulf of Siam and connected to Bangkok by steamers, while a port of considerable size is now under construction with the aid of technical and

E.N.A.

MEKONG RIVER CRAFT AT PHNOM-PENH

of the waters of the Mekong, the Tonlé-Sap Lake also becomes greatly reduced in area, and its depth falls to an average of 5 ft. The whole of C. lies in the basin of the lower Mekong, which, entering this ter. on the N., flows S. for some distance, then inclines SW. as far as Phnom-Penh, where it spreads into a delta, and resumes a southerly course. Fishing forms the staple trade of C., for Tonlé-Sap supports a fishing pop. of over 30,000. The fish are caught by means of large nets at the end of the floods, and are either dried or fermented for nuoc-mam sauce. Next to fishing come the agric. products, and here rice is largely grown in the low-lying districts. Agric. products grown include the tobacco plant, coffee, cotton, pepper, indigo, maize, tea, silk, and rubber. The chief native activity is the salting and smoking of fish from the lakes. Cattle-breeding is also a flourishing native occupation. Other native industries are

financial assistance from the U.S.A. There are nearly 900 m. of waterways and 2000 m. of asphalt and macadamised roads, the chief roads being from Saigon to the frontier of Thailand, via Phnom-Penh and Battambang, from Phnom-Penh to the Gulf of Siam, from Saigon to Kratie and from Phnom-Penh to Angkor.

Climate. Much the same as that of Cochin-China, and varies with the monsoons. During the NE. monsoon, which lasts from mid Oct. to mid April, the weather is dry and warm, with a temp. ranging from 77° to 80° F. From mid April onwards until Oct. there is constant rain, and the temp. is considerably higher, sometimes reaching 95° F. Wild animals of all sorts abound, such as the elephant, rhinoceros, buffalo, tiger, panther, and leopard. Monkeys and rats are the plague of the dist., as they destroy the crops and agric. products. The pop. of C. numbers approximately 4,000,000.

The bulk of the inhab. are Khmers, but sizable minorities of Chinese and Vietnamese are found in the tns and centres of trade where they handle a large proportion of the commerce. Tribes of backward Moi peoples are found in the mt and forest areas, and small numbers of Malays and Thais have also settled in C. The Khmers are taller than their Vietnamese neighbours and have darker skin pigmentation. They lack the energy and the business acumen of the Vietnamese and Chinese, which is why these latter occupy such a prominent position in the commercial life of the country. Buddhism is the prin. religion, and Buddhist monks in saffron robes are everywhere in evidence. Most Cambodian men spend a period of their lives in a Buddhist monastery. Technically and educationally the Cambodians are backward, and for this reason there is a great shortage of doctors, engineers, economists, and the like. C. is still nominally ruled by a king, but the real political power is in the hands of the gov. which is formed from an elected Parliament.

History. The mighty monuments of Angkor (q.v.) provide an eloquent testimony to the greatness and power of the kingdoms of Fu-nan and Tchén-la, the forerunners of modern C. Centuries of pressure and attacks from the Thais in the W. and N. and from the Chams, later superseded by the Vietnamese, in the E. and N., sapped the strength of C. She accepted Fr. protection in 1863, and in 1884 signed an agreement with France establishing the political and administrative laws by which she would be governed as a Fr. protectorate. The border provs. of Siemreap, Battambang, and Sisophon were ceded to C. by Thailand in 1907, but were returned to Thailand in 1941 by Japan. During the Second World War C. was occupied by the Japanese. After the armistice the French once more assumed control of C., but it was not long before an anti-French nationalist movement known as Khmer-Issarak, inspired by the example of the Viet Minh (q.v.) in Viet Nam, began to wage a guerrilla war against the French. Their purpose was to regain Cambodian independence, and most Cambodians, including the young king Norodom Sihanouk, were in sympathy with this aim. This internal war dragged on until 1954 when, in accordance with the agreements reached at the Geneva Conference on Indo-China, an armistice was declared, the Fr. troops and administration withdrew, and C. became once more an independent state. King Norodom Sihanouk abdicated in favour of his father and himself took over the political leadership of the country. To-day C. enjoys full political independence and is a member of U.N.O. Considerable works of development are being carried out in C. with U.S. and Colombo Plan aid. See C. Robequain, *The Economic Development of French Indo-China* (trans. by I. A. Ward), 1944, and E. J. Hammer, *The Struggle for Indo-China, 1954* (and supplement).

Cambodia River, see *MEKONG*.

Camboge, see *GAMBOGE*.

Cambon, Jules Martin (1845-1935), Fr. diplomat, b. Paris. A barrister, he held administrative posts in Algeria, 1874-8. He was Fr. ambas. in Washington, 1891; in Madrid, 1902. He was ambas. in Berlin when the First World War broke out, and in the Fr. Yellow Book he gave a searching analysis of Germany's relations with France during the 2 or 3 years preceding the war. He was secretary-general to the foreign ministry, 1915, and a signatory to the Versailles treaty.

Cambon, Pierre Paul (1843-1924), Fr. diplomat, b. Paris. He was called to the Bar, and was later secretary to Jules Ferry. C. was Fr. resident in Tunis, 1882; ambas. in Madrid, 1886; in Constantinople, 1891; and in London, 1898. He took an important part in establishing the Anglo-Fr. Entente.

Camborne, mrkt tn in Cornwall, England, 12 m. WSW. of Truro and 3 m. SW. of Redruth, the centre of a mining dist. Here is the School of Metalliferous Mining. Pop. of ward, 14,000; of urb. dist., 36,000.

Cambrai (ancnt Camaracum), Fr. tn in the dept of Nord, at the junction of the Escaut and the St-Quentin canal. 37 m. SSE. of Lille (q.v.). It was once a tn of the Nervii. It became a bishopric in the 5th cent., and an archbishopric in 1559. The League of C. in 1508 united the Pope, the Emperor, and the Kings of France and Spain against Venice. By the *Pax des Dames* (Ladies' Peace) arranged here in 1529 between Louise of Savoy on behalf of Francis I. and Marguerite of Austria on behalf of the Emperor Charles V, France regained Burgundy but lost Flanders, Artois, and Milan. In 1793, during the Fr. Revolution the old cathedral was destroyed, and the bones of Fénelon (q.v.), who was once Archbishop of C., were ignominiously disturbed; a monument to him was erected in the new cathedral in 1825. The tn was taken by the Germans in 1914. It suffered severely in both world wars. There are sev. churches of interest, an ancnt gate, a 12th-18th-cent campanile (229 ft high), an archiepiscopal palace, and a notable art gallery. There are cambrie (q.v.), lace, chicory, flour, beer, soap, iron, and sugar industries. Pop. 26,000.

Cambrai, battle of (north France). Two battles took place round C. in the First World War: (1) In 1917 the Germans were heavily pressing the Italians, and with a view to relieving this pressure, by preventing further Ger. divs. being taken from the W. front, a Brit. offensive against C. was planned, to be undertaken by the Third Army under Gen. Byng. Gen. von Marwitz was opposed to him. In place of the usual bombardment, which had hitherto announced the attacker's intentions, an enormous number of tanks was employed to destroy minor obstructions such as barbed-wire entanglements and machine-gun posts. The surprise nature of the attack proved to be the main feature contributing to success. The attack was launched on 20 Nov. 1917, with successful initial results, but the

Germans heavily and persistently counter-attacked at Bourlon Wood (q.v.), which was ultimately abandoned before C. was taken. (2) The great Brit. final offensive against the Germans began in Aug 1918, and to the Brit. First Army (to which a Canadian corps was added) under Gen. Horne was allotted the capture of C. The Canadians opened the attack on 26 Aug., and gained their first objectives, but as progress was made resistance became increasingly formidable as the Germans strengthened their rear lines. Resistance was first met in the Scarpe valley. Protecting C. to the NW. was the Ger. Drocourt-Quéant line. This was attacked on 2 Sept., and after only 4 hours' fighting the whole of the line, with its supporting lines, was in Brit. hands. The Germans hastily withdrew their remaining troops in this area and prepared to make another stand behind the Canal du Nord, which held up the Brit. advance. So far 10 Brit. divs. had defeated 13 Ger. divs. with considerable loss to the enemy. On 27 Sept the Canal du Nord was crossed on a narrow strip where it happened to be dry, and hostile positions to the N. of C. were captured. The advance was continued the next day, and Fontaine Notre-Dame, to the SW. of C., was captured. C. was now gradually becoming enveloped, but violent Ger. counter-attacks compelled ground to be given up in one or two places. Both sides were becoming exhausted with the struggle, but neither weakened, and on 30 Sept another Brit. and Canadian advance carried the line beyond C. on the N. as far E. as the canal at Ramillies. By 1 Oct. all the suburbs of C. had fallen. Steady progress to the S. of C. was being made by the Third Army, which had also commenced its advance on 27 Sept. One of its important objectives was the spur which dominated the country about Marcoing; Ribecourt, just S. of this position, was taken early in the advance, and by the evening Brit. troops were in the neighbourhood of Marcoing. At this time the First and Third Armies were in contact at Fontaine Notre-Dame. The next day the advance was continued against great opposition, but by nightfall the Germans had been driven over the Scheldt Canal, and the Allies' troops were firmly estab. at Noyelles and Marcoing. On 29 Sept. some of the Third Army crossed the canal about Masnières, while further N. others crossed at Noyelles and Marcoing, thus pressing on C. from the S. Resistance now became stronger than ever, and the Germans were fighting with great stubbornness. Nevertheless the Brit. troops were gradually closing round the city. Further S. the Australian troops were attacking about Masnières, and on 3 Oct. had captured ground to the E. of it and on the 5th took Montbréchain. C. fell on the same day. This battle proved to be one of the sternest fought during the war. Throughout this great battle the Canadians under Gen. Currie fought with conspicuous bravery, and the success of the operations was due mainly to their extraordinary exertions.

Cambresis, anct. div. of the prov. of Flanders, which now forms the chief part of the dept. of Cambrai (France). The Bishop of Cambrai was the Count, later the Duke, of C.

Cambria, Lat. name of Wales, derived from the Celtic *Cymry*, and originally applied to both Wales and the Brit. kingdom of Strathclyde. The name also appears in the Cambrian Mts, Cumbria, and Cumberland.

Cambrian System (Lat. *Cambria*, Wales), geological name of the oldest Palaeozoic system of rocks. The Cambrian Period follows the Pre-Cambrian and is followed by the Ordovician (q.v.). The Cambrian beds are the oldest to contain a well-organised fauna, which includes trilobites, brachiopods, pteropods, worms, sponges, and corals. Cambrian times began with a widespread invasion of land by the sea. In the Brit. Is. Cambrian rocks consist mostly of sandstones and shales, now altered to quartzites and slates; these outcrop in N. and S. Wales, Shropshire, the Malvern Hills, and the Lake Dist. In the NW. Highlands C. limestones occur. All these deposits were laid down in seas occupying basins running from Britain northwestward to Scandinavia where Cambrian rocks are also preserved. Cambrian beds are known in central Europe (especially Bohemia); N. Africa (especially Morocco); W. and central France; the Appalachians, the Pacific coast of N. America and around the Canadian Shield; and in China.

Cambric, name given to fine white linen fabrics, originally manuf. at Cambrai in the Fr. dept. of Nord. Some of the best C.s are now manuf. in Switzerland, while Scottish C. is an imitation of real C., in which the linen is replaced by finely twisted cotton.

Cambridge, Adolphus Charles, 1st Marquess of (1868-1927), Brit. prince, b. Kensington Palace, eldest son of the Prince of Teck, whom he succeeded in 1900, and Princess Mary of C., and elder brother of Queen Mary (q.v.). C. saw service in the S. African war and in the First World War. He renounced his continental titles in 1917, assuming the name of C.

Cambridge, Adolphus Frederick, 1st Duke of (1774-1850), seventh son of George III. b. Buckingham (then Queen's) Palace. He served in the campaign of 1794-5, and was created Duke of C. in 1801, appointed field marshal in 1813, and was viceroy of Hanover from 1815 to 1836. One of his daughters was the mother of Queen Mary (q.v.), wife of George V.

Cambridge, George William Frederick Charles, 2nd Duke of (1819-1904), Brit. soldier, first cousin of Queen Victoria, b. Hanover, the only son of George III's seventh son, Adolphus Frederick. He was present at most of the engagements in the Crimean War. He was made field marshal in 1862, and held the position of Commander-in-Chief from 1856 to 1895. He married an actress, Miss Fairbrother, their children taking the name of Fitz-George.

Cambridge, Richard Owen (1717-1802),

poet, b. London. Educ. Eton and Oxford, he studied law at Lincoln's Inn. He lived as a country gentleman at Whitminster in Glos. and afterwards at Twickenham, where he had many notabilities among his guests. He wrote the *Scribleriad*, 1751, a mock-heroic poem satirising false poetical taste, and also pub. some imitations of Horace.

Cambridge, municipal and parl. bor., city, and co. tn of Cambs, England, 56 m. N. of London, and 76 m. NE. of Oxford. The tn lies in a level plain, on the S. edge of the Fen country, and to its position here it probably owes its development, for the position of the hills around makes it the natural starting-point in crossing the Fens from the midlands. That its importance was early recognised is shown by its antiquity. There are probably anct Brit. remains in Castle Hill; 2 Rom. roads cross here; the tower of St Benet's Church is one of the finest pieces of Saxon work in the country, and its importance in Norman times is well known, while the church of the Holy Sepulchre is the oldest of the 4 round churches in England. The univ. (see CAMBRIDGE UNIVERSITY) is one of the oldest in Europe. The Leys School (q.v.), founded in 1874, is a public school for boys. There are 4 large grammar schools: Perse School (q.v.), founded in 1815; Perse School for Girls (1881); and the C. and co. high schools for girls and boys. The tn is built chiefly on the Rts. Granta and Cam (1 riv.). It has manufs. of scientific instruments, and light and electrical engineering, and it is the centre of a prosperous agric. dist. The name is generally derived from *Grantebrygge*, or *Grantabridge*, though the intermediate stages are not extant. The pop., which was increased to 59,000 in 1922 by the operation of the Cambridge Corporation Act of that year, is now 90,910. See C. W. Stubbs, *The Story of Cambridge*, 1912, 1932; B. W. Downs, *Cambridge, Past and Present*, 1926; N. Pevsner, *Cambridgeshire*, 1954; J. Steegman, *Cambridge*, 1954.

Cambridge: 1. City and one of the co. seats of Middx co., Massachusetts, U.S.A., on the Charles R. It almost forms a suburb of Boston. It is divided into various sections: Old C., the seat of Harvard Univ., Radcliffe College, and the Massachusetts Institute of Technology; N. C., the port; and E. C. The 2 last are the manufacturing dists. The prin. industries are the manuf. of soap, bakery products, rubber goods, confectioneries, foundry and machine-shop products, sheet-metal products, shoes, furniture, clothing, building supplies, and ink; printing and publishing are also carried on. Longfellow's home is a memorial. James Russell Lowell was b. here, and the first printing press estab. here (c. 1639) by Stephen Daye. Washington took command of Amer. Army in C. in 1775. Pop. 190,740.

2. Co. seat of Dorchester co., Maryland, U.S.A., on the Choptank R., 60 m. SE. of Baltimore, the centre of a farming region and a fishing port. It manufs.

canned vegetables, flour, clothing, boats, and steel and copper-wire products. Pop. 10,351.

Cambridge Platonists, group of 17th-cent. philosophers at Cambridge Univ. Led by Ralph Cudworth (1617-88) (q.v.) the C. P. opposed the narrow Puritan dogmatism, as well as the materialism of Hobbes and Descartes. They taught the spiritual constitution of the universe, and the harmony of reason and religion. Other members of the group were Henry More (q.v. 1614-87), John Smith (1618-1652), and Nathanael Culverwell (d. 1651). See C. E. Lowrey, *The Philosophy of Cudworth*, 1834, and F. J. Powicke, *The Cambridge Platonists*, 1926.

'**Cambridge Review**,' jour. of univ. life and thought, founded in 1879, appearing weekly in full term. It contains articles and book reviews of academic and general interest (by senior and junior members of the univ. and others), reviews of current athletic and artistic events, and editorial comment on univ. affairs.

Cambridge University is one of the oldest univs. in Europe. The earliest evidence that there were bodies of students in Cambridge dates from the beginning of the 13th cent. In 1231 Henry III issued a number of writs for the organisation and discipline of the students, and in 1284 Peterhouse, the first of the colleges, came into being as a house of residence for members of the univ. Formal recognition of the univ. came in 1318 when Pope John XXII, at the request of Edward II, confirmed its privileges with the issue of a bull decreeing that it should be a *studium generale* and should enjoy the privileges of a *Universitas*. From then onwards a Cambridge doctor could lecture in any part of the Christian world, and the univ. itself was independent of the jurisdiction of the bishop of its diocese. New statutes were given to the univ. in the year 1570, and in 1573 it received its grant of arms. The prin. effect of the new statutes, which remained in force for nearly 300 years, was to increase the power of the vice-chancellor and the heads of the colleges.

In the medieval univ. the student followed a 3-year course of Lat. grammar, logic, and rhetoric, known as the *trivium*, and became an 'incepting' bachelor. He then proceeded to the *quadrivium*—a course of geometry, arithmetic, music, and astronomy, lasting for 4 years and was then entitled to proceed to the degree of Master of Arts. Until the 15th cent. the prin. subjects of further study were theology, canon law, civil law, and medicine, and candidature for a doctor's degree required a further period of residence of at least 8 years. The 16th cent. saw the introduction of Greek, when Erasmus held the Lady Margaret's professorship of divinity in 1511, and the stimulus received from the Reformation was responsible for a great development in the univ. which at this time came to be considered a rival to the univ. of Oxford.

During the Civil war the sympathies of the colleges were Royalist, and many of the heads of colleges were deprived of their

offices, which were, however, restored after the Restoration. The latter half of the 17th cent. was noteworthy for 2 developments within the univ.—the rise of the Cambridge Platonists (q.v.) and the increasing prominence of mathematical studies. The first professorship of mathematics was estab. in 1663, and its second holder (1669) was Isaac Newton.

The univ. curriculum was further broadened throughout the 18th cent., and examinations assumed a greater importance, in contrast with the disputations, known as 'acts' and 'opponencies,' of earlier times. Written examinations were first introduced in 1772.

and in 1914 the univ. made formal application for a subsidy from public funds. This led to the first gov. grant of £5873 for medical education. In 1919 the vice-chancellor informed the president of the board of education that the univ. would welcome an inquiry into its resources, and stressed its urgent financial needs. The result was a special grant from the Treasury of £30,000, the forerunner of increasing ann. grants subsequently provided on the recommendation of the Univ. Grants Committee. In 1919 a royal commission on the univs. of Oxford and Cambridge was set up. It reported in 1922, and was followed by a statutory

ST JOHN'S COLLEGE, CAMBRIDGE

The 19th cent. was a period of reform and expansion. Honours examinations or triposes (see below) were introduced in classics in 1824, and within 50 years in moral sciences, natural sciences, law, and hist. In 1871 religious tests were abolished. In 1850 and 1872 royal commissions recommended many changes, which resulted in the statutes of 1856 and the Oxford and Cambridge Act, 1882. The prin. results of the legislation of this period were (1) to redress the balance between the univ. and the colleges, and to give to the general body of Masters of Arts much of the influence hitherto exercised by the college heads; (2) to abolish the tenure of college fellowships for life without conditions of work or residence, and to associate them with the holding of a univ. or college office; and (3) to raise the general intellectual level by competition among entrants to the univ., and among the senior members.

The development of univ. studies during the last years of the 19th cent. and the beginning of the 20th cent. outstripped the capacity of the univ. and the colleges,

whose statutes were approved by the king in council in 1926. The main effects of these statutes were (1) the transference of the control of univ. legislation from the Senate (Masters of Arts and holders of higher degrees) to the Regent House (approximately the resident members of the Senate); (2) the institution of the faculty system of instruction with a consequential transference of formal teaching from college to univ. teaching officers; (3) the fixing of age limits for the tenure of univ. and college offices; and (4) the setting up of an obligatory pension scheme. By these statutes the univ. is still governed.

While certain functions are reserved to the Senate, such as the election of the chancellor and other officers of the univ., and the approval of proposals for the conferment of degrees, the gov. of the univ. now rests in effect with the Regent House. Legislative proposals are called *graces* (Lat. *gratia*), which are submitted at periodic meetings of the Senate and of the Regent House, called *congregations*, presided over by the vice-chancellor.

The colleges of the univ. are corporate bodies having their own statutes and managing their own affairs. Further information is given in articles under their respective names. In order of foundation they are Peterhouse, Clare, Pembroke, Gonville and Caius, Trinity Hall, Corpus Christi, King's, Queen's, St Catharine's, Jesus, Christ's, St John's, Magdalene, Trinity, Emmanuel, Sidney Sussex, Downing, Girton (for women), Newnham (for women), Selwyn, and Fitzwilliam House (for non-collegiate students). Women first became full members of the univ. in 1947. Before coming into residence a candidate for admission to the univ. must be accepted by a college, must pass or gain exemption from the Previous Examination (including papers in Latin), and may also have to pass a college entrance examination. At the end of 3 years an undergraduate may proceed to the degree of Bachelor of Arts. Honours degrees are conferred on the results of examinations called triposes, which are held annually in May and June in mathematics, classics, moral sciences, natural sciences, theology, law, hist., oriental languages, modern and medieval languages, mechanical sciences, economics, archaeology and anthropology, English, geography, music, and chemical engineering. Special examinations are held for degrees in medicine and surgery. An Ordinary B.A. degree may be conferred on a student who has passed examinations in Christian theology, architectural studies, engineering studies, agriculture, or estate management.

Facilities for the education of adults who are not members of the univ. are provided in the form of lectures and classes at centres outside Cambridge, and of vacation courses in Cambridge, by the Univ. Board of Extra-mural Studies.

The number of students in residence during the academic year 1964-5 was 7934 (men 7217, women 717), of whom 720 were undertaking research for a higher degree or for a diploma.

See *Statutes and Ordinances of the University of Cambridge*, 1955 (reprinted every 3 years, supplement pub. annually); *The Student's Handbook to Cambridge* (pub. annually); *The Annual Register*; R. Willis and J. W. Clark, *Architectural History of the University of Cambridge*, 1886; T. Atkinson, *Cambridge Described and Illustrated*, 1897; S. C. Roberts, *Introduction to Cambridge*, 1948; *Report of the Oxford and Cambridge University Commission*, 1922.

Cambridge University Press. John Lair of Siegburg, usually known as John Siberch, set up his press in Cambridge in 1521 and became the first printer to the univ. Since that date a succession of univ. printers has exploited the privileges granted to the univ. by a charter of Henry VIII in 1534, to print and sell 'all manner of books.' The C. U. P. is a dept of the univ. controlled by a syndicate of senior members, and all its pubs. are issued under the univ. imprint. The head office of the C. U. P., and the printing works, are in Cambridge. The publishing office (Bentley House) in London is still the only

London publishing house built specially for the purpose. Since 1949 the C. U. P. has had a branch office in New York. Cambridge is one of the 3 Eng. presses which may lawfully print the Authorised Version of the Bible and claims to be the oldest Bible house in the world. Besides books and Bibles, the syndics also issue some 40 jour., many of them pub. for learned societies. The output of the C. U. P. consists largely of works of learning and primary scholarship in all branches of knowledge. The series of co-operative *Cambridge Histories*, inaugurated by Lord Acton at the end of the 19th cent. and continuing now with the *New Cambridge Modern History*, are perhaps the best known of the larger Cambridge ventures. The C. U. P. also publishes textbooks for univ. students, and since 1872, when the Pitt Press series was inaugurated, the syndics have produced a wide variety of books for schools in all subjects. In the years after the First World War Mr Walter Lewis, then univ. printer, and his typographical adviser, Mr Stanley Morison, estab. Cambridge among the leaders in the revival of Eng. typography.

Cambridgeshire, E. inland co. of England, bounded N. by Lincoln, E. by Norfolk and Suffolk, S. by Essex and Herts, W. by Beds, Hunts, and Northants. In Celtic times C. was in the ter. of the Iceni, and possesses some remains of pre-Rom. work, while relics of the Rom. occupation, in roads, urns, coins, etc., are common. At the Norman Conquest the men of the dist. made a stubborn resistance to the Norman invader, and it was at Ely that Hereward the Wake held out against him for some years. The co. was also prominent in the intestine struggles under Stephen, John, Henry III, and Charles I. The surface is generally very flat, and large parts, particularly in the N., consist of fens (q.v.). Undulations occur in the S., where are the Gog Magog Hills, and in the SE., in the area of Weston Colville, W. Wickham, and Castle Camps. The S. is also better wooded than the rest of the co. In the N. occurs the Bedford Level (q.v.). The prin. riv. is the Ouse, which crosses the co. from W. to E., with its tribs., the Cam, Lark, and Little Ouse. The Nene, in the N., is also important. These rivs. flow chiefly in artificial channels of recent construction, and are extremely sluggish. The co. is intersected by numerous drainage works. C. is a rich agric. dist., and the climate is on the whole healthy. The fenland, when drained and burnt, provides good soil for various crops, and the hills are mainly chalk. The co. is one of the chief grain-producing dists. of England. Dairy farming and sheep-rearing are also extensively carried on. There are practically no manufs., but brewing and brickmaking are carried on, and scientific and electrical instruments, and insecticides and other chemicals, are made. C. returns 1 member to Parliament, besides 1 sent from Cambridge city. The prin. tns. are Cambridge (the co. tn), Wisbech, March, Soham, and Thorney. The race-courses of Newmarket lie in C.,

though the tn is in the co of Suffolk. Area (including Isle of Ely) 555,118 ac. Pop., exclusive of administrative co. of Isle of Ely, 177,100 (including Isle of Ely, 285,520). See C. C. Babbington, *Antient Cambridgeshire*, 1883; E. Conybeare, *History of Cambridgeshire*, 1897; C. Fox, *The Archaeology of the Cambridge Region*, 1923; A. Mee, *Cambridgeshire*, 1939.

Cambridgeshire Regiment, The, raised in 1860 as a volunteer battalion. A contingent served in the S. African war, 1898-1902. In 1908 it became a unit of the Territorial Force (now Army). During the First World War it went to France in Feb. 1915 and within a month distinguished itself at St. Eloi. Four battalions were raised for the campaign and took part in the battles of Ypres, the Somme, Kommel Hill, and the allied victorious final advance. During the Second World War the C. R. produced 2 battalions; both went out to Singapore and both were lost, being captured by the Japanese. The regiment was reconstituted in Jan. 1947, and is now a Light A.A. Regiment R.A. (T.A.). For some years it formed part of the corps of The Suffolk Regiment.

Cambridgeshire Village Colleges, centres for further education and local community activities estab. at 5 vils. in Cambs, England, namely, Linton, Sawston, Bottisham, Impington, and Bassingbourn. Two more are planned for Swavesey and Soham. Each college serves an area including approximately a dozen contributory vils.

Cambuskenneth, ruined abbey in Stirlingshire, Scotland, on R. Forth, 1 m. E. of Stirling, founded by David I in 1147. The first Scots Parliament, attended by representatives of burghs, assembled here in 1326. James III and his queen, Margaret of Denmark, were buried in the abbey, and their remains were discovered during excavations in 1864, and reinterred with an altar memorial erected over them by command of Queen Victoria in 1865.

Cambuslang, non-burghal tn, including Newton and Carmunnock vils., in NW. Lanarkshire, Scotland, situated on the l. b. of the R. Clyde, 5 n. SE. of Glasgow. It has large steel works and coal-mines. Pop. 27,100.

Cambyses, or **Kambuiya** (529-521 BC), second king of the Medes and Persians, was the son of Cyrus the Great. After conquering W. Asia and assassinating his brother Smerdis, he wished to form an alliance with Egypt, but, receiving an affront from the Pharaoh, he invaded that country, and conquered it in 6 months (525 BC).

Camden, Charles Pratt, 1st Earl (1714-1794), lawyer and politician, b. Kensington, and educ. Eton and King's College, Cambridge. He was called to the Bar in 1738, but had practically no briefs till 1752, when he made his name as junior to R. Henley, who fell ill and left the case to him. He was made king's counsel and attorney-general to the Prince of Wales in 1755, in 1757 attorney-general, and in 1759 recorder of Bath. In 1761 he was knighted and made chief justice of the

court of common pleas, and in 1765 was raised to the peerage as Baron C. of Camden Place, Kent. In the following year he succeeded Worthington on the woolsack, receiving an addition of £1500 to his salary as recompense for the loss of his justiceship. He held the office till 1770, although he disapproved of the policy of the gov. Created Earl C., 1786.

Camden, William (1551-1623), scholar, historian, and antiquary, b. London, and educ. at Christ's Hospital, St Paul's School, and Christ Church, Oxford. In 1576 he was made second master of Westminster School, of which he became headmaster in 1593. The first ed. of *Britannia*, the work which has made his name famous, was pub. in 1586, the result of some 15 years' research (in 1605 he pub. his *Remains Concerning Britain*, a book of collections from his *Britannia*). He was perpetually improving this, and in 1607 the sixth ed. was reached. It is written in elegant Latin, and was first trans. into English in 1610. In 1597 C. resigned his headmastership on being appointed Clarenceux king-of-arms. He endowed the C. professorship of ant. hist. at Oxford, and in 1883 the C. Society was founded in his honour.

Camden: 1. City and port of New Jersey in U.S.A., and the cap. of C. co. It stands on the l. b. of the Delaware, opposite Philadelphia, and has foundries, cotton and woollen mills, chemical and glass works. It manufs. television, radio, phonograph, and other electronic products, and is the seat of the college of S. Jersey. The homes of Walt Whitman and Joseph Cooper were here. Pop. 124,555.

2. Co. seat of Kershaw co., S. Carolina, U.S.A., 33 m. NE. of Columbus. It was occupied by the British in 1780 when an Amer. force was defeated here by Lord Cornwallis. Cotton, grain, and rice are produced in the vicinity. It has lumber mills and a brass and iron foundry; there is also some printing. Pop. 7000.

Camden, tn on Nepean R. in Cumberland co., New S. Wales, Australia, 38 m. SW. of the city of Sydney. It is one of the oldest tns in the state and is surrounded by dairying dists. Pop. 4930.

Camden Town, dist. of London in the metropolitan bor. of St Pancras, developed from 1791 onwards when Lord Camden let out his land for building leases.

Camel (Arabic *djmal*), name given to the 1-humped Arabian *Camelus dromedarius* (see DROMEDARY), and to the 2-humped Asian *C. bactrianus*. The C.s and llamas form a family (Camelidae) of the ruminant div. of the order Artiodactyla. The Arabian C. is used in N. Africa and India, as well as in Arabia; it was also introduced into Australia in 1860, and into N. America, but is no longer used in either country. It is not so well able to withstand the cold as the Bactrian C., which has a much thicker coat and shorter legs, but it is swifter. The C. has a long thigh, which is vertical in position, and this accounts for its peculiar swaying walk. The humps vary in size, according to the condition of the

animal; they are reserves of fat and become small and flaccid after many days of hardship and indifferent food. It exists chiefly on the leaves of trees and dry vegetables. The female carries her young for 11 months, and a week after birth the baby C. has attained a height of 3 ft, but it is not full grown until its sixteenth or seventeenth year. It lives from 40 to 50 years. The power of carrying water in its stomach and living on limited quantities of food earned for it the title 'ship of the desert.' While on a journey through the desert a C. will go 3 days, doing 25 m. every day, without water, but on the fourth day it must receive a supply; the swifter breeds, for there are

of the gift that Abraham received from Pharaoh. The flesh of the C. is a very favourite food among the Arabs; their milk also forms a good and nutritious beverage. The Arabs weave the hair of the C. into various materials for clothing; it is also imported into Europe, and used in the manuf. of artists' brushes. The mounting of infantry on C.s has proved of great advantage, as it enables the men to reconnoitre in hot, arid countries, where water is not easily found, and where horses are not of much service. European troops have often made use of C.s in this way, when operating in India, Egypt, and the Sudan. In many of the central Asian deserts the Bactrian species is to be found in its wild condition, but these may be derived from escaped domesticated individuals.

Camel, apparatus used for raising a ship, so as to render it navigable in shallow water, consisting of large hollow vessels attached to the ship's side. Invented by a Russian engineer, De Witte, and much used between Kronstadt and Leningrad.

Camelford, mrkt tn of Cornwall, Eng- land, situated on the Camel, 28 m. NW. of Plymouth. The ruins of the castle associated with the name of King Arthur are situated at Tintagel (q.v.), 4 m. to the NW. Agriculture is the local industry. Pop. 1500.

Camellina, genus of cruciferous annuals which belong to Europe and the Mediterranean. *C. alyssum* is sometimes found in Britain, where *C. sativa*, Gold of Pleasure, or Siberian oil-seed, also occurs. The latter is of humble appearance, has small yellow flowers, and yields a good fibre.

Camellia, Asiatic genus of evergreen trees and shrubs belonging to the family Theaceae, with thick, dark, shiny leaves, and white or rose-pink flowers. Linnaeus so named it after Camellus, or Kamel, a Moravian Jesuit, who wrote an account of the flora of Luzon. There are sev. species, the best known being *C. japonica* and *C. reticulata*. The former originally came from Japan, being introduced into England in 1739. Its flowers are red, and it grows to a height of 30 ft. The latter was brought from China, and is a much smaller plant, with large pink flowers, known as semi-double. *C. oleifera* has sweet-scented white flowers; *C. sasangua*, an inhab. of China and Japan, and *C. drupifera*, from Cochin China and the mts of India, are both oil-yielding species. The oil of *C. sasangua* is in use for many domestic purposes, and has a pleasant odour; it is made by the crushing of the seeds into a coarse powder. The leaves of the plant are also made into a decoction and utilised by the Jap. women for their hair. The oil of *C. drupifera* is used for medicinal purposes. The C. is generally grown in Great Britain under glass, but it does well in the open in rich sandy peat and loam, with shelter from the cold easterly winds. It is propagated by layers or cuttings, also by seeds. Sev. varieties of *C. sinensis*, the source of tea, are cultivated in India, Java, China, and

E.N.A.

CAMEL AND YOUNG

many varieties of the Arabian C., will go much longer, and travel over 60 m. a day without refreshment. If too heavily laden it will sometimes refuse to rise; but while on its journey it bears its burden patiently, and will often only succumb under it to die. If a sandstorm should arise, it falls on its knees, stretches its neck along the sand, and, closing its nostrils, remains in that position until the storm has passed. In character the C. is a wild and savage animal, and it is due to the fact of its extreme stupidity and passiveness, and to any instinct of attachment to its master, that man has been enabled to make it of any service. At times the males become very fierce and dangerous, and make savage assaults on their fellows. It is not until its fourth year that its training as a beast of burden commences; it is then taught to rise and kneel at a given signal, and is accustomed by degrees to carry increasing loads, which may weigh anything from 50 to 1000 lb., according to the breed of the C. which is used. We have evidence that the Arabian C.s were some of the earliest animals used for domestic purposes, for according to Scripture 6000 of these beasts formed part of the great possessions of Job. They were also included as part

Japan. *C. × williamsii* and *C. 'Cornish Snow'* are notable hybrids raised in Cornwall.

Camelopard, *see* GIRAFFE.

Camelopardalis (the Giraffe), constellation near the N. Pole, between Ursa Major and Cassiopeia. It was originally discovered by Jacobus Bartschius, 1624, and added to the astronomical maps by Hevelius (q.v.).

Camelot, name given in medieval romance to the seat of King Arthur. It has been identified with Caerleon-upon-Usk, and also with Winchester, Cadbury Camp near Queen Camel in Somerset, and Tintagel in the Camel country of Cornwall. It is mentioned by Tennyson in *The Lady of Shalott* and *The Idylls of the King*, and by Shakespeare in *King Lear*.

Cameo, or Camaleu (It. *caméo*, from Medieval Lat. *cammaeus*). The word was in use in the 13th cent.; a C. is an engraved gem in which the figure, or subject, is carved in relief in a stone or other material providing 2 different layers of colour, in one of which the design is cut, the second colour forming a background. The intaglio, in contrast, is a gem in which the engraved subject is hollowed out as in the manner of a seal. The Egyptian scarab is an early example. In Greece it was not until after the time of Praxiteles that C. cutting developed as an art. The stones used for the purpose were brought from the E., and most of them were of magnificent size and colour. In Imperial Rome such rich materials, elaborately wrought, were in demand for the ornamentation of caskets, vases, cups, etc., as well as for personal adornments. Many of these have been preserved in excellent condition, and are to be found in various private and public collections. One of the most famous C.s is the Gonzaga, or Odescalchi, originally in the possession of the Empress Josephine, and later preserved in the Imperial cabinet in Leningrad. On it are represented the portraits of Nero and Agrippina. Another smaller but not less valuable C. is that of Jupiter fighting

the Titans, by Athenion (AD 50), now in the Vatican. The Portland Vase (q.v.), in the Brit. Museum, is a further example. The art of C. cutting was revived during the 15th cent. in Italy and was carried on with great success until comparatively recent times, Pistrucchi ending the long line of renowned engravers. In England Josiah Wedgwood initiated the C. (white on a coloured ground) in pottery. The modern C. cutters of Italy and other places, finding there was great difficulty in treating the hard gems, also being unable to obtain a sufficient supply of the fine ones necessary for the work, began to think of some other method: hence the introduction of shell C.s. The shells of various molluscs are now often used for making C.s. They are also imitated on glass, and in a cheap, mass-produced form in plastic mouldings. *See also* GEM.

Camera, *see* PHOTOGRAPHY.

Camera Lucida, optical instrument constructed for various purposes. Hooke was the inventor of one about 1674, and Wollaston brought out another in 1807. This latter one was intended to facilitate the perspective outline of objects, and consists of a 4-sided prism of glass, having one angle of 90 degrees, and the opposite angle of 135 degrees, while the other 2 angles are each of 67 1/2 degrees. The C. L. was of some importance to draughtsmen, before photography was used in that capacity, on account of its small size, which rendered it easily portable. Its chief use was in copying, reducing, or enlarging drawings.

CAMERA OBSCURA

O, object; M, mirror; L, lens; I, image.

Camera Obscura, an optical apparatus by means of which the images of objects are made to appear on a light or white surface, or a darkened room in which an image of surrounding objects is projected on to a large screen by a long-focus convergent lens. At the top of the dark chamber is a box containing a convex lens and sloping mirror. If a plane mirror

is placed behind the lens at an angle of 45 degrees to the horizon so that the rays of light would be reflected vertically downwards, an image is produced on the horizontal viewing table. Standing with one's back to the object the image will appear right way up but reversed left to right. This is the principle of the C. O. Its invention has been ascribed to Giovanni Battista della Porta, 1569, but it is a well-known fact that this principle had been recognised, and made use of, many years before his time. The C. O. was first employed in the interests of photography about 1794, by Thomas Wedgwood.

Camerarius, Joachim (1500-74), Ger. scholar, b. Bamberg. His proper name was Liebhard, but as the office of chamberlain at the court of the bishops of Bamberg was always held by his family, he changed it to C. (Ger. *Kammerer*, late Lat. *Camerarius*). One of the most distinguished philologists of his time, he improved the organisation of the univs. of Leipzig and Tübingen. He helped to prepare the Confession of Augsburg, 1530, and in 1555 was deputy of Leipzig Univ. to the Diet of Augsburg. He was a friend of Melancthon, of whom he wrote a biography in 1566. His many works include trans. of the classics, and monographs on Gk and Lat. philology and antiquities.

Camerino, It. tn, in the Marches (q.v.), 23 m. SW. of Macerata (q.v.). It is situated on an E. spur of the Apennines, and has an archiepiscopal cathedral, a univ. (non-state) founded in 1727, and silk manufs. Pop. 12,000.

Camerlingo, sometimes **Camerlingo** (It., 'chamberlain'), the cardinal who administers the property and revenues of the Holy See. He is the head of the Sacred College of Cardinals between the death of the Pope and the election of his successor, and he presides over the election.

Cameron, Sir David Young (1865-1945), painter, b. Glasgow. Skilled as an etcher, also painted landscape, especially Scottish scenes. A.R.A., 1911; R.A., 1920. Knighted, 1924. In 1935 he was appointed painter-in-honour to the king's household in Scotland.

Cameron, Sir Donald Charles (1872-1948), Brit. colonial administrator, educ. Rathmines school, Dublin, and entered the civil service of Brit. Guiana in 1890. He acted as colonial secretary of Mauritius between 1904 and 1907; in 1908 he became assistant secretary to the gov. of S. Nigeria, and in 1911 prin. assistant secretary. In 1914, when Lagos and S. Nigeria were united with N. Nigeria as the colony and protectorate of Nigeria (see NIGERIA), with Lugard as governor-general (see LUGARD, LORD), C. was promoted to be secretary to the central gov. In 1924 C. was promoted to be governor of Tanganyika Ter. where his Nigerian experience made him exceptionally well qualified to administer a country equal in size to Nigeria. Here his name is especially associated with the organisation of a system of native administration known as 'indirect rule' modelled on the principles already in operation in Brit. W. Africa. In the same year he inaugurated

the creation of an African civil service, improved the public health service of Tanganyika, and promoted the estab. of gov. schools in that ter. From 1931 to 1935 he was governor of Nigeria. His own account of his administration was pub. in 1939 in *My Tanganyika Service and Some Nigeria*. K.B.E., 1923; K.O.M.G., 1926; G.C.M.G., 1932.

Cameron, Fairfax of, see FAIRFAX.

Cameron, John (d. 1446), Bishop of Glasgow and chancellor of Scotland. In 1424 he was appointed secretary to King James I; keeper of the privy seal, 1425; keeper of the great seal, 1427; Bishop of Glasgow and chancellor of Scotland, 1428.

Cameron, John (c. 1579-1625), scholar and theologian, b. Glasgow. He studied at the univ. there. In 1600 he visited the Continent and taught classics and philosophy in many continental colleges, becoming prof. of divinity in the univ. of Saumur in 1618. In 1620 he returned to Britain, and in 1622 became principal of Glasgow Univ. His advocacy of the divine right of kings made many enemies, and in 1623 he returned to Saumur and thence went to Montauban as prof. of divinity.

Cameron, Richard (c. 1648-80), Covenantant, b. Falkland, Fife, where he became schoolmaster. Converted by the field preachers from Episcopacy, he became an extreme Presbyterian, and preached in Annandale and Clydesdale. In 1678 he went to Holland, and returned in 1680 to take part in the Sanguhar Declaration, for which a price of 5100 marks was set upon his head. He took refuge with some comrades in the hills in Ayrshire, preaching whenever he found an opportunity, until surprised by a party of dragoons at Aird's Moss, when both he and his brother were slain. See CAMERONIANS.

Cameron, Verney Lovett (1844-94), African explorer, b. Radipole in Dorset. He entered the navy in 1857, served in the Mediterranean, the W. Indies, and the Red Sea, and took part in the Abyssinian expedition and in the suppression of the slave trade. In 1872 he was made head of the expedition to relieve Livingstone, and left Zanzibar in Mar. 1873, but at Uyanayembe met Livingstone's followers bearing his remains to the coast. He proceeded to Ujiji, where he found Livingstone's records, and subsequently explored the S. portion of Lake Tanganyika. Afterwards he explored the upper reaches of the Congo, but was prevented from tracing its course to the W. coast owing to the hostility of the natives. He then turned his attention to the Zambesi, of which he discovered the sources, and in 1875 crossed Africa from E. to W., being the first traveller to achieve this feat. In 1878 he explored the route for a Constantinople to Bagdad railway from Beirut to Bushire, and in 1882, with Sir R. Burton, visited the Gold Coast. He wrote among other works, *Across Africa*, 1877, *Our Future Highway to India*, 1880, and some books for boys.

Cameron Highlanders, The Queen's Own. Formerly 79th Foot. Raised 1793 by Lt.-Gen. Alan Cameron, who in that

year raised some 800 young men in his native co. Inverness, and led them in most of the battles of the Peninsular campaign and at Waterloo. Its other campaigns are Crimea, Indian Mutiny, Egypt 1882, Nile 1884-5, S. African 1900-3. During the First World War it raised thirteen battalions, which served in France, Flanders, and Macedonia. In the Second World War the C. H. saw service on all the 3 major fronts—NW. Europe, N. Africa, and Italy—and in Burma. As part of the 51st Highland Div. under Maj.-Gen. Douglas Wimberley, the C. H. were in very hard fighting in 1943 at the battle of Akaret, particularly on 6 April on the Roumana Ridge. Other units were part of the Chindit force, in Burma. The Cameron and the Seaforth Highlanders are to be amalgamated by 1962. See C. Gardyne, *The Life of a Regiment*, 1923.

Cameronians, followers of Richard Cameron (q.v.), a Scottish Covenanter, who separated from the Church of Scotland towards the end of the 17th cent. on a question of eccles. polity. The C. refused to recognise the State control over the Church, and adhered strictly to the Solemn League and Covenant, ratified by the assembly of Westminster divines in 1643. They separated from the Presbyterian Church, and were officially known as the Reformed Presbyterians. The C. were bigoted fanatics, but undoubtedly acted from high motives. They refused to take the oath of allegiance, and thus cut themselves off from some of the privileges of citizenship. In 1876 the Reformed Presbyterians formally united with the Free Church, who also maintained the spiritual independence of the Church of Christ. There are, however, in the highlands a few who still call themselves C. See Walker, *Six Saints of the Covenant* (repub. in 1901).

Cameronians, The (Scottish Rifles), formerly 26th and 90th Foot. The first of these was raised in 1689 from the amnestied survivors of the Cameronian covenanter to help William III against James II. As the Earl of Angus's regiment, it served with distinction under William III, and later under Marlborough. Under Abercromby it gained further laurels in the Egyptian campaign of 1801, and also under Moore at Corunna in 1808-1809. The 90th Foot, raised by Thomas Graham, later Lord Lynedoch, in 1794, also served in the Egyptian campaign of 1801. It distinguished itself in the Indian Mutiny and the Zulu War of 1879. In 1881 the 26th and 90th were linked to form one regiment, and as such served in the S. African (1899-1902) war. During the First World War it raised 27 battalions, which served in France, Flanders, Macedonia, Gallipoli, and Palestine. The C. took part in battles in all the major theatres of war in the Second World War. In Burma they were part of the Chindit force of Maj.-Gen. Wingate. They played the chief role in the epic capture of Walcheren and S. Beveland early in 1945, suffering heavy losses in the final stages of the assault when the Germans rallied to

counter-attack. They also took part in the Rhine operations of the Second Brit. Army, notably in Mar. 1945. The depot is at Hamilton.

Cameroon, formerly a Ger. colony (Kamerun) on the W. coast of Africa, extending from the mouth of the Rio del Bey to a point slightly below 3° N. lat. It is now administered as trusteeship ter. by the British and the French. Formerly known as the Oil Coast, the ter. was demarcated by treaty between England and Germany in 1893, and between Germany and France in 1885 and 1894; and was increased in Nov. 1911 by acquisition of part of Fr. Equatorial Africa in compensation for recognition of Fr. suzerainty over Morocco. It is a mountainous country, with a strip of low-lying land near the coast. The prin. rivs. are the Lom, Nyory, Lokinya, and Kribi. The part that was ceded to Germany in 1911 is watered by the Logone, which flows into Lake Chad, and the Sanga, which is a trib. of the Congo. There is considerable rainfall, with no prolonged dry season. In Sept. 1914 Brit., Fr., and Belgian native troops, under European officers commanded by Maj.-Gen. Sir Charles Dobell, invaded the C. and destroyed the important wireless station at Douala which surrendered on 27 Sept. By April 1916 the ter. was entirely in allied hands.

By the Milner-Simon agreement of 1919 the whole area was divided into a Brit. sphere of about 34,000 sq. m. and a Fr. sphere of about 143,400 sq. m. and in 1922 the ters. were placed by the League of Nations under Brit. and Fr. mandates. The C. under Brit. trusteeship stretches the entire distance of the Nigerian E. boundary, except for one short break. The C. under the Fr. trusteeship borders on the Atlantic and has a pop. of 3,115,600 natives and 12,200 French. By decrees of 1921 and 1925 the Fr. C. was constituted an autonomous ter., both administratively and financially. The 1954 exports from the Fr. C. were cocoa (50,032 metric tons), palm kernels (16,810), timber, coffee, palm oil, rubber, bananas, ground-nuts, and cotton. In Fr. C. there are 16,000 km. of roads and 505 km. of railway. The 2 narrow strips of ter. extend from the Atlantic to Lake Chad, a distance of 700 m., and lie diagonally between 4°-12° 30' N. lat. and 8° 30'-14° 45' E. long. The nature of the country varies to a remarkable extent, from the coastal mangrove swamps and dense forest region to the grasslands at heights of 400 to 7000 ft. and again to sandy, swampy tracts in the Dikwa country and around Lake Chad. The highest peak is C. Mt, a volcanic mt 13,350 ft high. The Brit. C. is administered as part of Nigeria; administrative H.Q. are at Buea. The estimated pop. is 753,000. The N. areas are administered by the residents of the neighbouring provs. of Adamawa, Bornu, and Benue; the S. part forms a separate prov., known as the C.s Trust Ter. C.s Prov. is rich with timber, and the volcanic soil of the C. Mt is especially fertile. The ports Victoria and Tiko are linked to Buea by motor road. The exports are

cocoa, palm kernels, rubber, bananas, and mahogany. The Victoria dist. contained large Ger. cocoa, rubber, and banana plantations, with some 48,000 ac. under cultivation. Victoria lies amidst fine scenery and has a botanic garden planted by the Germans. Buea was the Ger. administrative cap. The wealth of the forests and minerals is as yet little exploited. There are 315 m. of railways and 3100 of roads. An 'Outline Plan of Development and Welfare, 1955-60,' Sessional Paper No. 2 of 1955, envisages an expenditure of over \$1,300,000 on road development (\$659,000), education (\$323,000), agriculture (\$230,000), and medical services (\$145,000). For the period 1955-60 the Brit. C. was allocated \$1,330,000 under the Colonial Development and Welfare Act of 1955. See also COLONIAL TRUSTEESHIP. See F. W. Migeod, *Through British Cameroons*, 1928, and ann. reports of the Colonial Office to the Permanent Mandates Commission of the League of Nations (H.M.S.O.).

Camillus, Marcus Furius (d. 365 BC), Rom. patrician and one of the great republican heroes. He was censor in 403. In 396 he took Veii, which had withstood a 10-year siege, and in 394 he captured Falerii. Being accused of misappropriating the booty of Veii, he retired to Ardea in 391. It is reported that he returned in the nick of time to stop Brennus from taking the Capitol. He opposed the desire of the plebs to move to Veii, and was largely instrumental in rebuilding the city. During subsequent campaigns he vanquished the Aequi, the Volsci, and the Etrusci, and finally, in 367 BC, the Gauls, near Alba. During his life he was elected military tribune with consular powers 6 times, and 5 times dictator. He d. of the plague.

Camisards, Huguenots or Protestants of the Cévennes, so called from the *camise* or white shirt which formed their uniform. They rose in revolt against the revocation of the Edict of Nantes by Louis XIV in 1685, and their zeal was fanned by the ruthless dragonnades, or quartering of dragoons upon Protestant households and the accompanying acts of cruelty in order to enforce conversion to the Catholic faith. At first consisting only of isolated outbreaks, the movement became more widespread after the murder in 1702 of the Abbé du Chayla, who for 15 years had proved a most heartless persecutor of the oppressed people. A general rebellion followed this event, and the rebels, now numbering some 3000, were able to maintain themselves for about 2 years in the mts against the royal forces. The defeat of some small detachments of soldiers led to Marshal Montrevel being sent to the dist. with an army of 60,000 men. The C. were, however, led by a young man with considerable military talent named Cavalier (q.v.), and though the royal army burnt sev. Camisard vills., Cavalier managed to increase the scope of the revolt. In 1704 Montrevel was superseded by Villars, who adopted more conciliatory measures, pardoning those who surrendered and releasing all prisoners

who swore allegiance, while his troops scoured the country in all directions and forced band after band of the insurgents to submit. In May 1704 Cavalier himself accepted the conditions offered, and left the country, with many of the more moderate C. A few zealots still held out, and the rising was renewed in 1705, but was put down ruthlessly, and the prov. entirely devastated. Cavalier and many others took service with the English and fought at Almanza in 1707. But the majority of the C. had perished in the fighting. The rebellion was marked by extreme brutality on both sides. See Anna Eliza Bray, *Revolt of the Protestants of the Cévennes*, 1870.

Camlet, cloth made in the Middle Ages from camel's hair, but now usually from the hair of the Angora goat, mixed with silk, nylon, wool, cotton, rayon, or linen.

Cammaerts, Émile (1878-), Belgian poet and author, b. Brussels, resident in England since 1908. He became prof. of Belgian studies in the univ. of London in 1931, and writes mainly in English. He came into prominence at the beginning of the First World War. with 2 vols. of Belgian poems, 1915 and 1916, the French being printed side by side with free Eng. trans. His pubs. include 4 vols. of trans. from John Ruskin and 1 from G. K. Chesterton, into French; *Les Deux Bossus* and *La Veillée de Noël*, plays, 1917; *Through the Iron Bars*, description of 2 years of Ger. occupation of Belgium, 1917; *Belgium from the Roman Invasion to the Present Day*, 1920; *Poèmes intimes*, 1922; *The Childhood of Christ as seen by the Primitive Masters*, 1922; *The Treasure House of Belgium*, a guide-book with a vein of historical learning, but mainly concerned with modern affairs, 1924; *Discoveries in England*, 1930; and *Rubens, Painter and Diplomat*, 1931.

Camoens (Camões), Luís Vaz de (1524 or 1525-80), most celebrated of Portuguese poets, was descended from an ant. noble and wealthy house. The exact place of his birth is disputed, but it is almost certain that he was b. Lisbon. By this time the full flood of the Renaissance was making itself felt in Europe, and among other countries Portugal was benefiting from the desire for further and fuller knowledge which seemed at this time to fill all men. C. was educ. at the college of All Saints at Coimbra, and steeped himself in the literature and mythology of the classics. He had an excellent memory, and little that he learnt was ever forgotten. His education, however, proceeded on very general lines, and there was practically no subject upon which he was not able to speak with some authority. He knew well the contemporary literatures of Spain and Italy, he had read much hist., and altogether we can say that his great poem *Os Lusíadas* (The Lusíads) gives evidence of his universal knowledge. He came then to Lisbon, which city made a firm and lasting impression on him, an impression which in his great poem he immortalised. He found easy entrance into the highest

society, and he quickly came to be recognised as a poet of no mean talent. Recent criticism has questioned the validity of a well-known tradition that makes him fall violently in love (in 1544) with Caterina de Ataíde, the daughter of a high official at court, who disapproved of his suit. This lady has been credited with the inspiration of many of his most impassioned sonnets, and has been described as his Beatrice. He was introduced at court, and here whilst he made many friends he also made enemies, and his too open passion quickly became a matter of gossip. He left the court, but his voluntary exile was restless; the verses which he wrote at this time show him to be now exuberant, now in the uttermost depths of despair. Many of his sonnets and roundels were written at this time, and from this period also date the greater number of his eclogues. He was now also employed in the composition of his patriotic poem, *Os Lusíadas*, but his love affairs were still unsettled, and he was finally forced into exile. His exile was probably hastened by the production of *El Rei Seleuco*. In his place of exile he composed *The Elegy of Exile*, and a number of beautiful sonnets. He now became a soldier, and in 1547 he fought against the Moors, and in an attack on Ceuta lost his right eye. Here he remained for the next 2 years still pouring forth verses, some despairing and sad, others philosophical; by himself seems to have been buoyed up by the memories of the past. In 1549 he prepared to go to India, and for that purpose returned to Lisbon; once there he found it impossible to drag himself away, and he remained to be near his love. But he indulged at this time in wild extravagances which finally landed him in prison, was pardoned, and proceeded to India. He sailed in 1553. In some poems he describes the voyage, which probably was not without its influence on *Os Lusíadas*, since after this date the discovery of India becomes the main theme. The Portuguese were at this time dominant in the E., and although C. was well received, he quickly became disgusted with his life at Goa. Between 1553 and 1555 he saw a fair amount of active service, his experiences being described in *Os Lusíadas*. He did not, however, stay at Goa, but travelled to many places in the E., usually to perform some military duty. He wrote whilst there *Desparates na Índia*, *Filodemo*, and *Satyras do Torneio*. He had acquired some little wealth, but now fortune turned against him. After waiting at Macao for a ship to take him back to India, he was imprisoned for intrigue, and he was shipwrecked whilst being brought back a prisoner to India. He managed to save his *Lusíadas*, but remained a prisoner in Cambodia, where he composed his *By the Waters of Babylon*. Still a prisoner he was taken back to Goa, where, according to tradition, he heard for the first time of the death of Caterina. It was on this occasion, or shortly after the shipwreck in which he lost his slave-girl, Dinamene, that he produced his famous sonnet *Alma Minha Gentil*. He

remained a prisoner for some time, being finally released when a friend of his became governor, and again for a short time he was imprisoned for debt. He was now very poor, but seems to have remained in India living a fairly happy life and working at his chief poem. For three years he was thus employed, and finally the poem was finished, and his ambition became to go back to Portugal and print it. In 1567 he got as far as Mozambique, but here again he was imprisoned for debt for 2 years, and finally by the charity of friends he was released from prison and sailed for home. He reached Portugal in 1569. He found his mother ready to welcome him; his father was dead, and now, having regained his home, he set about obtaining permission to print his poem. Permission was given in 1571, and the book appeared in 1572. It was received with acclamation by everybody. He was granted a substantial pension for three years, a period which was later extended, and he lived for a time in peace and enjoyment. In 1575 he fell, for a short time, into helpless poverty once more, but the renewal of his pension soon set him right again. In 1578 came the disaster of the battle of Alcaocer, and C. mourned the loss of his patron and king, Sebastian, in a magnificent sonnet. Early in 1580 the cardinal king d., and C., who saw the vanishing of Portuguese independence, had no further desire to live. In June of the same year the last of a great and illustrious line fell a victim to the plague which was ravaging Portugal. His greatest work was *Os Lusíadas* (or *The Lusitanians*) for which he has been not inaptly called the Virgil of Portugal. It has for its main theme the discovery of India and the greatness of Lusitania. It is written in ottava rima, and may be regarded as Portugal's national epic. C. also wrote comedies, sonnets, eclogues, and elegies. In 1918 a Camoens chair of Portuguese language and literature was estab. in King's College, London. See J. Adamson, *Life and Writings of Camoens*, 1820; Richard Fanshawe, *The Lusíad* (1st Eng. trans.), 1655; Sir R. F. Hurton, *Translation of Camoens' Lusíad, with Life and Commentary*, 1880; J. J. Aubertin, *The Lusíadas* (trans.), 1884; T. Braga, *Camões e o sentimento nacional*, 1891; E. Prestage, *Minor Works of Camoens*, 1924; Leonard Bacon, *The Lusíadas* (trans.), 1950; H. Cidade, *Luis de Camões* (3 vols.), 1952-3 and 1956.

Camomile, or **Chamomile**, *Anthemis*, genus of Compositae. Herbs native to England and W. Europe, and cultivated for medicinal use. The most important species of the genus is *Anthemis nobilis*, from which an infusion of its flowers is obtained and used as a bitter stomachic and tonic. In olden times it was used in fevers, but now other more effective remedies are in use. In large doses the infusion acts as a simple emetic. Its flowers in the cultivated state are said to be double, and the most satisfactory results are obtained from the largest, whitest, and most perfected double flowers. The flowers have a very fragrant

odour, with an intensely bitter taste. In addition to the bitter extraction that is yielded, the C. also produces about 2 per cent of a volatile fluid, which at first is pale blue in colour, but on exposure to the light it turns yellowish-brown. The odour is fragrant, like that of the flowers, and it is composed of butyl amyl angelates, and valerates. Other Brit. species are of no account; one of these (*A. cotula*), known as the stinking C. or mayweed, is so pungent as to blister the fingers. A foreign species (*A. tinctoria*) yields by its flowers a beautiful dye. *A. arvensis*, Corn C., is an annual common on chalk. *A. nobilis* may be used in the making of C. lawns.

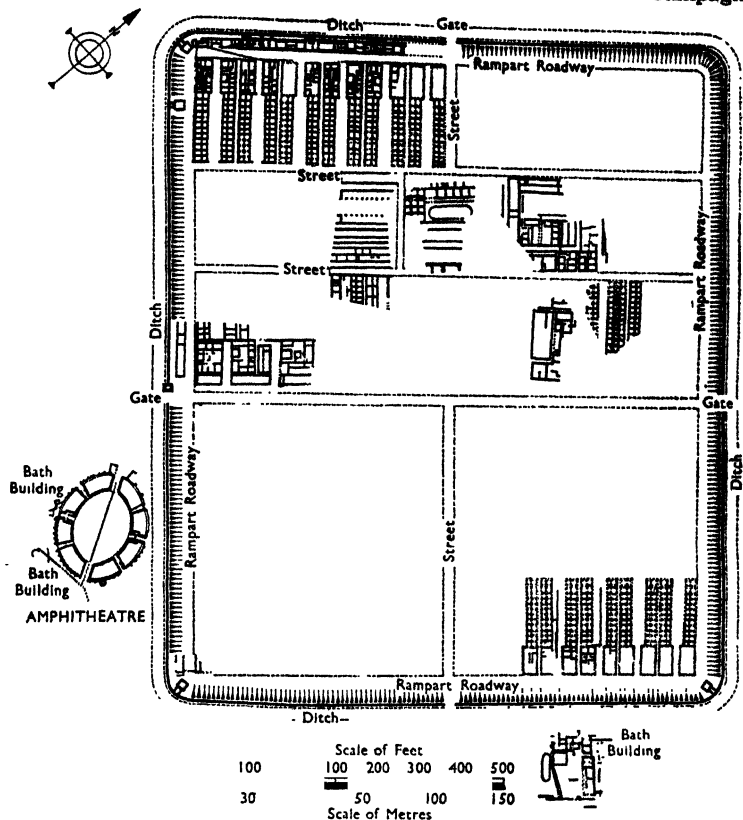

Camorra (It. *camorra*), secret society said to have been estab. about 1820 by prisoners in the Neapolitan dungeons to protect themselves against the brutalities of their jailers. The associates on their release transferred their practices to Naples itself, and in a few years the C. became a powerful organisation, practically controlling the life of the city. Smuggling, robbery, blackmail, all went on under its rules, traders having to pay heavy sums for permission to carry on their business, and the society derived a large revenue from brothels and the promotion of illegal lotteries; but while it remained non-political, it was unmolested by the authorities. After 1848 it adopted revolutionary ideas, becoming a political as well as criminal organisation, and controlling all elections. During the sixties it carried on a reign of terror in S. Italy, but after years of struggle its power was apparently broken by the gov. in 1877. But in 1900 so many Camorristi were proved to have attained high offices that the Neapolitan municipality was superseded for some months by a royal commission. In 1906 a double murder by some Camorristi led to the arrest of 40 conspirators, their chief being Enrico Albano. Witnesses' lives being unsafe at Naples, the court was removed to Viterbo, and the trial took place in 1911, long sentences of imprisonment being awarded to sev. of the accused. See A. C. Train, *Courts, Criminals, and the Camorra*, 1912.

Camouflage (from Fr. *camoufler*, to blind or veil). Although the word C. came into prominence only during the First World War, the principle of deceiving the enemy by artificial aids is very old. The deception most practised is that of so altering the appearance of troops or works as to render them either invisible or to assimilate them to the surrounding countryside. Hence during the S. African war of 1899-1902 Brit. troops were clothed in khaki, and practically all troops throughout the world wear uniform and equipment of a neutral shade. Taking cover by dressing troops in grass, reeds, or branches of trees is a very ancient practice. A good example is referred to by Shakespeare in *Macbeth*, where Macduff's army advances hidden by boughs (see Act v. sc. vi). C. was fairly easy before the development of aircraft, but during the First World War lines of trenches stood out in the landscape like huge scars and were most difficult to hide.

Air power confers great powers of observation upon an enemy, the antidote to which is a better use of C. So important was C. during First and Second World Wars that guns, tanks and vehicles, buildings, tents and marquees, were painted in such a manner as to deceive the observer from the air. C. on the sea was equally important, and the majority of low-powered ships were also painted in such a manner as to make observation from submarines difficult. The particular form adopted was known in the First World War as 'dazzle painting,' which gave a distorted appearance to vessels. Ships with high speed relied upon their speed for security against a submarine attack. During the Second World War C. was extended to all manner of buildings and works in Great Britain as a measure of defence against Ger. air-raids. For C. in nature see COLOURS OF ANIMALS and MIMICRY.

Camp, collection of tents or huts which is used to lodge soldiers on a campaign or during field manoeuvres. On active service it is sometimes difficult to transport tentage for the troops, and cantonments and bivouacs (q.v.) take their place. But when the force is comparatively small, and stationed in a hot country, the troops are still placed under canvas. The different C.s are distinguished by various ensigns in the daytime and by different coloured lamps at night. Thus a field hospital has a white flag with a red Geneva cross, or a red lamp; a supply and transport C. has a blue flag with a white centre, or a green lamp; an ordnance store C. has a blue flag with a red centre, or a yellow lamp. When near the enemy, on active service, the tactical considerations are of paramount importance; the C. must be so arranged that the troops can be in fighting order on the shortest notice. When this is observed, the C. should also have, if possible, a supply of good water, fuel, etc.; the ground should be firm with good natural drainage; and access should be open to good roads. When a large permanent garrison in barracks is visited by regulars and territorial troops during the drill season, for the purpose of combined manoeuvres under war conditions, this is termed a C. of exercise. All the ordinary requirements of a good C. site, as mentioned above, should be complied with, and in addition a wide expanse of fairly wild and changing country is a necessity.

Camp, Roman. The Romans were the first nation to carry the science of encampment to any degree of perfection; their C. was the same in outline from the time of Polybius to the fall of the empire, and was in form as follows. The site was an exact square with sides of 2017 Rom. ft. The *via principalis*, or prin. street, 100 ft wide, divided the C. into 2 unequal parts. In the smaller part, facing the middle of the *via principalis*, was the *praetorium*, or commander-in-chief's tent. There were 4 gates in the C.: one at each end of the main street, named *porta principalis dextra* (right prin. gate), and *porta principalis sinistra* (left

PLAN OF EXCAVATED PARTS OF THE ROMAN CAMP AT CAERLEON, MONMOUTHSHIRE

prin. gate); the *porta praetoria* (praetorian gate), and the *porta decumana* (decuman gate). The whole C. was surrounded by a *vallum* (rampart) and a *fossa* (ditch); the former was composed of earth from the latter and was surmounted by a palisade.

Campagna, It. tn in Campania (q.v.), 17 m. E. of Salerno (q.v.). Pop. 9700.

Campagna di Roma, plain in Italy, surrounding the city of Rome (q.v.). It stretches along the Tyrrhenian Sea, from Civitavecchia to Terracina (qq.v.), and has as its E. boundary the Alban and Sabine hills (qq.v.). This tract, which comprises most of anct Latium (q.v.), is from 30 to 40 m. wide and about 100 m. long. The lakes of the C. are craters of extinct volcanoes, judging from their conical form and the hard black lava which

in some cases forms their shores. The *emissarium* of Lake Albano (q.v.) still answers its original purpose as an aqueduct. The lake of Solfatara is composed of the waters of hot sulphur springs, and has ls. formed of calcareous deposit. This plain formed in olden times no inconsiderable part of 'the splendour that was Rome,' as is attested by the numerous ruined tns to be found there. In those times the C. was well populated and very fertile; but it was only by the skill and care of the anct inhab. that it was made so, and even then many of the tns in the dist. were unhealthy at certain seasons, according to Livy, Strabo, Cicero, and others. The main cause, however, of the marked changes, was the increased malignity of malaria. This was doubtless due to the repeated devastations of the land by the

Goths, the Vandals, and the Longobards, and more recently by the Normans and Saracens. Sev. of the popes attempted to improve its condition, and the It. Gov. has taken up the problem. Drainage and riv. embankment have been carried out, and large numbers of eucalyptus-trees have been planted. The malaria problem has also been attacked. The sparse pop. rears horses, buffaloes, cattle, sheep, and goats; a few cereals and some fruit are grown.

Campagnola, Domenico (c. 1482-?), It. painter, noted for his frescoes in the Scuola del Santo, Florence, and his oil paintings in the Scuola del Carmine. He studied under Titian. His most notable work is the 'Adam and Eve' in the Pitti Palace, Florence.

Campan, Jeanne Louise Henriette (née Genet) (1752-1822), Fr. authoress, b. Paris. She was appointed reader to the daughters of Louis XV in 1767, and Marie Antoinette later made her first lady of the bedchamber. She kept a school for young ladies at St Germain until 1807, when Napoleon Bonaparte founded a school at Ecouen, and appointed her principal thereof, a post which she held until the abolition of the school by Louis XVIII. Her best-known work is her *Mémoires sur la vie privée de Marie Antoinette*, 1823.

Campanella, Tommaso (1568-1639), It. philosopher and poet, b. Stilo, in Calabria. While still quite young he showed great talent, and was admitted into the Dominican order at the age of 15. Like Bacon, of whom he was a contemporary, he 'took all knowledge for his province,' but specialised in philosophy. He was opposed to the doctrines of Aristotle, and in his *Philosophia Sensibus Demonstrata*, pub. at Naples in 1591, he endeavoured to show that philosophy should be grounded, not so much on *a priori* conceptions, as on the observation of the natural world. After travelling to Rome he proceeded to Florence, where he was well received by the Grand Duke Ferdinand. Returning to Naples in 1598, he was in the following year arrested in Calabria, whither he had gone on a visit, on a charge of conspiracy against the Sp. Gov., which then held sway over Naples. He was accused of having schemed to obtain Turkish assistance in making himself the ruler of Calabria. Though there does not appear to have been any evidence against him, he was imprisoned, tortured, and condemned to perpetual confinement. Whilst in prison he wrote many philosophical and poetic works. Pope Urban VIII procured his removal to Rome in 1626, and in 1629 he was set free and given a pension. He betook himself to France in 1634, being afraid of further persecution; he was received with honour by Louis XIII and Richelieu, and was an honoured figure among the savants of that country. He devoted himself to philosophic studies until his death, which occurred at the monastery of his order in Paris. He attempted to form a philosophy of hist. and politics, the principle of which was the general progress of man

leading to a millennium. Among his numerous writings may be mentioned *La Città del Sole*, 1623 (trans. T. W. Halliday, 1937); *Poesie*, 1622; *Philosophia Rationalis*, 1638. C.'s complete works were ed. by A. D'Ancona (2 vols.), 1854. See E. G. Gardner, *Campanella and his Poetry*, 1923.

E.N.A.

THE BASILICA AND CAMPANILE OF SAN APOLLINARE NUOVA, RAVENNA

Campania, region (compartimento) of S. Italy, comprising the provs. of Avellino, Benevento, Naples, Salerno, and Caserta (qq.v.). It extends along the coast of the Tyrrhenian Sea, and is bounded N. by Abruzzi e Molise, NW. by Lazio, E. by Basilicata, and NE. by Apulia (qq.v.). It contains part of the S. Apennines (q.v.) and has extensive coastal plains. It is renowned for its scenery, its luxuriant vegetation, and its climate. In Roman times C. (a dist. of lesser extent than modern C.) was the scene of many legends; Lake Avernus (see AVERNO) and the Sibyl's Cave (see CUMAE) were situated there. The aristocracy of Rome built magnificent country houses in the interior, which is crossed by the Appian Way (q.v.). All the names of the cities are rich in classical associations—Puteoli (Pozzuoli), Cumae (Cuma), Parthenope (Naples), Capua, Beneventum (Benevento), Nola, etc., and in C. were the three cities buried in the eruption of Vesuvius (q.v.) in AD 79: Herculaneum,

Pompeii, and Stabiae (q.v.). The region produces cereals, hemp, silk, sulphur, fruit, and wine (the 'Falernian,' q.v., of the Romans came from C.). The chief tn is Naples. Area 5244 sq. m.; pop. 4,509,000.

Campanile (It. 'bell-tower', from Lat. *campana*, a bell) is a term applied to towers erected in close proximity, though not attached, to many churches in Italy. They are tall, usually square, and often graceful. The earliest examples are at Ravenna (see illustration). There are sev. fine brick C.s of the 8th-11th cents. in Rome. The 'leaning tower' at Pisa is perhaps the best known, owing to its remarkable deviation from the perpendicular. It was begun in 1174. Eight storeys, each surrounded by columns, form the tower, which inclines almost 13 ft from the vertical. Giotto designed the C. at Florence in 1334. It is 275 ft high, and is adorned with allegorical bas-reliefs and statues. The C. of St Mark's in Venice had 8 storeys, tapered slightly, and terminated in an open loggia of marble, containing 5 huge bronze bells. The loggia, forming the belfry proper, was surmounted by the statue of an angel in copper. The total height of the structure was 325 ft. Its construction was begun in 902, but the belfry was not added till 1510. On 14 July 1902, 1000 years after the tower had been started, it collapsed in ruins, but was completely rebuilt by 1910, exactly as it had been. Another fine C. is the Torre del Comune, Verona, 1172. (For English and other examples see BELFRY.)

Campanology, the art of bell ringing, where each bell is swung by a ringer through a full circle of 360 degrees, starting from an upside-down position or mouth upwards. In this position the ringer may hold his bell poised so as to allow him to change his position with the other bells in the peal, which may number from 3 to 4 up to 12. On 3 bells it is possible to ring 6 changes, on 4—24, 6—720, 8—40,320, and 12—479,001,600 changes. See also BELL.

Campanula (dimin. of Lat. *campana*, bell), typical genus of the Campanulaceae, contains about 300 species of herbs, usually perennial, rarely ann. or biennial. The bell-flowers, or bell-worts as they are often called, are found in N. temperate regions and as alpine plants in warm regions. Older names for the genus were *Trachelium* and *Cervicaria*, from the supposed power of many species of curing diseases of the trachea and neck. Perhaps the commonest in Britain is *C. rotundifolia*, called in Scotland the bluebell and in England the harebell; the graceful stem and the delicate hue of the flower make it one of the daintiest members of our flora. The flower-juice yields a very good blue ink, and when mixed with alum a green one. *C. pyramidalis*, the chimney plant, is indigenous on rocks and walls in Carinthia, Carniola, and Dalmatia, but is often cultivated for its tall raceme of beautiful flowers, when the plant attains a height of about 3 ft. *C. medium*, the Canterbury

or Coventry bell, is a native of central Europe, and is a biennial from which have been obtained many varieties differing greatly in size and colour, and often cultivated in gardens. *C. trachelium*, the nettle-leaved bellflower, is a European species with large blue bell-shaped flowers; *C. glomerata*, the clustered bell-flower, occurs in England in both a wild and cultivated state; *C. rapunculoides*, the garden rampion or ramps, has an edible root, and the leaves are sometimes used in salads; *C. latifolia*, the giant bell-flower or hark-wort, is found on dry mt pastures; *C. rapunculoides*, creeping bell-flower, occurs in the N.; *C. patula*, the spreading bell-flower, frequents hedges and thickets. *C. portenschlagiana*, a tall species; *C. erinus*, a forked plant; and *C. macrostyla*, a long-styled ann. sometimes known as the candelabrum bell-flower, are all further examples of the genus which flourish in Brit. gardens.

Campanulaceae, family of dicotyledonous plants. The species are occasionally trees or shrubs, but mostly herbs with a milky latex; about 1200 species flourish in warm climates. The calyx consists of 5 sepals, the corolla of 5 united petals, the androecium of 5 epigynous stamens, the inferior gynaecium of 2 to 5 united carpels, with usually a trilocular ovary, containing numerous ovules. The fruit may be a capsule or, less frequently, a berry. Genera include *Adenophora*, *Campanula*, *Downingia*, *Jasione*, *Lobelia*, *Michauxia*, *Trachelium*, and *Wahlenbergia*.

Campanularia, genus of Hydrozoa, common in European seas. They have stems bearing sporosacs, small bell-like cups containing the zooids or polyps. In some Hydrozoa these go free as 'swimming bells,' but in the C. they are stationary.

Campbell, Alexander (1788-1866), Amer. preacher, was b. Ireland. In 1809 he went to America to join his father, a Presbyterian minister, who had formed a 'Christian Association' at Washington, Pennsylvania, to promote Christian unity on evangelical principles. In 1811 Alexander became minister at Bethany, (W.) Virginia, and in 1812 succeeded his father as leader of the new Church, self-named 'Disciples of Christ,' but generally known as Campbellites (see CHRIST, DISCIPLES OF). Teaching baptism by immersion, he yet fell out with the Baptist churches of Virginia and Pennsylvania, and subsequently with the whole Baptist connection. From 1841 to his death he was president of Bethany College.

Campbell, Archibald, see ARGYLL, DUKES OF.

Campbell, Sir Colin, Baron Clyde (1792-1863), the son of a Glasgow carpenter. His maternal uncle Col. C. provided him education, and in 1808 procured him a commission. He fought at Walcheren and through the Peninsular war, earning a captaincy. After 30 years of active service and garrison duty, he became lieutenant-colonel in 1837, and for brilliant services in the second Sikh war, particularly at Chillianwala (Chillianwala) and Gujrat (Punjab), was made K.C.B.

and appointed in command at Peshawar. Later he commanded the Highland Brigade in the Crimea. In the mutiny year, when appointed by Palmerston commander-in-chief in India, he started from London next day, and within a few months stamped out the rebellion. Made Baron Clyde and field marshal in 1858, he returned home in 1860, and was awarded a pension of £2000. See lives by A. Forbes, 1896, and A. Shadwell, 1881.

Campbell, Donald Malcolm (1921-), b. Povey Cross, Surrey, son of Sir Malcolm Campbell (q.v.), holder of the world speedboat record with his turbo-jet hydroplane *Bluebird* at 239.07 m.p.h. (Coniston Water, 7 Nov. 1957). His 2 previous world records were 225.63 m.p.h. (Coniston, Sept. 1956), and 216.3 m.p.h. (Lake Mead, Nevada, U.S.A., Oct. 1955). C.B.E., 1957.

Campbell, George (1719-96), theologian, b. Aberdeen, and educ. at Marischal College. He was apprenticed at Edinburgh to a writer to the signet, but left the law in 1741 in order to study divinity. He became prin. of Marischal College in 1759, and prof. of divinity there in 1771, in which year he also became minister of Greyfriars. The work by which he is principally known is his *Dissertation on Miracles*, a reply to Hume, pub. in 1763. His *Philosophy of Rhetoric*, pub. in 1766, shows sound learning and good critical judgment. His other works include a new trans. of the Gospels (1778), and *Lectures on Ecclesiastical History*, pub. 4 years after his death in 1800.

Campbell, George Douglas and John, see ARGYLL, DUKES OF.

Campbell, Gordon (1886-1953), Brit. vice-admiral. In the First World War he commanded 'Q' or so-called mystery ships, on which he pub. in 1929 a book entitled *My Mystery Ships*. Awarded the V.C. in 1917. After the war he commanded in turn the *Impregnable* and *Tiger*. Rear-admiral, 1928. M.P. for Burnley, 1931, defeating Arthur Henderson.

Campbell, Henry Colville Montgomery (1887-), Bishop of London since 1956, educ. at Malvern College and Brasenose College, Oxford. He took up his first curacy in Alverstoke; in the First World War he was a chaplain to the forces (1915-17), and was a Territorial Army chaplain, 1926-38. Between 1917 and 1940 he held various London livings. In 1940 he became suffragan Bishop of Willesden, and from 1942 to 1949 was suffragan of Kensington, whence he was translated to the see of Guildford. In 1956 he was translated to the see of London in succession to Dr J. W. C. Wand (q.v.).

Campbell, Ignatius Roy Dunnachie (1901-57), S. African poet, b. Durban. During the First World War, when he was 15, he enlisted in the 6th S. African Infantry, but was sent back to Durban High School. Later he came to England and studied at Oxford, but failed to pass his examinations and lived in France for a time. In 1922 he married Mary Gar-

man and they lived in a fisherman's cabin in Wales, where he wrote *The Flaming Terrapin*, 1924. After a period editing *Voorslag* in S. Africa he was a bull-fighter in Spain from 1928 to 1931. In the Sp. Civil War he served with Franco's forces, and in the Second World War he served with the British in Africa. In 1935 he was converted to Rom. Catholicism. His works include *The Waygoose*, 1928, *Adamastor*, 1930, *The Gum Trees*, 1930, *Poems*, 1930, *The Georgiad*, 1931, *Flowering Reeds*, 1933, *Mithraic Emblems*, 1936, *Flowering Rifle*, 1939, *Talking Bronco*, 1940, *Sons of the Mistral*, 1941, and *Lorca*, 1952; his *Collected Poems* appeared in 1949. *Broken Record*, 1934, and *Light on a Dark Horse*, 1951, are autobiographical works. Campbell's poetry has a strong rhetorical strain, and he has been called 'the Byron of our time.'

Campbell, John, 1st Baron Campbell (1779-1861), lord chancellor of England, son of the Rev. George C. of Cupar, and was called to the Bar in 1806. He entered Parliament as member for Stafford in 1830 and was re-elected in 1831. He made his mark as a practical man of business, and was concerned in many useful measures, mostly connected with the rectification of abuses. He strongly supported Lord John Russell's first Reform Bill, and in 1832 was knighted and appointed solicitor-general. Sitting for Dudley, 1832-4, he was then elected at Edinburgh, and represented that city until 1841, taking part, as a Whig, in many fierce contests, especially concerning the abolition of church rates and the reform of eccles. courts. In 1840, as attorney-general, he conducted the prosecution of Frost and other Chartists, who were found guilty of high treason, and in the following year he became chancellor of Ireland, with the title of Baron C. of St Andrews. He resigned the chancellorship a few weeks later, and devoted his leisure to writing *The Lives of the Lord Chancellors and Keepers of the Great Seal*, 1845-69, a work which brought him both fame and obloquy.

Campbell, John Francis (1822-85), folklorist, b. Islay. Educ. at Eton and Edinburgh, he became secretary to the Lighthouse Commission. He collected a large number of highland songs and legends, which he pub. under the title *Popular Tales of the West Highlands* (4 vols.), 1860-2. He also pub. various Gaelic texts.

Campbell, John McLeod (1800-72), minister son of the Rev. John C. of Kilninver, Argyllshire, educ. at Glasgow and Edinburgh. Soon after 1825 his teaching on the doctrine of the Atonement aroused so much hostility that in 1830 he was charged with heresy. The General Assembly considered the offence proved, and removed him from office. He then went on an evangelical mission to the highlands, and afterwards ministered at Glasgow in a large chapel erected by his supporters. In 1856 he pub. *The Nature of the Atonement*, which was very widely read.

Campbell, Sir Malcolm (1884-1949),

motor engineer who frequently held the world's motor speed record. Sir Henry Segrave (q.v.) was the first to reach a speed of over 200 m.p.h., his time on Daytona Beach, on 23 Mar. 1927, being 203.79 m.p.h. or 29 m.p.h. better than the previous record held by C. On 19 Feb. 1928, C. reached 206.96 m.p.h., which record was beaten by Ray Keech, the Amer. motorist, on 22 April 1928, at 207.55 m.p.h., both performances being on Daytona Beach. Then on 11 Mar. 1929 Segrave reached 232 m.p.h., but was in his turn beaten on 5 Feb. 1931, by C. with 246.15 m.p.h. The 'Blue Bird' Napier-C. motor with which this record was accomplished had been often rebuilt since it was begun in 1924. At Daytona in 1931 he attained a mean average speed of 246 m.p.h., and, in 1933, 272 m.p.h. In 1935 he set up a new world's record, over a measured mile of 301 m.p.h. Knighted in 1931. In 1937 on Lake Maggiore he estab. a motor-boat record of 129.5 m.p.h. In 1938 in his *Blue Bird* he broke his own speed-boat record by averaging 131.41 m.p.h. for 2 runs over Lake Hallwill, Switzerland. Held the world's record for the fastest trip on water: this was on 19 Aug. 1939, on Coniston Water, his record being 141.74 (142.85 and 140.62) m.p.h.

Campbell, Mrs Patrick (Beatrice Stella Cornwallis-West) (1865-1940), actress, b. Kensington, daughter of John Tanner and Louisa R. Romanini; married Patrick C., who was killed in the S. African war in 1900, and then Maj. George Cornwallis-West. Gained a scholarship at the Guildhall School of Music. At 23 took up acting as a profession, making her first appearance at Liverpool. Between 1891 and 1893 she was in melodrama at the Adelphi Theatre, where George Alexander singled her out for the part of Paula in Pinero's *The Second Mrs Tanqueray*. This was the part of her life and her performance put her at once in the front rank of Eng. actresses. Success after success now followed under Alexander, Tree, and Hare. In 1895, at the Garrick Theatre, she acted the title part in Pinero's *The Notorious Mrs Ebbels*. In a season of joint management with Forbes-Robertson at the Lyceum, she played Juliet, Militza in *For the Crown* (John Davidson's rendering of *Pour la couronne*), Magda (Sudermann), Lady Teazle, Ophelia, Lady Macbeth, and Paula. Among other good performances were the Rat Wife in Ibsen's *Little Eyolf* in 1897; Mélisande in Maeterlinck's play *Pelléas et Mélisande*, Hilda Tesman in *Hedda Gabler*, and Deirdre in W. B. Yeats's play *Deirdre*. In 1914 she gave her memorable performance of Eliza Doolittle in G. B. Shaw's *Pymatagon*. In later years she was chiefly occupied in film work. In her youth she had a strange disturbing personality and a languorous It. beauty inherited from her mother; but besides these advantages, she had a keen and cutting wit and a strong sense of humour, a beautiful voice and perfect enunciation. The simpler emotions were not her true sphere, but she could express the passions with rare

intensity. Pub. *My Life and Some Letters*, 1922.

Campbell, Reginald John (1876-1956), Christian minister, b. London; son of a Methodist minister. Educ. privately; also at Univ. College, Nottingham. He went to Oxford in 1891, intending to enter the Estab. Church; but he became minister of the Union Street congregational church, Brighton, and, on the death of Joseph Parker, succeeded him at the City Temple, London, 1903-15. He issued a book called *The New Theology* in 1907, and filled the Temple continually, but the controversy he aroused over these works has long abated. In 1916 he was received into the Church of England. C. was vicar of Christ Church, Westminster, 1917-21. Vicar of Holy Trinity, Brighton, 1924-9. Other pub.: *A Spiritual Pilgrimage*, 1916, and *Life of Christ*, 1921.

Campbell, Thomas (1777-1844), poet, b. Glasgow. He was educ. at the grammar school and univ. there, and in 1795 went to the is. of Mull as a tutor. Two years later he settled in Edinburgh to study law, but he found the occupation little to his taste, and instead wrote *The Pleasures of Hope*, which appeared in April 1799, and went through 4 eds. within a year of pub. In 1800 he travelled on the Continent for some months and visited Munich, Leipzig, and Copenhagen. While he was staying at Hamburg he witnessed the battle of Hohenlinden; there too he met the hero of his *Exile of Erin*. He contributed articles to the *Edinburgh Encyclopaedia*, and ed. the *New Monthly Magazine*, 1820-30. C.'s longer poems, *The Pleasures of Hope*, *Gertrude of Wyoming*, 1809, and *Theodoric*, 1824, are not much read now. His war songs, 'Ye Mariners of England,' 'Hohenlinden,' and 'The Battle of the Baltic,' are written with a fine energy, and are, for stirring patriotism, unequalled in our language. C. d. at Boulogne, and was buried in Westminster Abbey. Works ed. by Washington Irving, 1810. W. A. Hill, 1851. W. M. Rossetti, 1880, and J. Robertson, 1911. See also W. Beattie, *Life and Letters of Thomas Campbell*, 1849; C. Redding, *Literary Reminiscences and Memoirs of Thomas Campbell*, 1860; J. C. Hadden, *Thomas Campbell*, 1899; W. M. Dixon, *Thomas Campbell: an Oration*, 1928.

Campbell, William Wilfrid (1861-1918), Canadian poet, b. Berlin, W. Ontario. He was educ. at Toronto and Cambridge, Massachusetts, and entered the Episcopal Church, but soon resigned. Among his works are *Lake Lyrics*, 1889, *Dread Voyage*, 1893, *Mordred and Hildebrande*, 1895, *Beyond the Hills of Dreams*, 1899, *The Practical Side of Imperialism*, 1904, *Sagas of Vaster Britain*, 1906, *Canada*, 1907, and *War Poems*, 1915.

Campbell-Bannermann, Sir Henry (1836-1908), statesman, b. Glasgow, and educ. at Glasgow High School, Glasgow Univ., and Trinity College, Cambridge. In 1868 C.-B. successfully contested Stirling Burghs as a Liberal in the general election which followed the Reform Act of 1868. In 1871 he became financial secretary to

the War Office. He was again financial secretary for war, 1880-2, secretary to the Admiralty, 1882-4, and was given Cabinet rank in 1884, becoming chief secretary for Ireland. In 1886 he announced his adherence to his leader, Gladstone, when the latter declared himself in favour of Home Rule, and was secretary for war in 1886, fulfilling the same office in the gov. of 1892-5. When Harcourt resigned the Liberal leadership in 1898, C. was selected for the vacant post. The outbreak of the Boer War, the opposition of C.-B. to the Imperial policy of a section of the Liberal party, led to still graver differences, but in 1901 a meeting of the party unanimously confirmed him in his leadership. In 1905 the Unionists resigned and the king sent for C.-B. At the election which followed the political pendulum swung, the Liberals being returned with a large majority. The prin. measures of his gov. were an Education Bill, an Irish Councils Bill, and a Plural Voting Abolition Bill, all of which were either rejected or previously altered by the House of Lords. Amongst the important measures which were passed may be mentioned the Small Holdings Act, a Trades Dispute Act, the Patents Act, and the Merchant Shipping Act. But almost immediately after his acceptance of the premiership C. began to fail in health, and to be unable to fulfil the duties of the office, and the leadership of the House passed practically into the hands of Asquith, and ultimately C.-B. resigned less than 3 weeks before his death. See life by J. A. Spender, 1923.

Campbell Family. In 1280 Colin Mor C. of Lochaw was knighted by Alexander III, and in 1445 Sir Duncan received a peerage. The family became Earls of Argyll in 1457; the marquise dates from 1640, and the dukedom from 1701. The C.s of Breadalbane, Cawdor, and Loudon are cadet branches of the family. See also ARGYLL, DUKES OF.

Campbellites, see CHRIST, DISCIPLES OF.
Campbelltown, N. Carolina, see FAYETTEVILLE.

Campbelltown, tn in Cumberland co., New S. Wales, Australia, adjacent to the metropolitan area of Sydney. Dairy and poultry farms are situated in the neighbourhood. Pop. 10,120.

Campbeltown, burgh and seaport in Argyll, Scotland, on the Kintyre peninsula, 36 m. S. of Tarbert, anciently called *Dalruadhain*. The harbour, sheltered by Davaar Is., is excellent; the main industries include herring and white fishing, net making, creamery, and whiskey distilling. Pop. 7,170.

Campeche: 1. State of SE. Mexico, level in character, with mixed forests; rice, sugar-cane, and tobacco are grown, and cattle are grazed. Dye-woods, cordage of sisal hemp, cotton, and indigo are the prin. exports. Area of state, 19,673 sq. m.; pop. 121,400.

2. City, cap. of above state, situated on C. Bay, 90 m. to the SW. of Merida. The harbour is safe but shallow. Manufs. include cigars, cigarettes, and chocolate. The city was founded in 1540 on the site

of a vast series of catacombs of the Mayas, and was repeatedly sacked by buccaneers, who knew it as Campeachy. Pop. 23,280.

3. Gulf of C., inlet of the Gulf of Mexico. The main ports are Veracruz, Coatzacoalcas, Carmen, and C.

Camperdown, tn in Victoria, Australia, 121 m. SW. of Melbourne, the centre of a prosperous dairying and pastoral dist.

'Camperdown,' 10,600-ton Brit. battleship, launched in 1885, which rammed and sank the *Victoria* in collision in the Mediterranean in 1893.

Camperdown, Battle of, Eng. naval victory over the Dutch, fought on 11 Oct. 1797, which served to wipe out the disgrace of the mutiny of the *Nore*, the Dutch fleet under De Winter being destroyed. The victor was Adm. Duncan, whose fleet comprised 7 ships of 74 guns, 7 of 64, besides a few frigates and cutters; the Dutch fleet, of 4 of 74 guns, 7 of 64, and other smaller ships, being only slightly inferior in strength. Duncan captured no fewer than 11 of the Dutch ships, but the casualties were heavy on both sides. The battle was fought a few m. off the Dutch coast, near the vil. of C., and Duncan, in recognition of the victory, was created Lord Duncan of C.

CAMPHOR

Camphor ($C_{10}H_{16}O$), waxy, translucent substance closely related to the ethereal oils, obtained from the C.-tree (*Cinnamomum camphora*). It is produced in Japan along the coast of China, but mostly in the is. of Formosa. The substance is obtained by storing chips of C. wood in earthenware vessels closed at the top, into which a current of steam enters. The C. is volatilised, and passes with the steam to the top of the pots, where it condenses in the form of small white crystals. C. has a sp. gr. nearly equal to that of water, melts at $178^{\circ}C.$, and boils at $204^{\circ}C.$ The main use of C. is in the manuf. of celluloid. It is used as an ingredient in many liniments for sprains, muscular rheumatism, etc. It is also largely used to keep away moths and noxious insects from clothing, furs, stuffed animal specimens, etc. C. was synthesised by Komppa in 1909, and it is now manuf. artificially from turpentine.

Camphor Oil, reddish liquid which is produced in the distillation of chips of the C-tree. The crude product usually contains a quantity of C. in solution.

Camphoric Acid ($C_{10}H_{16}O_4$), substance formed by digesting camphor with nitric acid. It forms colourless flakes which do not readily dissolve in water.

Camphorsulphonic Acid, $C_{10}H_{14}O \cdot SO_3H$, made by the action of fuming sulphuric acid on camphor, is a white crystalline solid used by Sir Wm Pope (1870-1939) in his classical researches upon stereochemistry.

Campi, or Campo, family of It. artists, of the school of Cremona, their bp.

Galeazzo Campi (1475-1536), the founder of the family. He was a pupil of Roccacino, but his style is in imitation of Perugino. His 'Resurrection of Lazarus' is at Castelmaggiore.

Giulio Campi (1502-72), son and pupil of Galeazzo. He studied under Giulio Romano at Mantua, but modelled his style on that of the great masters.

Antonio Cavaliere Campi (c. 1522-c. 1600), studied with his brother Giulio under Giulio Romano. He painted historical pieces in oil and fresco, modelling his art upon Correggio. His prin. pictures are 'St Paul raising Eutychus,' an altar-piece of the Nativity, and 'St Jerome in Meditation' (in the Prado). He was commissioned to paint for Philip II of Spain at Madrid, and won some reputation as an architect and writer.

Bernardino Campi (1522-1592), was probably related to this family. He studied under Giulio C. and Ippolito Corta at Mantua, and imitated the work of Titian, Raphael, and Correggio. He was chiefly employed in the churches of Italy. In 1584 he pub. a treatise on painting, *Parer sulla pittura*.

Campine, see KEMPEN

Campion, Edmund, Blessed (1540-81), Jesuit, b. London, his father being a bookseller. Educ. at Christ's Hospital and Oxford. Reconciled to the Catholic Church in 1571, he went to Douai, and, 7 years later, was ordained deacon and priest by the Archbishop of Prague. Came to England on a Jesuit mission and pub. his *Decem Rationes*, against Protestantism. Arrested in Berks in 1581, where he had taken refuge on account of the gov's proclamation against Jesuits, he was racked in the Tower and martyred at Tyburn. Beatified in 1886, his feast is on 1 Dec. See lives by Richard Simpson, 1867, and by E. Waugh, 1935.

Campion, Thomas (1567-1619), poet and musician, b. Witham, Essex. Educ. at Cambridge and on the Continent, he studied law at Gray's Inn, but discarded it and practised medicine in London. He was a delicate writer of vocal music for the lute accompaniment usual at this period, composed masques that are among the best of their kind, and produced many fine lyrics notable for their metrical finish. His songs are light as thistledown, seeming to float away in the air. The best known are 'There is a Garden in her Face' and 'My Sweetest Lesbia, Let Us Live and Love,' a fine trans. from Catullus. C. wa

concerned in 5 books of airs, making up 3 collections, which were pub. approximately between 1601 and 1617. He also wrote *Poemata*, 1595, in Latin, containing poems, elegies, and epigrams. His *Observations on the Art of English Poetic*, 1602, is an attack on the use of rhyme, and a plea for the adoption of unrhymed metres formed on classical models, such as are used in C.'s own 'Rose-checked Laura, Come.' Daniel's *Defence of Ryme* was an answer to this work. C. also composed the music for most of his songs. His works were ed. by A. H. Bullen, 1889, and by P. S. Vivian, 1909. See E. Arber, *An English Garner: Shorter Elizabethan Poems*, 1903; T. MacDonagh, *Thomas Campion and the Art of English Poetry*, 1913; M. M. Kastendieck, *England's Musical Poet*, 1938.

Campion, popular name of sev. species of *Silene* and *Lychnis*. *Silene cucubalus* is the bladder C.; *S. maritima* the sea C.; *S. acaulis* the moss C.; *Melandrium album*, white C.; *M. rubrum*, red C.; and *M. noctiflorum*, night-flowering C.

Campion Hall, Oxford, is a private hall of the univ. It was founded in 1896 for members of the Society of Jesus.

Campo, Conrado del (1876-1953), Sp. musical composer, b. and d. Madrid. One of the chief figures in modern Sp. music. He possessed a complex musical mind, and though accused of opposition to Sp. traditions, he has been also described as the Sp. Strauss; he had a mastery of modern technique and excelled in chamber and symphonic music. All his works, and they are very numerous, have been performed in Spain, many having won prizes. He was for many years the viola soloist at Madrid Royal Opera House and the Orquesta Sinfónica, of which he was a founder. Operas and other works: *El Final de Don Alvaro*; *La dama desconocida*; *Leonor Teller*; *Los Amantes de Verona* (on *Romeo and Juliet*); *Tragedia del beso*; *Dies Irae*; *Avapiés*; *La flor del agua*; *La divina comedia* (orchestral work with chorus on Dante's *Inferno*); *Granada y Galicia* (a symphonic poem); *Danza del Níaxu* (orchestral); *Kusida*; *Don Juan de España* (incidental music for Martínez Sierra's play); *Aires, airiños, aires* (for orchestra, solo voice and chorus).

Campo Formio, see CAMPOFORMINO.

Campoamor, Ramón de (1817-1901), Sp. poet and politician, b. in the Asturias. He studied medicine, but deserted it for poetry and politics. A zealous Conservative, he served as Governor of Alicante and Valencia. His ventures into the sphere of drama are by no means remarkable. His 2 chief plays are *El Palacio de la Verdad*, 1871, and *Dies Irae*, 1873; *El Drama Universal* is a pretentious poem in 8 cantos. He gained great fame in his day, but his work is now forgotten. Only a few of his *doloras* and *humoradas* are to-day considered readable. See A. Gonzalez Blanco, *Campoamor, biografía y estudio crítico*, 1911.

Campobasso (formerly *Molise*): 1. Prov. of Italy, in S. Abruzzi e Molise (q.v.). It is mountainous and has some high the Apennines (q.v.), but has a

coastal plain on the Adriatic in the NE. It is crossed SW.-NE. by the Biferno. The prin. tns include C., Isernia, Casacalenda, and Larino (qq.v.). Area 1750 sq. m.; pop. 406,000.

2. It. tn, cap. of the prov. of C., built partly on a hill crowned with a 16th-cent. castle, 84 m. SE. of L'Aquila (q.v.). There are sev. fine churches. C. has an important cutlery industry, and silk and paper manufs. Pop. 30,000.

Campoformido (formerly **Campo Formio**), It. vil., in Friuli-Venezia Giulia (q.v.), 5 m. SW. of Udine (q.v.). By the treaty signed here between France and Austria in Oct. 1797 Austria received Venice in return for Lombardy and the Belgian Netherlands (see NAPOLEON I). Pop. 3000.

Campos, Álvaro de, see PESSOA, FERNANDO.

Campra, André (1660-1744), Fr. composer, b. Aix-en-Provence, where he learnt music at the church of Saint-Sauveur. After some prov. church appointments he moved to Paris in 1694 and became musical director at Notre-Dame, where his motets became famous. In 1697 he produced his first stage work, the operaballet *L'Europe galante*. Between this and his last opera, *Achille et Déidamie*, given in 1735, he brought out about 40 dramatic works which earned him great fame and make a link between Lully and Rameau. He also wrote masses, motets, psalms, and cantatas.

Camps, in archaeology, see HILL FORTS.

Campus Martius (the field of Mars) was the name given to a large plain skirting the walls of Rome on the NW. side. It was sacred to Mars, and was therefore used for military manœuvres, contests, etc. During the later period of the rep. it was laid out in walks, baths, etc., and was used as a public recreation ground.

Campus Stellae, see SANTIAGO DE COMPOSTELA.

Camrose, 1st Viscount, William Ewert Berry (1879-), journalist and newspaper proprietor, b. Merthyr Tydfil, of which his father was mayor. Entering journalism, he came to London and in 1901 founded the *Advertising World*. With his brother James Gomer Berry (see KEMSLEY) he acquired the *Sunday Times* in 1915 and later the *Financial Times*. Together they built up the vast aggregation of newspapers, magazines, and annuals known

as the Amalgamated Press, with ramifications all over Britain. In 1928 they purchased the *Daily Telegraph*, of which C. became editor. During the Second World War he did valuable work at the Ministry of Information. He was made a baronet in 1921, a baron in 1929, and a viscount in 1941.

Camrose, city of Alberta, Canada, 69 m. SE. of Edmonton, incorporated as a tn in 1906, named after C., in Pembrokeshire, Wales. Originally called Sparling, its name was changed to avoid confusion with Stirling, Alberta, and Sperling, Manitoba. C. became a city on 1 Jan. 1955, and is the youngest city in Alberta. It is centre of an extensive farming area, and the largest legume seed-cleaning and processing plant in the commonwealth is located here; other industries include flour milling, woodworking and metal working, and coal mining. C. is served by both the Canadian National Railways and the Canadian Pacific Railway. In recent years oil wells have been developed in the area. Pop. 6100.

Camulodonum, see COLCHESTER.

Camus, Albert (1913-), Fr. writer, b. Mondovi, Algeria, of a Sp. mother and Alsatian father. C.'s first pubs. were essays, *L'enners et l'endroit*, 1937, and *Noces*, 1938, pub. in Algeria. In France, during the Second World War, he took part in the resistance movement, and helped to found the underground periodical *Combat*, for which he wrote a series of profound philosophical essays, which reveal an atheistic and nihilistic outlook. The problem of solitary man, alone against a hostile world, is treated in his first novel *L'Étranger*, 1942 (Eng. trans. *The Outsider*, 1957). In 1947 appeared *La Peste* (Eng. *The Plague*, 1948), a story of life in a modern tn during an epidemic. *La Chute* was pub. in 1956. His plays *Caligula*, 1944, *Le Malentendu*, 1944, and *L'État de siège*, 1948, are less well known than his novels. In latter years C.'s nihilistic attitude has changed to a more active humanism. He was awarded the Nobel prize for literature in 1957. See R. de Luppe, *Albert Camus*, 1951, and P. Thody, *Albert Camus*, 1957.

Camwood, name of a wood obtained from a tree that grows in Africa and Brazil. From it an exceedingly brilliant red dye is obtained, of which the only defect is its lack of permanency.
